DISTRICT SPECIFICATIONS

MAY 2024

BuildLACCD

NOTE:

In the event of conflicting information within the Design Guidelines and Standards the following precedence shall prevail:

1. Volume 2 District Specifications
2. Volume 1 Design Guidelines and Standards
3. Volume 2 Campus Specifications Matrix

Conflicts shall be brought to the attention of the Director of College Facilities (DOCF), Office of Information Technology (OIT), College Project Team (CPT) and District Project Manager (DPM).

SECTION 00 01 10 - TABLE OF CONTENTS

DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS*(To be provided with project documentation.)***DIVISION 01 - GENERAL REQUIREMENTS***(To be provided with project documentation.)***DIVISION 02 - EXISTING CONDITIONS**

02 41 16 Structural Demolition

02 41 19 Selective Demolition

DIVISION 3 - CONCRETE

03 10 00 Concrete Forms and Accessories

03 20 00 Concrete Reinforcement

03 30 00 Cast-in-Place Concrete

03 33 00 Cast-in-Place Architectural Concrete

03 35 00 Interior Concrete Floor Sealer

03 35 45 Polished and Stained Concrete Floor Finishing

03 37 13 Shotcrete

03 38 00 Post-Tensioned Concrete

03 45 00 Architectural Precast Concrete

03 54 00 Self-Leveling Portland Cement Based Underlayment

DIVISION 4 - MASONRY

04 21 30 Adhered Thin Brick Veneer

04 22 00 Concrete Unit Masonry

04 90 00 Masonry Cleaning

DIVISION 5 - METALS

05 06 50 Welded Stud Connectors

05 12 00 Structural Steel Framing

05 12 13 Architecturally Exposed Structural Steel Framing

05 12 19 Buckling Restrained Braces

05 31 00 Steel Decking

05 40 00 Cold-Formed Metal Framing

05 50 00 Metal Fabrications

05 51 13 Metal Pan Stairs

05 52 13 Pipe and Tube Railings

- 05 70 00 Decorative Metal
- 05 73 13 Glazed Decorative Metal Railings

DIVISION 6 - WOOD AND PLASTICS

- 06 10 53 Miscellaneous Carpentry
- 06 16 00 Sheathing
- 06 16 63 Cementitious Sheathing
- 06 20 23 Interior Finish Carpentry
- 06 41 13 Wood-Veneer-Faced Architectural Cabinets
- 06 41 16 Plastic-Laminate-Clad Architectural Cabinets
- 06 83 16 FRP Wall Panels

DIVISION 7 - THERMAL & MOISTURE PROTECTION

- 07 01 50 Preparation for Re-Roofing
- 07 11 13 Bituminous Dampproofing
- 07 13 26 Self-Adhering Sheet Waterproofing
- 07 13 54 Thermoplastic Sheet Waterproofing
- 07 14 13 Hot Fluid-Applied Rubberized Asphalt Waterproofing
- 07 16 13 Cementitious Waterproofing
- 07 18 00 Traffic Coatings
- 07 19 00 Water Repellents
- 07 21 00 Thermal Insulation
- 07 26 00 Below Grade Vapor Retarders
- 07 27 15 Non-Bituminous Self-Adhered Sheet Air Barriers
- 07 27 26 Fluid-Applied Membrane Air Barriers
- 07 32 13 Clay Roof Tiles
- 07 41 13 Standing-Seam Metal Roof Panels
- 07 42 13.13 Formed Metal Wall Panels
- 07 42 13.23 Metal Composite Material Wall Panels
- 07 46 46 Fiber-Cement Siding
- 07 52 16 Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing
- 07 54 19 Polyvinyl-Chloride (PVC) Roofing
- 07 62 00 Sheet Metal Flashing and Trim
- 07 71 00 Roof Specialties
- 07 72 00 Roof Accessories
- 07 81 00 Applied Fire Protection
- 07 81 23 Intumescent Fire Protection
- 07 84 13 Penetration Firestopping

- 07 84 43 Joint Firestopping
- 07 92 00 Joint Sealants
- 07 95 13 Seismic Joint Cover Assemblies

DIVISION 08 - OPENINGS

- 08 11 13 Hollow Metal Doors and Frames
- 08 11 16 Interior Aluminum Doors and Frames
- 08 14 16 Flush Wood Doors
- 08 14 23 Plastic Laminate-Faced Wood Doors
- 08 31 13 Access Doors and Frames
- 08 33 13 Coiling Counter Doors
- 08 33 23 Overhead Coiling Doors
- 08 33 26 Overhead Coiling Grilles
- 08 41 13 Aluminum-Framed Entrances and Storefronts
- 08 41 26 All-Glass Entrances and Storefronts
- 08 42 29.23 Sliding Automatic Entrances
- 08 44 13 Glazed Aluminum Curtain Walls
- 08 51 00 Metal Windows
- 08 56 59 Service and Teller Window Units
- 08 62 23 Tubular Skylights
- 08 63 00 Metal-Framed Skylights
- 08 71 00 Door Hardware
- 08 71 00A LACCD Door Hardware Standards Matrix
- 08 71 13 Automatic Swing Door Operators
- 08 80 00 Glazing
- 08 83 00 Mirrors
- 08 87 33 Architectural Window Film
- 08 91 19 Fixed Louvers
- 08 95 16 Wall Vents

DIVISION 9 - FINISHES

- 09 05 16 Water Vapor Emission Control System
- 09 21 16 Gypsum Board Shaft Wall Systems
- 09 22 16 Non-Structural Metal Framing
- 09 24 00 Cement Plastering
- 09 28 13 Cementitious Backing Boards
- 09 29 00 Gypsum Board
- 09 30 13 Ceramic Tiling

09 51 13	Acoustical Panel Ceilings
09 54 23	Linear Metal Ceilings
09 64 33	Laminated Wood Flooring
09 65 13	Resilient Base and Accessories
09 65 19	Resilient Tile Flooring
09 66 23	Resinous Matrix Terrazzo Flooring
09 67 23	Resinous Urethane and Epoxy Mortar Flooring
09 68 13	Tile Carpeting
09 69 00	Access Flooring
09 81 00	Acoustic Insulation and Sealants
09 90 00	Painting
09 96 00	High-Performance Coatings

DIVISION 10 - SPECIALTIES

10 11 00	Visual Display Units
10 14 00	Signage
10 21 13	Phenolic-Core Toilet Compartments
10 22 39	Folding Panel Partitions
10 26 00	Wall and Door Protection
10 28 13	Toilet Accessories
10 41 16	Emergency Access Key Boxes
10 43 21	Accessibility Evacuation Chairs
10 44 16	Fire Extinguishers
10 51 13	Metal Lockers, Benches and Cubbies
10 56 13	Metal Storage Shelving
10 73 33	Marquees
10 75 16	Ground-Set Flagpoles
10 81 13	Bird Control Devices

DIVISION 11 - EQUIPMENT

11 12 00	Parking Control Equipment
11 30 13	Residential Appliances
11 52 13	Projection Screens
11 81 29	Facility Fall Protection Devices

DIVISION 12 - FURNISHINGS

12 24 13	Roller Window Shades
12 36 00	Countertops
12 48 13	Entrance Floor Mats and Frames

12 65 00 Multi-Use Fixed Seating

DIVISION 14 - CONVEYING SYSTEMS

14 21 23 Machine Room Electric Traction Elevators

14 24 00 Hydraulic Elevators

14 42 00 Wheelchair Lift

DIVISION 21 - FIRE SUPPRESSION

21 13 00 Fire Protection Sprinkler Systems

21 13 13 Wet-Pipe Sprinkler Systems

21 13 16 Pre-Action Sprinkler Systems

21 22 00 Clean Agent Fire Suppression Systems

21 30 00 Fire Pumps

DIVISION 22 - PLUMBING

22 05 00 Plumbing System Design Criteria

22 05 29 Pipe Hangers and Supports

22 05 48 Vibration Isolation for Plumbing Piping and Equipment

22 05 53 Plumbing Identification

22 05 76 Cleanouts, Storm and Sanitary

22 07 00 Plumbing Piping Insulation

22 11 00 Plumbing, Piping, Valves, and Specialties

22 11 23 Pumps and Specialties

22 13 19 Drains

22 15 00 Compressed Air Equipment

22 30 00 Plumbing Equipment

22 34 36 Water Heaters

22 40 00 Plumbing Fixtures

DIVISION 23 - HEATING, VENTILATING AND AIR CONDITIONING (HVAC)

23 05 00 Basic HVAC Materials and Methods

23 05 48 Vibration Isolation for Piping, Ductwork and Equipment

23 05 49 Seismic Restraint for Piping, Ductwork and Equipment

23 05 93 Testing, Adjusting and Balancing

23 07 13 Duct Insulation

23 07 16 HVAC Equipment Insulation

23 07 19 HVAC Piping Insulation

23 09 00 Building Automation System (BAS) Controls

23 21 13 Hydronic Piping, Valves and Specialties

23 21 14	Hydronic Underground Piping
23 21 23	Hydronic Pumps
23 23 00	Refrigerant Piping Systems
23 25 00	HVAC Water Treatment
23 31 13	Air Distribution
23 34 00	Fans and Vents
23 35 00	Special Exhaust Systems
23 41 00	Air Filtration
23 44 00	UV Coil Irradiation
23 52 00	Non-Condensing Boilers
23 52 13	Electric Boilers
23 52 16	Condensing Boilers
23 52 19	Air to Water Heat Pump
23 57 00	Heat Exchangers for HVAC
23 64 00	Air Cooled Chillers
23 64 16	Water Cooled Chillers
23 64 27	Water to Water Heat Pump/Chiller
23 65 00	Cooling Towers
23 73 12	Custom Factory Air Handling Units
23 73 13	Modular Air Handlers
23 74 13	Packaged HVAC Units (Up to 25 Tons)
23 81 23	Computer Room Air Conditioning Units
23 81 30	Split Air Conditioning Units
23 81 46	Water Source Heat Pump Units
23 81 58	Variable Refrigerant Flow Heat Pump Systems
23 82 19	Fan Coil Units

DIVISION 25 - INTEGRATED AUTOMATION

25 05 00	Integrated Automation
----------	-----------------------

DIVISION 26 - ELECTRICAL

26 05 00	Common Work Results for Electrical
26 05 09	Equipment Wiring Systems
26 05 13	Medium Voltage Cable and Accessories
26 05 19	Low Voltage Electrical Power Conductors and Cables
26 05 26	Grounding and Bonding for Electrical Systems
26 05 29	Hangers and Supports for Electrical Systems
26 05 33	Raceways and Boxes for Electrical Systems

26 05 43	Underground Ducts and Raceways for Electrical Systems
26 05 53	Identification of Electrical Systems
26 05 73	Electrical Distribution System Studies
26 08 00	Commissioning of Electrical Systems
26 09 33	Lighting Control Systems
26 10 00	Medium Voltage Electrical Distribution
26 12 16	Dry-Type, Medium-Voltage Transformer
26 12 19	Pad-Mounted, Liquid-Filled, Medium-Voltage Transformers
26 22 00	Low Voltage Transformers (Dry-Type Transformers (600 V and Less))
26 24 13	Switchboards
26 24 16	Panelboards
26 24 19	Motor Control
26 27 13	Electricity Metering
26 27 16	Cabinets and Enclosures
26 27 26	Wiring Devices
26 27 29	Electric Vehicle Charging Station
26 29 23	Variable Frequency Motor Controllers
26 31 00	Photovoltaic Collectors
26 32 13	Emergency Motor Generator
26 33 23	Central Battery Equipment for Emergency Lighting
26 33 53	Static Uninterruptible Power Supply
26 36 00	Transfer Switch
26 51 00	Interior Lighting
26 56 00	Exterior Lighting
26 56 68	Exterior Athletic Lighting

DIVISION 27 – COMMUNICATIONS (Refer to Volume #3 AV, Technology, Security, and other relevant Standards)

27 00 00	Communications Basic Requirements
27 05 00	Common Work Results for Communications
27 05 03	Communications through Penetration Firestopping
27 05 26	Communications Bonding
27 05 28	Communications Raceway
27 05 43	Communications Exterior Pathways
27 05 53	Communications Identification and Administration
27 11 00	Communications Equipment Rooms
27 13 00	Communications Backbone Cabling
27 15 00	Communications Horizontal Cabling

27 20 00	Data Communications
27 32 43	DAS – Public Safety & Emergency Responder
27 41 00	Audio Visual Systems
27 51 13	Mass Notification System
27 51 26	Assistive Listening Systems
27 53 13	Wireless Clock Systems

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY (Refer to Volume #3 AV, Technology, Security, and other relevant Standards)

28 00 00	Security Systems Basic Requirements
28 04 09	Basic Security System Requirements Construction Specifications
28 05 00	Common Work Results for Electronic Security Systems
28 05 03	Through Penetration and Firestopping
28 05 28	Security Building Pathways
28 10 00	Access Control System
28 16 00	Intrusion Detection
28 20 00	Video Surveillance System
28 26 00	Emergency Call Boxes
28 26 05	Rescue Assistance Communication System
28 31 01	Fire Alarm and Detection Systems (Addressable)

DIVISION 31 - EARTHWORK

31 10 00	Site Clearing
31 22 00	Grading
31 23 16	Excavation and Fill for Paving
31 23 23	Excavation and Fill for Utilities

DIVISION 32 -EXTERIOR IMPROVEMENTS

32 01 30	Operation and Maintenance of Site Improvements
32 01 90.33	Tree and Shrub Preservation
32 12 26	Asphalt Paving
32 12 36	Emulsified Slurry Seal
32 13 13	Site Concrete Work
32 13 73	Concrete Pavement Joint Sealants
32 17 13	Parking Bumpers
32 17 23	Pavement Markings
32 17 26	Tactile Warning Surfacing
32 18 13	Synthetic Turf Surfacing
32 31 13	Chain-Link Fences and Gates

- 32 33 00 Site Furnishings
- 32 84 00 Planting Irrigation
- 32 84 13 Drip Irrigation
- 32 90 00 Planting
- 32 91 13 Soil Preparation
- 32 92 19 Seeding

DIVISION 33 - UTILITIES

- 33 11 00 Water Utility Distribution Piping
- 33 31 00 Sanitary Utility Sewerage Piping
- 33 41 00 Storm Utility Drainage Piping
- 33 47 00 Biofiltration Systems

DIVISION 41 - MATERIAL PROCESSING AND HANDLING EQUIPMENT

- 41 34 23 Paint Spray Booths

END OF SECTION

DIVISION 02
EXISTING CONDITIONS

This page intentionally left blank

SECTION 02 41 16
STRUCTURAL DEMOLITION

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Demolition, dismantling and cutting of existing building and site improvements as indicated, specified, and necessary for the completion of the Contract.
 - 2. Capping active utilities.
 - 3. Abandoning in-place below-grade construction.
 - 4. Removing inactive utilities.
 - 5. Protective measures.
 - 6. Removing demolished materials from the site.
- B. Related requirements: Site clearing.

1.02 DEFINITIONS

- A. Retain terms that remain after this Section has been edited for a project.
- B. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged.
- C. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and [deliver to Owner ready for reuse] [store]. Include fasteners or brackets needed for reattachment elsewhere.

1.03 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and Sequencing:
- B. Pre Installation Meeting: Conduct conference at Project Site.
 - 1. Inspect and discuss condition of construction to be demolished.
 - 2. Review structural load limitations of existing structures.
 - 3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.

4. Review and finalize protection requirements.
5. Review procedures for [noise control] [and] [dust control].
6. Review procedures for protection of adjacent buildings.
7. Review items to be salvaged and returned to Owner

1.05 SUBMITTALS

- A. Waste management Plan: Provide a Construction and Demolition (C&D) Waste Management Plan and submit to Department of State Architects.
- B. Qualification Data: For refrigerant recovery technician.
- C. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property[, for environmental protection] [, for dust control] [and] [, for noise control]. Indicate proposed locations and construction of barriers.
 1. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain[including means of egress from those buildings].
- D. Schedule of Building Demolition Activities: Indicate the following:
 1. Detailed sequence of demolition work, with starting and ending dates for each activity.
 2. Temporary interruption of utility services.
 3. Shutoff and capping[or re-routing] of utility services.
- E. Predemolition Photographs or Video: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by salvage and demolition operations. Comply with Section 01 32 33 "Photographic Documentation." Submit before the Work begins.
- F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- G. Record documents: At completion of this work, submit record documents showing the actual, dimensioned locations of capped utilities referenced to permanent features surrounding the site.

1.06 QUALITY ASSURANCE

- A. Retain "Refrigerant Recovery Technician Qualifications" Paragraph below if retaining refrigerant removal in Part 3.
- B. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

1.07 FIELD CONDITIONS

- A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.
- B. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.
 1. Provide not less than [72] <Insert number> hours' notice of activities that will affect operations of adjacent occupied buildings.

2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.
 - a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.
 - C. Revise first paragraph below if necessary.
 - D. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
 1. Before building demolition, Owner will remove the following items:
 - a. <Insert items to be removed by Owner>.
 - E. Retain one of two "Hazardous Materials" paragraphs below, or remove all references to hazardous materials. Insert scope of article to include asbestos, PCBs, and other materials if required. Coordinate statements with the General and Supplementary Conditions. See Evaluations.
 - F. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
 1. Hazardous materials will be removed by Owner before start of the Work.
 2. Retain subparagraph below to cover instances where hazardous materials are unexpectedly found and must be remediated. See the General Conditions for additional requirements on hazardous materials.
 3. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.
 - G. Retain "Hazardous Materials" Paragraph below if hazardous material remediation is part of the Work of this Contract. Consult a professional liability insurance carrier for current recommendations. Indemnification and a waiver of claims may be required from Owner as a condition for providing services related to hazardous material remediation.
 - H. Hazardous Materials: Present in buildings and structures to be demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
 1. If retaining first subparagraph below, see discussion in Evaluations about Sections dealing with hazardous materials.
 2. Hazardous material remediation is specified elsewhere in the Contract Documents.
 3. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
 4. Retain subparagraph below if materials are known to be present. Delete if Owner does not have, or will not provide, material safety data sheets for these materials.
 5. Owner will provide material safety data sheets for materials that are known to be present in buildings and structures to be demolished because of building operations or processes performed there.
 - I. On-site storage or sale of removed items or materials is not permitted.
- 1.08 COORDINATION
- A. Retain this article if demolition will interfere with Owner's operations; insert phasing requirements if applicable.

- B. Arrange demolition schedule so as not to interfere with [Owner's on-site operations] [or] [operations of adjacent occupied buildings].

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI/ASSP A10.6 and NFPA 241.

2.02 SOIL MATERIALS

- A. Satisfactory Soils: Comply with requirements in Section 31 20 00 Earth Moving.

PART 3 EXECUTION

3.01 GENERAL

- A. Protection: Do not begin demolition until temporary barricades, warning signs and other forms of protection are installed.
 - 1. Protect trees, plants, utilities and existing improvements not to be removed from injury or damage resulting from the Contractor's operation. Replace damaged improvements and utilities in kind at no cost to the Owner.
 - 2. Provide all safeguards, including warning signs and lights, barricades, and the like, for protection of the public, Contractor's employees and adjacent property during demolition.
- B. Noise control: Exercise caution and care to prevent generation of unnecessary noise. Keep noise levels to the minimum possible.
- C. Dust control: Control dust by frequent sprinkling with water or other methods acceptable to the Architect. Assume liability for all claims related to flying dust.
- D. Water control: Control the use of water to prevent damage to the existing facilities and site improvements to remain.
- E. Drainage: Prevent debris from blocking items including, but not limited to, surface drainage inlets and systems, which must remain in operation.

3.02 PREPARATION

- A. Mark location of utilities.
- B. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.
- C. Shut-off, disconnect, cap-off and seal plumbing, mechanical, and electrical services, in accordance with the requirements of the authorities having jurisdiction, before starting deconstruction. Place markers to indicate location of disconnected services. Identify service lines and capping on record drawings.
- D. Clearly mark location of salvaged material's storage areas, and provide and erect barriers and security devices as required.

3.03 EXISTING CONDITIONS

- A. Intent of Drawings and other reference documents is to show existing conditions with information developed from field surveys and to generally show the extent and type of demolition required.
- B. Make a detailed survey of existing conditions prior to commencing demolition, and report discrepancies or conflicts between Drawings and actual conditions in writing to the Architect for clarifications and instructions.
- C. Do not proceed where such conflicts or discrepancies occur prior to receipt of Architect's instructions.

3.04 DEMOLITION

- A. Perform demolition in a systematic manner. Use such methods as required to complete work in compliance with governing regulations.
- B. Where applicable, such as in public right-of-way, remove existing construction only to the extent indicated or necessary for installation of new construction and junction with existing materials.
- C. Cut back finished surfaces to straight, plumb or level lines as required.

3.05 PATCHING

- A. Patch materials to remain when damaged by demolition at no cost to the Owner.
- B. Finish material and appearance of the patch or repair shall match the existing contiguous materials and finishes in all respects, as approved by the Architect.

3.06 TITLE TO MATERIALS

- A. Except where indicated or specified otherwise, materials and equipment removed shall become the property of the Contractor and shall be removed from the site.
- B. The Owner will not be responsible for the condition or loss of, or damage to, such property after Notice to Proceed.
- C. Material and equipment shall not be viewed by prospective purchasers or sold on the site.

3.07 CLEAN-UP/DISPOSAL

- A. Debris, waste, and removed materials are Contractor's property for legal disposal off the site.
- B. Continuously clean-up and remove these items and do not allow to accumulate on or adjacent to the site. Refer to Section 01 74 00 for additional requirements on this subject.

END OF SECTION

This page intentionally left blank

SECTION 02 41 19

SELECTIVE DEMOLITION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:

1. Selective demolition, dismantling, cutting and alterations as indicated, specified, and necessary for the completion of the Contract.
2. Rerouting or offsetting existing utilities, such as piping, ducts, conduit and wiring.
3. Removing demolished materials not indicated to be salvaged, from the site.
4. Patching, repairing and finishing existing items to remain to the specified condition with an invisible transition, under normal lighting conditions at the site, between new and existing.
5. Preparation and cleaning of surfaces as required to install new work and finishes.
6. Protection of work to remaining.

B. Related Requirements:

1. Division 01 for special project procedures.
2. Division 01 for temporary building protection.
3. Division 31 for site demolition and clearing.
4. Divisions 22, 23 and 26 for disconnecting, cutting and capping utilities.

C. NIC work: Encapsulation , removal and disposal of asbestos and other hazardous materials.

1.02 DEFINITIONS

- A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged or reinstalled.
- B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and [deliver to Owner ready for reuse] [store].
- C. Remove and Reinstall: Detach items from existing construction, in a manner to prevent damage, prepare for reuse, and reinstall where indicated.
- D. Existing to Remain: Leave existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.
- E. Coordinate definition of "dismantle" with Section 013516 "Alteration Project Procedures" if that Section is also required for Project.
- F. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.

1.03 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and Sequencing:
- B. Pre-demolition meeting:
 - 1. Prior to start of demolition, arrange a meeting between the subcontractor that will be responsible for the work of this Section, the Contractor, the roofing manufacturer's authorized representative, and the Architect to review existing conditions, the Drawings, and the Specifications.
 - 2. Review structural load limitations of existing structure.
 - 3. If more than one trade will be responsible for the successful performance of the work of this Section, these trades shall attend the meeting.
 - 4. Identify areas of concern and remedial measures.
 - 5. Take photographs of the areas of concerns, before and after remedial measures are taken.
 - 6. Review areas where existing construction is to remain and requires protection.
 - 7. Record meeting minutes and distribute copy to all concerned, including the Architect, within 48 hours of the meeting.

1.05 SUBMITTALS

- A. Qualification Data: For refrigerant recovery technician.
- B. Engineering Survey: Submit engineering survey of condition of building.
- C. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property [, for environmental protection] [, for dust control] [and] [, for noise control]. Indicate proposed locations and construction of barriers.
- D. Schedule of Selective Demolition Activities: Indicate the following:
 - 1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's [building manager's] [and] [other tenants'] on-site operations are uninterrupted.
 - 2. Interruption of utility services. Indicate how long utility services will be interrupted.
 - 3. Coordination for shutoff, capping, and continuation of utility services.
 - 4. Use of elevator and stairs.
 - 5. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.
- E. Predemolition Photographs or Video: Show existing conditions of adjoining construction, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Comply with Section 01 32 33 "Photographic Documentation." Submit before Work begins.

- F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- G. Warranties: Documentation indicating that existing warranties are still in effect after completion of selective demolition.
- H. Inventory: Submit a list of items that have been removed and salvaged.

1.06 QUALITY ASSURANCE

- A. Refrigerant Recovery Technician Qualifications: Certified by an EPA-approved certification program.

1.07 FIELD CONDITIONS

- A. Owner will occupy portions of building immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.
- B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
 - 1. Before selective demolition, Owner will remove the following items:
 - a. <Insert items to be removed by Owner>.
- C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.
- D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
 - 1. Hazardous materials will be removed by Owner before start of the Work.
 - 2. If suspected hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.
- E. Hazardous Materials: Present in buildings and structures to be selectively demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
 - 1. Hazardous material remediation is specified elsewhere in the Contract Documents.
 - 2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
 - 3. Owner will provide material safety data sheets for suspected hazardous materials that are known to be present in buildings and structures to be selectively demolished because of building operations or processes performed there.
- F. Historic Areas: Demolition and hauling equipment and other materials shall be of sizes that clear surfaces within historic spaces, areas, rooms, and openings, including temporary protection, by 12 inches or more.
- G. Storage or sale of removed items or materials on-site is not permitted.
- H. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ASSP A10.6 and NFPA 241.

2.02 MATERIALS

- A. Contractor's option, except that materials used for patching shall be identical to the existing.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting selective demolition operations.
- B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- C. **[Perform]** **[Engage a professional engineer to perform]** an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective building demolition operations.
 1. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.
- D. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.
- E. Verify that hazardous materials have been remediated before proceeding with building demolition operations.
- F. Survey of Existing Conditions: Record existing conditions by use of **[measured drawings]** **[preconstruction photographs or video]** **[and]** **[templates]**.
 1. Comply with requirements specified in Section 013233 "Photographic Documentation."
 2. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations.
 3. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

3.02 PREPARATION

- A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.
- B. Protection:
 - 1. Do not begin demolition until temporary partitions, barricades, warning signs and other forms of protection are installed.
 - 2. Protect trees, plants, utilities and existing improvements that are not to be removed from injury or damage resulting from the Contractor's operation. Replace damaged landscaping, improvements and utilities in kind.
 - 3. During demolition provide safeguards, including warning signs and lights, barricades, and the like, for protection of the public, Contractor's employees and existing improvements to remain.
- C. Noise control: Refer to other Sections of Division 01.
 - 1. Exercise caution and care to prevent generation of unnecessary noise.
 - 2. Keep noise levels to the minimum possible.
 - 3. Discontinues noise producing operations, when requested by the Owner, and reschedule at a mutually acceptable time.
- D. Dust control: Control dust at all times.
 - 1. Provide dust-tight partitions to prevent dust escaping into other parts of the building where demolition is not in progress, as specified in other Sections of Division 01.
 - 2. Assume liability for claims related to flying dust caused by this work.
- E. Water control:
 - 1. Control the use of water to prevent damage to the existing facility and improvements to remain. Provide wet vacuum equipment where water, such as waste cooling water from concrete sawing, is used in and adjacent to existing building.
 - 2. Provide impermeable floor coverings and suitable dams to prevent damage by water, and immediately clean-up and remove surplus water, and water spilled in non-working areas.
 - 3. Assume liability for claims related to water seepage and leakage caused by this work.
- F. Security: Coordinate security with the Owner; refer to Section 01 50 00.
 - 1. Take necessary precautions to keep trespassers out of demolition areas.
 - 2. Properly secure demolition areas from entry when demolition is not in progress but do not block required exitways.
- G. Safety:
 - 1. If at any time the safety of existing construction appears to be endangered, take immediate measures to support such endangered construction; cease operations and immediately notify the Architect.
 - 2. Do not resume demolition until Architect's instructions are received.

3.03 SELECTIVE DEMOLITION

- A. Existing conditions:
 - 1. Intent of Drawings is to show existing conditions with information developed from field surveys and to generally show the extent and type of demolition required.

2. Make a detailed survey of existing conditions prior to commencing demolition, and report discrepancies or conflicts between Drawings and actual conditions in writing to the Architect for clarifications and instructions.
 3. Do not proceed where such conflicts or discrepancies occur prior to receipt of Architect's instructions.
- B. The Contractor shall be fully responsible for the adequacy and installation of temporary shoring and bracing systems used during demolition.
- C. Demolition shall be performed by skilled and properly equipped personnel.
- D. Remove existing construction only to the extent necessary for the proper installation of new construction and junction with existing materials. Cut back finished surfaces to straight, plumb or level lines as required.
- E. If unanticipated conditions which conflict with intended function or design are encountered, investigate and measure both nature and extent of the conflict.
1. Submit report to Architect in written, accurate detail.
 2. Pending receipt of directive from Architect, rearrange demolition schedule as necessary to continue overall job progress without delay.
- F. Where openings are cut oversize or in improper location, replace to excess removed material, to the Architect's satisfaction, at no additional cost to the Owner.
- G. Coordinate demolition with other trades to assure the proper sequence, limits, methods and time of performance. Schedule demolition so as to impose a minimum of hardship on the present operation of the facilities and the performance of the work of other trades.
- H. Whenever possible use small hand or small power tools designed for sawing or grinding; whenever possible avoid the use of tools with a hammering and chopping motion. Cut through finished surfaces from the exposed or finished side into concealed surfaces.
- I. In general remove materials as follows:
1. Portland cement concrete:
 - a. Locate and identify reinforcing bars in concrete prior to drilling and cutting, and protect structural integrity of existing work.
 - b. Use removal methods that will not crack or structurally affect adjacent concrete constructions.
 - c. Cut back concrete to clean, straight lines by saw cutting a minimum of 1 -inch deep; remainder of concrete may be jack-hammered.
 - d. Where indicated and where it will not weaken the structure, cut off reinforcing bars flush with the face of the concrete.
 - e. Where existing reinforcing bars are shown to be bonded into new concrete or masonry, use caution not to bend or otherwise damage them while removing concrete cover. Protect existing rebar from corrosion until new concrete is cast.
 - f. Where new concrete topping or cementitious setting bed will be cast on existing slabs, scarify or scab the surface to a profile of 1/4-inch to provide a mechanical bond with topping or setting bed.
 2. Masonry: Cut back to joint lines and remove old mortar without damaging units to remain to allow space for repairs to backing where applicable.

3. Modular materials:
 - a. Remove to a natural breaking point in whole units to a joint line with no damaged or defective unit remaining where joining new construction.
 - b. After removing flooring materials, clean substrates of old cement and adhesive.
4. Gypsum board: Remove to a joint line on a support.
5. Lath/plaster:
 - a. Saw cut plaster, but not lath and weather barrier (paper backing), cleanly.
 - b. Leave at least 2 -inch of lath exposed to tie into new lath, where applicable.
 - c. Leave sufficient undamaged weather barrier exposed to create a watertight, by proper lapping, joint with the new weather barrier or flashing.
6. Roofing and base flashing: Whenever possible engage the services of the roofer responsible for the installation of the original roofing to retain existing roofing warranty.
 - a. Request the presence of the roofing manufacturer's authorized representative prior to cutting into existing roof.
 - b. Cut-out roof membrane and underlying insulation neatly, with straight, clean edges. Remove only so much roofing and insulation as necessary for new work penetrating the roof membrane.
 - c. After the new work is installed, counterflash the penetrations as indicated and patch the roof membrane with the same membrane as the original roof, lapping a minimum of 6 inches over the existing.
 - d. Obtain the manufacturer representative's approval of the work which must be watertight; conduct water test when required by the manufacturer representative.
7. Utility Services and Mechanical/Electrical Systems:
 - a. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.
 - b. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off utility services and mechanical/electrical systems serving areas to be selectively demolished.
 - 1) Owner will arrange to shut off indicated services/systems when requested by Contractor.
 - 2) Arrange to shut off utilities with utility companies.
 - 3) If services/systems are required to be removed, relocated, or abandoned, provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
 - 4) Disconnect, demolish, and remove fire-suppression systems, plumbing, and HVAC systems, equipment, and components indicated on Drawings to be removed.
 - (a) Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - (b) Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material and leave in place.
 - (c) Equipment to Be Removed: Disconnect and cap services and remove equipment.

- (d) Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - (e) Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 - (f) Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
 - (g) Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material and leave in place.
- J. Materials not mentioned to be removed that interfere with new construction, except where structural integrity of the assembly is at risk, shall be cut to clean cut lines to provide for proper interface with new construction, or patching and repair, as required.
- K. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

3.04 SALVAGE

- A. Removed and salvaged items: Comply with the following.
1. Clean salvaged items.
 2. Pack or crate items after cleaning. Identify contents of containers.
 3. Store items in a secure area until delivery to Owner.
 4. Transport items to Owner's storage area on-site off-site designated by Owner indicated on Drawings.
 5. Protect items from damage during transport and storage.
 6. See Schedule at the end of the Section for a list of salvage materials.
- B. Title to materials:
1. Except where indicated or specified otherwise, materials and equipment removed and not reused shall become the property of the Contractor and shall be removed from the site.
 2. The Owner will not be responsible for the condition or loss of, or damage to, such property after notice to proceed.
 3. Material and equipment shall not be viewed by prospective purchasers or sold on the site.
- C. Existing items to remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.05 PATCHING

- A. Patch materials to remain when damaged by demolition.
- B. Finish material and appearance of the patch or repair shall match the existing contiguous materials and finishes in all respects, as approved by the Architect.

3.06 CLEAN-UP/DISPOSAL

- A. Debris, waste, and removed materials, other than items to be salvaged, are Contractor's property for legal disposal off the site.
- B. Continuously clean-up and remove these items and do not allow to accumulate in the building and on the site. Refer to Section 01 ** ** for additional requirements on this subject.
- C. Protection of existing work:
 - 1. Install protection before activities within existing building and on existing roof.
 - 2. Activate each fire sprinkler alarm valve system as soon as roof is installed.
 - 3. Protect existing roof from walking, working and equipment with minimum ¾-inch exterior grade plywood.
 - 4. Temporary partitions at interior of existing building: Construct of incombustible materials, with all wood materials fire retardant treated as specified in Section 06105. Dust-proof with tape or other acceptable means. Apply 2 coats of paint to wood surfaces visible to the public and building occupants.
 - 5. Construct partitions indicated of gypsum board or FRT plywood.
 - 6. Other barriers (expected to remain in place less than 45 days) may be built using flame-retardant reinforced polyethylene film.
 - 7. Restore surfaces of existing building to original condition where damaged due to work of this Contract or due to insufficient protection. Pay for repair of damage to contents.
 - 8. Do not allow water to enter wall insulation or roof insulation to remain. Replace when insulation has been wetted.
 - 9. Protect interior of structure from dust and weather and conserve interior heat. Protect temporary openings in exterior walls with fire-retardant treated weatherproof plywood or reinforced polyethylene barriers.

3.07 SELECTIVE DEMOLITION SCHEDULE

- A. Remove: <Insert description of items and construction to remove>.
- B. Remove and Salvage: <Insert description of items to remove and salvage>.
- C. Remove and Reinstall: <Insert description of items to remove and reinstall>.
- D. Existing to Remain: <Insert description of items to remain>.
- E. Dismantle: <Insert description of items to be removed>.

END OF SECTION

This page intentionally left blank

DIVISION 03

CONCRETE

This page intentionally left blank

SECTION 03 10 00
CONCRETE FORMS AND ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section
- B. Section Includes:
 - 1. Formwork for cast-in-place concrete as indicated.
 - 2. Installation of items to be embedded in concrete, such as anchor bolts, inserts, embeds, and sleeves.
- C. Related Sections:
 - 1. Section 01420: Testing and Inspection.
 - 2. Section 03200: Concrete Reinforcement.
 - 3. Section 03300: Cast-In-Place Concrete.

1.02 REFERENCES

- A. American Concrete Institute (ACI) Publication:
 - 1. ACI 318 – Building Code Requirements for Structural Concrete, Chapter 6, Formwork, Embedded Pipes, and Construction Joints.
 - 2. ACI 347 – Guide to Formwork for Concrete.
- B. American Plywood Association (APA):
 - 1. Form No. V345 - Concrete Forming Design/Construction Guide.
- C. National Institute of Standards and Technology (NIST):
 - 1. NIST Voluntary Product Standard PS 1.

1.03 SUBMITTALS

- A. Submit detailed structural calculations and drawings approved and signed by a California registered Civil Engineer where the height of the falsework or vertical shoring, as measured from the top of the sills to the soffit of the superstructure exceeds 14 feet, or where individual horizontal span lengths exceed 16 feet, or where provision for vehicular traffic through falsework or shoring occurs. For all other falsework and shoring submit layout signed by California registered Civil Engineer, manufacturer's authorized representative or a licensed contractor experienced in the usage and erection of falsework and vertical shoring. A copy of the plans and calculation shall be available at the jobsite at all times.
- B. Shop Drawings: Submit Shop Drawings indicating locations of forms, construction and expansion joints, embedded items, and accessories. Review and approval will not include form strength and adequacy.

- C. Product Data: Submit manufacturer's Product Data for form materials and accessories.
- D. Record Document: Keep an accurate record of the dates of removal of forms, form shores and reshores, and furnish copies to the Architect.

1.04 REGULATORY REQUIREMENTS

- A. California Building Code (CBC), Chapter 19A, and ACI 318.
- B. California Code of Regulations, Title 8, Division 1, Chapter 4, Subchapter 4, Construction Safety Orders, Article 6, Excavations, Sections 1713 and 1717.

1.05 DELIVERY, STORAGE AND HANDLING

- A. Storage shall prevent damage and permit access to materials for inspection and identification.
- B. Deliver materials for forms in timely manner to ensure uninterrupted progress.

1.06 QUALITY ASSURANCE

- A. Construction of Forms shall comply with the following as a minimum requirement:
 - 1. ACI 347, "Recommended Practice for Concrete Formwork"
 - 2. ACI 318 Section 26.11 and CBC Section 1905A.
 - 3. Tolerances shall conform to those as specified in ACI 301, "Specifications for Structural Concrete for Buildings", as applicable, unless exceeded by requirements of DSA or otherwise indicated or specified.
 - 4. Plywood: Conform to tables for form design and strength in APA Form V 345.
- B. Prior to construction of formwork for concrete beams and slabs above grade, Contractor shall conduct a meeting at the site to determine and define all camber, which may be required for the project. The Architect, Structural Engineer of record, Contractor and Contractor's formwork installer shall be in attendance at this meeting.
- C. Mock-ups: Provide mock-ups for exposed finishes if required by the Architect; 100 square feet minimum size. Locate as required by the Architect, for review and approval prior to installation. This applies to the exposed surface of retaining walls for this project.

PART 2 PRODUCTS

2.01 GENERAL

- A. Form materials may be reused during progress of the Work provided they are completely cleaned and reconditioned, recoated for each use, capable of producing formwork of required quality, and are structurally sound.
- B. Form Lumber: WCLIB Construction Grade or Better, WWPA No. 1 or Better.
- C. Plywood: NIST Voluntary Product Standard PS 1, Group 1, Exterior Grade B-B Plyform or better, minimum 5-ply and 3/4 inch thick for exposed locations and at least 5/8 inch thick for unexposed locations, grade marked, not mill oiled. Furnished plywood with medium or high density overlay is permitted.

- D. Coated Form Plywood: For exposed painted concrete, plastic overlaid plywood of grade specified above, factory coated with a form coating and release agent "Nox-crete", or equal.
- E. Tube Forms: Sonoco "Seamless Sonotubes," or equal, of the type leaving no marks in concrete, one-piece lengths for required heights.
- F. Joist Forms: Code recognized steel or molded plastic types as required.
- G. Special Forms: For exposed integrally-colored concrete, plywood as above with high density overlay, plywood with integral structural hardboard facing or fibrous glass reinforced plastic facing, providing specified finish.
- H. For Exposed Concrete Finish:
 - 1. Plywood: New, waterproof, synthetic resin bonded, exterior type Douglas fir or Southern pine plywood manufactured especially for concrete formwork and conforming to NIST Voluntary Product Standard PS 1, Grade B-B grade, Class I.
 - 2. Glass-Fiber-Fabric Reinforced Plastic Forms: Matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to structural tolerances and appearance of finished concrete surfaces.
 - 3. Steel: Minimum 16 gage sheet, well matched, tight fitting, stiffened to support weight of concrete, without deflection detrimental to tolerances and appearances of finished concrete surfaces.
 - 4. Plywood: "Finland Form," or "Combi Form" distributed by North American Plywood Corporation or equal. The material shall be furnished with hard smooth birch face veneers with phenolic resin thermally fused onto panel sides. Edges shall be factory sealed.
- I. Form Ties: Prefabricated rod, flat band, wire, internally threaded disconnecting type, not leaving metal within 1-1/2 inch of concrete surface.
- J. Form Coating: Non-staining clear coating free from oil, silicone, wax, not grain-raising, conforming to ASTM C309. Where form liners are furnished, provide form coatings recommended by form liner manufacturer.
- K. Form Liner: Rigid or resilient type by L.M. Scofield, Symons, Greenstreak or equal, types shown or directed, matching approved Sample.
- L. Void Forms: Manufactured by SureVoid Products, Inc., or equal. Forms shall be "WallVoid" for temporary support of concrete walls and grade beams spanning between supports, and "SlabVoid" for creating gaps between concrete slabs or steps and underlying soils. Void forms shall be fabricated of corrugated paper with moisture resistant exterior, and shall be capable of withstanding working load of 1,500 psf. Provide accessories as required.

PART 3 - EXECUTION

3.01 GENERAL

- A. Forms shall be constructed so as to shape final concrete structure conforming to shape, lines and dimensions of members required by Drawings and Specifications, and shall be sufficiently tight to prevent leakage of mortar. They shall be properly braced or tied together to maintain position and shape with no sagging, displacement, or bulging between studs. Forms and their supports shall be designed so that previously placed structures will not be damaged. Use clean, sound, approved form material, coated with specified materials only, not oil. Provide backing on all plywood joints. Forms shall be true to line within tolerances as permitted under section 1.6 above.

3.02 TOLERANCES

- A. Permitted abrupt or gradual irregularities in formed surfaces as measured within a 5 feet length with a straightedge shall per ACI 347, Table 5.3.1:

Class of Surface			
A	B	C	D
1/8 inch	1/4 inch	1/2 inch	1 inch

1. Class A: Use for concrete surfaces prominently exposed to public view.
 2. Class B: Use for coarse-textured concrete-formed surfaces intended to receive plaster, stucco or wainscoting.
 3. Class C: Use as a general standard for permanently exposed surfaces where other finishes are not specified.
 4. Class D: Use for surfaces where roughness is not objectionable and will be permanently concealed.
- B. Finish Lines: Position formwork to maintain hardened concrete finish lines within following permissible deviations.
1. Variation from Plumb:

a.	In 10'-0"	1/4 inch
b.	In any story or 20'-0"	3/8 inch
c.	In 40'-0" or more	3/4 inch
 2. Variation from Level or Grades Indicated:

a.	In 10'-0"	1/4 inch
b.	In any bay or 20'-0" maximum	3/8 inch
c.	In 40'-0" or more	3/4 inch
 3. Cross-Sectional Dimensions:

a.	Minus	1/4 inch
b.	Plus	1/2 inch
 4. Building Lines: Variation of linear building lines from established position in plan and related position of columns, walls and partitions:

- a. In any bay or 10'-0" maximum 1/2 inch
- b. In 40'-0" or more 1 inch

C. Slab Openings: Variations in size and location of sleeves and slab openings shall not exceed 1/4 inch.

3.03 ERECTION

- A. Conform to ACI 301 and ACI 347 except as exceeded by the requirements of code, regulatory agencies, or herein.
- B. Plywood shall be installed with horizontal joints level, vertical joints plumb and with joints tight. Back joints by studs or solid blocking, and fill where necessary for smoothness. Reused plywood shall be thoroughly cleaned, damaged edges or surfaces repaired and both sides and edges oiled with colorless form oil. Nail plywood along edges, and to intermediate supports, with common wire nails spaced as necessary to maintain alignment and prevent warping.
- C. Construction: Coat forms with the specified resin coating, not form oil. Construct forms to exact shapes, sizes, lines, and dimensions required to obtain level, plumb, and straight surfaces. Provide openings, offsets, keys, reglets, anchorages, recesses, moldings, chamfers, blocking, screeds, drips, bulkheads, and all other required features. Make forms easily removable without hammering or prying against concrete. Space forms apart with metal spreaders. Construct forms to accurate alignment, location and grades, and provide against sagging, leakage of concrete mortar, or displacement occurring during and after placing of concrete. Coordinate installation of inserts and anchors in forms according to Shop Drawings and requirements for work of other sections.
- D. Openings for Cleaning: Provide temporary openings at points in formwork to facilitate cleaning and inspection. At base of walls and wide piers, bottom form board on one face for entire length shall be omitted until form has been cleaned and inspected.
- E. Chamfers: Provide 3/4 inch by 3/4 inch chamfer strips for all exposed concrete corners and edges unless otherwise indicated.
- F. Reglets and Rebates: As specified in Section 03 3000: Cast-In-Place Concrete. Form required reglets and rebates to receive frames, flashing, and other equipment if required by Architect.
- G. Form Joints: Fill joints to produce smooth surfaces, intersections, and arises. Use polymer foam or equivalent fillers at joints and where forms abut or overlap existing concrete to prevent leakage of mortar.
- H. Recesses, Drips, and Profiles: Provide smooth milled wood or pre-formed rubber or plastic shapes of types shown and required.
- I. Re-Use: Clean and recondition form material before re-use.

3.04 REMOVAL OF FORMS

- A. Forms shall not be removed until concrete has sufficiently hydrated to maintain its integrity and not be damaged by form removal operations. Unless noted otherwise and/or permitted by the Architect, columns and wall forms shall not be removed in less than 24 hours, floor slabs in less than 7 days, beams and girders in less than 15 days, pan forms for joists may be removed after 3 days, but joist centering shall not be removed until after 15 days, and ramp, landing, steps and floor slabs shall not be removed in less than 7 days. Shoring shall not be removed until member has acquired sufficient strength to support its weight, load upon it, and added load of construction. In no case shall forms be removed sooner than specified in ACI 347, Table 5.7.2.3, or ACI 318 Section 26.11.
- B. Compressive strength of in-place concrete shall be determined by testing field-cured specimens representative of concrete location or members, as specified in Section 03 3000: Cast-In-Place Concrete.
- C. Avoid damage to concrete surfaces during form removal.
- D. Store reusable forms for exposed architectural concrete to prevent damage to contact surfaces.
- E. Remove formwork in same sequence as concrete placement to achieve similar concrete surface coloration.

3.05 SURVEY AND ADJUSTMENT:

- A. Check forms before and during placement of concrete, using an instrument, and make corrections as work proceeds.

3.06 EMBEDDED PIPING AND ROUGH HARDWARE:

- A. Comply with ACI 318, Section 26.8. Where work of other sections require openings for passage of pipes, conduits, ducts, and other inserts in the concrete, obtain all dimensions and other information. All necessary pipe sleeves, anchors, or other required inserts shall be accurately installed as part of the work of other sections, according to following requirements.
- B. Conduits or Pipes
 1. No pipe/conduit runs shall be embedded in structural concrete unless indicated on the structural drawings.
 2. Where pipe/conduit is indicated, it shall conform to the following requirements:
 - a. Conduits/pipes of aluminum shall not be embedded in structural concrete unless coated or covered to prevent aluminum-concrete reaction or electrolytic action between aluminum and reinforcing steel.
 - b. Conduits/pipes shall be located so as not to reduce strength of concrete. In no case place conduit/pipes in a slab 8" thick or less. Conduit buried in a concrete slab shall not have an outside diameter greater than 1/3 the slab thickness nor be placed below the bottom reinforcing steel or over top reinforcing steel. Embedded conduit/pipes shall be approved by the engineer of record prior to concrete placement.
- C. Sleeves: Pipe sleeves may pass through slabs or walls if not exposed to rusting or other deterioration and are of uncoated or galvanized iron or steel. Provide sleeves of diameter large enough to pass any hub or coupling on pipe, including any insulation.

3.07 FIELD QUALITY CONTROL

- A. Inspection: Obtain inspection and approval of forms before placing structural concrete.

3.08 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

3.09 CLEAN UP

- A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

END OF SECTION

This page intentionally left blank

SECTION 03 20 00
CONCRETE REINFORCEMENT

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section
- B. Section Includes:
 - 1. Reinforcing bars for cast-in-place concrete
 - 2. Reinforcing mesh for cast-in-place concrete
 - 3. Accessories, including but not limited to chairs and tie wires
 - 4. Reinforcing bars for masonry
 - 5. Reinforcing bars for site-cast pre-cast concrete
 - 6. Miscellaneous concrete work, including but not limited to areaways, cast-in-place valve boxes, pits, splash blocks, equipment bases, and other items as shown or required to complete all work.
- C. Related Sections:
 - 1. Section 01 4100: Testing and Inspection.
 - 2. Section 03 1000: Concrete Formwork.
 - 3. Section 03 3000: Cast-In-Place Concrete.

1.02 SYSTEM DESCRIPTION

- A. Regulatory Requirements: Fabrication and placement of reinforcing shall be in accordance with requirements of CBC, Chapter 19A and ACI 318.

1.03 REFERENCES:

- A. Comply with the following as a minimum requirement:
 - 1. American Society for Testing and Materials (ASTM):
 - a. ASTM A82 - Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.
 - b. ASTM A184 - Standard Specification for Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
 - c. ASTM A185 - Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete.
 - d. ASTM A496 - Standard Specification for Steel Wire, Deformed, for Concrete Reinforcement.
 - e. ASTM A497 - Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete.

- f. ASTM A615 - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
 - g. ASTM A706 - Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.
2. American Concrete Institute (ACI) Publication:
 - a. ACI 315 – Manual of Standard Practice for Detailing Reinforced Concrete Structures.
 - b. ACI 318 – Building Code Requirements for Structural Concrete, as modified by CBC Sections 1905A.
 - c. ACI 117 – Specification for Tolerances for Concrete Construction and Materials
 3. American Welding Society (AWS):
 - a. AWS D1.4 – Structural Welding Code – Reinforcing Steel.
 4. Concrete Reinforcing Steel Institute (CRSI) Manual of Standard Practice.
 5. California Building Code, Chapter 19A, Concrete.

1.04 SUBMITTALS

- A. Shop Drawings: Submit steel reinforcement Shop Drawings in accordance with ACI 315. Shop drawings should include complete layouts, sections, and details for congested conditions, typical bending diagrams and offsets, splice lengths and locations, proposed layout where vertical and horizontal bars intersect, and wherever welding is proposed, detailed to conform to AWS and CBC requirements. Include slab plans, size and lengths of reinforcing steel.
- B. Certification: Submit copies of welding operator's certificate.
- C. Chemical Analysis: Provide for bars to be welded, in accordance with ACI 318 Section 26.6.4.
- D. Closeout Submittals: Record locations and quantities of reinforcing that vary from Shop Drawings.
- E. LEED Documentation: Submit the following documentation
 1. Specific product name, make, model, and manufacturer
 2. Material Cost
 3. Environmental Product Declaration (EPD) report:
 - a. Product-specific declaration: Manufacturer's Life Cycle Assessment conforming to ISO 14044
 - b. Product Specific Type III EPD with third-party Type III certification
 - c. Industry-wide (generic) EPD with third-party Type III certification
 4. Post-Consumer Recycled Content: Cutsheets, product literature or letter from the manufacturer indicating the percentage by weight of post-consumer (post-industrial) recycled content.

1.05 QUALITY ASSURANCE

- A. Comply with the following as a minimum requirement:
 1. Concrete Reinforcing Steel Institute (CRSI) Manual of Standard Practice.

2. American Welding Society (AWS).
 3. American Concrete Institute (ACI).
 4. CBC, Chapter 19A, Concrete.
- B. Source Quality Control: Refer to Division 01 Sections, CBC Chapters 17A and 19A, and ACI 318 Chapter 26 for general requirements and to the following paragraphs for specific procedures. Testing laboratory retained by the Owner shall select test Samples of bars, ties, and stirrups from the material at the Project Site or from the place of distribution, with each Sample consisting of not less than two 18 inch long pieces, and perform the following tests according to ASTM A615, or ASTM A706, as applicable:
1. Identified Bars: If Samples are obtained from bundles as delivered from the mill, identified as to heat number, accompanied by mill analyses and mill test reports, and properly tagged with the identification certificate so as to be readily identified, perform one tensile and one bend test for each 10 tons or fraction thereof of each size of bars. Submit mill reports when Samples are selected.
 2. Unidentified Bars: When positive identification of reinforcing bars cannot be performed and when random Samples are obtained, perform tests for each 2.5 tons or fraction thereof, one tensile and one bend test from each size of bars.
 3. Testing to be per CBC Sections 1910A and 1704A.
- C. Certification of Welders: Shop and Project site welding shall be performed by welding operators certified by AWS.

1.06 DELIVERY, STORAGE AND HANDLING

- A. Avoid exposure to dirt, moisture or conditions harmful to reinforcing.
- B. Reinforcing steel bars, wire, and wire fabric shall be stored on the Project site to permit easy access for examination and identification of each shipment. Material of each shipment shall be separated for size and shape. Use metal tags indicating size, length and other marking shown on placement drawings. Maintain tags after bundles are broken.

PART 2 PRODUCTS

2.01 GENERAL

- A. Provide reinforcing of sizes, gages and lengths indicated, bent to indicated shapes.

2.02 MATERIALS

- A. Steel Reinforcing Bars: ASTM A615, or ASTM A706 deformed grade 60 billet steel unless otherwise specified or indicated. Deformations to be per ASTM A-305.
- B. Reinforcing Bars for welding: ASTM A706, Grade 60.
- C. Welded Wire Fabric for Reinforcement: ASTM A185, 60 KSI minimum tensile strength.
- D. Tie Wire: ASTM A82, fully annealed, copper-bearing steel wire, 16 gage minimum.

- E. Chairs, Spacers, Supports, and Other Accessories: Standard manufacture conforming to CRSI and ACI 315 fabricated from steel wire of required types and sizes. For reinforcement supported from grade, provide properly sized dense precast blocks of concrete with embedded wire ties.
- F. Welding electrodes: AWS D1.4, Table 5.1 and 5.3 low hydrogen electrodes, E9018 for Grade 60 steel.

2.03 FABRICATION OF REINFORCING BARS:

- A. Comply with CRSI Manual of Standard Practice for Reinforced Concrete Construction for fabrication of reinforcing steel.
- B. Bending and Forming: Fabricate bars of the indicated sizes and bend and form to required shapes and lengths by methods not injurious to materials. Do not heat reinforcement for bending. Bend bars No. 6 size and larger in the shop only. Bars with unscheduled kinks or bends are not permitted. Provide only tested and permitted bar materials.
- C. Welding: Provide only ASTM A706 steel where welding is indicated. Perform welding by the direct electric arc process in accordance with AWS D1.4 and specified low-hydrogen electrodes. Preheat 6 inches each side of joint. Protect joints from drafts during the cooling process; accelerated cooling is not permitted. Do not tack weld bars. Clean metal surfaces to be welded of loose scale and foreign material. Clean welds each time electrode is changed and chip burned edges before placing welds. When wire brushed, the completed welds must exhibit uniform section, smooth welded metal, feather edges without undercuts or overlays, freedom from porosity and clinkers, and good fusion and penetration into the base metal. Cut out welds or parts of welds deemed defective, using chisel, and replace with proper welding. Prequalification of welds shall be in accordance with CBC requirements.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Bars shall be bent cold. Bars partially embedded in concrete shall not be field bent except as indicated on reviewed Shop Drawings. Before installation, and again before concrete is placed, clean reinforcing of loose scale, rust, oil, dirt and any coating that could reduce bond.
- B. Securing in Place: Accurately place bars and wire tie in precise position where bars cross. Bend ends of wire ties away from the forms. Wire tie bars to corners of ties and stirrups. Support bars according to the current edition of "Recommended Practice for Placing Bar Supports" of Concrete Reinforcing Steel Institute, using approved accessories and chairs. Place precast concrete cubes with embedded wire ties to support reinforcing steel bars in concrete placed on grade and in footings. Use care not to damage vapor barriers where they occur. Accurately position, install, and secure reinforcing to prevent displacement during the placement of concrete.
- C. Exposed Concrete Surfaces: Provide stainless steel or exterior quality vinyl plastic tipped chairs, bolsters, and accessories where exposed on exterior or interior concrete surfaces not to be painted or permanently covered. Provide metal chairs to hold reinforcement the required distance above form bottoms. In beams and slab construction, provide chairs under top slab reinforcement as well as under bottom reinforcement. Space chairs so that reinforcement will not be displaced during installation. Provide metal spacers to secure proper spacing. Stirrups shall be accurately and securely wired to bars at both top and bottom. At slabs, footings, and beams in contact with earth, provide concrete blocks to support reinforcement at required distance above grade.

- D. Clearances: Maintain minimum clear distances between reinforcing bars and face of concrete as indicated on Structural Drawings.
- E. Splices: Do not splice reinforcing bars at the points of maximum stress except where indicated. Lap splices as shown or required to develop the full strength or stress of bars. Stagger splices in horizontal wall bars at least 48" longitudinally in alternate bars and opposite faces.
- F. Field Welding of Bars: As specified on plans for fabrication. All welding to be per ACI 318 Section 26.6.4.
- G. Maintaining Bars In Position: Take adequate precautions to assure that reinforcing position and spacing is maintained during placement of concrete.
- H. Reinforcing Mesh: Lap one full mesh plus 2", or 9" whichever is greater, at splices, wire tie, and support the same as specified for bars.
- I. Do not install reinforcing in supported slabs and beams until walls and columns have been installed to underside of slabs and beams or until construction joints have been thoroughly cleaned. Reinforcing shall be inspected before placement of concrete and cleaned as required.
- J. Use deformed bars unless otherwise indicated.
- K. Splice Devices:
 - 1. Type and manufacturer as noted on drawings. If substitution is requested, contractor to supply manufacturer calculations and supporting data showing proposed substitution conforms to requirements indicated and supplied.
 - 2. Install in accordance with manufacturer's written instructions.
 - 3. Splices shall develop at least 125% of the yielding strength of the bar.

3.02 FIELD QUALITY CONTROL:

- A. Supervision: Perform Work to this Section under supervision of a capable superintendent.
- B. Inspection: Obtain inspection per CBC Sections 1704A.4.2 & 1903A and approval of reinforcing before concrete is placed.
- C. Welding Inspection: Whether welding is done in the shop or at the site, perform welding of reinforcing bars under inspection of the Testing Laboratory Welding Inspector who is specially qualified and approved by DSA in accordance with CBC Section 1704A.4.2. The welding inspector shall make a systematic record of all welds.
 - 1. This record shall include:
 - a. Identification marks of welders.
 - b. List of defective welds.
 - c. Manner of correction of defects.

2. The welding inspector shall check the material, equipment details of construction, and procedures as well as the welds. The inspector shall also check the ability of the welder. The welder shall furnish the architect, structural engineer and the enforcement agency with a verified report that the welding which is required to be inspected is proper and has been done in conformity with the approved plans and specifications. The welding inspector shall use all means necessary to determine the quality of the weld. The inspector may use gamma ray, magnaflux, trepanning, sonics or any other aid to visual inspection, which the inspector may deem necessary to assure the adequacy of the welding.

3.03 CLEAN UP

- A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

3.04 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 03 30 00
CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section
- B. Section Includes:
 - 1. Cast-in-place normal weight and lightweight concrete, placement and finishing.
- A. Related Sections:
 - 1. Section 01 41 00: Testing and Inspection
 - 2. Section 03 10 00: Concrete Forms and Accessories.
 - 3. Section 03 20 00: Concrete Reinforcement.

1.02 REFERENCES

- A. Comply with the following American Concrete Institute (ACI) Publications as a minimum requirement:
 - 1. ACI 117 – Specifications for Tolerances for Concrete Construction and Materials.
 - 2. ACI 211 – Recommended Practice for Selecting Proportions of Concrete. ACI 301 – Specifications for Structural Concrete.
 - 3. ACI 302.1R – Guide for Concrete Floor and Slab Construction.
 - 4. ACI 304 – Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete
 - 5. ACI 305.1 - Specification for Hot Weather Concreting.
 - 6. ACI 306.1 – Standard Specification for Cold Weather Concreting.
 - 7. ACI 308 – Recommended Practice for Curing Concrete
 - 8. ACI 309 – Recommended Practice for Consolidation of Concrete
 - 9. ACI 318 - Building Code Requirements for Structural Concrete, as modified by CBC Section 1905A.
- B. Comply with the following American Society for Testing and Materials (ASTM) Standards as a minimum requirement:
 - 1. ASTM C31 – Standard Specification for Making and Curing Concrete Test Specimens in the Field.
 - 2. ASTM C33 - Standard Specification for Concrete Aggregates.
 - 3. ASTM C39 - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.

4. ASTM C42 - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
5. ASTM C88 - Standard Test Method for Soundness of Aggregates by use of Sodium Sulphate or Magnesium Sulphate.
6. ASTM C94 - Standard Specification for Ready-Mixed Concrete.
7. ASTM C143 - Standard Test Method for Slump of Hydraulic Cement Concrete.
8. ASTM C150 – Standard Specification for Portland Cement
9. ASTM C171 - Standard Specification for Sheet Materials for Curing Concrete.
10. ASTM C172 – Standard Practice for Sampling Freshly Mixed Concrete.
11. ASTM C173 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
12. ASTM C227 – Potential Alkali Reactivity of Cement-Aggregate Combinations (Mortar-Bar Method).
13. ASTM C231 – Air Content of Freshly Mixed Concrete by the Pressure Method.
14. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete.
15. ASTM C289 - Standard Test Method for Potential Alkali-Silica Reactivity of Aggregates (Chemical Method).
16. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
17. ASTM C330 - Standard Specification for Lightweight Aggregates for Structural Concrete.
18. ASTM C494 - Standard Specification for Chemical Admixtures for Concrete.
19. ASTM C567 - Standard Test Method for Determining Density of Structural Lightweight Concrete.
20. ASTM C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.
21. ASTM C845 - Standard Specification for Expansive Hydraulic Cement
22. ASTM C989 - Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.
23. ASTM C1107 - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
24. ASTM C1064 - Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete
25. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures
26. ASTM C1567 - Standard Test Method for Determining the Potential Alkali-Silica Reactivity of Combinations of Cementitious Materials and Aggregate (Accelerated Mortar-Bar Method)
27. ASTM D1751 - Standard Test Method for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types).
28. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
29. ASTM E1155 - Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers.

30. ASTM E1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
31. ASTM E1745 - Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

1.03 SUBMITTALS

- A. Shop Drawings: Submit Shop Drawings indicating locations of cast-in-place concrete work, dimensioned locations and types of construction and expansion joints, and accessory items such as vapor barriers. Include details and locations of reinforcing, embedded items, and interfacing with other Work.
- B. Mix Design Data: Submit concrete mix designs as specified herein and in Article 2.2.
 1. Submit name, address and telephone number of the concrete production facility which the contractor intends to engage to design the concrete mixes. Submit name and qualifications of the proposed concrete technologist.
 2. Mix Design: Submit a concrete mix design for each strength and type of concrete indicated in the drawings or specified. Include water/cement ratio, source, size and amount of coarse aggregate and admixtures. Predict minimum compressive strength, maximum slump and air content percentage. Clearly indicate locations where each mix design will be used. Limit water content per cubic yard of mixed concrete to: 300 pounds maximum for normal weight concrete (pea gravel mixes exempt), 325 pounds maximum for light weight concrete.
 3. Test Reports: Submit copies of test reports showing that the proposed mixes produce concrete with the strengths and properties specified. Include tests for cement, aggregates and admixtures. Provide gradation analysis.
- C. Material Samples: Contractor to provide 3' x 3' mock-up samples for each type of concrete color, finish and jointing for Owner's approval prior to installation where the formed surface will be permanently exposed as a finish (seating wall, slab on grade, lightweight concrete over metal decking).
- D. Certificates: Submit notarized certification that each of the following conforms to the standards indicated:
Portland cement: ASTM C150.
Normal weight concrete aggregates: ASTM C33.
Lightweight concrete aggregates: ASTM C330.
 1. Aggregates: Submit evidence that the aggregate is not reactive in the presence of cement alkalis. In the absence of evidence, aggregate shall be tested per ASTM C289. If results of test are other than innocuous, aggregates shall be tested per ASTM C1567, see CBC Section 1903A.5.
 2. Curing materials: ASTM C171.
 3. Manufacturer of ready-mixed concrete shall deliver to the IOR a certificate with each mixer truck. Certificate shall bear the signature of representative of the testing laboratory, and shall state quantity of cement, water, fine and coarse aggregate and admixtures.
 4. Admixtures: ASTM C260.
- E. Admixtures: Submit product data for proposed concrete admixtures.

- F. LEED Documentation: Submit the following documentation
1. Specific product name, make, model, and manufacturer
 2. Material Cost
 3. Environmental Product Declaration (EPD) report:
 4. Industry-wide (generic) EPD with third-party Type III certification
 5. Post-Consumer Recycled Content: Cutsheets, product literature or letter from the manufacturer indicating the percentage by weight of post-consumer (post-industrial) recycled content.
 6. Extracted, Manufactured, and Purchased locally. Provide cutsheets, product literature or letter from the manufacturer indicating the location of extraction, manufacturing, and purchasing and distance from the project site.

1.04 QUALITY ASSURANCE

- A. Concrete Manufacturer: Furnish concrete from licensed commercial ready-mix concrete plant conforming to DSA approved plans as well as CBC Chapter 19A and ACI 318-14 as modified by CBC section 1905A.
- B. Continuous inspection shall be provided at the batch plant and for transit-mixed concrete to run check sieve analysis of aggregate, check moisture content of fine aggregate, check design of mix, check cement being used with test reports, check loading of mixer trucks, and certify to quantities of materials placed in each mixer truck.
- C. Inspection shall be performed by a representative of a testing laboratory selected by the Owner. Owner will pay for inspection costs. Notify the laboratory 24 hours in advance of time concrete is to be mixed. Notify the laboratory of postponement or cancellation of mixing within at least 24 hours of scheduling time.
- D. Contractor shall assist the testing laboratory in obtaining and handling samples at the project site and at the source of materials.
- E. Continuous batch plant inspection requirement may be waived in accordance with CBC Section 1705A.3.3. Waiver shall be in writing, including DSA approval. When batch plant inspection is waived by DSA, the following requirements shall be met:
1. Approved inspector of the testing laboratory shall check the first batching each day for each approved mix design and furnish mix proportions to the licensed weightmaster.
 2. Licensed weightmaster shall positively identify materials as to quantity and certify to each load by a ticket.
 3. Tickets shall be transmitted to the IOR by a truck driver with load identified thereon. The IOR will not accept the load without a load ticket identifying the mix and will keep a daily record of placements, identifying each truck, its load and time of receipt and approximate location of deposit in the structure and will transmit a copy of the daily record to DSA.
 4. At the end of the project, the weightmaster shall furnish an affidavit to DSA certifying that all concrete furnished conforms in every particular to proportions established by mix designs.
- F. Special Inspections and Tests shall be in accordance with CBC Chapter 17A, CBC Section 1910A and Specification Section 01 4100.

- G. Allowable Tolerances: Construct concrete conforming to the tolerances specified in ACI 117 "Recommended Tolerances for Concrete Construction and Materials", as applicable, unless exceeded by requirements of regulatory agencies or otherwise indicated or specified.
- H. Source Quality Control: Refer to the following paragraphs for specific procedures. Concrete materials which, by previous tests or actual service, have shown conformance may be used without testing when so approved by the Architect and DSA. Testing Laboratory shall perform following conformance testing.
1. Cement: Furnish mill certificates in accordance with the CBC section 1910A.1 and acceptable to Architect and DSA, showing conformance with requirements specified.
 2. Cementitious Material Test. The concrete supplier shall furnish to the enforcement agency certification from the cement manufacturer that the cement proposed for use on the project has been manufactured and tested in compliance with the requirements of ASTM C 150 for Portland cement and ASTM C 595 or ASTM C 1157 for blended hydraulic cement, whichever is applicable. When a mineral admixture or ground granulated blast-furnace slag is proposed for use, the concrete supplier shall furnish to the enforcement agency certification from the manufacturer that they have been manufactured and tested in compliance with ASTM C 618 or ASTM C 989, whichever is applicable. The concrete producer shall provide copies of the cementitious material supplier's certificate of compliance that represents the materials used by date of shipment for concrete. Cementitious materials without certification of compliance shall not be used per section 1910A.1 of the CBC.
 3. Aggregates for Normal Weight Concrete: Test the aggregate before and after concrete mix is designed and whenever character of aggregate varies or source of material is changed in accordance with ASTM C33 and CBC section 1903A.5. Include a sieve analysis. Obtain samples of aggregates at the dry batching or ready-mix concrete plant in accordance with ASTM D75 and perform tests for the properties listed in the following table.
 4. Aggregates for Lightweight Concrete: Test the lightweight aggregates before mix is designed and whenever the character of aggregate varies or source is changed in accordance ASTM C330. Include sieve analyses, report on unit weights, report on deleterious substances, unburned or under-burned lumps, loss on ignition, soundness, staining materials, and crushed particles in coarse aggregate. Splitting tensile strength (FSP); 5.5 minimum

PHYSICAL PROPERTIES		
Physical Properties, units	Test Method	Minimum values
Sieve analysis	ASTM C136	
Organic impurities	ASTM C40	Fine aggregate not darker than reference standard color
Soundness	ASTM C88	Loss after 5 cycles not more than 8 percent of coarse aggregate, nor more than 10 percent of fine aggregate
Abrasion	ASTM C131	Weight loss not more than 10.5 percent after 100 revolutions, 42 percent after 500 revolutions
Deleterious materials	ASTM C33	
Materials finer than No. 200 sieve	ASTM C117	Not over 1 percent for gravel, 1.5 percent for crushed aggregate

Reactivity potential	ASTM C227, C289, C342	Ratio of silica released to reduction in alkalinity not to exceed 1.0.
Sand equivalent	ASTM D2419	California sand equivalent values operating range not below 71 percent

- I. Compliance with Regulations: All materials shall comply with the current rules and regulations of the local air quality management district, with the rules regarding volatile organic compounds, and with FDA rules and regulations for dangerous substances in construction products.

1.05 CONCRETE MIX DESIGNS

- A. A registered civil engineer with experience in concrete mix design shall select the relative amounts of ingredients to be used as basic proportions of the concrete mixes proposed for use under the provisions of ACI 318 Section 26.4. Mixes shall be based on existing approved compressive strength test data for concrete mixes in accordance with ACI 301 and requirements below:
- B. Strength Requirements: Design mixes for structural concrete for minimum 28-day compressive strengths required by Drawings and Specifications. The trial batch strength for each mix shall exceed indicated or specified strength by 750 psi or a lesser amount based on the standard deviations of strength test records according to ACI 318.
- C. Normal Weight Concrete Mix Design: Design all mixes for workability and durability of concrete. Control the mixes in accordance with ACI 301 and Section 26.4 of ACI 318, Building Code Requirements for Reinforced Concrete. Make adjustments in cement content required for concrete strengths at Contractor's expense and do not exceed 0.60 (or as indicated on concrete general notes of approved plans) absolute water-cement or cement plus fly ash ratio by weight. Do not use calcium chloride or any admix containing such material. Admixtures containing a material releasing nitrates in solution are limited to 0.06 percent by weight for the chloride ion.
- D. Maximum Aggregate Sizes: Not exceeding 3/4 of minimum clear space between bars and between bars and forms, nor larger than 1/5 of least dimensions between the forms.
- E. Design the mixes with 1" maximum size, except maximum 1-1/2" size for foundations and maximum 3/8" size at congested reinforcing or thin sections, as submitted by the contractor and approved by the Architect and Structural Engineer of Record.
- F. ACI 301 with test records. Where a testing laboratory acceptable to the enforcement agency has records of compressive strength tests, a standard deviation shall be established. Test records from which a standard deviation is calculated shall:
1. Represent materials, quality control procedures and conditions similar to those expected, and changes in materials and proportions within the test records shall not have been more restricted than those for proposed work.
 2. Represent concrete produced to meet a specified strength or strengths $f'c$ within 1,000 psi of that specified for proposed work.
 3. Must consist of at least 30 consecutive tests or two groups of consecutive tests totaling at least 30 tests as defined in ACI 301.

1.06 DELIVERY, STORAGE AND HANDLING

- A. Store cement and aggregate materials so as to prevent their deterioration or intrusion by foreign matter. Deteriorated or contaminated materials shall not be furnished.

- B. Packaged materials shall bear the manufacturers and brand name label, and shall be stored in their original unbroken package in a weather tight place until ready for use in the work.
- C. Ready-mix concrete shall be mixed and delivered in accordance with ASTM C 94. Each batch of concrete delivered to the Project site shall be accompanied by a time slip bearing departure time and signature of batch plant supervisor. Concrete shall be placed within 90 minutes after start of mixing. Deliver all materials in timely manner to ensure uninterrupted progress of the work.

1.07 PROJECT CONDITIONS

- A. Cold Weather Requirements: Batching, mixing, delivering and placing of concrete in cold weather shall comply with the applicable requirements of ACI 306.1. When placing concrete during freezing or near-freezing weather the mix shall have a temperature of at least 50 degrees F, but not more than 90 degrees F when cement is added. Concrete shall be maintained at a temperature of at least 50 degrees F. for at least 72 hours after placing or until it has thoroughly hydrated. When necessary, concrete materials shall be heated before mixing. Special precautions shall be provided for protection of transit-mixed concrete. Adequate equipment shall be provided for heating concrete materials and protecting concrete during freezing or near-freezing weather. Surfaces, in which concrete is to come in contact with, shall be free from frost or ice. No frozen materials or materials containing ice shall be furnished.
- B. Hot Weather Requirements: Batching, mixing, delivering and placing of concrete in hot weather shall comply with the applicable requirements of ACI 305R. During hot weather, proper attention shall be provided for ingredients, production methods, handling, placing, protection and curing, to prevent excessive concrete temperatures or water evaporation which could impair required strength or durability.
- C. Concrete temperature of freshly mixed concrete shall be determined per ASTM C1064.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Cement: ASTM C150. Portland Cement or ASTM C595 for Blended Hydraulic Cement.
- B. Aggregates: Conform to the following standards:
 - 1. Normal weight concrete: ASTM C33
 - 2. Aggregate shall be tested for Potential Alkali Reactivity of Cement-Aggregate Combinations per ASTM C289.
 - 3. Nominal maximum size of coarse aggregate shall be no larger than:
 - a. 1/5 the narrowest dimension between sides of forms, nor
 - b. 1/3 the depth of slabs, nor
 - c. 3/4 the clear spacing between individual reinforcing bars or wires, bundles of bars, individual tendons, or ducts.
 - 4. Aggregates shall be from approved pits, free from vegetable matter and of opaline, feldspar, or siliceous magnesium substances; all washed, clean, hard, fine-grained sound crushed rock or gravel; not over 5 percent by weight of flat, thin, elongated, friable, or laminated pieces (pieces having major dimension over 5 times average dimension) or more than 2 percent by weight of shale or cherty material. Any suitable individual grading

of coarse aggregate may be furnished, provided Grading of Combined Aggregate indicated in following table is obtained. Refer to Section 01 4200: Testing and Inspection.

GRADING OF COMBINED AGGREGATE

Sieve Number or Size in Inches	1-1/2" Maximum	1" Maximum	3/4" Maximum
Passing a 2"	-----	-----	-----
Passing a 1-1/2"	95-100	-----	-----
Passing a 1"	70-90	90-100	-----
Passing a 3/4"	50-80	70-95	90-100
Passing a 3/8"	40-60	45-70	55-75
Passing a No. 4	35-55	35-55	40-60
Passing a No. 8	25-40	27-45	30-46
Passing a No. 16	16-34	20-38	23-40
Passing a No. 30	12-25	12-27	13-28
Passing a No. 50	2-12	5-15	5-15
Passing a No. 100	0-3	0-5	0-5

- C. Water: Water for concrete mixes, curing and cleaning shall be potable and free from deleterious matter.
- D. Admixtures: Shall be shown capable of maintaining essentially the same composition and performance throughout the work as the product used in establishing concrete proportions in accordance with ACI 318, Section 26.4.
1. Admixtures containing chlorides or sulfides are not permitted.
 2. Air-entraining admixtures shall comply with ASTM C260. Air-entrained admixtures shall not be used for floor slabs to receive steel trowel finish.
 3. Admixtures for water reduction and setting time modification shall conform to ASTM C494.
 4. Admixtures for producing flowing concrete shall conform to ASTM C1017.
 5. Pozzolan: ASTM C618, Class F Fly Ash subject to the conditions in ACI 318 Section 26.4, containing two percent or less carbon. Fly ash shall not be used in excess of 15 percent by weight of total cement quantity for structural concrete except for foundations, which may use up to 25 percent fly ash by weight of total cement quantity. Fly ash need not be included in lightweight concrete mix designs.
 6. Admixtures containing ASTM C845 expansive cements shall be compatible with the cement and produce no deleterious effects.
 7. Silica fumes used as an admixture shall conform to ASTM C1240.
 8. Chemical admixtures shall conform to ACI 318 Section 26.4.1.4, type A or D, manufactured by Grace or approved equal. Type C or E admixtures may be utilized for cold weather conditions provided the admixture is compatible with all other mix materials and admixtures.
- E. Expansion Joint Fillers: Preformed strips, non-extruding and resilient bituminous type, of thickness indicated, conforming to ASTM D1751 and ASTM D1752.
- F. Curing Paper: Shall conform to ASTM C171 and consist of two sheets of kraft paper cemented together with a bituminous material in which are embedded cords or strands of fiber running in both directions. The paper shall be light in color, shall be free of visible defects, with uniform appearance, and non-staining. Liquid curing compounds may be substituted provided they are clear, conform to ASTM C 309, and comply with Rule II 13 of the South Coast Air Quality

Management District and Federal Air Quality Regulation 40 CFR 52.254, such as Master Builders, Grace, Antihydro.

- G. Floor Hardener: Water soluble, inorganic, silicate-based curing, hardening, sealing and dustproofing compound. Aquaseal W20 by Monopole Inc., Kure-N-Harden by BASF, Chem Hard by L&M, Liqui-Hard by W. R. Meadows, or equal.
- H. Underlayment: Two component latex underlayment for filling low spots in concrete for both interior and exterior applications, from featheredge to a maximum of 3/8 inch in thickness. Underlayment shall be non-shrink and suitable for repairing exposed concrete surfaces and for underlayment of carpet, resilient, tile and quarry floor coverings. La-O-Tex by TexRite, Underlay C or RS by Mer-Krete Systems, Underlayment 962 by C-Cure, or equal.
- I. Vapor Barrier: Polyolefin-based 15 mils minimum thickness, meeting or exceeding ASTM E1745, 10 feet minimum width. Permeance shall be less than 0.01 perms [grains/(ft²*hr*inHg)] as determined by ASTM E96 or ASTM F1249 and after mandatory conditioning tests per ASTM E154 Sections 8, 11, 12, & 13. Barrier shall have an impact strength greater than 70 grams per mil, and must be resistant to deterioration. Include accessories including tape and/or mastic. Stego Wrap by Stego Industries LLC, Perminator by W.R. Meadows, Ecoshield-E by Epro, or equal.
- J. Stair Strips and Nosing:
1. Fabricated from 6063-T5 extruded aluminum, mill finish. Anti-slip filler shall contain at least 60 percent virgin grain aluminum oxide abrasive. Binder shall be fully cured resilient type epoxy, with binder-to-filler ratio of 13 percent. The epoxy-abrasive filler shall extend over the curved front edge of the nosing and shall be securely bonded to the extruded aluminum base.
 2. Manufactured by Wooster Products Inc. American Safety Tread Co. Inc., or equal.
 3. Nosing and strips for concrete casting shall be provided with Sure-Hold anchors, chevron shaped continuous full length of nosing or strip.
 4. Nosings and anchors for attachment to hydrated concrete stairs and wood stairs shall be similar to those specified below, except they shall be provided with countersunk holes for screws and fasteners.
 5. Colors: As selected by Architect to contrast with stair color. Colors shall extend uniformly through the filler.
 6. Strip and Nosing Types:
 - a. Nosings for sloped riser steel pan stairs: Type WP4J, 4-1/16 inches wide, 3/8 inch thick.
 - b. Nosings for new concrete stairs: Type WP4C, 4-1/16 inches wide, 3/8 inch thick, nose projects down 1/4 inch.
 - c. Nosings for square edged steel pan stairs: Type WP4SP, 4-1/16 inches wide, 3/8 inch thick nose.
 - d. Strips for recessing into concrete stairs: Type WP1A, except 2-1/4 inches wide, 3/8 inch thick. American Safety Tread Co., Type 24, or equal.
 - e. Strips for adhering to existing or hydrated concrete: Flex-Tred anti-safety strips, minimum 2-1/4 inches wide. Cut from rolls and round corners.
 - f. Strips for anchoring into wood or stone: American Safety Tread Co., Type T-24H, or equal, with holes for fasteners, 2-1/4 inches wide.

- K. Grout: ASTM C1107, non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing additives, capable of developing a minimum compressive strength of 7,000 psi at 7 days; of consistency suitable for application and a 30 minute working time.
- L. Construction Joint Materials: "Key-Kold" or "Kwik-Joint," of profiles indicated.
- M. Bonding Agent: "Weld-Crete," manufactured by Larsen Products Co., P.O. Box 2127, Rockville, MD 20852, Master Builders "Concresive," or equal.
- N. Epoxy Grout: Master Builders "Ceilcote 648," or equal. $f'c$ shall be equal to 125% of the concrete base design strength.
- O. Non-shrink grout:
 - 1. For concealed areas: Master Builders "Embeco 885," or equal, non-gas-forming and free of oxidizing catalysts and inorganic accelerators, used as dry or damp pack, or mixed to a 20-second flow (CRC-C 611), without segregation or bleeding at any temperature between 45 degrees F and 100 degrees F. Working time 30 minutes or more. Grout shall be flowable with an $f'c$ equal to 125% of the concrete base design strength.
 - 2. For exposed areas: Master Builders "Masterflow 928," with same characteristics as specified for concealed areas.
- P. Drypack: Field mixture of 1 part cement to 2 parts fine aggregate mixed to a damp consistency such that a ball molded in the hands will stick together and hold its shape. In lieu of field mixing, Contractor may use factory mixed drypack material, such as Master Builders "Set Grout." $f'c$ shall be equal to 125% of the concrete base design strength.

2.02 CONCRETE MIX

- A. Mix shall be signed and sealed by a Civil or Structural Engineer currently registered in the State of California.
- B. Strength of Concrete: Strengths and types of concretes shall be as indicated in the Drawings. Unless otherwise indicated or specified, concrete shall be provided with minimum 28-day strength of 3000 psi ($f'c$).
- C. The required strength and durability of concrete shall be determined by compliance with the proportioning, testing, mixing and placing provisions of ACI 301. Concrete mix shall meet the durability requirements of ACI 318, Chapter 19 and CBC Section 1905A.
- D. Concrete proportioning shall be determined on the basis of field experience and/or trial mixtures shall in accordance with ACI 301. Proportions of materials shall provide workability and consistency to permit concrete to be placed readily into forms and around reinforcement under conditions of placement to be employed, without segregation or excessive bleeding.
- E. Ready-Mixed Concrete: Mix and deliver in accordance with requirements of ASTM C94. Furnish ready-mixed concrete from an approved commercial off-site plant. Use transit mixer trucks equipped with automatic devices for recording number of revolutions of drum, comply with ACI Chapter 5.
- F. Slump: Adjust quantity of water so concrete at point and time of placing does not exceed the slumps per plans when tested according to ASTM C143. Use the minimum water necessary for workability required by part of structure being cast.

- G. Admixtures: All approved admixtures shall be introduced into the concrete at the batch plant. Field additions are not acceptable.

PART 3 - EXECUTION

3.01 GENERAL

- A. Surfaces to receive concrete shall be free of debris, standing water, and any other deleterious substances before start of concrete placing.
- B. Time of Placing: Do not place concrete until reinforcement, conduits, outlet boxes, anchors, hangers, sleeves, bolts, and other embedded materials are securely fastened in place. Contact the IOR at least 24 hours before placing concrete; do not place concrete until inspected by the IOR.
- C. Pouring Record: A record shall be kept on the Project site of time and date of placing concrete in each portion of structure. Such record shall be maintained on the Project site until Substantial Completion and shall be available for examination by the Architect and DSA.

3.02 TOLERANCES

- A. Concrete construction tolerances shall be as specified in ACI 117 and as modified herein.
- B. Floor Flatness (FF) and Floor Levelness (FL) shall be as indicated below:

	Specified Overall Value		Minimum Local Value	
	F _F	F _L	F _F	F _L
Slabs on ground: mechanical and electrical rooms, parking structures and mortar bed set tile and quarry flooring.	20	15	15	10
Slab on ground: carpet.	25	20	17	15
Slab on ground: thinset tile and resilient flooring, polished concrete	35	25	24	17
Suspended slabs: mechanical and electrical rooms, parking structures and mortar bed set tile and quarry flooring.	20	15	N/A	N/A
Suspended slabs: carpet.	25	20	N/A	N/A
Topping slabs: polished concrete	35	25	N/A	N/A
Suspended slabs: thinset tile and resilient flooring.	35	20	N/A	N/A

- C. Refer to ACI 302.1R, Tables 8.1 and 8.2 Slab on Ground and Suspended Flatness/Levelness Construction Guide, for recommended concrete placing and finishing methods.

- D. Floor Flatness and Floor Levelness shall be tested in accordance to ASTM E1155. Floor measurements shall be made within 72 hours after slab installation, and shall precede removal of shores and forms.
- E. Floor levelness (FL) requirements are not applicable to concrete placed directly over unshored bare metal decking. These requirements are applicable for the topping slab placed over the structural composite floor decks.

3.03 PREPARATION

- A. Vapor Barrier: Before installation of screeds and slab reinforcement, install vapor barrier under slabs on grade, as indicated in the drawings.
 - 1. Install in accordance to ASTM E1643.
 - 2. Place vapor retarder sheeting with the longest dimension parallel with the direction of the concrete pour.
 - 3. Laps or seams shall be overlapped 12 inches, or as recommended by manufacturer. Laps and penetrations shall be sealed with the manufacturer's recommended tape and/or mastic.
 - 4. Extend membrane and lap at least 4 inches onto adjoining wall surfaces and seal with pressure-sensitive tape.
 - 5. IOR will inspect and mark areas of damage and insufficient installation of the vapor barrier sufficiently in advance of concrete placement.
 - a. Deficiencies shall be corrected before concrete is placed.
 - b. Patch damaged areas with vapor barrier overlapping all four sides 6 inches and adhering with tape.
- B. Reglets and Rebates:
 - 1. Form reglets and rebates in concrete to receive flashing, frames and other equipment as detailed and required. Coordinate dimensions and locations required with other related Work.
 - 2. If concrete slabs on grade adjoin a wall or other perpendicular concrete surface, form a reglet in wall to receive and carry horizontal concrete Work. Reglet shall be full thickness of the slab and shall be 3/4 inch wide, unless otherwise indicated. Requirement does not apply to exterior walks, unless specifically indicated.
- C. Screeds: Install screeds accurately and maintain at required grade or slab elevations after steel reinforcement has been installed, but before starting to place concrete. Install screeds adjacent to walls and in parallel rows not to exceed 8 feet on centers.
- D. Screeds over Vapor Barrier: Use weighted pad or cradle type screeds and do not drive stakes through the vapor barrier. Check with an instrument level, transit, or laser.
- E. Remove all free water from forms before concrete is deposited. Remove hardened concrete, debris, and foreign materials from interior surfaces of forms, exposed reinforcing, and from surfaces of mixing and conveying equipment.
- F. Wetting: Wet wood forms sufficiently to tighten up cracks. Wet other materials sufficiently to reduce adsorption and to help maintain concrete workability.
- G. Earth Subgrade: Dampen 24 hours before placing concrete, but do not muddy. Re-roll where necessary for smoothness and remove loose material.

- H. Gravel Fill: Recompact disturbed gravel and bring to correct elevation.
- I. Sand Beds or Subslab Drainage Fill: Recompact disturbed material and bring to correct elevation.
- J. Composite Steel Beams: Provide shores for tributary construction loads to floor and roof beams as required, or camber the beams as approved by Architect.
- K. All concrete shall be thoroughly consolidated by suitable means during placement and shall be thoroughly worked around reinforcement and embedded fixtures and into corners of forms.

3.04 INSTALLATION

A. Conveying and Placing:

1. Do not place concrete until reinforcing steel and forms or decks have been approved by the Inspector and other authorities having jurisdiction. Concrete shall be placed only under direct observation of the IOR. Do not place concrete outside of regular working hours, unless the IOR has been notified at least 48 hours in advance.
2. Concrete shall be conveyed from mixer to location of final placement by methods that will prevent separation or loss of materials. Place concrete in horizontal layers not more than 18" thick within 90 minutes after water is first added to the batch.
3. Concrete shall be placed as nearly as practicable to its final position to avoid segregation due to re-handling or flowing. No concrete that has partially hydrated or has been contaminated by foreign materials shall be placed, nor shall re-tempered concrete or concrete which has been remixed after initial set be placed.
4. In placing concrete in columns, walls or thin sections, provide openings in forms, elephant trunks, tremies or other recognized devices, to prevent segregation and accumulation of partially hydrated concrete on forms or metal reinforcement above level of concrete being placed. Such devices shall be installed so that concrete will be dropped vertically.
5. Concrete shall be placed as a continuous operation until placing of panel or section is completed. Top surfaces of vertically formed lifts shall be level.
6. Concrete shall be thoroughly consolidated by suitable means during placement, and shall be thoroughly worked around reinforcement and embedded fixtures with mechanical vibrators and into corners of forms.
7. Where conditions make consolidation difficult, or where reinforcement is congested, batches of concrete adjusted to use smaller size aggregates than specified in the mix design shall be used as approved by the Architect and Structural Engineer.
8. Where new concrete is placed against or on old or existing concrete, apply bonding agent to surface of old concrete prior to placement of new concrete.
9. Comply with ACI 301.

B. Cold Weather:

1. Provide adequate equipment for heating concrete materials and protecting concrete during freezing or near-freezing weather. All ground with which concrete is to come in contact shall be free from frost. No frozen materials or materials containing ice shall be used.
2. The temperature of concrete at the time of placement shall not be below the minimum temperatures given in Table 3.1 of ACI 306.1.

3. Concrete shall be maintained at a temperature of at least 50° F. for not less than 72 hours after placing or until it has thoroughly hardened. Cover concrete and provide sufficient heat as required. When necessary, aggregates shall be heated before mixing. Special precautions shall be taken for protection of transit-mixed concrete.

C. Hot Weather:

1. Concrete to be placed during hot weather shall comply with the requirements of ACI 301.
2. Maintain concrete temperatures indicated in Table 2.1.5 of ACI 305R to prevent the evaporation rate from exceeding 0.2 pound of water per square feet of exposed concrete per hour.
3. Cool concrete using methods indicated in ACI 305R Appendix B.
4. Place and cure concrete as specified in ACI 305R Chapter 4.

D. Compaction and Screeding:

1. Tamp freshly placed concrete with a heavy tamper until at least 3/8 inch of mortar is brought to surface. Concrete shall then be tamped with a light tamper and screeded with a heavy straightedge until depressions and irregularities are eliminated, and surface is true to finish grades or elevations. Remove excess water and debris.
2. Where slabs are to receive separate cement finish or mortar setting bed, continued tamping to raise mortar to surface is not performed. Laitance shall be removed by brushing with a stiff brush or by light sandblasting to expose clean top surface of coarse aggregate.
3. Compacting: Compact each layer of the concrete as placed with mechanical vibrators or equivalent equipment. Transmit vibration directly to concrete and in no case through the forms unless approved. Accomplish thorough compaction. Supplement by rodding or spading by hand adjacent to forms. Compact concrete into corners and angles of forms and around reinforcement and embedded fixtures. Recompact deep sections with congestion due to reinforcing steel as required.
4. Operation of Vibrators: Do not horizontally transport concrete in forms with vibrators nor allow vibrators to contact forms or reinforcing. Push vibrators vertically into the preceding layers that are still plastic and slowly withdraw, producing maximum obtainable density in concrete without creating voids or segregation. In no case disturb concrete that has partially set. Vibrate at intervals not exceeding two-thirds the effective visible vibration diameter of the submerged vibrator. Avoid excessive vibration that causes segregation. Provide sufficient vibration and/or revibration at thick foundations to prevent plastic settlement effects during curing.

E. Floating and Troweling:

1. When concrete has hydrated sufficiently, it shall be floated to a compact and smooth surface. After floating, wait until concrete has reached proper consistency before troweling. Top surfaces shall receive at least 2 troweling operations with steel hand trowel. Prior to and during final troweling, apply a fine mist of water frequently with an atomizing type fog sprayer. Omit troweling for slabs to receive a separate cement finish.
2. For interior finish slabs, final troweling shall provide a hard, impervious, and non-slip surfaces, free from defects and blemishes. Finished surface shall be within tolerances indicated in Article 3.02. Avoid burnishing. Do not add cement or sand to absorb excess moisture.
3. Exterior Paving and Cement Walks: Finish as specified above, except surface shall be given a non-slip broom finish to match Sample reviewed by the Architect.

4. Non-architectural vertical concrete surfaces shall be finished smooth and free from marks or other surface defects.
- F. Curing:
1. Length of time, temperature and moisture conditions for curing concrete shall be in accordance with ACI 301.
 2. Forms containing concrete, top of concrete between forms, and exposed concrete surfaces after removal of forms shall be maintained in a thoroughly wet condition for at least 7 consecutive days after placing. Use the water curing method, curing sheet material, or a clear liquid membrane-forming curing compound except as otherwise specified.
 3. If weather is hot or surface has dried out, spray surface of concrete slabs and paving with fine mist of water, starting not later than 2 hours after final troweling and continuing until sunset. Surface of finish shall be kept continuously wet until curing medium has been installed.
 4. Immediately after finishing, monolithic floor slabs shall be covered with curing paper. Paper shall be lapped 4 inches at joints and sealed with waterproof sealer. Edges shall be cemented to finish. Repair or replace paper damaged during construction operations.
 5. Within 24 hours after finishing, exterior slabs and paving, and interior slabs to receive cement topping or mortar setting beds, shall be covered with sand to a depth of 2 inches and kept thoroughly wet for 7 days. Instead of sand covering, exterior walks and paving where no other surface treatment is specified, may be cured with clear liquid curing compound immediately installed in accordance with manufacturer's directions.
- G. Filling, Leveling and Patching:
1. Fill and patch as required to meet as-cast finish requirements of ACI 301 Section 5.3.3.5.
 2. Concrete slabs exhibiting high or low spots and indicated to receive resilient floor covering or soft floor covering, shall have surfaces repaired. High spots shall be honed, or ground with power-driven machines to required tolerances. Low spots shall be filled with latex underlayment, installed in strict accordance with manufacturer's written recommendations.
 3. Holes resulting from form ties or sleeve nuts shall be solidly packed, through exterior walls, by pressure grouting with cement grout, as specified. Grouted holes on exposed surfaces shall be screeded flush and finished to match adjoining surfaces.
- H. Cement Base: Cement base shall be of the height, thickness, and shape detailed. Base shall be reinforced with one inch mesh, 18 gage, zinc-coated wire fabric. Base finish mixture shall be one part cement, 2 parts of fine aggregate and one part pea gravel. Colored cement base shall include a chemically inert mineral oxide pigment in the mix.
- I. Joints: Comply with ACI 318 Section 6.4. Locate joints in concrete only where shown or approved and obtain prior approval for points of stoppage of any pour. Clean and roughen surface of construction joints by removing entire surface and exposing 1/4" of clean coarse aggregate solidly embedded in mortar matrix by chipping, use of an approved retarder agent, or equal. Water and keep hardened concrete wet for not less than 24 hours before placing the next lift or abutting concrete. Cover the horizontal surfaces of existing or previously placed and hardened concrete with a 2" thick layer of fresh concrete of required mix less 50 percent of coarse aggregate just before balance of concrete is placed.
- J. Vertical Elements: Stop placement of concrete in walls and columns 1-1/2" below bottom of beams or supported slabs. Stop placement at sills and heads of wall openings in the same

manner. Allow concrete in vertical elements to be in place at least 2 hours and until vertical settlement has ceased before placing concrete for floor framing.

- K. Correction of Segregation: Before placing next layer of concrete, and at the top of each placement for vertical elements, remove all concrete containing excess water or fine aggregate, or showing deficiency of coarse aggregate, and fill the space with compacted concrete of correct proportions. Comply with ACI 318 Section 6.4.

3.05 3.05 FINISHING

- A. Soda and Acid Wash: Concrete surfaces to receive plaster, paint or other finish, and which have been formed by oil coated forms, shall be scrubbed with a solution of 1-1/2 pounds of caustic soda to one gallon of water. Surfaces where smooth wood or waste molds have been furnished shall be scrubbed with a solution of 20 percent muriatic acid. Wash with clean water after scrubbing.
- B. Sacking: Where required by the Architect, exposed concrete curbs, walls, and other surfaces shall be sacked by an application of cement grout, floated, and rubbed. Sacking shall not be performed until patching and filling of holes has been completed. Entire sacking operation for any continuous area shall be started and completed within the same day.
 - 1. Mix one part cement and 1-1/2 parts fine sand with sufficient water to produce a grout having consistency of thick paint. Wet surface of concrete sufficiently to prevent absorption of water from grout. Apply grout uniformly with a brush or spray gun, then immediately float surface with a cork or other suitable float, scouring wall vigorously.
 - 2. While grout is still plastic, finish surface with a sponge-rubber float, removing excess grout. Allow surface to dry thoroughly, then rub vigorously with dry burlap to completely remove dried grout. No visible film or grout shall remain after rubbing with burlap.
- C. Abrasive: Concrete stair treads, landings, ramps and steps on interior and exterior of buildings, and interior exposed concrete floors in shop buildings shall receive an abrasive finish. Abrasive grains in amount of 30 pounds per 100 square feet shall be evenly installed by dust-on method and embedded into surface during first troweling operation. Additional abrasive grains, in amount of 30 pounds per 100 square feet, shall then be evenly installed and embedded into surface during final troweling operation.
- D. Floor Hardener: Exposed interior concrete floors throughout shall be treated with floor hardener, as specified. Install hardener after surface of concrete has reached the point where no excess moisture is present, but while it is still plastic. Hardener shall be installed as follows:
 - 1. Protect adjacent surfaces. Clean surfaces to receive treatment in accordance with manufacturer's instructions, ensuring that all stains, oil, grease, form release agents, laitance, dust and dirt are removed prior to application.
 - 2. Apply hardener in accordance with manufacturer's instructions as soon as concrete is firm enough to work on after final troweling.
 - 3. Colored Hardener: Install at rate of 40 pounds per 100 square feet of surface for initial application.
 - 4. Gray (natural) Hardener: Install at rate of 20 pounds per 100 square feet of surface for initial application.
 - 5. Hardener shall be evenly distributed and thoroughly floated into surface mortar with a wood float. An additional 20 pounds of hardener, colored or gray, specified as above, shall be installed over each 100 square feet, and troweled to an even surface having uniform color and texture.

- E. Cement Grout and Dry-Pack Concrete: Cement grout shall be mixed at the Project site and shall be composed of one volume of cement and 2-1/2 volumes of fine aggregate. Materials shall be mixed dry with sufficient water added to make mixture flow under its own weight. When grout is used as a dry pack concrete, add sufficient water to provide a stiff mixture, which can be molded into a sphere.
- F. Broom Finish: Exterior stair treads and landings shall be provided with a non-slip broom finish in addition to abrasive finish specified.
- G. Abrasive Stair Nosing: Nosing shall be installed according to manufacturers written recommendations.

3.06 GROUTING AND DRYPACKING

- A. Install as indicated or required. Where grouting and drypacking is part of the work of other sections, it shall conform to the following requirements, as applicable.
- B. Drypacking: Mix materials thoroughly with minimum amount of water. Install drypack by forcing and rodding to fill voids and provide complete bearing under plates. Finish exposed surfaces smooth and cure with damp burlap or liquid curing compound.
- C. Non-Shrink Grouting:
 - 1. Mixing: Mix the approved non-shrink grout material with sufficient water per manufacturers recommendations.
 - 2. Application: Surfaces to receive the non-shrink grout shall be clean, and shall be moistened thoroughly immediately before placing the mortar. Before grouting, surfaces to be in contact shall be roughened and cleaned thoroughly, all loose particles shall be removed and the surface flushed thoroughly with neat cement grout immediately before the grouting mortar is placed. Place fluid grout from one side only and puddle, chain, or pump for complete filling of voids; do not remove the dams or forms until grout attains initial set. Finish exposed surfaces smooth, and cure as recommended by grout manufacturer.

3.07 EXPANSION AND CONSTRUCTION JOINTS

- A. Construction Joints: Details and proposed location of construction joints shall be as indicated on the Drawings, located to least impair strength of structure, in accordance with the following:
 - 1. Thoroughly clean contact surface.
 - 2. A mix containing same proportion of sand and cement provided in concrete plus a maximum of 50 percent of coarse aggregate shall be placed to a depth of at least one inch on horizontal joints. Vertical joints shall be wetted and coated with a neat cement grout immediately before placing of new concrete.
 - 3. Should contact surface become coated with earth, sawdust, or deleterious material of any kind after being cleaned, entire surface shall be re-cleaned before applying mix.
 - 4. Roughening may also be achieved by applying Rugasol Surface Retardant followed by water blasting.
- B. Expansion Joints: Provide expansion joints where indicated in walks and exterior slabs occurring on grade. Space approximately 20 feet apart (12 feet apart at traffic areas), unless otherwise indicated. Joints shall extend entirely through slab with joint filler in one piece for width of walk or slab. Joint filler shall be 3/8 inch thick, unless otherwise indicated.

- C. Tooled Joints: Slabs on grade, walks and paving on grade shall be marked into areas as indicated with markings made with a V-grooving tool. Marks shall be round-edged, free from burrs or obstructions, with clean cut angles and shall be straight and true. Walks, if not indicated, shall be marked off into rectangles of not more than 12 square feet and shall have a center marking where more than 5 feet wide.

3.08 FIELD QUALITY CONTROL

- A. Comply with pertinent provisions of section 01 4200.
- B. Continuous Inspection: Construct structural concrete under continuous inspection of Project Inspector. Obtain approval of forms and reinforcing as required by the Inspector before placing structural concrete.
- C. Molded Cylinder Tests:
 - 1. IOR or testing lab personnel will prepare cylinders and perform slump tests. Samples for concrete strength shall be taken in accordance to ASTM C172. Each cylinder shall be dated, given a number, point in structure from which sample was obtained, mix design number, mix design strength and result of accompanying slump test noted.
 - 2. Separate tests of molded concrete cylinders obtained at same place and time shall be made at age of 3 days, 7 days, and 28 days. A strength test shall be the average of the compressive strength of 2 cylinders, obtained from the same sample of concrete and tested at 28 days or at test age designated for determination of f'_c . Retain one additional cylinder from each location to be tested in the event that the initial 2 cylinder test does not meet the project requirements. High fly ash concrete mixes may be tested at 42 days in lieu of 28 days.
 - 3. Test cylinders shall be prepared at the Project site and stored in testing laboratory in accordance with ASTM C31, and tested in accordance with ASTM C39.
 - 4. Frequency of testing shall conform to ACI 318 Section 26.12 and CBC Section 1905A.1.16 as a minimum requirement.
 - 5. Control Test Cylinders: Cast a set of two or more cylinders for each day's placing of concrete for slabs supported on shoring. Place test cylinders on slabs represented by cylinders and cure the same as slabs. Test cylinders to determine proper times for removal of shores and reshoring. A strength test shall be the average of the compressive strengths of 2 cylinders made from the same sample of concrete and tested at 28 days.
- D. Concrete Consistency: Measure consistency according to ASTM C143. Test twice each day or partial day's run of the mixer.
- E. Adjustment of Mix: If the strength of any grade of concrete for any portion of Work, as indicated by molded test cylinders, falls below minimum 28 days compressive strength specified or indicated, adjust mix design for remaining portion of construction so that resulting concrete meets minimum strength requirements.
- F. Air Content Testing: Measure in accordance to ASTM C173 or ASTM C231, for each composite sample taken in accordance to ASTM C172.
- G. Defective Concrete:
 - 1. Should strength of any grade of concrete, for any portion of Work indicated by tests of molded cylinders and core tests, fall below minimum 28 days strength specified or indicated, concrete will be deemed defective Work and shall be replaced or adequately strengthened in a manner acceptable to the Architect and DSA.

2. Concrete Work that is not formed as indicated, is not true within 1/250 of span, not true to intended alignment, not plumb or level where so intended, not true to intended grades and levels, contains sawdust shavings, wood or embedded debris, or does not fully conform to Contract provisions, may be deemed to be defective Work and subject to removal and replacement if reasonable repair work cannot resolve the defects.
- H. Concrete for Equipment Pads, Mechanical and Electrical Work: Unless otherwise indicated, strength shall have a minimum $f'c = 3,000$ psi. Exposed concrete shall be provided with a hand trowel finish with radius corners and edges. Form and place concrete where necessary as described in Section 03 1000: Concrete Forms and Accessories, and reinforced as described in Section 03 2000: Concrete Reinforcement. Calcium chloride shall not be furnished in any concrete mix provided for the installation of underground electrical conduits. For concrete encasement of more than one conduit, furnish 3/4 inch maximum aggregate.
 - I. Level of Floors: Continuously monitor concrete placing to maintain level floor by use of an instrument level, transit, or laser.
- 3.09 CLEAN UP
- A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.
- 3.010 PROTECTION
- A. Protect the Work of this section until Substantial Completion.

SECTION 03 33 00

CAST-IN-PLACE ARCHITECTURAL CONCRETE

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes cast-in-place architectural concrete, including form facings, reinforcement and accessories, concrete materials, concrete mixture design, placement procedures, and finishes.

- 1. Requirements in Section 03 30 00 "Cast-in-Place Concrete" apply to architectural concrete.

- B. Related Requirements:

- 1. Section 03 30 00 "Cast-in-Place Concrete" for concrete not designated as architectural concrete.

1.03 DEFINITIONS

- A. Cast-in-Place Architectural Concrete: Formed concrete that is exposed to view on surfaces of completed structure or building and that requires special concrete materials, formwork, placement, or finishes to obtain specified architectural appearance.
- B. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.
- C. Design Reference Sample: Sample designated by Architect in the Contract Documents that reflects acceptable surface quality and appearance of cast-in-place architectural concrete.
- D. Reveal: Projection of coarse aggregate from matrix or mortar after completion of exposure operations.
- E. W/C Ratio: The ratio by weight of water to cementitious materials.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

- 1. Require representatives of each entity directly concerned with cast-in-place architectural concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.

- c. Ready-mix concrete manufacturer.
 - d. Cast-in-place architectural concrete Subcontractor.
2. Review [concrete finishes and finishing,] [cold- and hot-weather concreting procedures,] [curing procedures,] [construction joints,] [forms and form-removal limitations,] [reinforcement accessory installation,] [concrete repair procedures,] and protection of cast-in-place architectural concrete.
 3. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
 1. Indicate amounts of mixing water to be withheld for later addition at Project site.
- C. Formwork Shop Drawings: Show formwork construction, including form-facing joints, rustications, construction and contraction joints, form joint-sealant details, form tie locations and patterns, inserts and embedments, cutouts, cleanout panels, and other items that visually affect cast-in-place architectural concrete.
- D. Placement Schedule: Submit concrete placement schedule before start of placement operations. Include locations of all joints, including construction joints.
- E. Samples: For each of the following materials:
 1. Form-facing panels.
 2. Form ties.
 3. Form liners.
 4. Exposed aggregates.
 5. Coarse- and fine-aggregate gradations.
 6. Chamfers and rustications.
- F. Samples for Verification: Architectural concrete Samples, cast vertically, approximately 18 by 18 by 2 inches, of finishes, colors, and textures to match design reference sample. Include Sample sets showing the full range of variations expected in these characteristics.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[manufacturer] [testing agency]**.
- B. Material Certificates: For each of the following, signed by manufacturers:
 1. Cementitious materials.

2. Admixtures.
 3. Form materials and form-release agents.
 4. Repair materials.
- C. Material Test Reports: For the following, by a qualified testing agency:
1. Aggregates. [Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.]
- D. LEED Documentation: Submit documentation showing design compliance.
- 1.07 QUALITY ASSURANCE
- A. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
1. Manufacturer certified according to NRMCA's "NRMCA Quality Control Manual - Section 3, Certification of Ready Mixed Concrete Production Facilities."
- B. Testing Agency Qualifications: An independent agency, **[acceptable to authorities having jurisdiction,]** qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-01 or an equivalent certification program.
 2. Personnel performing laboratory tests shall be an ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
- C. Field Sample Panels: After approval of verification sample and before casting architectural concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, cast vertically, approximately 48 by 48 by 6 inches minimum, to demonstrate the expected range of finish, color, and texture variations.
1. Locate panels as indicated or, if not indicated, as directed by Architect.
 2. Demonstrate methods of curing, aggregate exposure, sealers, and coatings, as applicable.
 3. In presence of Architect, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
 4. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
 5. Demolish and remove field sample panels when directed.
- D. Mockups: Before casting architectural concrete, build mockups to verify selections made under Sample submittals and to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship. Build mockups to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Build mockups of typical exterior wall of cast-in-place architectural concrete as shown on Drawings.
3. Demonstrate curing, cleaning, and protecting of cast-in-place architectural concrete, finishes, and contraction joints, as applicable.
4. In presence of Architect, damage part of the exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
5. Obtain Architect's approval of mockups before casting architectural concrete.
6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on concrete mixtures.

1.09 FIELD CONDITIONS

- A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
 1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents.
 4. Do not use chemical accelerators unless otherwise specified and approved in design mixtures.
- B. Hot-Weather Placement: Comply with ACI 301 and as follows:
 1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 PRODUCTS

2.01 CONCRETE, GENERAL

- A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 303.1.

2.02 FORM-FACING MATERIALS

- A. General: Comply with Section 03 30 00 "Cast-in-Place Concrete" for formwork and other form-facing material requirements.
- B. Source Limitations: Obtain each type form-facing material from single source from single manufacturer.
- C. Form-Facing Panels for **[As-Cast] [Exposed-Aggregate]** Finishes: Steel- and glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that provide continuous, true, and smooth architectural concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
- D. Form-Facing Panels for **[As-Cast] [Exposed-Aggregate]** Finishes: Exterior-grade plywood panels, nonabsorptive, that will provide continuous, true, and smooth architectural concrete surfaces, **[high-density overlay, Class 1, or better] [medium-density overlay, Class 1, or better, mill-applied release agent and edge sealed]**, complying with DOC PS 1 **[, or Finnish phenolic overlaid birch plywood]**.
- E. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that provide surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- F. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.
- G. Form Liners: Units of face design, texture, arrangement, and configuration **[indicated] [to match design reference sample]**. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent surface treatments of concrete.
- H. Rustication Strips: Metal **[, dressed wood,]** or rigid plastic, or with sides beveled and back kerfed; nonstaining; in longest practicable lengths.
- I. Chamfer Strips: Metal, rigid plastic, elastomeric rubber, or dressed wood, 3/4 by 3/4 inch, minimum; nonstaining; in longest practicable lengths.
- J. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800; minimum 1/4 inch thick.
- K. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or Type S, Grade NS, that adheres to form joint substrates.
- L. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood.
- M. Form-Release Agent: Commercially formulated, colorless form-release agent that will not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments of those surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
- N. Surface Retarder: Chemical liquid set retarder, for application on form-facing materials, capable of temporarily delaying final hardening of newly placed concrete surface to depth of reveal specified.
- O. Form Ties: Factory-fabricated, **[glass-fiber-reinforced plastic] [internally disconnecting] [or] [removable]** ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
1. Furnish ties **[with tapered tie cone spreaders]** that, when removed, will leave holes **[3/4 inch] [1 inch] [1-1/4 inches] [1-1/2 inches] <Insert dimension>** in diameter on concrete surface.
 2. Furnish internally disconnecting ties that will leave no metal closer than 1-1/2 inches **[, after exposing aggregate,]** from the architectural concrete surface.
 3. Furnish glass-fiber-reinforced plastic ties, not less than 1/2 inch in diameter, of color **[to match Architect's sample] [selected by Architect from manufacturer's full range]**.
 4. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.03 STEEL REINFORCEMENT AND ACCESSORIES

- A. General: Comply with Section 03 30 00 "Cast-in-Place Concrete" for steel reinforcement and other requirements for reinforcement accessories.
- B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire fabric in place; manufactured according to CRSI's "Manual of Standard Practice."
1. Where legs of wire bar supports contact forms, use **[gray, all-plastic] [CRSI Class 1, gray, plastic-protected] [or] [CRSI Class 2, stainless-steel]** bar supports.

2.04 CONCRETE MATERIALS

- A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- B. Cementitious Materials:
1. Portland Cement: ASTM C 150/C 150M, **[Type I] [Type II] [Type I/II] [Type III], [gray] [white]**.
 2. Fly Ash: ASTM C 618, **[Class C] [Class F]**.
 3. Slag Cement: ASTM C 989/C 989M, Grade 100 or Grade 120.
 4. Silica Fume: ASTM C 1240 amorphous silica.
 5. Blended Hydraulic Cement: ASTM C 595/C 595M, **[Type IS, portland blast-furnace slag] [Type IP, portland-pozzolan] [Type IL, portland-limestone] [Type IT, ternary blended] cement.**

- C. Normal-Weight Aggregates: ASTM C 33/C 33M, **[Class 5S] [Class 5M] [Class 1N]** <Insert class> coarse aggregate or better, graded. Provide aggregates from single source **[with documented service-record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials]**.
1. Maximum Coarse-Aggregate Size: **[1 inch] [3/4 inch] [1/2 inch] [3/8 inch]**.
 2. Gradation: **[Uniformly] [Gap]** graded.
- D. Normal-Weight Fine Aggregate: **[ASTM C 33/C 33M] [or] [ASTM C 144]**, manufactured or natural sand, from same source for entire Project.
- E. Air-Entraining Admixture: ASTM C 260/C 260M.
- F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that does not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
- G. Color Pigment: ASTM C 979/C 979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, **[free of carbon black,]** nonfading, and resistant to lime and other alkalis.
1. Color: **[As indicated by manufacturer's designation] [Match Architect's sample] [As selected by Architect from manufacturer's full range]**.
- H. Water: Potable, complying with ASTM C 94/C 94M, except free of wash water from mixer washout operations.

2.05 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
- B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- C. Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
1. For integrally colored concrete, curing compound shall be **[pigmented type]** approved by color pigment manufacturer.
 2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.

2.06 REPAIR MATERIALS

- A. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
- B. Epoxy Bonding Adhesive: ASTM C 881/C 881M two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements.
 - 1. **[Types I and II, nonload bearing] [Types IV and V, load bearing]**, for bonding hardened or freshly mixed concrete to hardened concrete.

2.07 CONCRETE MIXTURES

- A. Obtain each color, size, type, and variety of concrete mixture from single manufacturer with resources to provide cast-in-place architectural concrete of consistent quality in appearance and physical properties.
- B. Prepare design mixtures for each type and strength of cast-in-place architectural concrete proportioned on basis of laboratory trial mixture or field test data, or both, according to ACI 301.
 - 1. Use a qualified independent testing agency for preparing and reporting proposed design mixtures based on laboratory trial mixtures.
- C. Cementitious Materials: For cast-in-place architectural concrete exposed to deicers, limit percentage, by weight, of cementitious materials other than portland cement according to ACI 301 requirements. **[Use fly ash, pozzolan, slag cement, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.]**
- D. Limit water-soluble, chloride-ion content in hardened concrete to **[0.06] [0.15] [0.30] [1.00]** percent by weight of cement.
- E. Admixtures: Use admixtures according to manufacturer's written instructions.
- F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.
- G. Concrete Mixtures:
 - 1. Compressive Strength (28 Days): **[5000 psi] [4500 psi] [4000 psi] [3500 psi] [3000 psi]**.
 - 2. Maximum W/C Ratio: 0.46.
 - 3. Slump Limit: **[3 inches] [4 inches] [8 inches]** for concrete with verified slump of **2 to 4 inches** before adding high-range water-reducing admixture or plasticizing admixture] <Insert dimension(s)>, plus or minus 1 inch.
 - 4. Air Content: **[5-1/2] <Insert number>** percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
 - 5. Air Content: **[6] <Insert number>** percent, plus or minus 1.5 percent at point of delivery for **[1-inch] [3/4-inch]** nominal maximum aggregate size.

2.08 CONCRETE MIXING

- A. **[Ready-Mixed] [or] [Site-Mixed]** Architectural Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and furnish batch ticket information.
1. Clean equipment used to mix and deliver cast-in-place architectural concrete to prevent contamination from other concrete.
 2. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 EXECUTION

3.01 FORMWORK INSTALLATION

- A. General: Comply with Section 03 30 00 "Cast-in-Place Concrete" for formwork, embedded items, and shoring and reshoring.
- B. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.
- C. In addition to ACI 303.1 limits on form-facing panel deflection, limit cast-in-place architectural concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
1. **[Class A, 1/8 inch] [Class B, 1/4 inch] [Class C, 1/2 inch]**.
- D. Construct forms to result in cast-in-place architectural concrete that complies with ACI 117 (ASI 117M).
1. Also comply with the following tolerances: **<Insert tolerances>**.
- E. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-in-place surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical. Kerf wood rustications, keyways, reglets, recesses, and the like, for easy removal.
1. Seal form joints and penetrations at form ties with form joint tape or form joint sealant to prevent cement paste leakage.
 2. Do not use rust-stained steel form-facing material.
- F. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
- G. **[Chamfer] [Do not chamfer]** exterior corners and edges of cast-in-place architectural concrete.
- H. Coat contact surfaces of wood rustications and chamfer strips with sealer before placing reinforcement, anchoring devices, and embedded items.
- I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
- J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

- K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
- L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.
- M. Coat contact surfaces of forms with surface retarder, according to manufacturer's written instructions, before placing reinforcement.
- N. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and attach securely to prevent deflection and maintain stability of liners during concreting. Prevent form liners from sagging and stretching in hot weather. Seal joints of form liners and form-liner accessories to prevent mortar leaks. Coat form liner with form-release agent.

3.02 REINFORCEMENT AND INSERT INSTALLATION

- A. General: Comply with Section 03 30 00 "Cast-in-Place Concrete" for fabricating and installing steel reinforcement. Securely fasten steel reinforcement and wire ties against shifting during concrete placement.
- B. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

3.03 REMOVING AND REUSING FORMS

- A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.
 - 1. Schedule form removal to maintain surface appearance that matches approved **[field sample panels] [mockups]**.
 - 2. Cut off and grind glass-fiber-reinforced plastic form ties flush with surface of concrete.
- B. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved **[28-day design compressive strength] [at least 70 percent of 28-day design compressive strength]**. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
- C. Clean and repair surfaces of forms to be reused in the Work. Do not use split, frayed, delaminated, or otherwise damaged form-facing material. Apply new form-release agent.
- D. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for cast-in-place architectural concrete surfaces.

3.04 JOINTS

- A. Construction Joints: Install construction joints true to line, with faces perpendicular to surface plane of cast-in-place architectural concrete, so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated.
 - 2. Form keyed joints as indicated. **[Embed keys at least 1-1/2 inches into concrete.]** Align construction joint within rustications attached to form-facing material.

3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 5. Space vertical joints in walls **[as indicated]** <Insert spacing>. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 6. Use **[bonding agent]** **[epoxy-bonding adhesive]** at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- B. Contraction Joints: Form weakened-plane contraction joints true to line, with faces perpendicular to surface plane of cast-in-place architectural concrete, so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

3.05 CONCRETE PLACEMENT

- A. Before placing concrete, verify that installation of formwork, form-release agent, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.
- C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.
 1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.
- D. Deposit concrete continuously between construction joints. Deposit concrete to avoid segregation.
 1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
 2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 303.1.
 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. Do not permit vibrators to contact forms.

3.06 FINISHES, GENERAL

- A. Architectural Concrete Finish: Match Architect's design reference sample, identified and described as indicated, to satisfaction of Architect.
- B. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.
 1. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

- C. Maintain uniformity of special finishes over construction joints unless otherwise indicated.

3.07 AS-CAST FORMED FINISHES

- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections exceeding specified limits on formed-surface irregularities.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Remove fins and other projections exceeding specified limits on formed-surface irregularities. **[Repair] [Do not repair]** and patch tie holes and defects.
- C. Rubbed Finish: Apply the following to smooth-form-finished as-cast concrete where indicated:
 - 1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
 - 2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part portland cement to 1-1/2 parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
 - 3. Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix 1 part portland cement and 1 part fine sand with a 1:1 mixture of bonding agent and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.
- D. Form-Liner Finish: Produce a textured surface free of pockets, streaks, and honeycombs, and of uniform appearance, color, and texture.

3.08 EXPOSED-AGGREGATE FINISHES

- A. Scrubbed Finish: After concrete has achieved a compressive strength of from 1000 to 1500 psi, apply scrubbed finish. Wet concrete surfaces thoroughly and scrub with stiff fiber or wire brushes, using water freely, until top mortar surface is removed and aggregate is uniformly exposed. Rinse scrubbed surfaces with clean water. Maintain continuity of finish on each surface or area of Work. Remove only enough concrete mortar from surfaces to match design reference sample or mockup.
- B. High-Pressure Water-Jet Finish: Perform high-pressure water jetting on concrete that has achieved a minimum compressive strength of 4500 psi. Coordinate with formwork removal to ensure that surfaces to be high-pressure water-jet finished are treated at same age for uniform results.
 - 1. Surface Continuity: Perform high-pressure water-jet finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work. Maintain required patterns or variances in reveal projection to match design reference sample or mockup.

- C. Abrasive-Blast Finish: Perform abrasive blasting after compressive strength of concrete exceeds 2000 psi. Coordinate with formwork removal to ensure that surfaces to be abrasive blasted are treated at same age for uniform results.
1. Surface Continuity: Perform abrasive-blast finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work. Maintain required patterns or variances in depths of blast to match design reference sample or mockup.
 2. Abrasive Blasting: Abrasive blast corners and edges of patterns carefully, using backup boards, to maintain uniform corner or edge line. Determine type of nozzle, nozzle pressure, and blasting techniques required to match design reference sample or mockup.
 3. Depth of Cut: Use an abrasive grit of proper type and gradation to expose aggregate and surrounding matrix surfaces to match design reference sample or mockup, as follows:
 - a. Brush: Remove cement matrix to dull surface sheen and expose face of fine aggregate; with no significant reveal.
 - b. Light: Expose fine aggregate with occasional exposure of coarse aggregate and uniform color; with maximum reveal of 1/16 inch.
 - c. Medium: Generally expose coarse aggregate; with slight reveal, a maximum of 1/4 inch.
 - d. Heavy: Expose and reveal coarse aggregate to a maximum projection of one-third its diameter; with reveal range of 1/4 to 1/2 inch.
- D. Bushhammer Finish: Allow concrete to cure at least 14 days before starting bushhammer surface finish operations.
1. Surface Continuity: Perform bushhammer finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work. Maintain required patterns or variances of cut as shown on Drawings or to match design reference sample or mockup.
 2. Surface Cut: Maintain required depth of cut and general aggregate exposure. Use power tool with hammer attachments for large, flat surfaces, and use hand hammers for small areas, at corners and edges, and for restricted locations where power tools cannot reach.
 3. Remove impressions of formwork and form facings with exception of tie holes.

3.09 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and with ACI 301 for hot-weather protection during curing.
- B. Begin curing cast-in-place architectural concrete immediately after **[removing forms from]** **[applying as-cast formed finishes to]** concrete. Cure according to ACI 308.1, by one or a combination of the following methods that will not mottle, discolor, or stain concrete:
1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.

- b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
- 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
 - 3. Curing Compound: Mist concrete surfaces with water. Apply curing compound uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.10 FIELD QUALITY CONTROL

- A. General: Comply with field quality-control requirements in Section 03 30 00 "Cast-in-Place Concrete."

3.11 REPAIR, PROTECTION, AND CLEANING

- A. Repair and cure damaged finished surfaces of cast-in-place architectural concrete when approved by Architect. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved mockups.
 - 1. Remove and replace cast-in-place architectural concrete that cannot be repaired and cured to Architect's approval.
- B. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.
- C. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.
- D. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.
- E. Wash and rinse surfaces according to concrete finish applicator's written instructions. Protect other Work from staining or damage due to cleaning operations.
 - 1. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

END OF SECTION

SECTION 03 35 00

INTERIOR CONCRETE FLOOR SEALER

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Surface preparation.
 - 2. Application of clear concrete sealer on exposed surfaces of the interior concrete floors indicated.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Pre-installation meeting:
 - 1. Prior to start of installation, arrange a pre-installation meeting between the sealer manufacturer, the applicator, and related trades whose work will be in contact with the treated surface, including but not limited to those for colored concrete and joint sealers.
 - 2. Record minutes of the meeting, file in the Project file, and send a copy to the Architect.
- B. Phasing
 - 1. Where feasible delay sealer application until installation of sealants is complete in joints adjoining surfaces to be coated.
 - 2. Sealer work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, sealer, and sealant materials identical to those used in the Work.

1.03 SUBMITTALS

- A. Data: Manufacturer Product Data of the proposed sealer, including recommended coverage rates, include material test reports indicating and interpreting test results for compliance of water-repellent sealer with criteria specified.
- B. Manufacturer certification:
 - 1. Letter from the sealer manufacturer to verify its acceptance of the applicator, acceptance of substrates as satisfactory to receive the specified sealer, and affidavit that sealer is compatible with concrete curing agent used.
 - 2. Duplicate copies of manufacturer affidavit with each shipment of materials delivered to the jobsite certifying that material furnished complies with specified requirements.

1.04 QUALITY ASSURANCE

- A. Installer qualifications: Firm with a minimum of 3 consecutive years of experience in application of the sealer proposed for use, or similar sealers, on projects of similar size and scope, and licensed or approved in writing by the sealer manufacturer.
- B. Sample panels: When requested by the sealer manufacturer, or necessary to adjust sealer formulation, provide sealer manufacturer with sufficient samples of substrate to be coated to determine exact formulation and coverage rates.

C. Manufacturer inspections:

1. Obtain materials only from manufacturer who will send a qualified technical representative to the Project site before start of this work to verify substrate acceptability. Schedule subsequent visits as required thereafter to review installation procedures and completed work, and to issue warranty specified.
2. Unsatisfactory conditions disclosed by the manufacturer visits to the site shall be promptly and satisfactorily repaired and the areas re-inspected by the manufacturer before work starts or resumes in affected areas.

1.05 JOB CONDITIONS

- A. Comply with manufacturer's recommendations regarding environmental requirements, and temperature and conditions of surfaces to receive sealer.

PART 2 PRODUCTS

2.01 SEALER/MANUFACTURER

- A. Basis of design is Liqui-Hard Ultra manufactured by W. R. Meadows or equal by one of the following:
 1. Consolideck LS by Prosoco,
 2. Hydrozo Silane 40 VOC by BASF.
 3. Seal Hard by L&M Construction Chemicals, Inc.
 4. L3000 by Pecora Corp.
 5. Or equal.

2.02 PERFORMANCE REQUIREMENTS

- A. Provide sealer with the following properties based on testing manufacturer standard products, according to test methods indicated, applied to substrates simulating Project conditions using same materials and application methods to be used for Project.
 1. Absorption: Minimum 90 percent reduction of absorption after 24 hours in comparison of treated and untreated specimens for hardened concrete: ASTM C 642.
 2. Water-vapor transmission: Maximum 10 percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, ASTM E 96.
 3. Durability: Maximum 5 percent loss of water repellency after 2500 hours of weathering in comparison to specimens before weathering, ASTM G 53.
 4. Permeability: Minimum 80 percent breathable in comparison of treated and untreated specimens, ASTM D 1653.
- B. Appearance: When compared visually to an untreated sample under same lighting conditions, the sealer shall not change the color and sheen of the coated substrate and shall be invisible after application and over the life of the building.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Obtain the services of a factory-authorized technical service representative, from the sealer manufacturer, to inspect and approve the substrates before application and to instruct the applicator on the product and application method to be used.
- B. Verify that slabs to be sealed are clean, dry and free of dust, dirt, oil, grease and other foreign material that would affect the application and performance of the sealer.
- C. Correct detrimental conditions before proceeding with installation.

3.02 PROTECTION

- A. Protect adjacent work, including sealant bond surfaces, from spillage or blow-over of sealer.

3.03 APPLICATION

- A. Test application:
 - 1. Before performing this work, including bulk purchase and delivery of products, prepare a small application in an unobtrusive location and in a manner approved by Architect to demonstrate the final effect (visual, physical, and chemical) of planned application.
 - 2. Proceed with work only after Architect review of test application.
- B. Sealer shall be applied by manufacturer-approved applicators using recommended methods and equipment. Do not exceed the application rate recommended by the manufacturer.
- C. Do not dilute concrete densifier and chemical hardener.
- D. Fresh Concrete
 - 1. Apply undiluted concrete densifier and chemical hardener as soon as concrete is firm enough to work on after final troweling.
 - 2. Apply undiluted concrete densifier and chemical hardener at approximately 650 - 800 ft.²/gal. using a low-pressure sprayer.
 - 3. Do not allow material to puddle on the surface.

3.04 FIELD QUALITY CONTROL

- A. The Owner may employ a testing agency to test the in-place sealer in compliance with standards specified.
- B. The Owner will pay cost of test, except when test discloses that the sealer tested does not comply with these Specifications; the Contractor shall pay subsequent retests until application meets Specifications requirements.
- C. In the event test shows that the sealer is deficient, apply additional sealer.
- D. Repetition of the above procedure on all previously treated surfaces will be at Contractor's expense.

3.05 CLEANING

- A. Clean sealer from adjacent surfaces immediately after spillage.
- B. Comply with manufacturer's recommendations for cleaning.

END OF SECTION

This page intentionally left blank

SECTION 03 35 45

POLISHED AND STAINED CONCRETE FINISHING

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Dye-stained cast-in-place concrete (SC-1).
 - 2. Supervising the work of Section 03 30 00 to obtain finished surfaces complying with the concrete stain manufacturer's instructions.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Pre-installation meeting: < Insert >
- B. Sequencing: Immediately after casting slabs, protect those scheduled to receive colored finish from unplanned stains and other damage. Cover slabs with impermeable, non-staining coverings, or ban all traffic from slabs until colored staining, sealing and temporary protection is completed.
 - 1. Discoloration, soil, and spots, such as those caused by gypsum board taping and finishing compounds, mortar, paint, etc., will not be concealed by the concrete stain and must be completely removed before stain is applied.
 - 2. Grind, acid-etch or take other measures acceptable to the Architect and the stain manufacturer, at no additional cost to the Owner, to clean slabs before applying penetrating stain.

1.03 SUBMITTALS

- A. Data:
 - 1. Manufacturer Product Data and specifications for concrete stain and color-matched sealing materials.
 - 2. Include instructions for surface preparation and application of stain, together with precautions to be taken while using the product.
- B. Samples:
 - 1. Color Samples on concrete < Insert > from the concrete stain manufacturer's standard color palette for color selection by the Architect.
 - 2. When selection is made, submit 12-inch square by approximately one-inch thick concrete Samples of selected colors.
- C. Certificates: Prior to beginning the work of this Section, submit letter from concrete stain manufacturer stating proposed materials to be used are compatible with curing compounds, sealers and materials used in the concrete mixes, and will not negatively affect concrete color, finishing characteristics, quality, durability or performance.
- D. Certifications: Duplicate copies of manufacturer's affidavit with each shipment of materials delivered to the jobsite certifying that material furnished complies with specified requirements.

- E. Qualification statements: Letter from the manufacturer verifying its acceptance of concrete stain applicator.

1.04 QUALITY ASSURANCE

- A. Uniformity: Obtain all concrete stain used for the Project from the same manufacturer.
- B. Applicator's qualifications:
 - 1. Firm and individuals with a minimum of 3 consecutive years of experience in the application of specified products on projects similar in material, design, complexity and extent to this Project, and whose work has resulted in applications with a record of successful in-service performance.
 - 2. Only a firm authorized, certified, licensed, or otherwise qualified by the concrete stain manufacturer as having the necessary experience, staff, and training to install manufacturer's products shall install concrete stain materials.
 - 3. Only those installer's personnel trained and authorized by concrete stain manufacturer in the procedures pertaining to the application of concrete stain shall perform the Work of this Section.
- C. Regulatory requirements: Coefficient of friction of colored concrete paving shall be not less than 0.6 for level surfaces and 0.8 for ramps when tested in compliance with ASTM C 1028 (field test) or ASTM D 2047 (laboratory test).
- D. Mockup:
 - 1. Before beginning work, cast a 10-foot square concrete panel at a location on the site acceptable to the Architect to demonstrate color, finish and slip resistance.
 - 2. Use the same personnel, materials and construction techniques intended to be used for the Project, including the selected cement, aggregates, form materials and curing compounds.
 - 3. Architect will review the mockup to determine if the Work falls within acceptable ranges for mottling, color and texture variation, unevenness, appearance and workmanship. Final acceptance of colors will be made from mockup Samples.
 - 4. Make corrections requested by the Architect or remove and replace mockup when corrective work is not acceptable. Repeat mockup(s) until Architect's approval is obtained.
 - 5. Protect approved mockup, which will be used as a standard for remaining concrete stained work on the Project, until its removal is authorized. Remove mockup only after completion and final acceptance of colored concrete work.

1.05 HANDLING

- A. Delivery: Deliver materials to the Project site in original unopened containers clearly labeled with manufacturer's labels intact and legible indicating manufacturer's name, brand, type, source of product, date of manufacture, color designation and expiration date.
- B. Storage: Keep containers tightly closed and store away from direct sunlight, combustible materials and sources of heat. Rotate inventory.
- C. Handling:
 - 1. Handle products to avoid damage to container and contamination.
 - 2. Do not use products whose shelf life has expired.

1.06 PROJECT CONDITIONS

- A. Perform the work of this Section while ambient temperature is maintained within a range between 40- and 90-degree F during application.
- B. Do not apply concrete stain when no rain is forecast, nor under adverse weather conditions, or when temperature, humidity or other environmental requirements are beyond manufacturer's recommended limits.

PART 2 PRODUCTS

2.01 CONCRETE STAIN (SC-1)

- A. Manufacturer: LM Scofield (basis of design), Westcoast Specialized Coating Systems, H&C, or equal by McKinnon Materials, Inc.

2.02

- A. Products: Design is based on Formula One Liquid Dye Concentrate (Two Coats), Formula One Lithium Densifier (One Coat), Formula One Finish, Coat - Voc Free (One Coat).
- B. Items must conform to the following:
 - 1. Polishing method: Mechanical, Grade: 1 Cream Finish, Class: 2 Medium, 800 Grit.
 - 2. Color: < Insert >.

2.03 SEALER

- A. Sealer: Scofield "Selectseal," water-based acrylic/aliphatic urethane sealer, or Cureseal (matte) as selected by the Architect on the sample panel.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions and measurements affecting the work of this Section at site.
- B. Correct detrimental conditions before proceeding with installation.

3.02 PREPARATION

- A. Protect adjacent surfaces from staining and damage by masking, covering them with impermeable coverings securely taped in place, or other appropriate form of protection, as required.
- B. Cleaning: Clean slab of foreign materials by scrubbing and rinsing with clear water. Protect and let dry.
 - 1. Ensure that concrete surface is clean, dry, structurally sound, and free from dirt, dust, oil, grease, solvents, paint, wax, asphalt, concrete curing compounds, sealing compounds, surface hardeners, bond breakers, adhesive residue, and other surface contaminants.
 - 2. Do not acid wash or use heavy alkali cleaners.

3.03 STAINING

- A. Apply stain full strength (undiluted) in accordance with its manufacturer's instructions at locations indicated.
- B. Control depth of color by adjusting volume of stain applied to floor.
- C. Apply 2 coats of stain. Allow floor to completely dry after each coat. Do not scrub clean between coats.
- D. After floor is completely dried, scrub off stain residue in accordance with the stain manufacturer's instructions. Allow floor to completely dry.
- E. Avoid washing concrete surfaces for a minimum of 48 hours.
- F. Protect stained surfaces; do not allow any traffic thereon until the sealer is applied, and then limit traffic to protected areas only.

3.04 POLISHING

- A. Refer to 03 35 29 "Retroplate."

3.05 SEALING

- A. Apply in accordance with its manufacturer's instructions to clean, dry concrete slabs. Finish shall be uniform, without sealer buildups, runs and holidays.

3.06 PROTECTING

- A. Unless otherwise recommended by the sealer manufacturer, restrict traffic on treated slabs for a minimum of 8 hours under normal conditions; protect traffic areas with dry, reinforced Kraft paper securely taped in place until final cleaning.
- B. Protect adjacent work from damages by this work with heavy Kraft paper or polyethylene film.
- C. Maintain protection in effective condition for as long as need for protection exists.
- D. Control use of water within the building so that no damage to previously installed work or existing improvements and finish occurs.
- E. Repair damaged areas to match adjacent, undamaged areas as approved by the Architect.
- F. Remove and replace damaged, stained, and other surfaces that do not match adjacent materials or cannot be satisfactorily cleaned or repaired, as determined and directed by the Architect, at no cost to the Owner.

END OF SECTION

SECTION 03 37 13

SHOTCRETE

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section
- B. Section Includes:
 - 1. Pneumatically placed concrete.
- C. Related Sections:
 - 1. Section 03 2000: Concrete Reinforcement.
 - 2. Section 03 3000: Cast-In-Place Concrete.

1.02 SYSTEM DESCRIPTION

- A. Regulatory Requirements: Comply with CBC requirements, such as Section 1910A

1.03 SUBMITTALS

- A. Shop Drawings: Submit Shop Drawings indicating locations to receive shotcrete. Provide details of installation and reinforcement.
- B. Product Data: Submit detailed product information identifying types and quality of materials, including admixtures.
- C. Submit a mix design of each proposed mix to be provided for the Work. If data from prior experience is not available or applicable, provide and perform specimen testing of proposed mix designs.

1.04 QUALITY ASSURANCE

- A. Comply with the following as a minimum requirement
 - 1. ACI 506.2 - Specification for Materials, Proportioning and Application of Shotcrete.
 - 2. ASTM C 150 - Portland Cement.
 - 3. Perform Work in accordance with ACI 506.2.
 - 4. Testing: Refer to DSA 103 and general notes on plans
- B. Qualifications of Installer:
- C. Mock-ups:

1. Test Panels: Construct a test panel of the thickness and reinforcing that reproduces the thickest and most congested area specified in the structural drawings. The IOR and special inspector will witness the assembly, reinforcing, installation, and disassembly of the test panel. The panel shall be at least 4 feet x 4 feet. After installation, but before the concrete has fully set, the panel shall be disassembled and inspected. The panel shall be free of voids, sags and defects.
2. Application of structural wet mix shotcrete in the finished Work shall not proceed until the test panel had been furnished, disassembled, and inspected by the IOR and special inspector.

1.05 DELIVERY, STORAGE AND HANDLING

- A. Ensure materials and surrounding air temperature are a minimum 50 degrees F. prior to, during, and for at least 7 days after completion of Work.
- B. During freezing or near freezing weather, provide equipment and cover to maintain 50 degrees F. and to protect Work completed or in progress.
- C. Suspend installation during high winds, rainy weather, or near freezing temperature when Work cannot be protected.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Cement: ASTM C 150 Type II/V or type L, low alkali.
- B. Aggregate: Conform to ACI 506, Gradation No. 1 or No. 2, ASTM C 33.
- C. Curing compound not detrimental to application of subsequent surface finish materials.

2.02 SHOTCRETE MIX

- A. Conform to following requirements:
 1. Compressive strength as indicated on Drawings; 28 day minimum.
 2. Aggregate size (maximum): 3/8 inch.
 3. Slump (plus or minus 1/2 inch): 1 inch to 2 inches
- B. Thoroughly mix shotcrete. Apply mix within 45 minutes.
- C. Develop mix design to provide compaction and low percentage of rebound, but stiff enough not to sag.
- D. Maintain quality control records during production of shotcrete. Submit records to the Architect.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine surfaces to receive shotcrete and verify unsuitable conditions have been corrected before proceeding. Verify that field conditions are acceptable and are ready to receive Work.

- B. Verify fabricated forms are true to line and dimension, adequately braced against vibration, and constructed to permit escape of air and rebound during installation.
- C. Ensure correct placement of reinforcement. Provide sufficient clearance around reinforcement to permit complete encasement.
- D. Provide safe access to shotcrete surfaces for screeding and finishing, to permit uninterrupted application.

3.02 PREPARATION

- A. Remove existing unsound concrete from substrate surfaces by chipping.
- B. Minimize abrupt changes in thickness of repair. Remove square external corners from substrate by rounding the edge.
- C. Sandblast existing surfaces that do not require chipping to remove oil, grease, and other contaminants, and to provide a roughed surface for proper bonding of the material.
- D. Determine operating procedures for placement in close quarter, extended distances, or around unusual obstructions where placement velocities and mix consistency must be adjusted.
- E. Clean and wet cementitious surfaces prior to installation. Maintain porous surfaces damp for several hours before installation. Do not install when there is visible free water present

3.03 BATCHING AND MIXING

- A. Shotcrete Mixes: Shall be designed based on the following minimum proportions:
 - 1. Provide shrinkage tests, as specified under Section 03 3000: Cast-In-Place Concrete.
 - 2. Provided mix with fine and 3/8 inch coarse aggregates shall contain between 20 and 30 percent pea gravel as specified, shotcrete-graded fine aggregate, at least 6.5 sacks of portland cement per cubic yard and sufficient water to produce a maximum slump of 2 inches plus-or-minus 1/2 inch.
 - 3. Shotcrete mixes shall be proportioned, batched and transported to assure complete mixing. Truck mixers shall be charged to not more than 75 percent of their rated capacity. Mixes shall be batched to provide a maximum 2 inch slump plus-or-minus 1/2 inch at the mixer at time of discharge. Water may be added at the Project site and in no case may the slump at the pump exceed 2 inches plus-or-minus 1/2 inch.
- B. Thoroughly mix cement and aggregate for at least one minute before adding water.

3.04 APPLICATION

- A. Install with suitable delivery equipment and procedures that will result in meeting the requirements of the Drawings and Specifications. Whenever possible, except when enclosing reinforcing steel, the nozzle shall be held at right angles to the surface to be placed and at a distance from 30 inches to 36 inches. When enclosing reinforcing steel, the nozzle shall be held so as to direct the material behind the bars. Each side of each bar shall be installed separately. Any deposits of loose sand or rebound shall be installed separately. Any deposits of loose sand or rebound shall be carefully removed from surfaces before material is installed. A second experienced nozzle operator equipped with an air jet shall attend the operators whenever reinforcing steel is being enclosed and shall carefully precede the nozzle and blow out rebound and sand which may have lodged behind the steel. Horizontal members shall not be installed from the top unless special methods are specified to eliminate rebound. The use of "puddled" shotcrete in which the water content of the mix is increased to facilitate the installation in difficult locations is not permitted. Shotcrete shall not be installed where the stream from the nozzle cannot directly impinge on the surface on which the shotcrete is to be installed.
- B. No rebound material shall be installed in the Work.
- C. The film of laitance, which forms on the surface of the shotcrete, shall be removed within approximately 2 hours after installation by brushing with a stiff broom. If this film is not removed within 2 hours, it shall be removed by wire brushing or sand blasting. Construction joints over 8 hours old shall be thoroughly cleaned before the installation of shotcrete.
- D. Damage: Pneumatically placed concrete subsiding after installation shall be removed and replaced. Rebound pockets, sags, sloughing or other defects shall be cut out and replaced.
- E. Surfaces to receive shotcrete shall have their entire surface thoroughly cleaned and roughened by sand blasting. Concrete and masonry shall be wetted before shotcrete is installed, but not so wet as to inhibit the installation. Sand for sand blasting shall be clean, sharp and uniform size, with no particles that will pass a 50 mesh screen.
- F. Reinforcement: Before installing shotcrete around or upon reinforcement, reinforcement shall be thoroughly cleaned of grease, oil, paint, loose mill scale, heavy rust and hydrated concrete.
- G. Reinforcing shall be supported and secured in place in such a manner that resulting vibrations from shotcrete installation will not damage and or dislodge reinforcing.
- H. Walls: Where structural wet mix shotcrete is to be installed to walls, minimum spacing of reinforcing steel shall be 6 bar diameters for walls with one curtain of steel. Where 2 curtains of steel are provided, curtain nearest nozzle shall be provided with a minimum spacing of 12 bar diameters and remaining curtain shall be provided with a minimum spacing of 6 bar diameters. Reinforcing steel shall be provided with a minimum of 3 bar diameters at splices. Minimum clear distance between reinforcing bars, other than mesh, shall be a minimum of 3 times maximum aggregate size.
1. Contact splices shall not be provided for bars larger than No. 5. Splices shall be non-contact back to back.
- I. Shotcrete forms shall be substantial and rigid. Forms shall be fabricated and installed to permit the effects of rebound.
1. Rigid or other required backing shall be installed against earth during application of wet mix shotcrete. Rigid or other required backing shall be provided where a void in embankment is to be bridged. Forms to be provided where required.

- J. Line and Thickness Control: Provide adequate wires or other required means to establish thickness, surface planes, and finish lines of shotcrete. Maintain specified tolerances by maintaining wires secure and taut.
- K. Placement Precautions: Do not install shotcrete if hydrating or stiffening of mix takes place at any time before delivery to nozzle.
- L. The height of a layer shall be limited to not more than 3 feet and a succeeding layer shall not be installed in less than 3 hours. Sloughing or sagging is not permitted.

3.05 FINISHING

- A. Install to a true, even surface by floating or rodding and providing a wood float finish to surfaces. Finish surfaces shall be within a tolerance of 1/8 inch in 10 feet. Finish to match existing conditions, if applicable.

3.06 CURING AND PROTECTING

- A. Initial Curing: Immediately after finishing, maintain shotcrete continuously moist for at least 20 days by one of the following materials or methods:
 - 1. Continuous sprinkling.
 - 2. Absorptive mat or other covering maintained continuously wet.
- B. Final Curing: Provide additional curing immediately following the initial curing and before shotcrete has hydrated with one of the following materials or methods:
 - 1. Continue the method provided for initial curing.
 - 2. Material conforming to ASTM C 171.
- C. Duration Of Curing. Maintain curing for the first 14 days after installation. During the curing period, maintain shotcrete above 40 degrees F. and in a moist condition as specified previously. Prevent rapid drying at end of curing period

3.07 FIELD QUALITY CONTROL

- A. Shotcrete Work shall be continuously inspected during installation. A special inspector, approved by DSA to inspect the Work of this section, shall inspect the materials, placing equipment, details of construction, and construction procedure. The IOR shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.
- B. No less than 2 cores each day shall be obtained from the Work at locations designated by the special inspector. At least one core shall be obtained for each 50 cubic yards of shotcrete. Cores shall be tested at approximately 28 days. Cores shall be 4 inches in diameter or larger. In addition, cores shall be obtained from 2 test panels each day. Test panels must be correlated with locations of wall being installed at same time as test panels.
- C. The special inspector shall observe coring operations and will prepare a report of coring operations for the testing laboratory.
- D. Obtain representative core samples in accordance with CBC recommendations, and test in accordance with ASTM C 42.

- E. Remove and replace shotcrete which lacks uniformity, exhibits segregation, honeycombing, or lamination, or which contains any dry patches, slugs, voids, or sand pockets.
- F. Remove and replace damaged shotcrete, which cannot be satisfactorily repaired.
- G. Repair core holes in accordance with Chapter 9 of ACI 301. Do not fill core holes with shotcrete. Repair holes with non-shrink non-staining concrete.

3.08 PROTECTION

- A. Before installation, protect interior and exterior trim, sash, doors, transoms, floors, ceilings and equipment. Debris shall be immediately cleaned up after installation but not less than once each day.
- B. Protect the Work of this section until Substantial Completion.

3.09 CLEAN-UP

- A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 03 38 00
POST-TENSIONED CONCRETE

PART 1 GENERAL

1.01 SUMMARY

- A. This Section includes the following:
1. Furnishing post-tensioning reinforcement and accessories including encapsulated prestressing tendons, pocket formers, support bars, bar chairs, and slab bolsters.
 2. Installing post-tensioning tendons.
 3. Performing post-tensioning operations including stressing and finishing tendons.
 4. Recording tendon elongations and gage pressures.
 5. Finishing tendon ends and patching stressing pockets.
- B. Related Sections include the following:
1. Division 3 Section "Cast-in-Place Concrete" for cast-in-place concrete.
 2. Division 3 Section "Concrete Reinforcement" for placement of nonprestressed steel reinforcement.
 3. Division 3 Section "Concrete Formwork" for formwork and forming accessories.
 4. Architectural Concrete

1.02 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.03 DEFINITIONS

- A. Strand Tail: Excess strand length extending past the anchorage device.
- B. Stressing Blockout: Opening created in the slab to allow access to stressing-end anchorages.
- C. Stressing Pocket: Void formed by pocket former at stressing-end anchorage to provide required cover over wedges and strand tail.
- D. Wedge Cavity: Cone-shaped hole in anchorage device designed to hold the wedges that anchor the strand.

1.04 SUBMITTALS

- A. Product Data: For the following:
1. Post-tensioning coating.
 2. Tendon sheathing.

3. Anchorage devices.
 4. Tendon couplers.
 5. Bar and tendon supports.
 6. Pocket formers.
 7. Sheathing repair tape.
 8. Stressing-pocket patching material.
 9. Encapsulation system.
- B. Shop Drawings: Installation drawings including plans, elevations, sections, details, and notes prepared by or under the supervision of a registered professional engineer detailing tendon layout and installation procedures, including the following:
1. Numbers, arrangement, and designation of post-tensioning tendons.
 2. Tendon profiles and method of tendon support including chair heights and locations. Show tendon profiles at sufficient scale to clearly indicate all support points, with their associated heights.
 3. Construction joint locations, pour sequence, locations of anchorages and blockouts required for stressing.
 4. Stressing procedures and jacking force to result in final effective forces used in determining number of tendons required.
 5. Sealed calculations prepared by a California registered professional engineer indicating method of elongation calculation including values used for friction coefficients, anchorage seating loss, elastic shortening, creep, relaxation, and shrinkage.
 6. Calculated elongations for each tendon.
 7. Details for horizontal curvature around openings and at anchorages.
 8. Details for corners and other locations where tendon layouts may conflict with one another or nonprestressed reinforcing steel.
 9. Diagrams and notes as necessary for positioning of nonprestressed reinforcement required for installing post-tensioning tendons including, but not limited to, the following:
 - a. Support bars.
 - b. Backup bars and hairpins at anchorages.
 - c. Hairpins at locations of horizontal curvature.
 - d. Supplemental reinforcement at blockouts.
- C. Design Shop Drawings and calculations.
- D. Samples for Verification: For the following products:
1. Each anchorage device assembly with a minimum of 24 inches (610 mm) of coated, sheathed strand.
 - a. Include components of encapsulation system.
 2. Each coupler assembly with a minimum of 24 inches (610 mm) of coated, sheathed strand.
 - a. Include components of encapsulation system.
 3. All components of encapsulation system, unassembled and clearly marked as to usage.

- E. Product Certificates:
 - 1. For each type of anchorage device and coupler, signed by product manufacturer.
 - 2. For each type of encapsulation system, signed by product manufacturer.
- F. Qualification Data: For installer, manufacturer and testing agency. Include resume of individual supervising installation and stressing of post-tensioning tendons.
- G. Mill Test Reports: Certified mill test reports for prestressing strand used on Project indicating that strand is low-relaxation and including the following:
 - 1. Coil numbers or identification.
 - 2. Breaking load.
 - 3. Load at 1 percent extension.
 - 4. Elongation at failure.
 - 5. Modulus of elasticity.
 - 6. Diameter and net area of strand.
- H. Field quality-control test reports.
- I. Procedures Statement: Procedures for cutting excess strand tail and patching stressing pocket.
- J. Stressing Jack Calibration: Calibration certificates for jacks and gages to be used on Project. Calibrate each jack-and-gage set as a pair. Calibration certificates shall be 6 months old or less.
- K. Stressing Records: Filled out by testing agency during stressing operation with the following information recorded:
 - 1. Name of Project.
 - 2. Date of approved installation drawings used for installation and stressing.
 - 3. Floor number and concrete placement area.
 - 4. Date of stressing operation.
 - 5. Weather conditions including temperature and rainfall.
 - 6. Name and signature of inspector.
 - 7. Name of individual in charge of stressing operation.
 - 8. Serial or identification numbers of jack and gage.
 - 9. Date of jack-and-gage calibration certificates.
 - 10. Gage pressure to achieve required stressing force per supplied calibration chart.
 - 11. Tendon identification mark.
 - 12. Calculated tendon elongation.
 - 13. Actual tendon elongation.
 - 14. Actual gage pressure.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer whose full-time Project superintendent has successfully completed PTI's Level 1 - Field Fundamentals course or has equivalent verifiable experience and knowledge acceptable to Architect.
 - 1. Superintendent must have received training from post-tensioning supplier in the operation of stressing equipment to be used on Project.
- B. Manufacturer Qualifications: Fabricating plant certified by PTI according to procedures set forth in PTI's "Manual for Certification of Plants Producing Unbonded Single Strand Tendons."
- C. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated, as documented according to ASTM E 548.
 - 1. Testing Agency Inspector: Personnel performing field inspections and measuring elongations shall have successfully completed PTI's Level 1 - Field Fundamentals course or shall have equivalent qualifications acceptable to Architect.
- D. Source Limitations: Obtain post-tensioning materials and equipment from the same supplier.
 - 1. Stressing jacks not provided by post-tensioning supplier must be calibrated and approved for use on Project by post-tensioning supplier.
- E. ACI Publications: Comply with ACI 423.6, "Specification for Unbonded Single Strand Tendons," unless otherwise indicated in the Contract Documents.
- F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to installation and stressing of post-tensioning tendons including, but not limited to, the following:
 - 1. Construction schedule and availability of materials, personnel, and equipment needed to make progress and avoid delays.
 - 2. Storage of post-tensioning materials on-site.
 - 3. Structural load limitations.
 - 4. Coordination of post-tensioning installation drawings and nonprestressed reinforcing steel placing drawings.
 - 5. Horizontal and vertical tolerances on tendon and nonprestressed reinforcement placement.
 - 6. Marking and measuring of elongations.
 - 7. Submittal of stressing records and requirements for tendon finishing.
 - 8. Removal of formwork.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle post-tensioning materials according to PTI's "Field Procedures Manual for Unbonded Single Strand Tendons."
- B. Inspect tendons and accessory items at time of their delivery to Project site, prior to off-loading. Notify post-tensioning supplier of observed damage prior to off-loading.
- C. Keep accurate and current records of materials delivered and used.
- D. Immediately remove from Project site any tendons with damaged strand.

1.07 COORDINATION

A. Attachments and Penetrations:

1. Attach permanent fixtures such as curtain-wall systems, handrails, fire-protection equipment, lights, and security devices to the slab using embedded anchors. Drilled anchors are not allowed unless authorized in writing by Architect.
2. Power-driven fasteners are not allowed unless authorized in writing by Architect.
3. Core drilling for sleeves or other penetrations is not allowed unless authorized in writing by Architect.
4. Protect penetrations within 18 inches of an anchorage with ASTM A 53/A 53M, Schedule 40 steel pipe.

PART 2 PRODUCTS

2.01 PRESTRESSING TENDONS

- A. Prestressing Strand: ASTM A 416, Grade 270, uncoated, 7-wire, low-relaxation, 0.5-inch diameter strand.
- B. Post-Tensioning Coating: Compound with friction-reducing, moisture-displacing, and corrosion-inhibiting properties specified in ACI 423.6; chemically stable and nonreactive with prestressing steel, nonprestressed reinforcement, sheathing material, and concrete.
 1. Minimum Coating Weight: 2.5 lb for 0.5-inch per 100 feet (30 m) of strand.
 2. Completely fill annular space between strand and sheathing over entire tendon length with post-tensioning coating.
- C. Tendon Sheathing: Comply with ACI 423.6.
 1. Minimum Thickness: 0.050 inch for polyethylene or polypropylene with a minimum density of 0.034 lb/cu. in.
 2. Continuous over the entire length of tendon to provide watertight encapsulation of strand and between anchorages to prevent intrusion of cement paste or loss of coating for a non-encapsulated system.
- D. Anchorage Device and Coupler Assembly: Assembly of strand, wedges, and anchorage device or coupler complying with static and fatigue testing requirements in ACI 423.6 and capable of developing 95 percent of actual breaking strength of strand.
 1. Anchorage Bearing Stresses: Comply with ACI 423.6 for stresses at transfer load and service load.
 2. Fixed-End Anchorage Device Assemblies: Plant fabricated with wedges seated at a load of not less than 80 percent and not more than 85 percent of breaking strength of strand.
- E. Encapsulation System: Watertight encapsulation of prestressing strand consisting of the following:
 1. Wedge-Cavity Caps: Attached to anchorages with a positive mechanical connection and completely filled with post-tensioning coating.
 - a. Caps for Fixed and Stressing-End Anchorages Devices: Designed to provide watertight encapsulation of wedge cavity. Sized to allow required extension of strand past the wedges.

- 1) Attach cap for fixed-end anchorage device in fabricating plant.
- b. Caps at Intermediate Anchorages: Open to allow passage of strand.
2. Sleeves: Attached to anchorage device with positive mechanical connection; overlapped a minimum of 4 inches (100 mm) with sheathing and completely filled with post-tensioning coating.

2.02 NONPRESTRESSED STEEL BARS

- A. Support Bars, Reinforcing Bars, Hairpins: ASTM A 706, Grade 60, deformed. Minimum support bar size is 1/2 inch.
- B. Low-Alloy-Steel Support Bars, Reinforcing Bars, Hairpins: ASTM A 706, deformed.
- C. Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening tendons and tendon support bars in place. Manufacture bar supports, according to CRSI's "Manual of Standard Practice," from steel wire, plastic, or precast concrete of greater compressive strength than concrete, and as follows:
 1. For uncoated bars, use all-plastic CRSI Class 1 plastic-protected bar supports.

2.03 ACCESSORIES

- A. Pocket Formers: Capable of completely sealing wedge cavity; sized to provide the required cover over the anchorage and allow access for cutting strand tail.
- B. Anchorage Fasteners: Galvanized steel nails, wires, and screws used to attach anchorage devices to formwork.
- C. Sheathing Repair Tape: Elastic, self-adhesive, moistureproof tape with minimum width of 2 inches (50 mm), in contrasting color to tendon sheathing; nonreactive with sheathing, coating, or prestressing steel.
 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Adhesive Tape Products, Inc.; PWT-20.
 - b. 3M; Tape 226.
 - c. Tyco Adhesives; Polyken 826, or equal.

2.04 PATCHING MATERIAL

- A. Patching Material: One component, polymer-modified, premixed patching material containing selected silica aggregates and portland cement, suitable for vertical and overhead application. Do not use material containing chlorides or other chemicals known to be deleterious to prestressing steel or material that is reactive with prestressing steel, anchorage device material, or concrete.
 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Euclid Chemical Company (The); Verticoat Supreme.
 - b. Fox Industries, Inc.; FX-228.

- c. Kaufman Products, Inc.; Patchwell Kit HB.
- d. Master Builders, Inc.; Emaco R350 CI.
- e. Sika Corporation, Inc.; SikaMonoTop 612 or equal.

PART 3 EXECUTION

3.01 FORMWORK

- A. Provide formwork for post-tensioned elements as specified in Division 3 Section "Cast-in-Place Concrete." Design formwork to support load redistribution that may occur during stressing operation. Ensure that formwork does not restrain elastic shortening, camber, or deflection resulting from application of prestressing force.
- B. Do not remove forms supporting post-tensioned elements until tendons have been fully stressed and elongations have been approved by Architect, unless authorized in writing by Architect.
- C. Do not place concrete in supported floors until tendons on supporting floors have been stressed and elongations have been approved by Architect, unless authorized in writing by Architect.

3.02 NONPRESTRESSED STEEL REINFORCEMENT PLACEMENT

- A. Placement of nonprestressed steel reinforcement is specified in Division 3 Section "Cast-in-Place Concrete." Coordinate placement of nonprestressed steel reinforcement with installation of post-tensioning tendons.

3.03 TENDON INSTALLATION

- A. Install tendons according to approved installation drawings and procedures stated in PTI's "Field Procedures Manual for Unbonded Single Strand Tendons."
- B. Tendon Supports: Provide continuous slab bolsters or bars supported on individual high chairs spaced at a maximum of 42 inches o.c. to ensure tendons remain in their designated positions during construction operations and concrete placement.
 - 1. Support tendons as required to provide profiles shown on installation drawings. Position supports at high and low points and at intervals not exceeding 48 inches. Ensure that tendon profiles between high and low points are smooth parabolic curves.
 - 2. Attach tendons to supporting chairs and reinforcement without damaging tendon sheathing.
 - 3. Support slab tendons independent of beam reinforcement.
- C. Maintain tendon profile within maximum allowable deviations from design profile as follows:
 - 1. 1/4 inch for member depth less than or equal to 8 inches.
 - 2. 3/8 inch for member depth greater than 8 inches and less than or equal to 24 inches.
 - 3. 1/2 inch for member depth greater than 24 inches.
- D. Maintain minimum radius of curvature of 480-strand diameters for lateral deviations to avoid openings, ducts, and embedded items. Maintain a minimum of 2 inches of separation between tendons at locations of curvature.

- E. Limit tendon bundles to five tendons. Do not twist or entwine tendons within a bundle. Maintain a minimum distance of 12 inches between center of adjacent bundles.
- F. If tendon locations conflict with nonprestressed reinforcement or embedded items, tendon placement governs unless changes are authorized in writing by Architect. Obtain Architect's approval before relocating tendons or tendon anchorages that interfere with one another.
- G. Deviations in horizontal spacing and location of slab tendons are permitted when required to avoid openings and inserts.
- H. Installation of Anchorage Devices:
 - 1. Place anchorage devices at locations shown on approved installation drawings.
 - 2. Do not switch fixed and stressing-end anchorage locations unless authorized in writing by Architect.
 - 3. Attach pocket formers, intermediate anchorage devices, and stressing-end anchorage devices securely to bulkhead forms. Install stressing-end and intermediate anchorage devices perpendicular to tendon axis.
 - 4. Install tendons straight, without vertical or horizontal curvature, for a minimum of 12 inches (300 mm) behind stressing-end and intermediate anchorages.
 - 5. Embed intermediate anchorage devices at construction joints in first concrete placed at joint.
 - 6. Minimum splice length in reinforcing bars at anchorages is 24 inches. Stagger splices a minimum of 60 inches.
 - 7. Place fixed-end anchorage devices in formwork at locations shown on installation drawings. Support anchorages firmly to avoid movement during concrete placement.
 - 8. Retain subparagraph below if an encapsulated system is specified. Revise as necessary if an encapsulated system is specified only for certain portions of structure.
 - 9. Remove loose caps on fixed-end anchorages, refill with post-tensioning coating, and re-attach caps to achieve a watertight enclosure.
- I. Maintain minimum concrete cover as follows:
 - 1. From Exterior Edge of Concrete to Wedge Cavity: 1-1/2 inches.
 - 2. Retain subparagraph below if a non-encapsulated system is specified. Revise as necessary if an encapsulated system is specified only for certain portions of structure.
 - 3. From Exterior Edge of Concrete to Strand Tail: 3/4 inch.
 - 4. Retain subparagraph below if an encapsulated system is specified. Revise as necessary if an encapsulated system is specified only for certain portions of structure.
 - 5. From Exterior Edge of Concrete to Wedge-Cavity Cap: 1 inch.
 - 6. A minimum of 1-inch (25-mm) top and edge concrete cover is recommended for anchorage devices in aggressive environments.
 - 7. Top, Bottom, and Edge Cover for Anchorage Devices: 1-1/2 inches.
- J. Maintain minimum clearance of 6 inches between tendons and openings.
- K. Paint markings on formwork will be transferred to concrete, allowing tendon locations to be determined by examination of slab soffit. Delete first paragraph below or use alternate method of marking tendon locations if soffit is to be exposed or such markings are not desired.

- L. Prior to concrete placement, mark tendon locations on formwork with spray paint.
- M. Do not install sleeves within 36 inches of anchorages after tendon layout has been inspected unless authorized in writing by Architect.
- N. Do not install conduit, pipe, or embeds requiring movement of tendons after tendon layout has been inspected unless authorized in writing by Architect.
- O. Do not use couplers unless location has been approved by Architect.

3.04 SHEATHING INSPECTION AND REPAIR

- A. Inspect sheathing for damage after installing tendons. Repair damaged areas by restoring post-tensioning coating and repairing or replacing tendon sheathing.
 - 1. Ensure that sheathing is watertight and there are no air voids.
 - 2. Follow tape repair procedures in PTI's "Field Procedures Manual for Unbonded Single Strand Tendons."
- B. Maximum length of exposed strand behind anchorages is as follows:
 - 1. Fixed End: 12 inches.
 - 2. Intermediate and Stressing End: 1 inch.
 - a. Cover exposed strand with sheathing repair tape to prevent contact with concrete.
- C. Immediately remove and replace tendons that have damaged strand.

3.05 CONCRETE PLACEMENT

- A. Do not place concrete until placement of tendons and nonprestressed steel reinforcement has been inspected by special inspector and Structural Engineer.
- B. Provide Architect and special inspector and Structural Engineer a minimum of 48 hours' notice before concrete placement.
- C. Place concrete as specified in Division 3 Section "Cast-in-Place Concrete." Ensure compaction of concrete around anchorages.
- D. Ensure that position of tendon and nonprestressed steel reinforcement does not change during concrete placement. Reposition tendons and nonprestressed steel reinforcement moved during concrete placement.
- E. Ensure that method of concrete placement does not damage tendon sheathing. Do not support pump lines, chutes, or other concrete placing equipment on tendons.

3.06 TENDON STRESSING

- A. Calibrate stressing jacks and gages at least every six months. Keep copies of calibration certificates for each jack-and-gage pair on Project site and available for inspection. Exercise care in handling stressing equipment to ensure that proper calibration is maintained.
- B. Stress tendons only under supervision of qualified post-tensioning superintendent.
- C. Do not begin stressing operations until concrete strength has reached 3000 psi as indicated by compression tests of field-cured cylinders.

- D. If concrete has not reached required strength within 96 hours, obtain Architect's approval to partially stress tendons and delay final stressing until concrete has reached required strength.
- E. Retain first paragraph below if stage stressing will be required; revise to suit Project.
- F. Stage stress transfer girders according to schedule shown on the Contract Drawings.
- G. If detensioning and restressing of tendon is required, discard wedges used in original stressing and provide new wedges.
- H. Mark and measure elongations according to PTI's "Field Procedures Manual for Unbonded Single Strand Tendons." Measure elongations to closest 1/8 inch.
- I. Submit stressing records within one day of completion of stressing. If discrepancies between measured and calculated elongations exceed plus or minus 7 percent, resolve these discrepancies to satisfaction of Architect.
- J. Prestressing will be considered acceptable if gage pressures shown on stressing record correspond to required stressing force and calculated and measured elongations agree within 7 percent.
- K. If measured elongations deviate from calculated elongations by more than 7 percent, additional testing, restressing, strengthening, or replacement of affected elements may be required.

3.07 TENDON FINISHING

- A. Do not cut strand tails or cover anchorages until stressing records have been reviewed and approved by Architect.
- B. Cut strand tails as soon as possible after approval of elongations.
- C. Cut strand tail between 1/2 and 3/4 inch from wedges. Do not damage tendon or concrete during removal of strand tail. Acceptable methods of cutting strand tail include the following:
 - 1. Oxyacetylene flame.
 - 2. Abrasive wheel.
 - 3. Hydraulic shears.
 - 4. Plasma cutting.
- D. Install caps and sleeves on intermediate anchorages within one day of stressing.
- E. Cut strand tails and install caps on stressing-end anchorages within one day of Structural Engineer's acceptance of elongations.
- F. Patch stressing pockets within one day of cutting strand tail. Clean inside surface of pocket to remove laitance or post-tensioning coating before installing patch material. Finish patch material flush with adjacent concrete.

3.08 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports. Cooperate with testing agency to facilitate the execution of its duties.

1. Before concrete placement, testing agency will inspect the following for compliance with post-tensioning installation drawings and the Contract Documents:
 - a. Location and number of tendons.
 - b. Tendon profiles and cover.
 - c. Installation of backup bars, hairpins, and other nonprestressed reinforcement shown on post-tensioning installation drawings.
 - d. Installation of pocket formers and anchorage devices.
 - e. Repair of damaged sheathing.
 - f. Connections between sheathing and anchorage devices.
2. Testing agency will record tendon elongations during stressing.
3. Testing agency will immediately report deviations from the Contract Documents to Architect.

3.09 PROTECTION

- A. Do not expose tendons to electric ground currents, welding sparks, or temperatures that would degrade component.
- B. Protect exposed components within one workday of their exposure during installation.
- C. Prevent water from entering tendons during installation and stressing.
- D. Provide weather protection to stressing-end anchorages if strand tails are not cut within 10 days of stressing the tendons.

3.10 REPAIRS

- A. Submit repair procedure to Architect for evaluation and approval.
- B. Do not proceed with repairs requiring removal of concrete unless authorized in writing by Architect.

SECTION 03 45 00

ARCHITECTURAL PRECAST CONCRETE

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
1. Precast architectural concrete units.
 2. Mold materials.
 3. Reinforcing materials.
 4. Prestressing tendons.
 5. Concrete materials.
 6. Steel connection materials.
 7. Stainless steel connection materials.
 8. Accessories.
 9. Grout materials.
 10. Clay facing materials.
 11. Stone facing materials.
 12. Insulated panel materials.
 13. Architectural precast concrete wall cap units.
 14. Concrete stair treads

1.02 DEFINITIONS

- A. Design Reference Sample: Sample of approved architectural precast concrete color, finish and texture, pre-approved by Architect.

1.03 PERFORMANCE REQUIREMENTS

- A. Structural performance: Provide architectural precast concrete units and connections capable of withstanding design loads within limits and under conditions indicated.

1.04 SUBMITTALS

- A. Product data: For each type of product indicated. Retain quality control records and certificates of compliance for 5 years or period of warranty, whichever is greater.
- B. Shop Drawings: Detail fabrication and installation of architectural precast concrete units. Indicate member locations, plans, elevations, dimensions, shapes and cross sections
1. Indicate location of each architectural precast concrete unit by same identification mark placed on panel.
 2. Indicate relationship of architectural precast concrete units to adjacent materials.

- C. Samples: Design reference samples for initial verification of design intent, approximately 12 by 12 by 2 inches (300 by 300 by 50 mm), representative of finishes, color, and textures of exposed surfaces of architectural precast concrete units.
 - 1. When back face of precast concrete unit is to be exposed, show samples of the workmanship, color, and texture of the backup concrete as well as the facing.
- D. Samples for each brick unit required, showing the full range of color and texture expected. Supply sketch of each corner or special shape with dimensions. Supply sample showing color and texture of joint treatment.
- E. Welding certificates: Copies of certificates for welding procedure specifications (WPS) and personnel.
- F. Qualification data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include list of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- G. Material Test Reports: From a qualified testing agency indicating and interpreting test results of the following for compliance with requirements indicated:
- H. Material certificates: Signed by manufacturers certifying that each of the following items complies with requirements.
 - 1. Concrete materials.

1.05 QUALITY ASSURANCE

1.06 HANDLING

- A. Store units with adequate dunnage and bracing and protect units to prevent contact with soil, staining, and to prevent cracking, distortion, warping or other physical damage.
- B. Store units, unless otherwise specified, with non-staining, resilient supports.
- C. Place stored units so identification marks are clearly visible, and product can be inspected.
- D. Deliver all architectural precast concrete units to the project site in such quantities and at such times to assure compliance with the agreed project schedule and proper setting sequence so as to limit unloading units temporarily on the ground.
- E. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses which would cause cracking or damage.
- F. Place non-staining resilient spacers of even thickness between each unit.
- G. Support units during shipment on non-staining shock absorbing material.

1.07 SEQUENCING

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 PRODUCTS

2.01 FABRICATORS

- A. Available fabricators: Subject to compliance with requirements, fabricators offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. <Insert fabricators' names and product designations for acceptable manufacturers.>

2.02 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, nonabsorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; non-reactive with concrete and suitable for producing required finishes.
 - 1. Mold-release agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- B. Form Liners: Units of face design, texture, arrangement, and configuration [indicated] [to match precast concrete design reference sample]. Provide solid backing and form supports to ensure that form liners remain in place during concrete placement. Use with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- C. Surface retarder: Chemical set retarder capable of temporarily delaying hardening of newly placed concrete mix to depth of reveal specified.

2.03 REINFORCING MATERIALS

- A. Reinforcing bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.
- B. Low-alloy-steel reinforcing bars: ASTM A 706/A 706M, deformed.
- C. Galvanized reinforcing bars: ASTM A 767/A 767M, Class II zinc coated, hot-dip galvanized and chromate wash treated after fabrication and bending, as follows:
 - 1. Steel reinforcement: **[ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M]**, deformed.
- D. Epoxy-coated reinforcing bars: ASTM A 775/A 775M or ASTM A 934/A 934M, as follows:
 - 1. Steel reinforcement: **[ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M]**, deformed.
- E. Steel Bar Mats: ASTM A 184/A 184M, assembled with clips, as follows:
 - 1. Steel reinforcement: **[ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M]**, deformed bars.
- F. Plain-steel welded wire reinforcement: ASTM A 185, fabricated from **[as-drawn] [galvanized and chromate wash treated]** steel wire into flat sheets.
- G. Deformed-steel welded wire reinforcement: ASTM A 497, flat sheet.

- H. Epoxy-coated-steel welded wire reinforcement: ASTM A 884/A 884M Class A coated, [plain] [deformed], flat sheet, [Type 1 bendable coating] [Type 2 non-bendable coating].
- I. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

2.04 CONCRETE MATERIALS

- A. Portland cement: ASTM C150, Type I or III.
 - 1. For surfaces exposed to view in finished structure, use [gray] [and] [white], same type, brand, and mill source throughout the precast concrete production.
 - 2. Standard gray Portland cement may be used for non-exposed backup concrete.
- B. Supplementary cementitious materials.
 - 1. Fly ash admixture: ASTM C 618, Class C or F with maximum loss on ignition of 3 percent.
 - 2. Metakaolin admixture: ASTM C 618, Class N.
 - 3. Silica fume admixture: ASTM C 1240 with optional chemical and physical requirement.
 - 4. Ground granulated blast-furnace slag: ASTM C989, Grade 100 or 120.
- C. Normal-weight aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S. Provide and stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for entire project.
 - 1. Face-mix coarse aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
 - a. Gradation: [Uniformly graded] [Gap graded] [To match design reference sample].
 - 2. Face-mix fine aggregates: Selected, natural or manufactured sand of the same material as coarse aggregate, unless otherwise approved by Architect.
- D. Backup concrete aggregates: ASTM C33 or C330.
- E. Lightweight aggregates: Except as modified by PCI MNL 117, ASTM C 330 with absorption less than 11 percent.
- F. Coloring admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable and non-fading.
- G. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
- H. Air-entraining admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.
- I. Water-reducing admixture: ASTM C 494/C494M, Type A.
- J. Retarding admixture: ASTM C 494/C494M, Type B.
- K. Water-reducing and retarding admixture: ASTM C 494/C494M, Type D.
- L. High-range, water-reducing admixture: ASTM C 494/C494M, Type F.

- M. High-range, water-reducing and retarding admixture: ASTM C 494/C494M, Type G.
- N. Plasticizing admixture for flowable Concrete: ASTM C 1017/C1017M.
- O. Admixtures containing calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture are not permitted.

2.05 GROUT MATERIALS

- A. Sand-cement grout: Portland cement complying with ASTM C 150, Type I, and clean, natural sand, ASTM C 144, or ASTM C 404. Mix at ratio of one part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- B. Nonmetallic, non-shrink grout: Premixed, nonmetallic, non-corrosive, non-staining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107, Grade A for drypack and Grades B and C for flowable grout and of a consistency suitable for application within a 30-minute working time.
- C. Epoxy-resin grout: Two-component mineral-filled epoxy-resin: ASTM C881 of type, grade, and class to suit requirements.

2.06 CONCRETE MIXES

- A. Prepare design mixes to match Architect's sample for each type of concrete required.
 - 1. Limit use of fly ash and granulated blast-furnace slag to 20 percent replacement of Portland cement by weight; metakaolin and silica fume to 10 percent of portland cement by weight.
- B. Design mixes may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.
- C. Limit water-soluble chloride ions to the maximum percentage by weight of cement permitted by ACI 318 (ACI 318M) or PCI MNL 117 when tested in accordance with ASTM C1218/C1218M.
- D. Normal-weight concrete face and backup mixes: Proportion mixes by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on project, to provide normal-weight concrete with the following properties:
 - 1. Compressive strength (28 Days): 5000 psi (34.5 MPa).
 - 2. Maximum water-cementitious materials ratio: 0.45.
- E. Water absorption: 6 percent by weight or 14 percent by volume, tested according to PCI MNL 117.
- F. Lightweight concrete backup mixes: Proportion mixes by either laboratory trial batch or field test data methods according to ACI 211.2, with materials to be used on Project, to provide lightweight concrete with the following properties:
 - 1. Compressive strength (28 Days): 5000 psi (34.5 MPa).
 - 2. Unit weight: Calculated equilibrium unit weight of 115 lb/cu.-foot (1842 kg/cu.m), plus or minus 3 lb/cu.-foot (48 kg/cu.m), according to ASTM C 567.
- G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.

- H. When included in design mixes, add other admixtures to concrete mixes according to manufacturer's written instructions.

2.07 MOLD FABRICATION

- A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement and vibration operations and temperature changes [and for prestressing and detensioning operations]. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.
 - 1. [Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during placing of concrete. Coat form liner with form-release agent.]
- B. Maintain molds to provide completed architectural precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.
 - 1. Form joints are not permitted on faces exposed to view in the finished work.
 - 2. Edge and corner treatment: Uniformly **[chamfered]** **[radiused]**.

2.08 FABRICATION

- A. Cast-in anchors, inserts, plates, angles, and other anchorage hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
- B. Weld headed studs and deformed bar anchors used for anchorage according to AWS D1.1 and AWS C5.4, "Recommended Practices for Stud Welding."
- C. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- D. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on contract drawing.
- E. Reinforcement: Comply with recommendations in PCI MNL 117 for fabrication, placing, and supporting reinforcement.
 - 1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy coated reinforcing exceeds limits specified ASTM A775/A775M repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
 - 2. Accurately position, support, and secure reinforcement against displacement during concrete- placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
 - 3. Place reinforcing steel and prestressing strand to maintain at least 3/4 -inch (19 mm) minimum concrete cover. Increase cover requirements for reinforcing steel to 1-1/2 inches (38 mm) when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.

4. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.
- F. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses.
- G. Mix concrete according to PCI MNL 117 and requirements in this Section. After concrete batching, no additional water may be added.
- H. Place face mix to a minimum thickness after consolidation of the greater of 1 inch (25 mm) or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover as indicated on contract drawings.
 1. At the fabricator's option either of the following mix design/casting techniques may be used:
 - a. A single design mix throughout the entire thickness of panel.
 - b. Design mixes for facing and backup; using cement and aggregates for each type as indicated, for consecutive placement in the mold. Use cement and aggregate specified for facing mix, use cement and aggregate for backup mix complying with criteria specified as selected by the fabricator.
- I. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units. Comply with requirements in PCI MNL 117 for measuring, mixing, transporting, and placing concrete.
 1. Place backup concrete to ensure bond with face mix concrete.
- J. Thoroughly consolidate placed concrete by internal and/or external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 117.
 1. Place self-consolidating concrete without vibration in accordance with PCI Interim Guidelines for the Use of Self-Consolidating Concrete.
- K. Comply with ACI 306.1 procedures for cold-weather concrete placement.
- L. Comply with ACI 305R recommendations for hot-weather concrete placement.
- M. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that will not show in finished structure.
- N. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until the compressive strength is high enough to ensure that stripping does not have an effect on the performance or appearance of the final product.
- O. Repair damaged architectural precast concrete units to meet acceptability requirements of PCI MNL 117.

2.09 FINISHES

- A. Panel faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved [design reference sample] [sample panels] [mockups] and as follows:
1. Design reference sample: <Insert description and identify fabricator and code number of sample.>
 2. PCI's "Architectural Precast Concrete –Color and Texture Selection Guide," of plate numbers indicated.
 3. As-cast surface finish: Provide surfaces free of excessive air voids, sand streaks, and honeycombs.
 4. Textured-surface finish: Impart by form liners to provide surfaces free of excessive air voids, sand streaks, and honeycombs, with uniform color and texture.
 5. Bush hammer finish: Use power and hand tools to remove matrix and fracture coarse aggregates.
 6. Exposed aggregate finish: Use chemical retarding agents applied to concrete forms and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
 7. Abrasive-blast finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
 8. Acid-etched finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces. Protect hardware, connections and insulation from acid attack.
 9. Honed finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
 10. Polished finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
 11. Sand-embedment finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.
- B. Finish exposed [top] [bottom] [back] surfaces of architectural precast concrete units to match face-surface finish.
- C. Finish unexposed surfaces [top] [bottom] [and back] of architectural precast concrete units by smooth steel-trowel finish.
- D. Finish unexposed surfaces of architectural precast concrete units by float finish.

2.10 SOURCE QUALITY CONTROL

- A. Quality-control testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete also test and inspect according to PCI Interim Guidelines for the Use of Self-Consolidating Concrete.
- B. Owner will employ an independent testing agency to verify architectural precast concrete fabricator's quality-control and testing methods.
1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency and provide samples of materials and concrete mixes as may be requested for additional testing and evaluation.

- C. Strength of precast concrete units will be considered deficient if units fail to comply with ACI 318 (ACI 318M) requirements for concrete strength.
- D. Testing: If there is evidence that the concrete strength of precast concrete units may be deficient or may not comply with ACI 318 (ACI 318M) requirements, Precaster will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42/C42M.
1. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by Architect.
 2. Cores will be tested in an air-dry condition.
 3. Strength of concrete for each series of 3 cores will be considered satisfactory if the average compressive strength is equal to at least 85 percent of the 28-day design compressive strength and no single core is less than 75 percent of the 28-day design compressive strength.
 4. Test results will be made in writing on the same day that tests are performed, with copies to Architect, Contractor, and precast concrete fabricator. Test reports will include the following:
 - a. Project identification name and number.
 - b. Date when tests were performed.
 - c. Name of precast concrete fabricator.
 - d. Name of concrete testing agency.
 - e. Identification letter, name, and type of precast concrete units or units represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.
- E. Patching: If core test results are satisfactory and precast concrete units comply with requirements, clean and dampen core holes and solidly fill with precast concrete mix that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.
- F. Defective work: Architectural precast concrete units that do not comply with acceptability requirements in PCI MNL 117, including concrete strength, manufacturing tolerances, and color and texture range are unacceptable. Chipped, spalled or cracked units may be repaired, if repaired units match the visual mock-up. The Architect reserves the right to reject any unit if it does not match the accepted samples and visual mock-up. Replace unacceptable units with precast concrete units that comply with requirements.

PART 3 EXECUTION

3.01 PREPARATION

- A. Deliver anchorage devices that are embedded in or attached to the building structural frame or foundation before start of such work.
- B. Provide locations, setting diagrams, and templates for the proper installation of each anchorage device.

3.02 EXAMINATION

- A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance
- B. Do not install precast concrete units until supporting cast-in place concrete building structural framing has attained minimum allowable design compressive strength or supporting steel or other structure is structurally ready to receive loads from precast.
- C. Correct unsatisfactory conditions before proceeding with installation.

3.03 ERECTION

- A. Erect precast concrete level, plumb and square within the specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.
 - 1. Install temporary steel or plastic spacing shims or bearing pads as precast concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
 - 2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 - 3. Remove projecting lifting devices and use sand-cement grout to fill voids within recessed lifting devices flush with surface of adjacent precast concrete surfaces when recess is exposed.
 - 4. Unless otherwise shown provide for uniform joint widths of 3/4 inch (19mm)
- B. Connect precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on approved Erection Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and/or grouting are completed.
 - 1. Disruption of roof flashing continuity by connections is not permitted; concealment within roof insulation is acceptable.
- C. Grouting connections: Grout connections where required or indicated. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.

3.04 ERECTION TOLERANCES

- A. Erect architectural precast concrete units level, plumb, square, true, and in alignment without exceeding the non-cumulative erection tolerances of PCI MNL 117, Appendix I.
- B. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections.
- C. Field welds will be subject to visual inspections and non-destructive testing in accordance with ASTM E 165 or ASTM E 709.
- D. Testing agency will report test results promptly and in writing to Contractor and Architect.
- E. Repair or remove and replace work that does not comply with specified requirements.
- F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.05 REPAIRS

- A. Repairs will be permitted provided structural adequacy of units and appearance are not impaired.
- B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet (6 m).
- C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged architectural precast concrete units when repairs do not meet requirements.

3.06 CLEANING

- A. Clean all surfaces of precast concrete to be exposed to view, as necessary, prior to shipping.
- B. Clean mortar, plaster, fireproofing, weld slag, and any other deleterious material from concrete surfaces and adjacent materials immediately.
- C. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
 - 1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Protect other work from staining or damage due to cleaning operations.
 - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

SECTION 03 54 00

SELF-LEVELING PORTLAND CEMENT BASED UNDERLAYMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Fluid-applied self-leveling floor underlayment.

1.02 REFERENCE STANDARDS

- A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or [50 mm] Cube Specimens) 2021.
- B. ASTM C348 - Standard Test Method for Flexural Strength of Hydraulic-Cement Mortars 2021.

1.03 SUBMITTALS

- A. Data: Manufacturer Product Data for product proposed for use.
- B. Tests: Test results as specified below.
- C. Sample panel:
 - 1. Provide, on a floor slab at the job site, a 10-foot square Sample panel of the cementitious underlayment to demonstrate texture of finish surface and test levelness of finish assembly.
 - 2. Make such modifications as necessary to achieve a Sample panel satisfactory to the Architect, or remove and construct additional Sample panel(s).
 - 3. Approved Sample panel may remain in place shall serve as the standard for the same work on the building.

1.04 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in performing the work of this Section.
 - 1. Approved by manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Keep dry and protect from direct sun exposure, freezing, and ambient temperature greater than 105 degrees F.

1.06 REGULATORY REQUIREMENTS

- A. Conform to applicable code for combustibility or flame spread requirements.

1.07 FIELD CONDITIONS

- A. Do not use in exterior applications.

- B. Do not apply where exposed to prolonged contact with water.
- C. Do not install underlayment until floor penetrations and peripheral work are complete.
- D. Maintain minimum ambient temperatures of 50 degrees F 24 hours before, during and 72 hours after installation of underlayment.
- E. During the curing process, ventilate spaces to remove excess moisture.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Cast Underlayments: General:
 - 1. Comply with applicable code for combustibility or flame spread requirements.
 - 2. Provide certificate of compliance from authority having jurisdiction indicating approval of underlayment materials in the required fire rated assembly.
- B. Cementitious Underlayment: Blended cement mix, that when mixed with water in accordance with manufacturer's directions will produce self-leveling underlayment with the following properties:
 - 1. Compressive Strength: Minimum 4000 psi after 28 days, tested per ASTM C109/C109M.
 - 2. Flexural Strength: Minimum 1250 psi after 28 days, tested per ASTM C348.
 - 3. Density: 125 lb/cu ft, nominal.
 - 4. Thickness: Capable of thicknesses from feather edge to maximum 3-1/2 inch.
- C. Primer: Manufacturer's recommended type.
- D. Sealer: Manufacturer's proprietary overspray material, formulated to seal cured floor surfaces to receive subsequent adhered finishes.
- E. Entangled net sound mat laminated to a point bonded moisture resistant fabric.
 - 1. Sound Control Mat: ASTM E 84; polymer, random geometric patterned core.

2.02 MIXING

- A. Site mix materials in accordance with manufacturer's instructions.
- B. Add aggregate, if recommended or required by manufacturer, for areas where thickness will exceed 1 inch. Mix underlayment and water for at least two minutes before adding aggregate, and continue mixing to assure that aggregate has been thoroughly coated.
- C. Mix to self-leveling consistency without over-watering.

PART 3 EXECUTION

3.01 EXAMINATION/PREPARATION

- A. Verify conditions affecting the work of this Section at the site.

- B. Correct detrimental conditions before proceeding with installation.

3.02 SURFACE PREPARATION

- A. Ensure the concrete floor substrate has fully achieved designed compressive strength.
- B. Repair subfloor with concrete repair products 24 hours prior to application of floor topping.
- C. Fill all non-moving, dry cracks with a low viscosity epoxy immediately prior to application of the floor topping.
- D. Perform surface preparation in accordance with standard ACI recommendations.
- E. Perform light, mechanical abrading of the existing substrate to remove all unsound concrete, contaminates, coatings, and adhesives.
- F. Ensure substrate is structurally sound, rigid, dust-free, and free of any contaminants that will adversely affect the bond of the floor topping. Concrete floors should have fully achieved designed compressive strength.
- G. Determine the moisture content and water vapor transmission rate of the subfloor prior to application of floor topping.

3.03 APPLICATION

- A. Install underlayment in accordance with manufacturer's instructions.
- B. Priming:
 - 1. Prime the properly prepared substrate with manufacturer's recommended primer to ensure maximum adhesion of floor topping.
- C. General: Mix and apply underlayment components according to manufacturer's written instructions.
 - 1. Close areas to traffic during underlayment application and for time period after application recommended in writing by manufacturer.
 - 2. Coordinate application of components to provide optimum adhesion to substrate and between coats.
 - 3. At substrate expansion, isolation, and other moving joints, allow joint of same width to continue through underlayment.
- D. Install screeds as recommended by manufacturer and as required to meet tolerance specified below. Set screeds with a laser level.
 - 1. Set screeds so that the minimum thickness of underlayment will be at least 1/8 inch.
 - 2. Where underlayment covers only a small area, grind, chisel and undercut slab, if required, so that the minimum thickness will not be less than 1/8 inch.
- E. Pump or pour material onto substrate. Do not retemper or add water.
 - 1. Pump, move, and screed while the material is still highly flowable.
 - 2. Be careful not to create cold joints.
 - 3. Wear spiked shoes while working in the wet material to avoid leaving marks.

- F. Place to indicated thickness, with top surface level to 1/16 inch in 10 ft.
 - 1. For final thickness over 1-1/2 inches, place underlayment in layers. Allow initial layer to harden to the point where the material has lost its evaporative moisture. Immediately prime and begin application of the subsequent layer within 24 hours.
- G. Place after partition installation.
- H. Where additional aggregate has been used in the mix, add a top layer of neat mix (without aggregate), if needed to level and smooth the surface.
- I. Transition from locations where sound reduction mat is installed to primary floor surface elevation; use transition strip or other recommended means to create straight and uniform transitions between carpet and resilient flooring areas where such condition is indicated on Drawings. Coordinate finished underlayment surface elevations with flooring thicknesses, door openings, and required clearances.

3.04 CURING

- A. Once underlayment starts to set, prohibit foot traffic until final set has been reached.
- B. Air cure in accordance with manufacturer's instructions.
- C. Apply sealer to cured flooring surfaces scheduled to receive adhered and glued-down finishes.
- D. Seal damaged floor surfaces, regardless of scheduled finish, in accordance with manufacturer's instructions.

3.05 FIELD QUALITY CONTROL

- A. An independent testing agency will perform field inspection and testing, as specified in Section 01 4000 - Quality Requirements.
- B. Placed Material: Agency will inspect and test for conformance to specified requirements.

END OF SECTION

DIVISION 04

MASONRY

This page intentionally left blank

SECTION 04 21 30

ADHERED THIN BRICK VENEER

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Thin brick veneer.
 - 2. Skim coat, weather barrier, mortar for brick masonry.
- B. Work supplied by other Sections but installed by this Section:
 - 1. Section 07 27 26 for Fluid-Applied Membrane Air Barrier.
 - 2. Section 07 62 00 for Sheet metal flashing.

1.02 PREINSTALLATION MEETING

- A. Preinstallation Conference: Conduct conference at Project site.

1.03 SUBMITTALS

- A. Product Data: Copies of manufacturer's printed specifications, installation instructions and general recommendations for all materials specified.
- B. Samples:
 - 1. Three samples of each type, shape and size of brick. Include in each set the full range of exposed color and texture to be expected in the finish Work.
 - 2. Full size Samples of 6-inch long samples of each type concealed flashing and neoprene pad.
- C. Shop drawings:
 - 1. Building elevations where brickwork occurs identifying all brick shapes and sizes. Large scale isometric Shop Drawings for all brick sizes and shapes other than "standard."
 - 2. Large scale, dimensioned Shop Drawings for flashings identifying materials, gauge(s), and showing details of fabrication, methods of lapping, joining and fastening, and other pertinent data. For conditions difficult to illustrate in 2-dimension, furnish isometric drawings.
- D. Material Certificates: For each type and size of the following:
 - 1. Masonry units:
 - a. Include data on material properties material test reports substantiating compliance with requirements.
 - b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
 - c. For exposed brick, include test report for efflorescence according to ASTM C67.

- d. For Clay Face Brick: Facing brick complying with ASTM C216.
2. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.

1.04 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 1. Build mockups for typical exterior wall in sizes approximately 48 inches long by 72 inches high by full thickness, including face and accessories.
 - a. Include a sealant-filled joint at least 16 inches long in mockup.
 - b. Include lower corner of window opening at upper corner of exterior wall mockup. Make opening approximately 12 inches wide by 16 inches high.
 - c. Include through-wall flashing installed for a 24-inch length in corner of exterior wall mockup approximately 16 inches down from top of mockup, with a 12-inch length of flashing left exposed to view (omit masonry above half of flashing).
 - d. Include skim coat, air barrier, flashing, and weep holes in exterior masonry-veneer wall mockup.
 2. Where masonry is to match existing, erect mockups adjacent and parallel to existing surface.
 3. Clean one-half of exposed faces of mockups with masonry cleaner as indicated.
 4. Protect accepted mockups from the elements with weather-resistant membrane.
 5. Approval of mockups is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.
 - a. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.05 HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.
- C. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.06 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of veneer, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
 - 1. Extend cover a minimum of 48 inches down face of veneer, and hold cover securely in place.
- B. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry. Immediately remove grout, mortar, and soil that come in contact with masonry.
 - 1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - 4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- C. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- D. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.02 UNIT MASONRY, GENERAL

- A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.
- B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects will be exposed in the completed Work.

2.03 BRICK

- A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
 2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
 3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
 4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
- B. Clay Face Brick: Facing brick complying with ASTM C216.
1. Manufacturer:
 - a. H. C. Muddox Co., basis of design.
 - b. Interstate Brick Co.
 - c. McNear Brick and Block.
 - d. Coronado Stone Products.
 - e. Or equal.
 2. Grade: SW.
 3. Type: FBX.
 4. Initial Rate of Absorption: Less than 30 g/30 sq. in. per minute when tested according to ASTM C7.
 5. Efflorescence: Provide brick that has been tested according to ASTM C67 and is rated "not effloresced."
 6. Color: Match two existing sizes and colors on existing building.
 7. Brick Size: Norman and Standard: 1/2-inch thick maximum.

2.04 ACCESSORIES

- A. General:
1. System basis of design: Laticrete North American.
 2. Systems meeting these requirements by the following manufacturers are acceptable upon approval by Architect.:
 - a. Custom Builders Products.
 - b. Ardex.
 - c. Or equal.
 3. Do not change the source of materials which may affect the appearance of the finished brickwork after masonry has started.

4. Bricks shall be factory-blended to prevent unbalanced concentrations of colors in the Work.
 5. Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.
- B. Skim coat over CMU: Laticrete Thin Brick Mortar.
- C. Waterproof Flashing Mortar: Laticrete Latapoxy Waterproof Flashing Mortar.
- D. Weather Barrier; See Section 07 27 26.
- E. Thin Set Adhesive: Laticrete MVIS Thin Brick Mortar.
- F. Pointing Mortar: Laticrete MVIS Masonry Pointing Mortar.
1. Color: As selected by Architect from manufacturer's standard palette of colors.
- G. Water used in mortar and grout: Taken from a supply distributed for domestic purposes and clean and free of acids, alkalies, or other organic materials at time of mixing.
- H. Sealant materials: As specified in Section 07 92 00.
- I. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene or urethane.
- J. Brick cleaner: Commercially prepared brick cleaning solution with a mild citric, acetic or sulfamic acid may be used when tests Samples provided by the Contractor are satisfactory to the Architect; do not use hydrofluoric, hydrochloric (muriatic) and ammonium bifluoride based acids.

PART 3 EXECUTION

3.01 EXAMINATION/PREPARATION

- A. Verify conditions and measurements affecting the work of this Section at site.
- B. Correct detrimental conditions before proceeding with installation.
- C. Confirm that substrate deflection shall not exceed $l/240$ with system's added dead and live loads to substrate.
- D. Protect adjacent construction with appropriate means from mortar droppings and other effects of laying of brick masonry units.
- E. Foundations:
 1. Verify that the foundation is clean, rough and level. Sandblast the area under the masonry if the surface contains laitance or other foreign material or is not sufficiently rough.
 2. Verify that foundation elevation is such that the bed joint thickness will be between 1/4-inch and 3/4-inch. The foundation edge shall be true to line so that the masonry does not project over more than 1/4-inch.

3.02 SHORES AND CENTERING

- A. Design, erect, support, brace and maintain shoring and centering for temporary support of masonry elements.
- B. Construct true to required finished shape, size and form, well braced and made rigid in all parts and capable of supporting and sustaining the loads to which they are subjected.
- C. Leave shores and centering in place until masonry can safely carry its own weight and the added loads of construction.

3.03 INSTALLATION-GENERAL

- A. Do not use bricks with chips, cracks, voids, discolorations and other defects which might be visible or cause staining in the finished Work.
- B. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.
- C. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.
- D. Wherever possible, use full size units.
- E. Keep cutting to a minimum.
 - 1. Cut and fit bricks, including work required to accommodate the work of other trades, by saw cutting to produce straight, sharp edges without spalling or other defects.
- F. When being laid, the brick shall have suction sufficient to hold the mortar and to absorb water from the mortar and grout. The brick shall be sufficiently damp so that the mortar will remain plastic enough to permit the brick to be leveled and plumbed immediately after being laid without destroying bond.
- G. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested according to ASTM C67. Allow units to absorb water so they are damp but not wet at time of laying.

3.04 TOLERANCES

- A. Dimensions and Locations of Elements:
 - 1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch.
 - 2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.
 - 3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2-inch total.
- B. Lines and Levels:
 - 1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
 - 2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet maximum.

3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 feet maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. Match existing 1/2-inch joints.
2. Do not vary from thickness indicated by more than plus or minus 1/8 inch.

3.05 SKIM COAT

- A. Install skim coat in accordance with ASTM C926.

3.06 INSTALLATION OF AIR BARRIER

- A. See Section 07 27 26.

3.07 LAYING THIN BRICK WALLS:

A. General:

1. Install in accordance with Thin Set Adhesive Manufacturer's recommendations.
2. Layout brickwork in advance for accurate spacing of exposed bond patterns with uniform joint widths, and to properly locate openings, returns and offsets. Avoid the use of less-than-half-size units at corners, jambs and wherever possible at other locations.
3. Install flashing at the perimeter of the openings, and weeps at the bottom of the walls and the perimeter of the openings to prevent the moisture from entering the building and to transmit the moisture to the outside of the wall. See Section 07 62 00.
4. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond pattern indicated on Drawings; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.
5. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
6. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

7. Tool exposed joints slightly to match existing joints. Cut joints flush for masonry to be concealed. Rake out mortar where joints will receive sealant. Regardless of jointing specified, all jointing in masonry exposed to the weather shall be tooled, making solid, smooth, watertight compact joints.
8. Remove bricks disturbed after laying; clean and relay in fresh mortar. Do not pound corners at jambs to fit stretcher units which have been set in position. If adjustments are required, remove bricks, clean off mortar, and reset in fresh mortar.
9. Install flashings where shown as masonry progresses. Form a watertight dam at concealed ends of flashing above and below openings whenever the flashing is interrupted. Lap joints 4-inch minimum and seal with sealant.
10. Do not apply more thin bed mortar than can be covered within 10-15 minutes, or while thin bed mortar is still wet and tacky.
11. Periodically, remove and check pieces of the thin brick veneer to verify 100% mortar coverage is being achieved.
12. Excess thin bed mortar must be cleaned from brick surfaces with a clean, wet cloth or sponge, while it is still fresh.
13. Allow the thin brick installation to set for 24 hours at 70° F, prior to pointing.

3.08 EXPANSION AND CONTROL JOINTS

- A. Provide control joints in brickwork where indicated on the Drawings and as specified below.
- B. Where brick comes in contact with the bottom of a shelf angle, install a continuous neoprene strip filler, in compliance with its manufacturer's printed instructions, to clean steel surfaces. Do not grout this joint but fill with sealant as specified below.
- C. In other control joints, insert preformed joint filler or back-up material in joints at proper depth to allow the correct cavity depth for the sealant.
 1. Make joint widths same as mortar joints.
 2. Keep joints open and clean by stuffing with polypropylene rope or other material to prevent filling with dirt, grout or mortar.
- D. After brick is grouted and completely dry, remove temporary filler material; brush joints clean and fill with the specified back-up material and sealant as specified in Section 07 92 00.

3.09 REPAIRING/POINTING

- A. Remove and replace bricks which are loose, chipped, broken, stained or otherwise damaged, or if units do not match adjoining units.
- B. Provide new units to match adjoining units and install in fresh mortar or grout, pointed to eliminate evidence of replacement.
- C. During the tooling of joints, enlarge voids or holes and completely fill with mortar or grout.

3.10 CLEANING

- A. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

- B. Final Cleaning:
1. Protect adjacent non-masonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 2. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 3. Clean bricks with specified cleaner using stiff bristle brushes in compliance with the cleaner manufacturer instructions.
- C. Coordinate cleaning with application of clear sealer specified in Section 09 90 00.

END OF SECTION

SECTION 04 22 00
CONCRETE UNIT MASONRY

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of the General and Supplementary Conditions and Division 01 apply to this section.
- B. Section Includes:
 - 1. Concrete masonry units.
 - 2. Reinforcing steel.
 - 3. Mortar, grout and grouting.
 - 4. Bolts, anchors, hardware, metal frames, and other insert items.
- C. Related Sections:
 - 1. Section 01 42 00: Testing and Inspection.
 - 2. Section 03 10 00: Concrete Forms and Accessories.
 - 3. Section 03 20 00: Concrete Reinforcement.
 - 4. Section 03 30 00: Cast-In-Place Concrete.
 - 5. Section 05 12 00: Structural Steel.
 - 6. Section 08 11 00: Steel Doors and Frames.

1.02 REFERENCES:

- A. American Society for Testing and Materials International (ASTM):
 - 1. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units.
 - 2. ASTM C94 - Standard Specification for Ready-Mixed Concrete.
 - 3. ASTM C140 - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units.
 - 4. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar.
 - 5. ASTM C150 - Standard Specification for Portland Cement.
 - 6. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes.
 - 7. ASTM C270 - Standard Specification for Mortar for Unit Masonry.
 - 8. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.
 - 9. ASTM C426 - Standard Test Method for Linear Drying Shrinkage of Concrete Masonry Units.
 - 10. ASTM C476 - Standard Specification for Grout for Masonry.

11. ASTM C595 – Standard Specification for Blended Hydraulic Cements
 12. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.
 13. ASTM C1019 - Standard Test Method for Sampling and Testing Grout.
 14. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms.
 15. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
- B. Masonry Standards Joint Committee (MSJC):

 2. ACI 530/ASCE5/TMS402 – Building Code Requirements for Masonry Structures.

1.03 SUBMITTALS

- A. Mix Design: Submit grout and mortar mix designs. Mix designs shall be signed and sealed by a Civil or Structural Engineer registered in the State of California.
- B. Product Data: Submit manufacturer's Product Data for assembly components, materials, and accessories. Submit certificates and data assuring that the proposed materials meet the specified ASTM standards.
- C. Samples: Submit Samples for each type of required masonry unit, including reinforcement and accessories.
- D. Shop Drawings: Indicate wall reinforcement, splice locations and bending diagrams.
- E. Admixtures: Additives and admixtures to mortar and grout shall not be used unless approved by the enforcing agency. Submit product data for any proposed admixture.
- F. LEED Documentation: Submit the following documentation
1. Specific product name, make, model, and manufacturer
 2. Material Cost
 3. Environmental Product Declaration (EPD) report:
 - a. Product-specific declaration: Manufacturer's Life Cycle Assessment conforming to ISO 14044
 - b. Product Specific Type III EPD with third-party Type III certification
 4. Post-Consumer Recycled Content: Cutsheets, product literature or letter from the manufacturer indicating the percentage by weight of post-consumer (post-industrial) recycled content.
 5. Extracted, Manufactured, and Purchased locally. Provide cutsheets, product literature or letter from the manufacturer indicating the location of extraction, manufacturing, and purchasing and distance from the project site.
 6. Health Product Declaration (HPD) with full disclosure of known hazards down to 1000ppm.

1.04 REGULATORY REQUIREMENTS

- A. Perform the Work in accordance with CBC, Chapter 21A.

- B. Comply with requirements of ACI 530.1.

1.05 QUALITY ASSURANCE

- A. Comply with the requirements of Specification Section 01420, CBC Chapter 21A, and ACI 530 and 530.1.
- B. Concrete Masonry Units:
 - 1. Notify the testing laboratory a minimum of 45 days in advance of installing concrete unit masonry, to allow for preconstruction testing of the units.
 - a. Units will be sampled and tested in accordance with ASTM C140 for compressive strength, absorption and moisture content.
 - b. Units will be sampled and tested in accordance with ASTM C426 for linear drying shrinkage.
 - 2. The material testing laboratory shall receive concrete masonry unit specimens for testing from masonry unit manufacturer. Number of specimens shall be as indicated in referenced ASTM standard tests. Testing laboratory will perform and send test results to the Architect and IOR.
- C. Cement: Submit certification from the cement manufacturer that the cement proposed for use on the project has been manufactured in accordance with ASTM C150 or ASTM C595. Certification shall include test results made on cement samples during production.
- D. Mortar and Grout Tests: At the beginning of all masonry work, mortar and grout will be tested in accordance with CBC Section 2105A.5.
 - 1. Mortar: Shall conform to ASTM C270 and to the property specifications of CBC Table 2103A.8(2) for Type S mortar.
 - a. Provide qualifications of mortar as meeting ASTM C270 at the beginning of the job and whenever mix design is changed.
 - b. Mortars will be evaluated during preconstruction, sampled and tested during construction for proportioning and compressive strength in accordance to ASTM C780 and ASTM C1586.
 - c. Tested mortar strength shall meet or exceed 900 psi at 7 days and 1,800 psi at 28 days.
 - 2. Grout: Shall conform to ASTM C476, and will be sampled and tested in accordance with ASTM C404 and ASTM C1019. Compressive strength shall equal or exceed specified compressive strength (f'_m) at 28 days, but not less than 2,000 psi.
 - a. Ready-Mix Grout: Grout manufacturer shall furnish batch ticket information in accordance to ASTM C94.
- E. Masonry Core Testing: Core testing will be performed in accordance with CBC, Section 2105A.4. Masonry removed by coring operations shall be replaced to match adjoining work.
- F. Inspection During Installation: A special inspector will continuously observe the installation of reinforced masonry. The IOR shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.
- G. The Owner will be responsible for the costs of original tests and inspection.

1.06 DELIVERY, STORAGE AND HANDLING

- A. Store units above grade on level platforms or pallets to allow air circulation under stacked units, in a dry location.
- B. Store cementitious materials and aggregates in such a manner as to prevent deterioration or intrusion of foreign matter or moisture.
- C. Handle units on pallets or flat bed barrows. Free discharge from conveyor units or transportation in mortar trays is not permitted.
- D. Cover and protect against wetting before installation.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Concrete Unit Masonry: Modular medium weight conforming to ASTM C90, grade N-1, hollow load-bearing concrete unit masonry. Minimum compressive strength of units shall be per structural drawings.
 - 1. Provide blocks by Orco, Angelus Block, or equal.
 - 2. Provide open-end units at walls to be grouted.
 - 3. Provide closed-end units at walls and at openings where ends will be exposed in finish Work; provide bond beam blocks where horizontal reinforcement is indicated.
 - 4. Provide special shapes and accessory units at locations indicated on Drawings.
 - 5. Provide units in colors and textures as indicated in the drawings.
 - 6. Masonry unit shall have been cured for a minimum of 28 days. Masonry unit shall have maximum liner shrinkage of 0.06 percent from saturated to oven dry.
- B. Cement: ASTM C150, Type II or ASTM C595 Type IL, from one source.
- C. Hydrated Lime: ASTM C207, Type S.
- D. Aggregates: ASTM C144 for mortar and ASTM C404 for grout.
- E. Mortar: ASTM C270, Type S, conforming to the property specifications of CBC Table 2103A.8(2). Provide mortar color as indicated in the drawings.
- F. Grout: ASTM C476. Ready-mixed grout shall be manufactured and delivered to the jobsite in accordance to ASTM C94.
- G. Admixture for Grout: Grout Aid Type 2, as manufactured by Sika Chemical Corp., or equal.
- H. Water: Clean, potable, free from substances deleterious to mortar, grout or reinforcement.
- I. Reinforcing Steel: Provide and install reinforcing steel in accordance with Specification Section 03 20 00, Concrete Reinforcement.
- J. Cleaning Materials: Sure Klean No. 600 detergent by ProSoCo or equal.

- K. Miscellaneous Materials: As required to complete the Work.
- L. Anchor Bolts: Shall be hex headed bolts conforming to ASTM A307 Grade A with the dimensions of the hex head conforming to ANSI/ASME B18.2.1, unless noted otherwise on structural drawings.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Discard units with cracks or other defects not complying with requirements of ASTM C 90.

3.02 CONSTRUCTION

- A. Construct per applicable provisions of CBC and ACI 530.1.
- B. Conform to ACI 530.1 for hot and cold weather masonry construction.

3.03 MORTAR AND GROUT MIXING

- A. Mortar: Shall provide a minimum strength of 1800 psi. Dry, loose volumes. Mix proportions will be verified by material testing laboratory.
- B. Grout: Shall provide a minimum strength of 2,000 psi or as indicated in the drawings, whichever is higher. Grout space requirements for coarse and fine grouts shall be per Table 7 of ACI 530.1. Add Sika Chemical Corp. Grout Aid or equal per manufacturer's instructions.
- C. Measurements: Proportion by accurate volume measurements. Measure in calibrated devices that can be checked at any time.
 - 1. Add water for workable consistency.
 - 2. Shovel measurements are not permitted.
- D. Mixing: Mix in accordance to ACI 530.1.
 - 1. Mortar: Place sand, cement, and water in mechanically operated mixer in that order, while mixer is running; mix for 3 minutes, add lime, and admixture (for grout), and continue mixing until a uniform mass is provided, but in no case less than 10 minutes. Measurement of ingredients shall be by volume. Mix dry ingredients with a sufficient amount of water to provide a workable mix. Batches of less than one sack of cement, and fractional sack batches are not permitted.
 - 2. Factory Blended Mortar: Mix in accordance with manufacturer's recommendations. Grout: Add sufficient water for a workable mix that will flow into all voids of the masonry without separation or segregation. Grout slump shall be between 8 and 11 inches.
- E. Re-tempering Time Limit: Use mortar within one hour after mixing. Discard any mortar that has been mixed longer or that has begun to set. If necessary re-temper within this time limit, by replacing only water lost due to evaporation and by thoroughly remixing.

3.04 INSTALLATION OF MASONRY UNITS

- A. Workmanship: Install masonry plumb and true to line with straight level joints of uniform thickness. Comply with ACI 530.1 tolerances. Maintain masonry clean during and after installation.
1. Lay-out and incorporate embedded hardware items.
 2. Assist other trades with built-in items, which require cutting and fitting of masonry.
 3. Cut block units with a diamond saw or carborundum wheel. Trowel or chisel cutting is not permitted.
 4. Keep cavities clear of droppings and debris. Remove droppings prior to grouting.
- B. Reinforcing Steel: Install as indicated on Drawings. Except as otherwise indicated, install reinforcement in accordance with standards of Concrete Reinforcing Steel Institute and to requirements specified in Specification Section 03 20 00, Concrete Reinforcement. Do not splice vertical reinforcement except where indicated on the Drawings.
- C. Shoring: Provide temporary shoring for lintels with sufficient strength to carry load without deflecting. Remove temporary shoring 28 days after masonry has been installed.
- D. Block Installation: Clean dirt and dust from surfaces before installation. Do not wet masonry units.
1. Foundation preparation: Sandblast tops of concrete starting surfaces, wash-off by high pressure water jet, and slurry coat surfaces with neat cement grout for bond to masonry.
 2. Install masonry with mortar to required joint thickness. Install blocks with 3/8-inch mortar bed on entire horizontal surface. Fill head joints solid, install tightly to adjoining units. Provide 3/8-inch joint thickness.
 - a. Hold racking to a minimum.
 - b. No tothing is permitted.
 - c. If it becomes necessary to move a unit after it has been installed, remove the unit, discard the mortar, and install the unit in fresh mortar.
 3. Anchor Bolts: Provide one-inch minimum grout space between bolts and masonry.
 4. Bond: Install units in stacked bond.
 5. Finish Joint Treatment: Unless otherwise indicated, cut both interior and exterior joints flush, and tool slightly concave to a dense, uniform surface.
 6. Grouting: Unless noted otherwise on Drawings, completely fill cells with grout.
- E. Steel Door Frames:
1. Locate door frames accurately, install plumb, "Ram-set" or "Rawlplug" to floor surface and brace in position before start of masonry installation.
 - a. Frames are specified to be furnished with adjustable anchors.
 - b. Fill interior of frames solid with mortar or grout as walls are constructed.
 2. Provide temporary wood spreaders from jamb to jamb and from head to floor to ensure that jambs do not bow-in, distort from a straight line, or deflect from superimposed loads during construction.

3.05 GROUTING

- A. Prior to grouting all cells shall be cleaned so that all spaces to be filled with grout do not contain mortar projections greater than 1/4 inch, loose mortar or foreign material.
- B. Grout materials and water contents shall be controlled to provide adequate fluidity for placement without segregation of the constituents, and shall be mixed thoroughly. Reinforcement shall be properly positioned and solidly embedded in the grout.
- C. The grouting of any section of wall shall be completed in one day with no interruptions greater than one hour.
- D. Between grout pours, a horizontal control joint shall be formed by stopping all wythes at the same elevation and with the grout stopping at 1-1/2 inches below a mortar joint, except at the top of the wall. Where bond beams occur, the grout pour shall be stopped a minimum of 1/2 inch below the top of the masonry.

3.06 LOW-LIFT GROUTING FOR HOLLOW MASONRY UNITS

- A. Grouting shall meet the requirements of CBC Section 2104A.6.1.1.2.
- B. After mortar joints have set, cells are cleaned of mortar and debris, and reinforcement is installed and inspected, grout cells in 4 feet maximum lifts. Horizontal and vertical reinforcement shall be held in place by suitable devices.
- C. Grout may be installed by pump, tremie or bucket, using hoppers to avoid spilling on exposed surfaces.
- D. All grout shall be consolidated with a mechanical vibrator after placing so as to completely fill all voids and to consolidate the grout. Grouted walls shall be solid and without voids
- E. Units shall be laid a maximum of 4 feet before grouting, and all over-hanging mortar and mortar droppings shall be removed. Grouting shall follow each 4 feet of construction laid and shall be consolidated so as to completely fill all voids and embed all reinforcing steel. Stop grout pours 1-1/2 inches below top of each lift. When grouting is stopped for 1 hour or longer, horizontal construction joints shall be formed by stopping the pour of grout not less than 1/2 inch or more than 2 inches below the top of the uppermost unit grouted. Horizontal steel shall be fully embedded in grout in an uninterrupted pour.
- F. Place an initial 2 feet high lift around, thoroughly compact, then place balance of each lift, compacting again through total lift, with hardwood spading sticks or pencil vibrators.
- G. Remove and discard spilled grout from upper units before grout can harden.
- H. Bracing: Adequately brace walls against wind and other forces during and after construction.
- I. Re-puddle top of grout after initial set.
- J. Placement of reinforcement/bolts/embeds shall conform to CBC section 2104A.6.2.

3.07 HIGH-LIFT GROUTING OPTION FOR HOLLOW MASONRY UNITS

- A. Grouting shall meet the requirements of CBC Section 2104A.6.1.1.3 and DSA IR 21-2.

- B. High-lift grouting shall apply only to cell sizes available with 8 inch and wider block units. This method is limited to conditions where openings, block pattern arrangements, special reinforcing steel, or embedded structural steel details do not prevent the free flow of grout or inhibit the use of mechanical vibration.
- C. Provide bond beam units, inverted for start course, and omit alternate blocks or cut openings in alternate face shell on bottom course for cleanouts. Use of open-end concrete masonry units is preferred wherever possible and is required at stacked bond conditions. Cleanout openings shall be provided in every reinforced cell at the bottom of each pour of grout. Alternatively, if the course at the bottom of the pour is constructed entirely of inverted open-end bond beam units, cleanout openings need only be provided in every reinforced cell at the bottom of each pour of grout. Cleanouts shall be sealed before grouting.
- D. Remove projecting mortar fins. Wash out every cell thoroughly using a water jet, which has sufficient force to remove mortar from the interior of the cells, and from reinforcing steel. The foundation or other horizontal construction joints shall be cleaned of all loose material and mortar droppings before each pour.
- E. Plug each cleanout by setting a face shell in mortar into opening and securely bracing it in place to prevent displacement. If masonry is not exposed in finish Work, cleanouts may be formed.
- F. Grouting:
1. Grout masonry cells solid, free from voids, to top of wall in lifts not exceeding 4 feet in height. Horizontal intermediate construction joints are not permitted.
 2. Do not install grout until masonry has set a minimum of 3 days in warm weather (50 degrees to 85 degrees F.) or 5 days in cool, damp weather (35 degrees to 50 degrees F.).
 3. Pump grout into grout cell space as rapidly as practical. Discard grout not in place within one hour after water was first added to batch.
 4. Install grout with maximum slump without segregation. Place in a continuous pour, in maximum lifts of 4 feet, with approximately 30 to 60 minutes elapsed time between any 2 successive lifts under normal weather conditions. An approved admixture that reduces early water loss and produces an expansive action shall be used in the grout.
 5. Grout shall be consolidated in accordance with CBC section 2104A.6.2.
 6. An approved admixture that reduces early water loss and produces and expansive action shall be used in the grout.
- G. Consolidating:
1. Consolidate and reconsolidate grout using 3/4 inch lightweight flexible cable vibrators.
 2. First consolidation shall be performed to bottom of lift immediately after placement, and in case of subsequent lifts, through previously placed lift.
 3. Top lift shall be reconsolidated no sooner than 30 minutes after grout has been installed.
 4. Vibrating of reinforcing steel is not permitted.

- H. Bracing: Adequately brace walls against wind and other forces during and after construction.
- I. Placement of reinforcement/bolts/embeds shall conform to CBC section 2104A.6.2.
- J. Wall Ties: When stacked bond is used, or when adequate cross webs between face shells are not provided, heavy gage wire embedded in the horizontal mortar joints should be provided across continuous vertical joints or between face shells to prevent blowouts. External ties or braces may also be used for this purpose.
- K. Inspections and Testing: All masonry work is required to be continuously inspected during laying and grouting by an inspector specially approved for that purpose by DSA. Core tests shall be performed in accordance with DSA IR 21-2.

3.08 CURING

- A. Remove efflorescence, stains, debris, excess grout, and foreign matter.
- B. During curing, or for any other purpose, do not saturate masonry with water.
- C. For low-humidity conditions, dampen the wall surface with a very light fog spray continuously for 3 days to cure mortar in joints.

3.09 PARGE COAT

- A. Apply parge coat to the earth side of surfaces that are to receive waterproofing.
- B. A cement and sand mix (1:3.5 by volume) or Type S mortar may be used for the parge coat.
- C. Parging should be applied to damp (not saturated) concrete masonry in two 1/4 inch thick layers. The first coat should be roughened when partially set, hardened for 24 hours, and then moistened before second coat is applied. The second coat should be trowelled to a smooth, dense surface.
- D. The parge coat should be beveled at the top to form a wash, and thickened at the bottom to form a cove between the base of the wall and the top of footing.

3.10 CLEANING

- A. At completion of masonry Work, remove misplaced mortar, grout or other foreign substances, and clean surfaces which will be exposed in finish Work with specified cleaner, or with clean water and stiff fiber brushes.
- B. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.11 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 04 90 00
MASONRY CLEANING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes cleaning the following:

1. Unit masonry surfaces.
2. Stone surfaces.

1.03 ALLOWANCES

- A. Allowances for cleaning masonry are specified in Section 01 21 00 "Allowances."

1.04 DEFINITIONS

- A. Very Low-Pressure Spray: Under [100 psi] <Insert value>.
- B. Low-Pressure Spray: [100 to 400 psi; 4 to 6 gpm] <Insert range of values>.
- C. Medium-Pressure Spray: [400 to 800 psi; 4 to 6 gpm] <Insert range of values>.
- D. High-Pressure Spray: [800 to 1200 psi; 4 to 6 gpm] <Insert range of values>.

1.05 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.
 1. Review methods and procedures related to cleaning masonry including, but not limited to, the following:
 - a. Verify masonry-cleaning equipment and facilities needed to make progress and avoid delays.
 - b. Materials, material application, and sequencing.
 - c. Cleaning program.
 - d. Coordination with building occupants.

1.06 SEQUENCING AND SCHEDULING

- A. Work Sequence: Perform masonry-cleaning work in the following sequence:
 1. Remove plant growth.
 2. Inspect for open mortar joints. Where repairs are required, delay further cleaning work until after repairs are completed, cured, and dried to prevent the intrusion of water and other cleaning materials into the wall.

3. Remove paint.
4. Clean masonry surfaces.
5. Where water repellents are to be used on or near masonry, delay application of these chemicals until after cleaning.

B. As scaffolding is removed, patch anchor holes used to attach scaffolding. Patch holes in masonry units according to masonry repair Sections. Patch holes in mortar joints according to masonry repointing Sections.

1.07 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include material descriptions and application instructions.
2. Include test data substantiating that products comply with requirements.

1.08 INFORMATIONAL SUBMITTALS

A. Qualification Data: For paint-remover manufacturer and chemical-cleaner manufacturer.

B. Preconstruction Test Reports: For cleaning materials and methods.

C. Cleaning program.

1.09 QUALITY ASSURANCE

A. Paint-Remover Manufacturer Qualifications: A firm regularly engaged in producing masonry cleaners that have been used for similar applications with successful results, and with factory-authorized service representatives who are available for consultation and Project-site inspection [, preconstruction product testing,] and on-site assistance.

B. Chemical-Cleaner Manufacturer Qualifications: A firm regularly engaged in producing masonry cleaners that have been used for similar applications with successful results, and with factory-authorized service representatives who are available for consultation and Project-site inspection [, preconstruction product testing,] and on-site assistance.

C. Cleaning Program: Prepare a written cleaning program that describes cleaning process in detail, including materials, methods, and equipment to be used; protection of surrounding materials; and control of runoff during operations. Include provisions for supervising worker performance and preventing damage.

1. If materials and methods other than those indicated are proposed for any phase of cleaning work, add a written description of such materials and methods, including evidence of successful use on comparable projects and demonstrations to show their effectiveness for this Project.

D. Mockups: Prepare mockups of cleaning on existing surfaces to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Cleaning: Clean an area [approximately 25 sq. ft.] [as indicated] <Insert dimension> for each type of masonry and surface condition.
 - a. Test cleaners and methods on samples of adjacent materials for possible adverse reactions. Do not test cleaners and methods known to have deleterious effect.
 - b. Allow a waiting period of not less than seven days after completion of sample cleaning to permit a study of sample panels for negative reactions.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.10 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Engage one or more chemical-cleaner [and paint-remover] manufacturers to perform preconstruction testing on masonry surfaces.
 1. Use test areas as indicated and representative of proposed materials and existing construction.
 2. Propose changes to materials and methods to suit Project.

1.11 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit masonry-cleaning work to be performed according to product manufacturers' written instructions and specified requirements.
- B. Clean masonry surfaces only when air temperature is 40 deg F and above and is predicted to remain so for at least seven days after completion of cleaning.

PART 2 PRODUCTS

2.01 PAINT REMOVERS

- A. Alkaline Paste Paint Remover: Manufacturer's standard alkaline paste or gel formulation, for removing paint from masonry; containing no methylene chloride.
- B. Covered or Skin-Forming Alkaline Paint Remover: Manufacturer's standard covered or skin-forming, alkaline paste or gel formulation, for removing paint from masonry; containing no methylene chloride.
- C. Solvent-Type Paste Paint Remover: Manufacturer's standard water-rinsable, solvent-type paste or gel formulation, for removing paint from masonry.
- D. Low-Odor, Solvent-Type Paste Paint Remover: Manufacturer's standard low-odor, water-rinsable, solvent-type paste, gel, or foamed emulsion formulation, for removing paint from masonry; containing no methanol or methylene chloride.
- E. Covered, Solvent-Type Paste Paint Remover: Manufacturer's standard, low-odor, covered, water-rinsable, solvent-type paste or gel formulation, for removing paint coatings from masonry; containing no methanol or methylene chloride.

2.02 CLEANING MATERIALS

- A. Water: Potable.
- B. Hot Water: Water heated to a temperature of 140 to 160 deg F.
- C. Detergent Solution, Job Mixed: Solution prepared by mixing 2 cups of tetrasodium pyrophosphate (TSP), 1/2 cup of laundry detergent, and 20 quarts of hot water for every 5 gal. of solution required.

- D. Mold, Mildew, and Algae Remover, Job Mixed: Solution prepared by mixing 2 cups of tetrasodium pyrophosphate (TSPP), 5 quarts of 5 percent sodium hypochlorite (bleach), and 15 quarts of hot water for every 5 gal. of solution required.
- E. Nonacidic Gel Cleaner: Manufacturer's standard gel formulation, with pH between 6 and 9, that contains detergents with chelating agents and is specifically formulated for cleaning masonry surfaces.
- F. Nonacidic Liquid Cleaner: Manufacturer's standard mildly alkaline liquid cleaner formulated for removing mold, mildew, and other organic soiling from ordinary building materials, including polished stone, brick, aluminum, plastics, and wood.
- G. Mild-Acid Cleaner: Manufacturer's standard mild-acid cleaner containing no muriatic (hydrochloric), hydrofluoric, or sulfuric acid; or ammonium bifluoride or chlorine bleaches.
- H. Acidic Cleaner: Manufacturer's standard acidic masonry cleaner composed of hydrofluoric acid or ammonium bifluoride blended with other acids, detergents, wetting agents, and inhibitors.
- I. One-Part Limestone Acidic Cleaner: Manufacturer's standard one-part acidic formulation for cleaning limestone.
- J. Two-Part Chemical Cleaner: Manufacturer's standard system consisting of potassium- or sodium-hydroxide-based, alkaline prewash cleaner and acidic afterwash cleaner that does not contain hydrofluoric acid.

2.03 ACCESSORY MATERIALS

- A. Liquid Strippable Masking Agent: Manufacturer's standard liquid, film-forming, strippable masking material for protecting glass, metal, glazed masonry, and polished stone surfaces from damaging effects of acidic and alkaline masonry cleaners.

2.04 CHEMICAL CLEANING SOLUTIONS

- A. Dilute chemical cleaners with water to produce solutions not exceeding concentration recommended in writing by chemical-cleaner manufacturer.
- B. Acidic Cleaner Solution for [Nonglazed Masonry] [and] [Unpolished Stone]: Dilute acidic cleaner with water to produce hydrofluoric acid content of 3 percent or less, but not greater than that recommended in writing by chemical-cleaner manufacturer.
 - 1. Stones: Use only on unpolished granite, unpolished dolomite marble, and siliceous sandstone.
- C. Acidic Cleaner for [Glazed Masonry] [and] [Polished Stone]: Dilute acidic cleaner with water to concentration demonstrated by testing that does not etch or otherwise damage glazed or polished surface, but not greater than that recommended in writing by chemical-cleaner manufacturer.
 - 1. Stones: Use only on polished granite and polished dolomite marble.

PART 3 EXECUTION

3.01 MASONRY-CLEANING SPECIALIST

- A. Masonry-Cleaning Specialist Firms: Subject to compliance with requirements, [provide masonry cleaning by one of the following] [firms that may provide masonry cleaning include, but are not limited to, the following]:

1. <Insert, in separate subparagraphs, names of masonry-cleaning specialist firms>.

3.02 PROTECTION

- A. Comply with each manufacturer's written instructions for protecting building and other surfaces against damage from exposure to its products. Prevent paint removers and chemical cleaning solutions from coming into contact with people, motor vehicles, landscaping, buildings, and other surfaces that could be harmed by such contact.
 1. Cover adjacent surfaces with materials that are proven to resist paint removers and chemical cleaners used unless products being used will not damage adjacent surfaces. Use protective materials that are waterproof and UV resistant. Apply masking agents according to manufacturer's written instructions. Do not apply liquid strippable masking agent to painted or porous surfaces. When no longer needed, promptly remove masking to prevent adhesive staining.
 2. Do not apply chemical solutions during winds of enough force to spread them to unprotected surfaces.
 3. Neutralize alkaline and acid wastes before disposal.
 4. Dispose of runoff from operations by legal means and in a manner that prevents soil erosion, undermining of paving and foundations, damage to landscaping, and water penetration into building interiors.
- B. Remove [gutters and] downspouts and associated hardware adjacent to immediate work area and store during masonry cleaning. Reinstall when masonry cleaning is complete.
 1. Provide temporary rain drainage during work to direct water away from building.

3.03 CLEANING MASONRY, GENERAL

- A. Cleaning Appearance Standard: Cleaned surfaces are to have a uniform appearance as viewed from [20 feet] [50 feet] <Insert distance> away by Architect.
- B. Proceed with cleaning in an orderly manner; work from [bottom to top] [top to bottom] of each scaffold width and from one end of each elevation to the other. Ensure that dirty residues and rinse water do not wash over dry, cleaned surfaces.
- C. Use only those cleaning methods indicated for each masonry material and location.
 1. Brushes: Do not use wire brushes or brushes that are not resistant to chemical cleaner being used.
 2. Spray Equipment: Use spray equipment that provides controlled application at volume and pressure indicated, measured at nozzle. Adjust pressure and volume to ensure that cleaning methods do not damage surfaces, including joints.
 - a. Equip units with pressure gages.
 - b. For chemical-cleaner spray application, use low-pressure tank or chemical pump suitable for chemical cleaner indicated, equipped with nozzle having a cone-shaped spray.
 - c. For water-spray application, use fan-shaped spray that disperses water at an angle of 25 to 50 degrees.
 - d. For high-pressure water-spray application, use fan-shaped spray that disperses water at an angle of at least 40 degrees.
 - e. For heated water-spray application, use equipment capable of maintaining temperature between 140 and 160 deg F at flow rates indicated.
 - f. For steam application, use steam generator capable of delivering live steam at nozzle.

- D. Perform each cleaning method indicated in a manner that results in uniform coverage of all surfaces, including corners, moldings, and interstices, and that produces an even effect without streaking or damaging masonry surfaces. Keep wall wet below area being cleaned to prevent streaking from runoff.
- E. Perform additional general cleaning, paint and stain removal, and spot cleaning of small areas that are noticeably different when viewed according to the "Cleaning Appearance Standard" Paragraph, so that cleaned surfaces blend smoothly into surrounding areas.
- F. Water Application Methods:
 - 1. Water-Soak Application: Soak masonry surfaces by applying water continuously and uniformly to limited area for time indicated. Apply water at low pressures and low volumes in multiple fine sprays using perforated hoses or multiple spray nozzles. Erect a protective enclosure constructed of polyethylene sheeting to cover area being sprayed.
 - 2. Water-Spray Applications: Unless otherwise indicated, hold spray nozzle at least 6 inches from masonry surface and apply water in horizontal back-and-forth sweeping motion, overlapping previous strokes to produce uniform coverage.
- G. Steam Cleaning: Apply steam to masonry surfaces at the very low pressures indicated for each type of masonry. Hold nozzle at least 6 inches from masonry surface and apply steam in horizontal back-and-forth sweeping motion, overlapping previous strokes to produce uniform coverage.
- H. Chemical-Cleaner Application Methods: Apply chemical cleaners to masonry surfaces according to chemical-cleaner manufacturer's written instructions; use brush [or spray] application. [Do not spray apply at pressures exceeding 50 psi.] Do not allow chemicals to remain on surface for periods longer than those indicated or recommended in writing by manufacturer.
- I. Rinse off chemical residue and soil by working upward from bottom to top of each treated area at each stage or scaffold setting. Periodically during each rinse, test pH of rinse water running off of cleaned area to determine that chemical cleaner is completely removed.
 - 1. Apply neutralizing agent and repeat rinse if necessary to produce tested pH of between 6.7 and 7.5.
- J. After cleaning is complete, remove protection no longer required. Remove tape and adhesive marks.

3.04 PRELIMINARY CLEANING

- A. Removing Plant Growth: Completely remove visible plant, moss, and shrub growth from masonry surfaces. Carefully remove plants, creepers, and vegetation by cutting at roots and allowing remaining growth to dry as long as possible before removal. Remove loose soil and plant debris from open joints to whatever depth they occur.
- B. Preliminary Cleaning: Before beginning general cleaning, remove extraneous substances that are resistant to planned cleaning methods. Extraneous substances include paint, calking, asphalt, and tar.
 - 1. Carefully remove heavy accumulations of rigid materials from masonry surface with sharp chisel. Do not scratch or chip masonry surface.
 - 2. Remove paint and calking with [alkaline paint remover] <Insert requirement>.
 - a. Comply with requirements in "Paint Removal" Article.
 - b. Repeat application up to two times if needed.
 - 3. Remove asphalt and tar with [solvent-type paste paint remover] <Insert requirement>.
 - a. Comply with requirements in "Paint Removal" Article.

- b. Apply paint remover only to asphalt and tar by brush without prewetting.
- c. Allow paint remover to remain on surface for 10 to 30 minutes.
- d. Repeat application if needed.

3.05 PAINT REMOVAL <INSERT DRAWING DESIGNATION>

- A. Paint-Remover Application, General: Apply paint removers according to paint-remover manufacturer's written instructions. Do not allow paint removers to remain on surface for periods longer than those indicated or recommended in writing by manufacturer.
- B. Paint Removal with Alkaline Paste Paint Remover:
 1. Remove loose and peeling paint using [low] [medium] [high]-pressure water spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
 2. Apply paint remover to dry, painted surface with brushes.
 3. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
 4. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove chemicals and paint residue.
 5. Repeat process if necessary to remove all paint.
 6. Apply acidic cleaner or manufacturer's recommended afterwash to surface, while surface is still wet, using low-pressure spray equipment or soft-fiber brush. Let cleaner or afterwash remain on surface as a neutralizing agent for period recommended in writing by chemical-cleaner or afterwash manufacturer.
 7. Rinse with cold water applied by [low] [medium] [high]-pressure spray to remove chemicals and soil.
- C. Paint Removal with Covered or Skin-Forming Alkaline Paint Remover:
 1. Remove loose and peeling paint using [low] [medium] [high]-pressure water spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
 2. Apply paint remover to dry, painted surface with trowel, spatula, or as recommended in writing by manufacturer.
 3. Apply cover according to manufacturer's written instructions.
 4. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
 5. Scrape off paint and remover.
 6. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove chemicals and paint residue.
 7. Apply acidic cleaner or manufacturer's recommended afterwash to surface, while surface is still wet, using low-pressure spray equipment or soft-fiber brush. Let cleaner or afterwash remain on surface as a neutralizing agent for period recommended in writing by chemical-cleaner or afterwash manufacturer.
 8. Rinse with cold water applied by [low] [medium] [high]-pressure spray to remove chemicals and soil.
 9. For spots of remaining paint, apply alkaline paste paint remover, according to "Paint Removal with Alkaline Paste Paint Remover" Paragraph.
- D. Paint Removal with Solvent-Type Paste Paint Remover:

1. Remove loose and peeling paint using [low] [medium] [high]-pressure water spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
2. Apply thick coating of paint remover to painted surface with natural-fiber cleaning brush, deep-nap roller, or large paint brush. Apply in one or two coats according to manufacturer's written instructions.
3. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
4. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove chemicals and paint residue.

E. Paint Removal with Covered, Solvent-Type Paste Paint Remover:

1. Remove loose and peeling paint using [low] [medium] [high]-pressure water spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
2. Apply paint remover to dry, painted surface with trowel, spatula, or as recommended in writing by manufacturer.
3. Apply cover according to manufacturer's written instructions.
4. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
5. Scrape off paint and remover.
6. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove chemicals and paint residue.

3.06 CLEANING MASONRY <INSERT DRAWING DESIGNATION>

A. Cold-Water Soak:

1. Apply cold water by intermittent spraying to keep surface moist.
2. Use perforated hoses or other means that apply a fine water mist to entire surface being cleaned.
3. Apply water in cycles of [five minutes] <Insert time> on and [20 minutes] <Insert time> off.
4. Continue spraying [until surface encrustation has softened enough to permit its removal by water wash, as indicated by cleaning tests] [for 72 hours] <Insert requirement>.
5. Remove soil and softened surface encrustation from surface with cold water applied by low-pressure spray.

B. Cold-Water Wash: Use cold water applied by [low] [medium] [high]-pressure spray.

C. Hot-Water Wash: Use hot water applied by [low] [medium] [high]-pressure spray.

D. Steam Cleaning: Apply steam at very low pressures not exceeding [30 psi] [80 psi] <Insert value>. Remove dirt softened by steam with wood scrapers, stiff-nylon or -fiber brushes, or cold-water wash, as indicated by cleaning tests.

E. Detergent Cleaning:

1. Wet surface with [cold] [hot] water applied by low-pressure spray.
2. Scrub surface with detergent solution using medium-soft brushes until soil is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil from mortar joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that surface remains wet.

3. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove detergent solution and soil.
4. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.

F. Mold, Mildew, and Algae Removal:

1. Wet surface with [cold] [hot] water applied by low-pressure spray.
2. Apply mold, mildew, and algae remover by brush [or low-pressure spray].
3. Scrub surface with medium-soft brushes until mold, mildew, and algae are thoroughly dislodged and can be removed by rinsing. Use small brushes for mortar joints and crevices. Dip brush in mold, mildew, and algae remover often to ensure that adequate fresh cleaner is used and that surface remains wet.
4. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove mold, mildew, and algae remover and soil.
5. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.

G. Nonacidic Gel Chemical Cleaning:

1. Wet surface with [cold] [hot] water applied by low-pressure spray.
2. Apply gel cleaner in 1/8-inch thickness by brush, working into joints and crevices. Apply quickly and do not brush out excessively, so area is uniformly covered with fresh cleaner and dwell time is uniform throughout area being cleaned.
3. Let cleaner remain on surface for period [recommended in writing by chemical-cleaner manufacturer] [established by mockup] <Insert requirement>.
4. Remove bulk of gel cleaner.
5. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove chemicals and soil.
6. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

H. Nonacidic Liquid Chemical Cleaning:

1. Wet surface with [cold] [hot] water applied by low-pressure spray.
2. Apply cleaner to surface [in two applications] by brush [or low-pressure spray].
3. Let cleaner remain on surface for period [recommended in writing by chemical-cleaner manufacturer] [established by mockup] [of two to three minutes] <Insert requirement>.
4. Rinse with [cold] [hot] water applied by [low] [medium] [high]-pressure spray to remove chemicals and soil.
5. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

I. Mild-Acid Chemical Cleaning:

1. Wet surface with cold water applied by low-pressure spray.
2. Apply cleaner to surface [in two applications] by brush [or low-pressure spray].

3. Let cleaner remain on surface for period [recommended in writing by chemical-cleaner manufacturer] [established by mockup] [of two to three minutes] <Insert requirement>.
4. Rinse with cold water applied by [low] [medium] [high]-pressure spray to remove chemicals and soil.
5. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

J. Acidic Chemical Cleaning:

1. Wet surface with cold water applied by low-pressure spray.
2. Apply cleaner to surface [in two applications] by brush [or low-pressure spray].
3. Let cleaner remain on surface for period [recommended in writing by chemical-cleaner manufacturer] [established by mockup] [of two to three minutes] <Insert requirement>.
4. Rinse with cold water applied by [low] [medium] [high]-pressure spray to remove chemicals and soil. Rinse until all foaming, if any, stops and suds disappear.
5. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

K. One-Part Limestone Chemical Cleaning:

1. Wet surface with [cold] [hot] water applied by low-pressure spray.
2. Apply cleaner to surface by brush [or low-pressure spray].
3. Let cleaner remain on surface for period [recommended in writing by chemical-cleaner manufacturer] [established by mockup] <Insert requirement>.
4. Immediately repeat application of one-part limestone cleaner as indicated above over the same area.
5. Rinse with [cold] [hot] water applied by medium-pressure spray to remove chemicals and soil.

L. Two-Part Chemical Cleaning:

1. Wet surface with [cold] [hot] water applied by low-pressure spray.
2. Apply alkaline prewash cleaner to surface by brush or roller.
3. Let cleaner remain on surface for period recommended in writing by chemical-cleaner manufacturer unless otherwise indicated.
4. Rinse with [cold] [hot] water applied by medium-pressure spray to remove chemicals and soil.
5. Apply acidic afterwash cleaner to surface [in two applications], while surface is still wet, using [low-pressure spray equipment,] deep-nap roller or soft-fiber brush. Let neutralizer remain on surface for period recommended in writing by manufacturer unless otherwise indicated.
6. Rinse with cold water applied by medium-pressure spray to remove chemicals and soil. [Rinse until surface reaction value is between pH 5 and pH 9 according to pH-measuring paper, pen, or indicator solution.]
7. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once.

3.07 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage [paint-remover manufacturer's and] chemical-cleaner manufacturer's factory-authorized service representatives for consultation and Project-site inspection [, to perform preconstruction product testing,] and provide on-site assistance when requested by Architect. Have [paint-remover manufacturer's and] chemical-cleaner manufacturer's factory-authorized service representatives visit Project site not less than [once] [twice] <Insert requirement> to observing progress and quality of the work.

3.08 FINAL CLEANING

- A. Clean adjacent nonmasonry surfaces of spillage and debris. Use detergent and soft brushes or cloths.
- B. Remove debris from gutters and downspouts. Rinse off roof and flush gutters and downspouts.
- C. Remove masking materials, leaving no residues that could trap dirt.

END OF SECTION

This page intentionally left blank

DIVISION 05

METALS

This page intentionally left blank

SECTION 05 06 50

WELDED STUD CONNECTORS

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section
- B. This Section covers the technical requirements for welded stud connectors and forms a part of all other Sections which require stud connectors, anchor studs, stud shear connectors, and similar items to be provided in accordance with this Section.
 - 1. Section includes:
 - a. Welded shear stud connectors.
 - b. Welding equipment for attachment of steel studs.
 - 2. Related work:
 - a. Relevant sections of Division 05.

1.02 SYSTEM DESCRIPTION

- A. Provide steel shear studs for welding by automatically timed shear stud-welding equipment, complete with an arc shield (ferrule) of heat-resistant ceramic or equivalent for all studs, and for studs 5/16-inch diameter or larger, a deoxidizing and arc stabilizing flux.

1.03 SUBMITTALS

- A. Data: Submit shear stud manufacturer's product data, specifications, typical installation details and other data as necessary to demonstrate compliance with the specified requirements. Provide certified evidence stud bases are qualified in accordance with CBC. Provide copies of DSA approvals for all studs, stud bases, and arc shields.
- B. Samples: Submit full-size shear stud sample when requested by the Structural Engineer.
- C. Test reports:
 - 1. Submit current compliance report from International Code Council (ICC) Evaluation Services showing shear studs comply with the Drawings, Specifications and the requirements of the authorities having jurisdiction.
 - 2. Provide adequate test results to verify feasibility of through-deck welding for the particular connector sizes and deck thickness involved.
- D. Manufacturer's instructions: Submit manufacturer-prepared instructions concerning the proper surface preparation and installation shear studs.
 - 1. LEED Documentation: Submit the following documentation
 - a. Specific product name, make, model, and manufacturer
 - b. Material Cost

- c. Post-Consumer Recycled Content: Cutsheets, product literature or letter from the manufacturer indicating the percentage by weight of post-consumer (post-industrial) recycled content.
- d. Extracted, Manufactured, and Purchased locally. Provide cutsheets, product literature or letter from the manufacturer indicating the location of extraction, manufacturing, and purchasing and distance from the project site.

1.04 QUALITY ASSURANCE

- A. General: Furnish studs and stud bases currently qualified in accordance with CBC, AWS D1.1, latest revision, and install in accordance with the procedures and quality control requirements of AWS D1.1, latest revision. Employ welding mechanics that are skilled and experienced in installing required studs and currently qualified in accordance with AWS D1.1-15 and CBC Section 2204A.1.
- B. Welder's qualifications: Qualify welding operators and welding procedures in compliance with AWS "Qualification" requirements of AWS D1.1.
 - 1. Verify welders to be employed in this work have satisfactorily passed AWS qualification tests and are current in their certification.
 - 2. If re-certification is required, retesting will be Contractor's responsibility.
- C. Source Quality Control: Refer to Section 01 4100. Testing Laboratory shall test end welded studs furnished for either shop or field installation according to CBC Section, 2213A.2.

1.05 HANDLING

- A. Delivery: Deliver materials to project site in original unopened packages, clearly labeled with manufacturer's identification labels intact and legible, indicating manufacturer's name, brand, type and source of product.
 - 1. Storage: Store materials above ground and under cover.
 - 2. Handling: Protect materials from damage during shipping, handling, and storage at the site.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of design is for "SL3" shear connectors fabricated by Nelson Stud Welding, Inc. Other acceptable materials/manufacturers include the following:
 - 1. "SC" shear connection studs by Stud Welding Associates.
 - 2. "Tru-Weld" shear connection studs by TFP Corporation.
 - 3. Or equal.

2.02 MATERIALS

- A. Steel: ASTM A 108, Grades C-1010 through C-1020 cold-drawn steel. Studs shall conform to the following minimum physical properties:
 - 1. Tensile strength: 65,000 psi.
 - 2. Yield strength: 51,000 psi.

3. Elongation in 2 inches: 20 percent.
 4. Reduction of area: 50 percent.
- B. Provide shear studs of uniform quality and condition, free of injurious laps, fins, seams, cracks, twists, bends not indicated, rust, rust pits, scale, oil and other injurious defects or substances.
1. Shear studs shall be finished by cold-heading, cold-rolling or machining.
 2. Shear studs shall not be painted, galvanized, or cadmium-plated prior to welding.

2.03 WELDING EQUIPMENT

- A. Furnish automatically timed stud-welding equipment and a suitable power source, of type and manufacturer listed as approved by the stud manufacturer. Interlock the welding equipment supplying current to two or more stud-welding guns so that only one gun can operate at a time and so power source has fully recovered from making one weld before another weld is started.

PART 3 EXECUTION

3.01 INSPECTION

- A. Verify that galvanizing on steel deck does not exceed the zinc coating approved for stud installation. Report in writing all conditions that prevent or interfere with the proper installation of studs including loose steel decking or improper fitting.

3.02 PREPARATION

- A. Preparation shall conform to AWS D1.1-15.
- B. Surfaces to receive shear studs shall be free from oil, grease, waxy films, paint and other deleterious materials that would negatively affect the quality of installation, durability and performance of components.
- C. Promptly install shear studs after surface cleaning and preparation.
- D. Preparation for Replacement Studs and Repairs: Repair steel surfaces as follows wherever a defective stud is removed. Make area where a stud is removed flush and smooth if the surface remains exposed in the Work. Complete repairs before installing a replacement stud on a defect area.
1. Areas Subject To Tensile Stress: Make the area flush and smooth. If the base metal is pulled out by stud removal, fill pocket by shielded metal-arc welding conforming to AWS D1.1, latest revision, using low-hydrogen electrodes, and grind the weld surfaces flush.
 2. Areas Subject To Compression: Where any stud failures are confined to shanks or fusion zones of the studs, a new stud may be installed adjacent to the defective area in lieu of repairing defective area and installing a replacement stud, subject to approval. If metal is pulled out of base metal, fill pocket as specified above for tensile stress areas except, if the defect depth is not more than the lesser of 1/8" or 7% of base metal thickness, the defect may be faired by grinding in lieu of weld filling.

3.03 INSTALLATION

- A. Hold welding gun in correct position and without movement until the weld metal has solidified.
- B. Product welded studs free from any defect or substance that interferes with intended functions.
- C. Do not install shear studs that exhibit defects, rusting, rust pits, scale, oil, deleterious or other substances that will interfere with their intended function.
- D. Comply with shear stud manufacturer's instructions and the following.

1. Do not install studs on wet surfaces.
 2. Break and remove arc shield after welding.
- E. Shear stud lengths:
1. Shear stud lengths indicated are minimum net lengths after welding.
 2. If reduction in length of a stud as it is welded results in the length of the stud being more than 1/16-inch greater than length specified by stud manufacturer, discontinue installation until cause is determined and eliminated, and pre-production testing is satisfactorily repeated.
- F. Defective fillets: Shear studs not showing full 360-degree weld fillet after welding may be repaired by adding a 3/16-inch fillet weld, in lieu of the missing weld fillet, in compliance with AWS D1.1 using low-hydrogen electrodes.
- G. Singly space shear stud connectors along the beam with excess double studs spaced symmetrically from each end of the beam. Place adjacent studs on centers not closer than 3" transversely and not closer than 4-1/2" longitudinally, on centers. Provide minimum distance between edges of the shear stud bases and flange edges equal to the stud diameter plus 1/8", but minimum 1-1/2" clearance wherever possible. Location accuracy of other types of studs shall permit the assembly of attachments without alterations or reaming.

3.04 INSTALLATION THROUGH STEEL DECK

- A. Exercise caution to prevent defective welds or damage when welding through steel decking.
- B. When shear studs will be welded through steel deck or corrugated steel forming, top flange of beams to receive such studs shall be unpainted and free of debris prior to installation of the deck or forming.
1. Install deck or forming so that the bottom rib or plate is in continuous contact with the surface to receive the studs.
 2. Field-weld studs to structural members only after all steel framing, deck or forms are in place and shored where required.
- C. Weld shear connectors to supports through decking in compliance with shear connector manufacturer's instructions and AWS D1.1.
1. Weld only on clean dry deck surfaces.
 2. Use through-deck stud welding where deck material thickness permits proper weld fusion to develop required connector capacity.
 3. If through-deck stud welding is not feasible, install studs through pre-punched holes in the deck. Provide pre-punched holes only for the studs involved and keep hole oversize to the minimum required to develop a proper weld.
 4. Do not weld studs through 2 layers of deck heavier than 20-gage. Puddle welds (arc-spot) may be omitted where they coincide with studs.

3.05 SITE TOLERANCES

- A. Longitudinal and lateral spacing for shear stud connectors relative to each other and to edges of member flanges may vary 1-inch maximum from locations shown, provided adjacent studs are not closer than 2-1/2 inches O.C.
- B. Provide a minimum distance between edges of shear stud bases and member flange edges equal to the stud diameter plus 1/8-inch but minimum 1-1/2 in. clearance where possible.
- C. Location accuracy of other types of studs shall permit the assembly of attachments without alterations or reaming.

3.06 REPLACING DEFECTIVE STUDS

A. Where a defective stud is removed, repair steel surfaces as follows:
Where stud is removed, make areas flush and smooth.

Complete repairs before installing replacement stud in defective area.

B. Areas subject to tensile stress:

1. If base metal material is pulled-out by shear stud removal, fill pocket by shielded metal-arc welding using low-hydrogen electrodes in compliance with AWS D1.1
2. Grind the weld surfaces flush and smooth.

C. Areas subject to compression:

1. Where a shear stud failure is confined to the shanks or fusion zones of the stud, a new shear stud may be installed adjacent to the defective area, subject to the Structural Engineer's approval, in lieu of repairing the defective area and installing a replacement stud.
2. If base metal material is pulled out by shear stud removal, fill pocket as specified above for tensile areas, except that if defect depth is not more than the lesser of either 1/8-inch or 7 percent of the base metal thickness, the defect may be faired by grinding in lieu of weld filling.

3.07 FIELD QUALITY CONTROL

Inspection: In accordance with CBC Sections 2213A.2 and 2204A.1 perform shop and field welded stud installation and testing under continuous inspection of a qualified welding inspector approved by DSA. In addition to the verified report, welding inspector's reports shall detail the location of all defective studs with the repair or replacement action taken.

A. Site tests: The Owner will employ a testing agency to test installed shear studs for compliance with specified requirements.

1. Perform pre-production testing, and stud installation and production testing under continuous inspection by the Owner's testing agency.
2. In addition to the standard reports, testing agency reports shall detail the location of defective studs with repair or replacement action taken, damage resulting from stud installation, and all defects and unusual occurrences.

B. Inspection Procedure: In accordance with CBC Section 1705A.2 Welding equipment type and capacity shall be in accordance with manufacturer's recommendations and shall be checked and approved by the welding inspector. At beginning of each day's work, a minimum of two test studs shall be made with the equipment to be used to metal which is the same as the actual work piece. Test studs shall be subjected to 90 degree bend test by striking them with a heavy hammer; after this test, the weld section shall not exhibit any tearing out or cracking.

C. Pre-production testing: Perform the following tests with each welding equipment power source at the start of each production period, at the start of any new welding procedure, and after any change in welding procedure. Production period is defined as the time interval from start-up to any shutdown of any stud-welding equipment.

1. Shear stud connector test: After cooling, test first 2 shear studs on a member by hammer bending to a 45-degree angle.
 - a. If failure occurs in the weld zone of either shear stud, correct welding procedure, weld and bend test 2 more studs on the member.
 - b. If either of the second 2 shear studs fail, continue additional welding on separate materials until 2 consecutive studs are tested and found satisfactory before any more studs are welded to the member.

2. Studs other than shear connectors: Weld 2 studs to separate material in the same general position (flat, vertical, sloping or overhead) and similar steel material and thickness as members to receive studs.
 - a. After cooling, hammer-bend the studs to a 30-degree angle.
 - b. If failure occurs in the weld zone of either stud, correct the procedure and successfully weld and test 2 successive studs before any studs are welded to members.
 - D. Stud installation and production testing: After cooling, test at least one stud on each member by hammer bending to a 15-degree angle.
 1. If failure occurs either in the weld zone or stud shank, follow method of correction required above for pre-production testing until successful installations are produced. Replaced defective studs.
 2. Test all studs not showing a full 360-degree fillet weld, all replacement studs, any stud for which reduction in length is less than correct and any stud that has been repaired
 - a. After cooling, hammer-bend studs to a 15-degree angle.
 - b. For studs showing less than a 360-degree fillet weld, bend stud in the direction opposite to the missing weld fillet.
 - E. Inspection of studs other than shear connectors: Test at least one stud per 100 studs installed by hammer bending to a 15-degree angle
 1. If stud fails, correct the welding procedure as required above for pre-production testing and bend-test 2 more in-place studs.
 2. If either of the second 2 studs fail, all studs represented by the tests shall be bent-tested, or shall be rejected and replaced.
 3. The Structural Engineer shall designate the extent of additional inspection and testing for critical structural connections.
 - F. Remove and replace studs that crack in the weld zone, in the base metal or the shank either during inspection and testing or under subsequent straightening.
 - G. Straightening: Provided no portion of the stud will fall within one-inch of an exposed concrete surface, bent shear stud connectors and shear transfer devices that are less than 16 degrees from vertical and are free of failure may be left in the bent position.
 1. Perform stud bending and straightening without heating and before completion of each day's stud welding.
 2. Obtain inspection and approval of straightened studs before covering.
 - H. Load testing: Testing agency shall load test studs in the extent and by methods directed.
- 3.08 CLEANUP
- A. Leave areas around job site free of debris, welding materials, equipment and related items after completion of job.

END OF SECTION

SECTION 05 12 00
STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section
- B. Section Includes:
 - 1. Structural steel.
- C. Related Sections:
 - 1. Section 01 4100: Testing and Inspection.
 - 2. Section 03 3000: Cast-In-Place Concrete.

1.02 REFERENCE STANDARDS, SPECIFICATIONS AND CODES

- A. CBC Chapter 22A.
- B. American Institute of Steel Construction (AISC):
 - 1. AISC – Steel Construction Manual, 14th Edition, including:
 - a. AISC 360 Specifications for Structural Steel Buildings.
 - b. AISC 303 Code of Standard Practice for Steel Buildings and Bridges.
 - c. RCSC – Specification for Structural Joints Using ASTM A325 or A490 Bolts.
 - 2. AISC 341 - Seismic Provisions for Structural Steel Buildings, July 12, 2016
 - 3. AISC 358 - Prequalified Connections for Special and Intermediate Steel Moment Frames for Seismic Applications.
- C. American Society for Testing and Materials (ASTM):
 - 1. ASTM A36 – Standard Specification for Carbon Structural Steel.
 - 2. ASTM A53 – Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - 3. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.
 - 4. ASTM A123 – Standard Specification for Zinc (Hot-Dipped Galvanized) Coatings on Iron and Steel Products.
 - 5. ASTM A153 – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - 6. ASTM A307 – Standard Specification for Carbon Steel Bolts and Studs, 60000 PSI Tensile Strength.
 - 7. ASTM A325 – Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 Ksi Minimum Tensile Strength.
 - 8. ASTM A435 - Standard Specification for Straight-Beam Ultrasonic Examination of Steel Plates.

9. ASTM A490 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
10. ASTM A500 – Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Round and Shapes.
11. ASTM A501 - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.
12. ASTM A572 – Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.
13. ASTM A653 – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
14. ASTM A673 - Standard Specification for Sampling Procedure for Impact Testing of Structural Steel,
15. ASTM A780 – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
16. ASTM A992 – Standard Specification for Structural Steel Shapes.
17. ASTM C1107 – Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).
18. ASTM E23 - Standard Test Methods for Notched Bar Impact Testing of Metallic Materials.
19. ASTM E112 - Standard Test Methods for Determining Average Grain Size
20. ASTM F1554 – Standard Specification for Anchor Bolts, Steel, 36, 55 and 105-Ksi Yield Strength.
21. ASTM F959 - Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners.
22. ASTM F1852 – Standard Specification for “Twist Off” Type Tension Control Structural Bolt/Nut/Washer Assemblies, Steel, Heat Treated, 120/105 ksi Minimum Tension Strength.

D. American Welding Society (AWS):

1. AWS D1.1 – Structural Welding Code - Steel.
2. AWS D1.8 – Structural Welding Code – Seismic Supplement.
2. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.
3. AWS B2.1 – Specifications for Welding Procedures and Performance Qualification.

E. SSPC – Steel Structures Painting Council:

1. SP-2 - Hand Tool Cleaning.

1.03 SYSTEM DESCRIPTION

A. Regulatory Requirements:

1. Structural steel shall conform to CBC requirements, except that steel manufactured by acid Bessemer process is not permitted for structural purposes.
2. Sheet and strip steel other than those listed in CBC, if provided for structural purpose, shall comply with DSA requirements.

1.04 SUBMITTALS

- A. Shop Drawings:
1. Submit Shop Drawings, including complete details and schedules for fabrication and shop assembly of members, and details, schedules, procedures and diagrams showing the sequence of erection. Fully detail minor connections and fastenings not shown or specified in the Contract Documents to meet required conditions using similar detailing as shown in the Contract Documents. Include a fully detailed, well controlled sequence and technique plan for shop and field welding that minimizes locked in stresses and distortion; submit sequence and technique plan for review by the Architect.
 - a. Include details of cuts, connections, camber, and holes in accordance with Figure 4.5 of AWS D1.1 or AISC 360 Section J1.8, weld position plan and other pertinent data. Indicate welds by standard AWS symbols, and show size, length and type of each weld.
 - b. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed for Work specified in other sections.
 - c. Erection and Bracing Plan and Erection Procedure: Submit an erection and framing plan, including columns, beams, and girders, signed and sealed by a Structural or Civil Engineer registered in the State of California in accordance with Title 8 CCR, Section 1710, Erection of Structures. Maintain a copy at the Project site as required by the California Division of Industrial Safety.
 - d. Submit a list of steel items to be galvanized.
 - e. Include identification and details of AESS members, if applicable.
- B. Product Data:
1. Submit copies of fabricator's specifications and installation instructions for the following products. Include laboratory test reports and other data required demonstrating compliance with these Specifications:
 - a. Structural steel, each type; including certified copies of mill reports covering chemical and physical properties.
 - b. Welding electrodes.
 - c. Welding gas.
 - d. Unfinished bolts and nuts.
 - e. Structural steel primer paint.
 - f. High-strength bolts, including nuts and washers.
- C. Manufacturer's Mill Certificate:
1. Submit, certifying that products meet or exceed specified requirements.
- D. Mill Test Reports:
1. Submit manufacturer's certificates, indicating structural yield and tensile strength, destructive and non-destructive test analysis.
- E. Submit certified copies of tests by manufacturer for fine grain practice. Structural steel base material, as described above, shall be manufactured to be fully killed and fine grained having grain size number 5 or better as determined by ASTM E112.

- F. Welding Procedure Specifications (WPS): Submit weld procedures for all welding on project to Owner's testing laboratory for approval. After approval by testing laboratory, submit to Architect of record for review. Weld procedures shall be qualified as described in AWS D1.5, section 5.12 or 5.13, AISC 341 and AISC 358, as applicable. Weld procedures shall indicate joints details and tolerances, preheat and interpass temperature, post-heat treatment, single or multiple stringer passes, peening of stringer passes for groove welds except for the first and the last pass, electrode type and size, welding current, polarity and amperes and root treatment. The welding variables for each stringer pass shall be recorded and averaged, from these averages the weld heat input shall be calculated. Submit the manufacturer's product data sheet for all welding material used. Welding shall not proceed until WPS have been reviewed and approved by the Engineer of Record.
- G. Welder's Certificates: Field welders shall be Project certified in accordance with AWS D1.1. Shop welders shall be Project certified for FCAW in accordance with AWS D1.1.
- H. Test Reports: Submit reports of tests conducted on shop and field welded and bolted connections. Include data on type of test conducted and test results.
- I. Welding Material Certification: Provide certificate that welding material complies to specifications. Submit to Owner's testing laboratory.
- J. LEED Documentation: Submit the following documentation
 1. Specific product name, make, model, and manufacturer
 2. Material Cost
 3. Environmental Product Declaration (EPD) report:
 4. Product-specific declaration: Manufacturer's Life Cycle Assessment conforming to ISO 14044
 5. Product Specific Type III EPD with third-party Type III certification
 6. Industry-wide (generic) EPD with third-party Type III certification
 7. Post-Consumer Recycled Content: Cutsheets, product literature or letter from the manufacturer indicating the percentage by weight of post-consumer (post-industrial) recycled content.
 8. Extracted, Manufactured, and Purchased locally. Provide cutsheets, product literature or letter from the manufacturer indicating the location of extraction, manufacturing, and purchasing and distance from the project site.
 9. Health Product Declaration (HPD) with full disclosure of known hazards down to 1000ppm.

1.05 QUALITY ASSURANCE

- A. Comply with the following as a minimum requirement, except as otherwise indicated:
 1. American Institute of Steel Construction (AISC) "Code of Standard Practice for Steel Buildings and Bridges", (AISC 303) modified as follows:
 - a. Replace "Structural Design Drawings" with "Contract Documents" throughout the document.
 - b. Paragraph 3.2 is hereby modified in it's entirety as follows:

- “Contract Documents including but not limited to architectural, mechanical, plumbing, electrical, civil and kitchen design drawings and specifications shall be used as supplement to the structural plans to define configurations and construction information.”
- c. Delete Paragraph 3.3.
 - d. In Paragraph 4.4, delete the following sentence:
“These drawings shall be returned to the Fabricator within 14 calendar days.”
 - e. Delete Paragraph 4.4.1.(a) in it’s entirety.
 - f. Paragraph 4.4.2 is hereby modified in it’s entirety as follows:
“No review action, implicit or explicit, shall be interpreted to authorize changes in the Contract Documents.”
2. AISC 360 - Specification for the Design, Fabrication and Erection of Structural Steel for Buildings
 3. Perform welding in accordance with AWS Standards, AWS D1.1, and California Building Code Section 2204A.1 and approved Weld Procedure Specifications (WPS).
 4. California Building Code, 2019 Edition, Chapter 22A.
- B. Shop fabrication shall be inspected in accordance with CBC.
- C. Qualifications of Fabricator: Fabricate structural steel in shop of a licensed fabricator, AISC certified, in the same category of the scope of this project. City of Los Angeles certification in lieu of AISC certification is acceptable.
- D. Source Quality Control: Refer to Section 01 4100. Testing Laboratory shall perform conformance testing in accordance with CBC Section 2213A and 1705A.2.
1. Identified Structural Steel: Tests are waived for steel identified by heat number, accompanied by mill analyses and mill test reports, and properly tagged with an Identification Certificate so as to be readily identified for conformance with applicable ASTM. Comply with CBC Section, 1705A.2 and Table 1705A.2.1.
 2. Unidentified Structural Steel: Steel not identified and certified as specified above shall be tested according to following requirements. Structural steel fabricator shall cut samples under direction of the Special Inspector and Testing Laboratory shall machine or otherwise prepare the specimens and perform testing of each 5 tons or fraction thereof for each size of unidentified steel. In the case of random pieces or of steel having F_y greater than 36 Ksi, testing of each piece is required. Tests required are:
 - a. For pipe, one tension and elongation test and one flattening test for each size.
 - b. For all other steel, one tension and elongation test and one bend test for each size.
 - c. Contractor shall reimburse to Owner all costs paid by Owner for testing unidentified steel.
- E. Erection and Bracing Plan and Procedure: Refer to Section 1710, Title 8, CCR, and Building Code. Employ and pay a California registered civil engineer to prepare an erection and bracing plan and erection procedure for structural steel including columns, beams, and girders, who shall be solely responsible for its compliance. Follow the plan and procedure exactly. Keep a copy at the job site as required by California Division of Industrial Safety. File two copies of stamped erection and bracing plan and procedure for record purposes only, not for review or approval.

- F. Testing & Inspection shall comply with the following:
1. CBC Section 1705A Tests and Inspections of Structural Steel. All steel used for structural purposes shall be identified as required by CBC Section 2203A. Manufacturer's mill analyses and test reports are acceptable for properly identified steel, but the enforcement agency may require additional testing to determine the quality of the steel if there is any doubt as to its acceptability. Any steel not properly identified shall be tested to meet the minimum chemical and mechanical requirements of the ASTM standard appropriate for the steel specified for the structure.
 2. EXCEPTION: No mechanical tests are required for unidentified steel when the minimum yield stress required by the design is less than or equal to 25 ksi (172 Mpa) and the steel is not part of the designated lateral-force-resisting system. Contractor to verify applicability with engineer of record prior to exercising this exception to mechanical testing.
 3. CBC Section 1705A.2 Inspection of Shop Fabrication. Inspection of shop fabrication shall be required for significant structural detailed connection and fabrication work as directed by the enforcement agency. This inspection shall be made by a qualified inspector approved by the enforcement agency. The inspector shall furnish the architect, structural engineer and the enforcement agency with a report that the materials and workmanship conform to the approved plans and specifications.
 4. CBC Section 1705A.2 Inspection of Welding. Inspection of all shop and field welding operations, including the installation of automatic end-welded stud shear connectors shall be made by a qualified welding inspector approved by the enforcement agency. Such inspector shall be a person trained and thoroughly experienced in inspecting welding operations. The inspector's ability to distinguish between sound and unsound welding shall be reliably established. The minimum requirements for a qualified welding inspector shall be as those for an AWS certified welding inspector (CWI), as defined in the provisions of the ANSI/AWS QCI-1-96, Standard for AWS Certification of Welding Inspectors published by the American Welding Society. All welding inspectors shall be approved by the enforcement agency.
 5. The ability of each welder to produce sound welds of all types required by the work shall be established by welder qualification satisfactory to the enforcement agency.
 6. Welding inspection of structural welding shall conform to the requirements of AWS D1.1 Structural Welding Code – Steel, published by the American Welding Society, except as modified by this section.
 7. Welding inspection of cold-formed steel members shall conform to the requirements of AWS D1.3.
 8. The welding inspector shall make a systematic record of all welds. This record shall include in addition to other required records:
 - a. Identification marks of welders.
 - b. List of defective welds.
 - c. Manner of correction of defects.

9. The welding inspector shall check the material, equipment, details of construction and procedure, as well as the welds. The inspector shall also check the ability of the welder. The inspector shall verify that the installation procedure for automatic end-welded stud shear connectors is in accordance with the requirements of AWS D1.1, Structural Welding Code – Steel, published by the American Weld Society and the approved plans and specifications. The inspector shall furnish the architect, structural engineer and the enforcement agency with a verified report that the welding is proper and has been done in conformity with AWS D1.1, Structural Welding Code – Steel, published by the American Welding Society and the approved plans and specifications. The inspector shall use all means necessary to determine the quality of the weld. The inspector may use gamma ray, magnaflux, trepanning, sonics or any other aid to visual inspection, which the inspector may deem necessary to be assured of the adequacy of the welding.
10. Inspection and testing of high strength bolts (F3125), nuts and washers shall conform to the requirements found in CBC Table 1705A.2.1 and CBC Section 2213A.1.

1.06 DELIVERY, STORAGE AND HANDLING

- A. Store structural steel above grade on platforms, skids or other supports.
- B. Protect steel from corrosion.
- C. Store welding electrodes in accordance with AWS D 12.1. Deliver electrodes to the site in unbroken packages bearing the manufacturer's name and label identifying the contents.
- D. Store other materials in a weather-tight and dry place until installed into the Work.

1.07 PROJECT SITE CONDITIONS

- A. Site Measurements: Take field measurements as required. Report any major discrepancy between Drawings and field dimensions.
- B. Protection of Floors: Use caution to protect floor slab and adjacent Work from damage. Do not overload floors. Use rubber tired equipment to handle and move steel. Do not place steel members directly on floor; use pads of timber or like material for cushioning.
- C. Temporary Flooring: Provide necessary temporary planking, scaffolding, and flooring for erection of structural steel or support of erection machinery. Conform use of temporary floors or steel decking to Code.
- D. Connection of Steel Decking Temporary Flooring: Temporarily weld steel decking to supports where used as a working platform. Distribute concentrated loadings from welding machines and other heavy machinery with planking or equal. Replace decking damaged by use as a working platform at no additional contract cost.

PART 2 PRODUCTS

2.01 GENERAL

- A. Stock Materials: Provide exact materials, sections, shapes, thickness, sizes, weights, and details of construction indicated on Drawings. Changes because of material stock or shop practices will be considered if net area of shape or section is not reduced thereby, if material and structural properties are at least equivalent, and if overall dimensions are not exceeded.

- B. All shapes, bars, plates, tubes and pipes shall be made of materials with at least 16% recycled content if produced from Basic Oxygen Furnace (BOF) or at least 67% recycled content if produced from Electric Arc Furnace (EAF).

2.02 MATERIALS

- A. Structural Steel: See structural drawings for detailed list of steel shape ASTM designation requirements.
- B. Threaded Fasteners: See structural drawings for ASTM designations.
- C. High-Strength Threaded Fasteners: See structural drawings for ASTM designations.
- D. Anchor Bolts: See structural drawings for ASTM designations.
- E. Primer: Use types acceptable to governing air quality management officials.
 - 1. For above-grade locations: Lead free metal primer, Tnemec Uni-Bond DF Series 115 or Rust-Oleum X-60.
 - 2. For below grade applications: Coal-tar epoxy coating, two coats, 5 mils per coat. Perma Bar, as manufactured by Karlee Co., Burbank, CA, or equal. Touch-up on job site with Perma-Bar coal-tar epoxy, match finish coat thickness.
- F. Clevis & Turnbuckle materials to be C-1035 and shall have the capacity to resist loads equal to or greater than those specified in the Manual of Steel Construction – Allowable Stress Design, Ninth Edition Tables on 4-148 & 4-149. Supply Structural Engineer of Record evidence of conformance to the specified classifications and capacities.
- G. Galvanizing: ASTM A123.
- H. Welding Electrodes: Provide electrodes recommended by manufacturer for seismic connections.
 - 1. Comply with AISC 341.
 - 2. All electrodes shall have a minimum Notch-Toughness of 20 ft-lb at -20 degrees F.
- I. Grout: ASTM C1107, non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing additives, capable of developing a minimum compressive strength of 7,000 psi at 7 days; of consistency suitable for application and a 30 minute working time. Grout shall be non-gas-forming, free of oxidizing catalysts and inorganic accelerators, performance and characteristics when mixed to a fluid consistency meeting CRD-C 79 and CRD-C 588, non-staining type in exposed areas.

2.03 FABRICATION

- A. Cleaning and Straightening Materials: Materials being fabricated shall be thoroughly cleaned of scale and rust, and straightened before fabrication. Cleaning and straightening methods shall not damage material. After punching or fabrication of component parts of a member, twists or bends shall be removed before parts are assembled. Produce finished members free from twists, bends, and open joints when erected.

- B. Drilling, Punching, and Reaming: Hole burning to make or enlarge previous holes is allowed only with prior approval. Prepare required holes in structural steel members for attachment or passage of Work of other trades. Precisely locate finished holes to ensure passage of all bolts through steel assemblies without drifting. Enlarge holes only by reaming. Poor matching of holes is cause for rejection.
- C. Milling: Compression joints depending on contact bearing shall be furnished with bearing surfaces prepared to a common plane by milling.
- D. Use of Burning Torch: Oxygen cutting of members shall be performed by machine. Gouges greater than 1/16 inch that remain from cutting shall be removed by grinding. Reentrant corners shall be shaped notch free to a radius of at least 1 inch. Gas cutting of holes for bolts or rivets is not permitted.
- E. Galvanizing: After fabrication, items indicated or specified to be galvanized shall be galvanized in largest practical sizes. Fabrication includes operations of shearing, punching, bending, forming, assembling or welding. Galvanized items shall be free from projections, barbs, or icicles resulting from the galvanizing process.
- F. Welding:
1. Type of steel furnished in welded structures shall provide chemical properties suitable for welding as determined by chemical analysis. Welds shall conform to the verification and inspection requirements of CBC Chapter 17A. Conform to AWS D1.1, and CBC Chapter 22A.
 2. Materials and workmanship shall conform to the requirements specified herein and to CBC requirements, modified as follows:
 - a. No welded splices shall be permitted except those indicated on Drawings unless specifically reviewed by the Architect.
 - b. Drawings will designate joints in which it is important that welding sequence and technique be controlled to minimize shrinkage stresses and distortion.
 3. Welding shall be performed in accordance with requirements of the AWS Structural Welding Code.
 - a. Welded Joint Details: Comply with AISC 341, AISC 358 and drawing details.
- G. Shop Finish:
1. Notify the IOR when Work is ready to receive shop prime coat. Work shall be inspected by the IOR before installation of primer.
 2. Structural steel and fittings, except galvanized items, which will be exposed when building is completed, shall receive a coat of primer.
 3. All exposed steel to receive Steel Coating System per section 099600.
Surface Preparation: [SSPC-SP1,2 or3] Commercial Blast Clean with a 2 mil angular anchor profile.
Prime Coat: Organic Urethane Zinc Rich conforms to SSPC Paint 20 type II and with the requirements of AISC "Allowable Stress Design Specification for Structural Joints using ASTM A325 or A490 Bolts" for a Class B Coating by testing method to determine the slip coefficient for coatings used in bolted connections. Products known to comply include the following.
Tnemec Company, Compton, CA: 90-97 Tneme-Zinc @ 2.5 to 3.5 mils DFT or equal
Tel # 310-639-9810

4. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete or high strength bolted.
 - H. Comply with fabrication tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for structural steel.
 - I. Contact: Pin components parts of built-up members and maintain in close contact using clamps or temporary bolting during welding operations. Accurately mill compression bearing surfaces of joints depending on contact bearings or saw cut square to axis, or as detailed. Cut other joints straight and true.
 - J. Joining: Provide members of the sizes, weights, shapes, and arrangements indicated, closely fitted and finished true to line and in precise position as necessary to allow proper joining of parts in the field. Drifting to enlarge unfair holes is not allowed without prior approval.
 - K. Holes For Anchor Bolts: Punch and drill or ream holes in base and bearing plates. Do not make or enlarge the holes by burning except for grouting holes in column bases without prior approval by the Architect.
- 2.04 CONNECTIONS:
- A. Make connections with bolts as noted on the Structural Drawings.
- 2.05 WELDING:
- A. Conform to CBC Section 2240A.1, AWS D1.1 as modified by referenced AISC Standards, and as indicated or noted on Drawings. Employ welding operators qualified in accordance with AWS D1.1, as applicable, who are thoroughly trained and experienced in arc welding and that produce uniformly reliable groove and fillet welds in flat, vertical, and overhead positions, and make neat and consistent welds. Weld all structural steel joints by shielded electric-arc method unless otherwise shown, specified, or approved. Conform welding in both shop and field, including the prequalification of welds and welder qualifications, to AWS D1.1.
 - B. Storage and Care of Electrodes: Coatings of low-hydrogen type electrodes shall be thoroughly dry as used. Conform to AWS D1.1; use electrodes as taken from hermetically sealed packages within time limit specified therein after package is opened. Electrodes not used within allowable time period and electrodes that have been exposed more than one hour to air having a relative humidity of 75% or greater, or as required by the manufacturer, shall be dried according to AWS D1.1 before they are used, or shall be reconditioned according to electrode manufacturer's recommendations. Electrodes so dried or reconditioned not used within allowable time period after drying is completed shall be redried before use. Electrodes of any class that have been wet shall not be used under any conditions.
 - C. Preparation: Clean steel surfaces to be welded of all paint, grease, oil, mill scale, and foreign matter. Clean weld each time the electrode is changed. Chip full surface of hand guided and controlled flame cut edges before welding. Surfaces prepared with automatic or mechanically guided and controlled equipment need not be ground or chipped before welding.
 - D. Weld Finishing: Grind exposed welds subject to contact to smooth surfaces free of holes, slag, or other defects, flush with the adjoining surfaces. No finish treatment is required for permanently concealed welds and other exposed welds.

- E. Procedures: During assembling and welding, hold components of a built-up member with adequate clamps or other means to keep parts straight and in close contact. Do no welding in wind until adequate protective screening is set up. Cut out defective welds or parts of welds with a chisel or air arc and replace.
- F. Weld Characteristics: Conform to AWS D1.1, Chapter 8, Statically Loaded Structures. Clean and wire brush all welds. Visual inspection of finished welds must show uniform section, smoothness of welded metal, feather edges without undercuts or overlays, freedom from porosity and inclusions, and good fusion and penetration into base metal at edges and ends of fillet welds.

2.06 SHOP PRIMING

- A. Clean surfaces according to AISC Specifications. Apply one shop coat of specified metal primer to minimum 1.0 mil dry film thickness. Work primer into joints. Do not prime the following:
 - 1. Steel surfaces embedded in concrete or masonry with the exception of those steel surfaces that support anchored brick veneer.
 - 2. Contact surfaces of high-strength bolted connections or field welded connections.
 - 3. Surfaces to receive directly adhered fireproofing.

2.07 SHOP AND FIELD QUALITY CONTROL

- A. A special inspector, approved by DSA to inspect the Work of this section, shall inspect high-strength bolted connections. The Owner will provide a DSA approved independent testing laboratory to perform tests and prepare test reports in accordance with CBC 1704A.2.4. The IOR shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.
- B. An AWS CWI certified special inspector, approved by DSA to inspect the Work of this section, shall inspect welded connections in accordance with CBC 1705A.2.5. The Owner will provide a DSA approved independent testing laboratory to perform tests and prepare test reports. The IOR shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.
- C. The independent testing laboratory shall conduct and interpret test and state in each report whether test specimens comply with requirements, and specifically state any deviations there from.
- D. Provide access to all places where structural steel Work is being fabricated or produced so required inspection and testing can be performed.
- E. The independent testing laboratory may inspect and/or test structural steel at plant before shipment; however, Architect reserves the right at any time before Contract Completion to deem materials not in compliance with the specified requirements as defective Work.
- F. Correct defects in structural Work when inspections and laboratory test reports indicate noncompliance with specified requirements. Perform additional tests as may be required to reconfirm noncompliance of original Work, and as may be required to show demonstrate compliance of corrected Work.
- G. Welding: Inspect and test during fabrication and erection of structural steel assemblies as follows:

1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in the Work. Record Work required and performed to correct deficiencies.
 2. Inspect welds. Welds shall be visually inspected before performing any non-destructive testing. Groove weld shall be inspected by ultrasonic or other approved non-destructive test methods. Testing shall be performed to AWS D1.1 Table 6.2 statically loaded non-tubular connections.
 3. Ultrasonic testing shall be performed by a specially trained and qualified technician who shall operate the equipment, examine welds, and maintain a record of welds examined, defects found, and disposition of each defect. Repair and test defective welds.
 4. Rate of Testing: Completed welds contained in joints and splices shall be tested 100 percent either by ultrasonic testing or by radiography.
 5. Welds, when installed in column splices, shall be tested by either ultrasonic testing or radiography.
 6. Base metal thicker than 1-1/2 inches, when subjected to through-thickness weld shrinkage strains, shall be ultrasonically inspected by shear wave methods for discontinuities directly behind such welds. Tests shall be performed at least 48 hours after completed joint has cooled down to ambient air temperature.
 7. Any material discontinuities shall be reviewed based on the defect rating in accordance with the criteria of AWS D1.1 table 6.3 by the Architect and DSA.
 8. Other method of non-destructive testing and inspection, for example, liquid dye penetrate testing, magnetic particle inspection or radiographic inspection may be performed on weld if required.
 9. Lamellar Tearing: Lamellar-tearing resulting from welding is a crack (with zero tolerance) and shall be repaired in accordance with AWS D1.1.
 10. Lamination: The rejection criteria shall be based on ASTM A435.
 11. Where testing reveals lamination or conditions of lamellar tearing in base metal, the steel fabricator shall submit a proposed method of repair for review by the Architect. Test repaired areas as required.
 12. Magnetic Particle Testing: Magnetic particle testing when required shall be provided in accordance with AWS D1.1 for procedure and technique. The standards of acceptance shall be in accordance with AWS D1.1 – Qualification.
- H. Lamellar Tearing: Prior to welding plates 1 to 1-1/2 inches thick and greater and rolled shapes within the distance from 6 inches above the top of the joint to 6 inches below the bottom of the joint shall be checked by ultrasonic testing for laminations in base metal which may interfere with the inspection of the completed joint. Should these defects occur, members will be reviewed by the Architect and DSA. Welding procedure specifications in sub-section 1.5G specify welding practices to minimize lamellar tearing.
- I. Prior Testing of Base Material: Test material before fabrication.
- J. Lines and levels of erected steel shall be certified by a State of California licensed surveyor as set forth in related Division 01 section.
- K. Record Drawings: After steel has been erected, correct or revise Shop Drawings and erection diagrams to correspond with reviewed changes performed in the field.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Verify governing dimensions and conditions of the Work before commencing erection Work.
 - 1. Report discrepancies between drawings and field dimensions to Architect before commencing work.
 - 2. Beginning of installation means erector accepts existing conditions and surfaces underlying or adjacent to work of this section.
- B. Provide temporary shoring and bracing, and other support during performance of the Work. Remove after steel is in place and connected, and after cast-in-place concrete has reached its design strength.

3.02 ERECTION

- A. Install structural steel accurately in locations, to elevations indicated, and according to AISC specifications and CBC requirements.
- B. Clean surfaces of base plates and bearing plates.
 - 1. Install base and bearing plates for structural members on wedges, shims, or setting nuts as required.
 - 2. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims; cut off flush with edge of base or bearing plate before packing with grout.
- C. Maintain erection tolerances of structural steel within AISC Code of Standard Practice for Steel Buildings and Bridges.
 - 1. Architecturally Exposed Structural Steel members and components, plumbed, leveled and aligned to a tolerance not to exceed one-half the amount permitted for structural steel. Contractor to provide adjustable connections between Architecturally Exposed Structural Steel and the structural steel frame or the masonry or concrete supports, in order to provide the erector with means for adjustment.
- D. Align and adjust various members forming part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact after assembly. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
 - 1. Level and plumb individual members of structure.
- E. Do not permit thermal cutting during erection of structural steel.
- F. Where indicated for field connections, provide standard bolts complying with ASTM A325.
- G. Install steel bolts at locations indicated. Assembly and installation shall be in accordance with CBC requirements.
 - 1. Allowable hole sizes: 1/16 inch larger than bolt size except as noted.
 - 2. Use friction type connection with standard hardened steel circular, square or rectangular washer under bolt nut.
 - 3. Thoroughly clean area under bolt head, nut and washer. Remove all paint, lacquer, oil or other coatings except organic zinc-rich paints in accordance with SSPC, SP-2.
 - 4. Tighten bolts by wrench until snug.

- H. Contractor shall be responsible for correcting detailing and fabrication errors and for correct fitting of all members and components.
- I. Erect structural steel plumb and level and to proper tolerances as set forth in the AISC Manual. Provide temporary bracing, supports or connections required for complete safety of structure until final permanent connections are installed.
- J. Steel Columns: Set column bases in exact position for alignment, plumb and straight, supported on adjustable bolt supports or shims until grout has set. Set center of base true to column center within 1/16" and adjust column height exactly. Maintain bases at exact position and level during grouting. Fill grout space solid with non-shrink grout.
- K. Provide anchor bolts with templates and diagrams/setting drawings. Verify position of bolts prior to delivery of steel. Contractor shall be responsible for proper location and installation of bolts. Correct deficiencies and errors.
- L. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and apply galvanizing repair paint according to ASTM A780.
- M. Connections: Hold steel in correct position during welding and bolting, and provide for dead loads, wind, and all erection stresses. Do no welding or final bolting until members have been aligned and plumbed.
 - 1. Field Welding: Conform to requirements for shop fabrication.
 - 2. Common Bolts: Tighten and upset bolt threads to preclude loosening, or use approved self-locking nuts.
- N. Damaged Members: During erection, straighten or replace members which are bent, twisted, or damaged as directed. If heating is required, perform heating by methods that ensure a uniform temperature throughout the entire member. When directed, remove members damaged to an extent impairing appearance, strength, or serviceability and replace with new members at no extra cost to the Owner.
- O. Employ qualified riggers and plan erection to require minimum cutting. Erect members plumb, true to line and level, and in precise positions. Provide temporary bracing and guying to resist loads and stresses to which the structure may be subjected, including those due to erection equipment and its operation.

3.03 FITTING

- A. Closely fit members, finished true to line and in precise position required to allow accurate erection and proper joining in the field.
- B. Drilling to enlarge unfair holes will not be allowed. Allow only enough drifting during assembly to bring parts into position, but not enough to enlarge holes or distort the metal. Do not heat rolled sections, unless approved by Architect.

3.04 PUNCHING AND DRILLING

- A. Punch material 1/16 inch larger than nominal diameter of bolt, wherever thickness of metal is equal to or less than the diameter of the bolt plus 1/8 inch.
- B. Drill or sub-punch and ream where metal is equal to or more than the diameter of the bolt plus 1/8 inch. Make diameter for sub-punched and sub-drilled holes 1/16 inch larger than nominal diameter of bolt.

- C. Precisely locate holes to ensure passage of bolt through assembled materials without drifting. Enlarge holes when necessary to receive bolts by reaming; flame cutting to enlarge holes is not acceptable. Structural Steel members with poorly matched holes will be rejected.

3.05 FINISHING

- A. After erection, spots or surfaces where paint has been removed, damaged, or burned off and field rivets, bolts, and other field connections not concealed in the work, shall be cleaned of dirt, oil, grease, and burned paint and furnished with a spot coat of the same primer installed during shop priming.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Install paint to exposed areas with the same material installed during shop painting. Install by brush or spray to provide a minimum dry film thickness of 2.5 mils.

3.06 FIELD QUALITY CONTROL

- A. Owner will provide a special inspector and independent testing laboratory to perform field inspections and tests and to prepare test reports.
- B. Correct deficiencies in or remove and replace structural steel that inspections and test reports indicate do not comply with specified requirements.
- C. All welders shall be qualified for each process and position per the latest edition of AWS D1.1, Chapter 4, Part C - Performance Qualifications. The welder's qualification shall be considered as remaining in effect indefinitely unless the welder is not engaged in a given process of welding for which the welder is qualified for a period exceeding six months or unless there is some specific reason to question a welder's ability.
- D. Inspection of Shop Fabrication: Required for structural steel according to CBC Section 1704A.2.5.
- E. Inspection of Shop and Field Welding: Required for all structural steel according to CBC Section 1705A.2.
- F. Erection Inspection: Inspector shall inspect all erection including the grouting under base plates.
- G. Non-Destructive Welding Inspection: The Special Inspector(s) shall continuously inspect and test all welds by ultrasonic or other non-destructive tests as approved. Test procedure for ultrasonic tests shall conform to AWS D1.1 and requirements herein.
 - 1. Required Testing: Test following welds by ultrasonic testing method:
 - a. Full Penetration Groove welded connections of column to column, column to girder, girder to girder, and like connections.
 - b. Other welded connections indicated to be ultrasonically tested on Structural Drawings.
 - c. Other welds directed to be ultrasonically tested by the Architect, Structural Engineer, or Inspector Of Record.

2. Ultrasonic Testing: An AWS Certified Welding Inspector, approved by DSA shall operate ultrasonic testing equipment, examine welds, and maintain a record of welds examined, defects found, and disposition of each defect. Defective welds shall be repaired in accordance with AWS D1.1, latest revision, and costs for retesting defective welds shall be responsibility of the Contractor. Tests shall be complete tests according to AWS D1.1, latest revision.
3. Rate of Testing: Test welds requiring ultrasonic testing at 100 percent. No reduction in testing rate will be permitted.
4. Backing Strips: Remove backing strips whenever ultrasonic indications arising from weld roots can be interpreted as either a weld defect or a backing strip, and retest weld if no root defect is visible. If no defect is disclosed by retest and no significant amount of the base and weld metal is removed, joint needs no further repair or welding. Repair all defects disclosed. Contractor shall bear the cost of removals and repairs.
5. Ultrasonic Instrumentation: Calibrated by technician to evaluate the quality of welds in accordance with AWS D1.1-06, Sections 5 and 6.
6. Acceptance Criteria: In accordance with larger reflector criteria of AWS D1.1, latest revision.

3.07 CLEAN UP

- A. Remove rubbish, debris and waste materials and legally dispose of off the Project Site.

3.08 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

3.09 HANDLING

- A. Both in shop and in the field, transport, handle and erect to prevent damage or overstressing of any component.

END OF SECTION

SECTION 05 12 13

ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Architecturally exposed structural steel (AESS).
2. Section 05 12 00 "Structural Steel Framing" requirements that also apply to AESS.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for [steel lintels and shelf angles not attached to structural-steel frame] [miscellaneous steel fabrications] [and] [other metal items] not defined as structural steel.
2. Section 09 96 00 "High-Performance Coatings for surface preparation and priming requirements.

1.02 DEFINITIONS

- A. AESS: Architecturally exposed structural steel.
- B. Category AESS 1: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 1 and may be designated AESS 1 or Category AESS 1 in the Contract Documents.
- C. Category AESS 2: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 2 and is designated as AESS 2 or Category AESS 2 in the Contract Documents.
- D. Category AESS 3: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 3 and is designated as AESS 3 or Category AESS 3 in the Contract Documents.
- E. Category AESS 4: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 4 and is designated as AESS 4 or Category AESS 4 in the Contract Documents.
- F. Category AESS C: Structural steel with custom characteristics that is categorized by ANSI/AISC 303, Section 10, as AESS C and is designated as AESS C or Category AESS C in the Contract Documents.
- G. SEAC/RMSCA Guide Specification: SEAC/RMSCA's "Sample Specification, Section 05 02 13: Architecturally Exposed Structural Steel."

1.03 COORDINATION

- A. Coordinate surface preparation requirements for shop-primed items.
- B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.

1.05 ACTION SUBMITTALS

A. Product Data:

1. Tension-control, high-strength, bolt-nut-washer assemblies.
2. Corrosion-resisting (weathering steel), tension-control, high-strength, bolt-nut-washer assemblies.
3. Filler.
4. Primer.
5. Galvanized-steel primer.
6. Etching cleaner.
7. Galvanized repair paint.

B. Shop Drawings: Show fabrication of AESS components. [Shop Drawings for structural steel may be used for AESS.]

1. Identify AESS category for each steel member and connection, including transitions between AESS categories and between AESS and non-AESS.
2. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
3. Include embedment Drawings.
4. Indicate orientation of mill marks and HSS seams.
5. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. [Indicate grinding, finish, and profile of welds.]
6. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections. Indicate orientation and location of bolt heads.
7. Indicate exposed surfaces and edges and surface preparation being used.
8. Indicate special tolerances and erection requirements.
9. Indicate weep holes for HSS [and vent holes for galvanized HSS].
10. Indicate surface preparation, primer, and coating requirements, including systems specified in other Sections.

C. Samples: Submit Samples to set quality standards for AESS.

1. Two steel plates, 3/8 by 8 by 4 inches, with long edges joined by a groove weld [and with weld ground smooth].
2. Steel plate, 3/8 by 8 by 8 inches, with one end of a short length of rectangular steel tube, 4 by 6 by 3/8 inches, welded to plate with a continuous fillet weld [and with weld ground smooth and blended].
3. Round steel tube or pipe, minimum 8 inches in diameter, with end of another round steel tube or pipe, approximately 4 inches in diameter, welded to its side at a 45-degree angle with a continuous fillet weld [and with weld ground smooth and blended].

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [fabricator] [shop-painting applicator].
- B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.07 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172) and is experienced in fabricating AESS similar to that indicated on this Project.
- B. Installer Qualifications: A qualified Installer who participates in the AISC Quality Certification Program, is designated an AISC-Certified Erector, [Category ACSE] [Category CSE], and is experienced in erecting AESS similar to that indicated on this Project.
- C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint [Endorsement P1] [Endorsement P2] [Endorsement P3] or SSPC-QP 3.
- D. Mockups: Build mockups of AESS to set quality standards for fabrication and installation.
 - 1. Build mockup of typical portion of AESS as shown on Drawings.
 - 2. Coordinate painting requirements with [Section 09 91 13 "Exterior Painting."] [Section 09 91 23 "Interior Painting."]
 - 3. Coordinate high-performance coatings requirements with Section 09 96 00 "High-Performance Coatings."
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Use special care in handling AESS to prevent twisting, warping, nicking, and other damage during fabrication, delivery, and erection. Store materials to permit easy access for inspection and identification. Keep AESS members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect AESS members and packaged materials from corrosion and deterioration.
 - 1. Do not store AESS materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.09 FIELD CONDITIONS

- A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Comply with requirements of ANSI/AISC 303, Sections 1 through 9 and as modified in Section 10, "Architecturally Exposed Structural Steel."

2.02 BOLTS, CONNECTORS, AND ANCHORS

- A. Tension-Control, High-Strength, Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 1, round-head assemblies consisting of steel structural bolts with splined ends; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
 - 1. Finish: [Plain] [Mechanically deposited zinc coating].
- B. Corrosion-Resisting (Weathering) Steel, Tension-Control, High-Strength, Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 3, round-head assemblies consisting of steel structural bolts with splined ends; ASTM A563, Grade DH3, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 3, hardened carbon-steel washers.

2.03 FILLER

- A. Polyester filler intended for use in repairing dents in automobile bodies.

2.04 PRIMER

- A. Steel Primer:
 - 1. Comply with [Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings."] [Section 09 91 13 "Exterior Painting," Section 09 91 23 "Interior Painting," and Section 09 96 00 "High-Performance Coatings."]
 - 2. SSPC-Paint 23, latex primer.
 - 3. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- B. Galvanized-Steel Primer: .
 - 1. Etching Cleaner: MPI#25, for galvanized steel.
 - 2. Galvanizing Repair Paint: ASTM A780/A780M.

2.05 FABRICATION

- A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.
 - 1. Use special care handling and fabricating AESS before and after shop painting to minimize damage to shop finish.
- B. Category AESS 1:
 - 1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - 2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.

3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
6. Limit butt and plug weld projections to 1/16 inch.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.

C. Category AESS 2:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
6. Limit butt and plug weld projections to 1/16 inch.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.

D. Category AESS 3:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
 3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
 4. Make intermittent welds appear continuous, using filler or additional welding.
 5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
 6. Limit butt and plug weld projections to 1/16 inch.
 7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 8. Remove weld spatter, slivers, and similar surface discontinuities.
 9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
 10. Grind tack welds smooth unless incorporated into final welds.
 11. Remove backing and runoff tabs, and grind welds smooth.
 12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
 13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
 14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
 15. Conceal fabrication and erection markings from view in the completed structure.
 16. Make welds uniform and smooth.
 17. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
 18. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
 19. Orient HSS seams as indicated or away from view.
 20. Align and match abutting member cross sections.
 21. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of 1/8 inch. At closed joints, maintain uniform contact within 1/16 inch.
 22. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.
- E. Category AESS 4:
1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.

3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
 4. Make intermittent welds appear continuous, using filler or additional welding.
 5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
 6. Limit butt and plug weld projections to 1/16 inch.
 7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 8. Remove weld spatter, slivers, and similar surface discontinuities.
 9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
 10. Grind tack welds smooth unless incorporated into final welds.
 11. Remove backing and runoff tabs, and grind welds smooth.
 12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
 13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
 14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
 15. Conceal fabrication and erection markings from view in the completed structure.
 16. Make welds uniform and smooth.
 17. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
 18. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
 19. Orient HSS seams as indicated or away from view.
 20. Align and match abutting member cross sections.
 21. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of 1/8 inch. At closed joints, maintain uniform contact within 1/16 inch.
 22. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.
 23. Treat HSS seams to appear seamless.
 24. Contour and blend welds and weld transitions between members, removing splatter exposed to view.
 25. Fill surface imperfections with filler and sand smooth to achieve surface quality approved by Architect.
 26. Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.
- F. Erection marks, painted marks, and other marks are permitted on **[galvanized-] [corrosion-resisting (weathering)] steel** surfaces of completed structure.
- G. Cleaning Corrosion-Resisting (Weathering) AESS: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6 (WAB)/NACE WAB-3.

2.06 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: [Snug tightened] [Pretensioned] [Slip critical].
- B. Weld Connections: Comply with AWS D1.1/D1.1M[**and AWS D1.8/D1.8M**] for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

2.07 GALVANIZING

- 1. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123/A123M.
- 2. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
- 3. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- 4. Galvanize AESS [**lintels**] <Insert description> attached to structural-steel frame and located in exterior walls.

2.08 SHOP PRIMING

- A. Shop prime steel surfaces, except the following:
 - 1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
 - 2. Surfaces to be field welded.
 - 3. Surfaces to be high-strength bolted with slip-critical connections.
 - 4. Corrosion-resisting (weathering) steel surfaces.
 - 5. Galvanized surfaces unless indicated to be painted.
- B. Surface Preparation: Clean nongalvanized surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
 - 1. SSPC-SP 2.
 - 2. SSPC-SP 3.
 - 3. SSPC-SP 7 (WAB)/NACE WAB-4.
 - 4. SSPC-SP 14 (WAB)/NACE WAB-8.
 - 5. SSPC-SP 11.
 - 6. SSPC-SP 6 (WAB)/NACE WAB-3.
 - 7. SSPC-SP 10 (WAB)/NACE WAB-2.
 - 8. SSPC-SP 5 (WAB)/NACE WAB-1.
 - 9. SSPC-SP 8.
- C. Preparing Galvanized Steel for Shop Priming: After galvanizing, thoroughly clean steel of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner [**or according to SSPC-SP 16**].

- D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
1. Stripe paint corners, crevices, bolts, welds, and eased edges.
 2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments, showing dimensions, locations, angles, and elevations.
- B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

3.03 ERECTION

- A. Take special care during erection to avoid marking or distorting the AESS and to minimize damage to shop painting. Set AESS accurately in locations and to elevations indicated and according to ANSI/AISC 303 and ANSI/AISC 360.
1. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Take care to avoid any blemishes, holes, or unsightly surfaces resulting from the use or removal of temporary elements.
 2. Grind tack welds smooth.
 3. Remove backing and runoff tabs, and grind welds smooth.
 4. Orient bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 5. Remove erection bolts in **[Category AESS 4]** <Insert category> AESS, fill holes with weld metal or filler, and grind or sand smooth to achieve surface quality approved by Architect.
 6. Fill weld access holes in **[Category AESS 4]** <Insert category> AESS with weld metal or filler and grind, or sand smooth to achieve surface quality as approved by Architect.
 7. Conceal fabrication and erection markings from view in the completed structure.
- B. In addition to ANSI/AISC 303, Section 10 requirements, comply with the following.

1. Erection of [Category AESS 1] [and Category AESS 2]:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than 1/16 inch.
 - e. Continuous welds are to be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.
2. Erection of Category AESS 3:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than 1/16 inch.
 - e. Continuous welds are to be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.
 - i. Weld profiles, quality, and finish are to be as approved by Architect.
 - j. Make joint welds, including tack welds, appear continuous by filling intermittent welds.
3. Erection of Category AESS 4:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than 1/16 inch.
 - e. Continuous welds are to be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.

- h. No torch cutting or field fabrication is permitted.
 - i. Weld profiles, quality, and finish are to be as approved by Architect.
 - j. Make joint welds, including tack welds, appear continuous by filling intermittent welds.
 - k. Grind welds smooth.
 - l. Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.
 - m. Oversize welds where ground, contoured, or blended, and grind to provide a smooth transition, matching profile approved by Architect.
4. Erection of Category AESS C:
- a. <Insert requirements>.

3.04 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: [Snug tightened] [Pretensioned] [Slip critical].
- B. Weld Connections: Comply with AWS D1.1/D1.1M[**and AWS D1.8/D1.8M**] for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

3.05 REPAIR

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and touchup galvanizing to comply with ASTM A780/A780M.
- B. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting, to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
 - 2. Cleaning and touchup painting are specified in Section 09 96 00 "High-Performance Coatings."
- C. Touchup Priming: Cleaning and touchup priming are specified in Section 09 96 00 "High-Performance Coatings."

3.06 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to inspect AESS as specified in Section 05 12 00 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.
- B. Architect will observe AESS in place to determine acceptability relating to aesthetic effect.

SECTION 05 12 19

BUCKLING RESTRAINED BRACES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes:
 - 1. Engineering, Fabrication, and Erection of Buckling Restrained Braces (BRB's).
- B. Provide all parts, materials, and labor required for the design, delivery, testing and erection of buckling-restrained braces, which are designed by the manufacturer to meet stiffness, yield strength, and elongation requirements as indicated on the Drawings and other requirements specified Herein.
- C. Related Sections:
 - 1. Division 01 – General Requirements.
 - 2. Section 05 1200: Structural Steel Framing.

1.03 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
 - 1. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section and as listed below. Refer to Section 05 1200.

- 1.04 DEFINITIONS
 - A. Buckling Restrained Brace (BRB): A steel brace consisting of an outer steel casing, an inner steel core, and a concrete matrix between the core and the outer steel casing. The inner steel core resists against tensile and compressive axial loads and is restrained from buckling by the concrete contained in the outer steel casing.
- 1.05 DESIGN AND PERFORMANCE REQUIREMENTS
 - A. Physical Requirements:
 - 1. The net area of the steel core shall be as designated on the Drawings.
 - 2. The casting shall not exceed the maximum dimensions designated on the Drawings, without written approval of Owner’s Representative.
 - B. Performance Criteria:
 - 1. Braces shall provide for stable cyclic displacement (lengthening and shortening), corresponding to the acceptance criteria of ANSI/AISC 341, Section K3.8.
 - C. Design Requirements:
 - 1. Manufacturer’s Engineer shall design the following components to achieve the Performance Criteria:
 - a. Braces
 - b. Connection of Brace to Gusset Plate
 - c. Gusset Plate
 - d. Connection of Gusset Plate to primary structural columns and beams.

Design shall be based on detailed examination and understanding of the results of qualifying cyclic tests and interpolation of results to project conditions.

Where bracing connections are designed by manufacturer, they shall be designed to a minimum of 1.1 times the adjusted brace strength as defined in Article 2.4.F. Connection design shall include length effects for long BRBs as described in Article 2.3.F.

2. Interpolation of test results for different member sizes shall be justified by rational analysis that demonstrates stress distributions and magnitudes of internal strains that are consistent with or less severe than the tested assemblies and that considers the adverse effects of larger material properties and variations in material properties. Consider the effect of imposed end rotations.
 3. Buckling-restrained braces longer than 35 feet (or greater than 200% of the qualifying test specimen) shall account for length effects in the determination of the compression overstrength factor (ϕ). BRB manufacturer shall submit design methodology to justify values used to determine length effects. This methodology must include the comparison of test results of at least (2) long BRBs (minimum of 40 feet long) to a control sample of one-half the length of the long specimen. Both the control sample and the long specimen shall be of similar capacity ($\pm 5\%$) for comparison.
 4. End rotation effects corresponding to the larger of 2.0 times Design Story Drift or .025 radians minimum shall be considered.
- D. Qualification Tests: The design of braces shall be based on results from qualifying cyclic tests. Test shall consist of at least two successful cyclic tests: one is required to be a test of a brace sub-assembly that includes brace connection imposed rotations and the other may be either a uniaxial or sub-assembly test.
1. Qualification tests shall conform to requirements of ANSI/AISC 341, Section K3.
 2. Qualification tests are permitted to be based on documented full-scale cyclic tests performed for other projects or tests reported in research, provided that there is sufficient basis for extrapolation to project conditions.
- 1.06 SUBMITTALS
- A. Qualification Testing Report: Conform to requirements of ANSI/AISC 341, Section K3.7.
 - B. Certified Manufacturer's Quality Assurance Plan: Conform to requirements of "Quality Assurance".
 - C. Manufacturer's in-house Quality Assurance Inspection Report for each brace upon completion of fabrication.
 - D. Brace Design: Submit drawings and calculations signed by the Manufacturer's Engineer.
 1. Design Drawings: Provide drawings, calculations and certifications that include the size and configuration of steel core for full length of BRB. Indicate casing size and length. Provide details of welding. The Brace manufacturer's engineer shall seal and sign final calculations, drawings and required certification.
 - E. Certified material test reports: Submit to Owner's Testing Laboratory for record purposes.
 1. Tensile tests and chemical analysis for all steel.
 2. Independent coupon tests used to verify core plate initial yield stress, tensile stress, and ultimate elongation.

- a. Where core plates are fabricated from plate material, coupon tests shall be performed on each plate.
 - b. Where core plates are fabricated from bar stock, coupons shall be made at intervals of each 5 tons of material of same heat and thickness.
 - c. Coupon tests to be taken at point of manufacture. Mill test reports (MTR) may not be used.
3. Plates 2 inches (50mm) and thicker shall be supplied with Charpy V-Notch testing in accordance with ASTM A673, Frequency P, or approved equal. The impact test shall meet a minimum average value of 20 ft-lbs absorbed energy at +70 degrees Fahrenheit and shall be conducted in accordance with AISC Specification, or approved equal.
- F. Erection Drawings: Show location and size of BRB's, including size, thickness, and length of exterior brace casing as well as configuration and size of the full length of the core plates. Provide complete information necessary for fabrication of elements of structural steel frame to receive braces and fabrication of connection plates. Show methods of assembly, including type and size of bolts, hole diameter, and preparation and finish of faying surfaces. Identify tolerances for fabrication and erection.
- G. Testing and Inspection Records: Submit Quality Assurance test and inspection reports to Testing Laboratory for record purposes prior to shipping of braces.
- H. Welding Certificates
1. Welder Performance Qualification Records (WPQR's)
 2. Welding Procedure Specification (WPS) written in conformance with AWS D1.1 for each proposed type of welded joint, whether pre-qualified or qualified by testing.
- I. Outside Testing Agency Quality Control Report where applicable.
- 1.07 QUALITY ASSURANCE
- A. Manufacturer Qualifications: Shall have manufactured and successfully tested braces of sizes required for this project.
- B. Design Engineer Qualifications: Civil Engineer, registered in the State of California that is knowledgeable with the results of cyclic testing BRB's and experienced in the design of BRB's based on engineering analysis.
1. Engineer may be an employee of brace manufacturer.
- C. Quality Assurance Plan: Manufacturer shall have a detailed Quality Assurance Plan to evidence that the BRB's being manufactured are of the same quality as those tested, including:
1. Welding procedures.
 2. Methodology for verifying and documenting material properties.
 3. Indication of how the product is to be identified, such that it can be traced back to production quality assurance records.
 4. A flow chart of the process by which the product is manufactured, including description of production methods.
 5. Identified manufacturing tolerances for each production process.
 6. In-process quality control including all points of internal inspection for control and monitoring of the fabrication and assembly process.

- D. Qualification Testing: Refer to Section 1.05D, "Qualification Tests" for requirements.
1. Extrapolation of Qualification Testing: All deviations from materials, details of fabrication, and quality assurance controls used for the fabrication of tested prototype braces shall be identified by manufacturer and reviewed by Design Engineer to ensure that production braces met or exceed the level of quality used in fabrication of prototype braces.
- E. Coupon Testing:
1. Sample and tension test each steel plate for brace core in accordance with ASTM E8, plate-type tests.
 2. Take samples from plates at point of brace manufacture.
 - a. The axis of the test specimens shall be parallel to the axis of the brace core; no testing transverse to axis of brace core in required.
 - b. The end of the test specimen shall be located 6 inches minimum from the end of plate.
 - c. The centerline of the test specimen shall be located at the center of steel bars and not closer than 8 inches to a rolled edge of plate.
 3. Report initial yield, yield at 0.2% offset, tensile strength, and elongation for each specimen. Report average yield at two percent offset for each sample (of 3, or more, specimen tests).
 4. When the average yield (at 0.2% offset) for a sample falls outside of the specified tolerances, the steel shall be rejected for use on the project.
- F. Erect mock-up of brace end and connection per Section 05 1200: Structural Steel.
- G. The Manufacturer shall notify Owner of fabrication schedule at least 30 days prior to fabrication in order to allow Owner or Owner's Representative to observe fabrication process.

1.08 DELIVERY, STORAGE AND HANDLING

- A. Store braces above grade on platforms, skids or other supports.
- B. Protect steel from corrosion.
- C. Store other materials in a weather-tight and dry place until installed into the Work.

PART 2 – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

- A. An acceptable manufacturer will have successfully completed qualification testing of braces similar to those required for the project and will be subject to compliance with other requirements of the Contract Documents, including limitations on maximum brace dimensions. Also, an acceptable manufacturer is one that has completed DSA projects (of similar size) in the past ten (10) years.
- B. Plants fabricating buckling-restrained braces shall comply with the following:
 1. Obtain and maintain accreditation from The American Institute of Steel Construction (AISC Certified Fabricator) in conjunction with any additional certifications required by the local jurisdiction.

2. Have a minimum of 5 years of documented continuous experience in the fabrication of buckling-restrained braces with a minimum of 30 completed projects over this same period.
 3. Buckling-restrained braces for this project shall be manufactured in the same facility (following the same quality assurance procedures) as the braces manufactured and tested to fulfill the AISC 341 testing requirements.
- C. Buckling-Restrained Braces shall be manufactured and supplied by the following vendor or equal.
1. CoreBrace, LLC
5789 West Wells Park Road
West Jordan, UT 84081
801.280.0701

Documentation showing evidence of valid accreditation and experience shall be submitted to the Engineer of Record during the bidding phase for any proposed manufacturer not listed above.

2.02 MATERIALS

- A. Core Plate
1. ASTM A36 with F_y as noted on the drawings.
 - a. F_y of all core plate material shall be verified via coupon test per Article 1.4.D.2.
 - b. Core plates 2 inches (50mm) and thicker shall be supplied with Charpy V-Notch testing per Article 1.4.D.3.
 - c. If not noted on the drawings, use $38\text{ksi} \leq F_y \leq 46\text{ksi}$
- B. Casing
1. ASTM A500, Gr. B or similar for square or rectangular sections.
 2. ASTM A500, Gr. B or A53, Gr. B or similar for round sections.
- C. Welding Materials
1. Shielded metal arc welding electrodes conform to AWS A5.1, flux-cored arc welding electrodes conform to AWS A5.20, and electrodes used for gas metal arc or submerged arc conform to the requirements of AWS A5.18.
 2. The minimum tensile strength of the E70 class electrodes used in production is 70,000 psi (470 MPa).
 3. Materials shall provide production welds with minimum Charpy V Notch properties of 20 ft-lbs (27 J) at -20°F (-30°C).
- D. Shop Primer: In accordance with Section 05 2100.
- E. Debonding Agent: Manufacturer's standard; demonstrated suitable to maintain separation of steel core and grout encasement when subjected to a minimum of 30 cycles of inelastic yielding at 2.0 percent strain; resistant to aging effects for a life cycle of 50 years.
- F. Fill Material: Manufacturer's standard cementitious grout; demonstrated suitable for function as a confining in-fill material by subassembly qualification testing.
1. Grout shall have a minimum compressive strength of 3500 psi at 28 days (ASTM C109).

G. Bolts, Nuts, and Washers:

1. ASTM A325 or A490 for conventional high-strength bolts (F3125),, ASTM A563 nuts.
2. ASTM 1852 or F2280 for twist-off type Tension Control Bolt/Nut/Washer Assemblies.

2.03 FABRICATION

A. Fabricate steel in accordance with Section 05 1200: Structural Steel for members part of the Seismic Force Resisting System. Braces shall be fabricated in accordance with AISC Code of Standard Practice and in an AISC Certified Shop that participates in the AISC Quality Certification Program.

B. Core Plates

1. The general roughness cannot exceed 1000 micro-inches in the yielding length.
2. Cut core plates to profile shown on manufacturer's design drawings. Conform to tolerances of manufacturer's Quality Assurance Manual, except tolerance on plate width shall not exceed plus or minus 0.2 inches (5mm).
3. Axis of core plates shall be parallel to rolling direction of steel plate.
4. Splices in the steel core shall not be permitted.
5. Roughness: After cutting, edges of core plates shall have surface finish better than Sample 3, AWS C4.1.
6. Gouges and Notches: Occasional gouges and notched less than 0.2 inches (5 mm) deep in edges of core plates may be repaired by grinding to a smooth transition. The length of transition shall be a minimum of 10 times the depth of gouge. The area shall be inspected by MT after grinding to ensure the entire depth of gouge has been removed. Deeper gouges shall be cause for rejection of piece.
7. Welding: Continuously weld intersections of cruciform plates. The detailing and finishing of weld terminations shall meet or exceed quality of tested assembly.

C. Holes: Bolted and pin connections shall conform with the requirements of ANSI/AISC 360.

1. Standard holes for bolted connections, except that single ply plated connections may use oversized holes
2. Holes for pins shall be a maximum of 1/32-inch larger than the diameter of the pin.

D. Assembly: Assemble components of the Buckling Restrained Brace in a manner to ensure proper performance of the brace.

1. Examine steel core areas for straightness prior to coating with debonding agent.
2. Provide end-conforming plates to ensure confinement of the fill material while allowing for non-restricting movement of the steel core.

E. Finishes: Except as otherwise designated on Drawings, conform to the following finish and painting schedule, in accordance with requirements of Division 05 Section, Structural Steel Framing:

1. Interior, concealed by finishes or spray fireproofed: SSPC-2 surface preparation; shop primed with manufacturer's standard shop primer, except faying surfaces of bolted connections, surfaces that will be field welded, exposed surfaces that shall be galvanized and surfaces to receive spray fireproofing.

2. Interior, exposed and finish painted: SSPC-6 surface preparation; shop paint with Type A primer, except at faying surfaces of bolted connections, surfaces that shall be galvanized and surfaces to receive spray fireproofing.
3. Do not paint connection faying surfaces if connection are designated slip critical unless paint used provides same slip resistance

2.04 SOURCE QUALITY CONTROL

- A. Inspection and testing will be performed under in accordance with procedures and administrative requirements of Division 01 Section.
- B. Owners Testing Agency will:
 1. Review Manufacturer's Quality Assurance Plan, mill certificates and coupon test report.
 2. Review Manufacturer's quality assurance test and inspection reports.
- C. Contractor shall:
 1. Notify Owner's Representative no less than 30 days before the start of fabrication of the buckling restrained braces, to allow Owner's Representative to observe fabrication and assembly process.
 2. Perform testing and inspection in accordance with approved Quality Assurance Plan and requirements of Contract Documents.

2.05 PERFORMANCE REQUIREMENTS

- A. Core plate material shall have a yield range of 42 ksi within ± 4 ksi unless indicated otherwise in the structural BRB drawings. Coupon tests taken from plates at point of manufacture of BRBs shall be used to verify conformance. Additional coupon tests may be performed to replace coupon tests that fall out of acceptable range.
- B. Increasing amplitude cyclic displacement tests per the AISC Seismic Provisions shall provide stable performance up to a displacement corresponding to 2.0 x Design Story Drift.
 1. Hysteretic behavior shall display no post-yield loss of strength, degradation, or pinching.
 2. Fracture of any portion of the BRB shall not occur during the qualifying tests.
 3. The cumulative ductility factor requirement specified in AISC 341 shall be increased from 200 to 300.
- C. The steel core shall resist compression and tension forces. The steel core area shall be as per the project drawings and based on the yield stress range specified.
- D. The steel and concrete casing shall prevent the steel core from buckling globally and locally during compressive loading without binding due to longitudinal shortening and transverse expansion. Demand for local and global stability of casing checks shall be based on the adjusted brace strength at the maximum yield stress ($F_{y,sc,max}$) of the specified yield stress range of the core plate material. Casing design shall include length effects for long BRBs as described in Article 2.3.F.
- E. Steel core projections beyond the steel casing and brace connections shall develop the adjusted brace strength without instigation of fracture or instability. For core plate checks use the minimum ($F_{y,sc,min}$) of the specified yield stress range for determining demand. For all other materials use $F_{y,sc,max}$ to determine demand.

- F. The overstrength factors (Ω) shall be determined at a brace strain level associated with the greater of a 2% interstory drift or twice the design story drift, the latter of which is taken as $(2\Omega C_d F_{y,sc,min})/(\rho I_e E)$. Where P_d is provided, twice the design story drift is taken as $(2C_d P_d)/(A_{sc} \rho I_e E)$. C_d is the design drift deflection amplification factor, E is the nominal modulus of elasticity of the core plate material, I_e is the Importance Factor, Ω is the Redundancy Factor, and P_d is the demand in the BRBs at the controlling drift design load case with gravity loads excluded. Compression overstrength determination shall include the effects of brace length as described in Article 2.3.F.

2.06 QUALIFICATION TESTS

- A. Buckling-restrained brace design shall be based on two qualifying cyclic tests conforming to the AISC Seismic Provisions for Buckling Restrained Braced Frames. As stated in the Provisions, at least one of the two qualifying tests needs to be a subassembly test to demonstrate the ability of the BRB to withstand rotational demands. The other test may be performed uniaxially or may also be a subassembly test.
- B. The requirements of the AISC 341 Seismic Provisions shall be met along with the modification in Article 2.4.B.3.
- C. The strain level during testing shall be equivalent to, or greater than, the strains that the project braces will be expected to withstand.
- D. Qualifying cyclical tests can be based on full-scale cyclical tests previously reported for projects, or research that are deemed similar to project conditions by the Manufacturer and Project Engineer.
- E. Qualification testing of long braces, if BRBs on this project are of sufficient length, as required in Article 2.3.F.

PART 3 – EXECUTION

3.01 ERECTION

- A. Braces are erected under Section 05 1200: Structural Steel for members part of the Seismic Force Resisting System.
- B. Prior to erection, clean faying surfaces of brace to be in contact with bolted connections to remove temporary coatings applied for transport and surface containments.
- C. Buckling restrained braces shall not be field cut or altered. Alterations to structural steel components to receive Buckling Restrained Braces shall be as permitted by Section 05 1200: Structural Steel.
- D. No field welding to buckling restrained brace members will be permitted, including attachment of nonstructural components.
- E. Prior to erection, clean faying surfaces of BRB to be in contact with bolted connections to remove temporary coatings applied for transport and surface contaminants.
- F. No field cutting or altering is permitted without the approval of the manufacturer and EOR.

3.02 FITTING

- A. Closely fit members, finished true to line and in precise position required to allow accurate erection and proper joining in the field.
- B. Drilling to enlarge unfair holes will not be allowed. Allow only enough drifting during assembly to bring parts into position, but not enough to enlarge holes or distort the metal. Do not heat rolled sections, unless approved by Architect.

3.03 PUNCHING AND DRILLING

- A. Punch material 1/16 inch larger than nominal diameter of bolt, wherever thickness of metal is equal to or less than the diameter of the bolt plus 1/8 inch.
- B. Drill or sub-punch and ream where metal is equal to or more than the diameter of the bolt plus 1/8 inch. Make diameter for sub-punched and sub-drilled holes 1/16 inch larger than nominal diameter of bolt.
- C. Precisely locate holes to ensure passage of bolt through assembled materials without drifting. Enlarge holes when necessary to receive bolts by reaming; flame cutting to enlarge holes is not acceptable. Structural Steel members with poorly matched holes will be rejected.

3.04 FINISHING

- A. After erection, spots or surfaces where paint has been removed, damaged, or burned off and field rivets, bolts, and other field connections not concealed in the work, shall be cleaned of dirt, oil, grease, and burned paint and furnished with a spot coat of the same primer installed during shop priming.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Install paint to exposed areas with the same material installed during shop painting. Install by brush or spray to provide a minimum dry film thickness of 1.5 mils.

3.05 FIELD QUALITY CONTROL

- A. Owner will provide a special inspector and independent testing laboratory to perform field inspections and tests and to prepare test reports.
- B. Correct deficiencies in or remove and replace structural steel that inspections and test reports indicate do not comply with specified requirements.
- C. Manufacturer to package BRB's for protection against shipping damage.
- D. Manufacturer shall coordinate delivery dates and quantities with Contractor/Owner. Contractor/Owner shall provide adequate storage space and proper lay-down areas.

3.06 CLEAN UP

- A. Remove rubbish, debris and waste materials and legally dispose of off the Project Site.

3.07 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

3.08 HANDLING

- A. Both in shop and in the field, transport, handle and erect to prevent damage or overstressing of any component.

END OF SECTION

SECTION 05 31 00

STEEL DECKING

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section.
- B. Section Includes:
 - 1. Metal decking as indicated.
 - 2. Shear connectors.
 - 3. Bent plate and sheet metal closures at decking edges and openings.
 - 4. Holes through decking, with reinforcing.
- C. Related Sections:
 - 1. Section 01 41 00: Testing and Inspection.
 - 2. Section 05 12 00: Structural Steel
 - 3. Section 07 60 00: Flashing and Sheet Metal.

1.02 REFERENCES

- A. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.
- B. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
- C. ASTM D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.
- D. ASTM D1056 - Standard Specification for Flexible Cellular Materials—Sponge or Expanded Rubber.
- E. AWS D 1.3 – Structural Welding Code Sheet – Steel.
- F. AISI – Specifications for the Design of Cold-Formed Steel Structural Members.

1.03 SYSTEM DESCRIPTION

- A. Performance Requirements: Compute properties of deck sections on basis of effective design width as limited by provisions of the AISI specifications. Provide no less than deck section properties specified, including section modulus and moment of inertia per foot of width.
- B. Regulatory Requirements:

1. Requirements of Regulatory Agencies: DSA and Underwriters Laboratories Inc. (UL) approval for the decking when installed as a part of an assembly indicated on Drawings in which fire resistive construction ratings are required.
2. Work of this section shall be in accordance with CBC.

1.04 SUBMITTALS

- A. Shop Drawings: Submit drawings fully detailing and dimensioning all steel decking including accessories, fastenings, welding, holes with reinforcing, flashings, and closures. Indicate welding according to AWS Standard Welding Symbols. Show dimensioned layouts for openings and reinforcing details.
- B. Calculations and Data: If steel decking of type differing from that indicated or specified is proposed, submit the manufacturer's calculations and supporting data showing that proposed decking conforms to requirements indicated and specified. Include the decking manufacturer's technical product data and copies of code approvals (including ICC report) for proposed decking. Submit with shop drawings and obtain approval prior to fabrication and delivery of decking.
- C. LEED Documentation: Submit the following documentation
 1. Specific product name, make, model, and manufacturer
 2. Material Cost
 3. Post-Consumer Recycled Content: Cutsheets, product literature or letter from the manufacturer indicating the percentage by weight of post-consumer (post-industrial) recycled content.
 4. Extracted, Manufactured, and Purchased locally. Provide cutsheets, product literature or letter from the manufacturer indicating the location of extraction, manufacturing, and purchasing and distance from the project site.

1.05 QUALITY ASSURANCE

- A. General: Metal decking steel shall conform to requirements of strengths and properties of standards specified.
- B. Qualifications of Welders: Properly certified for the type of Work involved in compliance with CBC requirements and AWS D1.3.
- C. Continuous inspection of welding will be performed by a special inspector, approved by DSA to inspect the Work of this section. Refer to Section 01 41 00: Testing and Inspection. The IOR shall be responsible for monitoring the work of the special inspector to ensure that the inspection program is satisfactorily completed.
- D. Identification of metal decking steel shall conform to the standards specified in Section 01420: Testing and Inspection.
 1. Fabricator shall furnish sufficient evidence to the Architect attesting compliance with specified requirements.
 2. Conform to CBC requirements. Unclassified or unidentified decking is not permitted. Furnish deck manufacturer's certified mill analyses and test reports for each heat covering decking having a minimum Fy of 33 Ksi. In addition, for decking having Fy greater than 33 Ksi, testing laboratory shall perform one tension and elongation test and one bend or flattening test for each gage.

- E. Unidentifiable Steel: Steel which is not readily identifiable as to grade from markings and test records is not permitted to be provided as part of the Work of this section.
- F. Metal Decking Shall be in conformance with the following:
 - 1. AISI "Specification for Design of Light Gauge Steel Members".
 - 2. AISI "Specification for Design of Cold Formed Steel Members".
 - 3. Steel Deck Institute Publication No. 29 "Design Manual for Composite Decking, Form Decks and Roof Decks.
- G. Payment For Tests and Inspections:
 - 1. Owner shall pay inspection and testing costs of identifiable steel.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

- A. Deck West
- B. Verco Manufacturing Inc.
- C. ASC Steel Deck
- D. Members of Steel Deck Institute (SDI)

2.02 MATERIALS

- A. Metal Decking: Roll-formed sheets conforming to ASTM A653, Grade 33, minimum yield strength of 38,000 psi, with G60 zinc coating, unless otherwise noted.
 - 1. Section properties shall conform to applicable provisions of latest edition of AISI - Specification for the Design of Cold-Formed Steel Structural Members.
 - 2. Deck lengths to span over at least three spans unless otherwise indicated. Each panel shall be factory slotted or have rolled-in moisture venting provisions.
- B. Flexible Closure Strips for Deck: Vulcanized, closed-cell, expanded chloroprene elastomer, complying with ASTM D1056, Grade SCE #41.
 - 1. Brittleness Temperature: Minus 40 degrees F, ASTM D746.
 - 2. Flammability Resistance: Self-extinguishing,
- C. Metal Flashing and Closures: 22 gage minimum, with ASTM A653, G60 zinc coating.
- D. Shear Connectors: Headed stud type, ASTM A108 Grade 1015, cold-finished carbon steel complying with AISC specifications.

- E. Decking Accessories: Provide indicated and required decking accessories including, without limitation, welding washers and welding anchors, closures, transitions, and filler strips, as required for complete installations. Provide bent plate closures, angles, channels, and attachments as required for openings through decking for ducts, shafts, piping, and other penetrations; where decking changes direction; and at decking perimeter; fabricated of 16 gage galvanized steel unless otherwise shown on the Structural Drawings. Provide roof drain and overflow sumps of minimum 14 gage galvanized steel.
- F. Galvanizing Repair Paint: Zinc rich paint conforming to Mil Spec MIL-P-21035 (SHIPS)

2.03 FABRICATION

- A. Corrugated sheets or sections shall be designed to support required live load between supporting members.
- B. Wherever practical, provide decking in lengths to span over three or more supports.
- C. Except as detailed otherwise, provide decking with interlocking side laps, 2-1/2 inches minimum end bearing, and 1-1/2 inches minimum side bearing.
- D. Welding: Provide materials and methods in accordance with recommendations of steel decking manufacturer and reviewed submittals. Hold decking tight to the supporting elements with screws or other means for proper welding or crimping of the decking edges. Conform to AWS D1.3, CBC Standards, and to the patterns and weld types indicated, with welds free from sharp edges and protrusions. Field coat welds and abraded surfaces at completion with an anodic type galvanizing repair paint. Omit the field paint coating where welds or abrasions are covered by concrete fill or sprayed fireproofing.

PART 3 - EXECUTION

3.01 OPENINGS

- A. Cut and reinforce units to provide openings which are located and dimensioned on the structural and mechanical Drawings.
- B. Provide openings, as approved by the Architect and DSA, for other Work not indicated on the Drawings.

3.02 INSTALLATION

- A. Install metal decking in accordance with decking manufacturers' recommendations, requirements of Drawings, Shop Drawings, and Specifications.
- B. Install metal decking on supporting steel framework and adjust to final position before permanently fastening in place.
 - 1. Install each unit to proper bearing on supports.
 - 2. Install units in straight alignment for entire length of run of cells with close registration of cells of one unit with those of abutting unit.
 - 3. Do not splice units except at supports. Conform to code approvals and approved submittals.

- C. Fasten decking to steel framework at ends of units and at intermediate supports. Welding shall be as indicated on Drawings.
- D. Fasten side laps between supports as indicated on Drawings.
- E. Cutting and Fitting: Perform cutting and fitting at columns, perimeters, shafts, stairs, and other openings. Provide tight fitting closures at the open uncovered ends and edges of decking, and all miscellaneous supports required to carry the metal decking. Secure hole reinforcement to decking with fillet welds placed on both sides of reinforcing members. Place reinforcement channels and angles across flutes and to project a distance beyond sides of openings equal to the maximum size of the opening unless otherwise shown. Perform field cutting and trimming square and neat, equal to factory cutting.
- F. Welding: Use materials and methods in accordance with recommendations of steel decking manufacturer and approved submittals. Hold decking tight to the supporting elements with screws or other means as directed for proper welding or crimping of the decking edges. Conform to AWS D1.3 and to the patterns and weld types indicated, with all finished welds free of sharp points or edges. Field coat welds and abraded surfaces at completion with an approved anodic type galvanizing repair paint. Omit the field paint coating where welds or abrasions are covered by concrete fill or sprayed fireproofing.
- G. Weld shear connectors to supports thru decking units as required by Drawings. Weld only on clean, dry surfaces. Do not weld shear connectors thru two layers of decking units.
- H. Damaged Decking: Remove and replace all metal decking showing denting or other damage that adversely affects decking strength or subsequent materials, as directed.

3.03 METAL FLASHINGS AND CLOSURES

- A. Furnish, install, and weld in position, sheet metal closure flashing, closure angles, closure plates, profile plates, and shear plates.
- B. Close open ends of cell runs at columns, openings, walls, similar interruptions and termination.

3.04 FIELD QUALITY CONTROL

- A. Inspection: Install steel decking under continuous inspection according to CBC Chapter 17A, 1704A.3.1.1.
 - 1. Welding inspection for steel deck diaphragms shall conform to CBC Section 2204A.1.

3.05 CLEAN UP

- A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.06 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 05 40 00
COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.01 SUMMARY

- A. Provisions of Division 01 apply to this section.
- B. Section Includes:
 - 1. Load-bearing metal stud systems.
- C. Related Sections:
 - 1. Section 01 41 00: Testing and Inspection.
 - 2. Section 05 12 00: Structural Steel.

1.02 SUBMITTALS

- A. Shop Drawings: Submit drawings showing framing, connection details, accessories and anchorage. Indicate location of assemblies, size and spacing of framing components.
- B. Product Data: Submit manufacturer's catalog data for each item proposed for installation.
- C. Certificates: Furnish manufacturer's certification that materials meet or exceed Specification requirements.
- D. Weld Procedures: Submit weld procedures, procedure qualification records, and electrode product data for review and approval.

1.03 QUALITY ASSURANCE

- A. Comply with following as a minimum requirement:
 - 1. AISI - Specifications for Design of Cold Formed Steel Structural Members.
 - 2. Welds shall be performed by AWS certified welders. Welding shall be performed in accordance with requirements of American Welding Society (AWS) Structural Welding Code-Steel D1.1 and D1.3. Structural welding Code-Sheet Steel.
 - 3. Welding shall be inspected by a special inspector, approved by DSA to inspect Work of this section. The IOR shall be responsible for monitoring work of special inspector to ensure that inspection program is satisfactorily completed.
 - 4. ASTM A 924 – Standard Specification for General Requirements for Steel Sheet Metallic-Coated by Hot-Dip Process
 - 5. ASTM A 1003 – Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.

6. ASTM A 1008 – Standard Specification for Steel Sheet and Strip, Hot-Rolled, Carbon, Structural High-Strength Low-Alloy, and High-Strength Low-Alloy with Improved Formability.
 7. ASTM C 954 – Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks) and Bracing or Bridging for Screw Application of Gypsum Panel Products and Plaster Bases.
 8. ASTM C 955 – Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases.
 9. ASTM A 653 – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by Hot Dip Process.
 10. ASTM C 1007 – Standard Specification for Installation of Structural (Axial and Transverse) Steel Framing Members and Accessories.
 11. ASTM E 488 – Standard Test Methods of Strength Anchors in Concrete and Masonry.
 12. ASTM E 1190 – Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members.
- B. Tolerances: Install walls and partitions on straight lines, plumb, free of twists or other defects, and contacting a 10 foot straightedge for its entire length at any location within a 1/8 inch tolerance. Install horizontal framing level within a tolerance of 1/8 inch in 12 feet in any direction.
- 1.04 DELIVERY, STORAGE AND HANDLING
- A. All materials shall be delivered in their original unopened packages and stored protected from damage. Do not store material directly on grade. Provide adequate support to prevent bowing of material prior to installation. If it is necessary to store materials outside, stack them off the ground on a platform and fully protected from the weather.
- B. Store welding electrodes in accordance with AWS D12.1.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Provide studs, tracks, joists and accessories manufactured by one of following:
1. Steel Studs Manufacturer's Association; ICC-ES ER4943P
 2. California Expanded Metal Products Co.; ICC-ES ER3403-P
- B. Special Connection Accessories: Products manufactured by The Steel Network, Inc., or equal.

2.02 MATERIALS

- A. Light Gage Metal Framing:
1. Metal framing shall be formed from corrosion resistant-steel conforming to requirements of ASTM A 653, 50 ksi minimum. Galvanize per ASTM A924, Designation G60.
 2. Metal framing shall be manufactured in conformance to ASTM C 955.

3. Install metal framing per ASTM C 1007, Standard Specification for Installation of Load-Bearing (Transverse and Axial) Steel Studs and Related Accessories.
- B. Gages and properties of studs shall be as indicated on Drawings.
 - C. Mechanical anchors to concrete and masonry shall be metal cinch at least 3/8 inch in diameter threaded bolt head type. Anchor bolts to be installed in concrete shall be hook type 1/2 inch diameter or more. Unless otherwise indicated.
 - D. Mechanical anchors to metal framing shall be No. 10 self-tapping and self-drilling wafer-head screws unless noted otherwise.
 - E. Accessories: Special top tracks, angles, fasteners, and strips of gypsum wallboard, as required for fire rating assembly required at each condition.
 - F. Mineral Wool: Thermafiber Safing Insulation or equal.
 - G. Galvanizing Repair Compound: High zinc dust content galvanizing repair paint meeting the requirements of ASTM A 780-00 or hot applied zinc rich material. Provide one of the following available products or another product complying with the referenced standard:
 1. American Solder & Flux; Drygalv
 2. Kenco Div.; Galvicon
 3. Metalloy Products, Co.; Galvalloy
 - H. Framing Accessories:
 1. Fabricate steel-framing accessories of the same material and finish used for framing members, with a minimum yield strength of 33,000 psi unless noted otherwise on contract documents.
 2. Provide accessories noted below, of thickness and configuration indicated on the Drawings. Where not indicated provide accessories manufacturer's standard of thickness and configuration.
 - a. Supplementary framing.
 - b. Bracing, bridging, and solid blocking.
 - c. Stud kickers, knee braces, and girts.
 - d. Hole reinforcing plates.
 - e. Backer plates.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
- B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.02 INSTALLATION

- A. Erect straight, plumb, square, true to lines, levels or elevations indicated, free from excessive twists and bends and braced against racking.
- B. Anchor top and bottom runner track to ceiling or roof structure overhead and to floor structure below.
- C. Install studs squarely in top and bottom runner track with firm abutment against track webs.
- D. Align and plumb studs, and fasten to flanges of both top and bottom runner tracks.
- E. Provide 3 studs minimum at corners of stud walls. Locate so as to provide surfaces for attachment of interior and exterior facing materials.
- F. Members not indicated to be welded together shall be attached with manufacturer recommended screws with minimum one screw at each flange of stud to top and bottom track. Wire tying of framing members is not permitted.
- G. Provide lateral bracing and bridging in accordance with manufacturer's written recommendations or as required by CBC.
- H. Intersecting walls and partitions, whether load-bearing or not, shall be connected.
- I. Splices in axially loaded studs are not permitted.
- J. Splice or butt weld butt joints in runner tracks. No splices are permitted in tracks over lintels, diaphragm sheathing, or diagonal bracing.
- K. Weld connections by fillet welds or plug welds in accordance with AWS recommended procedures and practices.
- L. Touch up abrasions, burns, and welding, including construction activities of other trades, with primers for primed steel or with galvanizing compound if galvanized. Remove oil, grease, rust, loose scale, loose coatings, weld slag and other deleterious material before touch-up.
- M. Studs that frame door openings shall be clipped to floor with 14 gage angle clips. Each clip to have two fasteners into studs and two fasteners into floor.
- N. Provide additional joists or blocking adjacent to exterior and interior walls, openings and elsewhere as required to provide support for indicated ceiling construction.
- O. Provide an additional joist under parallel partitions where partition length exceeds 1/2 joist span and around floor and roof openings which interrupt one or more spanning members.
- P. Conform to rules and practices set forth in ASTM C 1007-00, and with the manufacturer's printed instructions and recommendations, as applicable.
- Q. Cut stock neat and square. Cut framing members by sawing or shearing; do not torch cut. Provide members free of kinks and twists. Do not use damaged or distorted materials.
- R. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated on contract documents.

- S. Install supplementary framing, blocking, and bracing in metal framing system wherever walls or partitions are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, and similar work requiring attachment to the wall or partition. Use backing plates per the structural drawings to accommodate fastenings.
- T. Use pre-punched openings in the studs wherever possible to run 1½" outside diameter or smaller conduit or plumbing lines horizontally between studs. If penetrations are required in studs reinforce studs per the Steel Stud Manufacturer's Association (SSMA) requirements or refer to contract documents for stud reinforcing details. If reinforcing details are not specifically shown on the contract documents, reinforce stud penetrations per SSMA requirements.
- U. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of lath, sheathing, wallboard or other finishing materials.

3.03 CONNECTIONS TO METAL DECKING

- A. Provide premolded neoprene filler strips matching flute profile for non-fire-rated walls and partitions covered on one or both sides up to metal decking.
- B. Top runner track of fire-rated partitions shall be a minimum of 20 gage, unless noted otherwise, and attached to metal deck with required fasteners at spacing required for fire rating, but in no case over 16 inches on center. Areas above runner shall be friction fit with a minimum depth of 2-1/2 inches of 4 pounds per cubic foot density mineral wool insulation. A minimum of 1/2 inch of firestopping compound shall be installed to each side of mineral wool insulation for a one-hour system, and one inch of firestopping for a 2-hour system. Install required special tracks, angles, fasteners and strips of gypsum wallboard to provide required fire resistance rating.
- C. Proprietary fire-rated top tracks shall be installed in accordance with manufacturer's recommendations and fire rating approval requirements.

3.04 QUALITY CONTROL

- A. Welding Inspection:
 - 1. Inspection of field welding operations shall be performed by the special inspector. All inspection and testing shall be in compliance with CBC requirements.
 - 2. The special inspector shall inspect material, equipment, procedures, welds, and welder qualifications.

3.05 CLEAN UP

- A. Remove rubbish, debris, and waste materials and legally dispose of off Project site.

3.06 PROTECTION

- A. Protect Work of this section until Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 05 50 00
METAL FABRICATIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Miscellaneous framing and supports.
2. Prefabricated building columns.
3. Shelf angles.
4. Metal ladders.
5. Alternating tread devices.
6. Metal ships' ladders and pipe crossovers.
7. Metal floor plate.
8. Elevator pit sump covers.
9. Structural-steel door frames.
10. Miscellaneous steel trim.
11. Metal bollards.
12. Vehicular barrier cable systems.
13. Pipe and downspout guards.
14. Abrasive metal nosings, treads, and thresholds.
15. Cast-iron wheel guards.
16. Metal downspout boots.
17. Loose bearing and leveling plates.
18. Skateboard Deterrents.
19. Steel Cane Detection Rails.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.
2. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.
3. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.

C. Related Requirements:

1. Section 04 20 00 "Unit Masonry" for installing loose lintels, anchor bolts, and other items built into unit masonry.

2. Section 05 12 00 "Structural Steel Framing" for steel framing, supports, elevator machine beams, hoist beams, divider beams, door frames, and other steel items attached to the structural-steel framing.
3. Section 07 72 00 "Roof Accessories" for manufactured metal roof walkways and metal roof stairs.

1.02 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.03 ACTION SUBMITTALS

- A. Product Data:
 1. Nonslip aggregates and nonslip-aggregate surface finishes.
 2. Fasteners.
 3. Shop primers.
 4. Shrinkage-resisting grout.
 5. Prefabricated building columns.
 6. Slotted channel framing.
 7. Manufactured metal ladders.
 8. Alternating tread devices.
 9. Metal ships' ladders and pipe crossovers.
 10. Metal bollards.
 11. Vehicular barrier cable systems.
 12. Pipe and downspout guards.
 13. Abrasive metal nosings, treads, and thresholds.
 14. Cast-iron wheel guards.
 15. Metal downspout boots.
- B. Shop Drawings: Show fabrication and installation details. [Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.] Provide Shop Drawings for the following:
 1. Miscellaneous framing and supports for applications where framing and supports are not specified in other Sections.
 2. Elevator machine beams, hoist beams, and divider beams.
 3. Steel shapes for supporting elevator door sills.
 4. Steel girders for supporting wood frame construction.
 5. Steel pipe columns for supporting wood frame construction.

6. Prefabricated building columns.
7. Shelf angles.
8. Metal ladders.
9. Alternating tread devices.
10. Metal ships' ladders and pipe crossovers.
11. Metal floor plate and supports.
12. Elevator pit sump covers.
13. Structural-steel door frames.
14. Miscellaneous steel trim including **[steel angle corner guards] [steel edgings] [and] [loading-dock edge angles]**.
15. Metal bollards.
16. Loose steel lintels.
17. Vehicular barrier cable systems.

C. Samples for Verification: For each type and finish of extruded **[nosing] [and] [tread]**.

D. Delegated Design Submittals: For **[ladders] [alternating tread devices] [and] [vehicular barrier cable systems]**, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

A. Mill Certificates: Signed by stainless steel manufacturers, certifying that products furnished comply with requirements.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Research Reports: For post-installed anchors.

E. Delegated design engineer qualifications.

1.05 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel in accordance with the following welding codes:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.06 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls, floor slabs, decks, and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design **[ladders] [alternating tread devices] [and] [vehicular barrier cable systems]**.
- B. Structural Performance of Aluminum Ladders: Ladders **[, including landings,]** are to withstand the effects of loads and stresses within limits and under conditions specified in ANSI/ASC A14.3.
- C. Structural Performance of Alternating Tread Devices: Alternating tread devices are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Uniform Load: 100 lbf/sq. ft..
 2. Concentrated Load: 300 lbf applied on an area of 4 sq. in..
 3. Uniform and concentrated loads need not be assumed to act concurrently.
 4. Alternating Tread Device Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
 5. Comply with applicable railing loadings in Section 05 52 13 "Pipe and Tube Railings."
- D. Vehicular Barrier Cable Systems: Design vehicular barrier cable systems to resist a single **[6000-lbf] <Insert value>** service load and **[10,000-lbf] <Insert load>** ultimate load applied horizontally in any direction to the cable system, with anchorages or attachments capable of transferring this load to the structure. Limit deflection to 18 inches. Design is to assume loads are applied at a height of **[18 inches] <Insert height>** above the floor or ramp surface on an area not to exceed 1 sq. ft..
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces]** <Insert temperature change>.

2.02 METALS

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Stainless Steel Sheet, Strip, and Plate: ASTM A240/A240M or ASTM A666, **[Type 304] [Type 316L]**.
- D. Stainless Steel Bars and Shapes: ASTM A276/A276M, **[Type 304] [Type 316L]**.
- E. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.
- F. Rolled-Stainless Steel Floor Plate: ASTM A793.

- G. Abrasive-Surface Floor Plate: Steel plate [with abrasive granules rolled into surface] [or] [with abrasive material metallurgically bonded to steel].
1. Source Limitations: Obtain floor plate from single source from single manufacturer.
- H. Steel Tubing: ASTM A500/A500M, cold-formed steel tubing.
- I. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40) unless otherwise indicated.
- J. Zinc-Coated Steel Wire Rope: ASTM A741.
1. Wire Rope Fittings: Hot-dip galvanized-steel connectors with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.
- K. Stainless Steel Wire Rope: Wire rope manufactured from stainless steel wire complying with ASTM A492, Type 316.
1. Wire Rope Fittings: Stainless steel connectors, Type 316, with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.
- L. Steel Prestressing Strand: ASTM A416/A416M, Grade 270, low-relaxation, seven-wire, with 0.9-lb/sq. ft. zinc coating.
1. Steel Prestressing Strand Fittings: Hot-dip galvanized-steel anchors and connectors with capability to sustain, without failure, a load equal to minimum breaking strength of steel prestressing strand with which they are used.
- M. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
1. Size of Channels: **[1-5/8 by 1-5/8 inches]** [As indicated] <Insert size>.
 2. Galvanized Steel: ASTM A653/A653M, **[commercial steel, Type B] [structural steel, Grade 33]**, with G90 coating; **[0.108-inch] [0.079-inch] [0.064-inch]** nominal thickness.
 3. Cold-Rolled Steel: ASTM A1008/A1008M, **[commercial steel, Type B] [structural steel, Grade 33]; [0.0966-inch] [0.0677-inch] [0.0528-inch]** minimum thickness; **[unfinished] [coated with rust-inhibitive, baked-on, acrylic enamel] [hot-dip galvanized after fabrication]**.
- N. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
- O. Aluminum Plate and Sheet: ASTM B209, Alloy 6061-T6.
- P. Aluminum Extrusions: ASTM B221, Alloy 6063-T6.
- Q. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.
- R. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
- S. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
- T. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (lead red brass) or UNS No. C84400 (lead semired brass).
- U. Nickel Silver Extrusions: ASTM B151/B151M, Alloy UNS No. C74500.

- V. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).

2.03 FASTENERS

- A. General: Unless otherwise indicated, provide **[Type 304]** **[Type 316]** stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
1. Provide stainless steel fasteners for fastening **[aluminum]** **[stainless steel]** **[or]** **[nickel silver]**.
 2. Provide bronze fasteners for fastening bronze.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, ASTM A563; and, where indicated, flat washers.
- C. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325, Type 3, heavy-hex steel structural bolts; ASTM A563, Grade DH3, heavy-hex carbon-steel nuts; and where indicated, flat washers.
- D. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, ASTM F593; with hex nuts, ASTM F594; and, where indicated, flat washers; Alloy **[Group 1]** **[Group 2]**.
- E. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563; and, where indicated, flat washers.
1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
- F. Anchors, General: Capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing in accordance with ASTM E488/E488M, conducted by a qualified independent testing agency.
- G. Cast-in-Place Anchors in Concrete: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F2329/F2329M.
- H. Post-Installed Anchors: **[Torque-controlled expansion anchors]** **[or]** **[chemical anchors]**.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1]** **[Group 2]** stainless steel bolts, ASTM F593, and nuts, ASTM F594.
- I. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B633, Class Fe/Zn 5, as needed for fastening to inserts.

2.04 MISCELLANEOUS MATERIALS

- A. Shop Primers: Provide primers that comply with [Section 09 91 13 "Exterior Painting."] [Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings."] [Section 09 91 13 "Exterior Painting," Section 09 91 23 "Interior Painting," and Section 09 96 00 "High-Performance Coatings."]
- B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer that contains pigments that make it easily distinguishable from zinc-rich primer.
- C. Water-Based Primer: Emulsion type, anticorrosive primer for mildly corrosive environments that is resistant to flash rusting when applied to cleaned steel, complying with MPI#107 and compatible with topcoat.
- D. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- H. Shrinkage-Resistant Grout: Factory-packaged, nonmetallic, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- I. Concrete: Comply with requirements in Section 03 30 00 "Cast-in-Place Concrete" for normal-weight, air-entrained concrete with a minimum 28-day compressive strength of 3000 psi.

2.05 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing [**and contour of welded surface matches that of adjacent surface**].
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
- J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.06 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
 1. Fabricate units from slotted channel framing where indicated.
 2. Furnish inserts for units installed after concrete is placed.
- C. Fabricate supports for operable partitions from continuous steel beams of sizes [**indicated**] [**recommended by partition manufacturer**] with attached bearing plates, anchors, and braces as [**indicated**] [**recommended by partition manufacturer**]. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.
- D. Fabricate steel girders for wood frame construction from continuous steel shapes of sizes indicated.
 1. Provide bearing plates welded to beams where indicated.
 2. Drill or punch girders and plates for field-bolted connections where indicated.
 3. Where wood nailers are attached to girders with bolts or lag screws, drill or punch holes at 24 inches o.c.
- E. Fabricate steel pipe columns for supporting wood frame construction from steel pipe with steel baseplates and top plates as indicated. Drill or punch baseplates and top plates for anchor and connection bolts and weld to pipe with fillet welds all around. Make welds the same size as pipe wall thickness unless otherwise indicated.
 1. Unless otherwise indicated, fabricate from Schedule 40 steel pipe.

2. Unless otherwise indicated, provide 1/2-inch baseplates with four 5/8-inch anchor bolts and 1/4-inch top plates.

F. Galvanize miscellaneous framing and supports where indicated.

G. Prime miscellaneous framing and supports with [zinc-rich primer] [primer specified in Section 09 96 00 "High-Performance Coatings"] where indicated.

2.07 PREFABRICATED BUILDING COLUMNS

A. Source Limitations: Obtain prefabricated building column from single source from single manufacturer.

B. General: Provide prefabricated building columns consisting of load-bearing structural-steel members protected by concrete fireproofing encased in an outer non-load-bearing steel shell. Fabricate connections to comply with details shown or as needed to suit type of structure indicated.

C. Fire-Resistance Ratings: Provide prefabricated building columns listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for ratings indicated, based on testing in accordance with ASTM E119.

1. Fire-Resistance Rating: **[4 hours] [3 hours] [2 hours] [As indicated]**.

2.08 SHELF ANGLES

A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated.

1. Provide mitered and welded units at corners.

2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches larger than expansion or control joint.

B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.

C. Galvanize [**and prime**] shelf angles located in exterior walls.

D. Prime shelf angles located in exterior walls with [zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]

E. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.09 METAL LADDERS

A. General:

1. Comply with ANSI A14.3 [, except for elevator pit ladders].

2. For elevator pit ladders, comply with ASME A17.1/CSA B44.

B. Steel Ladders:

1. Space siderails **[16 inches] [18 inches]** apart unless otherwise indicated.

2. Siderails: Continuous, **[3/8-by-2-1/2-inch]** **[1/2-by-2-1/2-inch]** steel flat bars, with eased edges.
3. Rungs: **[3/4-inch-diameter]** **[3/4-inch-square]** **[1-inch-diameter]** **[1-inch-square]**, steel bars.
4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
6. Nonslip Surfaces for Steel Ladders: Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung.
7. Source Limitations: Obtain nonslip surfaces from single source from single manufacturer.
8. Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than **[1/2 inch]** **[3/4 inch]** in least dimension.
9. Support each ladder **[at top and bottom and not more than 60 inches o.c.]** with welded or bolted steel brackets.
10. Galvanize **[and prime]** **[exterior]** ladders, including brackets.
11. Prime **[exterior]** ladders, including brackets and fasteners, with **[zinc-rich primer.]** **[primer specified in Section 09 96 00 "High-Performance Coatings."]**

C. Aluminum Ladders:

1. Source Limitations: Obtain aluminum ladders from single source from single manufacturer.
2. Space siderails **[16 inches]** **[18 inches]** apart unless otherwise indicated.
3. Siderails: Continuous extruded-aluminum channels or tubes, not less than 2-1/2 inches deep, 3/4 inch wide, and 1/8 inch thick.
4. Rungs: Extruded-aluminum tubes, not less than 3/4 inch deep and not less than 1/8 inch thick, with ribbed tread surfaces.
5. Fit rungs in centerline of siderails; fasten by welding or with stainless steel fasteners or brackets and aluminum rivets.
6. Provide platforms as indicated fabricated from **[pressure-locked aluminum bar grating]** **[or]** **[extruded-aluminum plank grating]**, supported by extruded-aluminum framing. Limit openings in gratings to no more than **[1/2 inch]** **[3/4 inch]** in least dimension.
7. Support each ladder **[at top and bottom and not more than 60 inches o.c.]** with welded or bolted aluminum brackets.
8. Provide minimum 72-inch-high, hinged security door with padlock hasp at foot of ladder to prevent unauthorized ladder use.

2.10 ALTERNATING TREAD DEVICES

- A. Alternating Tread Devices: Fabricate alternating tread devices of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.

1. Tread depth is not to be less than 5 inches exclusive of nosing or less than 8-1/2 inches, including the nosing, tread width is not to be less than 7 inches, and riser height is not to be more than 9-1/2 inches.
 2. Tread depth is not to be less than 8-1/2 inches exclusive of nosing or less than 10-1/2 inches, including the nosing, tread width is not to be less than 7 inches, and riser height is not to be more than 8 inches.
 3. Fabricate from **[steel] [stainless steel] [aluminum]** and assemble by welding or with stainless steel fasteners.
 4. Comply with applicable railing requirements in Section 05 52 13 "Pipe and Tube Railings."
- B. Galvanize **[and prime] [exterior]** steel alternating tread devices, including treads, railings, brackets, and fasteners.
- C. Prime **[exterior]** steel alternating tread devices, including treads, railings, brackets, and fasteners, with **[zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]**

2.11 METAL SHIPS' LADDERS AND PIPE CROSSOVERS

- A. Provide metal **[ships' ladders] [and] [pipe crossovers]** where indicated. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.
1. Treads are not to be less than 5 inches exclusive of nosing or less than 8-1/2 inches including the nosing, and riser height is not to be more than 9-1/2 inches.
 2. Fabricate **[ships' ladders] [and] [pipe crossovers]**, including railings from **[steel] [stainless steel] [aluminum]**.
 3. Fabricate treads **[and platforms]** from **[welded or pressure-locked steel bar] [pressure-locked stainless steel bar] [pressure-locked aluminum bar] [extruded-aluminum plank]** grating. Limit openings in gratings to no more than **[1/2 inch] [3/4 inch]** in least dimension.
 4. Fabricate treads **[and platforms]** from **[rolled-steel floor] [rolled-stainless steel floor] [rolled-aluminum-alloy tread] [abrasive-surface floor]** plate.
 5. Comply with applicable railing requirements in Section 05 52 13 "Pipe and Tube Railings."
- B. Galvanize **[and prime] [exterior]** steel **[ships' ladders] [and] [pipe crossovers]**, including treads, railings, brackets, and fasteners.
- C. Prime **[exterior]** steel **[ships' ladders] [and] [pipe crossovers]**, including treads, railings, brackets, and fasteners, with **[zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]**

2.12 METAL FLOOR PLATE

- A. Fabricate from **[rolled-steel floor] [rolled-stainless steel floor] [rolled-aluminum-alloy tread] [abrasive-surface floor]** plate of thickness indicated below:
1. Thickness: **[1/8 inch] [3/16 inch] [1/4 inch] [5/16 inch] [3/8 inch] [As indicated]**.

- B. Provide grating sections where indicated, fabricated from [welded or pressure-locked steel bar] [pressure-locked stainless steel bar] [pressure-locked aluminum bar] [extruded-aluminum plank] grating. Limit openings in gratings to no more than [1/2 inch] [3/4 inch] [1 inch] in least dimension.
- C. Provide [steel] [stainless steel] [aluminum] angle supports as indicated.
- D. Include [steel] [stainless steel] [aluminum] angle stiffeners, and fixed and removable sections as indicated.
- E. Provide flush [steel] [stainless steel] [aluminum] bar drop handles for lifting removable sections, one at each end of each section.

2.13 ELEVATOR PIT SUMP COVERS

- A. Fabricate from [1/8-inch] [3/16-inch] [rolled-steel] [abrasive-surface] floor plate with four 1-inch-diameter holes for water drainage and for lifting.
- B. Fabricate from welded or pressure-locked steel bar grating. Limit openings in gratings to no more than [1/2 inch] [3/4 inch] [1 inch] in least dimension.
- C. Provide steel angle supports unless otherwise indicated.

2.14 STRUCTURAL-STEEL DOOR FRAMES

- A. Fabricate structural-steel door frames from steel shapes, plates, and bars of size and to dimensions indicated, fully welded together, with 5/8-by-1-1/2-inch steel channel stops, unless otherwise indicated. Plug-weld built-up members and continuously weld exposed joints. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than 10 inches o.c. Reinforce frames and drill and tap as necessary to accept finish hardware.
 - 1. Provide with integrally welded steel strap anchors for securing door frames into adjoining concrete or masonry.
- B. Extend bottom of frames to floor elevation indicated with steel angle clips welded to frames for anchoring frame to floor with expansion shields and bolts.
- C. Galvanize [and prime] [exterior] steel frames.
- D. Prime [exterior] steel frames with [zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]

1.2 MISCELLANEOUS STEEL TRIM

- E. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.
- F. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.
 - 1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.
- G. Galvanize [and prime] [exterior] miscellaneous steel trim.

- H. Prime [exterior] miscellaneous steel trim with [zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]

2.15 METAL BOLLARDS

- A. Fabricate metal bollards from [Schedule 80 steel pipe] [Schedule 40 steel pipe] [Schedule 80 stainless steel, No. 4/180-grit finish] [**1/4-inch** wall-thickness rectangular steel tubing] [steel shapes, as indicated].
 1. Cap bollards with 1/4-inch-thick, [steel] [stainless steel, ASTM A480/A480M, No. 4 finish] plate with [flat] [sloped] [domed] top.
 2. Where bollards are indicated to receive controls for door operators, provide cutouts for controls and holes for wire.
 3. Where bollards are indicated to receive light fixtures, provide cutouts for fixtures and holes for wire.
- B. Fabricate bollards with 3/8-inch-thick, [**steel**] [**stainless steel, ASTM A480/A480M, No. 4 finish**] baseplates for bolting to concrete slab. Drill baseplates at all four corners for 3/4-inch anchor bolts.
 1. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.
- C. Fabricate sleeves for bollard anchorage from steel or stainless steel [**pipe**] [**or**] [**tubing**] with 1/4-inch-thick, steel or stainless steel plate welded to bottom of sleeve. Make sleeves not less than 8 inches deep and 3/4 inch larger than OD of bollard.
- D. Fabricate internal sleeves for removable bollards from Schedule 80 [**steel**] [**stainless steel**] pipe or 1/4-inch wall-thickness [**steel**] [**stainless steel**] tubing with an OD approximately 1/16 inch less than ID of bollards. Match drill sleeve and bollard for 3/4-inch [**steel**] [**stainless steel**] machine bolt.
- E. Prime steel bollards with [zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]

2.16 VEHICULAR BARRIER CABLE SYSTEMS

- A. Vehicular Barrier Cable Systems: Of diameter required by performance requirements, but not less than 1/2-inch-diameter, [**zinc-coated steel wire rope**] [**stainless steel wire rope**] [**zinc-coated steel prestressing strand**] with turnbuckles, toggles, machine swage terminals, and other fittings and accessories for securing to structural columns and walls and for tightening barrier cable.

2.17 PIPE AND DOWNSPOUT GUARDS

- A. Fabricate [**pipe**] [**downspout**] guards from 3/8-inch-thick by 12-inch-wide, [**steel**] [**stainless steel, ASTM A480/A480M, No. 4 finish**] plate, bent to fit flat against the wall or column at both ends and to fit around pipe with 2-inch clearance between pipe and pipe guard. Drill each end for two 3/4-inch anchor bolts.
- B. Galvanize [**and prime**] steel [**pipe**] [**downspout**] guards.
- C. Prime steel [**pipe**] [**downspout**] guards with [zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]

2.18 ABRASIVE METAL NOSINGS, TREADS, AND THRESHOLDS

- A. Cast-Metal Units: Cast **[iron] [aluminum] [bronze (leaded red or semired brass)] [nickel silver (leaded nickel bronze)]**, with an integral-abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Source Limitations: Obtain units from single source from single manufacturer.
 2. Cross-hatched nosings, 4 inches wide, with 1/4-inch-thick 1-inch lip, for casting into concrete.
 3. Cross-hatched nosings, 1-1/2 inches wide, 3/8-inch-thick 1-1/2 inch lip, for casting into concrete.
 4. Cross-hatched Treads: Full depth of tread with 3/4-by-3/4-inch nosing, for application over bent plate treads or existing stairs.
 5. Fluted-Saddle-Type Thresholds: 5 inches wide by 1/2 inch high, with tapered edges.
 6. Fluted-Interlocking or -Hook-Strip Thresholds: 5 inches wide by 5/8 inch high, with tapered edge.
 7. Thresholds: Plain-stepped- (stop-) type units, 5 inches wide by 1/2 inch high, with 1/2-inch step.
- B. Extruded Units: **[Aluminum] [Bronze]**, with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Source Limitations: Obtain units from single source from single manufacturer.
 2. Provide ribbed units, with abrasive filler strips projecting 1/16 inch above aluminum extrusion.
 3. Provide solid-abrasive-type units without ribs.
 4. Nosings:
 - a. Square-back units, **[1-7/8 inches] [3 inches] [4 inches]** wide, for casting into concrete steps.
 - b. Beveled-back units, **[3 inches] [4 inches]** wide with 1-3/8-inch lip, for surface mounting on existing stairs.
 - c. Two-piece units, 3 inches wide, with subchannel for casting into concrete steps.

5. Treads: **[Square] [Beveled]**-back units, full depth of tread with 1-3/8-inch lip, for application over existing stairs.
 - C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
 - D. Drill for mechanical anchors and countersink. Locate holes not more than 4 inches from ends and not more than 12 inches o.c., evenly spaced between ends, unless otherwise indicated. Provide closer spacing if recommended by manufacturer.
 1. Provide two rows of holes for units more than 5 inches wide, with two holes aligned at ends and intermediate holes staggered.
 - E. Apply bituminous paint to concealed surfaces of cast-metal units.
 - F. Apply clear lacquer to concealed surfaces of extruded units.
- 2.19 CAST-IRON WHEEL GUARDS
- A. Provide wheel guards made from cast-iron, 3/4-inch-thick, hollow-core construction, of size and shape indicated. Provide holes for countersunk anchor bolts and grouting.
 - B. Prime cast-iron wheel guards with **[zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]**
- 2.20 METAL DOWNSPOUT BOOTS
- A. Source Limitations: Obtain downspout boots from single source from single manufacturer.
 - B. Provide downspout boots made from cast **[iron] [aluminum]** in heights indicated with inlets of size and shape to suit downspouts. Provide units with flanges and holes for countersunk anchor bolts.
 1. Outlet: **[Vertical, to discharge into pipe] [Horizontal, to discharge into pipe] [At 35 degrees from horizontal, to discharge onto splash block or pavement].**
 - C. Prime cast-iron downspout boots with **[zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]**
- 2.21 LOOSE BEARING AND LEVELING PLATES
- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.
 - B. Galvanize bearing and leveling plates.
 - C. Prime plates with **[zinc-rich primer.] [primer specified in Section 09 96 00 "High-Performance Coatings."]**
- 2.22 LOOSE STEEL LINTELS
- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

- B. Size loose lintels to provide bearing length at each side of openings equal to one-twelfth of clear span, but not less than 8 inches unless otherwise indicated.
- C. Galvanize [**and prime**] loose steel lintels located in exterior walls.
- D. Prime loose steel lintels located in exterior walls with [**zinc-rich primer.**] [**primer specified in Section 09 96 00 "High-Performance Coatings."**]

2.23 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.24 GENERAL FINISH REQUIREMENTS

- A. Finish metal fabrications after assembly.
- B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.25 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean galvanized surfaces of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.
- C. Shop prime iron and steel items [**not indicated to be galvanized**] unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
 - 1. Shop prime with [**universal shop primer**] [**primers specified in Section 09 91 13 "Exterior Painting"**] [**primers specified in Section 09 91 23 "Interior Painting"**] **unless** [**zinc-rich primer is**] [**primers specified in Section 09 96 00 "High-Performance Coatings" are**] indicated.
- D. Preparation for Shop Priming: Prepare surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**] [**SSPC-SP 3, "Power Tool Cleaning."**] [**requirements indicated below:**]
 - 1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 3. Items Indicated to Receive Primers Specified in Section 09 96 00 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 4. Other Steel Items: SSPC-SP 3, "Power Tool Cleaning."
 - 5. Galvanized-Steel Items: SSPC-SP 16, "Brush-off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals."

- E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2.26 ALUMINUM FINISHES

- A. As-Fabricated Finish: AA-M12.
- B. Clear Anodic Finish: AAMA 611, Class I, AA-M12C22A41.

2.27 SKATEBOARD DETERRENTS

- A. Acceptable manufacturers includes the following:
 - 1. Warehouse LLC,, Delray Beach Florida.
 - 2. Grind to a Halt, Elburn Illinois.
 - 3. Skate Stoppers, El Cajon California.
 - 4. The Park and Facilities, West Palm Beach Florida.
 - 5. Or equal.
- B. Material: Type 318 stainless steel.

2.28 STEEL CANE DETECTION RAILS

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:
 - 1. Cast Aluminum: Heavy coat of bituminous paint.
 - 2. Extruded Aluminum: Two coats of clear lacquer.

3.02 INSTALLATION OF MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for **[ceiling-hung toilet partitions] [operable partitions] [overhead doors] [and] [overhead grilles]** securely to, and rigidly brace from, building structure.
- C. Anchor shelf angles securely to existing construction with **[expansion anchors] [anchor bolts] [through bolts]**.
- D. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.
 - 1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.
- E. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installation of Bearing and Leveling Plates" Article.
 - 1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.03 INSTALLATION OF PREFABRICATED BUILDING COLUMNS

- A. Install prefabricated building columns to comply with ANSI/AISC 360, "Specifications for Structural Steel Buildings," and with requirements applicable to listing and labeling for fire-resistance rating indicated.

3.04 INSTALLATION OF SHELF ANGLES

- A. Install shelf angles as required to keep masonry level, at correct elevation, and flush with vertical plane.

3.05 INSTALLATION OF METAL LADDERS

- A. Secure ladders to adjacent construction with the clip angles attached to the stringer.
- B. Install brackets as required for securing of ladders welded or bolted to structural steel or built into masonry or concrete.

3.06 INSTALLATION OF ALTERNATING TREAD DEVICES

- A. Secure top and bottom of alternating tread devices to construction to comply with manufacturer's written instructions.

3.07 INSTALLATION OF METAL SHIPS' LADDERS AND PIPE CROSSOVERS

- A. Secure top and bottom of ships' ladders to construction to comply with manufacturer's written instructions.
- B. Secure pipe crossovers to construction to comply with manufacturer's written instructions.

3.08 INSTALLATION OF METAL FLOOR PLATE

- A. Install metal floor plates flush with finished surface. Adjust as required to avoid lippage that could present a tripping hazard.

3.09 INSTALLATION OF ELEVATOR PIT SUMP COVERS

- A. Install tops of elevator sump pit cover plates and frames flush with finished surface. Adjust as required to avoid lippage that could present a tripping hazard.

3.10 INSTALLATION OF STRUCTURAL-STEEL DOOR FRAMES

- A. Fasten structural steel door frames to the floor slab by means of angle clips and expansion bolts. Anchor door jambs to adjacent construction in accordance with shop drawing details.

3.11 INSTALLATION OF MISCELLANEOUS STEEL TRIM

- A. Anchor to concrete construction to comply with manufacturer's written instructions.

3.12 INSTALLATION OF METAL BOLLARDS

- A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.
 - 1. Do not fill removable bollards with concrete.
- B. Anchor bollards to existing construction with **[expansion anchors] [anchor bolts] [through bolts]**. Provide four 3/4-inch bolts at each bollard unless otherwise indicated.
 - 1. Embed anchor bolts at least 4 inches in concrete.
- C. Anchor bollards in concrete **[with pipe sleeves preset and anchored into concrete] [in formed or core-drilled holes not less than 42 inches deep and 3/4 inch larger than OD of bollard]**. Fill annular space around bollard solidly with shrinkage-resistant grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch toward bollard.
- D. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

- E. Anchor internal sleeves for removable bollards in **[concrete by inserting in pipe sleeves preset into concrete] [formed or core-drilled holes not less than 42 inches deep and 3/4 inch larger than OD of sleeve]**. Fill annular space around internal sleeves solidly with shrinkage-resistant grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch toward internal sleeve.
- F. Anchor internal sleeves for removable bollards in place with concrete footings. Center and align sleeves in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace sleeves in position until concrete has cured.
- G. Place removable bollards over internal sleeves and secure with 3/4-inch machine bolts and nuts. After tightening nuts, drill holes in bolts for inserting padlocks. Owner furnishes padlocks.
- H. Fill bollards solidly with concrete, mounding top surface to shed water.
 - 1. Do not fill removable bollards with concrete.

3.13 INSTALLATION OF VEHICULAR BARRIER CABLE SYSTEMS

- A. Install vehicular barrier cable systems at locations indicated, mounted at heights indicated on Drawings above the parking surface. Anchor **[wire ropes] [steel prestressing strand]** to structural columns and walls and tension to withstand vehicle loading as specified in "Performance Requirements" Article with no cable tensioned less than 3000 lbf. Do not displace supporting components.

3.14 INSTALLATION OF PIPE AND DOWNSPOUT GUARDS

- A. Provide pipe guards at exposed vertical pipes in **[parking garage] [at locations indicated on Drawings]** where not protected by curbs or other barriers. Install by bolting to wall or column with expansion anchors. Provide four 3/4-inch bolts at each pipe guard. Mount pipe guards with top edge 26 inches above driving surface.

3.15 INSTALLATION OF ABRASIVE METAL NOSINGS, TREADS, AND THRESHOLDS

- A. Center nosings on tread widths unless otherwise indicated.
- B. For nosings embedded in concrete steps or curbs, align nosings flush with riser faces and level with tread surfaces.
- C. Seal thresholds exposed to exterior with elastomeric sealant complying with Section 07 92 00 "Joint Sealants" to provide a watertight installation.

3.16 INSTALLATION OF CAST-IRON WHEEL GUARDS

- A. Anchor wheel guards to concrete or masonry construction to comply with manufacturer's written instructions. Fill cores solidly with concrete.

3.17 INSTALLATION OF METAL DOWNSPOUT BOOTS

- A. Anchor metal downspout boots to concrete or masonry construction to comply with manufacturer's written instructions.
- B. Secure downspouts terminations to downspouts and substrate per manufacturer's instructions.

3.18 INSTALLATION OF LOOSE BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with shrinkage-resistant grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.19 REPAIRS

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in **[Section 09 91 13 "Exterior Painting."]** **[Section 09 91 23 "Interior Painting."]**
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

SECTION 05 51 13

METAL PAN STAIRS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Preassembled steel stairs with **[concrete-filled] [precast concrete] [precast terrazzo] [epoxy-resin-filled] [and] [abrasive-coating-finished, formed-metal]** treads.
2. **[Steel tube] railings** and guards attached to metal stairs.
3. **[Steel tube] handrails** attached to walls adjacent to metal stairs.
4. Railing gates at the level of exit discharge.

1.02 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs **[, railings, and guards]**.

1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, **[blocking for attachment of wall-mounted handrails,]** and items with integral anchors, that are to be embedded in concrete or masonry.
2. Deliver such items to Project site in time for installation.

C. Coordinate locations of hanger rods and struts with other work so they do not encroach on required stair width and are within fire-resistance-rated stair enclosure.

D. Schedule installation of railings and guards so wall attachments are made only to completed walls.

1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.

1.03 ACTION SUBMITTALS

A. Product Data: For metal pan stairs and the following:

1. Perforated metal.
2. Woven-wire mesh.
3. Welded-wire mesh.

4. Prefilled metal-pan-stair treads.
5. Abrasive nosings.
6. Shop primer products.
7. Nonslip-aggregate concrete finish.
8. Abrasive-coating finish to formed-metal stairs.
9. Precast concrete treads.
10. Precast terrazzo treads.
11. Epoxy-resin-filled stair treads.
12. Handrail wall brackets.
13. Grout.

B. Shop Drawings:

1. Include plans, elevations, sections, details, and attachments to other work.
2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
3. Include plan at each level.
4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.
5. Indicate profile and dimensions of precast terrazzo treads.
6. Indicate profile and dimensions of epoxy-resin-filled treads.

C. Samples for Verification: For each type and finish of **[nosing]** **[precast terrazzo tread]** **[epoxy-resin-filled tread]**.

D. Delegated Design Submittal: For stairs, **[railings and guards,]** **[precast terrazzo treads,]** **[epoxy-resin-filled treads]**, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the **[jurisdiction]** **[State]** in which Project is located.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 2. Protect steel members and packaged materials from corrosion and deterioration.
 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
 - a. Repair or replace damaged materials or structures as directed.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design stairs, **[railings and guards,] [precast terrazzo treads,] [epoxy-resin-filled treads]**, including attachment to building construction.
- B. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Uniform Load: 100 lbf/sq. ft..
 2. Concentrated Load: 300 lbf applied on an area of 4 sq. in..
 3. Uniform and concentrated loads need not be assumed to act concurrently.
 4. Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
 5. Limit deflection of treads, platforms, and framing members to **[L/360] <Insert deflection ratio>** or 1/4 inch, whichever is less.
- C. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.

3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces]** **<Insert temperature change>**.
- D. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]** **<Insert requirement>**.
 1. Component Importance Factor: **<Insert requirement>**.

2.02 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Steel Tubing for Railings and Guards: **[ASTM A500/A500M (cold formed)] [or] [ASTM A513/A513M]**.
 1. Provide galvanized finish for exterior installations and where indicated.
- D. Steel Pipe for Railings and Guards: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 1. Provide galvanized finish for exterior installations and where indicated.
- E. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A1008M, **[either commercial steel, Type B, or]** structural steel, Grade 25, unless another grade is required by design loads; exposed.
- F. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, **[either commercial steel, Type B, or]** structural steel, Grade 30, unless another grade is required by design loads.
- G. Galvanized Steel Sheet: ASTM A653/A653M, G90 coating, **[either commercial steel, Type B, or]** structural steel, Grade 33, unless another grade is required by design loads.
- H. Expanded-Metal, Carbon Steel: ASTM F1267, **[Type I (expanded)] [Type II (expanded and flattened)]**, Class 1 (uncoated).
 1. Style Designation: **[3/4 number 13] [1-1/2 number 10]** **<Insert designation>**.
- I. Perforated Metal, Uncoated: Cold-rolled steel sheet, ASTM A1008/A1008M, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel Type B, **[0.060 inch]** **<Insert dimension>** thick, **[with 1/4-inch holes 3/8 inch o.c. in staggered rows] [with 1/8-by-1-inch round end slotted holes in staggered rows]** **<Insert description>**.
- J. Perforated Metal, Galvanized Steel Sheet: ASTM A653/A653M, G90 coating, commercial steel Type B, **[0.064 inch]** **<Insert dimension>** thick, **[with 1/4-inch holes 3/8 inch o.c. in staggered rows]** **<Insert description>**.

- K. Perforated Metal, Aluminum Sheet: ASTM B209, **[0.125 inch] [0.063 inch]** <Insert dimension> thick, **[with 1/4-inch holes 3/8 inch o.c. in staggered rows]** <Insert description>.
- L. Woven-Wire Mesh, Steel: Intermediate-crimp, **[diamond] [square]** pattern, 2-inch woven-wire mesh, made from 0.135-inch nominal-diameter steel wire complying with ASTM A510/A510M.
- M. Woven-Wire Mesh, Aluminum: Intermediate-crimp, **[diamond] [square]** pattern, 2-inch woven-wire mesh, made from 0.162-inch-diameter, aluminum wire complying with ASTM B211, Alloy 6061-T94.
- N. Welded-Wire Mesh: **[Diamond] [Square]** pattern, 2-inch welded-wire mesh, made from 0.236-inch nominal-diameter steel wire complying with ASTM A510/A510M.
- O. Aluminum Extrusions: ASTM B221, Alloy 6063-T6.
- P. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
- Q. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
- R. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (leaded red brass) or No. C84400 (leaded semired brass).
- S. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).
- T. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.

2.03 ABRASIVE NOSINGS

- A. Cast-Metal Units: Cast **[iron] [aluminum] [bronze] [nickel silver]**, with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
 - 1. Configuration: Cross-hatched units, **[3 inches] [4 inches]** wide without lip.
- B. Extruded Units: **[Aluminum] [Bronze]** units with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
 - 1. Provide ribbed units, with abrasive filler strips projecting 1/16 inch above aluminum extrusion.
 - 2. Provide solid-abrasive units without ribs.
 - 3. Nosings, Square-Back Units: **[1-7/8 inches] [3 inches] [4 inches]** wide, without lip.
 - 4. Nosings, Two-Piece Units: 3 inches wide, with subchannel for casting into concrete.
- C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
- D. Apply bituminous paint to concealed surfaces of cast-metal units set into concrete.
- E. Apply clear lacquer to concealed surfaces of extruded units set into concrete.

2.04 FASTENERS

- A. General: Provide [zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5] [Type 304 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5] where built into exterior walls.
1. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings and Guards to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings and guards to other types of construction indicated [**and capable of withstanding design loads**].
- C. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, ASTM A563; and, where indicated, flat washers.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563; and, where indicated, flat washers.
1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for [**exterior stairs**] [**stairs indicated to be galvanized**] [**stairs indicated to be shop primed with zinc-rich primer**].
- E. Post-Installed Anchors: [**Torque-controlled expansion anchors**] [**or**] [**chemical anchors**] capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy [**Group 1**] [**Group 2**] stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.05 MISCELLANEOUS MATERIALS

- A. Handrail Wall Brackets: [Cast nickel-silver,] [Cast aluminum,] [Cast bronze,] [Cast stainless steel,] center of rail [**2-1/2 inches**] [**3-1/8 inches**] <Insert dimension> from face of wall.
- B. Welding Electrodes: Comply with AWS requirements.
- C. Shop Primers: Provide primers that comply with [Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings."] [Section 09 91 13 "Exterior Painting," Section 09 91 23 "Interior Painting," and Section 09 96 00 "High-Performance Coatings."]
- D. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- E. Zinc-Rich Primer: Comply with SSPC-Paint 20, [**Type I-A**] [**Type I-B**] [**Type I-C**] [**Type II**], Level [**1**] [**2**] [**3**], and compatible with topcoat.

- F. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish system indicated.
- G. Galvanizing Repair Paint: High-zinc-dust-content paint complying with **[SSPC-Paint 20]** **[ASTM A780/A780M]** and compatible with paints specified to be used over it.
- H. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- I. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for **[interior]** **[exterior]** use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.
- J. Prefilled Concrete Treads:
 - 1. Concrete Materials and Properties: Comply with requirements in Section 03 30 00 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with minimum 28-day compressive strength of 3000 psi and maximum aggregate size of 1/2 inch unless otherwise indicated.
 - 2. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.
 - 3. Plain Steel Welded-Wire Reinforcement: ASTM A1064/A10645M, **[steel,]** **[galvanized steel,]** 6 by 6 inches, W1.4 by W1.4, unless otherwise indicated on Drawings.
 - 4. Reinforcement Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening welded-wire reinforcement in place.
 - a. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.
- K. For galvanized reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.06 PRECAST CONCRETE TREADS

- A. Concrete Materials and Properties: Comply with requirements in Section 03 30 00 "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of 5000 psi and a total air content of not less than 4 percent or more than 6 percent.
- B. Reinforcement: Galvanized, welded-wire reinforcement, 2 by 2 inches by 0.062-inch-diameter steel wire; comply with ASTM A1064/A1064M, except for minimum wire size.

2.07 PRECAST TERRAZZO TREADS

- A. Precast Terrazzo Stair Treads: Epoxy terrazzo units cast in maximum lengths possible. Comply with manufacturer's written instructions for fabricating precast terrazzo units in sizes and profiles indicated.
 - 1. Epoxy Resin Matrix: Manufacturer's standard recommended for use indicated.

2. Aggregates: Comply with NTMA gradation standards for mix indicated, and containing no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
3. Reinforcement: ASTM A615/A615M, Grade 60 bars, as required by unit size, profile, and thickness.
4. Abrasive Inserts: 1/2-inch-wide, silicon carbon/epoxy mixture.
 - a. Provide three inserts, 1/2 inch apart, with first insert located 1 inch from nosing at adjacent stair riser locations.
5. Color: As selected by Architect from manufacturer's standard color selections.
6. Finish: Honed.
7. Surface Sealer: Slip- and stain-resistant, penetrating sealer that is chemically neutral with pH factor between 7 and 8; does not affect color or physical properties of terrazzo type indicated; is recommend by sealer manufacturer for use with specified terrazzo; and complies with NTMA guide specification for terrazzo type applicable for this Project.

2.08 EPOXY-RESIN-FILLED TREADS

- A. Epoxy-Resin-Filled Treads: 3/8-inch-thick, epoxy resin with 8000-psi compressive strength; set on steel subthead.
 1. Color: As selected by Architect from manufacturer's standard color selections.

2.09 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, **[railings and guards,]** clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs **[, railings, and guards]** in shop to greatest extent possible.
 1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
 1. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.

- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Weld exposed corners and seams continuously unless otherwise indicated.
 - 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #1 - No evidence of welded joint] [Finish #2 - Completely sanded joint with some undercutting and pinholes okay] [Finish #3 - Partially dressed weld with spatter removed] [Finish #4 - Good quality, uniform undressed weld with minimal splatter]**.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
 - 1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 - 2. Locate joints where least conspicuous.
 - 3. Fabricate joints that will be exposed to weather in a manner to exclude water.
 - 4. Provide weep holes where water may accumulate internally.

2.10 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for **[Architectural] [Commercial] [Service]** Class, unless more stringent requirements are indicated.
- B. Stair Framing:
 - 1. Stringers: Fabricate of **[steel plates] [or] [steel channels] [or] [steel rectangular tubes] [as indicated on Drawings]**.
 - a. Stringer Size: **[As required to comply with "Performance Requirements" Article] [As indicated on Drawings]**.
 - b. Provide closures for exposed ends of channel and rectangular tube stringers.
 - c. Finish: **[Shop primed] [Painted] [Galvanized]**.
 - 2. Platforms: Construct of **[steel plate] [or] [steel channel] [or] [steel rectangular tube]** headers and miscellaneous framing members as **[required to comply with "Performance Requirements" Article] [indicated on Drawings]**.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.
 - b. Finish: **[Shop primed] [Painted] [Galvanized]**.

3. Weld **[or bolt]** stringers to headers; weld **[or bolt]** framing members to stringers and headers. **[If using bolts, fabricate and join so bolts are not exposed on finished surfaces.]**
 4. Where stairs are enclosed by gypsum board **[shaft-wall]** assemblies, provide hanger rods or struts to support landings from floor construction above or below.
 - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
 5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch.
1. Fabricate treads and landing subplatforms of exterior stairs so finished walking surfaces slope to drain.
 2. Steel Sheet, Uncoated: **[Cold] [Hot]-**rolled steel sheet **[unless otherwise indicated].**
 3. Galvanized Steel Sheet: Galvanized steel sheet **[, where indicated].**
 4. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
 5. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
 6. Shape metal pans to include nosing integral with riser.
 7. Attach abrasive nosings to risers.
 8. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
 9. Provide epoxy-resin-filled treads, reinforced with glass fibers, with non-slip-concrete aggregate finish to tread surface.
 10. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
 - a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.
- D. Abrasive-Coating-Finished, Formed-Metal Stairs: Form risers, treads, and platforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.097 inch.
1. Steel Sheet: Uncoated, hot-rolled steel sheet unless otherwise indicated.
 2. Directly weld risers and treads to stringers; locate welds on underside of stairs.
 3. Provide platforms of configuration indicated or, if not indicated, the same as treads. Weld platforms to platform framing.
 4. Finish tread and platform surfaces with manufacturer's standard epoxy-bonded abrasive finish.

2.11 FABRICATION OF STAIR RAILINGS AND GUARDS

- A. Comply with applicable requirements in [Section 05 52 13 "Pipe and Tube Railings."] [Section 05 73 00 "Decorative Metal Railings."]
- B. Fabricate railings and guards to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of member, post spacings, wall bracket spacing, and anchorage, but not less than that needed to withstand indicated loads.
1. Rails and Posts: **[1-5/8-inch-diameter] [1-1/2-inch-square]** top and bottom rails and 1-1/2-inch-square posts.
 2. Picket Infill: **[1/2-inch-] [3/4-inch-] [round] [square]** pickets spaced to prohibit the passage of a 4-inch diameter sphere.
 3. Expanded-Metal Infill: Expanded-metal panels edged with U-shaped channels made from steel sheet and not less than 0.043 inch thick. Orient expanded metal with long dimension of diamonds **[parallel to top rail] [perpendicular to top rail] [vertical]**.
 4. Perforated-Metal Infill: Perforated-metal panels edged with U-shaped channels made from metal sheet, of same metal as perforated metal, and not less than 0.043 inch thick. Orient perforated metal with pattern **[parallel to top rail] [perpendicular to top rail] [horizontal] [vertical] [as indicated on Drawings]**.
 5. Mesh Infill: **[Woven] [Welded]**-wire mesh crimped into 1-by-1/2-by-1/8-inch steel channel frames. Orient wire mesh with **[diamonds vertical] [wires perpendicular and parallel to top rail] [wires horizontal and vertical]**.
 6. Intermediate Rails Infill: **[1-5/8-inch-diameter] [1-1/2-inch-square]** intermediate rails spaced less than **[12 inches] [21 inches]** clear.
 7. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with **[cam-type, self-closing] [spring]** hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.
- C. Welded Connections: Fabricate railings and guards with welded connections.
1. Fabricate connections that are exposed to weather in a manner that excludes water.
 - a. Provide weep holes where water may accumulate internally.
 2. Cope components at connections to provide close fit, or use fittings designed for this purpose.
 3. Weld all around at connections, including at fittings.
 4. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 5. Obtain fusion without undercut or overlap.
 6. Remove flux immediately.
 7. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #1 - No evidence of a welded joint] [Finish #2 - Completely sanded joint, some undercutting and pinholes are okay] [Finish #3 - Partially dressed weld with spatter removed] [Finish #4 - Good quality, uniform undressed weld with minimal splatter]** as shown in NAAMM AMP 521.
- D. Form changes in direction of railings and guards as follows:

1. As detailed.
 2. By bending **[or by inserting prefabricated elbow fittings]**.
 3. By flush bends **[or by inserting prefabricated flush-elbow fittings]**.
 4. By radius bends of radius indicated **[or by inserting prefabricated elbow fittings of radius indicated]**.
 5. By inserting prefabricated **[elbow fittings] [flush-elbow fittings] [elbow fittings of radius indicated]**.
- E. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- F. Close exposed ends of railing and guard members with prefabricated end fittings.
- G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated.
1. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.
- H. Connect posts to stair framing by direct welding unless otherwise indicated.
- I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work.
1. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
 2. For galvanized railings and guards, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
 3. For nongalvanized railings and guards, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
 4. Provide type of bracket **[with flange tapped for concealed anchorage to threaded hanger bolt] [with predrilled hole for exposed bolt anchorage]** and that provides 1-1/2-inch clearance from inside face of handrail to finished wall surface.
- J. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports.
1. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.12 FINISHES

- A. Finish metal stairs after assembly.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.

2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- C. Preparation for Shop Priming: Prepare uncoated, ferrous-metal surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."
- D. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
 1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF METAL PAN STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates.
 - a. Clean bottom surface of plates.
 - b. Set plates for structural members on wedges, shims, or setting nuts.
 - c. Tighten anchor bolts after supported members have been positioned and plumbed.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - 3. Comply with requirements for welding in "Fabrication, General" Article.
- F. Place and finish concrete fill for treads and platforms to comply with Section 03 30 00 "Cast-in-Place Concrete."
 - 1. Install abrasive nosings with anchors fully embedded in concrete.
 - 2. Center nosings on tread width.
- G. Install precast concrete treads with adhesive supplied by manufacturer.
- H. Install precast terrazzo treads according to manufacturer's written instructions.

3.03 INSTALLATION OF RAILINGS AND GUARDS

- A. Adjust railing and guard systems before anchoring to ensure matching alignment at abutting joints with tight, hairline joints.
 - 1. Space posts at spacing indicated or, if not indicated, as required by design loads.
 - 2. Plumb posts in each direction, within a tolerance of 1/16 inch in 3 feet.
 - 3. Align rails and guards so variations from level for horizontal members and variations from parallel with rake of stairs for sloping members do not exceed 1/4 inch in 12 feet.
 - 4. Secure posts, rail ends, and guard ends to building construction as follows:
 - a. Anchor posts to steel by **[welding] [or] [bolting]** to steel supporting members.
 - b. Anchor handrail and guard ends to concrete and masonry with steel round flanges welded to rail and guard ends and anchored with post-installed anchors and bolts.
- B. Install railing gates level, plumb, and secure for full opening without interference.
 - 1. Attach hardware using tamper-resistant or concealed means.
 - 2. Adjust hardware for smooth operation.
- C. Attach handrails to wall with wall brackets.
 - 1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - 2. Secure wall brackets to building construction as **[required to comply with performance requirements.] [follows:]**
 - a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.

- b. For hollow masonry anchorage, use toggle bolts.
- c. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
- d. For steel-framed partitions, use hanger or lag bolts set into **[fire-retardant-treated] wood** backing between studs. Coordinate with stud installation to locate backing members.
- e. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
- f. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.04 REPAIR

A. Touchup Painting:

- 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
- 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 09 90 00 "Painting" and Section 09 96 00 "High-Performance Coatings."

B. Repair of Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION

This page intentionally left blank

SECTION 05 52 13

PIPE AND TUBE RAILINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Steel railings.
2. Aluminum railings.
3. Stainless steel railings.

B. Related Requirements:

1. Section 05 51 13 "Metal Pan Stairs" for steel tube railings associated with metal pan stairs.
2. Section 05 73 00 "Decorative Metal Railings" for ornamental railings fabricated from pipes and tubes and guard-infill metals.
3. Section 09 69 00 "Access Flooring" for railings included with access flooring.

1.02 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Manufacturer's product lines of mechanically connected railings.
2. Expanded metal infill panels.
3. Perforated metal infill panels.
4. Woven-wire mesh infill panels.
5. Fasteners.
6. Post-installed anchors.
7. Handrail brackets.

8. Shop primer.
 9. Intermediate coats and topcoats.
 10. Bituminous paint.
 11. Nonshrink, nonmetallic grout.
 12. Anchoring cement.
 13. Metal finishes.
 14. Paint products.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- C. Samples for Initial Selection: For products involving selection of color, texture, or design **[, including mechanical finishes]**.
- D. Samples for Verification: For each type of exposed finish required.
1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters, including finish.
 2. Fittings and brackets.
 3. Assembled Sample of railing system, made from full-size components, including top rail, post, handrail, and infill. Sample need not be full height.
 - a. Show method of **[connecting] [and] [finishing]** members at intersections.
- E. Delegated Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For **[delegated design professional engineer] [testing agency]**.
- B. Welding certificates.
- C. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.
- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- E. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.
- F. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.
- 1.05 QUALITY ASSURANCE
- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces of railings from damage by applying a strippable, temporary protective covering before shipping.

1.07 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design railings, including attachment to building construction.
- B. Structural Performance: Railings, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 1. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces] <Insert temperature change>**.

2.02 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.

1. Provide type of bracket with **[flange tapped for concealed anchorage to threaded hanger bolt] [predrilled hole for exposed bolt anchorage]** and that provides 1-1/2-inch clearance from inside face of handrail to finished wall surface.

2.03 STEEL RAILINGS

- A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- B. Tubing: **[ASTM A500/A500M (cold formed)] [or] [ASTM A513/A513M, Type 5]**.
- C. Pipe: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 1. Provide galvanized finish for exterior installations and where indicated.
- D. Plates, Shapes, and Bars: ASTM A36/A36M.
- E. Cast Iron Fittings: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
- F. Expanded Metal Infill Panels: ASTM F1267, **[Type I (expanded)] [Type II (expanded and flattened)]**, Class 1 (uncoated).
 1. Style Designation: **[3/4 number 13] [1-1/2 number 10] <Insert designation>**.
- G. Perforated-Metal Infill Panels:
 1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel, Type B, **[0.060 inch] <Insert dimension>** thick, **[with 1/4-inch holes 3/8 inch o.c. in staggered rows] <Insert description>**.
 - a. Basis-of-Design Product: Provide product with perforations matching **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>**.
 2. Galvanized-Steel Sheet: ASTM A653/A653M, G90 coating, commercial steel Type B, **[0.064 inch] <Insert dimension>** thick, **[with 1/4-inch holes 3/8 inch o.c. in staggered rows] [with 1/8-by-1-inch round end slotted holes in staggered rows] <Insert description>**.
 - a. Basis-of-Design Product: Provide product with perforations matching **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>**.
- H. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond] [square]** pattern, 2-inch woven-wire mesh, made from 0.134-inch-diameter steel wire complying with ASTM A510.
 1. Basis-of-Design Product: Provide product with crimp pattern matching **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>**.

2.04 ALUMINUM RAILINGS

- A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- B. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
- C. Extruded Bars and Tubing: ASTM B221, Alloy 6063-T5/T52.
- D. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
 - 1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- E. Drawn Seamless Tubing: ASTM B210/B210M, Alloy 6063-T832.
- F. Plate and Sheet: ASTM B209, Alloy 6061-T6.
- G. Die and Hand Forgings: ASTM B247, Alloy 6061-T6.
- H. Castings: ASTM B26/B26M, Alloy A356.0-T6.
- I. Perforated Metal Infill Panels: Aluminum sheet, ASTM B209, Alloy 6061-T6, **[0.063 inch]** <Insert dimension> thick, **[with 1/4-inch holes 3/8 inch o.c. in staggered rows]** <Insert description>.
 - 1. Basis-of-Design Product: Provide product with perforations matching **[product indicated on Drawings]** <Insert manufacturer's name; product name or designation>.
- J. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond]** **[square]** pattern, 2-inch woven-wire mesh, made from 0.162-inch-diameter aluminum wire complying with ASTM B211/B211M, Alloy 6061-T94.
 - 1. Basis-of-Design Product: Provide product with crimp pattern matching **[product indicated on Drawings]** <Insert manufacturer's name; product name or designation>.

2.05 STAINLESS STEEL RAILINGS

- A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- B. Tubing: ASTM A554, **[Grade MT 304]** **[Grade MT 316L]**.
- C. Pipe: ASTM A312/A312M, **[Grade TP 304]** **[Grade TP 316L]**.
- D. Castings: ASTM A743/A743M, **[Grade CF 8 or CF 20]** **[Grade CF 8M or CF 3M]**.
- E. Plate and Sheet: ASTM A240/A240M or ASTM A666, **[Type 304]** **[Type 316L]**.
- F. Expanded Metal Infill Panels: ASTM F1267, **[Type I (expanded)]** **[Type II (expanded and flattened)]**, Class 3 (corrosion-resistant steel), made from stainless steel sheet, ASTM A240/A240M or ASTM A666, **[Type 304]** **[Type 316]**.
 - 1. Style Designation: **[3/4 number 13]** **[1-1/2 number 10]** <Insert designation>.

- G. Perforated Metal Infill Panels: Stainless steel sheet, ASTM A240/A240M or ASTM A666, [Type 304] [Type 316L], **[0.062 inch]** <Insert dimension> thick, [with **1/4-inch** holes **3/8 inch** o.c. in staggered rows] <Insert description>.
1. Basis-of-Design Product: Provide product with perforations matching **[product indicated on Drawings]** <Insert manufacturer's name; product name or designation>.
- H. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond]** **[square]** pattern, 2-inch woven-wire mesh, made from 0.141-inch-diameter stainless steel wire complying with ASTM A580/A580M, **[Type 304]** **[Type 316]**.
1. Basis-of-Design Product: Provide product with crimp pattern matching **[product indicated on Drawings]** <Insert manufacturer's name; product name or designation>.

2.06 FASTENERS

A. Fastener Materials:

1. Ungalvanized-Steel Railing Components: Plated steel fasteners complying with ASTM F1941/F1941M, Class Fe/Zn 5 for zinc coating.
2. Hot-Dip Galvanized Railing Components: Type 304 stainless steel or hot-dip zinc-coated steel fasteners complying with ASTM A153/A153M or ASTM F2329/F2329M for zinc coating.
3. Aluminum Railing Components: **[Type 304]** **[Type 316]** stainless steel fasteners.
4. Stainless Steel Railing Components: **[Type 304]** **[Type 316]** stainless steel fasteners.
5. Finish exposed fasteners to match appearance, including color and texture, of railings.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction **[and capable of withstanding design loads]**.

C. Fasteners for Interconnecting Railing Components:

1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
2. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
3. Provide **[Phillips]** **[tamper-resistant]** **[square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 **[or ICC-ES AC308]**.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1]** **[Group 2]** stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.07 MISCELLANEOUS MATERIALS

- A. Handrail Brackets: [Cast iron] [Cast aluminum,] [Cast stainless steel,] [Cast nickel-silver,] center of handrail **[2-1/2 inches]** **[3-1/8 inches]** <Insert dimension> from [face of railing] [wall].
- B. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for metal alloy welded.
1. For **[aluminum]** **[and]** **[stainless steel]** railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint, complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Shop Primers: Provide primers that comply with [Section 09 91 13 "Exterior Painting."] [Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings."]
- F. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- G. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- H. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- I. Intermediate Coats and Topcoats: Provide products that comply with [Section 09 91 13 "Exterior Painting."] [Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings."]
- J. Epoxy Intermediate Coat: Complying with MPI #77 and compatible with primer and topcoat.
- K. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.
- L. Bituminous Paint: Cold-applied asphalt emulsion, complying with ASTM D1187/D1187M.
- M. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout, complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- N. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
1. Water-Resistant Product: **[At exterior locations]** **[and]** **[where indicated on Drawings]**, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.08 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage [**but not less than that required to support structural loads**].
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
 - 1. Clearly mark units for reassembly and coordinated installation.
 - 2. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water.
 - 1. Provide weep holes where water may accumulate.
 - 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with [**welded**] [**or**] [**nonwelded**] connections unless otherwise indicated.
- H. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with [**cam-type, self-closing**] [**spring**] hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.
- I. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for [**Finish #1 welds; ornamental quality with no evidence of a welded joint**] [**Finish #2 welds; good appearance, completely sanded joint, some undercutting and pinholes okay**] [**Finish #3 welds; utilitarian appearance not subject to view, partially dressed weld with spatter removed**].
- J. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.

- K. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
1. Fabricate splice joints for field connection, using an epoxy structural adhesive, if this is manufacturer's standard splicing method.
- L. Form changes in direction as follows:
1. As detailed.
 2. **[By bending] [or] [by inserting prefabricated elbow fittings].**
 3. **[By flush bends] [or] [by inserting prefabricated flush-elbow fittings].**
 4. **[By radius bends of radius indicated] [or] [by inserting prefabricated elbow fittings of radius indicated].**
 5. By bending to smallest radius that will not result in distortion of railing member.
- M. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- N. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
- O. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.
- P. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- Q. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work.
1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 2. Coordinate anchorage devices with supporting structure.
- R. For railing posts set in concrete, provide stainless steel sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure.
- S. For removable railing posts, fabricate slip-fit sockets from stainless steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height.
1. Provide socket covers designed and fabricated to resist being dislodged.
 2. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- T. Expanded-Metal Infill Panels: Fabricate infill panels from expanded-metal sheet of same metal as railings.

1. Edge panels with U-shaped channels made from metal sheet, of same metal as expanded metal and not less than 0.043 inch thick.
 2. Orient expanded metal with long dimension of diamonds **[parallel to top rail]** **[perpendicular to top rail]** **[horizontal]** **[vertical]**.
- U. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from **[steel]** **[galvanized steel]** **[aluminum]** **[stainless steel]** **[same metal as railings in which they are installed]**.
1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than 0.043 inch thick.
 2. Orient perforated metal with pattern **[parallel to top rail]** **[perpendicular to top rail]** **[horizontal]** **[vertical]** **[as indicated on Drawings]**.
- V. Woven-Wire Mesh Infill Panels: Fabricate infill panels from woven-wire mesh crimped into 1-by-1/2-by-1/8-inch metal channel frames.
1. Fabricate wire mesh and frames from same metal as railings in which they are installed.
 2. Orient wire mesh with **[diamonds vertical]** **[diamonds perpendicular to top rail]** **[wires perpendicular and parallel to top rail]** **[wires horizontal and vertical]** **[as indicated on Drawings]**.
- W. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.09 STEEL AND IRON FINISHES

- A. Galvanized Railings:
1. Hot-dip galvanize **[exterior]** **[indicated]** steel railings, including hardware, after fabrication.
 2. Comply with ASTM A123/A123M for hot-dip galvanized railings.
 3. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 4. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 5. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner **[and as follows]**.
1. Comply with SSPC-SP 16.
- D. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves; however, hot-dip galvanize anchors to be embedded in exterior concrete or masonry.

- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3.] [SSPC-SP 3.] [requirements indicated below:]**
1. Exterior Railings: SSPC-SP 6/NACE No. 3.
 2. Railings Indicated To Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3.
 3. Railings Indicated To Receive Primers Specified in Section 09 96 00 "High-Performance Coatings": SSPC-SP 6/NACE No. 3.
 4. Other Railings: SSPC-SP 3.
- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1 for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
1. Shop prime uncoated railings with **[universal shop primer] [primers specified in Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting"]** unless **[zinc-rich primer is] [primers specified in Section 09 96 00 "High-Performance Coatings" are]** indicated.
 2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish: Comply with **[Section 09 91 13 "Exterior Painting."] [Section 09 96 00 "High-Performance Coatings.]**
1. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].**
- H. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1 for shop painting. Apply at spreading rates recommended by coating manufacturer.
1. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].**

2.10 ALUMINUM FINISHES

- A. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Mill Finish: AA-M12, nonspecular as fabricated.
- C. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41] [AA-M12C22A31].**
- D. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44] [AA-M12C22A32/A34].**
1. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities].**

- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- F. High-Performance Organic Finish, Two-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- G. Superior Performance Organic Finish, Three-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- H. Superior Performance Organic Finish, Four-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- I. Single-Coat Superior Performance FEVE Organic Finish: Single-coat fluoroethylene vinyl ether (FEVE) fluoropolymer finish, complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- J. Two-Coat Superior Performance FEVE Organic Finish: Two-coat fluoroethylene vinyl ether (FEVE) fluoropolymer finish complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.

2.11 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces.
 - 3. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Stainless Steel Pipe and Tubing Finishes:
 - 1. 180-Grit Polished Finish: Uniform, directionally textured finish.
 - 2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
 - 3. Polished and Buffed Finish: 320-grit finish followed by buffing **[to a high luster finish] [to a mirror-like finish] [to match Architect's sample]**.
- D. Stainless Steel Sheet and Plate Finishes:
 - 1. Directional Satin Finish: ASTM A480/A480, No. 4.
 - 2. High-Luster Finish: ASTM A480/A480M, No. 7.
 - 3. Mirror Finish: ASTM A480/A480M, No. 8.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.02 INSTALLATION, GENERAL

- A. Perform cutting, drilling, and fitting required for installing railings.
 - 1. Fit exposed connections together to form tight, hairline joints.
 - 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 - 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 - 4. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - 5. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
 - 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.03 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws, using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending 2 inches beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within 6 inches of post.

3.04 ANCHORING POSTS

- A. Use stainless steel pipe sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, **[welded to post after placing anchoring material] [attached to post with setscrews]**.
- D. Leave anchorage joint exposed with **[1/8-inch buildup, sloped away from post] [anchoring material flush with adjacent surface]**.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type, as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For steel railings, weld flanges to post and bolt to metal supporting surfaces.
 - 2. For aluminum railings, attach posts as indicated, using fittings designed and engineered for this purpose.
 - 3. For stainless steel railings, weld flanges to post and bolt to supporting surfaces.

- F. Install removable railing sections, where indicated, in slip-fit stainless steel sockets cast in concrete.

3.05 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with **[sleeves concealed within] [flanges connected to] [brackets on underside of rails connected to]** railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and **[welded to railing ends] [or] [connected to railing ends, using nonwelded connections]**.
- C. Attach handrails to walls with wall brackets **[, except where end flanges are used]**. Provide brackets with **[1-1/2-inch] <Insert dimension>** clearance from inside face of handrail and finished wall surface.
 - 1. Use type of bracket with **[flange tapped for concealed anchorage to threaded hanger bolt] [predrilled hole for exposed bolt anchorage]**.
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets **[and railing end flanges]** to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - 4. For steel-framed partitions, use hanger or lag bolts set into **[fire-retardant-treated]**wood backing between studs. Coordinate with stud installation to locate backing members.
 - 5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements, using self-tapping screws of size and type required to support structural loads.
 - 6. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.
- E. Install railing gates level, plumb, and secure for full opening without interference.
 - 1. Attach hardware using tamper-resistant or concealed means.
 - 2. Adjust hardware for smooth operation.

3.06 REPAIR

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

- a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in **[Section 09 91 13 "Exterior Painting.]"** **[Section 09 91 23 "Interior Painting.]"** **[Section 09 96 00 "High-Performance Coatings.]"**

3.07 CLEANING

- A. Clean **[aluminum]** **[and]** **[stainless steel]** by washing thoroughly with clean water and soap and rinsing with clean water.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

3.08 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 05 70 00
DECORATIVE METAL

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Decorative window security bars.
2. Decorative mechanical grilles and frames.
3. Custom door pulls.
4. Combination hall push-button stations.
5. Metal reveals at wood paneling.
6. Cast-metal rosettes at marble joints.

B. Related Requirements:

1. Section 05 73 00 "Decorative Metal Railings" for decorative metal railings.
2. Section 05 75 00 "Decorative Formed Metal" for decorative metal items made from sheet metal.

1.02 COORDINATION

- A. Coordinate installation of anchorages for decorative metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product, including finishing materials.

1.

- B. Shop Drawings: Show fabrication and installation details for decorative metal.

1. Include plans, elevations, component details, and attachment details.
2. Indicate materials and profiles of each decorative metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.

- C. Patterns, Models, or Plaster Castings: Made from proposed patterns for each design of custom casting required.

- D. Samples for Initial Selection: For products involving selection of color, texture, or design **[including mechanical finishes]**.

- E. Samples for Verification: For each type of exposed finish.
 - 1. Sections of linear shapes.
 - 2. Full-size Samples of castings and forgings.
 - a. For custom castings, submit finished Samples showing ability to reproduce detail [**cast-metal color,**] and quality of finish. [**Samples may be of similar previous work.**]
 - 3. Samples of [welded] [and] [brazed] joints showing quality of workmanship [and color matching of materials].

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [fabricator] [organic-coating applicator] [anodic finisher] [powder-coating applicator].
- B. Mill Certificates: Signed by manufacturers of stainless steel certifying that products furnished comply with requirements.
- C. Welding certificates.

1.06 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing decorative metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Installer Qualifications: Fabricator of products.
- C. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings, of type indicated, to aluminum extrusions and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- D. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- E. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- F. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
 - 4. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.07 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups for the following types of decorative metal:

- a. <Insert, in separate subparagraphs, description of each decorative metal type including mockup size>.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- 1.08 DELIVERY, STORAGE, AND HANDLING
- A. Store decorative metal in a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.
 - B. Deliver and store cast-metal products in wooden crates surrounded by enough packing material to ensure that products are not cracked or otherwise damaged.
- 1.09 FIELD CONDITIONS
- A. Field Measurements: Verify actual locations of walls and other construction contiguous with decorative metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 PRODUCTS

2.01 DECORATIVE METAL FABRICATORS

- A. Fabricator: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 1. <Insert manufacturer's name>.

2.02 METALS, GENERAL

- A. Metal Surfaces, General: Use materials with smooth, flat surfaces unless otherwise indicated. Use materials without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

2.03 ALUMINUM

- A. Fabricate products from alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- B. Bars and Shapes: ASTM B221, Alloy 6063-T5/T52.
- C. Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
- D. Tubing: ASTM B210, Alloy 6063-T832.
- E. Plate and Sheet: ASTM B209, [Alloy 3003-H14] [Alloy 5005-H32] [Alloy 6061-T6].
- F. Forgings: ASTM B247, Alloy 6061-T6.
- G. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.04 COPPER AND COPPER ALLOYS

- A. Fabricate products from alloys indicated and temper to suit application and forming methods but with strength and stiffness not less than H01 (quarter-hard) for plate, sheet, strip, and bars and H55 (light-drawn) for tube and pipe.

2.05 BRONZE

- A. Extruded Shapes: ASTM B455, Alloy UNS C38500 (architectural bronze).
- B. Pipe: ASTM B43, Alloy UNS C23000 (red brass, 85 percent copper).
- C. Tube: ASTM B135, Alloy UNS C23000 (red brass, 85 percent copper).
- D. Castings: [ASTM B62, Alloy UNS C83600 (85-5-5-5 or No. 1 composition commercial red brass)] [or] [ASTM B584, Alloy UNS C86500 (No. 1 manganese bronze)].
- E. Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper).

2.06 BRASS

- A. Extruded Shapes: ASTM B249/B249M, Alloy UNS C36000 (free-cutting brass).
- B. Seamless Tube: ASTM B135, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- C. Castings: ASTM B584, Alloy UNS C85200 (high-copper yellow brass).
- D. Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).

2.07 NICKEL SILVER

- A. Extruded Shapes: ASTM B249/B249M, Alloy UNS C79600.
- B. Castings: ASTM B584, Alloy UNS C97300 (12 percent leaded nickel silver).

2.08 COPPER

- A. Tube: ASTM B75/B75M, Alloy UNS C12200 (phosphorous deoxidized, high residual phosphorous copper).
- B. Castings: ASTM B824, with a minimum of 99.9 percent copper.
- C. Plate, Sheet, Strip, and Bars: ASTM B152/B152M, Alloy UNS C11000 (electrolytic tough pitch copper) or Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).

2.09 STAINLESS STEEL

- A. Tubing: ASTM A554, [Grade MT 304] [Grade MT 316] [Grade MT 316L].
- B. Pipe: ASTM A312/A312M, [Grade TP 304] [Grade TP 316] [Grade TP 316L].
- C. Castings: ASTM A743/A743M, [Grade CF 8 or Grade CF 20] [Grade CF 8M or Grade CF 3M].

- D. Plate, Sheet, and Strip: ASTM A240/A240M or ASTM A666, **[Type 304]** **[Type 316]** **[Type 316L]**.
- E. Flat Bar: ASTM A666, [Type 304] [Type 316] [Type 316L].
- F. Bars and Shapes: ASTM A276, [Type 304] [Type 316] [Type 316L].
- G. Wire Rope and Fittings:
 1. Wire Rope: **[1-by-19]** **[7-by-7]** **[7-by-19]** **<Insert designation>** wire rope made from wire complying with ASTM A492, Type 316.
 2. Wire-Rope Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain without failure a load equal to minimum breaking strength of wire rope with which they are used.

2.10 STEEL AND IRON

- A. Tubing: **[ASTM A500/A500M (cold formed)]** **[or]** **[ASTM A513, Type 5 (mandrel drawn)]**.
- B. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
- C. Plates, Shapes, and Bars: ASTM A36/A36M.
- D. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M unless otherwise indicated.
- E. Steel Sheet, Cold Rolled: ASTM A1008/A1008M, either commercial steel or structural steel, exposed.

2.11 TITANIUM

- A. Strip, Sheet, and Plate: ASTM B265, Grade 1.
- B. Bars: ASTM B348, Grade 1.

2.12 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
 1. Aluminum Items: **[Aluminum]** **[Type 304 stainless steel]** **[Type 316 stainless steel]** fasteners.
 2. Copper-Alloy (Bronze) Items: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed, muntz metal (Alloy 280) fasteners where exposed]**.
 3. Copper-Alloy (Brass) Items: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed, brass (Alloy 260 or 360) fasteners where exposed]**.
 4. Stainless Steel Items: **[Type 304]** **[Type 316]** stainless steel fasteners.
 5. Titanium Items: **[Type 304]** **[Type 316]** stainless steel fasteners.
 6. Uncoated-Steel Items: Plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed, Type 304 stainless steel fasteners where exposed.
 7. Galvanized-Steel Items: Plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating.

8. Dissimilar Metals: **[Type 304] [Type 316]** stainless steel fasteners.
 - B. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.
 - C. Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work unless **[otherwise indicated] [exposed fasteners are unavoidable]**.
 1. Provide **[Phillips] [tamper-resistant] [square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
 - D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 **[or ICC-ES AC308]**.
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5 unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1] [Group 2]** stainless steel bolts, ASTM F593, and nuts, ASTM F594.
- 2.13 MISCELLANEOUS MATERIALS
- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
 - B. Brazing Rods: For copper alloys, provide type and alloy as recommended by producer of metal to be brazed and as required for color match, strength, and compatibility in fabricated items.
 - C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
 - D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
 - E. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.
 - F. Shop Primers: Provide primers that comply with **[Section 09 91 13 "Exterior Painting."] [Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings.]**
 - G. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
 - H. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
 - I. Shop Primer for Galvanized Steel: **[Cementitious galvanized metal primer complying with MPI#26] [Vinyl wash primer complying with MPI#80] [Water-based galvanized metal primer complying with MPI#134]**.
 - J. Intermediate Coats and Topcoats for Steel: Provide products that comply with **[Section 09 91 13 "Exterior Painting."] [Section 09 91 23 "Interior Painting."] [Section 09 96 00 "High-Performance Coatings.]**

- K. Epoxy Intermediate Coat for Steel: Complying with MPI#77 and compatible with primer and topcoat.
- L. Polyurethane Topcoat for Steel: Complying with MPI#72 and compatible with undercoat.
- M. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.14 FABRICATION, GENERAL

- A. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly.
 - 1. Disassemble units only as necessary for shipping and handling limitations.
 - 2. Clearly mark units for reassembly and coordinated installation.
 - 3. Use connections that maintain structural value of joined pieces.
- B. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged.
 - 1. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes.
 - 2. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.
- C. Form decorative metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.
- E. Form simple and compound curves in bars, pipe, tubing, and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.
- F. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- G. Mill joints to a tight, hairline fit. Cope or miter corner joints. Fabricate connections that will be exposed to weather in a manner to exclude water.
- H. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- I. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as needed to receive finish hardware, screws, and similar items unless otherwise indicated.
- J. Comply with AWS for recommended practices in shop **[welding] [and] [brazing]. [Weld] [and] [brazed] behind finished surfaces without distorting or discoloring exposed side. Clean exposed [welded] [and] [brazed] joints of flux, and dress exposed and contact surfaces.**
 - 1. Where **[welding] [and] [brazing]** cannot be concealed behind finished surfaces, finish joints to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Type 1 Welds: no evidence of a welded joint] [Type 2 Welds: completely sanded joint, some**

undercutting and pinholes okay] [Type 3 Welds: partially dressed weld with spatter removed] [Type 4 Welds: good quality, uniform undressed weld with minimal splatter].

- K. Provide castings that are sound and free of warp, cracks, blowholes, or other defects that impair strength or appearance. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks.

2.15 FABRICATION OF DECORATIVE WINDOW SECURITY BARS

- A. Fabricate decorative window grilles to designs indicated from steel bars and shapes of sizes and profiles indicated. Form steel bars by bending, forging, coping, mitering, and welding.
- B. Welding: Interconnect grille members with full-length, full-penetration welds unless otherwise indicated. Use welding method that is appropriate for metal and finish indicated and that develops full strength of members joined. Finish exposed welds and surfaces smooth, flush, and blended to match adjoining surfaces.
- C. Brackets, Fittings, and Anchors: Provide wall brackets, fittings, and anchors to connect decorative window grilles to other work unless otherwise indicated.
1. Furnish inserts and other anchorage devices to connect decorative window grilles to concrete and masonry work. Coordinate anchorage devices with supporting structure.
 2. Fabricate anchorage devices that are capable of withstanding loads indicated.

2.16 DECORATIVE MECHANICAL GRILLES

- A. Fabricate decorative grilles from perforated **[aluminum] [brass] [bronze] [stainless steel] [steel]** sheet or plate of thickness, size, and pattern indicated. Form perforations by punching, cutting, or drilling to produce openings of sizes and shapes indicated. Roll, press, and grind perforated metal to flatten and to remove burrs and deformations.
1. Form perforations to match existing grilles.
 2. Drawings indicate perforated metal patterns required and are based on products of one manufacturer. Perforated metal patterns produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.
- B. Drill and countersink grilles for mounting screws at 2 inches from corners and at 10 inches or less o.c. Provide units with oval-head **[wood] [self-tapping machine]** screws.
- C. Fabricate grille frames from extruded **[aluminum] [brass] [bronze] [stainless steel] [steel]** of profiles and to sizes and shapes indicated. Miter frame members at corners and connect with concealed splice plates **[welded] [brazed]** to back of frames.
1. Secure grilles in frames with 0.5-inch-long **[welds] [brazing]** along perimeter of grilles at 4 inches o.c.
 2. Provide frame profiles to match existing frames.
 3. Drawings indicate frame profiles required and are based on products of one manufacturer. Similar frame profiles produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.
- D. Drill and countersink frames for mounting screws at 4 inches from corners and at 16 inches or less o.c. Provide units with oval-head **[wood] [self-tapping machine]** screws.

2.17 FABRICATION OF CUSTOM DOOR PULLS

- A. Fabricate custom door pulls from **[brass] [bronze] [stainless steel]** bar stock of profile indicated, fabricated to shapes indicated.
1. Form curves by bending to produce uniform curvature of radii indicated; maintain profile of member throughout entire bend without buckling, twisting, or otherwise deforming exposed surfaces.
 2. Where radii of bends are too small to avoid buckling, grind bars after bending to restore original profile.
 3. Drill and tap door pulls to receive through bolts for attachment to doors.
- B. Fabricate backing plates for custom door pulls from 1/8-inch **[brass] [bronze] [stainless steel]** sheet.
1. Cut to shape indicated and bevel edges at a 45-degree angle for one-half thickness of metal.
 2. Drill and countersink holes where indicated for screws and bolts.
- C. Provide units with oval-head through bolts for mounting pulls and with oval-head wood screws for mounting backing plates.

2.18 FABRICATION OF COMBINATION HALL PUSH-BUTTON STATIONS

- A. Fabricate units of **[brass] [bronze] [stainless steel]** to comply with details indicated. Coordinate with elevator signal equipment to provide integrated, closely fitted assemblies.
1. Fabricate faceplates from 1/8-inch-thick sheet with edges beveled at a 45-degree angle for one-half thickness of metal.
 2. Provide units with rectangular, split-bowl trash receptacle, designed for recess mounting in nominal 4-inch wall depth. Fabricate recessed cabinets, top rings, and split bowls of same metal as face of units; fabricate removable receptacles of drawn aluminum. Nominal dimensions of units are 10 by 10 by 3-1/2 inches in depth.
 3. Provide units with emergency pictorial signs and text, complying with requirements of authorities having jurisdiction, indicating that in fire emergency, elevators should not be used and that stairways should be used instead. Engrave pictorial sign and text into front surface of faceplates to a depth of 1/16 inch with engraving painted red. Make signs 5 inches wide by 8 inches high.
 4. Provide cutouts in faceplates of units for push buttons of elevator hall push-button station **[, card reader,]** and elevator key switches. Coordinate locations and sizes of cutouts so additional faceplate is not required and so faces of push buttons are flush with fronts of faceplates and key switches project beyond faceplate only by depth of bezel.

2.19 FABRICATION OF METAL REVEALS

- A. Fabricate metal reveals for wood paneling from **[3/4-by-3/4-by-1/16-inch extruded-bronze] [3/4-by-3/4-by-0.025-inch brake-formed, stainless steel] [3/4-by-3/4-by-0.015-inch brake-formed titanium]** channels.
1. Drill for mounting screws 6 inches from ends of channels and not more than 24 inches o.c.
 2. Locate mounting screws at same heights for all channels.
 3. Provide **[black-finished,]** hex-socket, wafer-head screws for mounting reveals.

2.20 FABRICATION OF CAST-METAL ROSETTES

- A. Fabricate cast-metal rosettes to design indicated from **[aluminum]** **[brass]** **[bronze]** **[nickel silver]**. Drill and tap castings for threaded mounting studs.
1. Provide custom castings to match design indicated.
 2. Manufacturer's stock castings may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.
 3. Drawings indicate cast-metal rosette designs required and are based on products of one manufacturer. Castings produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.

2.21 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.22 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm]** **[AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm]** **[AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
1. Color: **[Champagne]** **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** <Insert color>.
 2. **[Match Architect's sample]** **[As selected by Architect from full range of industry colors and color densities]**.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.
- E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil for primer and 0.8 mil for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]**.
- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.

- G. Superior-Performance Organic Finish: **[Two] [Three] [Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.

2.23 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
- B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
- D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
- E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
- F. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below):
1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- G. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below):
1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- H. Medium-Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below):
1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- I. Fine-Matte Finish, Lacquered: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below):
1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide) **[, with color matching Architect's sample]**.

- K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: directionally textured, uniform; Chemical Finish: nonetched cleaned, degreased; Chemical Finish: conversion coating, ammonium sulfate) **[, with color matching Architect's sample].**
- L. Statuary Conversion Coating, Bright Relieved and Lacquered: M12-C55-M2x-O6x (Mechanical Finish: matte finish, as cast; Chemical Finish: conversion coating, sulfide; Mechanical Finish: buffed, as specified; Coating: clear, organic, air dried, as specified below) **[, with color matching Architect's sample]:**
1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- M. Blackened, Bright Relieved, and Lacquered: M33-O60-M2x-O6x (Mechanical Finish: directionally textured, coarse satin; Coating: black, air dried; Mechanical Finish: buffed, as specified; Coating: clear, organic, air dried, as specified below) **[, with blackening and buffing matching Architect's sample]:**
1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.

2.24 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain of directional finishes with long dimension of each piece.
- C. Stainless Steel Tubing Finishes:
1. 180-Grit Polished Finish: Uniform, directionally textured finish.
 2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
 3. Polished and Buffed Finish: 320-grit finish followed by buffing [to a high luster finish] [to a mirror-like finish] [to match Architect's sample].
- D. Stainless Steel Sheet and Plate Finishes:
1. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M, No. 2B.
 2. Directional Satin Finish: ASTM A480/A480M, No. 4.
 3. Dull Satin Finish: ASTM A480/A480M, No. 6.
 4. High Luster Finish: ASTM A480/A480M, No. 7.
 5. Mirror Finish: ASTM A480/A480M, No. 8.
- E. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- F. Sputter-Coated Finish: Titanium nitride coating deposited by magnetic sputter-coating process over indicated mechanical finish.
- G. Colored, Oxide-Film Finish: Clear, oxide interference film produced by degreasing and then immersing in a mixture of chromic and sulfuric acids.

1. Product: Subject to compliance with requirements, provide INCO colored stainless steel finish as developed and licensed by International Nickel Co., Ltd.
2. Color: [Match Architect's sample] [As selected by Architect from finisher's full range].

2.25 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize products made from rolled, pressed, and forged steel shapes, castings, plates, bars, and strips indicated to be galvanized to comply with ASTM A123/A123M.
 1. Hot-dip galvanize steel and iron hardware indicated to be galvanized to comply with ASTM A153/A153M.
 2. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 3. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. Preparing Galvanized Items for Shop Priming: After galvanizing, thoroughly clean decorative metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- C. Preparing Nongalvanized Items for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with [SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."] [SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."] [requirements indicated below:]
 1. Exteriors (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Interiors (SSPC Zone 1A): SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- D. Primer Application: Apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
 1. Shop prime uncoated ferrous-metal surfaces with **[universal shop primer] [primers specified in Section 09 90 00 "Painting"]** unless **[zinc-rich primer is]** primers specified in Section 09 96 00 "High-Performance Coatings" are indicated.
 2. Do not apply primer to galvanized surfaces.
- E. Shop-Painted Finish: Comply with [Section 09 90 00 "Painting."] [Section 09 96 00 "High-Performance Coatings."]
 1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].
- F. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
 1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].
- G. Powder-Coat Finish, Nongalvanized: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:
 1. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

2. Treat prepared metal with iron-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils.
 4. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].
- H. Powder-Coat Finish, Galvanized: Prepare, treat, and coat galvanized metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
 2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils.
 4. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].

2.26 TITANIUM FINISHES

- A. General: Fabricate items from finished titanium stock, taking care not to damage finish during fabrication. Protect finish as needed during fabrication by applying a strippable, temporary protective covering.
- B. Dull Matte Finish: Pickled and annealed.
- C. Bright Matte Finish: Vacuum annealed.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative metal.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Provide anchorage devices and fasteners where needed to secure decorative metal to in-place construction.
- B. Perform cutting, drilling, and fitting required to install decorative metal. Set products accurately in location, alignment, and elevation, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.
- C. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of decorative metal, restore finishes to eliminate evidence of such corrective work.

- D. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
 - E. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.
 - F. Restore protective coverings that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.
 - 1. Retain protective coverings intact; remove coverings simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.
 - G. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding and requirements for welding and for finishing welded connections in "Fabrication, General" Article. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - H. Field Brazing: Comply with requirements for brazing and for finishing brazed connections in "Fabrication, General" Article. Braze connections that are not to be left as exposed joints but cannot be shop brazed because of shipping size limitations.
 - I. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- 3.03 INSTALLATION OF DECORATIVE WINDOW SECURITY BARS
- A. Fasten security bar frames to concrete and masonry walls with cast-in-place or post-installed anchors. Peen exposed threads of anchors to prevent removal of security bars.
- 3.04 INSTALLATION OF DECORATIVE MECHANICAL GRILLES
- A. Mount decorative grilles at heights and in positions indicated, adjusting ductwork to be centered on grilles if any.
 - 1. Secure to framing and blocking with specified fasteners.
 - 2. On marble, brick, and other solid surfaces, secure with wood screws in plastic plugs.
- 3.05 INSTALLATION OF DECORATIVE-METAL-CLAD, HOLLOW-METAL DOORS AND FRAMES
- A. Install doors and frames to comply with requirements specified in Section 08 11 13 "Hollow Metal Doors and Frames."
- 3.06 INSTALLATION OF CUSTOM DOOR PULLS
- A. Install door pulls at heights and locations shown. Install with backing plates on both sides of doors. Fasten backing plates to doors with oval-head **[wood]** **[self-tapping metal]** screws and secure pulls through doors and backing plates with oval-head machine screws.

3.07 INSTALLATION OF COMBINATION HALL PUSH-BUTTON STATIONS

- A. Coordinate installation of combination hall push-button stations with installation of related elevator signal equipment components. Secure units in place with faceplate overlapping surrounding wall finish and drawn into contact with surrounding wall finish at entire perimeter of faceplate.

3.08 INSTALLATION OF METAL REVEALS AT WOOD PANELING

- A. Install metal reveals between wood panels as paneling is installed. Secure to wood grounds with specified screws.

3.09 INSTALLATION OF CAST-METAL ROSETTES AT MARBLE JOINTS

- A. Install cast-metal rosettes at intersections of marble joints where indicated. Install only after marble work is complete and joints are grouted. Secure to wall by drilling a 3/4-inch-round hole at intersection of marble joints and by filling hole with molding plaster into which threaded stud is embedded. Angle drill and rotate so bottom of hole is larger than at surface.
 - 1. Secure rosettes in place with masking tape until plaster sets. After plaster has set, remove masking tape and adhesive residue.

3.10 CLEANING AND PROTECTION

- A. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
- B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 09 96 00 "High-Performance Coatings".
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- E. Protect finishes of decorative metal from damage during construction period with temporary protective coverings approved by decorative metal fabricator. Remove protective covering at time of Substantial Completion.
- F. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 05 73 13

GLAZED DECORATIVE METAL RAILINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Glazed decorative metal railings.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood blocking for anchoring railings.

1.02 DEFINITIONS

- A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor and exterior deck areas and for pedestrian guidance and support, visual separation, or wall protection.

1.03 COORDINATION AND SCHEDULING

- A. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.05 ACTION SUBMITTALS

A. Product Data:

1. Metal railings assembled from standard components.
2. Glass products.
3. Glazing cement and accessories for structural glass railings.
4. Sealant and accessories for structural glass railings.
5. Fasteners.
6. Wood rails.
7. Lacquer for copper alloys.
8. Shop primer.
9. Bituminous paint.
10. Nonshrink, nonmetallic grout.

11. Anchoring cement.
- B. Shop Drawings: Include plans, elevations, sections, and attachment details.
 - C. Samples for Initial Selection: For products involving selection of color, texture, or design [, **including mechanical finishes**].
 - D. Samples for Verification: For each type of exposed finish required.
 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 2. Base channel.
 3. Each type of glass and glass edge required.
 4. Fittings and brackets.
 5. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, [**structural glass balusters,**] [**and**] [**glass-infill panels**]. Show method of finishing members at intersections. Samples need not be full height.
 - E. Delegated Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.06 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For [professional engineer] [testing agency].
 - B. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.
 - C. Product Test Reports: For tests performed by a qualified testing agency, in accordance with ASTM E894, ASTM E935, ASTM E2353, and ASTM E2358.
 - D. Evaluation Reports: From ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.
 1. For glazed decorative metal railings.
 2. For post-installed anchors.
 - E. Preconstruction test reports.
- 1.07 QUALITY ASSURANCE
- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 1. Build mockups as indicated on Drawings.
 2. Build mockups for each form and finish of glass-infill panel railing consisting of two posts, top rail, handrail, glass-infill panel, and anchorage system components that are full height and are not less than 24 inches in length.
 3. Build mockups for each form and finish of structural glass railing consisting of top rail, structural glass, base channel, and anchorage system components that are full height and are not less than 24 inches in length.

4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups. Payment for these services will be made **[by Owner] [from the testing and inspecting allowance, as authorized by Change Orders] [by Contractor]**. Retesting of products that fail to meet specified requirements is to be done at Contractor's expense.
 1. Build laboratory mockups at testing agency facility; use personnel, materials, and methods of construction that will be used at Project site.
 2. Test railings in accordance with ASTM E894, ASTM E935, ASTM E2353, and ASTM E2358.
 3. Notify Architect **[seven] <Insert number>** days in advance of the dates and times when laboratory mockups will be tested.

1.09 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

- A. Manufacturer's Special Warranty for Laminated Glass: Glazed decorative metal railing manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 1. Warranty Period: **[Five] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design glazed decorative metal railings, including attachment to building construction.
- B. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
 1. Aluminum: The lesser of minimum yield strength divided by 1.65, or minimum ultimate tensile strength divided by 1.95.
 2. Copper Alloys: 60 percent of minimum yield strength.
 3. Stainless Steel: 60 percent of minimum yield strength.

4. Steel: 72 percent of minimum yield strength.
 5. Glass: 25 percent of mean modulus of rupture (50 percent probability of breakage), as listed in "Mechanical Properties" in AAMA CW-12, "Structural Properties of Glass."
- C. Structural Performance: Railings, including attachment to building construction, are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Structural Glass Railings and Glass-Infill Panels:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.
 3. For structural glass railings, support each section of top rail **[and handrail]** by a minimum of three glass panels or by other means so railings will remain in place if any one glass panel fails.
 - a. Support top rail **[and handrail]** ends such that railings remains in place if end glass panel fails.
- D. Wind Loads: For exterior glazed decorative metal railings, capable of withstanding the following wind loads in accordance with the IBC and ASTM E1300:
1. Wind Load: **[As indicated on Drawings]** <Insert wind load>.
- E. Windborne-Debris-Impact Resistance: Exterior glazed decorative metal railings passing ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone **[1]** **[2]** **[3]** **[4]** for **[basic]** **[enhanced]** protection.
1. Large-Missile Test: For exterior glazing located within **[30 feet]** <Insert dimension> of grade.
 2. Small-Missile Test: For exterior glazing located between 30 feet and **[60 feet]** <Insert dimension> above grade.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces]** <Insert temperature change>.
- 2.02 GLAZED DECORATIVE METAL RAILINGS
- A. Source Limitations for Laminated Glass: Obtain from single source from single manufacturer.
 - B. Source Limitations for Decorative Metal Railing Components: Obtain from single source from single manufacturer for each component and installation method.

- C. Product Options: Information on Drawings and in the Specifications establishes requirements for railing system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.03 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

2.04 ALUMINUM

- A. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- B. Extruded Bars and Shapes, Including Extruded Tube: ASTM B221, Alloy 6063-T5/T52.
- C. Extruded Structural Pipe and Round Tube: ASTM B429/B429M, Alloy 6063-T6.
1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- D. Drawn Seamless Tubing: ASTM B210, Alloy 6063-T832.
- E. Plate and Sheet: ASTM B209, [**Alloy 5005-H32**] [**Alloy 6061-T6**].
- F. Die and Hand Forgings: ASTM B247, Alloy 6061-T6.
- G. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.05 STAINLESS STEEL

- A. Tubing: ASTM A554, [**Grade MT 304**] [**Grade MT 316**].
- B. Pipe: ASTM A312/A312M, [**Grade TP 304**] [**Grade TP 316**].
- C. Castings: ASTM A743/A743M, [Grade CF 8 or Grade CF 20] [Grade CF 8M or Grade CF 3M].
- D. Sheet, Strip, Plate, and Flat Bar: ASTM A666 or ASTM A240/A240M, [**Type 304**] [**Type 316**].
- E. Bars and Shapes: ASTM A276, [**Type 304**] [**Type 316**].

2.06 STEEL AND IRON

- A. Tubing: [ASTM A500/A500M (cold formed)] [or] [ASTM A513/A513M].
- B. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.

2.07 COPPER ALLOYS

- A. Copper and Copper Alloys, General: Provide alloys indicated and with temper to suit application and forming methods, but with strength and stiffness not less than Temper H01 (quarter hard) for plate, sheet, strip, and bars and Temper H55 (light drawn) for tube and pipe.
- B. Bronze Extruded Shapes: ASTM B455, Alloy UNS C38500 (architectural bronze).
- C. Brass Extruded Shapes: ASTM B249/B249M, Alloy UNS C36000 (free-cutting brass).
- D. Nickel Silver Extruded Shapes: ASTM B249/B249M, Alloy UNS C79600.
- E. Bronze Seamless Pipe: ASTM B43, Alloy UNS C23000 (red brass, 85 percent copper).
- F. Bronze Seamless Tube: ASTM B135/B135M Alloy UNS C23000 (red brass, 85 percent copper).
- G. Brass Seamless Tube: ASTM B135/B135M Alloy UNS C26000 (cartridge brass, 70 percent copper).
- H. Copper Seamless Tube: ASTM B75/B75M, Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).
- I. Bronze Castings: [Composition bronze castings complying with ASTM B62, Alloy UNS C83600 (85-5-5-5 or No. 1 composition commercial red brass)] [or] [sand castings complying with ASTM B584, Alloy UNS C86500 (No. 1 manganese bronze)].
- J. Brass Castings: Sand castings complying with ASTM B584, Alloy UNS C85200 (high-copper yellow brass).
- K. Copper Castings: ASTM B824, with a minimum of 99.9 percent copper.
- L. Nickel Silver Castings: ASTM B584, Alloy UNS C97300 (12 percent leaded nickel silver).
- M. Bronze Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper).
- N. Brass Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- O. Copper Plate, Sheet, Strip, and Bars: ASTM B152/B152M, Alloy UNS C11000 (electrolytic tough pitch copper) or Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).

2.08 GLASS AND GLAZING PRODUCTS, GENERAL

- A. Glazing Publications: Comply with written instructions of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 - 1. NGA/GANA Publications: ["**GANALaminated Glazing Reference Manual**" and]"GANA Glazing Manual."
- B. Safety Glazing: Glazing is to comply with 16 CFR 1201, Category II.

- C. Safety Glazing Labeling: Permanently mark glass with certification label of **[the SGCC] [the SGCC or another certification agency acceptable to authorities having jurisdiction] [or] [manufacturer]**. Label is to indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- D. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.
- E. Low-Iron Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3; and with visible light transmission of not less than 91 percent.
- F. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.
- G. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Class 1 and low-iron clear, or Class 2 (tinted) as indicated, Quality-Q3.
- H. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
- I. Ceramic-Coated Glass: Heat-strengthened float glass, Condition C; with ceramic enamel applied by silk-screened process; complying with Specification No. 95-1-31 in GANA's "Engineering Standards Manual" and with other requirements specified.
- J. Bent Glass: ASTM C1464, [Kind BFT (bent, tempered)] [Kind BHS, (bent, heat strengthened)] [Kind BL, (bent, laminated)].
- K. Glazing Cement and Accessories for Structural Glass Railings: Glazing cement, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal base channels.
- L. Sealant and Accessories for Structural Glass Railings: Sealant, gaskets, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal base channels.
- M. Glazing Gaskets for Glass-Infill Panels: Glazing gaskets and related accessories as recommended or supplied by railing manufacturer for installing glass-infill panels in post-supported railings.

2.09 GLASS HANDRAILS AND GUARDS

- A. Tempered Glass Handrails and Guards: Provide products that have been tested for surface and edge compression in accordance with ASTM C1048 and for impact strength in accordance with 16 CFR 1201 for Category II materials.
 - 1. Glass Color: **[Clear] [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
 - 2. Thickness for Structural Glass Balusters: As required by structural loads, but not less than **[12.0] [19.0]** mm.
 - 3. Thickness for Glass-Infill Panels: As required by structural loads, but not less than **[6.0] [10.0]** mm.
 - 4. Glass Thickness: As indicated on Drawings.

- B. Laminated Glass Handrails and Guards: ASTM C1172, Type II with two plies of glass bonded together by an interlayer.
1. Construction: Laminate glass with [**polyvinyl butyral interlayer**] [or] [**ionoplast polymer interlayer**] to comply with interlayer manufacturer's written instructions.
 2. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 3. Kind: [**LHS (laminated heat strengthened)**] [**LT (laminated tempered)**] [**As indicated**].
 4. Glass Color: Inner-ply [**clear**] [**low-iron clear**] [**blue**] [**blue-green**] [**bronze**] [**green**] [**gray**] <Insert color>; outer-ply [**clear**] [**low-iron clear**] [**blue**] [**blue-green**] [**bronze**] [**green**] [**gray**] <Insert color>.
 5. Ceramic Coating Color and Pattern: [**As selected by Architect from manufacturer's full range**] <Insert manufacturer's color and pattern designation>, applied to [**inner**] [**outer**] glass ply.
 6. Interlayer Color: [**Clear**] [**Blue-green**] [**Bronze light**] [**Gray**] <Insert color>.
 7. Interlayer Color and Pattern: [**As selected by Architect from manufacturer's full range**] [**Match**] [**Provide**] <Insert manufacturer's color and pattern designation>.
 8. Glass Plies for Structural Glass Balusters: Thickness required by structural loads, but not less than [**6.0**] [**8.0**] mm thick each.
 9. Glass Plies for Glass-Infill Panels: Thickness required by structural loads, but not less than [**3.0**] [**4.0**] [**5.0**] mm each.
- C. Windborne-Debris-Impact-Resistant Laminated Glass Guards: ASTM C1172, Type II with two plies of glass bonded together with an interlayer.
1. Construction: Laminate glass with [**polyvinyl butyral interlayer**] [or] [**ionoplast polymer interlayer**] to comply with interlayer manufacturer's written instructions.
 2. Interlayer Thickness: [**0.060 inch**] [**0.090 inch**].
 3. Kind: [**LHS (laminated heat strengthened)**] [**LT (laminated tempered)**] [**As indicated**].
 4. Glass Color: Inner-ply [**clear**] [**low-iron clear**] [**blue**] [**blue-green**] [**bronze**] [**green**] [**gray**] <Insert color>; outer-ply [**clear**] [**low-iron clear**] [**blue**] [**blue-green**] [**bronze**] [**green**] [**gray**] <Insert color>.
 5. Ceramic Coating Color and Pattern: [**As selected by Architect from manufacturer's full range**] <Insert manufacturer's color and pattern designation>, applied to [**inner**] [**outer**] glass ply.
 6. Interlayer Color: [**Clear**] [**Blue-green**] [**Bronze light**] [**Gray**] <Insert color>.
 7. Interlayer Color and Pattern: [**As selected by Architect from manufacturer's full range**] [**Match**] [**Provide**] <Insert manufacturer's color and pattern designation>.
 8. Glass Plies for Structural Glass Balusters: Thickness required by structural loads, but not less than [**6.0**] [**8.0**] [**10**] mm thick each.
 9. Glass Plies for Glass-Infill Panels: Thickness required by structural loads, but not less than [**4.0**] [**5.0**] mm each.

2.10 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
1. Aluminum Components: [**Type 304**] [**Type 316**] stainless steel fasteners.

2. Stainless Steel Components: **[Type 304] [Type 316]** stainless steel fasteners.
 3. Copper-Alloy (Bronze) Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed; muntz metal (Alloy 280) fasteners where exposed]**.
 4. Copper-Alloy (Brass) Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed; brass (Alloy 260 or Alloy 360) fasteners where exposed]**.
 5. Dissimilar Metals: **[Type 304] [Type 316]** stainless steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated **[and capable of withstanding design loads]**.
- C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless [otherwise indicated] [exposed fasteners are unavoidable] [exposed fasteners are the standard fastening method for railings indicated].
1. Provide **[Phillips] [tamper-resistant] [square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to design load, in accordance with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193[**or ICC-ES AC308**].
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/ASTM F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1] [Group 2]** stainless steel bolts, ASTM F593, and nuts; ASTM F594.

2.11 MISCELLANEOUS MATERIALS

- A. Handrail Brackets: [Cast aluminum,] [Cast stainless steel,] [Cast bronze,] [Cast brass,] [Cast copper,] [Cast nickel-silver,] center of rail **[2-1/2 inches] [3-1/8 inches]** <Insert dimension> from face of structural glass balusters.
- B. Wood Rails:
1. Clear, straight-grained hardwood rails secured to **[recessed] [exposed]** metal subrail.
 - a. Species: **[Ash] [Cherry] [Red oak] [Walnut] [White oak]** <Insert species>.
 - b. Finish: **[Manufacturer's standard] [Transparent polyurethane] [Penetrating oil] [Acrylic impregnated]**.
 - c. Staining: **[None] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert description or manufacturer's name and product designation>.
 - d. Profile: **[Square, 1-3/4 by 1-3/4 inches with edges eased to 1/4-inch radius] [Rectangular, 1-3/4 by 5 inches with edges eased to 1/4-inch radius] [Round, 2-inch diameter] [As indicated]** <Insert description>.
 2. Hardwood rails complying with Section 06 40 23 "Interior Architectural Woodwork."
- C. Lacquer for Copper Alloys: Clear acrylic lacquer specially developed for coating copper-alloy products.

- D. Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MP#79.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- F. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- G. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Anchoring Cement: **[At exterior locations] [and] [where indicated]** provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.12 FABRICATION OF METAL RAILINGS

- A. Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage [, **but not less than that required to support structural loads**].
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- H. Form changes in direction as follows:
 - 1. As detailed.
 - 2. **[By bending] [or] [by inserting prefabricated elbow fittings]**.
 - 3. **[By flush bends] [or] [by inserting prefabricated flush-elbow fittings]**.
 - 4. **[By radius bends of radius indicated] [or] [by inserting prefabricated elbow fittings of radius indicated]**.

5. By bending to smallest radius that will not result in distortion of railing member.
 - I. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
 - J. Close exposed ends of hollow railing members with prefabricated end fittings.
 - K. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, handrail brackets, miscellaneous fittings, and anchors to interconnect railing members to other work where indicated.
 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.
 - L. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.
 - M. For railing posts set in concrete, provide **[steel] [stainless steel]** sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure.
- 2.13 FABRICATION OF GLASS PANELS AND BALUSTERS
- A. Fabricate glass to sizes and shapes required; provide for proper edge clearance and bite on glazing panels.
 - B. Glass-Infill Panels: Provide [tempered] [laminated, heat-strengthened] [laminated, tempered] glass-infill panels [for both straight and curved sections].
 1. Edge Finish: **[Clean-cut or flat-grind edges to produce smooth, square edges with slight chamfers at junctions of edges and faces] <Insert edge finishes>**.
 - C. Structural Glass Balusters: Provide [tempered] [laminated, heat-strengthened] [laminated, tempered] structural glass balusters [for both straight and curved sections].
 1. Edge Finish: **[Grind smooth and flat polish exposed edges of glass, including those at open joints, to produce smooth, square edges with glass edge finishes]**.
 2. Factory-bond structural glass balusters to aluminum base and top-rail channels in railing manufacturer's plant using **[glazing cement] [sealant]** to comply with manufacturer's written instructions [, **unless field glazing is standard with manufacturer]**.
 3. Fabricate structural glass balusters to maintain equal length glass widths and uniform spacing of **[1/2 inch] <Insert spacing>** between glass balusters.
- 2.14 METAL FINISH REQUIREMENTS, GENERAL
- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.15 ALUMINUM FINISHES

- A. Mechanical Finish: AA-M3x; sand top rails, handrails, and intermediate rails in one direction only, parallel to length of railing, with 120- and 320-grit abrasive. After installation, polish railings with No. 0 steel wool immersed in paste wax, then rub to a luster with a soft dry cloth.
- B. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
- C. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
 - 1. Color: **[Champagne] [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>**.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil for primer and 0.8 mil for topcoat.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- F. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.

- G. Superior-Performing Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [**for seacoast and severe environments**].
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range**] <Insert color and gloss>.
- H. Superior-Performing Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [**for seacoast and severe environments**].
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range**] <Insert color and gloss>.
- I. Superior-Performing Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range**] <Insert color and gloss>.
- J. Superior-Performing Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range**] <Insert color and gloss>.
- 2.16 STAINLESS STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Stainless Steel Tubing Finishes:
1. 180-Grit Polished Finish: Uniform, directionally textured finish.
 2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
 3. Polished and Buffed Finish: 320-grit finish followed by buffing [**to a high luster finish**] [**to a mirrorlike finish**] [**to match Architect's sample**].
- D. Stainless Steel Sheet, Strip, Plate, and Bar Finishes:

1. Directional Satin Finish: ASTM A480/A480M, No. 4.
2. High Luster Finish: ASTM A480/A480M, No. 7.
3. Mirror Finish: ASTM A480/A480M, No. 8.

2.17 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system for designating copper-alloy finish systems defined in NAAMM/NOMMA 500, "Metal Finishes Manual for Architectural and Metal Products."
- B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
- D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
- E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
- F. Lacquered Buffed Finish: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- G. Lacquered Hand-Rubbed Finish: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- H. Lacquered Medium-Satin Finish: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- I. Lacquered Fine-Matte Finish: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide).
 1. Color: Match Architect's sample.

- K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: directionally textured, uniform; Chemical Finish: nonetched cleaned, degreased; Chemical Finish: conversion coating, ammonium sulfate) [, **with color matching Architect's sample**].

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

- A. Comply with Drawings and manufacturer's written instructions for installing glazed decorative metal railings, accessories, and other components.
- B. Windborne-Debris Resistance: Anchor glazed decorative metal railings to structure using anchoring method, fastener type, and fastening frequency identical to that used in windborne-debris-resistance testing.
- C. Perform cutting, drilling, and fitting required for installing metal railings.
1. Fit exposed connections together to form tight, hairline joints.
 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 4. Do not weld, cut, or abrade surfaces of metal railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 5. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
1. Coat concealed surfaces of [**aluminum**] [**and**] [**copper alloys**] that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with [**shop primer**] [**bituminous paint**].
- E. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- F. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.02 METAL RAILING CONNECTIONS

- A. Nonwelded Connections:
1. Use mechanical or adhesive joints for permanently connecting railing components.
 2. Use wood blocks and padding to prevent damage to railing members and fittings.
 3. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.

- B. Expansion Joints: Install expansion joints at locations indicated, but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches of post.

3.03 METAL ANCHORING POSTS

- A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted in sleeves, fill annular space between post and sleeve with [**nonshrink, nonmetallic grout**] [**or**] [**anchoring cement**], mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with [**nonshrink, nonmetallic grout**] [**or**] [**anchoring cement**], mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, [welded to post after placing anchoring material] [attached to post with setscrews].
- D. Leave anchorage joint exposed with [**1/8-inch** buildup, sloped away from post] [anchoring material flush with adjacent surface].
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For aluminum railings, attach posts as indicated using fittings designed and engineered for this purpose.
 - 2. For copper-alloy railings, attach posts as indicated using fittings designed and engineered for this purpose.
 - 3. For stainless steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.04 INSTALLATION OF GLASS BALUSTERS

- A. Structural Glass Railings:
 - 1. Install assembly to comply with railing manufacturer's written instructions.
 - 2. Attach base channel to building structure, then insert and connect factory-fabricated and -assembled glass balusters [**if glass was bonded to base and top-rail channels in factory**].
 - 3. For field-assembled balusters, attach base channel to building structure, insert glass in base channel, and bond with [**glazing cement**] [**sealant**].
 - a. Support glass balusters in base channel at quarter points with channel-shaped setting blocks that also act as shims to maintain uniform space for glazing cement.
 - b. Fill remaining space in base channel with [**glazing cement**] [**sealant**] for uniform support of glass.
 - 4. Adjust spacing of glass balusters so gaps between balusters are equal before securing in position.

5. Erect glass railings under direct supervision of manufacturer's authorized technical personnel.

B. Post-Supported Railings with Glass-Infill Panels:

1. Install assembly to comply with railing manufacturer's written instructions and with requirements in other Part 3 articles.
2. Erect posts and other metal railing components, and set factory-cut glass-infill panels.
3. Do not cut, drill, or alter glass-infill panels in field. Protect edges from damage.

3.05 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and to prepare test reports. Payment for these services will be made **[by Owner] [from the testing and inspecting allowance, as authorized by Change Orders]**.
- B. Extent and Testing Methodology: Testing agency will randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Test railings in accordance with ASTM E894, ASTM E935, ASTM E2353, and ASTM E2358 for compliance with performance requirements.
- C. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Architect and comply with specified requirements.
- D. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

3.06 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with water and soap, rinsing with clean water, and wiping dry.
- B. Clean copper alloys in accordance with metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
- D. Clean wood rails by wiping with a damp cloth and then wiping dry.

3.07 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

DIVISION 06
WOOD AND COMPOSITES

This page intentionally left blank

SECTION 06 10 53

MISCELLANEOUS CARPENTRY

PART 1 GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Wood nailers and blockings.
 - 2. Rough hardware.
 - 3. Plywood backboards for electrical and telephone equipment.
- B. Related requirements: Painting plywood backboards.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - 1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 - 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - 3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
 - 4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
- B. Material Certificates:
 - 1. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
 - 2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.

1.3 QUALITY ASSURANCE

- A. Fire-retardant wood products shall be manufactured under the independent third party inspection of UL
- B. Follow-Up Service and each piece shall bear the UL classified mark indicating the extended ASTM E 84 test
- C. Each piece shall be labeled kiln dried after treatment (KDAT).

1.4 HANDLING

- A. Procedure: In accordance with AWWPA recommendations for storage and protection of pressure-treated wood.
- B. Do not store materials in wet or damp areas.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Nailers and blockings:
 - 1. No. 1 or No. 2 grade Douglas fir, S4S, seasoned to moisture content of 19 percent maximum and stamped S-Dry, graded in compliance with WCLIB Grading Rules.
 - 2. If specifications for pressure treatment state the maximum percentages of moisture content at the time of treatment, comply with those requirements in lieu of the above.
- B. Plywood:
 - 1. Telephone and electrical equipment backing panels: DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, thickness indicated or, if not indicated, not less than 1/2 inch thick.
 - 2. Elsewhere: Softwood plywood APA, Exterior Grade, C-C Plugged.
- C. Rough hardware:
 - 1. General: Use hot-dip galvanized (not electro-plated) Type 316 stainless steel fasteners complying with G185 to attach pressure-treated wood.
 - 2. For fastening lumber-to-lumber: Cement-coated or annular threaded nails of sufficient length to penetrate a minimum of 1-1/4-inch into adjoining members, or stove or lag bolts used with washers.
 - 3. For fastening plywood-to-lumber: Ring shank or annular threaded nails; 8d for 1/2-inch plywood and 10d for 3/4-inch plywood.
 - 4. For fastening plywood or lumber to steel: Minimum #10 galvanized full threaded screws driven thru 5/8-inch diameter steel washers.
 - 5. For fastening plywood or lumber to concrete or masonry: Corrosion-resistant drilled expansion type anchors or power-driven anchors by Hilti Fastening Systems, Molly Division of USM Corp., Redhead, or equal, capable of resisting a withdrawal force of 400 lb. each without failure.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

- A. Preservative Treatment by Pressure Process: AWWPA U1, Use categories as follows:
 - 1. UC1: Interior construction not in contact with ground or subject to moisture. Include [all rough carpentry.] [the following items:]
 - 1) Wood sills, sleepers, blocking, [furring,] [stripping,] and similar concealed members in contact with masonry or concrete.
 - 2) Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 - 3) Wood floor plates that are installed over concrete slabs-on-grade.
 - 4) Wood furniture.
 - 5) Wood millwork.
 - 6) <Insert item>.

2. UC2: Interior construction not in contact with ground but may be subject to moisture. Include [all rough carpentry.] [the following items:]
 - a. Wood sills, sleepers, blocking, [furring,] [stripping,] and similar concealed members in contact with masonry or concrete.
 - b. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 - c. Wood floor plates that are installed over concrete slabs-on-grade.
 - d. Wood millwork.
 - e. Wood flooring.
 - f. <Insert item>.
3. UC3A (Commodity Specification A): Coated sawn products in exterior construction not in contact with ground but exposed to all weather cycles including intermittent wetting. Include [all rough carpentry.] [the following items:]
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
 - c. Wood siding and trim.
 - d. <Insert item>.
4. UC3A (All Other Commodity Specifications): Coated products excluding sawn products in exterior construction not in contact with ground, exposed to all weather cycles but protected from liquid water. Include [all rough carpentry.] [the following items:]
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
 - c. Wood floor plates that are installed over concrete slabs-on-grade.
 - d. Wood siding and trim.
 - e. Wood sheathing.
 - f. <Insert item>.
5. UC3B (Commodity Specification A): Uncoated sawn products in exterior construction not in contact with ground, exposed to all weather cycles including intermittent wetting but with sufficient air circulation for wood to dry. Excludes sawn products not in contact with ground but with ground contact-type hazards. Include [all rough carpentry.] [the following items:]
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
 - c. Wood decking, railings, and joists and beams for decks that are not critical to the performance and safety of the entire system/construction and that are in locations easily accessible for maintenance, repair, or replacement.

- d. <Insert item>.
6. UC3B (All Other Commodity Specifications): Uncoated products excluding sawn products in exterior construction not in contact with ground, exposed to all weather cycles including prolonged wetting. Include [all rough carpentry.] [the following items:]
- a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
 - c. <Insert item>.
7. UC4A (Commodity Specification A): Non-critical sawn products in contact with ground and exposed to all weather cycles including continuous or prolonged wetting, and sawn products not in contact with ground but with ground contact-type hazards or that are critical or hard to replace. Include [all rough carpentry.] [the following items:]
- a. Wood framing members that are less than 6 inches (152 mm) above the ground.
 - b. Joists and beams when they are difficult to maintain, repair, or replace and are critical to the performance and safety of the entire system/construction.
 - c. <Insert item>.
8. UC4A (All Other Commodity Specifications): Non-critical products excluding sawn products in contact with ground and exposed to all weather cycles, normal exposure conditions. Include [all rough carpentry.] [the following items:]
- a. <Insert item>.
9. UC4B (Commodity Specification A): Critical or difficult-to-replace sawn products in contact with ground and exposed to all weather cycles including continuous or prolonged wetting, high decay potential, and salt water splash. Include [all rough carpentry.] [the following items:]
- a. Wood foundations.
 - b. <Insert item>.
10. UC4B (All Other Commodity Specifications): Critical or difficult-to-replace products excluding sawn products in contact with ground and exposed to all weather cycles including high decay potential and salt water splash. Include [all rough carpentry.] [the following items:]
- a. <Insert item>.
11. UC4C (Commodity Specification A): Critical structural sawn products in contact with ground and exposed to all weather cycles including continuous or prolonged wetting, severe environments, and extreme decay potential. Include [all rough carpentry.] [the following items:]
- a. Wood foundation piling.
 - b. <Insert item>.
12. UC4C (All Other Commodity Specifications): Critical structural products excluding sawn products in contact with ground and exposed to all weather cycles including severe environments and extreme decay potential. Include [all rough carpentry.] [the following items:]
- a. Wood foundation piling.
 - b. <Insert item>.

13. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. [Do not use inorganic boron (SBX) for sill plates.]
 14. For exposed items indicated to receive a stained or natural finish, chemical formulations are not to require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
 15. After treatment, redry [boards] [dimension lumber] to 19 percent maximum moisture content.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
1. For exposed lumber indicated to receive a stained or natural finish, [mark end or back of each piece] [or] [omit marking and provide certificates of treatment compliance issued by inspection agency].
- D. Application: Treat [all rough carpentry unless otherwise indicated.] [items indicated on Drawings, and the following:]
1. Retain first subparagraph below if Project includes wood adjacent to roofing or waterproofing.
 2. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 3. Wood sills, sleepers, blocking, [furring,] [stripping,] and similar concealed members in contact with masonry or concrete.
 4. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 5. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
 6. Wood floor plates that are installed over concrete slabs-on-grade.
 7. <Insert item>.

2.3 FIRE-RETARDANT TREATED WOOD

- A. General: Where fire-retardant-treated materials are indicated, materials are to comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
1. Treatment is not to promote corrosion of metal fasteners.
 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.

3. Interior Type A: Treated materials are to have a moisture content of 28 percent or less when tested in accordance with ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.
 4. Design Value Adjustment Factors: Treated lumber is to be tested according to ASTM D5664 and design value adjustment factors are to be calculated according to ASTM D6841. [For enclosed roof framing, framing in attic spaces, and where high temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.]
- C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent. [Kiln-dry plywood after treatment to maximum moisture content of 15 percent.]
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency and other information required by authorities having jurisdiction.
1. For exposed lumber indicated to receive a stained or natural finish, [mark end or back of each piece] [or] [omit marking and provide certificates of treatment compliance issued by testing agency].
- E. For exposed items indicated to receive a stained or natural finish, chemical formulations are not to bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat [all rough carpentry unless otherwise indicated.] [items indicated on Drawings, and the following:]
1. Concealed blocking.
 2. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
 3. Plywood backing panels.
 4. <Insert item>.
- G. General: Where fire-retardant-treated materials are indicated, provide materials that comply with performance requirements in AWWA C20 (lumber) and AWWA C27 (plywood). Identify fire-retardant-treated wood with appropriate classification marking of UL, US Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to AHJ.
- H. Use treatment for which chemical manufacturer publishes physical properties of treated wood after exposure to elevated temperatures, when tested by a qualified independent testing agency according to ASTM D 5664 for lumber and ASTM D 5516 for plywood.
- I. Use treatment free of halogens, sulfates, chlorides, arsenic, ammonium phosphate, formaldehyde, urea formaldehyde, and that does not promote corrosion of metal fasteners.
1. Exterior: Fire-retardant treatment is free of halogens, sulfates, chlorides, ammonium phosphate, and contains no added urea formaldehyde
 - a. "Exterior-Fire-X" by Hoover Treated Wood Products (basis of design), FRX FRT Wood by Arch Wood Protection, or equal.
 - b. Shall be kiln-dried to a maximum moisture content of 19% for lumber and 15% for plywood.
 - c. Plywood shall have a minimum bond durability of Exposure 1 in accordance with US Product Standard PS 1, Construction and Industrial Plywood.
 - d. Grade marked structural lumber treated with EXTERIOR FIRE-X® shall be in accordance with PS 20.

2. Interior: "Type A" fire-retardant with individual surface burning characteristics for the species and products listed under UL Certifications.
 - a. "Pyro-Guard" by Hoover Treated Wood Products, Dricon FRT by Arch Wood Protection, or equal.
 - b. Plywood treated with PYRO-GUARD® shall be manufactured under US Product Standards - PS 1 or PS 2. Panels shall have a minimum bond durability of Exposure 1.
 - c. Grade marked lumber treated with PYRO-GUARD® shall be in accordance with PS 20

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine conditions and measurements affecting the work of this Section at site.
- B. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

- A. Paint backboard panels before installation as specified in Section 09 90 00.

3.3 INSTALLATION

- A. Subdrill holes in pieces where splitting may occur; size holes slightly smaller than diameter of nail.
- B. Do not drive nails closer to edge of lumber than 1/4 length.
- C. Remove lumber split in nailing and replace with sound members.
- D. Make joints accurately and neatly, square, flush and tight.
- E. Install wood screws and lag bolts with complete penetration to head. Bore lead holes equal to root diameter of the screw or bolt. Drive flush or recess with nailer face.
- F. Pressure-treated wood products: Do not rip or mill treated lumber. End cuts, drilling holes and joining cuts are permitted. Plywood may be cut in any direction.
 1. Fire-retardant-treated wood used in structural applications shall be installed in accordance with the conditions and limitations listed in UL ER7002-01.
 2. Use pressure-treated wood where required by Code and as specified above.
 3. Use fire-treated wood where required for blockings and nailers located in metal-framed walls, partitions and ceilings.
 4. Field apply sealing coating to end cut wood members and ripped plywood with a coating that is compatible with the pressure treated wood product and has similar protection properties.
- G. Provide nailers and blockings where indicated and required.
 1. Template and drill to match anchor bolts in steel members, concrete and masonry.

2. Where materials are applied over flush nailer surfaces, use carriage bolts with heads drawn flush into top of nailer or blockings, or counterbore holes to recess washers and heads of nuts.

3.4 ANCHORAGE

A. Fastening lumber or plywood to lumber:

1. Space nails a maximum of 12 inches o.c. and stagger across face of piece. Locate fastener also within 3 inches of each end of piece.
2. Drive nail heads flush with wood surfaces. Nails shall penetrate adjoining piece a minimum of 1-1/4-inch.

B. Fastening lumber or plywood to concrete or to masonry:

1. Space anchors a maximum of 36 inches o.c. and stagger if lumber is more than 5 inches wide.
2. Make anchor heads flat or countersunk flush with surface, but not countersunk more than 1/3 the thickness of piece to be fastened.
3. Anchor withdrawal resistance shall be a minimum of 400 lb. per anchor, or number of fasteners increased accordingly from that specified. Minimum penetration of 1-1/2-inch into concrete or masonry.

C. Fastening lumber or plywood to steel:

1. Space screws a maximum of 24 inches o.c. and stagger if lumber is more than 5 inches wide.
2. Drive screw heads flush with face of plywood or lumber.
3. Anchor shall penetrate a minimum of 1/4 inch through the steel.

3.5 CLEANUP

- A. Comply with the requirements of Division One.
- B. Do not bury wood of any type on the jobsite.

END OF SECTION

SECTION 06 16 00

SHEATHING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wall sheathing.
2. Roof sheathing.
3. Parapet sheathing.
4. Composite nail base insulated roof sheathing.
5. Subflooring and underlayment.
6. Sheathing joint-and-penetration treatment materials.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for plywood backing panels.
2. Section 07 25 00 "Weather Barriers" for water-resistive barrier applied over wall sheathing.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1. Review air-barrier and water-resistant glass-mat gypsum sheathing requirements and installation, special details, transitions, mockups, air-leakage testing, protection, and work scheduling that covers air-barrier and water-resistant glass-mat gypsum sheathing.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Wall sheathing.
2. Roof sheathing.
3. Parapet sheathing.
4. Composite nail base insulated roof sheathing.
5. Subflooring and underlayment.
6. Sheathing joint-and-penetration treatment materials.

B. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
 3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5516.
 4. For products receiving waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 5. For air-barrier and water-resistant glass-mat gypsum sheathing, include manufacturer's technical data and tested physical and performance properties of products.
- C. Shop Drawings: For air-barrier and water-resistant glass-mat gypsum sheathing assemblies.
1. Show locations and extent of sheathing, accessories, and assemblies specific to Project conditions.
 2. Include details for sheathing joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 3. Include details of interfaces with other materials that form part of air barrier.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer [, including list of ABAA-certified installers and supervisors employed by Installer, who work on Project] [and] [testing and inspecting agency].
- B. Product Certificates: From air-barrier and water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.
- C. Product Test Reports: For each air-barrier and water-resistant glass-mat gypsum sheathing assembly, indicating compliance with specified requirements, for tests performed by a qualified testing agency.
- D. Evaluation Reports: For the following, from ICC-ES:
1. Wood-preservative-treated plywood.
 2. Fire-retardant-treated plywood.
 3. Foam-plastic sheathing.
 4. Air-barrier and water-resistant glass-mat gypsum sheathing.
- E. Field quality-control reports.
- 1.05 QUALITY ASSURANCE
- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer of air-barrier and water-resistant glass-mat gypsum sheathing.
1. Installer is to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and is to employ ABAA-certified installers and supervisors on Project.

- B. Mockups: Build mockups to set quality standards for materials and execution [**and for preconstruction testing**].
1. Build integrated mockups of exterior wall assembly [**as indicated on Drawings**] [, **150 sq. ft.**] <Insert requirement>, incorporating backup wall construction, window, storefront, door frame and sill, ties and other penetrations, and flashing to demonstrate crack and joint treatment and sealing of gaps, terminations, and penetrations of air-barrier sheathing assembly.
 - a. Coordinate construction of mockups to permit inspection and testing of sheathing before external insulation and cladding are installed.
 - b. Include junction with roofing membrane [, **building corner condition,**] [**and foundation wall intersection**].
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- C. Testing Agency Qualifications:
1. For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
 2. For testing and inspecting agency providing tests and inspections related to air-barrier and water-resistant glass-mat gypsum sheathing: an independent agency, qualified in accordance with ASTM E329 for testing indicated, and certified by Air Barrier Association of America, Inc.

1.06 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: [**Owner will engage**] [**Engage**] a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier and water-resistant glass-mat gypsum sheathing assemblies are to comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage in accordance with [**ASTM E1186, chamber pressurization or depressurization with smoke tracers**] [**ASTM E1186, chamber depressurization with detection liquids**] <Insert requirement>.
 2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate in accordance with [**ASTM E783**] [or] [**ASTM E2357**].
 3. Notify Architect [**seven**] <Insert number> days in advance of the dates and times when mockups will be tested.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: As tested in accordance with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
- B. Air-Barrier and Water-Resistant Glass-Mat Gypsum Sheathing Performance: Air-barrier and water-resistant glass-mat gypsum sheathing assembly, and seals with adjacent construction, are to be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies are to be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations [, **tie-ins to installed waterproofing**] [, **tie-ins to other installed air barriers**], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

2.02 WOOD PANEL PRODUCTS

- A. Emissions: Products are to meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
- C. Factory mark panels to indicate compliance with applicable standard.

2.03 PRESERVATIVE-TREATED PLYWOOD

- A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2[for interior construction not in contact with ground, Use Category UC3b for exterior construction not in contact with ground, and Use Category UC4a for items in contact with ground].
 - 1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
- B. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
- C. Application: [Treat all plywood unless otherwise indicated] [Treat items indicated on Drawings] [and plywood in contact with masonry or concrete or used with roofing, flashing, vapor barriers, and waterproofing].

2.04 FIRE-RETARDANT-TREATED PLYWOOD

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
 - 1. Use treatment that does not promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.
 - 3. Interior Type A: Treated materials are to have a moisture content of 28 percent or less when tested in accordance with ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.
 - 4. Design Value Adjustment Factors: Treated lumber plywood is to be tested in accordance with ASTM D5516 and design value adjustment factors are to be calculated in accordance with ASTM D6305. Span ratings after treatment are to be not less than span ratings specified. [**For roof sheathing and where high-temperature fire-retardant treatment is indicated, span ratings for temperatures up to 170 deg F are to be not less than span ratings specified.**]
- C. Kiln-dry material after treatment to a maximum moisture content of 15 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- D. Identify fire-retardant-treated plywood with appropriate classification marking of qualified testing agency.
- E. Application: [Treat all plywood unless otherwise indicated.] [Treat plywood indicated on Drawings, and the following:]
 - 1. Roof [**and wall**] sheathing within 48 inches of [**fire**] [**party**] walls.
 - 2. Roof sheathing.
 - 3. Subflooring and underlayment for raised platforms.
 - 4. **<Insert category of plywood items required to be treated>**.

2.05 WALL SHEATHING

- A. Plywood Sheathing, Walls: [DOC PS 1] [Either DOC PS 1 or DOC PS 2], [Exterior, Structural I] [Exterior] [Exposure 1, Structural I] [Exposure 1] sheathing.
 - 1. Span Rating: Not less than [**16/0**] [**20/0**] [**24/0**] [**32/16**].
 - 2. Nominal Thickness: Not less than [**1 1/32 inch**] [**3/8 inch**] [**1/2 inch**].
- B. Oriented-Strand-Board Sheathing, Walls: DOC PS 2, [**Exposure 1, Structural I**] [**Exposure 1**] sheathing.
 - 1. Span Rating: Not less than [**16/0**] [**20/0**] [**24/0**] [**24/16**] [**32/16**].

2. Nominal Thickness: Not less than **[5/16 inch] [3/8 inch] [1/2 inch]**.
- C. Paper-Surfaced Gypsum Sheathing: ASTM C1396/C1396M, gypsum sheathing; with water-resistant-treated core and with water-repellent paper bonded to core's face, back, and long edges.
1. Type and Thickness: **[Regular, 1/2 inch] [Type X, 5/8 inch]** thick.
 2. Edge and End Configuration: **[V-shaped, tongue-and-groove long edges; square ends] [Square]**.
 3. Size: **[24 by 96 inches for horizontal] [48 by 96 inches for vertical] [48 by 108 inches for vertical] [600 by 2400 mm for horizontal] [1200 by 2400 mm for vertical] [1200 by 2750 mm for vertical]** installation.
- D. Glass-Mat Gypsum Sheathing, Walls: ASTM C1177/C1177M.
1. Type and Thickness: **[Regular, 1/2 inch] [Type X, 5/8 inch]** thick.
 2. Size: **[48 by 96 inches] [48 by 108 inches] [48 by 120 inches] [1200 by 2400 mm] [1200 by 2750 mm] [1200 by 3050 mm]** for vertical installation.
- E. Air-Barrier and Water-Resistant Glass-Mat Gypsum Sheathing: ASTM C1177/C1177M, Type X, coated fiberglass mat gypsum sheathing with integral weather-resistant barrier and air barrier complying with ASTM E2178.
1. Thickness: 5/8 inch thick.
 2. Size: **[48 by 96 inches] [48 by 108 inches] [48 by 120 inches] [1200 by 2400 mm] [1200 by 2750 mm] [1200 by 3050 mm]** for vertical installation.
 3. Edges: Square.
 4. Flashing and Transitions Strips: As acceptable to sheathing manufacturer.
 5. Air Permeance: Maximum **[0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft.] <Insert value>** pressure difference when tested in accordance with ASTM E2178.
 6. Vapor Permeance: Minimum **[20 perms] <Insert value>** when tested in accordance with ASTM E96/E96M, Desiccant Method, Procedure A.
 7. Sheathing Assembly Air Leakage: Maximum **[0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft.] <Insert value>** when tested in accordance with ASTM E2357.
 8. Fire Propagation Characteristics: Complies with NFPA 285 testing as part of an approved assembly.
 9. UV Resistance: Can be exposed to sunlight for **[30] [90] [180] <Insert number>** days in accordance with manufacturer's written instructions.
 10. Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by sheathing manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- F. Cellulose Fiber-Reinforced Gypsum Sheathing: ASTM C1278/C1278M, gypsum sheathing.

1. Type and Thickness: **[Regular, 1/2 inch]** **[Type X, 5/8 inch]** thick.
2. Size: **[48 by 96 inches]** **[48 by 108 inches]** **[48 by 120 inches]** **[1200 by 2400 mm]** **[1200 by 2750 mm]** **[1200 by 3050 mm]**.

G. Cementitious Backer Units, Walls: ASTM C1325, Type A.

1. Thickness: **[1/2 inch]** **[5/8 inch]** **[As indicated]**.

H. Fiberboard Sheathing: ASTM C208, Type IV, **[Grade 1 (Regular)]** **[Grade 2 (Structural)]** cellulosic fiberboard sheathing with square edges, **[1/2 inch]** **[25/32 inch]** thick.

I. Extruded-Polystyrene-Foam Sheathing: ASTM C578, Type IV, in manufacturer's standard lengths and widths with tongue-and-groove or shiplap long edges as standard with manufacturer.

1. Thickness: **[3/4 inch]** **[1 inch]** **[As indicated]**.
2. Flame Propagation Test: Materials and construction are to be tested in accordance with NFPA 285.

J. Foil-Faced, Polyisocyanurate-Foam Sheathing: ASTM C1289, Type I or Type II, Class 2, rigid, cellular, polyisocyanurate thermal insulation. Foam-plastic core and facings are to have a flame-spread index of 25 or less when tested individually.

1. Thickness: **[7/16 inch]** **[1/2 inch]** **[5/8 inch]** **[3/4 inch]** **[1 inch]** **[As indicated]**.
2. Flame Propagation Test: Materials and construction are to be tested in accordance with NFPA 285.

2.06 ROOF SHEATHING

A. Plywood Sheathing, Roofs: **[DOC PS 1]** **[Either DOC PS 1 or DOC PS 2]**, **[Exterior, Structural I]** **[Exterior]** **[Exposure 1, Structural I]** **[Exposure 1]** sheathing.

1. Span Rating: Not less than **[16/0]** **[20/0]** **[24/0]** **[32/16]** **[40/20]** **[48/24]**.
2. Nominal Thickness: Not less than **[15/32 inch]** **[1/2 inch]**.

B. Oriented-Strand-Board Sheathing, Roofs: DOC PS 2, **[Exposure 1, Structural I]** **[Exposure 1]** sheathing.

1. Span Rating: Not less than **[16/0]** **[20/0]** **[24/0]** **[24/16]** **[32/16]** **[40/20]** **[48/24]**.
2. Nominal Thickness: Not less than **[7/16 inch]** **[15/32 inch]** **[1/2 inch]** **[5/8 inch]** **[3/4 inch]**.

2.07 PARAPET SHEATHING

A. Plywood Sheathing, Parapets: **[DOC PS 1]** **[Either DOC PS 1 or DOC PS 2]**, **[Exterior, Structural I]** **[Exterior]** **[Exposure 1, Structural I]** **[Exposure 1]** sheathing.

1. Span Rating: Not less than **[16/0]** **[20/0]** **[24/0]** **[32/16]** **[40/20]** **[48/24]**.
2. Nominal Thickness: Not less than **[15/32 inch]** **[1/2 inch]**.

B. Oriented-Strand-Board Sheathing, Parapets: DOC PS 2, **[Exposure 1, Structural I]** **[Exposure 1]** sheathing.

1. Span Rating: Not less than [16/0] [20/0] [24/0] [24/16] [32/16] [40/20] [48/24].
2. Nominal Thickness: Not less than [7/16 inch] [15/32 inch] [1/2 inch] [5/8 inch] [3/4 inch].

C. Glass-Mat Gypsum Sheathing, Parapets: ASTM C1177/C1177M.

1. Type and Thickness: [Regular, 1/2 inch] [Type X, 5/8 inch] thick.
2. Size: [48 by 96 inches] [48 by 108 inches] [48 by 120 inches] [1200 by 2400 mm] [1200 by 2750 mm] [1200 by 3050 mm] for vertical installation.

D. Cementitious Backer Units, Parapets: ASTM C1325, Type A.

1. Thickness: [1/2 inch] [5/8 inch] [As indicated].

2.08 COMPOSITE NAIL BASE INSULATED ROOF SHEATHING

A. Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: ASTM C1289, Type V with DOC PS 2, Exposure 1 oriented strand board on one face.

1. Polyisocyanurate-Foam Thickness: [1 inch] [1-1/2 inches] [2 inches] [2-1/2 inches] [3 inches] [3-1/2 inches] [4 inches].
2. Oriented-Strand-Board Nominal Thickness: [7/16 inch] [5/8 inch].

B. Vented, Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: ASTM C1289, Type II, Class 1, with DOC PS 2, Exposure 1 oriented strand board adhered to spacers on one face.

1. Polyisocyanurate-Foam Thickness: [1 inch] [1-1/2 inches] [2 inches] [2-1/2 inches] [3 inches] [3-1/2 inches] [4 inches].
2. Oriented-Strand-Board Nominal Thickness: [7/16 inch] [5/8 inch].
3. Spacers: Wood furring strips or blocks not less than 3/4 inch thick and spaced not more than [12 inches] [16 inches] [24 inches] o.c.

2.09 SUBFLOORING AND UNDERLAYMENT

A. Plywood Combination Subfloor-Underlayment: DOC PS 1, [Exterior, Structural I, C-C Plugged] [Exterior, C-C Plugged] [Exposure 1, Structural I, Underlayment] [Exposure 1, Underlayment] single-floor panels.

1. Span Rating: Not less than [16] [20] [24] [32] [48].
2. Nominal Thickness: Not less than [23/32 inch] [7/8 inch] [1 inch].
3. Edge Detail: [Square] [Tongue and groove].
4. Surface Finish: Fully sanded face.

B. Oriented-Strand-Board Combination Subfloor-Underlayment: DOC PS 2, Exposure 1 single-floor panels.

1. Span Rating: Not less than [16] [20] [24] [32] [48].
2. Nominal Thickness: Not less than [23/32 inch] [7/8 inch] [1 inch].

3. Edge Detail: [**Square**] [**Tongue and groove**].
 4. Surface Finish: [**Fully sanded**] [**Resin-impregnated overlay**] face.
- C. Plywood Subflooring: [DOC PS 1] [Either DOC PS 1 or DOC PS 2], [Exterior, Structural I] [Exterior] [Exposure 1, Structural I] [Exposure 1] single-floor panels or sheathing.
1. Span Rating: Not less than [**16**] [**20**] [**24**] [**32**] [**48**] [or] [**32/16**] [**40/20**] [**48/24**].
 2. Nominal Thickness: Not less than [**23/32 inch**] [**7/8 inch**] [**1 inch**].
- D. Oriented-Strand-Board Subflooring: DOC PS 2, Exposure 1[, **Structural I sheathing**] [**single-floor panels or sheathing**].
1. Span Rating: Not less than [**16**] [**20**] [**24**] [**32**] [**48**] [or] [**32/16**] [**40/20**] [**48/24**] [**60/32**].
 2. Nominal Thickness: Not less than [**23/32 inch**] [**7/8 inch**] [**1 inch**].
- E. Underlayment: Provide underlayment in nominal thicknesses indicated or, if not indicated, not less than 1/4 inch over smooth subfloors and not less than 3/8 inch over board or uneven subfloors.
1. Plywood Underlayment for Resilient Flooring: DOC PS 1, [**Exterior A-C**] [**Exterior B-C**] [**Exterior, C-C Plugged**] [**Exposure 1 Underlayment**] with fully sanded face.
 2. Plywood Underlayment for Ceramic Tile: DOC PS 1, Exterior, C-C Plugged, not less than 5/8-inch nominal thickness.
 3. Plywood Underlayment for Carpet: DOC PS 1, [**Exterior, C-C Plugged**] [**Exposure 1, Underlayment**] [**Interior, Underlayment**].
 4. Particleboard Underlayment: ANSI A208.1, [**Grade PBU**] [**Grade M-2**].
 5. Hardboard Underlayment: ANSI A135.4, Class 4 (Service), Surface S1S; with back side sanded.

2.10 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. For [**roof**] [**parapet**] [**and**] [**wall**] sheathing, provide fasteners [**with hot-dip zinc coating complying with ASTM A153/A153M**] [**of Type 304 stainless steel**].
 2. For [**roof**] [**parapet**] [**and**] [**wall**] sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Screws for Fastening Sheathing to Wood Framing: ASTM C1002.
- E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.

- F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
 - 1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C1002.
 - 2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C954.
- G. Screws for Fastening Composite Nail Base Insulated Roof Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117. Provide washers or plates if recommended by sheathing manufacturer.

2.11 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant for Paper-Surfaced and Glass-Mat Gypsum Sheathing: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated and complying with requirements for elastomeric sealants specified in Section 07 92 00 "Joint Sealants."
- B. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
 - 1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches wide, 10 by 10 or 10 by 20 threads/inch, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.
- C. Sheathing Tape for Foam-Plastic Sheathing: Pressure-sensitive plastic tape recommended by sheathing manufacturer for sealing joints and penetrations in sheathing.

2.12 MISCELLANEOUS MATERIALS

- A. Adhesives for Field Gluing Panels to Wood Framing: Formulation complying with **[APA AFG-01]** **[ASTM D3498]** that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. Table 2304.10.1, "Fastening Schedule," in the ICC's International Building Code.

2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in the ICC's International Residential Code for One- and Two-Family Dwellings.
 3. ICC-ES evaluation report for fastener.
- D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- E. Coordinate **[wall]** **[parapet]** **[and]** **[roof]** sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.02 INSTALLATION OF WOOD STRUCTURAL PANEL

- A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.
- B. Fastening Methods: Fasten panels as indicated below:
1. Combination Subfloor-Underlayment:
 - a. **[Glue and nail]** **[Nail]** to wood framing.
 - b. Screw to cold-formed metal framing.
 - c. Space panels 1/8 inch apart at edges and ends.
 2. Subflooring:
 - a. **[Glue and nail]** **[Nail]** **[Nail or staple]** to wood framing.
 - b. Screw to cold-formed metal framing.
 - c. Space panels 1/8 inch apart at edges and ends.
 3. Wall and Roof Sheathing:
 - a. **[Nail]** **[Nail or staple]** to wood framing. **[Apply a continuous bead of glue to framing members at edges of wall sheathing panels.]**
 - b. Screw to cold-formed metal framing.
 - c. Space panels 1/8 inch apart at edges and ends.
 4. Underlayment:
 - a. **[Nail]** **[Nail or staple]** to subflooring.
 - b. Space panels 1/32 inch apart at edges and ends.
 - c. Fill and sand edge joints of underlayment receiving resilient flooring immediately before installing flooring.

3.03 INSTALLATION OF GYPSUM SHEATHING

- A. Comply with GA-253 and with manufacturer's written instructions.
1. Fasten gypsum sheathing to wood framing with **[nails] [or] [screws]**.
 2. Fasten gypsum sheathing to cold-formed metal framing with screws.
 3. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
 4. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent panels without forcing. Abut ends over centers of studs, and stagger end joints of adjacent panels not less than one stud spacing. Attach at perimeter and within field of panel to each stud.
1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
 2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- D. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.
1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
 2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- E. Seal sheathing joints in accordance with sheathing manufacturer's written instructions.
1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
 2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.
- F. Air-Barrier and Water-Resistant Glass-Mat Gypsum Sheathing:
1. Install accessory materials in accordance with sheathing manufacturer's written instructions and details to form a seal with adjacent construction, to seal fasteners, and ensure continuity of air and water barrier.
 - a. Coordinate the installation of sheathing with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 - b. Install transition strip on roofing membrane or base flashing, so that a minimum of 3 inches of coverage is achieved over each substrate.

2. Connect and seal sheathing material continuously to air barriers specified under other Sections as well as to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
3. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
4. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply [**transition strip**] [**preformed silicone extrusion**], so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.
 - a. Transition Strip: Roll firmly to enhance adhesion.
 - b. Preformed Silicone Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
5. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of sheathing material with foam sealant.
6. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.
7. Seal top of through-wall flashings to sheathing with an additional 6-inch-wide, transition strip.
8. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
9. Repair punctures, voids, and deficient lapped seams in strips and transition strips extending 6 inches beyond repaired areas in strip direction.

3.04 INSTALLATION OF CEMENTITIOUS BACKER UNITS

- A. Install panels and treat joints in accordance with ANSI A108.11 and manufacturer's written instructions for type of application indicated.

3.05 INSTALLATION OF FIBERBOARD SHEATHING

- A. Comply with ASTM C846 and with manufacturer's written instructions.
- B. Fasten fiberboard sheathing panels to intermediate supports and then at edges and ends. Use galvanized roofing nails[**or galvanized staples**]; comply with manufacturer's recommended spacing and referenced fastening schedule. Drive fasteners flush with surface of sheathing and locate perimeter fasteners at least 3/8 inch from edges and ends.
- C. Install sheathing vertically with long edges parallel to, and centered over, studs. Install solid wood blocking where end joints do not occur over framing. Allow 1/8-inch open space between edges and ends of adjacent units. Stagger horizontal joints if any.
- D. Cover sheathing as soon as practical after installation to prevent deterioration from wetting.

3.06 INSTALLATION OF FOAM-PLASTIC SHEATHING

- A. Comply with manufacturer's written instructions.

- B. Foam-Plastic Wall Sheathing: Install vapor-relief strips or equivalent for permitting escape of moisture vapor that otherwise would be trapped in stud cavity behind sheathing.
- C. Apply sheathing tape to joints between foam-plastic sheathing panels and at items penetrating sheathing. Apply at upstanding flashing to overlap both flashing and sheathing.

3.07 INSTALLATION OF PARTICLEBOARD UNDERLAYMENT

- A. Comply with CPA's recommendations for type of subfloor indicated. Fill and sand gouges, gaps, and chipped edges. Sand uneven joints flush.
 - 1. Fastening Method: **[Glue and nail]** **[Nail]** **[Nail or staple]** underlayment to subflooring.

3.08 INSTALLATION OF HARDBOARD UNDERLAYMENT

- A. Comply with CPA's recommendations and hardboard manufacturer's written instructions for preparing and applying hardboard underlayment.
 - 1. Fastening Method: **[Nail]** **[Nail or staple]** underlayment to subflooring.

3.09 FIELD QUALITY CONTROL

- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
- B. Testing and Inspecting Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.
- C. Inspections: Air-barrier and water-resistant glass-mat gypsum sheathing, accessories, and installation are subject to inspection for compliance with requirements. **[Inspections may include the following:]**
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 - 2. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 - 3. Termination mastic has been applied on cut edges.
 - 4. Strips and transition strips have been firmly adhered to substrate.
 - 5. Compatible materials have been used.
 - 6. Transitions at changes in direction and structural support at gaps have been provided.
 - 7. Connections between assemblies (sheathing and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 - 8. All penetrations have been sealed.
- D. Tests: As determined by testing agency from among the following tests:
 - 1. Air-Leakage-Location Testing: Air-barrier sheathing assemblies will be tested for evidence of air leakage in accordance with **[ASTM E1186, chamber pressurization or depressurization with smoke tracers]** **[ASTM E1186, chamber depressurization using detection liquids]** **<Insert requirement>**.

2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with [**ASTM E783**] [or] [**ASTM E2357**].
 - E. Air barriers will be considered defective if they do not pass tests and inspections.
 - F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
 - G. Prepare test and inspection reports.

SECTION 06 16 63
CEMENTITIOUS SHEATHING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wall sheathing.
2. Roof sheathing.
3. Parapet sheathing.
4. Subflooring and underlayment.
5. Sheathing joint-and-penetration treatment materials.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for plywood backing panels.
2. Section 07 25 00 "Weather Barriers" for water-resistive barrier applied over wall sheathing.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review air-barrier and water-resistant glass-mat gypsum sheathing requirements and installation, special details, transitions, mockups, air-leakage testing, protection, and work scheduling that covers air-barrier and water-resistant glass-mat gypsum sheathing.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Wall sheathing.
2. Roof sheathing.
3. Parapet sheathing.
4. Subflooring and underlayment.
5. Sheathing joint-and-penetration treatment materials.

B. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Evaluation Reports: For the following, from ICC-ES:
 - 1. Wood-preservative-treated plywood.
- C. Field quality-control reports.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 PRODUCTS

2.01 WALL SHEATHING

- A. Cementitious Backer Units, Walls: ASTM C1325, Type A.
 - 1. Thickness: [1/2 inch] [5/8 inch] [As indicated].

2.02 PARAPET SHEATHING

- A. Cementitious Backer Units, Parapets: ASTM C1325, Type A.
 - 1. Thickness: [1/2 inch] [5/8 inch] [As indicated].

2.03 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 - 1. For [roof] [parapet] [and] [wall] sheathing, provide fasteners [with hot-dip zinc coating complying with ASTM A153/A153M] [of Type 304 stainless steel].
 - 2. For [roof] [parapet] [and] [wall] sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Screws for Fastening Sheathing to Wood Framing: ASTM C1002.

- E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
- F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
 - 1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C1002.
 - 2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C954.
- G. Screws for Fastening Composite Nail Base Insulated Roof Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117. Provide washers or plates if recommended by sheathing manufacturer.

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. Table 2304.10.1, "Fastening Schedule," in the California Building Code (CBC).
 - 2. ICC-ES evaluation report for fastener.
- D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- E. Coordinate [wall] [parapet] [and] [roof] sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.02 INSTALLATION OF CEMENTITIOUS BACKER UNITS

- A. Install panels and treat joints in accordance with ANSI A108.11 and manufacturer's written instructions for type of application indicated.
- B. Precut panels and make accurate cutouts for penetrations.
- C. Install boards with a 3/8-inch gap where non-load-bearing construction they abut structural elements.
- D. To prevent wicking, install boards with a 1/4-inch gap where they abut materials that might retain moisture.
- E. Attach board at 8 inches o.c.; set fasteners back 3/8-inch minimum from edges. Drive fasteners so heads bear tightly against face of boards but do not cut into facing.
- F. Pre-fill gap between boards with bonding material then embed 2-inch mesh tape and smooth material over joint and corner.

END OF SECTION

SECTION 06 20 23
INTERIOR FINISH CARPENTRY

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Interior trim.
2. Paneling.
3. Shelving and clothes rods.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for furring, blocking, and other carpentry work not exposed to view [and for framing exposed to view].
2. Section 06 40 23 "Interior Architectural Woodwork" for shop-fabricated carpentry.
3. Section 09 91 23 "Interior Painting" for priming and backpriming of interior finish carpentry.

1.02 DEFINITIONS

- A. MDF: Medium-density fiberboard.
- B. MDO: Plywood with a medium-density overlay on the face.
- C. PVC: Polyvinyl chloride.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Interior trim.
2. Paneling.
3. Shelving and clothes rods.

B. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.

1. Include data for wood-preservative treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained. Include chemical-treatment manufacturer's written instructions for finishing treated material.
2. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced before shipment to Project site to levels specified.

C. Samples: For each exposed product and for each color and texture specified.

- D. Samples for Initial Selection: For each type of product involving selection of colors, profiles, or textures.
- E. Samples for Verification:
 - 1. For each species and cut of lumber and panel products with nonfactory-applied finish, with half of exposed surface finished; 50 sq. in. for lumber and 8 by 10 inches for panels.
 - 2. For foam-plastic moldings, with half of exposed surface finished; 50 sq. in..
 - 3. For each finish system and color of lumber and panel products with factory-applied finish, 50 sq. in. for lumber and 8 by 10 inches for panels.

1.04 QUALITY ASSURANCE

A.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation.
 - 1. Protect materials from weather by covering with waterproof sheeting, securely anchored.
 - 2. Provide for air circulation around stacks and under coverings.
- B. Deliver interior finish carpentry materials only when environmental conditions comply with requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions comply with requirements specified for installation areas.

1.06 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet-work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.
 - 1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers are subject to compliance with requirements; see current Campus Standards for Preferred Manufacturers.

2.02 MATERIALS, GENERAL

- A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with applicable rules of any rules-writing agency certified by the American Lumber Standard Committee's (ALSC) Board of Review. Grade lumber by an agency certified by the ALSC's Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.
 - 2. For exposed lumber, mark grade stamp on end or back of each piece [, or omit grade stamp and provide certificates of grade compliance issued by grading agency].
- B. Softwood Plywood: DOC PS 1.
- C. Hardboard: ANSI A135.4.
- D. MDF: ANSI A208.2, [Grade 130] <Insert grade>.
- E. Particleboard: ANSI A208.1, [Grade M-2] [Grade M-2-Exterior Glue].
- F. Melamine-Faced Particleboard: Particleboard complying with ANSI A208.1, Grade M-2, finished on both faces with thermally fused, melamine-impregnated decorative paper and complying with ISO 4586-3, Grade VGS.
 - 1. Color: [White] [Black] [Gray] [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color>.

2.03 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Preservative Treatment by Pressure Process: AWWA U1; Use Category [UC1] [UC2].
 - 1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 18 percent, respectively.
 - 2. Preservative Chemicals: Acceptable to authorities having jurisdiction [and containing no arsenic or chromium].
 - 3. For exposed items indicated to receive transparent finish, do not use chemical formulations that contain colorants or that bleed through or otherwise adversely affect finishes.
 - 4. Do not use material that is warped or does not comply with requirements for untreated material.
 - 5. Mark lumber with treatment-quality mark of an inspection agency approved by the ALSC's Board of Review.
 - a. For exposed lumber indicated to receive a stained or natural finish, [mark end or back of each piece] [or] [omit marking and provide certificates of treatment compliance issued by inspection agency].
 - 6. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
 - a. For exposed plywood indicated to receive a stained or natural finish, mark back of each piece.
 - 7. Application: [Where indicated on Drawings] [All interior lumber and plywood] <Insert application>.

INTERIOR TRIM

B. Softwood Lumber Trim for Transparent Finish (Stain or Clear Finish):

1. Species and Grade:
 - a. Eastern white pine; NeLMA or NLGA [C Select] [D Select] [Finish or 1 Common] [Premium or 2 Common].
 - b. Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NLGA or WWPA [C Select (Choice)] [D Select (Quality)] [1 Common (Colonial)] [2 Common (Sterling)].
 - c. Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPA [C Select (Choice)] [D Select (Quality)] [Finish or 1 Common (Colonial)] [Premium or 2 Common (Sterling)].
 - d. White woods; WWPA [C Select] [D Select] [1 Common] [2 Common].
 - e. Douglas fir-larch or Douglas fir south; NLGA, WCLIB, or WWPA [Superior or C & Btr] [Prime or D] finish.
 - f. Southern pine; SPIB [B & B] [C & Btr] finish.
 - g. Western red cedar; NLGA, WCLIB, or WWPA [Clear Heart] [Grade A] [Grade B].
2. Maximum Moisture Content: [19] [15] percent [with at least 85 percent of shipment at 12 percent or less].
3. Finger Jointing: [Allowed] [Not allowed].
4. Face Surface: [Surfaced (smooth)] [Saw textured].

C. Hardwood Lumber Trim for Transparent Finish (Stain or Clear Finish):

1. Species and Grade: [Red oak] [White maple] [Alder] [Aspen, basswood, cottonwood, sap gum, sycamore, white maple, or yellow poplar] <Insert species>; NHLA [Clear] [A Finish] [B Finish].
2. Maximum Moisture Content: [13] [10] [9] <Insert number> percent.
3. Finger Jointing: Not allowed.
4. Gluing for Width: [Allowed] [Not allowed] [Use for lumber trim wider than 6 inches].
5. Veneered Material: [Allowed] [Not allowed] [Use for lumber trim wider than 6 inches].
6. Face Surface: [Surfaced (smooth)] [Saw textured].
7. Matching: Selected for compatible grain and color.

D. Lumber Trim for Opaque Finish (Painted Finish):

1. Species and Grade:
 - a. Eastern white pine; NeLMA or NLGA [D Select] [Finish or 1 Common] [Premium or 2 Common].
 - b. Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NLGA or WWPA [D Select (Quality)] [1 Common (Colonial)] [2 Common (Sterling)].
 - c. Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPA [D Select (Quality)] [Finish or 1 Common (Colonial)] [Premium or 2 Common (Sterling)].
 - d. White woods; WWPA [D Select] [1 Common] [2 Common].

- e. Douglas fir-larch or Douglas fir south; NLGA, WCLIB, or WWPA [Superior or C & Btr] [Prime or D] finish.
 - f. Spruce-pine-fir; NeLMA, NLGA, WCLIB, or WWPA [1 Common] [2 Common].
 - g. Alder, aspen, basswood, cottonwood, gum, magnolia, soft maple, sycamore, tupelo, or yellow poplar; NHLA [A Finish] [B Finish].
2. Maximum Moisture Content for Softwoods: [19] [15] percent [with at least 85 percent of shipment at 12 percent or less].
 3. Maximum Moisture Content for Hardwoods: [13] [10] [9] <Insert number> percent.
 4. Finger Jointing: [Allowed] [Not allowed].
 5. Face Surface: [Surfaced (smooth)] [Saw textured].
 6. Optional Material: Primed MDF of same actual dimensions as lumber indicated may be used in lieu of lumber.
- E. Softwood Moldings for Transparent Finish (Stain or Clear Finish): MMPA WM 4, N-grade wood moldings. Made to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
1. Species: [Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] [Southern pine] [Western red cedar] [Douglas fir] <Insert species>.
 2. Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
 3. Finger Jointing: Not allowed.
 4. Matching: Selected for compatible grain and color.
 5. Base Pattern: [WM 623, 9/16-by-3-1/4-inch ogee] [WM 713, 9/16-by-3-1/4-inch ranch] [WM 753, 9/16-by-3-1/4-inch beaded-edge] [WM 620, 9/16-by-4-1/4-inch ogee] [WM 750, 9/16-by-4-1/4-inch beaded-edge] base.
 6. Shoe-Mold Pattern: [WM 129, 7/16-by-11/16-inch quarter-round] [WM 126, 1/2-by-3/4-inch quarter-round] [WM 131, 1/2-by-3/4-inch ogee] shoe mold.
 7. Casing Pattern: [WM 327, 11/16-by-2-1/4-inch clamshell] [WM 366, 11/16-by-2-1/4-inch featheredge] [WM 376, 11/16-by-2-1/4-inch beaded-edge] casing.
 8. Mull-Casing Pattern: [WM 957, 3/8-by-1-3/4-inch beaded-edge] [WM 973, 3/8-by-1-3/4-inch bullnose] [WM 983, 3/8-by-1-3/4-inch featheredge] casing.
 9. Stop Pattern: [WM 856, 3/8-by-1-3/8-inch ranch] [WM 946, 3/8-by-1-3/8-inch ogee] [WM 886, 3/8-by-1-3/8-inch bullnose] stop.
 10. Chair-Rail Pattern: WM 297, 11/16-by-3-inch chair rail.
- F. Hardwood Moldings for Transparent Finish (Stain or Clear Finish): MMPA WM 4, N-grade wood moldings made to patterns included in MMPA's "HWM/Series Hardwood Moulding Patterns."
1. Species: [Red oak] [White maple] [Aspen, basswood, cottonwood, sap gum, sycamore, white maple, or yellow poplar] <Insert species>.
 2. Maximum Moisture Content: 9 percent.
 3. Finger Jointing: Not allowed.
 4. Matching: Selected for compatible grain and color.
 5. Optional Material: Kiln-dried softwood or MDF, with exposed surfaces veneered with species indicated, may be used in lieu of solid wood.

6. Base Pattern: [HWM 633, 7/16-by-3-1/4-inch ogee] [HWM 713, 7/16-by-3-1/4-inch ranch] [HWM 753, 7/16-by-3-1/4-inch beaded-edge] [WM 620, 7/16-by-4-1/4-inch ogee] base.
 7. Shoe-Mold Pattern: [HWM 129, 7/16-by-11/16-inch quarter-round] [HWM 126, 1/2-by-3/4-inch quarter-round] [HWM 131, 1/2-by-3/4-inch ogee] shoe mold.
 8. Casing Pattern: [HWM 328, 1/2-by-2-1/4-inch clamshell] [HWM 366, 1/2-by-2-1/4-inch featheredge] [HWM 376, 1/2-by-2-1/4-inch beaded-edge] casing.
 9. Mull-Casing Pattern: [HWM 989, 3/16-by-2-inch square-edge] [HWM 988, 3/8-by-1-1/2-inch featheredge] [HWM 987, 3/8-by-2-inch featheredge] casing.
 10. Stop Pattern: [HWM 856, 3/8-by-1-3/8-inch ranch] [HWM 946, 3/8-by-1-3/8-inch ogee] [HWM 886, 3/8-by-1-3/8-inch bullnose] stop.
 11. Chair-Rail Pattern: HWM 297, 11/16-by-3-inch chair rail.
- G. Moldings for Opaque Finish (Painted Finish): Made to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
1. Softwood Moldings: MMPA WM 4, P grade.
 - a. Species: [Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] <Insert species>.
 - b. Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
 2. Hardwood Moldings: MMPA WM 4, P-grade.
 - a. Species: [Aspen, basswood, cottonwood, gum, magnolia, soft maple, tupelo, or yellow poplar] <Insert species>.
 - b. Maximum Moisture Content: 9 percent.
 3. Finger Jointing: [Allowed] [Not allowed].
 4. Optional Material: Primed MDF.
 5. Base Pattern: [WM 623, 9/16-by-3-1/4-inch ogee] [WM 713, 9/16-by-3-1/4-inch ranch] [WM 753, 9/16-by-3-1/4-inch beaded-edge] [WM 620, 9/16-by-4-1/4-inch ogee] [WM 750, 9/16-by-4-1/4-inch beaded-edge] base.
 6. Shoe-Mold Pattern: [WM 129, 7/16-by-11/16-inch quarter-round] [WM 126, 1/2-by-3/4-inch quarter-round] [WM 131, 1/2-by-3/4-inch ogee] shoe mold.
 7. Casing Pattern: [WM 327, 11/16-by-2-1/4-inch clamshell] [WM 366, 11/16-by-2-1/4-inch featheredge] [WM 376, 11/16-by-2-1/4-inch beaded-edge] casing.
 8. Mull-Casing Pattern: [WM 957, 3/8-by-1-3/4-inch beaded-edge] [WM 973, 3/8-by-1-3/4-inch bullnose] [WM 983, 3/8-by-1-3/4-inch featheredge] casing.
 9. Stop Pattern: [WM 856, 3/8-by-1-3/8-inch ranch] [WM 946, 3/8-by-1-3/8-inch ogee] [WM 886, 3/8-by-1-3/8-inch bullnose] stop.
 10. Chair-Rail Pattern: WM 297, 11/16-by-3-inch chair rail.
- H. PVC-Wrapped Moldings: MMPA WM 2 and made to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
1. Base Pattern: [WM 623, 9/16-by-3-1/4-inch ogee] [WM 713, 9/16-by-3-1/4-inch ranch] base.

2. Shoe-Mold Pattern: [WM 129, 7/16-by-11/16-inch quarter-round] [WM 126, 1/2-by-3/4-inch quarter-round] shoe mold.
 3. Casing Pattern: [WM 327, 11/16-by-2-1/4-inch clamshell] [WM 366, 11/16-by-2-1/4-inch featheredge] casing.
 4. Mull-Casing Pattern: [WM 973, 3/8-by-1-3/4-inch bullnose] [WM 983, 3/8-by-1-3/4-inch featheredge] casing.
 5. Stop Pattern: [WM 856, 3/8-by-1-3/8-inch ranch] [WM 886, 3/8-by-1-3/8-inch bullnose] stop.
 6. Chair-Rail Pattern: WM 297, 11/16-by-3-inch chair rail.
 7. Colors, Textures, and Grain Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].
- I. Foam-Plastic Moldings: Molded product of shapes indicated, with a tough outer skin on exposed surfaces; factory primed. Exposed surfaces are not to be shaped after molding.
1. Density: Not less than 20 lb/cu. ft..
 2. Flame-Spread Index: Not more than [75] <Insert number> when tested according to ASTM E84.
 3. Thickness: Not more than 1/2 inch.
 4. Width: Not more than 8 inches.
 5. Patterns: [As indicated by manufacturer's designations] [Match Architect's samples].

PANELING

- J. Hardwood Veneer Plywood Paneling: Manufacturer's stock hardwood plywood panels complying with HPVA HP-1.
1. Face Veneer Species and Cut: [Rotary-cut white birch] [Plain-sliced red oak] [Plain-sliced hickory] <Insert species and cut>.
 2. Veneer Matching: [Random match] [Selected for similar color and grain].
 3. Backing Veneer Species: [Same species as face veneer] [Any hardwood compatible with face species].
 4. Construction: Veneer core.
 5. Thickness: [1/8 inch] [5/32 inch] [3/16 inch] [1/4 inch] [5/16 inch] [7/16 inch].
 6. Panel Size:
 - a. [48 by 96 inches] [48 by 120 inches].
 - b. [1200 by 2400 mm] [1200 by 3000 mm].
 7. Glue Bond: Type II (interior).
 8. Face Pattern: Manufacturer's standard [V] [channel]-grooved pattern, with grooves at edges, center, and third points of panels, and at other locations to provide pattern resembling random-width boards.
 9. Finish: [Manufacturer's standard, transparent, UV-resistant, protective finish] [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].

Hardboard Paneling: Interior factory-finished hardboard paneling complying with ANSI A135.5.

10. Thickness: [1/8 inch] [5/32 inch] [1/4 inch].
 11. Finish: [Class I] [Class II].
 12. Surface-Burning Characteristics: As follows, tested according to ASTM E84:
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 13. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].
- K. Board Paneling, MMPA: Interior wood-board paneling complying with MMPA WM 9.
1. Species: [Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] [Southern pine] [Western red cedar] [Figured red gum] <Insert species>.
 2. Grade: [Clear No. 1] [Clear No. 2] [Knotty No. 1] [Knotty No. 2] [Finger jointed].
 3. Maximum Moisture Content: [15 percent with at least 85 percent of shipment at 12 percent or less] [9 percent].
 4. Pattern: [V-joint, tongue and groove, PT 82] [Beaded ceiling, PT 85] [Beveled-edge channel, shiplapped, PT 82] [As indicated].
 5. Net Coverage Width: Not less than [5-1/16 inches] [6-3/4 inches] [8-3/4 inches].
- L. Board Paneling:
1. Species and Grade:
 - a. Eastern white pine; NeLMA or NLGA [C Select] [D Select] [Finish or 1 Common] [Premium or 2 Common].
 - b. Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NLGA or WWPA [C Select (Choice)] [D Select (Quality)] [1 Common (Colonial)] [2 Common (Sterling)].
 - c. Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPA [C Select (Choice)] [D Select (Quality)] [Finish or 1 Common (Colonial)] [Premium or 2 Common (Sterling)].
 - d. Southern pine; SPIB [B & B] [C & Btr] [No. 2] Paneling.
 - e. Western red cedar; NLGA, WCLIB, or WWPA [Clear Heart] [Grade A] [Grade B].
 2. Maximum Moisture Content: [19] [15] percent [with at least 85 percent of shipment at 12 percent or less].
 3. Pattern:
 - a. V-joint, tongue and groove, [NeLMA EWP 4] [SPIB SPP 54] [or] [WWPA WP 4].
 - b. Pickwick, tongue and groove, [NeLMA EWP 2] [SPIB SPP 52] [or] [WWPA WP 2].
 - c. Rounded-edge channel groove, tongue and groove, [SPIB SPP 60] [or] [WWPA WP 6].
 - d. Edge and center bead, tongue and groove, [NeLMA E & CB] [or] [WWPA E & CB Ceiling].
 4. Net Coverage Width: Not less than [5-1/16 inches] [6-3/4 inches] [8-3/4 inches].

SHELVING AND CLOTHES RODS

- M. Shelving: [Exposed] [Closet] [Utility] shelving, made from [the following material] [one of the following materials], 3/4 inch thick:
1. Particleboard with [radiused and filled] [or] [solid-wood] front edge.
 2. MDF with [radiused] [or] [solid-wood] front edge.
 3. MDO softwood plywood with solid-wood edge.
 4. Melamine-faced particleboard with [radiused and filled] [applied-PVC] front edge.
 5. Wood boards as specified above for [lumber trim for opaque] [softwood lumber trim for transparent] [hardwood lumber trim for transparent] finish.
 6. Softwood Boards:
 - a. Kiln-dried eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPA [C Select (Choice)] [D Select (Quality)] [Finish or 1 Common (Colonial)] [Premium or 2 Common (Sterling)].
 - b. Kiln-dried Douglas fir-larch, Douglas fir south, or hem-fir; SPIB [Superior or C & Btr] [Prime or D] finish; NLGA, WCLIB, or WWPA; or southern pine; [B & B] [C] finish.
- N. Shelf Cleats: [3/4-by-3-1/2-inch boards] [3/4-by-5-1/2-inch boards] [3/4-by-5-1/2-inch boards with hole and notch to receive clothes rods], as specified above for [shelving] [lumber trim for opaque finish] [softwood lumber trim for transparent finish] [hardwood lumber trim for transparent finish].
- O. Shelf Brackets with Rod Support: BHMA A156.16, B04051; prime-painted formed steel.
- P. Shelf Brackets without Rod Support: BHMA A156.16, B04041; prime-painted formed steel.
- Q. Standards for Adjustable Shelf Brackets: BHMA A156.9, B04102; [powder-coat-finished] [brass-finished] [zinc-plated] steel.
- R. Adjustable Shelf Brackets: BHMA A156.9, B04112; [powder-coat-finished steel] [brass-finished steel] [zinc-plated steel] [bronze-anodized aluminum] [black-anodized aluminum] [natural aluminum].
- S. Standards for Adjustable Shelf Supports: BHMA A156.9, B04071; [powder-coat-finished] [brass-finished] [zinc-plated] steel.
- T. Adjustable Shelf Supports: BHMA A156.9, B04081 or B04091; [powder-coat-finished] [brass-finished] [zinc-plated] steel.
- U. Wood Clothes Rods: 1-1/2-inch-diameter, clear, kiln-dried [hardwood] [Douglas fir or southern pine].
- V. Metal Clothes Rods: 1-5/16-inch-diameter, [aluminum tubes] [chrome-plated-steel tubes] [color-coated-steel tubes] [stainless steel tubes] [chrome-plated-steel telescoping tubes with end brackets for mounting on shelf cleats].
- W. Wood Rod Flanges: Clear, kiln-dried, [Douglas fir or southern pine] [eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] [red oak] [white maple] [aspen, basswood, cottonwood, sap gum, white maple, or yellow poplar] <Insert species> turnings [with clear finish].

- X. Metal Rod Flanges: [Aluminum] [Chrome-plated steel] [Stainless steel].

MISCELLANEOUS MATERIALS

- Y. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.
- Z. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.
- AA. Installation Adhesive for Foam-Plastic Moldings: Product recommended for indicated use by foam-plastic molding manufacturer.
- BB. Paneling Adhesive: Comply with paneling manufacturer's written instructions for adhesives.
- CC. Multipurpose Construction Adhesive: Formulation, complying with ASTM D3498, that is recommended for indicated use by adhesive manufacturer.

FABRICATION

- DD. Back out or kerf backs of the following members, except those with ends exposed in finished work:
 - 1. Interior standing and running trim, except shoe and crown molds.
 - 2. Wood-board paneling.
- EE. Ease edges of lumber less than 1 inch in nominal thickness to 1/16-inch radius and edges of lumber 1 inch or more in nominal thickness to 1/8-inch radius.

PART 3 EXECUTION

EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

PREPARATION

- D. Clean substrates of projections and substances detrimental to application.
- E. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 24 hours [unless longer conditioning is recommended by manufacturer].

INSTALLATION, GENERAL

- F. Do not use materials that are unsound; warped; improperly treated or finished; inadequately seasoned; too small to fabricate with proper jointing arrangements; or with defective surfaces, sizes, or patterns.
- G. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials.
 - 1. Use concealed shims where necessary for alignment.
 - 2. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
 - 3. Where face fastening is unavoidable, countersink fasteners, fill surface flush, and sand unless otherwise indicated.
 - 4. Install to tolerance of 1/8 inch in 96 inches for level and plumb. Install adjoining interior finish carpentry with 1/32-inch maximum offset for flush installation and 1/16-inch maximum offset for reveal installation.
 - 5. Coordinate interior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate interior finish carpentry.

INSTALLATION OF INTERIOR TRIM

- H. Install trim with minimum number of joints as is practical, using full-length pieces from maximum lengths of lumber available.
 - 1. Do not use pieces less than 24 inches long, except where necessary.
 - 2. Stagger joints in adjacent and related standing and running trim.
 - 3. [Cope] [Miter] at returns, miter at outside corners, and cope at inside corners to produce tight-fitting joints with full-surface contact throughout length of joint.
 - 4. Use scarf joints for end-to-end joints.
 - 5. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.
 - 6. Match color and grain pattern of trim for transparent finish (stain or clear finish) across joints.
 - 7. Install trim after gypsum-board joint finishing operations are completed.
 - 8. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting.
 - 9. Fasten to prevent movement or warping.
 - 10. Countersink fastener heads on exposed carpentry work and fill holes.

INSTALLATION OF PANELING

- I. Plywood Paneling: Select and arrange panels on each wall to minimize noticeable variations in grain character and color between adjacent panels.
 - 1. Leave 1/4-inch gap to be covered with trim at top, bottom, and openings.
 - 2. Install with uniform tight joints between panels.

3. Attach panels to supports with manufacturer's recommended panel adhesive and fasteners.
 4. Space fasteners and adhesive as recommended by panel manufacturer.
 5. Conceal fasteners to greatest practical extent.
 6. Arrange panels with grooves and joints over supports.
 - a. Fasten to supports with nails of type and at spacing recommended by panel manufacturer.
 - b. Use fasteners with prefinished heads matching groove color.
- J. Hardboard Paneling: Install according to manufacturer's written instructions.
1. Leave 1/4-inch gap to be covered with trim at top, bottom, and openings.
 2. Butt adjacent panels with moderate contact.
 3. Use fasteners with prefinished heads matching paneling color.
 4. Wood Stud or Furring Substrate: Install with 1-inch annular-ring shank hardboard nails.
 5. Plaster or Gypsum-Board Substrate: Install with 1-5/8-inch annular-ring shank hardboard nails.
 6. Nailing: Space nails 4 inches o.c. at panel perimeter and 8 inches o.c. at intermediate supports unless otherwise required by manufacturer.
- K. Board Paneling: Install according to manufacturer's written instructions.
1. Arrange in random-width pattern suggested by manufacturer unless boards or planks are of uniform width.
 2. Install in full lengths without end joints.
 3. Stagger end joints in random pattern to uniformly distribute joints on each wall.
 4. Install with uniform end joints with only end-matched (tongue-and-groove) joints within each field of paneling.
 5. Install with uniform end joints. Locate end joints only over furring or blocking.
 6. Select and arrange boards on each wall to minimize noticeable variations in grain character and color between adjacent boards.
 7. Install with uniform tight joints between boards.
 8. Fasten paneling by face nailing, setting nails, and filling over nail heads.
 9. Fasten paneling with trim screws, set below face and filled.
 10. Fasten paneling by blind nailing through tongues.
 11. Fasten paneling with paneling system manufacturer's concealed clips.
 12. Fasten paneling to gypsum wallboard with panel adhesive.

INSTALLATION OF SHELVING AND CLOTHES RODS

- L. Cut shelf cleats at ends of shelves about 1/2 inch less than width of shelves and sand exposed ends smooth.
1. Install shelf cleats by fastening to framing or backing with finish nails or trim screws, set below face and filled.

2. Space fasteners not more than 16 inches o.c. [Use two fasteners at each framing member or fastener location for cleats 4 inches nominal in width and wider.]
 3. Apply a bead of multipurpose construction adhesive to back of shelf cleats before installing.
 4. Remove adhesive that is squeezed out after fastening shelf cleats in place.
- M. Install shelf brackets according to manufacturer's written instructions, spaced not more than [32 inches] [36 inches] o.c. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
- N. Install standards for adjustable shelf supports according to manufacturer's written instructions. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Space fasteners not more than 12 inches o.c.
- O. Install standards for adjustable shelf brackets according to manufacturer's written instructions, spaced not more than 36 inches o.c. and within 6 inches of ends of shelves. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
- P. Cut shelves to neatly fit openings with only enough gap to allow shelves to be removed and reinstalled.
1. Install shelves, fully seated on cleats, brackets, and supports.
 2. Fasten shelves to cleats with finish nails or trim screws, set flush.
 3. Fasten shelves to brackets to comply with bracket manufacturer's written instructions.
- Q. Install rod flanges for rods as indicated.
1. Fasten to shelf cleats, framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
 2. Install rods in rod flanges.

ADJUSTING

- R. Replace interior finish carpentry that is damaged or does not comply with requirements.
1. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.
- S. Adjust joinery for uniform appearance.

CLEANING

- T. Clean interior finish carpentry on exposed and semiexposed surfaces.
- U. Restore damaged or soiled areas and touch up factory-applied finishes if any.

PROTECTION

- V. Protect installed products from damage from weather and other causes during construction.

- W. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.
1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 06 41 13

WOOD-VENEER-FACED ARCHITECTURAL CABINETS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wood cabinets for transparent finish.
2. Wood cabinets for opaque finish.
3. Wood materials.
4. Fire-retardant-treated material.
5. Cabinet hardware and accessories.
6. Miscellaneous materials.
7. Shop finishing.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.

1.02 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.
- B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 08 71 00 "Door Hardware" to manufacturer of architectural cabinets; coordinate Shop Drawings and fabrication with hardware requirements.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Wood cabinets for transparent finish.
2. Wood cabinets for opaque finish.
3. Wood materials.
4. Fire-retardant-treated material.
5. Cabinet hardware and accessories.
6. Miscellaneous materials.

7. Shop finishing.
- B. Product Data Submittals: For each product.
1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- C. Shop Drawings: For architectural cabinets.
1. Comply with NAAWS standards.
 2. Include plans, elevations, sections, and attachment details.
 3. Show large-scale details.
 4. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 5. Show locations and sizes of cutouts and holes for items installed in architectural cabinets.
 6. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 7. Apply NAAWS Certified Compliance Program label to Shop Drawings.
- D. Samples: For each exposed product and for each color and finish specified, in manufacturer's standard size.
- E. Samples for Initial Selection: For each type of exposed finish.
- F. Samples for Verification: For the following:
1. Lumber for Transparent Finish: Not less than **[5 inches wide by 12 inches long]** **[5 inches wide by 24 inches long]**, for each species and cut, finished on one side and one edge.
 2. Veneer Leaves: Representative of and selected from flitches to be used for transparent-finished cabinets.
 3. Lumber and Panel Products with Shop-Applied Opaque Finish: 5 inches wide by 12 inches long for lumber and **[8 by 10 inches]** **[12 by 12 inches]** for panels, for each finish system and color.
 4. Finish **[entire]** **[one-half of]** exposed surface.
 5. Thermally Fused Laminate (TFL) Panels: **[8 by 10 inches]** **[12 by 12 inches]**, for each color, pattern, and surface finish.
 - a. Provide edge banding on one edge.
 6. Corner Pieces:
 - a. Cabinet-front frame joints between stiles and rails and at exposed end pieces, 18 inches high by 18 inches wide by 6 inches deep.
 - b. Miter joints for standing trim.
 7. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For [manufacturer] [and] [Installer].
- B. Product Certificates: For [each type of product.] [the following:]

1. Composite wood products.
 2. Thermally fused laminate panels.
 3. Glass.
 4. Adhesives.
- C. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
- D. Field quality-control reports.
- 1.06 CLOSEOUT SUBMITTALS
- A. Quality Standard Compliance Certificates: NAAWS Certified Compliance Program certificates.
- 1.07 QUALITY ASSURANCE
- A. General: Work shall be in accordance with NAAWS standards for the grade or grades specified.
- B. Certified compliance:
1. Before delivery to the jobsite the woodwork supplier shall provide a NAAWS Certified Compliance Certificate indicating the millwork products being supplied and certifying that these products fully meet the requirements of the Grade or Grades specified.
 2. Each elevation of casework shall bear a NAAWS Certified Compliance label.
 3. At completion of installation the woodwork installer shall provide a NAAWS Certified Compliance certificate indicating the products installed and certifying that the installation of these products fully meets the requirements of the Grade or Grades specified.
 4. Fees charged by NAAWS for their Certified Compliance program shall be included in the Contractor's bid.
- C. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- D. Certified Seismic Installation Program:
1. Before walls are closed up, provide a written Woodwork Institute Certified Seismic Installation Program report confirming that backing is provided in all locations required for casework installation or identifying those locations where backing is missing or improperly located.
 2. On completion of installation, provide a Woodwork Institute Certified Seismic Installation Program Certificate identifying the work covered and certifying the installations meets the requirements of the NAAWS CSIP attachment details and schedules.
 3. All fees charge by the Woodwork Institute for its Certified Seismic Installation Program are the responsibility of the millwork installer and shall be included in their bid.
 4. In the event there is a conflict between the Contract Documents and the CSIP HCAI-approved OPM Drawings, the CSIP HCAI-approved OPM Drawings and Certified Seismic Installation Program shall prevail.
- E. Installer Qualifications: [Manufacturer of products] [Licensed participant in NAAWS's Certified Compliance Program].

- F. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of [typical architectural cabinets as shown on Drawings] <Insert description>.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.09 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 20 and 50 percent during the remainder of the construction period.
- C. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 PRODUCTS

2.01 ARCHITECTURAL CABINETS

- A. Source Limitations: Engage a qualified woodworking firm to assume responsibility for production of architectural cabinets with sequence-matched wood veneers **[wood paneling] [wood doors with face veneers that are sequence matched with architectural cabinets] [and] [transparent-finished wood doors that are required to be of same species as architectural cabinets]**.
- B. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - 1. <Insert, in separate subparagraphs, names of preapproved woodworking firms>.

2.02 CABINETS, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the North American North American Architectural Woodwork Standards for grades of architectural cabinets indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels] [and] [certificates]** from **[NAAWS]** certification program indicating that woodwork **[and installation]** complies with requirements of grades specified.
 - a. This Project has been registered with NAAWS as NAAWS Quality Certification Program Number **<Insert number>**.
 2. The Contract Documents contain requirements that are more stringent than the referenced woodwork quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.

2.03 WOOD CABINETS FOR TRANSPARENT FINISH

- A. North American Architectural Woodwork Standards Grade: **[Premium] [Custom] [Economy]**.
- B. Type of Construction: **[Frameless] [Face frame]**.
- C. Door and Drawer-Front Style: **[Flush overlay] [Reveal overlay] [Lipped] [Flush inset]**.
1. Reveal Dimension: **[1/2 inch] [As indicated on Drawings] <Insert dimension>**.
- D. Wood for Exposed Surfaces: **[As indicated on Drawings.]**
1. Species: **[Red oak] [White oak] [White ash] [White birch] <Insert species>**.
 2. Blueprint Matching: Comply with veneer and other matching requirements indicated for blueprint-matched paneling.
 3. Cut: **[Plain sliced/plain sawn] [Rift cut/rift sawn] [Quarter cut/quarter sawn]**.
 4. Grain Direction: **[Vertically for drawer fronts, doors, and fixed panels] [Horizontally for drawer fronts, doors, and fixed panels] [Vertically for doors and fixed panels, horizontally for drawer fronts] [As indicated on Drawings]**.
 5. Matching of Veneer Leaves: **[Book] [Slip] [Random] match**.
 6. Veneer Matching within Panel Face: **[Running] [Balance] [Center-balance] match**.
 7. Veneer Matching within Room: Provide cabinet veneers in each room or other space from a single flitch with doors, drawer fronts, and other surfaces matched in a sequenced set with continuous match where veneers are interrupted perpendicular to the grain.
- E. Semiexposed Surfaces:
1. Surfaces Other Than Drawer Bodies: **[Same species and cut indicated for exposed surfaces] [Thermally fused laminate panels] [Compatible species to that indicated for exposed surfaces, stained to match] <Insert requirements>**.
 - a. Edges of Thermally Fused Laminate Panel Shelves: PVC or polyester edge banding.
 2. Drawer Subfronts, Backs, and Sides: **[Solid-hardwood lumber, same species indicated for exposed surfaces] [Solid-hardwood lumber, stained to match species indicated for exposed surfaces] [Solid-hardwood lumber] [Thermally fused laminate panels with PVC or polyester edge banding] <Insert requirements>**.
 3. Drawer Bottoms: **[Hardwood plywood] [Thermally fused laminate panels] <Insert requirements>**.

- F. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers unless located directly under tops.
- G. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
 - 1. Join subfronts, backs, and sides with [glued rabbeted joints supplemented by mechanical fasteners] [or] [glued dovetail joints].

2.04 WOOD CABINETS FOR OPAQUE FINISH

- A. North American North American Architectural Woodwork Standards Grade: **[Premium]** **[Custom]** **[Economy]**.
- B. Type of Construction: [Frameless] [Face frame].
- C. Door and Drawer-Front Style: [Flush overlay] [Reveal overlay] [Lipped] [Flush inset].
 - 1. Reveal Dimension: **[1/2 inch]** [As indicated on Drawings] <Insert dimension>.
- D. Species for Exposed Lumber Surfaces: Any closed-grain hardwood.
- E. Panel Product for Exposed Surfaces: **[MDF]** **[Medium-density overlay]**.
- F. Semiexposed Surfaces:
 - 1. Surfaces Other Than Drawer Bodies: [Match materials indicated for exposed surfaces] [Thermally fused laminate panels] <Insert requirements>.
 - a. Edges of Thermally Fused Laminate Panel Shelves: PVC or polyester edge banding.
 - 2. Drawer Sides and Backs: [Solid-hardwood lumber] [Thermally fused laminate panels with PVC or polyester edge banding] <Insert requirements>.
 - 3. Drawer Bottoms: [Hardwood plywood] [Thermally fused laminate panels] <Insert requirements>.
- G. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers unless located directly under tops.
- H. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
 - 1. Join subfronts, backs, and sides with [glued rabbeted joints supplemented by mechanical fasteners] [or] [glued dovetail joints].

2.05 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.
 - 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than 3 inches wide.
 - 2. Wood Moisture Content: 4 to 9 percent.
- B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Medium-Density Fiberboard (MDF): ANSI A208.2, **[Grade 130] <Insert grade>**.
2. Particleboard (Medium Density): ANSI A208.1, **[Grade M-2] [Grade M-2-Exterior Glue]**.
3. Softwood Plywood: DOC PS 1 **[, medium-density overlay]**.
4. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.
5. Thermally Fused Laminate (TFL) Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper **[and complying with requirements of ISO 4586]**.

2.06 FIRE-RETARDANT-TREATED MATERIAL

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of architectural cabinets.
- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E84.
1. For panels 3/4 inch thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, 1600 psi; modulus of elasticity, 300,000 psi; internal bond, 80 psi; and screw-holding capacity on face and edge, 250 and 225 lbf, respectively.

2. For panels 13/16 to 1-1/4 inches thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, 1300 psi; modulus of elasticity, 250,000 psi; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, 250 and 175 lbf, respectively.
- D. Fire-Retardant Fiberboard: MDF panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E84.

2.07 CABINET HARDWARE AND ACCESSORIES

- A. Cabinet Hardware: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Section 08 71 00 "Door Hardware".
- B. Butt Hinges: 2-3/4-inch, five-knuckle steel hinges made from 0.095-inch-thick metal, and as follows:
1. Semiconcealed Hinges for Flush Doors: ANSI/BHMA A156.9, B01361.
 2. Semiconcealed Hinges for Overlay Doors: ANSI/BHMA A156.9, B01521.
- C. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, 100 degrees of opening, self-closing.
- D. Accessories Basis of Design:
1. Cabinet Drawer Glides: Accuride 3832
 2. Cabinet Hinges: Rockford Process Control (RPC) #851
 3. Cabinet Locks: Best L Series Deadbolts and Strikes
 4. Cabinet Magnetic Catches: Epco #591
 5. Cabinet Pulls: Trimco 562-4
 6. Cabinet Shelf Standards: Knappe & Vogt (KV) 255 standards and 256 shelf clips
 7. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.
- E. Slides for Sliding Glass Doors: ANSI/BHMA A156.9, B07063; **[plastic] [aluminum]**.
- F. Door Locks: ANSI/BHMA A156.11, E07121.
- G. Drawer Locks: ANSI/BHMA A156.11, E07041.
- H. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.
- I. Float Glass for Cabinet Doors: ASTM C1036, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3.
1. Thickness: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm]**.
 2. Tint Color: **[Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
- J. Tempered Float Glass for Cabinet Doors: ASTM C1048, Kind FT, Condition A, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3, 6 mm thick unless otherwise indicated.
1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
 2. Unframed Glass Doors: Seam exposed edges seamed before tempering.

- K. Mirror Glass for Cabinet Doors: ASTM C1503, Mirror **[Select] [Glazing]**, Quality-Q3.
1. Thickness: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm]**.
- L. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Section 08 81 13 "Decorative Glass Glazing."
- M. Tempered Float Glass for Cabinet Shelves: ASTM C1048, Kind FT, Condition A, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3; with exposed edges seamed before tempering, 6 mm thick.
1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray]** <Insert color>.
- N. Grommets for Cable Passage: **[1-1/4-inch] [2-inch]** <Insert dimension> OD, molded-plastic grommets and matching plastic caps with slot for wire passage.
1. Color: **[Brown] [Black]** <Insert color>.
- O. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for BHMA finish number indicated.
1. Dark, Oxidized, Satin Bronze, Oil Rubbed: ANSI/BHMA 613 for bronze base; ANSI/BHMA 640 for steel base; match Architect's sample.
 2. Bright Brass, Clear Coated: ANSI/BHMA 605 for brass base; ANSI/BHMA 632 for steel base.
 3. Bright Brass, Vacuum Coated: ANSI/BHMA 723 for brass base; ANSI/BHMA 729 for zinc-coated-steel base.
 4. Satin Brass, Blackened, Bright Relieved, Clear Coated: ANSI/BHMA 610 for brass base; ANSI/BHMA 636 for steel base.
 5. Satin Chromium Plated: ANSI/BHMA 626 for brass or bronze base; ANSI/BHMA 652 for steel base.
 6. Bright Chromium Plated: ANSI/BHMA 625 for brass or bronze base; ANSI/BHMA 651 for steel base.
 7. Satin Stainless Steel: ANSI/BHMA 630.
- P. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.08 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber]**, kiln-dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

2.09 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate architectural cabinets to dimensions, profiles, and details indicated. Ease edges and corners to 1/16-inch radius unless otherwise indicated.

- C. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify Architect seven days in advance of the dates and times architectural cabinet fabrication will be complete.
 - 2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- D. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- E. Install glass to comply with applicable requirements in Section 08 80 00 "Glazing" and in GANA's "Glazing Manual."
 - 1. For glass in wood frames, secure glass with removable stops.
 - 2. For exposed glass edges, polish and grind smooth.

2.10 SHOP FINISHING

- A. Finish architectural cabinets at manufacturer's shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. Shop-finish transparent-finished architectural cabinets at manufacturer's shop as specified in this Section.
- C. Drawings indicate items that are required to be shop finished. Finish these items at manufacturer's shop as specified in this Section. See Section 09 90 00 Painting for field finishing of architectural cabinets.
- D. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural cabinets, as applicable to each unit of work.
 - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of cabinets.
- E. Transparent Finish:
 - 1. North American North American Architectural Woodwork Standards Grade: [Premium] [Custom] [Economy] [Same as item to be finished].
 - 2. Finish: System - [1, nitrocellulose lacquer] [2, precatylyzed lacquer] [3, postcatylyzed lacquer] [4, water-based latex acrylic] [5, conversion varnish] [6, synthetic penetrating oil] [7, catalyzed vinyl] [8, water-based crosslinking acrylic] [9, UV-curabile acrylated epoxy, polyester, or urethane] [10, water-based UV curabile] [11, catalyzed polyurethane] [12, water-based polyurethane] [13, catalyzed polyester].
 - 3. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to cabinets made from closed-grain wood before staining and finishing.
 - 4. Staining: [None required] [Match approved sample for color] [Match Architect's sample].

5. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
6. Filled Finish for Open-Grain Woods: [After staining, apply wash-coat sealer and allow to dry.] Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
7. Sheen: [Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100] gloss units measured on 60-degree gloss meter per ASTM D523.

F. Opaque Finish:

1. North American North American Architectural Woodwork Standards Grade: [Premium] [Custom] [Economy] [Same as item to be finished].
2. Finish: System - [1, nitrocellulose lacquer] [2, precatylyzed lacquer] [3, postcatylyzed lacquer] [4, water-based latex acrylic] [5, conversion varnish] [7, catalyzed vinyl] [8, water-based crosslinking acrylic] [9, UV-curable acrylated epoxy, polyester, or urethane] [10, water-based UV curable] [11, catalyzed polyurethane] [12, water-based polyurethane] [13, catalyzed polyester].
3. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].
4. Sheen: [Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100] gloss units measured on 60-degree gloss meter per ASTM D523.

PART 3 EXECUTION

3.01 PREPARATION

- A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.02 INSTALLATION

- A. North American North American Architectural Woodwork Standards Grade: Install cabinets to comply with quality standard grade of item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
- C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails [**or finishing screws**] for exposed fastening, countersunk and filled flush with cabinet surface.
 1. For shop-finished items, use filler matching finish of items being installed.
- D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches using concealed shims.
 1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 3. Maintain veneer sequence matching of cabinets with transparent finish.

4. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches o.c. with [No. 10 wafer-head screws sized for not less than 1-1/2-inch penetration into wood framing, blocking, or hanging strips] [No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish] [toggle bolts through metal backing or metal framing behind wall finish].
- E. Shop Finishes: Touch up finishing after installation of architectural cabinets. Fill nail holes with matching filler.
 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.
- F. Field Finishing: See [Section 09 91 23 "Interior Painting"] [and] [Section 09 93 00 "Staining and Transparent Finishing"] for finishing of installed architectural cabinets.

3.03 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through NAAWS's Certified Compliance Program certifying that woodwork, including installation, complies with requirements of the North American North American Architectural Woodwork Standards for the specified grade.
 1. Inspection entity is to prepare and submit report of inspection.
- B. Provide Woodwork Institute Certified Seismic Installation System inspection reports and certificates as specified in part 1 of this section.

3.04 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semi-exposed surfaces. Touch up finishes to restore damaged or soiled areas.

END OF SECTION

SECTION 06 41 16

PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Plastic-laminate-clad architectural cabinets.
2. Cabinet hardware and accessories.
3. Miscellaneous materials.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.

1.02 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.
- B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 08 71 00 "Door Hardware" to manufacturer of architectural cabinets; coordinate Shop Drawings and fabrication with hardware requirements.

1.03 PRE-INSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

- A. Action submittals are submittals requiring responsive action and return of reviewed documents to Contractor. Product Data:
 1. Plastic-laminate-clad architectural cabinets.
 2. Cabinet hardware and accessories.
 3. Miscellaneous materials.
- C. Product Data Submittals: For each product.
 1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- D. Comply with NAAWS standards.
- E. Shop Drawings:
 1. Comply with NAAWS standards.

2. Include plans, elevations, sections, and attachment details.
 3. Show large-scale details.
 4. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 5. Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.
 6. Apply NAAWS Certified Compliance Program label to Shop Drawings.
- F. Samples: For each exposed product and for each color and texture specified, in manufacturer's or manufacturer's standard size.
- G. Samples for Initial Selection: For each type of exposed finish.
- H. Samples for Verification: For the following:
1. Plastic Laminates: **[8 by 10 inches] [12 by 12 inches]**, for each type, color, pattern, and surface finish required.
 - a. Provide one sample applied to core material with specified edge material applied to one edge.
 2. Thermally Fused Laminate (TFL) Panels: **[8 by 10 inches] [12 by 12 inches]**, for each color, pattern, and surface finish.
 - a. Provide edge banding on one edge.
 3. Corner Pieces:
 - a. Cabinet-front frame joints between stiles and rails and at exposed end pieces, 18 inches high by 18 inches wide by 6 inches deep.
 - b. Miter joints for standing trim.
 4. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For **[manufacturer] [and] [Installer]**.
- B. Product Certificates: For **[each type of product.] [the following:]**
1. Composite wood products.
 2. Thermally fused laminate panels.
 3. High-pressure decorative laminate.
 4. Glass.
 5. Adhesives.
- C. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
- D. Field quality-control reports.
- 1.06 CLOSEOUT SUBMITTALS
- A. Quality Standard Compliance Certificates: NAAWS Certified Compliance Program certificates.
- 1.07 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
 - 1. Manufacturer's Certification: Licensed participant in NAAWS's Certified Compliance Program.
- B. Certified Seismic Installation Program:
 - 1. Before walls are closed up, provide a written NAAWS Certified Seismic Installation Program report confirming that backing is provided in all locations required for casework installation or identifying those locations where backing is missing or improperly located.
 - 2. On completion of installation, provide a NAAWS Certified Seismic Installation Program Certificate identifying the work covered and certifying the installations meets the requirements of the NAAWS CSIP attachment details and schedules.
 - 3. All fees charge by the NAAWS for its Certified Seismic Installation Program are the responsibility of the millwork installer and shall be included in their bid.
 - 4. In the event there is a conflict between the Contract Documents and the CSIP HCAI-approved OPM Drawings, the CSIP HCAI-approved OPM Drawings and Certified Seismic Installation Program shall prevail.
- C. Installer Qualifications: [Manufacturer of products] [Licensed participant in NAAWS's Certified Compliance Program].
- D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of [typical architectural cabinets as shown on Drawings] <Insert description>.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.09 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 20 and 50 percent during the remainder of the construction period.
- C. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 ARCHITECTURAL CABINETS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following]** **[provide products by one of the following]** **[available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

2.03 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

- A. Quality Standard: Unless otherwise indicated, comply with the NAAWS Standards for grades of cabinets indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels]** **[and]** **[certificates]** from **[NAAWS]** certification program indicating that **woodwork [and installation]** complies with requirements of grades specified.
 2. The Contract Documents contain requirements that are more stringent than the referenced quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.
- B. Plastic Laminate manufacturer:
1. Panolam/Nevamar.
 2. Formica.
 3. Wilsonart.
 4. Or Equal
- C. NAAWS Standards Grade: **[Premium]** **[Custom]** **[Economy]**.
- D. Type of Construction: **[Frameless]** **[Face frame]**.
- E. Door and Drawer-Front Style: **[Flush]** **[Reveal]** overlay.
1. Reveal Dimension: **[1/2 inch]** **[As indicated]** <Insert dimension>.
- F. High-Pressure Decorative Laminate: ISO 4586-3, grades as indicated or if not indicated, as required by quality standard.
- G. Exposed Surfaces:
1. Plastic-Laminate Grade: **[HGS]** **[VGS]** **[HGP]**.

2. Edges: [Grade HGS] [Grade VGS] [PVC tape, **0.018-inch** minimum thickness, matching laminate in color, pattern, and finish] [PVC T-mold matching laminate in color, pattern, and finish] [PVC edge banding, 3.0 mm thick, matching laminate in color, pattern, and finish].
3. Pattern Direction: [Vertically for drawer fronts, doors, and fixed panels] [Horizontally for drawer fronts, doors, and fixed panels] [Vertically for doors and fixed panels, horizontally for drawer fronts] [As indicated].

H. Semi-exposed Surfaces:

1. Surfaces Other Than Drawer Bodies: [High-pressure decorative laminate, ISO 4586-3] [Thermally fused laminate panels].
 - a. Edges of Plastic-Laminate Shelves: [PVC tape, **0.018-inch** minimum thickness, matching laminate in color, pattern, and finish] [PVC T-mold matching laminate in color, pattern, and finish] [PVC edge banding, 3.0 mm thick, matching laminate in color, pattern, and finish].
 - b. Edges of Thermally Fused Laminate Panel Shelves: PVC or polyester edge banding.
 - c. For semi-exposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, ISO 4586-3, grade to match exposed surface.
2. Drawer Sides and Backs: [Solid-hardwood lumber] [Thermally fused laminate panels with PVC or polyester edge banding].
3. Drawer Bottoms: [Hardwood plywood] [Thermally fused laminate panels].

I. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers unless located directly under tops.

J. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, ISO 4583-3, grade to match exposed surface.

K. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with [glued rabbeted joints supplemented by mechanical fasteners] [or] [glued dovetail joints].

L. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. As indicated by laminate manufacturer's designations.
2. Match Architect's sample.
3. As selected by Architect from laminate manufacturer's full range in the following categories:
 - a. Solid colors, [gloss] [matte] finish.
 - b. Solid colors with core same color as surface, [gloss] [matte] finish.
 - c. Wood grains, [gloss] [matte] finish.
 - d. Patterns, [gloss] [matte] finish.

2.04 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.
 - 1. Wood Moisture Content: 4 to 9 percent.
- B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.
 - 1. Medium-Density Fiberboard (MDF): ANSI A208.2, **[Grade 130]** <Insert grade>.
 - 2. Particleboard (Medium Density): ANSI A208.1, **[Grade M-2]** **[Grade M-2-Exterior Glue]**.
 - 3. Softwood Plywood: DOC PS 1[, **medium-density overlay**].
 - 4. Thermally Fused Laminate (TFL) Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper[**and complying with requirements of ISO 4586**].

2.05 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products in accordance with test method indicated by a qualified testing agency.
 - 1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
 - 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 - 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
 - 1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 - 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 - 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 - 4. Mill lumber before treatment and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of architectural cabinets.
- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less in accordance with ASTM E84.

1. For panels 3/4 inch thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, 1600 psi; modulus of elasticity, 300,000 psi; internal bond, 80 psi; and screw-holding capacity on face and edge, 250 and 225 lbf, respectively.
 2. For panels 13/16 to 1-1/4 inches thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, 1300 psi; modulus of elasticity, 250,000 psi; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, 250 and 175 lbf, respectively.
- D. Fire-Retardant Fiberboard: MDF panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less in accordance with ASTM E84.

2.06 CABINET HARDWARE AND ACCESSORIES

- A. Cabinet Hardware: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Section 08 71 00 "Door Hardware".
- B. Butt Hinges: 2-3/4-inch, five-knuckle steel hinges made from 0.095-inch-thick metal, and as follows:
1. Semiconcealed Hinges for Flush Doors: ANSI/BHMA A156.9, B01361.
 2. Semiconcealed Hinges for Overlay Doors: ANSI/BHMA A156.9, B01521.
- C. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, 100 degrees of opening, self-closing.
- D. Accessories Basis of Design:
1. Cabinet Drawer Glides: Accuride 3832
 2. Cabinet Hinges: Rockford Process Control (RPC) #851
 3. Cabinet Locks: Best L Series Deadbolts and Strikes
 4. Cabinet Magnetic Catches: Epco #591
 5. Cabinet Pulls: Trimco 562-4
 6. Cabinet Shelf Standards: Knap & Vogt (KV) 255 standards and 256 shelf clips
 7. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.
- E. Float Glass for Cabinet Doors: ASTM C1036, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3.
1. Thickness: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm]**.
 2. Tint Color: **[Blue-green] [Bronze] [Green] [Gray]** <Insert color>.
- F. Tempered Float Glass for Cabinet Doors: ASTM C1048, Kind FT, Condition A, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3, 6 mm thick unless otherwise indicated.
1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray]** <Insert color>.
 2. Unframed Glass Doors: Seam exposed edges seamed before tempering.
- G. Mirror Glass for Cabinet Doors: ASTM C1503, Mirror **[Select] [Glazing]**, Quality-Q3.
1. Thickness: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm]**.

- H. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Section 08 81 13 "Decorative Glass Glazing."
- I. Tempered Float Glass for Cabinet Shelves: ASTM C1048, Kind FT, Condition A, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3; with exposed edges seamed before tempering, 6 mm thick.
 - 1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray]** <Insert color>.
- J. Grommets for Cable Passage: **[1-1/4-inch] [2-inch]** <Insert dimension> OD, molded-plastic grommets and matching plastic caps with slot for wire passage.
 - 1. Color: **[Brown] [Black]** <Insert color>.
- K. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
 - 1. Dark, Oxidized, Satin Bronze, Oil Rubbed: ANSI/BHMA 613 for bronze base; ANSI/BHMA 640 for steel base; match Architect's sample.
 - 2. Bright Brass, Clear Coated: ANSI/BHMA 605 for brass base; ANSI/BHMA 632 for steel base.
 - 3. Bright Brass, Vacuum Coated: ANSI/BHMA 723 for brass base; ANSI/BHMA 729 for zinc-coated-steel base.
 - 4. Satin Brass, Blackened, Bright Relieved, Clear Coated: ANSI/BHMA 610 for brass base; ANSI/BHMA 636 for steel base.
 - 5. Satin Chromium Plated: ANSI/BHMA 626 for brass or bronze base; ANSI/BHMA 652 for steel base.
 - 6. Bright Chromium Plated: ANSI/BHMA 625 for brass or bronze base; ANSI/BHMA 651 for steel base.
 - 7. Satin Stainless Steel: ANSI/BHMA 630.
- L. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.07 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber]**, kiln-dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- C. Adhesive for Bonding Plastic Laminate: **[Type I, waterproof type] [Type II water-resistant type]** as selected by fabricator to comply with requirements.
 - 1. Adhesive for Bonding Edges: Hot-melt adhesive **[or adhesive specified above for faces]**.

2.08 FABRICATION

- A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.

- B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify Architect seven days in advance of the dates and times architectural cabinet fabrication will be complete.
 - 2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- D. Install glass to comply with applicable requirements in Section 08 80 00 "Glazing" and in GANA's "Glazing Manual."
 - 1. For glass in frames, secure glass with removable stops.
 - 2. For exposed glass edges, polish and grind smooth.

PART 3 EXECUTION

3.01 PREPARATION

- A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.02 INSTALLATION

- A. NAAWS Standards Grade: Install cabinets to comply with quality standard grade of item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
- C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.
- D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches using concealed shims.
 - 1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 - 2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

3. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches o.c. with [No. 10 wafer-head screws sized for not less than **1-1/2-inch** penetration into wood framing, blocking, or hanging strips] [No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish] [toggle bolts through metal backing or metal framing behind wall finish].

3.03 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through **[NAAWS's Certified Compliance Program]** certifying that woodwork, including installation, complies with requirements of the NAAWS Standards for the specified grade.
 1. Inspection entity is to prepare and submit report of inspection.
- B. Provide NAAWS Certified Seismic Installation System inspection reports and certificates as specified in part 1 of this section.

3.04 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semi-exposed surfaces.

END OF SECTION

SECTION 06 83 16
FRP WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Fiberglass reinforced polyester (FRP) wall panels.
 - 2. Matching moldings, fasteners, adhesive, and sealant.
- B. Related requirements: All other sealants.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing:
- B. Preinstallation meeting:

1.03 SUBMITTALS

- A. Samples: 12-inch square Samples of panel and 12-inch lengths of each profile of moldings.
- B. Shop Drawings: Shop Drawings showing panel joint locations and details. Joint locations are subject to the Architect's approval.
- C. Data: Manufacturer Product Data including testing laboratory certification of fire hazard classification on each package.
- D. Maintenance instructions:
 - 1. Copy of the panel manufacturer's maintenance instructions.
 - 2. Include recommended cleaning materials and methods of application therefore together with precautions in cleaning materials' use if such are improperly applied.

1.04 HANDLING

- A. Store panels indoor, and flat to avoid distortion. Maintain storage area temperature above 60-degree F.

1.05 JOB CONDITIONS

- A. Comply with wall panel manufacturer recommendations for temperature and humidity in installation areas.
- B. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.

PART 2 PRODUCTS

2.01 MATERIALS

- A. FRP wall panel: By one of the following, furnished in longest length available to minimize joints, of the color selected by the Architect.
 - 1. Marlite Standard FRP panels, P 100 white, pebbled finish, basis of design.
 - 2. Crain Composites.
 - 3. Or equal.
- B. Trim: Manufacturer standard vinyl division bar, insider corner, outside corner and cap as required, matching the color of wall panel.
- C. Fasteners: Manufacturer standard rivets matching the color of the wall panel.
- D. Adhesive: Titebond "Fast Grab", or equal non-toxic, non-allergenic adhesive recommended by the wall panel manufacturer and meeting Code requirements for flammability and toxicity.
- E. Sealant: White, low gloss silicone, as specified in Section 07 92 00 unless otherwise recommended by panel manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine surfaces scheduled to receive wall panel for conditions that will adversely affect execution, permanence and quality of work. Verify that substrates are:
 - 1. Clean, smooth, dry, free of irregularities.
 - 2. Straight within a maximum tolerance of 1/8-inch in 10 feet, and not greater than 1/16-inch each running foot.

- B. Correct detrimental conditions before proceeding with installation.

3.02 MOLDING INSTALLATION

- A. Provide molding at top and bottom edges of panels. Use full-length stock moldings for run equaling, or less than, the stock length. Miter corners.
- B. Butt vertical edges tight and flush.
- C. Install panels plumb and level, and with hairline joints.

3.03 INSTALLATION OF PANELS

- A. Except as modified in this Section, comply with the panel manufacturer's installation instructions.
- B. Establish the top of the wainscot, or vertical terminations, in a straight line.
- C. Avoid contamination of panel faces.
- D. Butt joints for an even and tight fit along entire length of joint. Make joints plumb and level.
- E. Balance sheet width symmetrically about centerline of wall so that no sheet is less than 2-foot wide.
- F. Glue panels securely to substrate.
- G. Square cut and sand smooth edges that will not be covered by trim. Do not damage exposed face.
- H. Carefully locate penetrations and openings through the panels, including electrical outlets and piping, and provide minimum sized openings as required. Size openings so they will be covered by switch plates, flanges and other required trim.

3.04 CLEANING

- A. Remove excess sealant and adhesive from joint immediately.
- B. Clean installation immediately after installation with manufacturer recommended cleaner.
- C. Replace damaged or permanently contaminated units.

DIVISION 07
THERMAL & MOISTURE PROTECTION

This page intentionally left blank

SECTION 07 01 50

PREPARATION FOR RE-ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. The Work of This Section Includes:

1. Full roof tear-off.
2. Partial roof tear-off.
3. Temporary roofing.
4. Roof re-cover preparation.
5. Base flashing removal.
6. Fastener pull-out testing.
7. Disposal.

B. Related Requirements:

1. Section 01 10 00 "Summary" for use of premises and for phasing requirements.
2. Section 01 50 00 "Temporary Facilities and Controls" for temporary construction and environmental-protection measures for reroofing preparation.

1.02 DEFINITIONS

- A. EPS: Molded (expanded) polystyrene.
- B. Full Roof Tear-off: Removal of existing roofing system down to existing **[roof deck] [concrete fill]**.
- C. OSB: Oriented strand board.
- D. Partial Roof Tear-off: Removal of selected components and accessories from existing roofing system.
- E. Roofing Terminology: Definitions in ASTM D1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to work of this Section.
- F. Roof Re-Cover Preparation: Existing roofing system is to remain and be prepared for new roof installed over it.

1.03 PRE-INSTALLATION MEETINGS

- A. Preliminary Roofing Conference: Before starting removal Work, conduct conference at **[Project site] <Insert location>**.
 1. Meet with Owner, Architect, **[Construction Manager,]** Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

2. Review methods and procedures related to roofing tear-off, including, but not limited to, the following:
 - a. Reroofing preparation, including roofing system manufacturer's written instructions.
 - b. Temporary protection requirements for existing roofing system components that are to remain.
 - c. Existing roof drains and roof drainage during each stage of reroofing, and roof-drain plugging and plug removal.
 - d. Construction schedule and availability of materials, Installer's personnel, equipment, and facilities needed to avoid delays.
 - e. Existing roof deck conditions requiring Architect notification.
 - f. Existing roof deck removal procedures and Owner notifications.
 - g. Condition and acceptance of existing roof deck and base flashing substrate for reuse.
 - h. Structural loading limitations of roof deck during reroofing.
 - i. Base flashings, special roofing details, drainage, penetrations, equipment curbs, and condition of other construction that affect reroofing.
 - j. HVAC shutdown and sealing of air intakes.
 - k. Shutdown of fire-suppression, -protection, and -alarm and -detection systems.
 - l. Asbestos removal and discovery of asbestos-containing materials.
 - m. Governing regulations and requirements for insurance and certificates if applicable.
 - n. Existing conditions that may require Architect notification before proceeding.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Temporary Roofing Submittal: Product data and description of temporary roofing system.
 1. If temporary roof remains in place, include surface preparation requirements needed to receive permanent roof, and submit a letter from roofing manufacturer stating acceptance of the temporary roof and that its inclusion does not adversely affect the new roofing system's resistance to fire and wind **[or specified special warranty] [or its FM Approvals rating]**.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
 1. Include certificate that Installer is approved by warrantor of existing roofing system.
 2. Include certificate that Installer is licensed to perform asbestos abatement.

- B. Field Test Reports: Fastener pull-out test report.
- C. Photographs or Video: Show existing conditions of adjoining construction and site improvements, including exterior and interior finish surfaces, that might be misconstrued as having been damaged by reroofing operations.
 - 1. Submit before Work begins.
- D. Landfill Records: Indicate receipt and acceptance of **[demolished roofing materials and]** hazardous wastes, such as asbestos-containing materials, by a landfill facility licensed to accept them.

1.06 CLOSEOUT SUBMITTALS

- A. Certified statement from **<Insert name of manufacturer for existing warranted roof system>** stating that existing roof warranty has not been affected by Work performed under this Section.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: **[Approved by warrantor of existing roofing system to work on existing roofing] [and] [licensed to perform asbestos abatement in the state or jurisdiction where Project is located]**.
- B. Regulatory Requirements:
 - 1. Comply with governing EPA notification regulations before beginning roofing removal.
 - 2. Comply with hauling and disposal regulations of authorities having jurisdiction.

1.08 FIELD CONDITIONS

- A. Existing Roofing System: **[Built-up asphalt] [Built-up coal-tar] [APP-modified bituminous] [SBS-modified bituminous] [EPDM] [CSPE] [KEE] [PVC] [TPO] [APP-modified bituminous protected membrane] [SBS-modified bituminous protected membrane] [Fluid-applied protected membrane] [Coated foamed] <Insert roof type>** roofing.
- B. General Considerations:
 - 1. Assess existing drain bowls for replacement. Replace drain bowl unless approved by Owner and assessed to have equal remaining useful life as newly installed roof.
 - 2. Assess roof drainage. Where roof drainage is insufficient, provide supplemental drainage during construction of new roof.
 - 3. Assess fall protection requirements.
 - 4. Assess existing base flashings.
 - a. Where existing roof base flashing is integrated into the wall and the wall weather barrier and this transition has a removable or cuttable metal counterflashing, the scope shall not include the removal of cladding.
 - b. Where existing roof base flashings are encapsulated behind cladding without a removable or cuttable metal counterflashing, the Contractor shall:
 - 1) Remove wall cladding and integrate roofing into existing weather resistant barrier and provide a metal counterflashing.

- 2) Where wall cladding removal is not feasible, an alternate scope and roof termination shall be provided to the Owner for approval.
5. Assess coping metal and other potentially salvable sheet metal items.
 - a. Confirm that salvable sheet metal will have an expected useful life that matches that of the new roof.
 - b. Confirm that salvable sheet metal will fit in the new roof.
- C. Owner **[will]** **[will not]** occupy portions of building immediately below reroofing area.
 1. Conduct reroofing so Owner's operations are not disrupted.
 2. Provide Owner with not less than **[72]** **<Insert number>** hours' written notice of activities that may affect Owner's operations.
 3. Coordinate work activities daily with Owner so Owner has adequate advance notice to place protective dust and water-leakage covers over sensitive equipment and furnishings, shut down HVAC and fire-alarm or -detection equipment if needed, and evacuate occupants from below work area.
 4. Before working over structurally impaired areas of deck, notify Owner to evacuate occupants from below affected area.
 - a. Verify that occupants below work area have been evacuated before proceeding with work over impaired deck area.
- D. Protect building to be reroofed, adjacent buildings, walkways, site improvements, exterior plantings, and landscaping from damage or soiling from reroofing operations.
- E. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.
- F. Conditions existing at time of inspection for bidding will be maintained by Owner as far as practical.
 1. A roof moisture survey of existing roofing system is available for Contractor's reference.
 2. The results of an analysis of test cores from existing roofing system are available for Contractor's reference.
 3. Construction Drawings **[and Project Manual]** for existing roofing system are provided for Contractor's convenience and information, but they are not a warranty of existing conditions. They are intended to supplement rather than serve in lieu of Contractor's own investigations. Contractor is responsible for conclusions derived from existing documents.
- G. Limit construction loads on existing roof areas to remain, and existing roof areas scheduled to be reroofed to **<Insert load>** for rooftop equipment wheel loads and **<Insert load>** for uniformly distributed loads.
- H. Weather Limitations: Proceed with reroofing preparation only when existing and forecasted weather conditions permit Work to proceed without water entering existing roofing system or building.
 1. Remove only as much roofing in one day as can be made watertight in the same day.
- I. Hazardous Materials:
 1. It is not expected that hazardous materials, such as asbestos-containing materials, will be encountered in the Work.

- a. Hazardous materials will be removed by Owner before start of the Work.
- b. Existing roof will be left no less watertight than before removal.
2. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner.
 - a. Hazardous materials will be removed by Owner under a separate contract.
3. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
 - a. Hazardous material remediation is specified elsewhere in the Contract Documents.
 - b. Do not disturb hazardous materials or items suspected of containing hazardous materials except according to procedures specified elsewhere in the Contract Documents.
 - c. Coordinate reroofing preparation with hazardous material remediation to prevent water from entering existing roofing system or building.

1.09 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during reroofing, by methods and with materials so as not to void existing roofing system warranty issued by <Insert name of manufacturer for existing warranted roof system>.
 1. Notify warrantor before proceeding with the Work.
 2. Notify warrantor of existing roofing system on completion of reroofing, and obtain documentation verifying that existing roofing system has been inspected and warranty remains in effect.
 - a. Submit documentation at Project closeout.

PART 2 PRODUCTS

2.01 TEMPORARY PROTECTION MATERIALS

- A. EPS Insulation: ASTM C578.
- B. Plywood: DOC PS 1, Grade CD, Exposure 1.
- C. OSB: DOC PS 2, Exposure 1.

2.02 TEMPORARY ROOFING MATERIALS

- A. Design and selection of materials for temporary roofing are Contractor's responsibilities.
- B. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft..
- C. Base Sheet: ASTM D4601/D4601M, Type II, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet.
- D. Glass-Fiber Felts: ASTM D2178/D2178M, Type IV, asphalt-impregnated, glass-fiber felt.

- E. Asphalt Primer: ASTM D41/D41M.
- F. Roofing Asphalt: ASTM D312/D312M, Type III or IV.
- G. Base Sheet Fasteners: Capped head, factory-coated steel fasteners, listed in FM Approvals' RoofNav.

2.03 INFILL AND REPLACEMENT MATERIALS

- A. Use infill materials matching existing roofing system materials unless otherwise indicated.
 - 1. Infill materials are specified in [Section 07 52 16 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing"] [Section 07 54 19 "Polyvinyl-Chloride (PVC) Roofing"] unless otherwise indicated.
- B. Steel deck is specified in Section 05 31 00 "Steel Decking."
- C. Wood blocking, curbs, and nailers are specified in Section 06 10 00 "Rough Carpentry."
- D. Plywood roof sheathing is specified in Section 06 16 00 "Sheathing."
- E. Parapet Sheathing:
 - 1. ASTM C1177/C1177M or ASTM C1278/C1278M water-resistant gypsum substrate; **[1/4 inch] [3/8 inch] [1/2 inch] [5/8 inch]** thick.
 - 2. **[Pressure-preservative] [Exterior fire-retardant]**-treated plywood wall sheathing, **[19/32 inch] <Insert dimension>** thick, complying with Section 06 16 00 "Sheathing."
- F. Fasteners: Factory-coated steel fasteners with metal or plastic plates listed in FM Approvals' RoofNav, and acceptable to new roofing system manufacturer.

2.04 AUXILIARY REROOFING MATERIALS

- A. General: Use auxiliary reroofing preparation materials recommended by roofing system manufacturer for intended use and compatible with components of **[existing and]**new roofing system.

PART 3 EXECUTION

3.01 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect existing roofing system that is not to be reroofed.
 - 2. Loosely lay 1-inch-minimum thick, EPS insulation over existing roofing in areas not to be reroofed.
 - a. Loosely lay 15/32-inch plywood or OSB panels over EPS. Extend EPS past edges of plywood or OSB panels a minimum of 1 inch.
 - 3. Limit traffic and material storage to areas of existing roofing that have been protected.
 - 4. Maintain temporary protection and leave in place until replacement roofing has been completed. Remove temporary protection on completion of reroofing.

5. Comply with requirements of existing roof system manufacturer's warranty requirements.
- B. Seal or isolate windows that may be exposed to airborne substances created in removal of existing materials.
- C. Shut off rooftop utilities and service piping before beginning the Work.
- D. Test existing roof drains to verify that they are not blocked or restricted.
 1. Immediately notify Architect of any blockages or restrictions.
- E. Coordinate with Owner to shut down air-intake equipment in the vicinity of the Work.
 1. Cover air-intake louvers before proceeding with reroofing work that could affect indoor air quality or activate smoke detectors in the ductwork.
- F. During removal operations, have sufficient and suitable materials on-site to facilitate rapid installation of temporary protection in the event of unexpected rain.
- G. Maintain roof drains in functioning condition to ensure roof drainage at end of each workday.
 1. Prevent debris from entering or blocking roof drains and conductors.
 - a. Use roof-drain plugs specifically designed for this purpose.
 - b. Remove roof-drain plugs at end of each workday, when no work is taking place, or when rain is forecast.
 2. If roof drains are temporarily blocked or unserviceable due to roofing system removal or partial installation of new roofing system, provide alternative drainage method to remove water and eliminate ponding.
 - a. Do not permit water to enter into or under existing roofing system components that are to remain.

3.02 ROOF TEAR-OFF

- A. Full Roof Tear-off Considerations:
 1. Core existing roofs prior to tear off to:
 - a. Confirm substrate type and thickness
 - b. Confirm materials within roof
 - c. Confirm slope of substrate
 - d. Additional time/money shall not be provided to Contractor due to not confirming site conditions prior to tear off.
 2. Coordinate insulation height with existing base flashing counterflashing, doors, elevators and other surfaces.
 3. Confirm compatibility of new roofing against any remnants of the existing roofing. Remove these items or provide separation tapes/membranes.
- B. Notify Owner each day of extent of roof tear-off proposed for that day **[and obtain authorization to proceed]**.

- C. Lower removed roofing materials to ground and onto lower roof levels, using dust-tight chutes or other acceptable means of removing materials from roof areas.
- D. Remove aggregate ballast from roofing. [**Store aggregate ballast for reuse in manner not to exceed structural loading limitations of roof deck.**]
- E. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing using a power broom.
- F. Remove pavers and accessories from roofing.
 - 1. Store and protect pavers and accessories for reuse in manner not to exceed structural loading limitations of roof deck.
 - 2. Discard cracked pavers.
- G. Remove ballast, protection mat, and EPS insulation from protected roofing membrane.
 - 1. Discard EPS insulation that is damaged or exceeds [**8 lb/cu. ft.**] <Insert value>.
 - 2. Store EPS insulation for reuse and protect it from physical damage.
 - 3. Store ballast for reuse in manner not to exceed structural loading limitations of roof deck.
- H. Full Roof Tear-off: [**Where indicated on Drawings, remove**] [**Remove**] existing roofing and other roofing system components down to the existing [**roof deck**] [**concrete fill**].
 - 1. Remove [substrate board] [vapor retarder] [roof insulation] [and] [cover board].
 - 2. Remove base flashings and counter flashings.
 - 3. Remove perimeter edge flashing and gravel stops.
 - 4. Remove copings.
 - 5. Remove expansion-joint covers.
 - 6. Remove flashings at pipes, curbs, mechanical equipment, and other penetrations.
 - 7. Remove roof drains indicated on Drawings to be removed.
 - 8. Remove wood blocking, curbs, and nailers.
 - 9. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry.
 - a. Remove unadhered bitumen, unadhered felts, and wet felts.
 - 10. Remove excess asphalt from steel deck.
 - a. A maximum of 15 lb/100 sq. ft. of asphalt is permitted to remain on steel decks.
 - 11. Remove fasteners from deck [or cut fasteners off slightly above deck surface].
- I. Partial Roof Tear-off: [**Where indicated on Drawings, remove**] [**Remove**] existing roofing down to [**existing cover board**] [**existing insulation**] <Insert substrate> and immediately check for presence of moisture.
 - 1. [**Engage**] [**Owner will engage**] a qualified testing agency to perform the following test:
 - a. Coordinate with Owner's testing agency to schedule times for tests and inspections immediately after removal.

2. Survey exposed substrate that is to remain using infrared color thermography according to ASTM C1153.
 - a. Prepare survey report of initial scan indicating locations of entrapped moisture, if any, and area calculations of locations of entrapped moisture.
3. Survey exposed substrate that is to remain using electrical capacitance/impedance testing according to ASTM D7954/D7954M.
 - a. Prepare survey report indicating locations of entrapped moisture, if any, and area calculations of locations of entrapped moisture.
4. Survey exposed substrate that is to remain using nuclear hydrogen detection testing according to SPRI/RCI NT-1.
 - a. Prepare survey report indicating locations of entrapped moisture, if any, and area calculations of locations of entrapped moisture.
5. Remove wet or damp materials below existing roofing and above deck as directed by Architect.
 - a. [Removal is paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.]
6. Inspect wood blocking, curbs, and nailers for deterioration and damage.
 - a. If wood blocking, curbs, or nailers have deteriorated, immediately notify Architect.
 - b. [Removal is paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.]
7. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry.
 - a. Remove unadhered bitumen, unadhered felts, and wet felts.
8. Remove excess asphalt from steel deck that is exposed by removal of wet or damp materials.
 - a. A maximum of 15 lb/100 sq. ft. of asphalt is permitted to remain on steel decks.
9. Remove fasteners from deck [or cut fasteners off slightly above deck surface].

3.03 DECK PREPARATION

- A. Inspect deck after tear-off of roofing system.
- B. If broken or loose fasteners that secure deck panels to one another or to structure are observed, or if deck appears or feels inadequately attached, immediately notify Architect.
 1. Do not proceed with installation until directed by Architect.
- C. If deck surface is unsuitable for receiving new roofing or if structural integrity of deck is suspect, immediately notify Architect.
 1. Do not proceed with installation until directed by Architect.
- D. Provide additional deck securement as indicated on Drawings.

- E. Replace steel deck as indicated on Drawings.
- F. Replace steel deck as directed by Architect.
 - 1. Deck replacement will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- G. Prepare and paint steel deck surface.
 - 1. Painting and preparation for painting is specified in Section 09 91 13 "Exterior Painting."
- H. Replace plywood roof sheathing as indicated on Drawings.
- I. Replace plywood roof sheathing as directed by Architect.
 - 1. Roof sheathing replacement will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.

3.04 INFILL MATERIALS INSTALLATION

- A. Immediately after roof tear-off, and inspection and repair, if needed, of deck, fill in tear-off areas to match existing roofing system construction.
 - 1. Installation of infill materials is specified in Section 07 54 19 "Polyvinyl-Chloride (PVC) Roofing."
 - 2. Installation of wood blocking, curbs, and nailers is specified in Section 06 10 00 "Rough Carpentry."
- B. Install new roofing patch over roof infill area.
 - 1. If new roofing is installed the same day tear-off is made, roofing patch is not required.

3.05 TEMPORARY ROOFING

- A. Install approved temporary roofing over area to be reroofed.
- B. Install temporary roofing over area to be reroofed.
 - 1. [Install two glass-fiber felts] [Mechanically fasten base sheet and install a glass-fiber felt], lapping each sheet 19 inches over preceding sheet.
 - 2. Embed glass-fiber felt in a solid mopping of hot roofing asphalt applied within equiviscous temperature range.
 - 3. Glaze-coat completed surface with hot roofing asphalt.
- C. Remove temporary roofing before installing new roofing.
- D. Prepare temporary roof to receive new roofing [**according to approved temporary roofing proposal**] [**by patching and repairing temporary roofing**] <Insert preparation method>.
 - 1. Restore temporary roofing to watertight condition.
 - 2. Obtain approval for temporary roof substrate from roofing manufacturer and Architect before installing new roof.

3.06 ROOF RE-COVER PREPARATION

- A. Roof Re-Cover Considerations:
1. Interview facilities staff and provide roof assessment (top and underside) to determine if there are any current or past leaks.
 2. Contractor shall be required to provide non-destructive roof moisture scan to determine extent and location of any moisture in the existing roof assembly.
 - a. Core areas with suspected moisture to confirm what material within roof assembly is wet.
 - b. Replace wet materials as part of re-cover scope.
 3. Contractor shall be required to core roofs prior to tear off to:
 - a. Confirm substrate type and thickness.
 - b. Confirm materials within roof.
 - 1) If core outlines more than two layers of previously installed roofing, a re-cover roof is no longer a viable option unless AHJ approval is given in writing.
 - c. Confirm slope of substrate.
 - d. Core shall be taken at locations where roof moisture scan outlined potential moisture in existing roofing assembly.
 - e. Additional time/money shall not be provided to Contractor due to not confirming site conditions prior to tear off.
- B. Remove blisters, ridges, buckles, [**mechanically attached roofing fastener buttons projecting above roofing,**] and other substrate irregularities from existing roofing that inhibit new recover boards from conforming to substrate.
1. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing with a power broom.
 2. Scarify surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new recover boards.
 3. Broom clean existing substrate.
 4. Coordinate with Owner's inspector to schedule times for tests and inspections.
 5. Verify that existing substrate is dry.
 - a. Spot check substrates with an electrical capacitance moisture-detection meter.
 6. Remove materials that are wet or damp.
 - a. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- C. Remove blisters, ridges, buckles, [**mechanically attached roofing fastener buttons projecting above roofing,**] and other substrate irregularities from existing roofing that inhibit new [**recover boards**] [**roofing**] from conforming to substrate.
1. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing with a power broom.

2. Shave surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new **[recover boards] [roofing]**.
 3. Broom clean existing substrate.
 4. Coordinate with Owner's inspector to schedule times for tests and inspections.
 5. Verify that existing substrate is dry before proceeding with installation.
 - a. Spot check substrates with an electrical capacitance moisture-detection meter.
 6. Remove materials that are wet and damp.
 - a. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- D. Remove blisters and areas of roofing not fully adhered.
- E. Remove **[mechanically attached roofing fastener buttons projecting above roofing and other]** substrate irregularities that inhibit new recover boards from conforming to substrate.
1. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing with a power broom.
 2. Clean substrate of contaminants, such as dirt, debris, oil, and grease, that can affect adhesion of coated foamed roofing.
 3. Power vacuum the existing roof surface.
 - a. If recommended by foam manufacturer, prime dried surface at recommended rate with recommended primer.
 4. Scarify surface of coated polyurethane roofing as necessary to achieve a suitable substrate for new roofing.
 5. Provide additional uplift securement for existing roofing system with new screws and plates applied to each roof zone at the following densities:
 - a. Field of roof, one fastener for each **<Insert area>**.
 - b. Corners of roof, one fastener for each **<Insert area>**.
 - c. Perimeters of roof, one fastener for each **<Insert area>**. Width of perimeter zone of roof is **<Insert dimension>**.
 6. Verify that surface is dry by pressing litmus paper to surface areas most likely to retain moisture, such as shaded areas and low spots.
 - a. If paper changes color, surface is too wet to apply foam.
- 3.07 BASE FLASHING REMOVAL
- A. Remove existing base flashings.
1. Clean substrates of contaminants, such as asphalt, sheet materials, dirt, and debris.
- B. Do not damage metal counterflashings that are to remain.
1. Replace metal counterflashings damaged during removal with counterflashings **[of same metal, weight or thickness, and finish as existing.] [specified in Section 07 62 00 "Sheet Metal Flashing and Trim."]** **[specified in Section 07 71 00 "Roof Specialties."]**

- C. Inspect parapet sheathing, wood blocking, curbs, and nailers for deterioration and damage.
 - 1. If parapet sheathing, wood blocking, curbs, or nailers have deteriorated, immediately notify Architect.
- D. Remove existing parapet sheathing and replace with new parapet sheathing to comply with Section 06 16 00 "Sheathing."
 - 1. If parapet framing, wood blocking, curbs, or nailers have deteriorated, immediately notify Architect.
- E. When directed by Architect, replace parapet framing, wood blocking, curbs, and nailers to comply with **[Section 05 40 00 "Cold-Formed Metal Framing.]" [Section 06 10 00 "Rough Carpentry."]**

3.08 FASTENER PULL-OUT TESTING

- A. **[Perform] [Retain independent testing and inspecting agency to conduct]** fastener pull-out tests according to SPRI FX-1, and submit test report to **[Architect] [and] [roofing manufacturer]** before installing new roofing system.
 - 1. Obtain **[Architect's] [roofing manufacturer's]** approval to proceed with specified fastening pattern.
 - a. **[Architect] [Roofing manufacturer]** may furnish revised fastening pattern commensurate with pull-out test results.

3.09 DISPOSAL

- A. Collect demolished materials and place in containers.
 - 1. Promptly dispose of demolished materials.
 - 2. Do not allow demolished materials to accumulate on-site.
 - 3. Storage or sale of demolished items or materials on-site is not permitted.
- B. Transport and legally dispose of demolished materials off Owner's property.

SECTION 07 11 13
BITUMINOUS DAMPPROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Cold-applied, cut-back-asphalt dampproofing.
2. Cold-applied, emulsified-asphalt dampproofing.

B. Related Requirements:

1. Section 03 30 00 "Cast-in-Place Concrete" for bituminous vapor retarders under slabs-on-grade.
2. Section 04 22 00 "Concrete Unit Masonry" for mortar parge coat on masonry surfaces.
3. Section [07 13 26 "Self-Adhering Sheet Waterproofing"] [Section 07 14 00 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 07 14 16 "Cold Fluid-Applied Waterproofing"] for waterproofing.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.03 FIELD CONDITIONS

- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit dampproofing to be performed according to manufacturers' written instructions.
- B. Ventilation: Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has cured.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Source Limitations: Obtain primary dampproofing materials and primers from single source from single manufacturer. Provide **[protection course] [drainage panels] [and]** auxiliary materials recommended in writing by manufacturer of primary materials.

2.02 PERFORMANCE REQUIREMENTS

- A. VOC Content: Products are to comply with VOC content limits of authorities having jurisdiction unless otherwise indicated.

2.03 COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

- A. Trowel Coats: ASTM D4586/D4586M, Type I, Class 1, fibered.
- B. Brush and Spray Coats: ASTM D4479/D4479M, Type I, fibered [or nonfibered].

2.04 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Trowel Coats: ASTM D1227, Type II, Class 1.
- B. Fibered Brush and Spray Coats: ASTM D1227, Type II, Class 1.
- C. Brush and Spray Coats: ASTM D1227, Type III, Class 1.

2.05 AUXILIARY MATERIALS

- A. Furnish auxiliary materials recommended in writing by dampproofing manufacturer for intended use and compatible with bituminous dampproofing.
- B. Cut-Back-Asphalt Primer: ASTM D41/D41M.
- C. Emulsified-Asphalt Primer: ASTM D1227, Type III, Class 1, except diluted with water as recommended in writing by manufacturer.
- D. Asphalt-Coated Glass Fabric: ASTM D1668/D1668M, Type I.
- E. Patching Compound: **[Epoxy or latex-modified repair mortar] [Asbestos-free fibered mastic]** of type recommended in writing by dampproofing manufacturer.
- F. ASTM D6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners.
 - 1. Thickness: Nominal **[1/8 inch] [1/4 inch]**.
 - 2. Adhesive: Rubber-based solvent type recommended in writing by waterproofing manufacturer for protection course type.
- G. Fan folded, with a core of extruded-polystyrene board insulation faced on **[one side] [or both sides]** with plastic film, nominal thickness 1/4 inch, with a compressive strength of not less than 8 psi per ASTM D1621, and maximum water absorption by volume of 0.6 percent per ASTM C272/C272M.
- H. Extruded-polystyrene board insulation, unfaced, ASTM C578, Type X, 1/2 inch thick.
- I. Smooth-surfaced roll roofing complying with ASTM D6380/D6380M, Class S, Type III.

2.06 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel acceptable to dampproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side of the core, with or without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft.] <Insert value>**.

2.07 INSULATION DRAINAGE PANELS

- A. Insulation Drainage Panels:
 - 1. Comply with Section 07 21 00 "Thermal Insulation" for insulation drainage panels.
 - 2. Unfaced or geotextile-faced, extruded-polystyrene board insulation according to ASTM C578, Type IV, 25-psi, or Type VI, 40-psi, minimum compressive strength; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for surface smoothness, maximum surface moisture content, and other conditions affecting performance of the Work.
- B. Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for dampproofing application.
- B. Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.
- C. Clean substrates of projections and substances detrimental to dampproofing work; fill voids, seal joints, and remove bond breakers if any.
- D. Apply patching compound to patch and fill tie holes, honeycombs, reveals, and other imperfections [**; cover with asphalt-coated glass fabric**].

3.03 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions for dampproofing application, cure time between coats, and drying time before backfilling unless otherwise indicated.
 - 1. Apply dampproofing to provide continuous plane of protection.
 - 2. Apply additional coats if recommended in writing by manufacturer or to achieve a smooth surface and uninterrupted coverage.
- B. Where dampproofing footings and foundation walls, apply from finished-grade line to top of footing; extend over top of footing and down a minimum of 6 inches over outside face of footing.
 - 1. Extend dampproofing 12 inches onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.
 - 2. Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, cracks, and where indicated as "reinforced," by embedding an 8-inch-wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat for embedding fabric is in addition to other coats required.

- C. Where dampproofing exterior face of inner wythe of exterior masonry cavity walls, lap dampproofing at least 1/4 inch onto flashing, masonry reinforcement, veneer ties, and other items that penetrate inner wythe.
 - 1. Extend dampproofing over outer face of structural members and concrete slabs that interrupt inner wythe.
 - 2. Lap dampproofing at least 1/4 inch onto shelf angles supporting veneer.
- D. Where dampproofing interior face of above-grade, exterior **[concrete] [and] [masonry] [single-wythe masonry]** walls, continue dampproofing through intersecting walls by keeping vertical mortar joints at intersection temporarily open or by dampproofing wall before constructing intersecting walls.

3.04 INSTALLATION OF COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

- A. Concrete Foundations and Parged Masonry Foundation Walls: Apply **[two brush or spray coats at not less than 1.25 gal./100 sq. ft. for first coat and 1 gal./100 sq. ft. for second coat] [or] [one trowel coat at not less than 4 gal./100 sq. ft.]**.
- B. Unparged Masonry Foundation Walls: Apply **[primer and two brush or spray coats at not less than 1.25 gal./100 sq. ft. for first coat and 1 gal./100 sq. ft. for second coat] [or] [primer and one trowel coat at not less than 4 gal./100 sq. ft.]**.
- C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft..
- D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft..
- E. Concrete Backup for Masonry Veneer Assemblies: Apply one brush or spray coat at not less than 1 gal./100 sq. ft..
- F. Masonry Backup for Masonry Veneer Assemblies: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft..
- G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft..

3.05 INSTALLATION OF COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Concrete Foundations and Parged Masonry Foundation Walls: Apply **[two brush or spray coats at not less than 1.5 gal./100 sq. ft. for first coat and 1 gal./100 sq. ft. for second coat] [one fibered brush or spray coat at not less than 3 gal./100 sq. ft.] [or] [one trowel coat at not less than 4 gal./100 sq. ft.]**.
- B. Unparged Masonry Foundation Walls: Apply **[primer and two brush or spray coats at not less than 1.5 gal./100 sq. ft. for first coat and 1 gal./100 sq. ft. for second coat] [primer and one fibered brush or spray coat at not less than 3 gal./100 sq. ft.] [or] [primer and one trowel coat at not less than 5 gal./100 sq. ft.]**.
- C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft..
- D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft..

- E. Concrete Backup for Masonry Veneer Assemblies: Apply one brush or spray coat at not less than 1 gal./100 sq. ft..
- F. Masonry Backup for Masonry Veneer Assemblies: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft..
- G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft..
- H. Interior Face of Exterior Concrete Walls: Where above grade and indicated to be furred and finished, apply one brush or spray coat at not less than 1 gal./100 sq. ft..
- I. Interior Face of Exterior Masonry Walls: Where above grade and indicated to be furred and finished, apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft..

3.06 INSTALLATION OF PROTECTION COURSE

- A. Install protection course over completed-and-cured dampproofing. Comply with dampproofing-material and protection-course manufacturers' written instructions for attaching protection course.
 - 1. Support protection course over cured coating with spot application of adhesive type recommended in writing by protection-board manufacturer.
 - 2. Install protection course **[on same day] [within 24 hours]** of dampproofing installation (while coating is tacky) to ensure adhesion.

3.07 INSTALLATION OF DRAINAGE PANEL

- A. Molded-Sheet Drainage Panels: Install panels, with geotextile facing away from wall substrate, according to manufacturer's written instructions. Use adhesive or another method that does not penetrate dampproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. Install **[thermal insulation specified in Section 07 21 00 "Thermal Insulation,"] [protection course]** before installing drainage panels.
- B. Insulation Drainage Panels: Install panels over dampproofed surfaces. Use adhesive or another method that does not penetrate dampproofing. Cut and fit panels to within 3/4 inch of projections and penetrations.
 - 1. Ensure that drainage channels are aligned and free of obstructions.

3.08 PROTECTION

- A. Protect installed insulation drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where panels are subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- B. Correct dampproofing that does not comply with requirements; repair substrates, and reapply dampproofing.

END OF SECTION

SECTION 07 13 26

SELF-ADHERING SHEET WATERPROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Modified bituminous sheet waterproofing.
2. Protection course.
3. Molded-sheet drainage panels.
4. Insulation drainage panels.

B. Related Requirements:

1. Section 07 21 00 "Thermal Insulation."
2. Section 07 95 13.16 "Exterior Expansion Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.
3. Section 07 95 13.19 "Parking Deck Expansion Joint Cover Assemblies" for deck expansion-joint assemblies that interface with waterproofing.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
2. Review transitions within waterproofing system and between waterproofing and adjacent air barrier.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written installation instructions for evaluating, preparing, and treating substrate.

B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, air barrier, and other termination conditions.

1. Include setting drawings that indicate layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

C. Samples: For each product, including the following materials:

1. 8-by-8-inch square of waterproofing and flashing sheet.
2. 4-by-4-inch square of drainage panel.
3. Plaza-deck paver, **[4-by-4-inch square] [full sized]**, in each color and texture required **[, including paver pedestal assembly]**.

1.04 INFORMATIONAL SUBMITTALS

- A. Research Reports: For modified bituminous sheet waterproofing/termite barrier, showing compliance with ICC-ES AC380.
- B. Field quality-control reports.
- C. Qualification Statements: For Installer.
- D. Sample warranties.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1.06 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
 1. Build mockups for each typical waterproofing installation including **[pavers and]** accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: **[100 sq. ft. in area] [As indicated on Drawings]**.
 - b. Description: Each type of **[wall] [deck] [and] [plaza] <Insert description>** installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to frozen, damp, or wet substrates.
 1. Do not apply waterproofing when snow, rain, fog, or mist is present.
- B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.08 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation work, including fill **[, other waterproofing systems] [, under-slab vapor retarders] [, under-slab insulation] [and] [, subdrainage systems] [shoring]**.
- B. Coordinate requirements for concrete formwork to provide suitable substrate for waterproofing and to minimize penetrations through waterproofing.

1.09 WARRANTY

- A. Manufacturer's Warranty:
 - 1. Waterproofing Warranty: Manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 - a. Warranty Period: 5 years minimum for non-hydrostatic conditions and 10 years minimum watertight warranty for hydrostatic conditions from date of Substantial Completion.
 - 2. Termite Barrier Warranty: Manufacturer agrees to furnish replacement waterproofing termite barrier material and accessories for waterproofing termite barrier and accessories that do not comply with requirements or that fail to resist penetration by termites within specified warranty period.
 - a. Warranty Period: Ten years from date of Substantial Completion.
- B. Installer's Special Warranty: Specified form, **[on warranty form at end of this Section,] signed** by Installer, covering Work of this Section, for warranty period of **[two] <Insert number>** years.
 - 1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, **[and] [, including paver pedestal assembly]**.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers are subject to compliance with requirements; see current Campus Standards for Preferred Manufacturers.

2.02 SOURCE LIMITATIONS

- A. Waterproofing System: Obtain waterproofing materials **[, protection course] [molded-sheet drainage panels] [insulation drainage panels]** from single source from single manufacturer.

2.03 MODIFIED BITUMINOUS SHEET WATERPROOFING

- A. Modified Bituminous Sheet Waterproofing: Minimum 60-mil nominal thickness, self-adhering sheet consisting of 56 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement, and with release liner on adhesive side **[; formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction]**.
 - 1. Physical Properties:

- a. Tensile Strength, Membrane: 250 psi minimum; ASTM D412, Die C, modified.
 - b. Ultimate Elongation: 300 percent minimum; ASTM D412, Die C, modified.
 - c. Low-Temperature Flexibility: Pass at minus 20 deg F; ASTM D1970/D1970M.
 - d. Puncture Resistance: 40 lbf minimum; ASTM E154/E154M.
 - e. Water Absorption: 0.2 percent weight-gain maximum after 48-hour immersion at 70 deg F; ASTM D570.
 - f. Water Vapor Permeance: 0.05 perm maximum; ASTM E96/E96M, Water Method.
 - g. Hydrostatic-Head Resistance: **[200 ft.] <Insert dimension>** minimum; ASTM D5385/D5385M.
2. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.
- B. Modified Bituminous Sheet Waterproofing, Foil Faced: Minimum 60-mil nominal thickness, self-adhering sheet consisting of 56 mils of rubberized asphalt integrally bonded to a 4-mil aluminum backing, and with release liner on adhesive side.
1. Physical Properties:
 - a. Low-Temperature Flexibility: Pass at minus 20 deg F; ASTM D5147/D5147M.
 - b. Puncture Resistance: 40 lbf minimum; ASTM E154/E154M.
 - c. Water Vapor Permeance: 0.05 perm maximum; ASTM E96/E96M, Water Method.
 - d. Hydrostatic-Head Resistance: **[171 ft.] <Insert dimension>** minimum; ASTM D751.
 2. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.
- C. Modified Bituminous Sheet Waterproofing, Fabric Reinforced: Minimum 60-mil nominal thickness, self-adhering sheet consisting of rubberized-asphalt membrane with embedded fabric reinforcement, and with release liner on adhesive side.
1. Physical Properties:
 - a. Pliability: No cracks when bent 180 degrees over a 1-inch mandrel at minus 25 deg F; ASTM D146/D146M.
 - b. Puncture Resistance: **[40 lbf] [100 lbf]** minimum; ASTM E154/E154M.
 - c. Water Vapor Permeance: 0.05 perm maximum; ASTM E96/E96M, Water Method.
 2. Sheet Strips: Self-adhering, reinforced, rubberized-asphalt strips of same material and thickness as sheet waterproofing.
- D. Modified Bituminous Sheet Waterproofing/Termite Barrier: Minimum 68-mil nominal thickness, self-adhering sheet consisting of 64 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement and with release liner on adhesive side **[/b> formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction].**
1. Physical Properties:

- a. Tensile Strength, Composite Membrane: 325 psi minimum; ASTM D412, Die C, modified.
 - b. Low-Temperature Flexibility: Pass at minus 25 deg F; ASTM D146/D146M.
 - c. Puncture Resistance: 50 lbf minimum; ASTM E154/E154M.
 - d. Water Absorption: 0.1 percent weight-gain maximum after 48-hour immersion at 70 deg F; ASTM D570.
 - e. Water Vapor Permeance: 0.05 perm maximum; ASTM E96/E96M, Method B.
 - f. Hydrostatic-Head Resistance: 231 ft. minimum; ASTM D5385/D5385M.
 - g. Resistance to Termite Penetration: Comply with ICC-ES AC380.
2. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.
- E. Modified Bituminous Deck-Paving Sheet Waterproofing: Minimum 65-mil nominal thickness, self-adhering sheets designed to be overlaid with asphalt paving; consisting of rubberized-asphalt membrane with woven or nonwoven fabric reinforcement laminated to one surface or embedded within the membrane, and with release liner on adhesive side.
1. Physical Properties:
 - a. Tensile Strength, Membrane: **[50 lbf/in.] <Insert value>** minimum; ASTM D882.
 - b. Pliability: Unaffected when bent 180 degrees over a 1/4-inch mandrel at minus 15 deg F; ASTM D146/D146M.
 - c. Puncture Resistance: **[40 lbf] [100 lbf] [200 lbf]** minimum; ASTM E154/E154M.
 2. Sheet Strips: Self-adhering, reinforced, rubberized-asphalt strips of same material and thickness as sheet waterproofing.

2.04 ACCESSORIES FOR WATERPROOFING

- A. Furnish accessory materials as recommended in writing by waterproofing manufacturer for intended use and compatibility with sheet waterproofing.
 1. Furnish liquid-type accessory materials that comply with VOC limits of authorities having jurisdiction.
- B. Primer: Liquid **[waterborne] [solvent-borne]** primer as recommended in writing for substrate by sheet waterproofing material manufacturer.
- C. Surface Conditioner: Liquid, waterborne surface conditioner as recommended in writing for substrate by sheet waterproofing material manufacturer.
- D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.
- E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.
- F. Metal Termination Bars: Aluminum or stainless steel bars, approximately 1 by 1/8 inch, predrilled at 9-inch centers.

2.05 PROTECTION COURSE

- A. Protection Course, Asphaltic: ASTM D6506/D6506M; semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
1. Thickness: Nominal **[1/8 inch] [1/4 inch] [1/8 inch]** for vertical applications; **1/4 inch** elsewhere].
 2. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for protection course type.
- B. Protection Course, Extruded-Polystyrene Board Insulation, Faced: Fan folded, faced on **[one side] [or] [both sides]** with plastic film, nominal thickness 1/4 inch, with compressive strength of not less than 8 psi when tested in accordance with ASTM D1621, and maximum water absorption by volume of 0.6 percent when tested in accordance with ASTM C272/C272M.
- C. Protection Course, Extruded-Polystyrene Board Insulation, Unfaced: ASTM C578, Type X, 1/2 inch thick.
- D. Protection Course, Molded-Polystyrene Board Insulation: ASTM C578, Type I, 0.90 lb/cu. ft. minimum density, 1-inch minimum thickness.

2.06 MOLDED-SHEET DRAINAGE PANELS

- A. Molded-Sheet Drainage Panel with Polymeric Film, Nonwoven-Geotextile Faced: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft.] <Insert values>**.
- B. Molded-Sheet Drainage Panel without Polymeric Film, Nonwoven-Geotextile Faced: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side of the core, without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft.] <Insert values>**.
- C. Molded-Sheet Drainage Panel with Polymeric Film, Woven-Geotextile Faced: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 40 sieve, laminated to one side of the core and a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft.] <Insert value>**.
- D. Molded-Sheet Drainage Panel without Polymeric Film, Woven-Geotextile Faced: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 40 sieve, laminated to one side of the core, without a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft.] <Insert value>**.

- E. Molded-Sheet Collector-Panel System with Polymeric Film: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven-geotextile facing with an apparent opening size not exceeding No. 40 sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 17 gpm per ft.] <Insert values>** and a minimum horizontal, in-plane flow rate **[as indicated on Drawings] <Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.
- F. Molded-Sheet Collector-Panel System Wrapped with Geotextile: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; wrapped with a nonwoven-geotextile facing with an apparent opening size not exceeding No. 40 sieve; and with a vertical flow rate through the core of **[21 to 97 gpm per ft.] <Insert values>** and a minimum horizontal, in-plane flow rate **[as indicated on Drawings] [of 21 gpm per ft.] <Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.

2.07 INSULATION DRAINAGE PANELS

- A. Insulation Drainage Panels, Unfaced, Type IV: ASTM C578, Type IV, 25 psi minimum compressive strength; unfaced extruded-polystyrene board insulation; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
- B. Insulation Drainage Panels, Geotextile Faced, Type IV: ASTM C578, Type IV, 25 psi minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
- C. Insulation Drainage Panels, Unfaced, Type VI: ASTM C578, Type VI, 40 psi minimum compressive strength; unfaced extruded-polystyrene board insulation; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
- D. Insulation Drainage Panels, Geotextile Faced, Type VI: ASTM C578, Type VI, 40 psi minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
- E. Insulation Drainage Panels, Unfaced, Plaza-Deck Type VI: ASTM C578, Type VI, 40 psi minimum compressive strength; unfaced extruded-polystyrene board insulation, fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.
- F. Insulation Drainage Panels, Geotextile Faced, Plaza-Deck Type VI: ASTM C578, Type VI, 40 psi minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges, with one side having grooved drainage channels, and faced with manufacturer's standard, nonwoven geotextile filter fabric.
- G. Insulation Drainage Panels, Unfaced, Plaza-Deck Type VII: ASTM C578, Type VII, 60 psi minimum compressive strength; unfaced extruded-polystyrene board insulation, fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.

- H. Insulation Drainage Panels, Geotextile Faced, Plaza-Deck Type VII: ASTM C578, Type VII, 60 psi minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges, with one side having grooved drainage channels, and faced with manufacturer's standard, nonwoven geotextile filter fabric.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of waterproofing.
 - 1. Verify that concrete has cured and aged for minimum time recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with manufacturer's written installation instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections.
- E. Fill form tie holes, honeycomb, aggregate pockets, holes, and other voids.
- F. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D4258.
 - 1. Install sheet strips of width in accordance with manufacturer's written installation instructions and center over treated construction and contraction joints and cracks exceeding a width of **[1/16 inch] [or] [1/8 inch for modified bituminous deck-paving waterproofing]**.
- G. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths in accordance with manufacturer's written installation instructions.
 - 1. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.
- H. Corners: Prepare, prime, and treat inside and outside corners in accordance with manufacturer's written installation instructions.
 - 1. Install membrane strips centered over vertical inside corners. Install 3/4-inch fillets of liquid membrane on horizontal inside corners and as follows:

- a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
 - b. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.
- I. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.03 INSTALLATION OF MODIFIED BITUMINOUS SHEET WATERPROOFING

- A. Install modified bituminous sheets in accordance with waterproofing manufacturer's written installation instructions.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch-minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.
 1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F.
- D. Two-Ply Application: Install sheets to form a membrane with lap widths not less than 50 percent of sheet widths, to provide a minimum of two thicknesses of sheet membrane over areas to receive waterproofing.
- E. Horizontal Application: Apply sheets from low to high points of decks to ensure that laps shed water.
- F. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.
- G. Seal edges of sheet waterproofing terminations with **[mastic] [termination bar and sealant]**.
- H. Install sheet waterproofing and accessory materials to tie into adjacent waterproofing.
- I. Roll waterproofing membrane to firmly adhere to substrate. Roll seams and terminations.
- J. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches beyond repaired areas in all directions.
- K. Immediately install protection course with butted joints over waterproofing membrane.
 1. **[Molded-sheet drainage panels] [Insulation drainage panels]** may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer and installed immediately.

3.04 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, in accordance with manufacturer's written installation instructions. Use adhesive or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. For vertical applications, install **[board insulation] [protection course]** before installing drainage panels.

3.05 INSTALLATION OF INSULATION DRAINAGE PANELS

- A. Install insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch of projections and penetrations.
- B. Ensure that drainage channels are aligned vertically and free of obstructions.
- C. On vertical surfaces, set insulation drainage panels in adhesive or tape applied in accordance with manufacturer's written installation instructions.
- D. On horizontal surfaces, loosely lay insulation drainage panels in accordance with manufacturer's written installation instructions. Stagger end joints and tightly abut insulation units.

3.06 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a **[full-time] site** representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.
- C. Waterproofing will be considered defective if it does not pass tests and inspections.

3.07 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed insulation drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION

SECTION 07 13 54

THERMOPLASTIC SHEET WATERPROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Below grade walls / slabs waterproofing.
1. PVC sheet waterproofing.
 2. CTEM sheet waterproofing.
 3. Drainage panels.
- B. Related Requirements:
1. Section 07 21 00 "Thermal Insulation" for general building insulation.
 2. Section 07 54 19 "Polyvinyl-Chloride (PVC) Roofing" for thermoplastic membranes used **[for roofing] [and] [beneath vegetated roof assemblies]**.
 3. Section 07 95 13 "Seismic Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.
1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
1. Include layout drawings showing locations of submembrane containment strips **[and control test drains]**.
 2. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- C. Samples: For each exposed product and for each color and texture specified, including the following products:
1. 8-by-8-inch square of waterproofing and flashing sheet.

2. 4-by-4-inch square of drainage panel.
3. Plaza-deck paver, **[4-by-4-inch square] [full sized]**, in each color and texture required.
4. Paver pedestal assembly.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Field quality-control reports.
- C. Sample Warranties: For special warranties.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
 1. Build for each typical waterproofing installation including **[pavers and]** accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: **[100 sq. ft. in area] [As indicated on Drawings]**.
 - b. Description: Each type of **[deck] [and] [plaza] <Insert description>** installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Do not permit asphaltic materials or polystyrene insulation to contact PVC materials.
- C. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.07 WARRANTY

- A. Manufacturer's Warranty: [Manufacturer agrees to furnish replacement waterproofing material for] [Manufacturer and Installer agree to repair or replace] waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 1. Warranty Period: **[Five] [10] [20] <Insert number>** years from date of Substantial Completion.

- B. Installer's Special Warranty: Specified form, **[on warranty form at end of this Section,]**signed by Installer, covering Work of this Section, for warranty period of **[two]** **<Insert number>** years.
1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Source Limitations for Waterproofing System: Obtain waterproofing materials **[, protection course,] [and] [drainage panels]** from single source from single manufacturer.

2.02 PVC SHEET WATERPROOFING

- A. PVC Sheet: **[60-mil-] [80-mil-]** thick, PVC membrane with integral pigments, stabilizers, UV absorbers, biocide, and nonwoven fiberglass reinforcement; with the following properties measured according to standard test methods referenced:
1. Tensile Strength: 1500 psi minimum; ASTM D638.
 2. Elongation at Break: 240 percent minimum, machine direction; ASTM D638.
 3. Seam Strength: 90 percent minimum of tensile strength; ASTM D638.
 4. Retention of Properties after Heat Aging: 95 percent minimum retention of tensile strength and elongation; ASTM D638 after 168 hours at 194 deg F; ASTM D3045.
 5. Tear Resistance: 21 lbf minimum; ASTM D1004.
 6. Low-Temperature Bend: Pass at minus 40 deg F; ASTM D2136.
 7. Linear Dimension Change: 0.002 percent maximum after 6 hours at 176 deg F; ASTM D1204.
 8. Water Absorption: 2.5 percent maximum weight gain after 168 hours' immersion at 158 deg F; ASTM D570.
 9. Dynamic Puncture Resistance: 117.7 ft. pdl minimum; ASTM D5635/D5635M.
- B. Self-Adhered PVC Sheet: 120-mil-thick, composite sheet composed of 60-mil-thick, PVC membrane with integral pigments, stabilizers, biocide, and nonwoven fiberglass reinforcement; a 60-mil-thick, nonpermeable, closed-cell-foam backing layer; and a pressure-sensitive adhesive coating; with the following properties measured according to standard test methods referenced:
1. Tensile Strength: 1500 psi minimum; ASTM D638.
 2. Elongation at Break: 240 percent minimum, machine direction; ASTM D638.
 3. Seam Strength: 90 percent minimum of tensile strength; ASTM D638.
 4. Retention of Properties after Heat Aging: 95 percent minimum retention of tensile strength and elongation; ASTM D638 after 168 hours at 194 deg F; ASTM D3045.
 5. Tear Resistance: 21 lbf minimum; ASTM D1004.
 6. Linear Dimension Change: 0.002 percent maximum after 6 hours at 176 deg F; ASTM D1204.

7. Dynamic Puncture Resistance: 949.2 ft. pdl minimum; ASTM D5635/D5635M.

2.03 CTEM SHEET WATERPROOFING

- A. CTEM Sheet: **[60-mil-] [75-mil-]**, coal tar elastomeric (CTEM) membrane with coal tar pitch, PVC, and kee resin; with the following properties measured in accordance with standard test methods referenced:
 1. Tensile Strength: 1050 psi minimum, ASTM D638.
 2. Elongation at Break: 150 percent minimum, machine direction; ASTM D638.
 3. Seam Strength: 95 percent minimum of tensile strength; ASTM D638.
 4. Retention of Properties after Heat Aging: ASTM D3045.
 5. Tear Resistance: 250 lb/in. minimum, ASTM D1004.
 6. Low Temperature Bend, Minus 40 Deg F (Minus 40 Deg C): Pass, ASTM D2136.
 7. Water Vapor Permeance: 0.375 perm maximum, ASTM E96/E96M.
 8. Hydrostatic Pressure Resistance: 290 psi minimum, ASTM D751.
- B. Self-Adhered CTEM Sheet: Composite sheet composed of **[60-mil-] [75-mil-]** thick, coal tar elastomeric (CTEM) membrane with coal tar pitch, PVC, and kee resin; and a pressure-sensitive adhesive coating; with the following properties measured in accordance with standard test methods referenced:
 1. Tensile Strength: 1050 psi minimum, ASTM D638.
 2. Elongation at Break: 150 percent minimum, machine direction; ASTM D638.
 3. Seam Strength: 95 percent minimum of tensile strength; ASTM D638.
 4. Retention of Properties after Heat Aging: ASTM D3045.
 5. Tear Resistance: 250 lb/in. minimum, ASTM D1004.
 6. Low Temperature Bend, Minus 40 Deg F (Minus 40 Deg C): Pass, ASTM D2136.
 7. Water Vapor Permeance: 0.375 perm maximum, ASTM E96/E96M.
 8. Hydrostatic Pressure Resistance: 290 psi minimum, ASTM D751.
- C. Fleece-Backed CTEM Sheet: Composite sheet composed of 60-mil-thick, coal tar elastomeric (CTEM) membrane with coal tar pitch, PVC, and kee resin with a 30-40-mil-thick polyester fleece backing; with the following properties measured in accordance with standard test methods referenced:
 1. Tensile Strength: 1300 psi minimum, ASTM D638.
 2. Elongation at Break: 150 percent minimum, machine direction; ASTM D638.
 3. Seam Strength: 95 percent minimum of tensile strength; ASTM D638.
 4. Retention of Properties after Heat Aging: ASTM D3045.
 5. Tear Resistance: 380 lb/in. minimum, ASTM D1004.
 6. Low Temperature Bend, Minus 40 Deg F (Minus 40 Deg C): Pass, ASTM D2136.
 7. Water Vapor Permeance: 0.375 perm maximum, ASTM E96/E96M.
 8. Hydrostatic Pressure Resistance: 290 psi minimum, ASTM D751.

2.04 AUXILIARY MATERIALS

- A. Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
 - 1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
 - B. Concealed Sheet Flashing: Same material, construction, and thickness as sheet waterproofing.
 - C. Exposed PVC Sheet Flashing: PVC-sheet flashing **[60 mils] [80 mils] [96 mils]** thick; PVC with integral pigments, stabilizers, UV absorbers, and biocide; reinforced with nonwoven fiberglass.
 - D. Exposed CTEM Sheet Flashing: CTEM-sheet flashing 60-mil-thick; modified coal tar elastomeric sheet.
 - 1. Sheet Width: **[4 inches] [6 inches] [9 inches] [12 inches]** [or] [as required].
 - E. Preformed Flashing Shapes: As needed to suit Project requirements including, but not limited to, detail corners, level changes, stop ends, and other similar special applications
 - F. Surface Conditioner: Manufacturer's standard waterborne surface treatment to bind residual surface dust and efflorescence to substrate.
 - G. Bonding Adhesives: For bonding waterproofing sheets **[, containment strips,]** and sheet flashings to substrates.
 - H. Containment Strip: Manufacturer's standard asphalt-resistant, 60-mil-thick, **[PVC] [CTEM]** strip; reinforced with nonwoven fiberglass; 12 inches wide.
 - I. Geotextile Leveling Layer: Manufacturer's standard 0.22-inch-thick, nonwoven polypropylene fabric.
 - J. Separation Layer: Manufacturer's standard 0.16-inch-thick, nonwoven polypropylene fabric.
 - K. Protection Course: **[39-mil-thick, HDPE sheet]** [or] **[51-mil-thick, hot-air-weldable, PVC sheet]** protection layer.
 - L. Waterproofing and Sheet-Flashing Accessories: Sealants, pourable sealers, termination reglets, clamps, compression bars, tapes, preformed cone and stack flashings, and other accessories recommended by waterproofing manufacturer for intended use.
 - M. Control Test Drain: Manufacturer's standard assembly to verify the absence or presence of leaks from underside of waterproofed slab.
 - N. Metal Termination Bars: Manufacturer's standard stainless steel or aluminum bars, prepunched, with noncorrosive fasteners.
- 2.05 DRAINAGE PANELS
- A. Composite Drainage Panels: Drainage panel acceptable to waterproofing manufacturer and consisting of a nonbiodegradable core of fused, entangled filaments or a three-dimensional

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.
 - 1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D4258.
- F. Prepare, treat, and seal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.03 INSTALLATION OF FULLY ADHERED SHEET WATERPROOFING

- A. Install self-adhered sheets over entire area to receive waterproofing according to manufacturer's written instructions.
 - 1. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - 2. Install laps shingled with slope of deck where possible.
 - 3. Install flashings concurrently with deck sheet.
 - 4. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - 5. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - 6. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- B. Apply surface conditioner, at required rate, to substrates to receive waterproofing. Apply only at temperatures greater than 25 deg F and rising.
- C. Apply and firmly adhere sheets to substrate; butt adjoining sheets tightly. Apply only when the membrane, air, and substrate temperatures are greater than 40 deg F and rising. Apply a minimum 8-inch-wide cover strip centered over joints and lap edges; hot-air weld cover strip to deck sheet.

- D. Hot-air weld three-way overlaps or T-joints with a 4-inch-round or square patch.
- E. Unless terminations and deck-sheet waterproofing perimeter are sealed with flashings, secure them with mechanically anchored metal termination bar. Seal edge of termination with sealant.
- F. Install flashing at deck drains. Spread sealant bed over deck drain flange, lap flashing membrane into drain flange and over deck sheet according to membrane manufacturer's written instructions, and hot-air-weld flashing to deck sheet; securely seal flashing sheet in place with clamping ring.
- G. Perform field quality-control testing before subsequent work.
- H. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

3.04 INSTALLATION OF LOOSELY LAID SHEET WATERPROOFING

- A. Install loosely laid sheets over entire area to receive waterproofing according to manufacturer's written instructions.
 - 1. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - 2. Install laps shingled with slope of deck where possible.
 - 3. Install flashings concurrently with deck sheet.
 - 4. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - 5. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - 6. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- B. Install geotextile leveling layer over entire area to receive deck sheet. Lap edges at least 4 inches and spot adhere fabric to deck as required to keep in position as waterproofing sheet is placed in position. Trim fabric using scissors or utility blades; do not use welding equipment to cut fabric.
- C. Apply deck sheet over area, lapping edges at least 3 inches for machine welding or at least 4 inches for hand welding. Hot-air weld sheets.
- D. Hot-air weld three-way overlaps or T-joints with a 4-inch-round or square patch.
- E. Secure perimeter of deck sheet with manufacturer's standard metal termination bars and accessories as recommended by manufacturer for each condition.
- F. At deck drains, spread sealant bed over drain flange and lap membrane into drain flange according to membrane manufacturer's written instructions; securely seal sheets in place with clamping ring.
- G. Perform field quality-control testing before subsequent work.

- H. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

3.05 INSTALLATION OF COMPARTMENTED, LOOSELY LAID SHEET WATERPROOFING

- A. Install compartmented, loosely laid sheets over entire area to receive waterproofing according to manufacturer's written instructions.
 1. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 2. Install laps shingled with slope of deck where possible.
 3. Install flashings concurrently with deck sheet.
 4. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 5. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 6. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- B. Construct a test containment grid before beginning installation. Perform manufacturer's recommended peel test on the test containment grid and on each day's completed waterproofing work before resuming the following day's installation.
- C. Install submembrane containment grid to form compartments secured by containment strips. Also, install containment strips at the base of walls, curbs, penetrations, terminations, and transitions and at the perimeter of the installation. Secure containment grid to substrate with bonding adhesive.
- D. Install geotextile leveling layer over entire area between containment strips. Lap edges at least 4 inches and spot adhere fabric to deck as required to keep in position as waterproofing sheet is placed in position. Trim fabric even with edges of containment strips using scissors or utility blades; do not use welding equipment to cut fabric.
- E. Control-Test-Drain Installation: Drill 1-inch-diameter hole through the substrate at or near the low point of each compartment and install control test drain, according to manufacturer's written instructions, so as to enable verification of the absence or presence of leaks from underside of waterproofed slab.
- F. Apply deck sheet over area, lapping edges at least 3 inches for machine welding or at least 4 inches for hand welding. Hot-air weld the sheet to containment strips.
- G. Hot-air weld three-way overlaps or T-joints with a 4-inch-round or square patch.
- H. Install flashing at deck drains. Spread sealant bed over deck drain flange, lap flashing membrane into drain flange and over containment strips according to membrane manufacturer's written instructions, and hot-air weld flashing to containment strips; securely seal flashing sheet in place with clamping ring.
- I. Perform field quality-control testing before subsequent work.

- J. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

3.06 INSTALLATION OF SHEET FLASHING

- A. Form wall flashings exposed in final construction using exposed sheet flashing; otherwise, use concealed sheet flashing.
- B. Lap sheet flashings over deck sheet or containment strips. Flash penetrations and field-formed inside and outside corners with sheet flashing.
- C. Extend flashings a minimum of 8 inches above the overburden unless otherwise indicated on Drawings and acceptable to waterproofing manufacturer.
- D. Hot-air weld joints with deck sheet or containment strips and end laps of overlapping sheet flashings and accessories to ensure a watertight seam installation.
- E. Hot-air weld three-way overlaps or T-joints with a 4-inch-round or square patch.
- F. Secure flashings along top edge with mechanically anchored metal termination bar or with mechanically anchored metal reglet for subsequent metal counterflashing. Seal top of termination with sealant.
- G. Terminate deck sheet at expansion joints and discontinuous deck-to-wall or deck-to-deck joints. Bridge and cover joints with sheet flashing and joint accessories according to manufacturer's written instructions for each type of joint.

3.07 INSTALLATION OF PROTECTION COURSE

- A. Install separation layer over sheet waterproofing before placing protection course.
- B. Install protection course over **[sheet waterproofing]** **[separation layer]** according to manufacturer's written instructions and before beginning subsequent construction operations. Minimize exposure of membrane.

3.08 INSTALLATION OF DRAINAGE PANELS

- A. Install drainage panels immediately after waterproofing-membrane manufacturer's inspection and acceptance of the waterproofing installation.
- B. Place and secure drainage panels directly over the waterproofing membrane, according to waterproofing manufacturer's written instructions.
- C. Trim drainage panels to fit closely around penetrations and at the base of drains to ensure that water flows freely from composite into drain openings.
- D. Cover cut edges of drainage panels to protect waterproofing membrane from damage.
- E. Protect installed drainage panels during subsequent construction.

3.09 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests.

- B. Manufacturer's Field Service: Engage a **[full-time]** site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.
 - C. Flood Testing: Flood test each deck area for leaks, in accordance with procedures in ASTM D5957, after completing waterproofing but before placing overlying construction. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - 1. Flood to an average depth of 2-1/2 inches with a minimum depth of 1 inch and a maximum depth of 4 inches. Maintain 2 inches of clearance from top of sheet flashings.
 - 2. Flood each area for **[24] [48] [72]** hours.
 - 3. Testing agency is to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.
 - 4. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
 - D. Electronic Leak-Detection Testing:
 - 1. Testing agency is to test **[each deck area] [each deck area indicated for testing on Drawings]** <Insert area to be tested> for leaks using an electronic leak-detection method that locates discontinuities in the waterproofing membrane.
 - 2. Testing agency is to perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
 - 3. Testing agency is to create a conductive electronic field over the area of waterproofing to be tested and electronically determine locations of discontinuities or leaks, if any, in the waterproofing.
 - 4. Testing agency is to provide survey report indicating locations of discontinuities, if any.
 - E. Waterproofing will be considered defective if it does not pass tests and inspections.
 - F. Prepare test and inspection report.
- 3.10 PROTECTION, REPAIR, AND CLEANING
- A. Do not permit foot or vehicular traffic on unprotected membrane.
 - B. Protect waterproofing from damage and wear during remainder of construction period.
 - C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
 - D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION

SECTION 07 14 13

HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Hot fluid-applied, rubberized-asphalt waterproofing membrane.
2. Molded-sheet drainage panels.
3. Insulation.
4. Plaza-deck pavers.

B. Related Requirements:

1. Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.
2. Section 07 55 56 "Fluid-Applied Protected Membrane Roofing" for hot fluid-applied, rubberized-asphalt roofing.
3. Section 07 91 00 "Preformed Joint Seals" for foundation-wall expansion joints that interface with waterproofing.
4. Section 07 92 00 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 07 95 13.19 "Parking Deck Expansion Joint Cover Assemblies" for plaza expansion-joint assemblies that interface with waterproofing.
6. Section 32 14 00 "Unit Paving" for plaza-deck pavers set on setting beds.

1.02 PRE-INSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference at **[Project site]** <Insert location>.

1. Review waterproofing requirements, including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
2. If needed, insert list of conference participants not mentioned in Section 01 31 00 "Project Management and Coordination."

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
- B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins to adjoining waterproofing, and other termination conditions.

1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

C. Samples: For plaza-deck pavers [, **full sized**] in each color and texture required.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[Installer] [and] [testing agency]**.

B. Field quality-control reports.

C. Sample Warranties: For special warranties.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Mockups: Install waterproofing to **[100 sq. ft.] <Insert value>** of **[deck] [wall]** to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality. **[Install pavers and paver supports to demonstrate aesthetic effects, and set quality standards for materials and execution.]**

1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Protect stored materials from direct sunlight.

1.07 FIELD CONDITIONS

A. Weather Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below zero deg F.

1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.08 WARRANTY

- A. When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws. Example in "Special Warranty" Paragraph below is a labor-and-material warranty. Verify coverage with manufacturers. Manufacturers' warranties customarily do not include costs of excavating and exposing the waterproofing membrane as well as backfilling and restoring affected construction in vertical applications.
- B. Special Warranty: Manufacturer agrees to repair or replace waterproofing and sheet flashings that do not comply with requirements or that fail to remain watertight within specified warranty period.
1. In addition to special warranty covering waterproofing and sheet flashings above, some manufacturers offer total-system warranties for plaza decks that include insulation and pavers. These warranties may include the costs of removing and reinstalling readily removable construction overlaying waterproofing. Verify coverage with manufacturers.
 2. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pedestal-mounted pavers on plaza decks.
 3. Warranty insulation retains 90 percent of original published thermal value.
 4. Warranty pavers do not dish or warp and do not crack, split, or disintegrate in freeze-thaw conditions.
 5. Verify available warranties and warranty periods. Fabric-reinforced, hot fluid-applied waterproofing may qualify for 10-year warranties from some manufacturers.
 6. Warranty Period: 10 years from date of Substantial Completion.
- C. Special Installer's Warranty: Specified form **[, on warranty form at end of this Section,]** signed by Installer, covering Work of this Section, for warranty period of **[two] <Insert number>** years.
1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pedestal-mounted pavers on plaza decks.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers are subject to compliance with requirements:
1. American Hydrotech.
 2. Monolithic Membrane 6125 CETCO.
 3. Strataseal HR Carlisle Coating & Waterproofing.
 4. CCW 500-R Tremco, TREMproof 6100.
 5. Or Approved Equivalent.

2.02 SOURCE LIMITATIONS

- A. Source Limitations: Obtain waterproofing materials **[sheet flashings] [protection course] [molded-sheet drainage panels] [insulation] [pavers] [and] [pedestals]** from single source from single manufacturer.

2.03 WATERPROOFING MEMBRANE

- A. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.

2.04 HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

- A. Single-Component Waterproofing: **[Reinforced] [Unreinforced]**; 100 percent solids rubberized asphalt membrane.
 - 1. Flow: 1/8 inch maximum at 140 deg F in accordance with ASTM D5329.
 - 2. Flash Point: Not less than 500 deg F and not less than 77 deg F above the manufacturer's maximum recommended application temperature in accordance with ASTM D92.
 - 3. Water-Vapor Permeance: 0.027 perm in accordance with ASTM E96/E96M, Procedure E.
 - 4. Crack Bridging Capability: No cracking, splitting, or loss of adhesion in accordance with ASTM C1305/C1305M.

2.05 ACCESSORIES

- A. General: Accessory materials recommended by waterproofing manufacturer for intended use and compatible with waterproofing.
- B. Primer: ASTM D41/D41M, asphaltic primer.
- C. Elastomeric Sheet: 50-mil-minimum, uncured sheet neoprene **[with manufacturer's recommended contact adhesives]** as follows:
 - 1. Tensile Strength: 1400 psi minimum; ASTM D412, Die C.
 - 2. Elongation: 300 percent minimum; ASTM D412.
 - 3. Tear Resistance: 125 psi minimum; ASTM D624, Die C.
 - 4. Brittleness: Does not break at minus 30 deg F; ASTM D2137.
- D. Liquid Applied Flashing Membrane: Two-component, PMMA liquid applied resin membrane flashing system.
- E. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel, or aluminum termination bars; approximately 1 by 1/8 inch thick; with stainless steel anchors.
- F. Sealants and Accessories: Manufacturer's recommended sealants and accessories.
- G. Reinforcing Fabric: Manufacturer's recommended, spun-bonded polyester fabric.
- H. Asphaltic Protection Course: ASTM D6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
 - 1. Thickness: **[1/8 inch, nominal] [1/4 inch, nominal] [1/8 inch, nominal, for vertical applications; 1/4 inch, nominal, elsewhere].**
- I. Rubberized Sheet Protection Course: Manufacturer's standard, 80- to 90-mil-thick, fiberglass-reinforced rubberized asphalt or modified bituminous sheet.

2.06 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve, laminated to one side **[with] [or] [without]** a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm/ft..
- B. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 sieve, laminated to one side **[with] [or] [without]** a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm/ft..

2.07 INSULATION

- A. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C578, **[Type IV, 25 psi] [Type VI, 40 psi] [Type VII, 60 psi] [Type V, 100 psi]** minimum compressive resistance, **[square] [or] [shiplap]** edged.
- B. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C578, **[Type IV, 25 psi] [or] [Type VI, 40 psi]** minimum compressive resistance; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
- C. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C578, **[Type IV, 25 psi] [or] [Type VI, 40 psi]** minimum compressive resistance; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven, geotextile filter fabric.
- D. Unfaced Plaza-Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C578, **[Type VI, 40 psi] [Type VII, 60 psi]** minimum compressive resistance; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.
- E. Geotextile-Faced Plaza-Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C578, Type VII, 60 psi minimum compressive resistance; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven, geotextile filter fabric.

2.08 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: **[Brick] [Concrete] [Asphalt-block] [Granite] [Limestone] [Marble] [Quartz-based stone] [Slate] [Travertine]** pavers specified in Section 32 14 00 "Unit Paving."
- B. Concrete Plaza-Deck Pavers: Heavyweight, hydraulically pressed, concrete units, **[square edged] [with top edges beveled 3/16 inch]**, manufactured for use as plaza-deck pavers; minimum compressive strength **[7500 psi] [6500 psi] <Insert value>**, ASTM C140; absorption not greater than 5 percent, ASTM C140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance in accordance with ASTM C67.
 1. Thickness: **[1-5/8 inches] [1-3/4 inches] [2 inches] [2-3/8 inches]** <Insert dimension>.
 2. Face Size: **[8-7/8 inches square] [9 inches square] [9 by 18 inches] [12 inches square] [12 by 24 inches] [18 inches square] [24 inches square] [As indicated]** <Insert dimensions and shape>.

3. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
- C. Paver Supports: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including **[fixed-height] [adjustable or stackable]** pedestals, shims, and spacer tabs for joint spacing of **[1/8 inch] [3/16 inch] [1/8 to 3/16 inch]**.
 1. Concrete Fill: ACI 301, compressive strength of 5000 psi at 28 days, and air content of 6 percent.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
 3. Verify adhesion of membrane meets Manufacturer's requirements prior to installation.
 4. Verify slope of substrate. Where slope does not meet intent of construction documents, provide Manufacturer approved cementitious topping to create slope and wait required cure period before membrane application.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- C. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- D. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- E. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- F. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate in accordance with ASTM D4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces in accordance with ASTM D4258.
- G. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, and other voids.

3.03 JOINTS, CRACKS, AND TERMINATIONS

- H. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.
 - 1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt in accordance with ASTM D4258.
 - 2. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.
 - 3. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches on each side of nonmoving joints and cracks not exceeding 1/8 inch thick, and beyond roof drains and penetrations.
 - a. Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.
- I. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3.04 INSTALLATION OF LIQUID FLASHING

- J. All detailing and flashing shall be done in accordance with the manufacturer's standard guideline details.
- K. All detailing and flashing shall be completed before installing the membrane over the field of the substrate.
- L. All liquid-applied, resin flashings shall be applied over properly completed membrane flashing details in accordance with the manufacturer's standard guideline details.

3.05 INSTALLATION OF FLASHING

- M. Install elastomeric sheets at terminations of waterproofing membrane according to manufacturer's written instructions.
- N. Prime substrate with asphalt primer.
- O. Install elastomeric sheet and adhere to deck and wall substrates in a layer of hot rubberized asphalt.
- P. Extend elastomeric sheet up walls or parapets a minimum of 8 inches above plaza-deck pavers and 6 inches onto deck to be waterproofed.
- Q. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of waterproofing.

3.06 INSTALLATION OF HOT FLUID-APPLIED, RUBBERIZED ASPHALT WATERPROOFING MEMBRANE

- R. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow it to dry.
- S. Heat and apply rubberized asphalt according to manufacturer's written instructions.
 - 1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
- T. Start application with manufacturer's authorized representative present.
- U. Unreinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to form a uniform, unreinforced, seamless membrane, 180-mil minimum thickness.
- V. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils; embed reinforcing fabric, overlapping sheets 2 inches; spread another 125-mil-thick layer to provide a uniform, reinforced, seamless membrane 215 mils thick.
- W. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.
- X. Cover waterproofing with protection course with overlapped joints before membrane is subject to **[backfilling] [construction or vehicular traffic]**.

3.07 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- Y. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate according to manufacturer's written instructions. Use methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. For vertical applications, install **[board insulation] [protection course]** before installing drainage panels.

3.08 INSTALLATION OF INSULATION

- Z. Install **[one or more layers of board insulation to achieve required thickness] [and] [insulation drainage panels]** over waterproofed surfaces. Cut and fit to within 3/4 inch of projections and penetrations.
- AA. On vertical surfaces, set insulation units into rubberized asphalt according to manufacturer's written instructions.
- BB. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.09 INSTALLATION OF PLAZA-DECK PAVERS

- CC. Install concrete pavers according to manufacturer's written instructions.
- DD. Accurately install **[fixed] [adjustable]**-height paver pedestals and accessories to elevations required. Adjust for final level and slope with shims.
 - 1. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure in accordance with ACI 301.
- EE. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- FF. Install pavers to not vary more than 1/16 inch in elevation between adjacent pavers or more than 1/16 inch from surface plane elevation of individual paver.
- GG. Limit variation in paving installation to within **[1/4 inch in 10 feet] <Insert dimensions>** of surface plane in any direction; noncumulative.

3.10 FIELD QUALITY CONTROL

- HH. Engage a full-time site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions; surface preparation; and application of membrane, flashings, protection, and drainage components; furnish daily reports to Architect.
 - 1. Site representative is to measure membrane thickness with pin tester or other suitable device at least once for every 100 sq. ft. and include measurements in reports.
- II. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect.
 - 1. The roof area or portions thereof shall be leak tested by means of Electronic Leak Detection (ELD) or by ponding water at a minimum depth of 2" (50.8 mm) for a period of 48 hours to check the integrity of the membrane installation.
 - a. ELD testing should be performed on all installed membrane assembly. Testing is to be performed in accordance with ASTM D7877 or ASTM D8231. Areas that are ELD tested should be covered immediately
 - b. Verify that the structure can support the deadload weight of a water test before testing.

- c. If leaks should occur the water shall be drained completely and the membrane installation repaired.
2. In the event of damage to the membrane assembly, Electronic Leak Detection testing shall be required to repaired areas prior to the placement of subsequent overburden.

3.11 CLEANING AND PROTECTION

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Retain first paragraph below when board insulation or insulation drainage panels are required and may be exposed for a period on plaza decks.
- C. Protect installed **[board insulation]** **[insulation drainage panels]** from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 07 16 13

CEMENTITIOUS WATERPROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes acrylic latex modified cement waterproofing in water features.
- B. Related requirements: Division 3 for cast-in-place concrete.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing:
 - 1. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.
- B. Pre-installation meeting:
 - 1. Convene minimum two weeks prior to starting work of this section.

1.03 SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
 - 1. Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
 - 3. Installation methods.
- B. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) square representing actual product, color, and patterns.
- C. Certificate: Manufacturer certification that proposed materials, details and systems, indicated and specified, comply with manufacturer's details and specifications.
- D. Data: Manufacturer Product Data including installation instructions.
- E. Warranty: Manufacturer's warranty form.
- F. Closeout: 2 copies of the warranties to the Owner.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Minimum 5 year experience manufacturing similar products.
- B. Installer Qualifications: Minimum 2 year experience installing similar products.
- C. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
 - 1. Finish areas designated by Architect.

2. Do not proceed with remaining work until workmanship is approved by Architect.
3. Refinish mock-up area as required to produce acceptable work.

1.05 HANDLING

- A. Deliver and store in a dry area between 40- and 90-degree F.
- B. Handle and protect from direct sun light in accordance with manufacturer's instructions.
- C. Deliver materials in manufacturer's unopened containers, fully identified with brand, type, grade, class and other qualifying information.
- D. Take necessary precautions to keep products clean, dry and free of damage.

1.06 PROJECT CONDITIONS

- A. Maintain surfaces to be waterproofed and surrounding air temperature at not less than 40-degree F.
- B. Apply waterproofing only when surface and ambient temperatures are 40-degree F and rising. At temperatures above 85-degree F and above, protect application from direct sun and wind to prevent premature surface drying and shrinkage cracks.
- C. Apply only when temperatures are steady or rising.
- D. Do not apply materials to frosted surfaces.

1.07 WARRANTY

- A. General:
 1. The warranties are governed by the requirements herein, those of Section 01 17 40, and the General Conditions of the Contract.
 2. Warranties specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and are in addition to and run concurrent with other warranties made by the Contractor under requirements of the Contract Documents.
- B. Special Warranty: Manufacturer's standard form in which manufacturer and installer agrees to repair or replace components of crystalline waterproofing that fail in materials or workmanship within specified warranty period.
 1. Failures include but are not limited to failure to maintain watertight (defined as the presence of moisture or dampness) conditions within specified warranty period.
 2. Warranty Period: 5 years from date of Substantial Completion.
 3. Should any defects develop, or any leaks occur in the Work within the guarantee period, such defects or leaks shall at once be remedied and made good without cost or expense to the Owner.
 - a. Leaks are defined as the presence of dampness on the face of the foundation wall inboard of the membrane and the top of the wearing slab.

PART 2 PRODUCTS

2.01 MANUFACTURER / MATERIAL

- A. Aquafin, Inc. 2K/M.

2.02 MATERIALS

- A. Waterproofing: Aquafin-2K/M.acrylic modified cement waterproofing, 2-component, acrylic emulsion based, flexible, crack bridging waterproofing membrane barrier.
 - 1. Color: Selected by Architect [from standard color char.]
- B. Patching compound: Aquafin Mortar-LN pre-blended, cementitious waterproofing and repair mortar for honeycombs, forming coves, etc.
- C. Reinforcing mesh: Aquafin-2K-Fabric polypropylene non-woven fleece.
- D. Crack and joint sealing tape: Aquafin “Joint Sealing Tape-2000,” elastomeric tear-resistant, breathable waterproofing tape.
- E. Expansion joint sealing tape: Aquafin “Joint Sealing Tape-2000-S,” elastomeric, tear-resistant, breathable waterproofing tape.
- F. Sealing gasket for PVC pipe and other penetrations: Aquafin-“Gasket 18/18” elastomeric, tear-resistant, breathable waterproofing sealing gasket.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions under which waterproofing materials are to be installed.
- B. Correct unsatisfactory conditions before proceeding with waterproofing application.

3.02 PREPARATION

- A. Protect adjacent surfaces not designated to receive waterproofing.
- B. Substrate preparation:
 - 1. Remove oil, grease, dirt, loose particles, remains of form oils, water repellents, rust or other coatings by high-pressure water blasting (>3000 psi), wet or dry sand blasting, or other mechanical means to produce surfaces suitable for application of waterproofing.
 - 2. Follow manufacturer's instructions to clean and prepare surfaces and seal cracks and joints.
 - 3. Voids in concrete substrates:
 - a. One-quarter-inch diameter and larger: Pre-treat with a cementitious mortar.
 - b. Less than 1/4-inch in diameter: Fill with waterproofing material.
- C. Saturate surfaces to be waterproofed with clean water; do not waterproof where standing water is present.

3.03 INSTALLATION

- A. Mix 2-component waterproofing material in proportions recommended by manufacturer.
- B. Taping:

1. Apply waterproofing material by brush in a 6- to 7-inch wide strip coat centered over joints, cracks, penetrations and changes of plane to be taped.
 2. While coat is wet, unroll tape in the coating and apply a coat of waterproofing material over the tape, smoothing out wrinkles and fish mouths.
- C. Waterproofing: Apply waterproofing material in the total thickness specified below in accordance with its manufacturer recommendations:
1. Thickness of finished system for water level up to 2-feet: 60 mils.
 2. For water depth greater than 2-feet: 90 mils.
 3. Application thickness shall not exceed 120 mils.
 4. Apply with stainless steel trowel, tampico brush, short nap roller or spray equipment.
 5. In areas with movement or cracking, the waterproofing material shall be additionally reinforced with mesh embedded between 2 waterproofing layers.
 6. Apply material in 2 coats minimum.
 7. Do not bridge cracks greater than 1/16-inch. Bridge dynamic cracks or joints with elastomeric joint sealing tape, as supplied by waterproofing manufacturer.
 8. Prime and protect alkali sensitive metals such as copper, aluminum, galvanized or zinc treated metal before coating with waterproofing material. Follow manufacturer's recommendations for primer material.
- D. Curing:
1. Follow manufacturer's instructions. Do not use water for curing; waterproofing material is self-curing.
 2. Protect surfaces from rain, frost and premature dehydration; cover with polyethylene film with taped joints to retard water evaporation.
 3. Protect from hot and windy conditions during curing.
- E. Precaution: Do not overcoat the waterproofing with solvent-based materials.
- 3.04 FIELD QUALITY CONTROL
- A. When waterproofing work is complete, fill water feature to normal "in use" depth with water and hold for 48 hours without loss due to leakage.
 - B. Should leak appear, repair as directed by the manufacturer and in a manner acceptable to the Architect.
- 3.05 CLEANING
- A. Clean adjacent surfaces and materials.

END OF SECTION

SECTION 07 18 00
TRAFFIC COATINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Traffic coatings and pavement markings for the following applications:
1. Pedestrian traffic.
 2. Vehicular traffic.
 3. Equipment-room floor.
- B. Related Requirements:
1. Section 07 19 00 "Water Repellents" for penetrating and film-forming water repellents applied on traffic-bearing surfaces.
 2. Section 09 67 23 "Resinous Urethane and Epoxy Mortar" for fluid-applied, **[decorative]** **[general-use commercial]** **[general-use industrial]** **[high-performance]** resinous flooring that does not serve as a waterproofing membrane with integral wearing surface.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

- A. Product Data: Traffic coatings and pavement markings for the following applications:
1. Pedestrian traffic.
 2. Vehicular traffic.
 3. Equipment-room floor.
- B. Product Data Submittals: For each product.
1. Include installation instructions and details, material descriptions, dry- or wet-film thickness requirements, and finish.
- C. Shop Drawings: For traffic coatings.
1. Include details for treating substrate joints and cracks, flashings, deck penetrations, and other termination conditions that are not included in manufacturer's product data.
 2. Include plans showing layout of pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.
- D. Samples for Initial Selection: For each type of exposed finish.
- E. Samples for Verification: For each type of exposed finish, prepared on rigid backing.
1. Provide stepped Samples on backing to illustrate buildup of traffic coatings.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of traffic coating.
- C. Field quality-control reports.
- D. Sample Warranty: For manufacturer's warranty.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For traffic coatings to include in maintenance manuals.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Mockups: Build mockups to set quality standards for materials and execution.
 - 1. Build mockup for each traffic coating and substrate to receive traffic coatings.
 - 2. Size: **[200 sq. ft.] <Insert dimension>** of each substrate to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 FIELD CONDITIONS

- A. Environmental Limitations: Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.
 - 1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.
- B. Do not install traffic coating until items that penetrate membrane have been installed.
- C. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of **[40 deg F for oil-based materials] [50 deg F for water-based materials]**, and not exceeding 95 deg F.

1.08 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace traffic coating that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:

- a. Adhesive or cohesive failures.
 - b. Abrasion or tearing failures.
 - c. Surface crazing or spalling.
 - d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
2. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain traffic coatings from single source from single manufacturer.
- B. Obtain primary traffic-coating materials, including primers, from traffic-coating manufacturer. Obtain accessory materials including aggregates, sheet flashings, joint sealants, and substrate repair materials of types and from sources recommended in writing by primary material manufacturer.
- C. Obtain pavement-marking paint from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Material Compatibility: Provide primers; base coat, intermediate coat, and topcoat; and accessory materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

2.03 TRAFFIC COATINGS

- A. Traffic Coating <Insert drawing designation>: Manufacturer's standard, traffic-bearing, seamless, high-solids-content, cold liquid-applied, elastomeric, water-resistant membrane system with integral wearing surface for **[pedestrian traffic] [vehicular traffic] [and] [equipment-room floor]** <Insert requirement> service condition; according to ASTM C957/C957M.
- B. Primer: Liquid primer as recommended in writing for substrate and conditions by traffic-coating manufacturer.
 1. Material: **[Epoxy] [Polyurethane]**.
- C. Preparatory and Base Coats: **[Polyurethane] [Aromatic urethane] [Aliphatic urethane] [or] [epoxy]**.
 1. Thicknesses: Minimum **[dry-] [or] [wet-]**film thickness **[as recommended in writing by manufacturer for substrate and service conditions indicated]** <Insert thickness>.
- D. Intermediate Coat: **[Polyurethane] [Aromatic urethane] [Aliphatic urethane] [or] [epoxy]**.
 1. Thicknesses: Minimum **[dry-] [or] [wet-]**film thickness **[as recommended in writing by manufacturer for substrate and service conditions indicated]** <Insert thickness>, measured excluding aggregate.

2. Aggregate Content: [As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated] [Not less than **8 to 10 lb/100 sq. ft.**] [To refusal] <Insert requirement>.
- E. Topcoat: **[Polyurethane] [Aromatic urethane] [Aliphatic urethane] [Aromatic urethane with UV inhibitors] [or] [epoxy]**.
1. Thicknesses: Minimum [dry-] [or] [wet-]film thickness [as recommended in writing by manufacturer for substrate and service conditions indicated] <Insert thickness>, measured excluding aggregate.
 2. Aggregate Content: [As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated] [As required to achieve slip-resistant finish] **[8 to 10 lb/100 sq. ft.]** [To refusal] <Insert requirement>.
 3. Color: [As selected by Architect from manufacturer's full range] [Match Architect's sample] <Insert color>.
- F. Aggregate: **[Manufacturer's standard aggregate for each use indicated] [Uniformly graded, washed silicon carbide sand] [Uniformly graded, washed silica sand] [Uniformly graded, washed flint shot silica] [Walnut shell granules] [or] [Aluminum-oxide grit]** <Insert aggregate> of particle sizes, shape, and minimum hardness recommended in writing by traffic-coating manufacturer.
- G. Fire-Test-Response Characteristics: Provide traffic-coating materials with the fire-test-response characteristics as determined by testing identical products according to test method below for deck type and slopes indicated by an independent testing and inspecting agency that is acceptable to authorities having jurisdiction.
1. **[Class A] [Class B] [Class C]** roof covering according to ASTM E108.
 2. <Insert test requirement>.
- H. Energy Star Listing: Provide traffic coating that is listed on the DOE's Energy Star "Roof Products Qualified Product List" for low-slope roof products.
- I. Energy Performance: Provide traffic coating with an initial Solar Reflectance Index of **[not less than 0.70]** <Insert value> and emissivity of **[not less than 0.75]** <Insert value> when tested according to CRRC-1.

2.04 ACCESSORY MATERIALS

- A. Joint Sealants: **[As specified in Section 07 92 00 "Joint Sealants."]** [ASTM C920.] <Insert requirement.>
- B. Sheet Flashing: Nonstaining **[sheet material recommended in writing by traffic-coating manufacturer]** [, uncured neoprene sheet] [, cured neoprene sheet] <Insert material>.
 1. Thickness: Minimum **[60 mils] [50 mils]** <Insert value>.
- C. Adhesive: Contact adhesive recommended in writing by traffic-coating manufacturer.
- D. Reinforcing Strip: Fiberglass mesh recommended in writing by traffic-coating manufacturer.

2.05 PAVEMENT MARKINGS

- A. Pavement-Marking Paint Specified Elsewhere: Comply with Section 32 17 23 "Pavement Markings."

- B. Pavement-Marking Paint:
1. Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, **[Type N] [Type F] [Type S]**; colors complying with FS TT-P-1952.
 2. MPI #32 Alkyd Traffic Marking Paint.
 3. Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, Type II, with drying time of less than **[three] [45]** minutes.
 4. MPI #97 Latex Traffic Marking Paint.
 5. Color: **[White] [Yellow] [Blue] [As indicated]** <Insert color>.
- C. Glass Beads: **[AASHTO M 247, Type 1] [FS TT-B-1325, Type 1A]**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, surface smoothness, and other conditions affecting performance of traffic-coating work.
- B. Verify that substrates are visibly dry and free of moisture.
1. Test for moisture according to ASTM D4263.
 2. Test for moisture content by **[measuring with an electronic moisture meter] [method recommended in writing by traffic-coating manufacturer]** <Insert test method>.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of traffic-coating work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.
1. Begin coating application only after substrate construction and penetrating work have been completed.
 2. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by traffic-coating manufacturer has passed and after substrates are dry.
 3. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Clean and prepare substrates according to ASTM C1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer.
- B. Priming: Unless manufacturer recommends in writing against priming, prime substrates according to manufacturer's written instructions.
1. Limit priming to areas that will be covered by traffic-coating material on same day. Reprime areas exposed for more time than recommended by manufacturer.

- C. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.
- D. Mask adjoining surfaces not receiving traffic coatings to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.
- E. Concrete Substrates: **[Mechanically abrade surface to a uniform profile acceptable to manufacturer, according to ASTM D4259.]** Do not acid etch.
 - 1. Remove grease, oil, paints, and other penetrating contaminants from concrete.
 - 2. Remove concrete fins, ridges, and other projections.
 - 3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.
 - 4. Remove remaining loose material to provide a sound surface, and clean surfaces according to ASTM D4258.

3.03 TERMINATIONS AND PENETRATIONS

- A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C1127 and manufacturer's written instructions.
- B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.
- C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.
- D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.04 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D4258.
 - 1. Comply with recommendations in ASTM C1193 for joint-sealant installation.
- B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic-coating manufacturer.

3.05 INSTALLATION OF TRAFFIC COATINGS

- A. Apply traffic coating according to ASTM C1127 and manufacturer's written instructions.
- B. Apply coats of specified compositions for each type of traffic coating at locations as indicated on Drawings.
- C. Start traffic-coating application in presence of manufacturer's technical representative.
- D. Verify that wet-film thickness of each coat complies with requirements every **[100 sq. ft.]** **<Insert dimension>**.

- E. Uniformly broadcast and embed aggregate in each coat indicated to receive aggregate according to manufacturer's written instructions. After coat dries, sweep away excess aggregate.
- F. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.
- G. Cure traffic coatings. Prevent contamination and damage during coating application and curing.

3.06 INSTALLATION OF PAVEMENT MARKINGS

- A. Do not apply pavement-marking paint for striping and other markings until layout, colors, and placement have been verified with Architect and traffic coating has cured.
- B. Sweep and clean surface to eliminate loose material and dust.
- C. Apply pavement-marking paint with mechanical equipment to produce markings of dimensions indicated with uniform straight edges. Apply at manufacturer's recommended rates for a minimum wet-film thickness of 15-mils.
 - 1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
 - 2. Broadcast glass beads uniformly into wet pavement-marking paint at a rate of 6 lb/gal..

3.07 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform the following field tests and inspections:
 - 1. Materials Testing:
 - a. Samples of material delivered to Project site are to be taken, identified, sealed, and certified in presence of **[Owner and]**Contractor.
 - b. Testing agency must perform tests for characteristics specified, using applicable referenced testing procedures.
 - c. Testing agency must verify thickness of coatings during traffic-coating application for each **[600 sq. ft.] <Insert dimension>** of installed traffic coating or part thereof.
 - 2. Electronic Leak-Detection Testing:
 - a. Testing agency must test **[each deck area]** **[each deck area indicated for testing on Drawings]** **<Insert area to be tested>** for leaks using an electronic leak-detection method that locates discontinuities in the traffic-coating membrane.
 - b. Testing agency must perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
 - c. Testing agency must create a conductive electronic field over the area of traffic coating to be tested and electronically determine locations of discontinuities or leaks, if any, in the traffic coating.

- d. Testing agency must provide survey report indicating locations of discontinuities, if any.
 - B. Final Traffic-Coating Inspection: Arrange for traffic-coating manufacturer's technical personnel to inspect membrane installation on completion.
 - 1. Notify Architect or Owner 48 hours in advance of date and time of inspection.
 - C. Waterproofing will be considered defective if it does not pass tests and inspections.
 - D. Prepare test and inspection reports.
- 3.08 PROTECTING AND CLEANING
- A. Protect traffic coatings from damage and wear during remainder of construction period.
 - B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 07 19 00
WATER REPELLENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Penetrating water repellents.
2. Film-forming water repellents.

B. Related Requirements:

1. Section 04 20 00 "Unit Masonry" for integral water-repellent admixture for unit masonry assemblies.

1.02 PRE-INSTALLATION MEETINGS

- A. Pre-installation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Penetrating water repellents.
2. Film-forming water repellents.
3. MPI-approved water repellents.

B. Product Data Submittals:

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's standard colors.
3. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.
4. Include printout of current "MPI Approved Products List" for each product category specified in Part 2 that specifies water repellents approved by MPI, with the proposed product highlighted.

- C. Samples: For each type **[and color]** of water repellent and substrate indicated, 12 by 12 inches in size, with specified water-repellent treatment applied to half of each Sample.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Applicator]** **[testing agency]**.

- B. Product Certificates: For each type of water repellent.
- C. Preconstruction Test Reports: For water-repellent-treated substrates.
- D. Field quality-control reports.
- E. Sample Warranty: For special warranty.

1.05 QUALITY ASSURANCE

- A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.
- B. MPI Standards: Comply with MPI standards indicated and provide water repellents listed in its "MPI Approved Products List."
- C. Mockups: Prepare mockups of each required water repellent on each type of substrate required to demonstrate aesthetic effects, **[for preconstruction testing,]** and to set quality standards for materials and execution.
 - 1. Locate mockups **[where shown on Drawings] [on masonry sample panels] [on existing surfaces where directed by Architect] [in locations that enable viewing under same conditions as the completed Work] <Insert requirement>**.
 - a. Size: **[10 sq. ft.] [25 sq. ft.] <Insert size>** each.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 PRECONSTRUCTION TESTING

- A. Preconstruction Testing: Engage a qualified testing agency to perform preconstruction testing of water repellents on **[field mockups] [manufacturer's standard substrate assemblies] [on existing substrate assemblies]**.
 - 1. In addition to verifying performance requirements, use mockups to verify manufacturer's written instructions for application procedure and optimum rates of product application to substrates.
 - 2. Propose changes to materials and methods to suit Project.
 - 3. Notify Architect **[seven] <Insert number>** days in advance of the dates and times when mockups will be tested.

1.07 FIELD CONDITIONS

- A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied in accordance with manufacturers' written instructions and warranty requirements:
 - 1. Concrete surfaces and mortar have cured for not less than 28 days.

2. Building has been closed in for not less than 30 days before treating wall assemblies.
3. Ambient temperature is above 40 deg F and below 100 deg F and will remain so for 24 hours.
4. Substrate is not frozen and substrate-surface temperature is above 40 deg F and below 100 deg F.
5. Rain or snow is not predicted within 24 hours.
6. Not less than **[24 hours]** **[seven days]** have passed since surfaces were last wet.
7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.
8. <Insert restriction>.

1.08 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which **[manufacturer]** **[and]** **[Applicator]** agree(s) to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period.
1. Warranty Period: **[Two]** **[Five]** **<Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Performance: Water repellents must meet the following performance requirements as determined by **[preconstruction]** testing on **[manufacturer's standard]** substrates representing those indicated for this Project.
- B. Water Absorption: Minimum 90 percent reduction of water absorption after 24 hours for treated compared to untreated specimens when tested according to the following:
1. Cast-in-Place Concrete: ASTM C642.
 2. Precast Concrete: ASTM C642.
 3. Cast Stone: ASTM C1195.
 4. Concrete Masonry Units: ASTM C140.
 5. Clay Brick: ASTM C67.
 6. Natural Stone: ASTM C97/C97M.
 7. Portland Cement Plaster (Stucco): ASTM D6532.

- C. Water-Vapor Transmission: Comply with one or both of the following:
 - 1. Maximum 10 percent reduction in water-vapor transmission of treated compared to untreated specimens, in accordance with ASTM E96/E96M.
 - 2. Minimum 80 percent water-vapor transmission of treated compared to untreated specimens, in accordance with ASTM D1653.
- D. Water Penetration and Leakage through Masonry: Minimum 90 percent reduction in leakage rate of treated compared to untreated specimens, in accordance with ASTM E514/E514M.
- E. Durability: Maximum 5 percent loss of water-repellent performance after 2,500 hours of weathering in accordance with ASTM G154 compared to water-repellent-treated specimens before weathering.
- F. Chloride-Ion Intrusion in Concrete: NCHRP Report 244, Series II tests.
 - 1. Reduction of Water Absorption: **[80]** <Insert number> percent.
 - 2. Reduction in Chloride Content: **[80]** <Insert number> percent.

2.02 PENETRATING WATER REPELLENTS

- A. Penetrating Low-VOC Silane Water Repellent: Clear, containing **[20]** **[40]** **[100]** <Insert number> percent or more active content of **[modified]** silane; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.
- B. Penetrating Low-VOC Siloxane Water Repellent: Clear, containing **[10]** **[12]** <Insert number> percent or more active content of **[modified]** siloxane; with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.
- C. Penetrating Low-VOC Silane/Siloxane-Blend Water Repellent: Clear, containing 100 percent active content of silane and siloxane blend with Zero g/L of VOCs.
 - 1. Rainguard International: Micro-Seal Water Repellant (One Coat). For first coat on unpainted wood and masonry surfaces.
 - 2. Approved Equal.
- D. Penetrating Low-VOC Siliconate Water Repellent: Clear, methyl siliconate water repellent with 400 g/L or less of VOCs.
- E. Penetrating Water and Oil Repellent: Clear, oleophobic water repellent; with 400 g/L or less of VOCs.
- F. Penetrating Water Repellent and Corrosion Inhibitor: Clear, containing **[100]** <Insert number> percent or more active content of modified **[silane]** **[siloxane]** water repellent and corrosion inhibitor, with 400 g/L or less of VOCs.
- G. Penetrating Water Repellent for Calcareous Stone: Clear, modified silane with ethyl silicate, specially formulated for limestone and marble.
- H. Penetrating Water Repellent Concentrate: Concentrated **[siloxane]** **[silane]**, for field dilution.

2.03 FILM-FORMING WATER REPELLENTS

- A. Film-Forming Low-VOC Silicone Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; in a solvent- or waterborne solution containing not less than 3 and up to 7 percent solids by weight; and with 400 g/L or less of VOCs.
- B. Film-Forming Silicone Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; in a solvent- or waterborne solution containing not less than 3 and up to 7 percent solids by weight; and with 600 g/L or less of VOCs.
- C. Film-Forming Water Repellent for Masonry: **[Clear] [Pigmented]**, consisting of resins, acrylics, polymers, with 600 g/L or less of VOCs; for masonry block or brick.
 - 1. Color: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color>**.
- D. Film-Forming Low-VOC Modified Acrylic Water Repellent: **[Clear] [Pigmented]**, breathing coating of acrylic resin, which may be enhanced with silane and siloxane resins; in a waterborne, solvent-borne, or acrylic emulsion solution containing less than 15 percent solids by volume; and with 400 g/L or less of VOCs.
 - 1. Color: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color>**.
- E. Film-Forming Modified Acrylic Water Repellent: **[Clear] [Pigmented]**, breathing coating of acrylic resins, which may be enhanced silane and siloxane resins; in a waterborne, solvent-borne, or acrylic emulsion solution containing less than 15 percent solids by volume; and with 600 g/L or less of VOCs.
 - 1. Color: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color>**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.
 - 1. Verify that surfaces are clean and dry in accordance with water-repellent manufacturer's requirements. Check moisture content in three representative locations by method recommended by manufacturer.
 - 2. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
 - 3. Verify that required repairs are complete, cured, and dry before applying water repellent.
- B. Test pH level in accordance with water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. New Construction and Repairs: Allow concrete and other cementitious materials to age before application of water repellent, in accordance with repellent manufacturer's written instructions.
- B. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product in accordance with water-repellent manufacturer's written instructions and as follows:
 - 1. **[Cast-in-Place Concrete] [Precast Concrete] [Cast Stone] [and] [Concrete Unit Masonry]**: Remove oil, curing compounds, laitance, and other substances that inhibit penetration or performance of water repellents in accordance with ASTM E1857 **<Insert requirement>**.
 - 2. Clay Brick Masonry: ASTM D5703.
 - 3. Natural Stone: ASTM C1515.
 - 4. Portland Cement Plaster (Stucco): ASTM E1857.
- C. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.
- D. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.
- E. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.
 - 1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.03 APPLICATION OF WATER REPELLENTS

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.
- B. Apply coating of water repellent on surfaces to be treated using 15 psi-pressure spray with a fan-type spray nozzle, roller, or brush to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.
 - 1. **[Precast Concrete] [and] [Cast Stone]**: At Contractor's option, first application of water repellent may be completed before installing units. Mask mortar and sealant bond surfaces to prevent water repellent from migrating onto joint surfaces. Remove masking after repellent has cured.
- C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.04 FIELD QUALITY CONTROL

- A. Testing of Water-Repellent Material: Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when water repellent is being applied:
1. Owner will engage the services of a qualified testing agency to sample water-repellent material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
 2. Testing agency will perform tests for compliance of water-repellent material with product requirements.
 3. Owner may direct Contractor to stop applying water repellents if test results show material being used does not comply with product requirements. Contractor to remove noncomplying material from Project site, pay for testing, and correct deficiency of surfaces treated with rejected materials, as approved by Architect. **<Insert additional requirements to suit Project>**.
- B. Coverage Test: In the presence of Architect, hose down a dry, repellent-treated surface to verify complete and uniform product application. A change in surface color will indicate incomplete application.
1. Notify Architect seven days in advance of the dates and times when surfaces will be tested.
 2. Reapply water repellent until coverage test indicates complete coverage.

3.05 CLEANING

- A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by Architect.
- B. Comply with manufacturer's written cleaning instructions.

END OF SECTION

SECTION 07 21 00
THERMAL INSULATION

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Extruded polystyrene foam-plastic board insulation.
2. Molded (expanded) polystyrene foam-plastic board insulation.
3. Graphite-polystyrene foam-plastic board insulation.
4. Polyisocyanurate foam-plastic board insulation.
5. Glass-fiber blanket insulation.
6. Glass-fiber board insulation.
7. Mineral-wool blanket insulation.
8. Mineral-wool board insulation.
9. Loose-fill insulation.
10. Spray-applied cellulosic insulation.
11. Cellular glass insulation.
12. Reflective insulation.

B. Related Requirements:

1. Section 04 22 00 "Concrete Unit Masonry" for insulation installed in masonry cells.
2. Section 06 16 00 "Sheathing" for foam-plastic board sheathing installed directly over wood or steel framing.
3. **[Section 07 13 26 "Self-Adhering Sheet Waterproofing"] [Section 07 13 54 "Thermoplastic Sheet Waterproofing"] [Section 07 14 13 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"]** for insulated drainage panels installed with plaza deck insulation.
4. **[Section 07 52 16 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing"] [Section 07 54 19 "Polyvinyl-Chloride (PVC) Roofing"] [Section 07 55 52.16 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Protected Membrane Roofing"]** for insulation specified as part of roofing construction.
5. **[Section 09 24 00 "Cement Plastering"] [Section 09 29 00 "Gypsum Board"]** for sound attenuation blanket used as acoustic insulation.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Extruded polystyrene foam-plastic board insulation.

2. Molded (expanded) polystyrene foam-plastic board insulation.
3. Graphite-polystyrene foam-plastic board insulation.
4. Polyisocyanurate foam-plastic board insulation.
5. Glass-fiber blanket insulation.
6. Glass-fiber board insulation.
7. Mineral-wool blanket insulation.
8. Mineral-wool board insulation.
9. Loose-fill insulation.
10. Spray-applied cellulosic insulation.
11. Cellular glass insulation.
12. Reflective insulation.

1.03 INFORMATIONAL SUBMITTALS

- A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
 1. For blown-in or sprayed fiberglass and cellulosic-fiber loose-fill insulation, indicate initial installed thickness, settled thickness, settled R-value, installed density, coverage area, and number of bags installed.
 2. Sign, date, and post the certification in a conspicuous location on Project site.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Research Reports: For foam-plastic insulation, from ICC-ES.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect foam-plastic board insulation as follows:
 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers are subject to compliance with requirements; provide products by one of the following:
1. Johns Manville (Basis of Design).
 2. Atlas Roofing Corporation.
 3. Hunter Panels.
 4. DuPont.
 5. Firestone Building Products.
 6. Rmax, Inc.
 7. CertainTeed Corporation.
 8. Guardian Building Products, Inc.
 9. Owens Corning.
 10. Approved equal.
- B. Fire propagation characteristics: Passes NFPA 285 testing as part of an approved assembly.

2.02 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes less than **[25 and 450] [75 and 450] [200 and 450]** when tested in accordance with ASTM E84.
- B. Fire-Resistance Ratings: Comply with ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.
- C. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
- D. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.
- E. Thermal-Resistance Value (R-Value): **[R-value as indicated on Drawings] [R-value as indicated below] <Insert R-value>** in accordance with ASTM C518.
1. R-Value at **<Insert location>**: **<Insert R-value>**.

2.03 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION

- A. Extruded Polystyrene Board Insulation, Type X **<Insert drawing designation>**: ASTM C578, Type X, 15-psi minimum compressive strength; unfaced.
- B. Extruded Polystyrene Board Insulation, Type IV **<Insert drawing designation>**: ASTM C578, Type IV, 25-psi minimum compressive strength; unfaced.

- C. Extruded Polystyrene Board Insulation, Type IV, Drainage Panels <Insert drawing designation>: ASTM C578, Type IV, 25-psi minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
- D. Extruded Polystyrene Board Insulation, Type VI <Insert drawing designation>: ASTM C578, Type VI, 40-psi minimum compressive strength.
- E. Extruded Polystyrene Board Insulation, Type VI, Drainage Panels <Insert drawing designation>: ASTM C578, Type VI, 40-psi minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
- F. Extruded Polystyrene Board Insulation, Type VII <Insert drawing designation>: ASTM C578, Type VII, 60-psi minimum compressive strength.
- G. Extruded Polystyrene Board Insulation, Type VII, Drainage Panels <Insert drawing designation>: ASTM C578, Type VII, 60-psi minimum compressive strength; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
- H. Extruded Polystyrene Board Insulation, Type V <Insert drawing designation>: ASTM C578, Type V, 100-psi minimum compressive strength.

2.04 MOLDED (EXPANDED) POLYSTYRENE FOAM-PLASTIC BOARD INSULATION

- A. Molded (Expanded) Polystyrene Board Insulation, Type I <Insert drawing designation>: ASTM C578, Type I, 10-psi minimum compressive strength.
- B. Molded (Expanded) Polystyrene Board Insulation, Type VIII <Insert drawing designation>: ASTM C578, Type VIII, 13-psi minimum compressive strength.
- C. Molded (Expanded) Polystyrene Board Insulation, Type II <Insert drawing designation>: ASTM C578, Type II, 15-psi minimum compressive strength.
- D. Molded (Expanded) Polystyrene Board Insulation, Type IX <Insert drawing designation>: ASTM C578, Type IX, 25-psi minimum compressive strength.
- E. Molded (Expanded) Polystyrene Board Insulation, Type XIV <Insert drawing designation>: ASTM C578, Type XIV, 40-psi minimum compressive strength.
- F. Molded (Expanded) Polystyrene Board Insulation, Type XV <Insert drawing designation>: ASTM C578, Type XV, 60-psi minimum compressive strength.

2.05 GRAPHITE-POLYSTYRENE FOAM-PLASTIC BOARD

- A. Graphite-Polystyrene Foam-Plastic Board, Type I <Insert drawing designation>: ASTM C578, Type I, 10-psi minimum compressive strength; 4-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- B. Graphite-Polystyrene Foam-Plastic Board, Type I, Faced <Insert drawing designation>: ASTM C578, Type I, 10-psi minimum compressive strength; 4-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.

- C. Graphite-Polystyrene Foam-Plastic Board, Type VIII <Insert drawing designation>: ASTM C578, Type VIII, 13-psi minimum compressive strength; 3.1-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- D. Graphite-Polystyrene Foam-Plastic Board, Type VIII, Faced <Insert drawing designation>: ASTM C578, Type VIII, 13-psi minimum compressive strength; 3.1-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- E. Graphite-Polystyrene Foam-Plastic Board, Type II <Insert drawing designation>: ASTM C578, Type II, 15-psi minimum compressive strength; 3.1-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- F. Graphite-Polystyrene Foam-Plastic Board, Type IX <Insert drawing designation>: ASTM C578, Type IX, 25-psi minimum compressive strength; 2.5-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- G. Graphite-Polystyrene Foam-Plastic Board, Type IX, Faced <Insert drawing designation>: ASTM C578, Type IX, 25-psi minimum compressive strength; 2.5-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- H. Graphite-Polystyrene Foam-Plastic Board, Type XIV <Insert drawing designation>: ASTM C578, Type XIV, 40-psi minimum compressive strength; 2.5-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- I. Graphite-Polystyrene Foam-Plastic Board, Type XV <Insert drawing designation>: ASTM C578, Type XV, 60-psi minimum compressive strength; 2.5-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- J. Graphite-Polystyrene Foam-Plastic Board, Type X, Faced <Insert drawing designation>: ASTM C578, Type X, 15-psi minimum compressive strength; 1.1-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.
- K. Graphite-Polystyrene Foam-Plastic Board, Type IV, Faced <Insert drawing designation>: ASTM C578, Type IV, 25-psi minimum compressive strength; 1.1-perm maximum vapor permeance at 1-inch thickness per ASTM E96/E96M.

2.06 POLYISOCYANURATE FOAM-PLASTIC BOARD INSULATION

- A. Polyisocyanurate Board Insulation, Foil Faced <Insert drawing designation>: ASTM C1289, foil faced, Type I, Class 1 or 2.
- B. Polyisocyanurate Board Insulation, Glass-Fiber-Mat Faced <Insert drawing designation>: ASTM C1289, glass-fiber-mat faced, Type II, Class 2.

2.07 GLASS-FIBER BLANKET INSULATION

- A. Glass-Fiber Blanket Insulation, Unfaced <Insert drawing designation>: ASTM C665, Type I; passing ASTM E136 for combustion characteristics.
- B. Glass-Fiber Blanket Insulation, Polypropylene-Scrim-Kraft Faced <Insert drawing designation>: ASTM C665, Type II (nonreflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier).

- C. Glass-Fiber Blanket Insulation, Kraft Faced <Insert drawing designation>: ASTM C665, Type II (nonreflective faced), Class C (faced surface not rated for flame propagation); Category 1 (membrane is a vapor barrier).
- D. Glass-Fiber Blanket Insulation, Reinforced-Foil Faced <Insert drawing designation>: ASTM C665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
- E. Glass-Fiber Blanket Insulation, Foil Faced <Insert drawing designation>: ASTM C665, Type III (reflective faced), Class B (faced surface with a flame-propagation resistance of 0.12 W/sq. cm); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.

2.08 GLASS-FIBER BOARD INSULATION

- A. Glass-Fiber Board Insulation, Unfaced <Insert drawing designation>: ASTM C612, Type IA; unfaced [, passing ASTM E136 for combustion characteristics].
 - 1. Nominal Density: [2.25 lb/cu. ft.] [3 lb/cu. ft.] [4.25 lb/cu. ft.] [6 lb/cu. ft.] <Insert value>.
- B. Glass-Fiber Board Insulation, Faced <Insert drawing designation>: ASTM C612, Type IA; faced on one side with foil-scrim-kraft or foil-scrim-polyethylene vapor retarder.
 - 1. Nominal Density: [2.25 lb/cu. ft.] [3 lb/cu. ft.] [4.25 lb/cu. ft.] [6 lb/cu. ft.] <Insert value>.

2.09 MINERAL-WOOL BLANKET INSULATION

- A. Mineral-Wool Blanket Insulation, Unfaced <Insert drawing designation>: ASTM C665, Type I (blankets without membrane facing); consisting of fibers; passing ASTM E136 for combustion characteristics.
- B. Mineral-Wool Blanket Insulation, Reinforced-Foil Faced <Insert drawing designation>: ASTM C665, Type III (reflective faced); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.

2.10 MINERAL-WOOL BOARD INSULATION

- A. Mineral-Wool Board Insulation, Types IA and IB, Unfaced <Insert drawing designation>: ASTM C612, Types IA and IB; passing ASTM E136 for combustion characteristics.
 - 1. Nominal Density: [1.6 lb/cu. ft.] [2.25 lb/cu. ft.] [3 lb/cu. ft.] [4 lb/cu. ft.] [4.3 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] <Insert value>.
- B. Mineral-Wool Board Insulation, Types IA and IB, Faced <Insert drawing designation>: ASTM C612, Types IA and IB; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder.
 - 1. Nominal Density: [1.6 lb/cu. ft.] [2.25 lb/cu. ft.] [3 lb/cu. ft.] [4 lb/cu. ft.] [4.3 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] <Insert value>.

- C. Mineral-Wool Board Insulation, Type II, Unfaced <Insert drawing designation>: ASTM C612, Type II; passing ASTM E136 for combustion characteristics.
1. Nominal Density: **[4 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] <Insert value>**.
- D. Mineral-Wool Board Insulation, Type II, Faced <Insert drawing designation>: ASTM C612, Type II; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder.
1. Nominal Density: **[4 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] <Insert value>**.
- E. Mineral-Wool Board Insulation, Type III, Unfaced <Insert drawing designation>: ASTM C612, Type III; passing ASTM E136 for combustion characteristics.
1. Nominal Density: **[4 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] [10 lb/cu. ft.] <Insert value>**.
- F. Mineral-Wool Board Insulation, Type III, Faced <Insert drawing designation>: ASTM C612, Type III; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder.
1. Nominal Density: **[4 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] [10 lb/cu. ft.] <Insert value>**.
- G. Mineral-Wool Board Insulation, Type IVA <Insert drawing designation>: ASTM C612, Type IVA; **[unfaced] [with black mat facer] <Insert facer material>**.
1. Nominal Density: **[4 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] [10 lb/cu. ft.] [11 lb/cu. ft.] [12 lb/cu. ft.] <Insert value>**.
- H. Mineral-Wool Board Insulation, Type IVB <Insert drawing designation>: ASTM C612, Type IVB; **[unfaced] [with black mat facer] <Insert facer material>**.
1. Nominal Density: **[4.3 lb/cu. ft.] [6 lb/cu. ft.] [8 lb/cu. ft.] [10 lb/cu. ft.] [11 lb/cu. ft.] [12 lb/cu. ft.] [6.2 lb/cu. ft. outer layer and 3.8 lb/cu. ft. innerlayer] <Insert value>**.

2.11 LOOSE-FILL INSULATION

- A. Cellulosic-Fiber Loose-Fill Insulation <Insert drawing designation>: ASTM C739, chemically treated for flame-resistance, processing, and handling characteristics.
- B. Glass-Fiber Loose-Fill Insulation <Insert drawing designation>: ASTM C764, **[Type I for pneumatic application] [or] [Type II for poured application]**.

2.12 SPRAY-APPLIED CELLULOSIC INSULATION

- A. Self-Supported, Spray-Applied Cellulosic Insulation <Insert drawing designation>: ASTM C1149, **[Type I (materials applied with liquid adhesive; suitable for either exposed or enclosed applications),] [Type II (materials containing a dry adhesive activated by water during installation; intended only for enclosed or covered applications),] [Type III (materials containing an adhesive mixed with water during application; intended for application on attic floors),]** chemically treated for flame-resistance, processing, and handling characteristics.

2.13 CELLULAR GLASS INSULATION

- A. Cellular Glass Insulation <Insert drawing designation>: ASTM C552, **[Type I (flat block)] [Type IV (board)] [faced on both sides with manufacturer's special kraft-paper sheets laminated to glass block with asphalt]**.

2.14 REFLECTIVE INSULATION

- A. Reflective Insulation: ASTM C1224, with one or more low-emittance surfaces with emittance value of 0.1 or less as measured per ASTM C1371.
1. Construction: **[Surfaces separated with internal expanders] [Surfaces separated by single-layer polyethylene bubble film] [Surfaces separated by double-layer polyethylene bubble film] <Insert construction>**.
 2. Water-Vapor Transmission: **[1 perm, maximum] [5 perms or greater]**.
- B. Sheet Radiant Barrier: ASTM C1313/C1313M with at least one surface with emittance value of 0.1 or less as measured per ASTM C1371.
1. Construction: **[Foil on one side of substrate] [Foil on both sides of substrate] [Vacuum metallizing on substrate]**.
 2. Tear Resistance: **<Insert value>**.
 3. Water-Vapor Transmission: **[1 perm, maximum] [5 perms or greater]**.
 4. Sheet Width: **<Insert width>**.
- C. Interior Radiation Control Coating System: Silver-colored, low-emissivity, **[solvent] [water]**-based coating; with a surface emittance value of 0.25 or less as measured per ASTM C1371.

2.15 INSULATION FASTENERS

- A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
1. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation.
- B. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
1. Angle: Formed from 0.030-inch-thick, perforated, galvanized carbon-steel sheet with each leg 2 inches square.
 2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation.

- C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.
 - 1. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
 - a. Crawl spaces.
 - b. Ceiling plenums.
 - c. Attic spaces.
 - d. **<Insert location>**.
- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of **[1 inch] [2 inches] [3 inches]** between face of insulation and substrate to which anchor is attached.
- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates without damaging insulation, fasteners, or substrates.

2.16 ACCESSORIES

- A. Insulation for Miscellaneous Voids:
 - 1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.
 - 2. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.
 - 3. Polyurethane Pour-In-Place Insulation: Closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84, specifically formulated for pour-in-place applications.
- B. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.
- C. Asphalt Coating for Cellular-Glass Block Insulation: Cutback asphalt or asphalt emulsion of type recommended by manufacturer of cellular-glass block insulation.
- D. Eave Ventilation Troughs: Preformed, rigid fiberboard or plastic sheets designed and sized to fit between roof framing members and to provide ventilation between insulated attic spaces and vented eaves.

PART 3 EXECUTION

3.01 PREPARATION

- A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.02 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Install insulation with manufacturer's R-value label exposed after insulation is installed.
- D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.03 INSTALLATION OF SLAB INSULATION

- A. On vertical slab edge and foundation surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.
 - 1. If not otherwise indicated, extend insulation a minimum of **[24 inches] [36 inches]** **<Insert dimension>** below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.
 - 1. If not otherwise indicated, extend insulation a minimum of **[24 inches] [36 inches]** **<Insert dimension>** in from exterior walls.

3.04 INSTALLATION OF FOUNDATION WALL INSULATION

- A. Butt panels together for tight fit.
- B. Anchor Installation: Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
 - 1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions.
 - 2. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application.
 - 3. Apply insulation standoffs to each spindle to create cavity width indicated on Drawings between concrete substrate and insulation.
 - 4. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation.
 - 5. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

- C. Adhesive Installation: Install with adhesive or press into tacky waterproofing or dampproofing according to manufacturer's written instructions.

3.05 INSTALLATION OF CAVITY-WALL INSULATION

- A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately 24 inches o.c. both ways on inside face and as recommended by manufacturer.
 - 1. Fit courses of insulation between [**wall ties and other**] obstructions, with edges butted tightly in both directions, and with faces flush.
 - 2. Press units firmly against inside substrates.
 - 3. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Section 04 20 00 "Unit Masonry."
- B. Cellular-Glass Board Insulation: Install with closely fitting joints using [**adhesive pad**] [**serrated trowel**] attachment method according to manufacturer's written instructions.
- C. Mineral-Wool Board Insulation: Install insulation fasteners 4 inches from each corner of board insulation, at center of board, and as recommended by manufacturer.
 - 1. Fit courses of insulation between [**masonry wall ties and other**] obstructions, with edges butted tightly in both directions, and with faces flush.
 - 2. Press units firmly against inside substrates.

3.06 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

- A. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
 - 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 - 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 - 3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 - 4. Attics: Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
 - 5. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 - 6. For wood-framed construction, install blankets in accordance with ASTM C1320 and as follows:
 - a. With faced blankets having stapling flanges, lap blanket flange over flange of adjacent blanket to maintain continuity of vapor retarder once finish material is installed over it.

7. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
 - a. Exterior Walls: Set units with facing placed toward **[exterior of construction] [interior of construction] [as indicated on Drawings]**.
 - b. Interior Walls: Set units with facing placed **[as indicated on Drawings] [toward areas of high humidity] <Insert location>**.
- B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
 1. Glass-Fiber Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft..
 2. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.
- C. Loose-Fill Insulation: Apply in accordance with ASTM C1015 and manufacturer's written instructions.
 1. Level horizontal applications to uniform thickness as indicated, lightly settle to uniform density, but do not compact excessively.
 2. For cellulosic-fiber loose-fill insulation, comply with CIMA's Bulletin #2, "Standard Practice for Installing Cellulose Insulation."
- D. Spray-Applied Cellulosic Insulation: Apply spray-applied insulation according to manufacturer's written instructions.
 1. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked.
 2. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.

3.07 INSTALLATION OF CURTAIN-WALL INSULATION

- A. Install board insulation in curtain-wall construction according to curtain-wall manufacturer's written instructions.
 1. Hold insulation in place by securing metal clips and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass.
 2. Maintain cavity width of dimension indicated on Drawings between insulation and glass.
 3. Install insulation to fit snugly without bowing.

3.08 INSTALLATION OF REFLECTIVE INSULATION

- A. Install sheet reflective insulation in accordance with ASTM C727.
- B. Install sheet radiant barriers in accordance with ASTM C1744.
- C. Install interior radiation control coating system in accordance with ASTM C1321.

3.09 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

SECTION 07 26 00

BELOW GRADE VAPOR RETARDERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Polyethylene vapor retarders.
 - 2. Reinforced-polyethylene vapor retarders.
- B. Related Requirements:
 - 1. Section 03 30 00 "Cast-in-Place Concrete" for under-slab vapor retarders.
 - 2. Section 07 21 00 "Thermal Insulation" for vapor retarders integral with insulation products.

1.02 ACTION SUBMITTALS

- A. Product Data: Submit manufacturer's product data and installation instructions for vapor barrier and accessories.
 - 1. Polyethylene vapor retarders.
 - 2. Reinforced-polyethylene vapor retarders.
 - 3. Fire-retardant, reinforced-polyethylene vapor retarders.
- B. Shop Drawings: Submit shop drawings for all vapor barrier termination conditions.

1.03 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each product, for tests performed by a qualified testing agency.

PART 2 PRODUCTS

2.01 REINFORCED-POLYETHYLENE VAPOR RETARDERS

- A. Reinforced-Polyethylene Vapor Retarders: Sheet with outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nylon cord or polyester scrim and weighing not less than **[20 lb/1000 sq. ft.] <Insert weight>**, with maximum permeance rating of 0.1 perm.

2.02 ACCESSORIES

- A. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
- B. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and has demonstrated capability to bond vapor retarders securely to substrates indicated.

- C. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

PART 3 EXECUTION

3.01 PREPARATION

- A. Clean substrates of substances that are harmful to vapor retarders, including removing projections capable of puncturing vapor retarders.

3.02 INSTALLATION OF VAPOR RETARDERS ON FRAMING

- A. Place vapor retarders on side of construction indicated on Drawings.
- B. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives, vapor retarder fasteners, or other anchorage system as recommended by manufacturer. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.
- C. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs and sealing with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Locate all joints over framing members or other solid substrates.
- D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.
- E. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

3.03 INSTALLATION OF VAPOR RETARDERS IN CRAWL SPACES

- A. Install vapor retarders over prepared grade. Lap joints a minimum of 12 inches and seal with manufacturer's recommended tape. Install second layer over pathways to equipment.
- B. Extend vapor retarder over footings and seal to foundation wall or grade beam with manufacturer's recommended tape.
 - 1. Extend vapor retarder vertically minimum **[16 inches] [24 inches] <Insert dimension>** above top of footing.
- C. Seal around penetrations such as utilities and columns in order to create a monolithic, airtight membrane at grade surface, perimeter, and all vertical penetrations.

3.04 PROTECTION

- A. Protect vapor retarders from damage until concealed by permanent construction.

END OF SECTION

SECTION 07 27 15

NON-BITUMINOUS SELF-ADHERING SHEET AIR BARRIERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Self-adhering air barrier.
 - 1. Vapor-retarding non-bituminous sheet.
 - 2. Vapor-permeable non-bituminous sheet.
- B. Related Requirements:
 - 1. Section 06 16 00 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
 - 2. Section 07 25 00 "Weather Barriers" for weather barriers, including [building paper] [flexible flashing] [and] [building wraps with air-barrier properties].

1.02 DEFINITIONS

- A. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- B. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.
- C. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.04 ACTION SUBMITTALS

- A. Product Data: Self-adhering air barrier. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; and tested physical and performance properties of products.
 - 1. Vapor-retarding non-bituminous sheet.
 - 2. Vapor-permeable non-bituminous sheet.
- B. Shop Drawings: For air-barrier assemblies.
 - 1. Show locations and extent of air-barrier materials, accessories, and assemblies specific to Project conditions.
 - 2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

3. Include details of interfaces with other materials that form part of air barrier.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. [Include list of ABAA-certified installers and supervisors employed by Installer, who work on Project.]
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with air barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.
- D. Field quality-control reports.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 1. Installer to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and to employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution [and for preconstruction testing].
 1. Build integrated mockups of exterior wall assembly [as indicated on Drawings] [, 150 sq. ft.] <Insert requirement>, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection and testing of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing membrane [, building corner condition,] [and] [foundation wall intersection].
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: [Owner will engage] [Engage] a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies to comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.

1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage in accordance with [ASTM E1186, chamber pressurization or depressurization with smoke tracers] [ASTM E1186, chamber depressurization with detection liquids] <Insert requirement>.
2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate in accordance with [ASTM E783] [or] [ASTM E2357].
3. Adhesion Testing: Mockups will be tested for required air-barrier adhesion to substrate in accordance with ASTM D4541.
4. Notify Architect [seven] <Insert number> days in advance of the dates and times when mockups will be tested.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.09 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.
 1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction to be capable of performing as a continuous air barrier [and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration]. Air-barrier assemblies to be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations [, tie-ins to installed waterproofing], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Air-Barrier Assembly Air Leakage: Maximum [0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft.] <Insert value>, when tested in accordance with ASTM E2357.

2.03 NONBITUMINOUS SHEET AIR BARRIER

- A. Vapor-Retarding Non-Bituminous Sheet: Minimum 10-mil-thick, self-adhering sheet consisting of 5 mils of air-barrier film and a 5-mil-thick, acrylic adhesive with release liner on adhesive side [and formulated for application with primer that complies with VOC limits].
 1. Physical and Performance Properties:

- a. Air Permeance: Maximum [0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft.] <Insert value> pressure difference; ASTM E2178.
 - b. Puncture Resistance: Minimum [40 lbf] <Insert value>; ASTM E154/E154M.
 - c. Vapor Permeance: Maximum [1.0 perm] <Insert value>; ASTM E96/E96M, Desiccant Method.
 - d. Adhesion to Substrate: Minimum [16 lbf/sq. in.] <Insert value> when tested in accordance with ASTM D4541 as modified by ABAA.
 - e. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
 - f. UV Resistance: Can be exposed to sunlight for [150] <Insert number> days in accordance with manufacturer's written instructions.
- B. Vapor-Permeable Non-Bituminous Sheet: Minimum 20-mil-thick, self-adhering sheet consisting of a breathable carrier film or fabric and an adhesive with release liner on adhesive side [and formulated for application with primer that complies with VOC limits].
1. Physical and Performance Properties:
 - a. Air Permeance: Maximum [0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft.] <Insert value> pressure difference; ASTM E2178.
 - b. Puncture Resistance: Minimum [40 lbf] <Insert value>; ASTM E154/E154M.
 - c. Vapor Permeance: Minimum [15 perms] <Insert value>; ASTM E96/E96M, Desiccant Method, Procedure A.
 - d. Adhesion to Substrate: Minimum [16 lbf/sq. in.] <Insert value> when tested in accordance with ASTM D4541 as modified by ABAA.
 - e. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
 - f. UV Resistance: Can be exposed to sunlight for [50] [150] <Insert number> days in accordance with manufacturer's written instructions.

2.04 ACCESSORY MATERIALS

- A. Requirement: Provide primers, transition strips, termination strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- B. Primer: Liquid [waterborne] [solvent-borne] primer recommended for substrate by air-barrier material manufacturer.
- C. Stainless Steel Sheet: ASTM A240/A240M, Type 304, [0.0187 inch] [0.0250 inch] <Insert dimension> thick, and Series 300 stainless steel fasteners.
- D. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.
 - 3. Verify that substrates are visibly dry and free of moisture. [Test concrete substrates for capillary moisture by plastic sheet method in accordance with ASTM D4263.]
 - 4. Verify that masonry joints are flush and completely filled with mortar.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION

- A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate in accordance with manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.
- H. Bridge [isolation joints] [expansion joints] [and] [discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints] with air-barrier accessory material that accommodates joint movement in accordance with manufacturer's written instructions and details.

3.03 INSTALLATION OF NONBITUMINOUS SHEET AIR BARRIER

- A. Install materials in accordance with air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.
 - 1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
- B. Prepare, treat, and seal inside and outside corners and vertical and horizontal surfaces at terminations and penetrations with termination mastic.

- C. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier sheet on same day. Reprime areas exposed for more than 24 hours.
- D. Apply and firmly adhere air-barrier sheets over area to receive air barrier. Accurately align sheets and maintain uniform 2-1/2-inch-minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure airtight installation.
 - 1. Apply sheets in a shingled manner to shed water.
 - 2. Roll sheets firmly to enhance adhesion to substrate.
- E. Apply continuous air-barrier sheets over accessory strips bridging substrate cracks, construction, and contraction joints.
- F. CMU: Install air-barrier sheet horizontally against the CMU beginning at base of wall. Align top edge of air-barrier sheet immediately below protruding masonry ties or joint reinforcement or ties, and firmly adhere in place.
 - 1. Overlap horizontally adjacent sheets a minimum of 2 inches and roll seams.
 - 2. Apply overlapping sheets with bottom edge slit to fit around masonry reinforcing or ties. Roll firmly into place.
 - 3. Seal around masonry reinforcing or ties and penetrations with termination mastic.
 - 4. Continue the sheet into all openings in the wall, such as doors and windows, and terminate at points to maintain an airtight barrier that is not visible from interior.
- G. Seal top of through-wall flashings to air-barrier sheet with an additional 6-inch-wide, transition strip.
- H. Seal exposed edges of sheet at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- I. Install air-barrier sheet and accessory materials to form a seal with adjacent construction and to maintain a continuous air barrier.
 - 1. Coordinate air-barrier installation with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
- J. Connect and seal exterior wall air-barrier sheet continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- K. At end of each working day, seal top edge of air-barrier material to substrate with termination mastic.
- L. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- M. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply [transition strip] [preformed silicone extrusion] so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.

1. Transition Strip: Roll firmly to enhance adhesion.
 2. Preformed Silicone Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
- N. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- O. Repair punctures, voids, and deficient lapped seams in air barrier. Slit and flatten fishmouths and blisters. Patch with air-barrier sheet extending 6 inches beyond repaired areas in all directions.
- P. Do not cover air barrier until it has been tested and inspected by testing agency.
- Q. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.
- 3.04 FIELD QUALITY CONTROL
- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
- B. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to perform tests and inspections.
- C. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. [Inspections may include the following:]
1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 2. Continuous structural support of air-barrier system has been provided.
 3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 4. Site conditions for application temperature and dryness of substrates have been maintained.
 5. Maximum exposure time of materials to UV deterioration has not been exceeded.
 6. Surfaces have been primed.
 7. Laps in sheet materials have complied with the minimum requirements and have been shingled in the correct direction (or mastic applied on exposed edges), with no fishmouths.
 8. Termination mastic has been applied on cut edges.
 9. Air barrier has been firmly adhered to substrate.
 10. Compatible materials have been used.
 11. Transitions at changes in direction and structural support at gaps have been provided.
 12. Connections between assemblies (air barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 13. All penetrations have been sealed.
- D. Tests: As determined by testing agency from among the following tests:

1. Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage in accordance with [ASTM E1186, chamber pressurization or depressurization with smoke tracers] [ASTM E1186, chamber depressurization using detection liquids] <Insert requirement>.
 2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with [ASTM E783] [or] [ASTM E2357] <Insert test>.
 3. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate in accordance with ASTM D4541 for each [600 sq. ft.] <Insert value> of installed air barrier or part thereof.
- E. Air barriers will be considered defective if they do not pass tests and inspections.
1. Apply additional air-barrier material, in accordance with manufacturer's written instructions, where inspection results indicate insufficient thickness.
 2. Remove and replace deficient air-barrier components for retesting as specified above.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Prepare test and inspection reports.
- 3.05 CLEANING AND PROTECTION
- A. Protect air-barrier system from damage during application and remainder of construction period, in accordance with manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials in accordance with air-barrier manufacturer's written instructions.
 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION

SECTION 07 27 26

FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. High-build air barriers, vapor retarding.
2. High-build air barriers, vapor permeable.
3. Medium-build air barriers, vapor retarding.
4. Medium-build air barriers, vapor permeable.

B. Related Requirements:

1. Section 06 16 00 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
2. Section 07 25 00 "Weather Barriers" for weather barriers, including [building paper] [flexible flashing] [and] [building wraps with air-barrier properties].

1.02 DEFINITIONS

- A. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- B. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.
- C. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.
 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.04 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; dry film thickness; and tested physical and performance properties of products.
 1. High-build air barriers, vapor retarding.
 2. High-build air barriers, vapor permeable.
 3. Medium-build air barriers, vapor retarding.
 4. Medium-build air barriers, vapor permeable.

- B. Shop Drawings: For air-barrier assemblies.
 - 1. Show locations and extent of air-barrier materials, accessories, and assemblies specific to Project conditions.
 - 2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 3. Include details of interfaces with other materials that form part of air barrier.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. [Include list of ABAA-certified installers and supervisors employed by Installer, who work on Project.]
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.
- D. Field quality-control reports.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. Installer to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and to employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution [and for preconstruction testing].
 - 1. Build integrated mockups of exterior wall assembly [as indicated on Drawings] [, 150 sq. ft.] <Insert requirement>, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection and testing of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing membrane [, building corner condition,] [and] [foundation wall intersection].
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: [Owner will engage] [Engage] a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies must comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
 - 1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage in accordance with [ASTM E1186, chamber pressurization or depressurization with smoke tracers] [ASTM E1186, chamber depressurization with detection liquids] <Insert requirement>.
 - 2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate in accordance with [ASTM E783] [or] [ASTM E2357].
 - 3. Adhesion Testing: Mockups will be tested for required air-barrier adhesion to substrate in accordance with ASTM D4541.
 - 4. Notify Architect [seven] <Insert number> days in advance of the dates and times when mockups will be tested.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.09 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.
 - 1. Protect substrates from environmental conditions that affect air-barrier performance.
 - 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain primary air-barrier materials and air-barrier accessories from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction to be capable of performing as a continuous air barrier [and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration]. Air-barrier assemblies to be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations [, tie-ins to installed waterproofing], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Air-Barrier Assembly Air Leakage: Maximum [0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft.] <Insert value>, when tested in accordance with ASTM E2357.
- C. Air Permeance: Maximum [0.004 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft.] <Insert value> pressure difference; ASTM E2178.

- D. Ultimate Elongation: Minimum [200] [250] [350] [500] <Insert number> percent; ASTM D412, Die C.
- E. Adhesion to Substrate: Minimum [16 lbf/sq. in.] [30 lbf/sq. in.] <Insert value> when tested in accordance with ASTM D4541.
- F. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
- G. UV Resistance: Can be exposed to sunlight for [30] [60] [90] [180] [240] [360] <Insert number> days in accordance with manufacturer's written instructions.

2.03 HIGH-BUILD AIR BARRIERS, VAPOR RETARDING

- A. High-Build, Vapor-Retarding Air Barrier, Modified Bituminous Type: Modified bituminous membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.
- B. High-Build, Vapor-Retarding Air Barrier, Synthetic Polymer Type: Synthetic polymer membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.
- C. Vapor Permeance: Maximum [0.1 perm] <Insert value>; ASTM E96/E96M, [Procedure A, Desiccant Method] [Procedure B, Water Method].

2.04 HIGH-BUILD AIR BARRIERS, VAPOR PERMEABLE

- A. High-Build, Vapor-Permeable Air Barrier, Modified Bituminous Type: Modified Bituminous membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.
- B. High-Build, Vapor-Permeable Air Barrier, Synthetic Polymer Type: Synthetic polymer membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.
- C. Vapor Permeance: Minimum [5 perms] <Insert value>; ASTM E96/E96M, [Procedure A, Desiccant Method] [Procedure B, Water Method].

2.05 MEDIUM-BUILD AIR BARRIERS, VAPOR RETARDING

- A. Medium-Build, Vapor-Retarding Air Barrier: Synthetic polymer material with an installed dry film thickness, according to manufacturer's written instructions, of 16 to 34 mils over smooth, void-free substrates.
 - 1. Vapor Permeance: Maximum [0.1 perm] <Insert value>; ASTM E96/E96M, [Procedure A, Desiccant Method] [Procedure B, Water Method].

2.06 MEDIUM-BUILD AIR BARRIERS, VAPOR PERMEABLE

- A. Medium-Build, Vapor-Permeable Air Barrier: Synthetic polymer material with an installed dry film thickness, according to manufacturer's written instructions, of 16 to 34 mils over smooth, void-free substrates.
 - 1. Vapor Permeance: Minimum [5 perms] <Insert value>; ASTM E96/E96M, [Procedure A, Desiccant Method] [Procedure B, Water Method].

2.07 ACCESSORY MATERIALS

- A. Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- B. Primer: Liquid [waterborne] [solvent-borne] primer recommended for substrate by air-barrier material manufacturer.
- C. Stainless Steel Sheet: ASTM A240/A240M, Type 304, [0.0187 inch] [0.0250 inch] <Insert dimension> thick, and Series 300 stainless steel fasteners.
- D. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.
 - 3. Verify that substrates are visibly dry and free of moisture. [Test concrete substrates for capillary moisture by plastic sheet method in accordance with ASTM D4263.]
 - 4. Verify that masonry joints are flush and completely filled with mortar.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION

- A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate in accordance with manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.
- H. Bridge [isolation joints] [expansion joints] [and] discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement in accordance with manufacturer's written instructions and details.

3.03 INSTALLATION OF ACCESSORIES

- A. Install accessory materials in accordance with air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
 - 3. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
 - 4. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.
- B. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- C. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.
- D. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- E. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply [transition strip] [preformed silicone extrusion] so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.
 - 1. Transition Strip: Roll firmly to enhance adhesion.
 - 2. Preformed Silicone Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
- F. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- G. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.
- H. Seal top of through-wall flashings to air barrier with an additional 6-inch-wide, transition strip.
- I. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

- J. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.04 INSTALLATION OF PRIMARY AIR-BARRIER MATERIAL

- A. Apply air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier in accordance with air-barrier manufacturer's written instructions and details. Apply air-barrier material within manufacturer's recommended application temperature ranges.
 - 1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
 - 2. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 3. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.
- B. High-Build Air Barriers: Apply continuous unbroken air-barrier material to substrates according to the following thickness. Apply air-barrier material in full contact around protrusions such as masonry ties.
 - 1. Vapor-Retarding, High-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements, but not less than 35 mils] [not less than 40 mils] [not less than 45 mils] <Insert dimension>, applied in [one coat] [two equal coats] [one or more equal coats].
 - 2. Vapor-Permeable, High-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements, but not less than 35 mils] <Insert dimension>, applied in [one coat] [two equal coats] [one or more equal coats].
- C. Medium-Build Air Barriers: Apply continuous unbroken air-barrier material to substrates according to the following thickness. Apply an increased thickness of air-barrier material in full contact around protrusions such as masonry ties.
 - 1. Vapor-Retarding, Medium-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements] [not less than 16 mils] [not less than 34 mils] <Insert dimension>, applied in [one coat] [two equal coats] [one or more equal coats]. Apply additional material as needed to achieve void- and pinhole-free surface.
 - 2. Vapor-Permeable, Medium-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements] <Insert dimension>, applied in [one coat] [two equal coats] [one or more equal coats]. Apply additional material as needed to achieve void- and pinhole-free surface, but do not exceed thickness on which required vapor permeability is based.
- D. Low-Build Air Barriers: Apply continuous unbroken air-barrier material to substrates according to the following thickness. Apply an increased thickness of air-barrier material in full contact around protrusions such as masonry ties.
 - 1. Vapor-Retarding, Low-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements] [not less than 15 mils] [not less than 6 mils] <Insert dimension>, applied in [one coat] [two equal coats] [one or more equal coats]. Apply additional material as needed to achieve void- and pinhole-free surface.

2. Vapor-Permeable, Low-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements] <Insert dimension>, applied in [one coat] [two equal coats] [one or more equal coats]. Apply additional material as needed to achieve void- and pinhole-free surface, but do not exceed thickness on which required vapor permeability is based.

- E. Do not cover air barrier until it has been tested and inspected by testing agency.
- F. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.05 FIELD QUALITY CONTROL

- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
- B. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to perform tests and inspections.
- C. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. [Inspections may include the following:]
 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 2. Air-barrier dry film thickness.
 3. Continuous structural support of air-barrier system has been provided.
 4. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 5. Site conditions for application temperature and dryness of substrates have been maintained.
 6. Maximum exposure time of materials to UV deterioration has not been exceeded.
 7. Surfaces have been primed, if applicable.
 8. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 9. Termination mastic has been applied on cut edges.
 10. Strips and transition strips have been firmly adhered to substrate.
 11. Compatible materials have been used.
 12. Transitions at changes in direction and structural support at gaps have been provided.
 13. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 14. All penetrations have been sealed.
- D. Tests: As determined by testing agency from among the following tests:
 1. Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage in accordance with [ASTM E1186, chamber pressurization or depressurization with smoke tracers] [ASTM E1186, chamber depressurization using detection liquids] <Insert requirement>.

2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with [ASTM E783] [or] [ASTM E2357].
 3. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate in accordance with ASTM D4541 for each [600 sq. ft.] <Insert value> of installed air barrier or part thereof.
- E. Air barriers will be considered defective if they do not pass tests and inspections.
1. Apply additional air-barrier material, in accordance with manufacturer's written instructions, where inspection results indicate insufficient thickness.
 2. Remove and replace deficient air-barrier components for retesting as specified above.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Prepare test and inspection reports.

3.06 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, in accordance with manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials in accordance with air-barrier manufacturer's written instructions.
 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.
- C. Remove masking materials after installation.

SECTION 07 32 13

CLAY ROOF TILES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Clay roof tiles.
2. Underlayment materials.
3. Ridge vents.
4. Metal flashing and trim.

B. Related Requirements:

1. Section 07 72 53 "Snow Guards" for snow guards.

1.02 ALLOWANCES

- A. See Section 01 21 00 "Allowances" for description of allowances affecting items specified under this Section.

1.03 UNIT PRICES

- A. See Section 01 22 00 "Unit Prices" for description of unit prices affecting items specified under this Section.

1.04 ALTERNATES

- A. See Section 01 23 00 "Alternates" for description of alternates affecting items specified under this Section.

1.05 DEFINITIONS

- A. Roofing Terminology: See ASTM D1079 and glossary in TRI/WSRCA's "Concrete and Clay Roof Tile Installation Manual" for definitions of terms related to roofing Work in this Section.

1.06 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.
 1. <Insert participant requirements>.

1.07 ACTION SUBMITTALS

A. Product Data:

1. Clay roof tiles.
2. Underlayment materials.
3. Ridge vents.

4. Metal flashing and trim.
- B. Shop Drawings: For metal flashing and trim.
 - C. Samples: For each exposed product and for each color and texture specified, in sizes indicated.
 1. Clay Roof Tiles: Full size, showing full range of color values and blends.
 2. Accessory Tiles: Full size, each type.
 3. Metal Flashing: 12 inches square.
 4. Ridge Vents: 12-inch-long Sample.
 5. Eave Closures: In manufacturer's standard size.
 - D. Samples for Initial Selection: For each type of clay roof tile and accessory tile.
 1. Include Samples of accessories involving color selection.
 - E. Samples for Verification: For the following products, in sizes indicated:
 1. Clay Roof Tiles: Full size, showing full range of color values and blends.
 2. Accessory Tiles: Full size, each type.
 3. Metal Flashing: 12 inches square.
 4. Ridge Vents: 12-inch-long Sample.
 5. Eave Closures: In manufacturer's standard size.
- 1.08 INFORMATIONAL SUBMITTALS
- A. Material Test Reports: For each type of clay roof tile, based on evaluation of comprehensive tests performed by a qualified testing agency.
 - B. Research Reports: From [an agency acceptable to authorities having jurisdiction] [ICC-ES] <Insert evaluation agency>, indicating that product is suitable for intended use under applicable building codes for the following:
 1. [Mortar] [Adhesive] tile-attachment systems.
 2. Wire-tie tile-attachment systems.
 3. Polymer-modified bitumen sheet underlayment.
 4. Synthetic underlayment.
 - C. Sample Warranty: For manufacturer's materials warranty.
- 1.09 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For roofing to include in maintenance manuals.
 - B. Materials warranties.
 - C. Roofing Installer's warranty.
- 1.10 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Clay Roof Tiles: [100 sq. ft.] <Insert area> of each type, in unbroken bundles.
- 1.11 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups for clay roof tiles including related roofing materials.
 - a. Size: **[48 inches long by 48 inches wide]** <Insert dimensions>.
 - b. Include gutter and downspout complying with requirements in **[Section 07 62 00 "Sheet Metal Flashing and Trim.]"** **[Section 07 71 00 "Roof Specialties.]"**
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Store underlayment rolls in a dry, well-ventilated location protected from weather, sunlight, and moisture in accordance with manufacturer's written instructions.
 - 1. Store on end, on pallets or other raised surfaces. Do not double-stack rolls.
- B. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing Work is not in progress.
- C. Handle, store, and place roofing materials in a manner to prevent damage to roof deck or structural supporting members.

1.13 FIELD CONDITIONS

- A. Environmental Limitations: Proceed with installation only when existing and forecasted weather conditions permit product installation and related Work to be performed in accordance with manufacturer's written instructions and warranty requirements.
 - 1. Install self-adhering, polymer-modified bitumen sheet underlayment within the range of ambient and substrate temperatures recommended in writing by manufacturer.

1.14 WARRANTY

- A. Materials Warranty: Manufacturer agrees to repair or replace clay roof tiles that fail in materials within specified warranty period.
 - 1. Warranty Period: **[50]** **<Insert number>** years from date of Substantial Completion.
- B. Roofing Installer's Warranty: On warranty form at end of this Section, signed by Installer, in which Installer agrees to repair or replace components of clay-tile roofing that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: **[Two]** **[Five]** **<Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain each type of product from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Exterior Fire-Test Exposure: Provide clay roof tiles and related roofing materials identical to those of assemblies tested for Class A fire resistance in accordance with ASTM E108 or UL 790 by Underwriters Laboratories or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
- B. Energy Performance, Energy Star: Provide roof tiles that are listed on the DOE's "Energy Star Roof Product List" for steep-slope roof products.

2.03 CLAY ROOF TILES

- A. Clay Roof Tiles: ASTM C1167, molded- or extruded-clay roof tile units of shape and configuration indicated, kiln fired, and free of surface imperfections. Provide with fastening holes pre-punched at factory before firing. Shape and style of tiles to match current Campus Specification Standards.
 - 1. Durability: [Grade 1] [Grade 2] [Grade 3].
 - 2. High-Profile Shape: Type I, [Spanish or "S"] [two-piece tapered mission] [two-piece straight mission] [two-piece straight barrel mission] [two-piece Greek] [two-piece Roman] <Insert shape>.
 - a. Accessory Tiles: [Ridge] [ridge vent] [ridge end] [hip and hip starter] [header course] [L-shaped rake edge] [roll rake edge] [starter] [end band] [terminal] [eave closure] [and] [top fixture] <Insert accessory> units.
 - 3. Low-Profile Shape: Type II, [French interlocking] <Insert shape>.
 - a. Accessory Tiles: [Ridge] [ridge vent] [ridge end] [hip and hip starter] [header course] [L-shaped rake edge] [roll rake edge] [starter] [end band] [terminal] [eave closure] [and] [top fixture] <Insert accessory> units.
 - 4. Flat Shape: Type III, [flat shingle] [flat interlocking] <Insert shape>.
 - a. Accessory Tiles: [Ridge and closed ridge end] [hip and hip starter] [header course] [L-shaped rake edge] [starter] [end band] [and] [terminal] <Insert accessory> units.
 - 5. Size: <Insert length and width dimensions>.
 - a. Provide clay roof tiles of diminishing widths for circular bays or round towers.
 - 6. Finish and Texture: [Matte, smooth] [Matte, striated] [Glazed, smooth] <Insert finish and texture>.
 - 7. Color: [Terra cotta] [Brown] [Red] [Blended red] [Buff] <Insert description>.

2.04 UNDERLAYMENT MATERIALS

- A. Felt: [ASTM D226/D226M Type II, asphalt saturated] [ASTM D4869/D4869M Type IV, asphalt saturated] [ASTM D2626/D2626M, asphalt saturated and coated, mineral-granule surfaced on weather (top) side], unperforated.
- B. Asphalt Roll-Roofing: ASTM D6380/D6380M, Class M, Type II, asphalt-saturated and -coated organic felt; mineral-granule surfaced on weather (top) side.
- C. Synthetic Underlayment: UV-resistant polypropylene, polyolefin, or polyethylene polymer fabric with surface coatings or treatments to improve traction underfoot and abrasion resistance; recommended, in writing, by manufacturer for use under roof tile; and evaluated and documented to be suitable for use as a roof underlayment under applicable codes by a testing and inspecting agency acceptable to authorities having jurisdiction.
- D. Polymer-Modified Bitumen Sheet: Styrene-butadiene-styrene- (SBS) modified asphalt, glass-fiber-mat-reinforced sheet; minimum [55-mil] [40-mil] <Insert dimension> nominal thickness; recommended in writing by manufacturer and acceptable to authorities having jurisdiction for use as underlayment in tile steep-slope roofing systems; and designed for mechanical fastening or adhesive attachment using roofing asphalt or cold-applied adhesive.
 - 1. <Insert testing requirements>.
- E. Self-Adhering, Polymer-Modified Bitumen Sheet: ASTM D1970/D1970M, minimum [55-mil-] [50-mil-] [40-mil-] <Insert dimension> thick sheet; glass-fiber-mat-reinforced, polymer-modified asphalt; with slip-resistant top surface and release backing; cold applied; and recommended in writing by manufacturer for use in tile roofing system required. [Provide primer for adjoining concrete, masonry, and metal surfaces to receive underlayment.]
 - 1. Top Surface: [Sand] [Granule] [Textured polymer film] [Polyester].
- F. Self-Adhering, Polymer-Modified Bitumen Sheet, High Temperature: ASTM D1970/D1970M, minimum [55-mil-] [50-mil-] [40-mil-] <Insert thickness> thick sheet; glass-fiber-mat-reinforced, polymer-modified asphalt; with slip-resistant top surface and release backing; cold applied; and recommended in writing by manufacturer for use in tile roofing system required. [Provide primer for adjoining concrete, masonry, and metal surfaces to receive underlayment.]
 - 1. Thermal Stability: Stable after testing at 240 deg F in accordance with ASTM D1970/D1970M.
 - 2. Top Surface: [Granule] [Textured polymer film] [Polyester].

2.05 RIDGE VENTS

- A. Rigid-Plastic Ridge Vent: Manufacturer's standard, rigid section high-density polypropylene or other UV-stabilized plastic ridge vent for use under ridge tiles.
 - 1. Minimum Net Free Area: <Insert area>.
 - 2. Width: <Insert dimension>.
 - 3. Thickness: <Insert dimension>.
- B. Flexible Ridge Vent: Manufacturer's standard roll-form ridge vent that protects against driven rain and snow and is recommended in writing by manufacturer for installation with roof tile indicated.

1. Width: <Insert dimension>.
2. Features: [Butyl adhesive strips at sides] [Corrugated aluminum strips at sides].

2.06 ACCESSORIES

- A. Asphalt Roofing Cement: ASTM D4586/D4586M Type II, asbestos free.
- B. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied.
- C. Elastomeric Sealant: ASTM C920, Type S, Grade NS, one-part, non-sag, elastomeric polymer sealant of class and use classifications required to seal joints in clay-tile roofing and remain watertight; recommended in writing by manufacturer for applications indicated.
- D. Roofing Asphalt: ASTM D312/D312M Type IV.
- E. Cold-Applied Adhesive: Manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with underlayments.
- F. Mortar: ASTM C270, Type M, [natural color] [with ASTM C979/C979M, pigmented mortar matching the color of clay roof tiles for exposed-to-view mortar, and natural color for concealed-from-view mortar].
- G. Foam Adhesive: Two-component, polyurethane expanding adhesive recommended in writing for application by clay-roof-tile manufacturer.
- H. Eave Closure: Manufacturer's standard [EPDM] [copper] [stainless steel] [galvanized-steel] [aluminum, mill finish] <Insert material> eave closure formed to shape of clay roof tiles.
- I. Wood Nailers: Comply with requirements for pressure-preservative-treated wood in Section 06 10 53 " Miscellaneous Rough Carpentry."
- J. Mesh Fabric: 18-by-14 mesh of PVC-coated, glass-fiber thread.

2.07 FASTENERS

- A. Roofing Nails: ASTM F1667, hot-dip galvanized-steel, 0.120-inch diameter shank, sharp-pointed, conventional roofing nails with barbed shanks; minimum 3/8-inch-diameter head; of sufficient length to penetrate 3/4 inch into substrate or extend at least 1/8 inch through thickness of the sheathing, whichever is less.
 1. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
- B. Underlayment Nails: Aluminum, stainless steel, or hot-dip galvanized-steel wire nails with low-profile metal or plastic caps, 1-inch-minimum diameter.
 1. Provide with minimum 0.0134-inch-thick metal cap, 0.010-inch-thick power-driven metal cap, or 0.035-inch-thick plastic cap; and with minimum 0.083-inch-thick ring shank or 0.091-inch-thick smooth shank of length to penetrate at least 3/4 inch into roof sheathing or to penetrate through roof sheathing less than 3/4 inch thick.

- C. Nails for Wood Nailers: ASTM F1667; hot-dip galvanized-steel, common or box, steel wire, flat head, and smooth shank.
- D. Wire Ties: [Copper] [Brass] [Stainless steel], 0.083-inch-minimum diameter.
- E. Twisted-Wire-Tie System: Continuously twisted, two-wire unit with loops formed 6 inches apart, minimum [0.101-inch-diameter copper wire and 0.064-inch-diameter copper tie wires] [0.090-inch-diameter stainless steel wire and 0.063-inch-diameter stainless steel tie wires] [0.105-inch-diameter galvanized-steel wire and 0.063-inch-diameter galvanized-steel tie wires] <Insert requirements>, with matching-metal folding clip anchors.
- F. Single-Line, Wire-Tie System: Interconnecting eave-to-ridge system, minimum [0.101-inch-diameter copper] [0.090-inch-diameter stainless steel] [0.105-inch-diameter galvanized-steel] <Insert requirements> wire, preformed to accommodate clay roof tile type and application indicated.
- G. Hook Nails: One-piece wind lock and clay-roof-tile fastener system, minimum [0.135-inch-diameter brass] [0.135-inch-diameter copper] [0.120-inch-diameter stainless steel] [0.120-inch-diameter galvanized-steel] <Insert requirements> wire, for direct deck nailing.
- H. Tile Locks: [Brass] [Copper] [Stainless steel] [Hot-dip galvanized-steel], nominal 0.1-inch-diameter wire device designed to secure butt edges of overlaid clay roof tiles.
- I. Storm Clips: [Brass, minimum 0.048-by-1/2-inch] [Stainless steel, minimum 0.048-by-1/2-inch] [Hot-dip galvanized-steel, minimum 0.048-by-1/2-inch] <Insert requirements> strap-type, L-shaped retainer clips designed to secure side edges of clay roof tiles. Provide with two fastener holes in base flange.

2.08 METAL FLASHING AND TRIM

- A. General: Comply with requirements in Section 07 62 00 "Sheet Metal Flashing and Trim."
 - 1. Sheet Metal: [Copper] [Stainless steel] [Zinc-tin alloy coated copper] [Anodized aluminum] [Aluminum, mill finished] <Insert requirements>.
- B. Fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for design, dimensions, metal, and other characteristics of the item unless otherwise specified in this Section or indicated on Drawings.
 - 1. Apron Flashings: Fabricate with lower flange extending a minimum of [4 inches] [6 inches] <Insert dimension> over and [4 inches] <Insert dimension> beyond each side of downslope tile roofing and [6 inches] <Insert dimension> up the vertical surface.
 - 2. Step Flashings: Fabricate with a headlap of 4 inches and a minimum extension of [4 inches] [5 inches] <Insert dimension> both horizontally and vertically.
 - 3. Channel Flashings: Fabricate with vertical surface extending a minimum of [4 inches] [5 inches] <Insert dimension> above the clay roof tile and [4 inches] [6 inches] <Insert dimension> beneath the tile roofing, with a [1-inch-] <Insert dimension> high vertical return to form a runoff channel.

4. Rake Pan Flashings: Fabricate with vertical surface extending over fasciae and **[6 inches]** **<Insert dimension>** beneath the tile roofing, with a **[1-inch-]** **<Insert dimension>** high vertical return to form a runoff channel.
 5. Cricket and Backer Flashings: Fabricate with concealed flange extending a minimum of **[24 inches]** **<Insert dimension>** beneath upslope tile roofing, **[6 inches]** **<Insert dimension>** beyond each side of **[chimney]** **[skylight]**, and **[6 inches]** **<Insert dimension>** above the roof plane.
 6. Counterflashings: Fabricate to cover **[4 inches]** **<Insert dimension>** of base flashing measured vertically; and in lengths required so that no step exceeds **[8 inches]** **<Insert dimension>** and overall length is no more than **[10 feet]** **<Insert dimension>**.
 - a. Provide metal **[reglets]** **[receivers]** for installation.
 7. Valley Flashings: Fabricate from metal sheet not less than **[24 inches]** **<Insert dimension>** wide in lengths not exceeding **[10 feet]** **<Insert dimension>**, with **[1-inch-]** **<Insert dimension>** high, inverted-V profile water diverter at center of valley and equal flange widths of not less than **[11 inches]** **<Insert dimension>**.
 - a. Hem flange edges for fastening with metal cleats.
 8. Drip Edges: Fabricate in lengths not exceeding **[10 feet]** **<Insert dimension>**, with minimum 2-inch roof-deck flange and 1-1/2-inch fascia flange with 3/8-inch drip at lower edge.
- C. Sheet Metal Ridge Vent: Fabricate from 16-oz./sq. ft.- thick copper sheet, terminating each side in V-shaped external baffles with venting holes producing net free ventilation area of 2.65 sq. in./ft..
- D. Vent-Pipe Flashings: ASTM B749, Type L51121, at least 1/16 inch thick. Provide lead sleeve sized to slip over and turn down into pipe, soldered to skirt at slope of roof and extending at least 4 inches from pipe onto roof.
- E. **<Insert snow-guard requirements>**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking or metal clips and that installation is within flatness tolerances.
 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and completely anchored and that provisions have been made for flashings and penetrations through roofing.
 3. Verify that vent stacks and other penetrations through roofing are installed and securely fastened.

- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF CLAY ROOF TILES

- A. Install clay roof tiles in accordance with manufacturer's written instructions and recommendations in TRI/WSRCA's "Concrete and Clay Roof Tile Installation Manual" and NRCA's "The NRCA Roofing Manual: Steep-Slope Roof Systems" unless more stringent requirements are specified in this Section or indicated on Drawings.
 - 1. Install to resist wind forces resulting from design wind speeds indicated on Drawings.
 - 2. Maintain uniform exposure and coursing of clay roof tiles throughout roof.
 - 3. Extend tiles 2 inches over eave fasciae.
 - 4. Nail Fastening: Drive nails to clear the clay roof tile so the tile hangs from the nail and is not drawn up.
 - a. Install wire through nail holes of cut tiles that cannot be nailed directly to roof deck, and fasten to nails driven into deck.
 - 5. Wire-Tie Fastening: Install wire-tie systems and fasten clay roof tiles in accordance with manufacturer's written instructions.
 - 6. Mortar Setting: Install clay roof tiles in accordance with manufacturer's written instructions and acceptance criteria of authorities having jurisdiction.
 - 7. Foam-Adhesive Setting: Install clay roof tiles in accordance with adhesive and tile manufacturers' written instructions and acceptance criteria of authorities having jurisdiction.
 - 8. Storm Clips: Install to capture edges of longitudinal sides of clay roof tiles and securely fasten to roof deck.
 - 9. Tile Locks: Install to support and lock overlying tile butts to underlying tiles.
 - 10. Cut and fit clay roof tiles neatly around roof vents, pipes, ventilators, and other projections through roof. Fill voids with mortar.
 - 11. Install clay roof tiles with color blend approved by Architect.
- B. Flat-Shingle Clay-Roof-Tile Installation:
 - 1. Maintain 2-inch headlap between succeeding courses of clay roof tiles.
 - 2. Offset joints by half the clay-roof-tile width in succeeding courses.
 - 3. Extend clay roof tiles 1 inch over fasciae at rakes.
 - 4. Install ridge tiles in **[V-ridge] [saddle] [mitered]** configuration with laps facing away from prevailing wind. Seal laps with **[asphalt roofing cement] [butyl sealant] [elastomeric sealant]**.
 - a. Close voids where ridge tiles meet clay roof tiles with **[ridge closure] [mortar struck with face of ridge cover]** tiles.
 - 5. Install hip tiles in **[V-ridge] [saddle] [mitered]** configuration. Seal laps with **[asphalt roofing cement] [butyl sealant] [elastomeric sealant]**.
 - a. Fill voids with mortar where hip tiles meet clay roof tiles, and strike mortar flush with face of hip cover tiles.

C. Flat Interlocking Clay-Roof-Tile Installation:

1. Provide minimum 3-inch lap between succeeding courses of clay roof tiles.
2. Offset joints by half the clay-roof-tile width in succeeding courses.
3. Install L-shaped rake tiles.
4. Install ridge tiles in **[V-ridge] [saddle] [mitered]** configuration with laps facing away from prevailing wind. Seal laps with **[asphalt roofing cement] [butyl sealant] [elastomeric sealant]**.
 - a. Close voids where ridge tiles meet clay roof tiles with **[ridge closure] [mortar struck with face of ridge cover]** tiles.
5. Install hip tiles in **[V-ridge] [saddle] [mitered]** configuration. Seal laps with **[asphalt roofing cement] [butyl sealant] [elastomeric sealant]**.
 - a. Fill voids with mortar where hip tiles meet clay roof tiles, and strike mortar flush with face of hip cover tiles.

D. Low-Profile, Interlocking Clay-Roof-Tile Installation:

1. Provide minimum 3-inch lap between succeeding courses of clay roof tiles.
2. Install rake tiles indicated.
3. Install ridge tiles with laps facing away from prevailing wind. Seal laps with **[asphalt roofing cement] [butyl sealant] [elastomeric sealant]**.

E. High-Profile Clay-Roof-Tile Installation:

1. Install **[tile] [sheet metal] [EPDM]** eave closure.
2. Provide minimum 3-inch lap between succeeding courses of clay roof tiles.
3. Install rake tiles indicated.
4. Install ridge tiles with laps facing away from prevailing wind. Seal laps with **[asphalt roofing cement] [butyl sealant] [elastomeric sealant]**.

F. Open Valleys: Cut clay roof tiles at open valleys to form straight lines. **[Maintain uniform width of exposed open valley] [Widen exposed portion of open valley 1/8 inch in 12 inches]** from highest to lowest point.

1. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
2. Do not nail tiles to metal flashings.

G. Closed Valleys: Cut clay roof tiles at closed valleys to form straight lines, trimming upper concealed corners of tiles. Maintain uniform gap of **[1/2 to 3/4 inch] [3/4 to 1 inch]** <Insert dimension> on either side of water diverter at valley centerline.

1. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
2. Do not nail tiles to metal flashings.

H. Remove and replace damaged or broken clay roof tiles.

3.03 INSTALLATION OF UNDERLAYMENT MATERIALS

- A. Comply with clay-roof-tile and underlayment manufacturers' written installation instructions and with recommendations in NRCA's "The NRCA Roofing Manual: Steep-Slope Roof Systems" applicable to products and applications indicated unless more stringent requirements are specified in this Section or indicated on Drawings.
1. Cover **[ridge]** **[hip]** wood nailers with underlayment strips.
- B. Felt: Install parallel with and starting at eaves and fasten with underlayment nails.
1. Single-Layer Installation: Install on roof deck.
 - a. Lap sides a minimum of **[2 inches]** **[4 inches]** over underlying course.
 - b. Lap ends a minimum of 4 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 2. Top-Layer Installation: Install as second layer over anchor-layer underlayment, with side laps offset halfway between side laps of underlying anchor layer.
 - a. Lap sides a minimum of **[2 inches]** **[4 inches]** over underlying course.
 - b. Lap ends a minimum of 4 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 3. Double-Layer Installation: Install on roof deck.
 - a. Install a 19-inch-wide starter course at eaves and completely cover with a 36-inch-wide second course.
 - b. Install succeeding 36-inch-wide courses lapping previous courses 19 inches in shingle fashion.
 - c. Lap ends a minimum of 6 inches.
 - d. Stagger end laps between succeeding courses at least 72 inches.
 - e. Apply a continuous layer of asphalt roofing cement over starter course and on felt surface to be concealed by succeeding courses as each felt course is installed. Apply **[over entire roof]** **[at locations indicated on Drawings]**.
 4. Install fasteners in a grid pattern of 12 inches between side laps with 6-inch spacing at side and end laps.
 5. Install felt over areas protected by self-adhering, polymer-modified bitumen sheet.
 6. Terminate felt **[flush]** **[extended up not less than 4 inches]** **<Insert requirements>** against sidewalls, curbs, chimneys, and other roof projections.
- C. Asphalt Roll-Roofing: Install parallel with and starting at eaves.
1. Single-Layer Installation: Install on roof deck.
 - a. Lap sides a minimum of **[2 inches]** **[4 inches]** over underlying course.
 - b. Lap ends a minimum of 4 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 - d. Fasten with underlayment nails.
 2. Top-Layer Installation: Install as second layer over anchor-layer underlayment, with side laps offset halfway between side laps of underlying anchor layer.
 - a. Lap sides a minimum of **[2 inches]** **[4 inches]** over underlying course.

- b. Lap ends a minimum of 4 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 - d. **[Fasten with underlayment nails] [Adhere to anchor layer in solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature] [Adhere to anchor layer in uniform coating of cold-applied adhesive] [Adhere to anchor layer in uniform coating of asphalt roofing cement].**
3. Double-Layer Installation: Install on roof deck.
- a. Install a 19-inch-wide starter course at eaves and completely cover with a 36-inch-wide second course.
 - b. Install succeeding 36-inch-wide courses lapping previous courses 19 inches in shingle fashion.
 - c. Lap ends a minimum of 6 inches.
 - d. Stagger end laps between succeeding courses at least 72 inches.
 - e. Fasten with underlayment nails.
 - f. Apply a continuous layer of asphalt roofing cement over starter course and on roll-roofing surface to be concealed by succeeding courses as each roll-roofing course is installed. Apply **[over entire roof] [at locations indicated on Drawings].**
4. Install fasteners in a grid pattern of 12 inches between side laps with 6-inch spacing at side and end laps.
5. Install roll roofing over areas protected by self-adhering, polymer-modified bitumen sheet.
6. Terminate roll roofing **[flush] [extended up not less than 4 inches] <Insert requirements>** against sidewalls, curbs, chimneys, and other roof projections.
- D. Synthetic-Underlayment Top Layer: Install in accordance with manufacturer's written installation instructions and as second layer over anchor-layer underlayment.
1. Completely cover anchor-layer underlayment and install parallel with and starting at the eaves, with side laps offset halfway between side laps of underlying anchor layer.
 2. Lap sides and ends as recommended in writing by manufacturer, but not less than **[2 inches] [4 inches]** for side laps and 6 inches for end laps.
 3. Stagger end laps from anchor-layer end laps and between succeeding top courses at interval recommended in writing by manufacturer, but not less than 72 inches.
 4. Fasten with underlayment nails.
 5. Install fasteners in a grid pattern of 12 inches between side laps with 6-inch spacing at side and end laps.
- E. Polymer-Modified Bitumen Sheet: Install parallel with and starting at eaves.
1. Single- or Anchor-Layer Installation: Install on roof deck.
 - a. Lap sides a minimum of **[2 inches] [4 inches]** over underlying course.
 - b. Lap ends a minimum of 6 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 - d. Fasten with underlayment nails.
 2. Top-Layer Installation: Install as a second layer over anchor-layer underlayment, with side laps offset halfway between side laps of underlying anchor layer.

- a. Lap sides a minimum of **[2 inches] [4 inches]**.
 - b. Lap ends a minimum of 6 inches.
 - c. Stagger end laps from anchor-layer end laps and between succeeding top-layer courses at least 72 inches.
 - d. **[Fasten with underlayment nails] [Adhere to anchor layer in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature] [Adhere to anchor layer in uniform coating of cold-applied adhesive].**
3. Double-Layer Installation: Install on roof deck in overlapping layers with a half-width plus 1-inch-wide starter course at eaves completely covered by full-width second course.
 - a. Install succeeding courses lapping previous courses by a half-width plus 1 inch in shingle fashion.
 - b. Lap ends a minimum of 6 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 - d. Fasten with underlayment nails.
 4. Install fasteners in a grid pattern of 12 inches between side laps with 6-inch spacing at side and end laps.
 5. Install sheets over areas protected by self-adhering, polymer-modified bitumen sheet.
 6. Terminate sheets **[flush] [extended up not less than 4 inches] <Insert requirements>** against sidewalls, curbs, chimneys, and other roof projections.
- F. Self-Adhering, Polymer-Modified Bitumen Sheet: Install, wrinkle free.
1. Comply with low-temperature installation restrictions of underlayment manufacturer.
 2. Install lapped in direction that sheds water.
 3. Lap sides not less than 4 inches.
 4. Lap ends not less than 6 inches, staggered 24 inches between succeeding courses.
 5. Roll laps with roller.
 6. Prime concrete, masonry, and metal surfaces to receive self-adhering, polymer-modified bitumen sheet.
 7. Single-Layer Installation: Install over entire roof deck.
 8. Top-Layer Installation: Install as second layer over anchor-layer underlayment.
 - a. Completely cover anchor-layer underlayment.
 - b. Offset side laps halfway between side laps of underlying anchor layer and offset end laps from those of underlying anchor layer at least 72 inches.
 9. Water and Ice-Dam Protection Installation: Install on roof deck where indicated **[below] [on Drawings]**.
 - a. Eaves: Extend from edges of eaves **[24 inches] [36 inches] <Insert dimension>** beyond interior face of exterior wall.
 - b. Rakes: Extend from edges of rakes **[24 inches] [36 inches] <Insert dimension>** beyond interior face of exterior wall.
 - c. Valleys: Extend from lowest to highest point **[18 inches] <Insert dimension>** on each side of centerline.
 - d. Hips: Extend **[18 inches] <Insert dimension>** on each side.

- e. Ridges: Extend **[36 inches]** <Insert dimension> on each side [without obstructing continuous ridge vent slot].
 - f. Sidewalls: Extend **[18 inches]** <Insert dimension> beyond sidewalls and return vertically against sidewalls not less than **[4 inches]** <Insert dimension>.
 - g. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend **[18 inches]** <Insert dimension> beyond penetrating elements and return vertically against penetrating elements not less than **[4 inches]** <Insert dimension>.
 - h. Roof-Slope Transitions: Extend **[18 inches]** <Insert dimension> on each roof slope.
10. Cover underlayment within seven days.
- G. Valley Underlayment: Install one layer of 36-inch-wide underlayment centered in valley, running full length of valley, and on top of underlayment on field of roof that is woven through valley. Install all layers of underlayment in and through valley tight with no bridging.
- 1. Use [same underlayment as installed on field of roof] <Insert requirements>.
 - 2. Lap ends at least 12 inches in direction that sheds water, and seal with asphalt roofing cement.
 - 3. Fasten to roof deck with underlayment nails located as far from valley center as possible and only to extent necessary to hold underlayment in place until installation of valley flashing.
 - 4. Solidly cement valley underlayment to roof-field underlayment that is woven through valley using asphalt roofing cement.

3.04 INSTALLATION OF RIDGE VENTS

- A. Rigid-Plastic Ridge Vents: Install continuous ridge vents over clay roof tiles in accordance with manufacturer's written instructions. Fasten with nails of sufficient length to penetrate substrate.
- B. Flexible Ridge Vent: Install continuous-roll ridge vents over clay roof tiles in accordance with manufacturer's written instructions.

3.05 INSTALLATION OF METAL FLASHING AND TRIM

- A. Install metal flashings and other sheet metal to comply with requirements in Section 07 62 00 "Sheet Metal Flashing and Trim."
 - 1. Install in accordance with clay-roof-tile manufacturer's written instructions and recommendations in NRCA's "The NRCA Roofing Manual: Steep-Slope Roof Systems."
- B. Apron Flashings: Extend lower flange over and beyond each side of downslope tile roofing and up the vertical surface.
- C. Step Flashings: Install with a headlap of 4 inches and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying tile. Fasten to roof deck only.
- D. Cricket and Backer Flashings: Install against roof-penetrating elements, extending concealed flange beneath upslope tile roofing and beyond each side.
- E. Channel Flashings: Install over underlayment materials and fasten to roof deck.
- F. Rake Pan Flashings: Install over underlayment materials and fasten to roof deck.

- G. Counterflashings: Coordinate with installation of base flashing and fit tightly to base flashing. Lap joints a minimum of 4 inches secured in a waterproof manner.
1. Install in reglets or receivers.
- H. Valley Flashings: Install centered in valleys, lapping ends at least [8 inches] <Insert dimension> in direction that sheds water. Fasten upper end of each length to roof deck beneath overlap.
1. Secure hemmed flange edges into metal cleats spaced [12 inches] [24 inches] <Insert dimension> apart and fastened to roof deck.
 2. Adhere minimum [9-inch-] <Insert dimension> wide strips of self-adhering, polymer-modified bitumen sheet to metal flanges and to [underlying self-adhering, polymer-modified bitumen sheet] <Insert requirements>. Place strips parallel to and over flanges so that they will be just concealed by installed tile.
 3. Provide a closure at the end of the inverted-V profile of the valley metal to minimize water and ice infiltration.
- I. Rake Drip Edges: Install over underlayment materials and fasten to roof deck.
- J. Eave Drip Edges: Install below underlayment materials and fasten to roof deck.
- K. Sheet Metal Ridge Vents: Install centered on and mechanically fasten to wood ridge. Adhere each side to clay roof tile with elastomeric sealant.
1. Install fabric mesh over roof-deck air ventilation gaps to prevent insect entry.
- L. Pipe Flashings: Form flashing around pipe penetrations and tile roofing. Fasten and seal to tile roofing.

3.06 INSTALLATION OF WOOD NAILERS

- A. Install wood nailers securely fastened to roof deck at the following locations:
1. Hips.
 2. Ridges.
 3. Rakes.
- B. Install beveled wood-cant nailers at eaves and securely fasten to roof deck.
- C. Install nominal 1-by-2-inch wood-batten nailers horizontally [over 1/2-inch-high, pressure-preservative-treated wood lath strips] [in 48-inch lengths with ends separated by 1/2 inch], at spacing required by clay-roof-tile manufacturer, and securely fasten to roof deck.
1. Install nominal 1-by-2-inch wood counter battens vertically spaced [24 inches] <Insert dimension> apart and securely fasten to roof deck.

3.07 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("the work") on the following project:
1. Owner: <Insert name of Owner>.
 2. Owner Address: <Insert address>.
 3. Building Name/Type: <Insert information>.

4. Building Address: **<Insert address>**.
 5. Area of the Work: <Insert information>.
 6. Acceptance Date: **<Insert date>**.
 7. Warranty Period: **<Insert time>**.
 8. Expiration Date: **<Insert date>**.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant the work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that, during Warranty Period, Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of the work as are necessary to correct faulty and defective work and as are necessary to maintain the work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to the work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Peak gust wind speed exceeding **<Insert mph>**;
 - c. Fire;
 - d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. Faulty construction of copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. Vapor condensation on bottom of roofing; and
 - g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When the work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to the work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of the work.
 4. During Warranty Period, if Owner allows alteration of the work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of the alterations, but only to the extent the alterations affect the work covered by this Warranty. If Owner engages Roofing Installer to perform the alterations, Warranty shall not become null and void unless Roofing Installer, before starting the alterations, notified Owner in writing, showing reasonable cause for claim, that the alterations would likely damage or deteriorate the work, thereby reasonably justifying a limitation or termination of this Warranty.
 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a use or service more severe than originally specified, this Warranty shall become null and void on date of the change, but only to the extent the change affects the work covered by this Warranty.

6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect the work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on the work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of the work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.

1. Authorized Signature: <Insert signature>.
2. Name: <Insert name>.
3. Title: <Insert title>.

SECTION 07 41 13

STANDING-SEAM METAL ROOF PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes standing-seam metal roof panels.
- B. Related Sections:
 - 1. Section 07 42 93 "Soffit Panels" for metal panels used in horizontal soffit applications.
 - 2. Section 07 72 53 "Snow Guards" for prefabricated devices designed to hold snow on the roof surface, allowing it to melt and drain off slowly.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.
 - 1. Meet with Owner, Architect, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review structural loading limitations of **[deck] [purlins and rafters]** during and after roofing.
 - 6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
 - 7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
 - 8. Review temporary protection requirements for metal panel systems during and after installation.
 - 9. Review procedures for repair of metal panels damaged after installation.
- B. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.03 SUBMITTALS

- A. Product Data: For each type of product.
- B. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

1.04 SHOP DRAWINGS:

- A. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
- B. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches.
- C. Samples
 - 1. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.
 - 2. Include similar Samples of trim and accessories involving color selection.
 - 3. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 4. Metal Panels: 12 inches long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.
- D. Qualification Data: For Installer.
- E. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- F. Field quality-control reports.
- G. Sample Warranties: For special warranties.
- H. Closeout submittals:
 - 1. Maintenance Data: For metal panels to include in maintenance manuals.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
- D. Retain first subparagraph below for large-scale mockup. Indicate portion of roof represented by mockup on Drawings or draw mockup as separate element.

- E. Build mockup of typical roof area and eave [, **including fascia,**] [**and soffit**] as shown on Drawings; approximately [**48 inches**] [**12 feet**] <Insert dimension> square by full thickness, including attachments [, **underlayment,**] and accessories.
 - F. Build mockups for typical roof area only, including accessories.
 - G. Size: [**12 feet** long by **6 feet**] <Insert dimension>.
 - H. [**Each type of exposed seam and seam termination**] <Insert mockup item>.
 - I. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - J. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- 1.06 DELIVERY, STORAGE, AND HANDLING
- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
 - B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
 - C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- 1.07 FIELD CONDITIONS
- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.
- 1.08 COORDINATION
- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
 - B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.
- 1.09 WARRANTY
- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. Warranty Period: Two years from date of Substantial Completion.

- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.
- C. Special Weathertightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.
 - 1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for steep-slope roof products.
 - 1. Solar reflective index (SRI): Not less than 29 per ASTM E1980.
 - 2. Reflectance and Emissivity:
 - a. Solar Reflectance: Not less than 0.25 per ASTM test methods C1549 or E1918, or CRRC-1 Method #1.
 - 3. Thermal Emissivity: Not less than 0.75 per ASTM C1371.
- B. Energy Performance: Provide roof panels according to one of the following when tested according to CRRC-1:
 - 1. Three-year, aged solar reflectance of not less than and emissivity of not less than 0.75.
- C. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:
 - 1. Wind Loads: As indicated on Drawings.
 - 2. Other Design Loads: As indicated on Drawings.
 - 3. Deflection Limits: For wind loads, no greater than 1/240 of the span.
 - 4. Test-Pressure Difference: 6.24 lbf/sq. ft.
- D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 1646 at the following test-pressure difference:
 - 1. Test-Pressure Difference: 15.0 lbf/sq. ft.

- E. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E 2140.
- F. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
 - 1. Uplift Rating: UL 90.
- G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- H. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.
 - 1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.

2.02 STANDING-SEAM METAL ROOF PANELS

- A. Formed with integral ribs at panel edges and intermediate stiffening ribs symmetrically spaced between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and lapping and interconnecting side edges of adjacent panels.
 - 1. System based on AEP Span, a Division of ASC Profiles, Inc.; Preformed Metal Standing Seam Roofing – SpanSeam (SPS2216), or equal.
 - 2. Acceptable manufacturer's meeting these requirements are:
 - a. Berridge Manufacturing Company.
 - b. SLR Standing Seam Roof Panels by Morin, aa Kingspan Group Company.
 - c. Or equal.
 - 3.
 - 4. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: 0.022 inch.
 - 5. Clips: Two-piece floating to accommodate thermal movement.
 - a. Material: 0.028-inch- nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
 - 6. Panel Coverage: 16 inches.

7. Panel Height: 2.0 inches.
- B. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils thick, consisting of slip-resistant, polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.
 1. Thermal Stability: Stable after testing at 300 deg F; ASTM D 1970.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F; ASTM D 1970.
 3. System based on Grace Ultra by GCP Applied Technologies, or equal.
 - C. Slip Sheet: Manufacturer's recommended slip sheet, of type required for application.
 - D. Miscellaneous Metal Subframing and Furring: ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 coating designation or ASTM A 792/A 792M, Class AZ50 coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
 - E. Retain panel accessories, flashing, and trim as required and coordinate with those specified in Section 07 62 00 "Sheet Metal Flashing and Trim."
 - F. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch-thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
 - G. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
 - H. Panel Fasteners: Self-tapping screws designed to withstand design loads.
 - I. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.03 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 3. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 4. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.04 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
 - 1. DuraTech® 5000: Polyvinylidene Fluoride, full 70 percent Kynar 500® or Hylar 5000®, consisting of a baked-on 0.15-0.20 mil corrosion resistant primer and a baked-on 0.70-0.80 mil finish coat with a specular gloss of 8 to 15 when tested in accordance with ASTM D523 at 60 degrees with a dry film thickness of not less than 0.2 mil for primer and 0.8 mil for topcoat.
 - 2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
- B. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.
- C. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.
- D. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- E. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.03 UNDERLAYMENT INSTALLATION

- A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated on Drawings, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.
- B. Apply over the roof area indicated below:
1. Roof perimeter for a distance up from eaves of **[24 inches] [36 inches] <Insert dimension>** beyond interior wall line.
 2. Valleys, from lowest point to highest point, for a distance on each side of **[18 inches] <Insert dimension>**. Overlap ends of sheets not less than 6 inches.
 3. Rake edges for a distance of **[18 inches] <Insert dimension>**.
 4. Hips and ridges for a distance on each side of **[12 inches] <Insert dimension>**.
 5. Roof-to-wall intersections for a distance from wall of **[18 inches] <Insert dimension>**.
 6. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of **[18 inches] <Insert dimension>**.
- C. Felt Underlayment: Apply at locations indicated **[below] [on Drawings]**, in shingle fashion to shed water, and with lapped joints of not less than 2 inches.
1. Apply on roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering sheet underlayment not less than 3 inches, in shingle fashion to shed water.
- D. Slip Sheet: Apply slip sheet over underlayment before installing metal roof panels.
- E. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 07 62 00 "Sheet Metal Flashing and Trim."

3.04 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Shim or otherwise plumb substrates receiving metal panels.
 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 3. Install screw fasteners in predrilled holes.
 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 5. Install flashing and trim as metal panel work proceeds.

6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
- C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.
- D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- E. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
1. Install clips to supports with self-tapping fasteners.
 2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
 3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
 4. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.
 5. Watertight Installation:
 - a. Apply a continuous ribbon of sealant or tape to seal joints of metal panels, using sealant or tape as recommend in writing by manufacturer as needed to make panels watertight.
 - b. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 - c. At panel splices, nest panels with minimum 6-inch end lap, sealed with sealant and fastened together by interlocking clamping plates.
 6. Clipless Metal Panel Installation: Fasten metal panels to supports with screw fasteners at each lapped joint at location and spacing recommended by manufacturer.
 7. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
 - a. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.

- F. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).
- G. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 36 inches o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- H. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.
1. Provide elbows at base of downspouts to direct water away from building.
 2. Connect downspouts to underground drainage system indicated.
- I. Roof Curbs: Install flashing around bases where they meet metal roof panels.
- J. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.05 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal panel units within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.06 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect metal roof panel installation, including accessories. Report results in writing.
- B. Remove and replace applications of metal roof panels where tests and inspections indicate that they do not comply with specified requirements.
- C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- D. Prepare test and inspection reports.

3.07 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 42 13.13

FORMED METAL WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes open-joint, preformed aluminum wall panels, soffit and roof panels, sunscreens and canopies, their support system, special shapes, and all other panels elements for the building.
- B. Related requirements:
 - 1. Division 05 for steel studs in exterior walls.
 - 2. Division 07 for the following:
 - a. Insulation.
 - b. Other flashing and sheet metal.
 - c. Air/water barrier.
 - d. Sealants.
 - 3. Division 08 for curtain wall.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.
 - 1. Meet with Owner, Architect, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
 - 6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
 - 7. Review temporary protection requirements for metal panel assembly during and after installation.
 - 8. Review of procedures for repair of metal panels damaged after installation.
 - 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

B. Coordination

1. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.03 SUBMITTALS

A. Data:

1. Manufacturer Product Data sheet or equivalent printed literature indicating product information for panel attachment system, setting accessories and other related materials.
2. Data shall substantiate that the materials comply with the specified requirements.

B. Shop Drawings: Dimensioned Shop Drawings for the preformed wall panel system, including design and detailing of the panel support framing elements and their attachment to the structural frame. Coordinate drawings and their submittal with the curtain wall system and other exterior wall components.

1. Show the panel layout on each plane, support framing system, panel attachment members, secondary water control, jointing, dimensions, sizes and locations of cut-outs, relation to work of other trades, and other pertinent data and information.
2. Indicate and dimension adjoining, abutting and penetrating work to be performed by other trades.
3. Number each panel to correspond to the markings shown on the fabrication or shop drawings. Mark the identification number on the back of each panel.
4. The Drawings and calculations shall bear the seal of a California-registered professional engineer. The engineer shall also perform and submit structural calculations to document all panel conditions.

C. Samples:

1. Prior to fabrication, submit 12-inch square preliminary Samples panels showing corners, special shapes, or other conditions and finishes, as may be required by the Architect, at the jobsite for review and approval.
2. Samples will serve as the control for limiting acceptable range of appearance.

D. Data:

1. Manufacturer Product Data sheet or equivalent printed literature indicating product information for panel attachment system, setting accessories maintenance and other related materials.
2. Data shall substantiate that the materials comply with the specified requirements.

E. Closeout: Manufacturer instructions for care, repair and replacement procedures, and Samples showing repaired panels.

1.04 QUALITY ASSURANCE

A. Fabricator/installer qualifications:

1. Single firm with a minimum of 5 years successful experience in the fabrication and erection of panel systems of similar sizes, shapes and finishes required for this Project, and which has ample production facilities to produce, furnish and supply the panels as required for installation without delay to the Work.

2. Firm must be regularly engaged in the engineering, fabrication, finishing and installation, of similar work.
- B. Mockup: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1.05 DELIVERY, STORAGE AND HANDLING

A. Delivery:

1. After fabrication, protect panels with strippable plastic film.
2. Deliver panels to ensure that there will be no damage or staining.
3. Deliver other materials, except bulk materials, in manufacturer's unopened containers with name, brand, type, grade and color fully indicated thereon. Store bulk materials as required to avoid any deleterious effects of weather, soiling or contamination.
4. Delivered items shall be properly boxed or crated. Mark containers with installation location, fabrication/piece numbers, shop drawings reference, etc., as applicable.

B. Storage:

1. Store above grade on suitable surfaces using polyethylene film to separate panels from supporting or protecting members.
2. Protect from weather, soiling and damage of every kind.
3. Crate panels to prevent accumulation of moisture between panels.

1.06 WARRANTY

A. Warrant that panels and their support system will meet the specified performance criteria specified and will be free from defects in materials and workmanship for 2 years after Substantial Completion, except where longer warranties are specified below.

1. Certify in writing that installed work is in accordance with the Contract Documents and authorized alterations and/or additions thereto and that, should defect develop during the warranty period due to improper workmanship or materials installed as a part of this Section, such defects will upon written request, be repaired or replaced at no additional cost to the Owner.
2. If exploratory work is required to determine the cause of the defects, the cost of such work shall be borne by the Contractor when his work is found to be at fault.
3. Further warrant the Owner in writing that wall panels will not evidence delamination of any type for 10 years after Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested according to ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Finish Warranty Period: [20] [10] [5] <Insert number> years from date of Substantial Completion.

- C. The warranty, the enforcement or lack of enforcement thereof, shall not deprive the Owner of other actions, rights or remedies available to him. Warranty shall be in form approved by Owner.

PART 2 PRODUCTS

2.01 PERFORMANCE CRITERIA:

- A. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E283 at the following test-pressure difference:
 - 1. Test-Pressure Difference: [1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)].
- B. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at the following test-pressure difference:
 - 1. Test-Pressure Difference: [2.86 lbf/sq. ft. (137 Pa)] [6.24 lbf/sq. ft. (300 Pa)].
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): [120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces] <Insert temperature range>.
- D. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
- E. Vibration harmonics, wind whistles, noises caused by thermal movement, thermal movement transmitted to other building elements, loosening, weakening or fracturing of attachments or components of system are not permitted in the installed work.
- F. Design system so panels can be removed without removing or disrupting adjacent panels or materials.

2.02 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.

2.03 CONCEALED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. Provide factory-formed metal panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners [and factory-applied sealant] in side laps. Include accessories required for weathertight installation.

2.04 METAL LINER PANELS

- A. Provide factory-formed metal liner panels designed for interior side walls and field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners in side laps. Include accessories required for a complete installation.

2.05 MATERIALS

- A. Aluminum Sheet: Coil-coated sheet, ASTM B209 (ASTM B209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- B. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A653/A653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A792/A792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
- C. Clips, pins and fasteners: 300 series stainless steel. Use for attachment to substructure of sizes required to meet performance criteria. Secure clips in the manufacturer's facility to the greatest degree possible. Pop rivet attachment of clips and accessories will not be accepted.
- D. Flashings, closure strips or metal trim: Of materials to match that of panel sheets in thickness as required to fulfill performance criteria.
- E. Back pans on panels: Of sizes and minimum gages required to fulfill performance requirements.
- F. Metal panel support system:
 - 1. Stud and joist framing members: As specified in Section 05 40 00.
 - 2. Aluminum extrusion panel retention members, clips, angles or panel hangers: Design to fulfill performance criteria specified.
 - 3. Structural steel shapes: ASTM A 36.
 - 4. Steel plates: ASTM A 283, Grade C.
 - 5. Air/water barrier: As specified in Section 07 27 00.
- G. Miscellaneous materials:
 - 1. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 - a. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
 - b. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 - c. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

2. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
3. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
4. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 - a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
 - b. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 - c. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.06 FABRICATION

- A. Manufacture panels under controlled environment in fabricator's plant in conformance with accepted shop drawings and calculations so tolerances, as stated herein, are not exceeded. Field fabrication of panels is not permitted.
- B. Weld inside surfaces of seams, such as the panel returns at corners, to prevent intrusion of water.
- C. Clean surfaces in compliance with the sealant manufacturer's recommendations, and apply sealant to inside surfaces of seams, such as the panel returns at corners, to prevent intrusion of water.
- D. Grind and polish exposed welds to match adjacent surface finish and to be invisible in the finish work.
- E. Install back pans as required sealing all perimeter edges.
- F. Flatness of panels defined:
 1. Ensure exposed metal panels including exposed flashing components have a visual flatness acceptable to Architect and in such manner that slope of any surface at any point does not exceed 0.5 percent from nominal plane of surface when measured in any direction at one inch intervals when ambient temperature is at 72 deg F and under any combination of performance conditions. This requirement is also applicable to conditions and jointing of components in same plane and to transition from one component to another or similar component in same plane.
 2. Short length distortion ripples, edge distortions, "oil-canning", "telegraphing of fasteners" and like will not be permitted. Make provisions to allow for differential thermal expansion between stiffeners, recessed slots and exposed metal of curtain wall system to take place without noise and without buckling of surface.
 3. Dimensional tolerances of outer dimensions of panels: +/-1/32-inch in 48 inches measured at any point.

G. Fabrication tolerances:

1. Panel bow: Maximum 0.2 percent of width or length, whichever is greater.
2. Width or length: Plus 0.064 to 48-inch; Plus 0.032 to 144-inch
3. Thickness: Plus 0.008-inch.
4. Squareness: 0.1875-inch difference between diagonals.
5. Camber: 0.062-inch maximum.
6. Radius of exterior bent corners: 1/16-inch maximum.

2.07 FINISHING

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Steel Panels and Accessories:

1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
2. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
3. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
4. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
5. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
7. Finish in "Concealed Finish" Subparagraph below is frequently used as a factory finish for interior surfaces.

8. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

D. Aluminum Panels and Accessories:

1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
2. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
3. Mica Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
4. Metallic Fluoropolymer: AAMA 2605. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
5. FEVE Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
7. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
8. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine structure that will support the metal panel framing system. Verify elevation, tolerances, embedments, offset lines, and other conditions, which would affect the satisfactory installation and performance of the panels.
- B. Correct unsuitable conditions before proceeding with erection.

3.02 PREPARATION

- A. Examine framework to receive panels. Make certain framework is secure and properly aligned and prepared to receive panels.
- B. Do not begin installation of panels until Architect has accepted secondary air/ water barrier.
- C. Prepare surfaces to be in contact with panels and panel surfaces in compliance with materials manufacturers' recommendations and those of panel fabricator prior to installation of panels to framework.

3.03 INSTALLATION

- A. Install panels and panel support members in compliance with approved shop drawings, calculations, and fabricator's published instructions. Install panels so that in their final location and position joints are uniform, perfectly aligned, with flush joints, and panels are not twisted out of plane. Adjust work to conform to the following tolerances (maximum variations).
 - 1. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 2. Install screw fasteners in predrilled holes.
 - 3. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 4. Install flashing and trim as metal panel work proceeds.
 - 5. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 6. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 7. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
 - 8. Face width of joints: Plus 1/32-inch.
 - 9. Joint taper: 1/100-inch/ft length, with a maximum length of tapering in one direction of 6 feet.
 - 10. Jog in alignment of edge: Plus 1/16-inch.
 - 11. Rough opening dimension: Plus 1/16-inch at head, Plus 1/16-inch at sill, and Plus 1/16-inch at jamb.
 - 12. Deviation from plumb, 1/16-inch maximum per one story height and a maximum of 1/8-inch in a 45 feet. run.
 - 13. Deviation from horizontal: 1/8-inch maximum in a 30 feet. run.
- B. Fasteners
 - 1. Steel Panels: Use stainless steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
 - 2. Aluminum Panels: Use aluminum or stainless steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
- C. Metal Liner Panels: Install panels on [exterior side of girts, with girts exposed to the interior] [interior side of girts with flush appearance on the inside].
- D. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.
- E. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).
- 3.04 SEALANTS
- A. Comply with the requirements of Section 07 92 00 for sealants, backer rods, and their installation.
- 3.05 FIELD QUALITY CONTROL
- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
 - B. Water-Spray Test: After installation, test area of assembly [shown on Drawings] [as directed by Architect] <Insert area> for water penetration according to AAMA 501.2.
 - C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.
 - D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
 - E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
 - F. Prepare test and inspection reports.
- 3.06 CLEANING AND PROTECTING
- A. Leave protective coatings or films on panels in place as long as possible where doing so will not produce discoloration or other undesirable visual defects.
 - B. Remove protective coatings or films when, and in the manner, recommended by materials manufacturers published instructions.
 - C. Clean panels in accordance with material manufacturers' published recommendations.
 - D. Protect panels from damage. Repair or replace any damaged panels to Architect's satisfaction.

1. Carefully remove rejected panels and replace with new panels without delay and without cost to the Collage.
2. Remove panel or panels damaged in the removal of defective or rejected panels and replace with new panels.

END OF SECTION

This page intentionally left blank

SECTION 07 42 13.23

METAL COMPOSITE MATERIAL WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes panel system and the following components:
 - 1. Metal composite material panels with mounting system.
 - 2. Panel mounting system including anchors, shims, furring, fasteners, gaskets and sealants, related flashing adapters, and masking (as required) for a complete watertight installation.
- B. Related requirements: Division 07 for other sheet metalwork.

1.02 DEFINITIONS

- A. MCM: Metal Composite Material.
- B. Panel:
 - 1. Two sheets of aluminum sandwiching a solid core of extruded thermoplastic material formed in a continuous process with no glues or adhesives between dissimilar materials.
 - 2. The core material shall be free of voids and shall not contain foamed insulation material.
 - 3. Products laminated sheet by sheet in a batch process using glues or adhesives between materials are not acceptable.

1.03 SUBMITTALS

- A. Data: Manufacturer including product specifications, standard details, certified product test results, installation instructions, and general recommendations, as applicable to materials and finishes for each component and for total panel system.
- B. Shop Drawings: Dimensioned Shop Drawings showing materials, gages, methods of fabrication and assembly, joints, finishes and all other pertinent data.
 - 1. Show panel layout, details edge conditions, joints, corners, panel profiles, supports, anchorages, trim, flashings, closures, and special details.
 - 2. Distinguish between factory and field assembled work.
- C. Samples: 12-inch long by actual panel width Samples in profile, style, color, and texture indicated. Include panel accessories.
- D. Code Compliance: Documents showing product compliance with the national and local building code shall be submitted prior to the bid. These documents shall include, but not be limited to, appropriate Evaluation Reports and/or test reports supporting the use of the product.

1.04 QUALITY ASSURANCE

- A. Installer qualifications: Firm with a minimum of 5 years' experience in installation of exterior metal panels of scope and complexity similar to those of the Project.

- B. Composite Panel Manufacturer shall have a minimum of 20 years' experience in the manufacturing of this product.
- C. Composite Panel Manufacturer shall be solely responsible for panel manufacture and application of the finish.
- D. Fabricator/installer shall be acceptable to the composite panel manufacturer.
- E. Field measurements should be taken prior to the completion of shop fabrication whenever possible. However, coordinate fabrication schedule with construction progress as directed by the Contractor to avoid delay of work. Field fabrication may be allowed to ensure proper fit. However, field fabrication shall be kept to an absolute minimum with the majority of the fabrication being done under controlled shop conditions.
- F. Shop drawings shall show the preferred joint details providing a structurally sound wall panel system that allows no uncontrolled water penetration on the inside face of the panel system as determined by ASTM E 331. Systems not utilizing a construction sealant at the panel joints (i.e. Rout and Return Dry and Rear Ventilated System) shall provide a means of concealed drainage with baffles and weeps for water which may accumulate in members of the system.
- G. Maximum deviation from vertical and horizontal alignment of erected panels: 1/4-inch in 20-foot non-accumulative.
- H. Panel fabricator/installer shall assume undivided responsibility for all components of the exterior panel system including, but not limited to attachment to sub-construction, panel to panel joinery, panel to dissimilar material joinery, and joint seal associated with the panel system.
- I. Mockup: Erect at the Project site a (visual) composite mockup of the exterior wall, including all the components of the building envelope, as indicated or directed, for review and approval.
 - 1. If the mockup is free-standing, provide a firm foundation for the mockup and make mockup complete with all accessories, and other features required for the final assembly on the building. Glaze mockup.
 - 2. Make modifications necessary to achieve a mockup satisfactory to the Owner and Architect or remove and construct additional mockup(s).
 - 3. Approved mockup shall serve as the standard for the same work on the building.
 - 4. Protect mockup until its removal, if not incorporated in the Work, otherwise remove mockup only after completion and acceptance of final work.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Protection: Cardboard covers, strippable film or other form of protection standard with the fabricator.
- B. Delivery:
 - 1. Deliver panels and other components so they will not be damaged or deformed.
 - 2. Exercise care in unloading, storing, and erecting panels to prevent bending, warping, twisting, and surface damage.
- C. Storage:
 - 1. Stack materials on platforms or pallets, covered with tarpaulins or other suitable weathertight ventilated covering.

2. Store metal wall and roof panels so that they will not accumulate water.
3. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.

1.06 WARRANTY

- A. Furnish panel manufacturer's written warranty covering failure of the factory-applied exterior finish on metal panels within the warranty period. This warranty shall be in addition to and not a limitation of other rights the Owner may have against the Contractor under the Contract Documents.
- B. Warranty period for factory-applied finish is 20 years after Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide MCM panel systems capable of withstanding the effects of the following loads, based on testing in accordance with ASTM E330:
 1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
 3. Deflection Limits: For wind loads, no greater than 1/240 of the span.
- B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. of wall area when tested in accordance with ASTM E283 at the following test-pressure difference:
 1. Test-Pressure Difference: 6.24 lbf/sq. ft.
- C. Water Penetration under Static Pressure: No water penetration to room side of assembly when tested for 15 minutes in accordance with ASTM E331 at the following test-pressure difference:
 1. Test-Pressure Difference: 6.24 lbf/sq. ft.
- D. Thermal Movements: Locate expansion and contraction points to allow for free and noiseless thermal movements from surface temperature changes.
 1. Temperature Change (Range): minus 20 deg F to 180 deg F, material surfaces.
- E. Design wind pressure: Wind loads prescribed by Code or ANSI A50.1, whichever is more restrictive, but in no case less than 20 psf.
- F. Thermal movements:
 1. Provide assemblies, including anchorage, that accommodate thermal movements of systems and supporting elements resulting from the following maximum change (range) in ambient and surface temperatures without buckling, damaging stresses on glazing, failure of joint sealants, damaging loads on fasteners, failure of doors or other operating units to function properly, and other detrimental effects.
 2. Temperature change (range): 120-degree F. ambient, 180-degree F. material surfaces.
 3. System performance requirements: Provide certified test results by a recognized testing laboratory or agency (by college) in compliance with specified test methods for each system.

- a. Composite panels shall be capable of withstanding building movements and weather exposures based on the following test standards required by the Architect and/or the local building code.
- b. Panels shall be designed to withstand the design wind load, but in no case less than 20 psf and 30 psf on parapet and corner panels. Wind load testing shall be conducted in accordance with ASTM E 330 with the following results:
 - 1) Normal to the plane of the wall between supports, deflection of the secured perimeter-framing members shall not exceed $L/175$ or 3/4-inch, whichever is less.
 - 2) Normal to the plane of the wall, the maximum panel deflection shall not exceed $L/60$ of the full span.
 - 3) Maximum anchor deflection shall not exceed 1/16-inch.
 - 4) At 1-1/2 times design pressure, permanent deflections of framing members shall not exceed $L/100$ of span length and components shall not experience failure or gross permanent distortion. At connection points of framing members to anchors, permanent set shall not exceed 1/16-inch.
- c. Air infiltration: When tested in accordance with ASTM E 283, air infiltration at 1.57 psf must not exceed 0.06 cfm/ft² of wall area.
- d. Water infiltration - Water infiltration is defined as uncontrolled water leakage through the exterior face of the assembly. Systems not using a construction sealant at the panel joints (i.e. Rout and Return Dry and Rear Ventilated Systems) shall be designed to drain water leakage occurring at the joints. No water infiltration shall occur in system under a differential static pressure of 6.24 psf after 15 minutes of exposure in accordance with ASTM E 331.
- e. Pressure equalized rain screen systems: Comply with AAMA 508 "Voluntary Test Method and Specification for Pressure Equalized Rain Screen Wall Cladding Systems."
- f. Provide assemblies that always operates quietly and without:
 - 1) Vibration harmonics.
 - 2) Wind whistles.
 - 3) Noises caused by thermal movement (including "popping" and "ticking").
 - 4) Thermal movement transmitted to other building elements.
 - 5) Loosening, weakening or fracturing of attachments or components or system.

2.02 METAL COMPOSITE MATERIAL (MCM) WALL PANELS

- A. MCM Wall Panel Systems: Provide factory-formed and -assembled, MCM wall panels fabricated from two metal facings that are bonded to a solid, extruded thermoplastic core; formed into profile for installation method indicated. Include attachment assembly components panel stiffeners, and accessories required for weathertight system.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide ALUCOBOND®; 3A Composites USA Inc.; ALUCOBOND® PLUS or comparable product by one of the following:
 - a. Arconic Architectural Products (USA).
 - b. Alpolc Materials; Mitsubishi Chemical Composites.
 - c. Or equal.

- B. Aluminum-Faced Composite Wall Panels: Formed with 0.020-inch- (0.50-mm-) thick, anodized aluminum sheet facings.
 - 1. Panel Thickness: 0.157 inch (4 mm).
 - 2. Core: Standard.
 - 3. Peel Strength: 22.5 in-lb/inch when tested for bond integrity in accordance with ASTM D1781.
 - 4. Fire Performance: Flame spread less than 25 and smoke developed less than 450, in accordance with ASTM E84.
- C. Attachment Assembly Components: Formed from extruded aluminum.

2.03 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed, metallic-coated steel sheet ASTM A653/A653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A792/A792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide Fabricator's standard sections as required for support and alignment of MCM panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of MCM panels unless otherwise indicated.
- C. Flashing and Trim: Provide flashing and trim formed from same material as MCM panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent MCM panels.
 - 1. By the panel manufacturer.
- D. Aluminum Trim: Formed with 0.040-inch (1.00-mm-) thick, coil-coated aluminum sheet facings.
- E. Color: Clear anodized aluminum.
- F. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of MCM panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- G. Panel Sealants: ASTM C920; silicone sealant; of type, grade, class, and use classifications required to seal joints in MCM panels and remain weathertight; and as recommended in writing by MCM panel manufacturer.

2.04 FABRICATION

- A. General: Fabricate and finish MCM panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Fabricate MCM panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

- C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations or recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 4. Sealed Joints: Form non-expansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.05 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Aluminum Panels and Accessories:
1. PVDF Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. FEVE Fluoropolymer: AAMA 2605. One-coat [clear] [tinted] fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 4. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
 - b. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, MCM panel supports, and other conditions affecting performance of the Work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by MCM wall panel manufacturer.
 - 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by MCM wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and assemblies penetrating MCM panels to verify actual locations of penetrations relative to seam locations of MCM panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages in accordance with ASTM C754 and MCM panel manufacturer's written recommendations.

3.03 INSTALLATION

- A. General: Install MCM panels in accordance with Drawings and fabricator's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to supports unless otherwise indicated. Anchor MCM panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Shim or otherwise plumb substrates receiving MCM panels.
 - 2. Flash and seal MCM panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by MCM panels are installed.
 - 3. Install screw fasteners in predrilled holes.
 - 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 5. Install flashing and trim as MCM panel work proceeds.
 - 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 7. Align bottoms of MCM panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
 - 1. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by MCM panel manufacturer.

- D. Attachment Assembly, General: Install attachment assembly required to support MCM wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
 - 1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.
- E. Panel Installation: Attach MCM wall panels to supports at locations, spacings, and with fasteners recommended by Fabricator to achieve performance requirements specified.
- F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete MCM panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by MCM panel Fabricator; or, if not indicated, provide types recommended in writing by MCM system Fabricator.
- G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, or SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
 - 1. Install exposed flashing and trim that is without buckling and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

3.04 ERECTION TOLERANCES

- A. Site Verifications of Conditions:
 - 1. Verify conditions of substrate previously installed under other Sections are acceptable for the MCM system installation. Provide documentation indicating detrimental conditions to the MCM system performance.
 - 2. Once conditions are verified, MCM system installation tolerances are as follows:
 - a. Shim and align MCM wall panel units within installed tolerance of 1/4 inch in 20 feet, non-accumulative, on level, plumb, and location lines as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.05 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing agency to perform field tests and inspections.
- B. Water-Spray Test: After installation, test area of assembly as directed by Architect for water penetration in accordance with AAMA 501.2.
- C. Fabricator's Field Service: Engage a factory-authorized service representative to test and inspect completed MCM wall panel installation, including accessories.

- D. MCM wall panels will be considered defective if they do not pass test and inspections.
- E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.06 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as MCM panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of MCM panel installation, clean finished surfaces as recommended by MCM panel manufacturer. Maintain in a clean condition during construction.
- B. After MCM panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace MCM panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 46 46
FIBER-CEMENT SIDING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fiber-cement siding.
2. Fiber-cement soffit.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood furring, grounds, nailers, and blocking.
2. Section 06 20 13 "Exterior Finish Carpentry" for exterior **[cellular PVC] [and] [foam-plastic]** trim.
3. Section 07 25 00 "Weather Barriers" for weather-resistive barriers.

1.02 COORDINATION

- A. Coordinate siding installation with flashings and other adjoining construction to ensure proper sequencing.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Fiber-cement siding.
2. Fiber-cement soffit.

- B. Product Data Submittals: For each type of fiber-cement **[siding] [and] [soffit]**. [Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.]

- C. Shop Drawings: Submit shop drawings for all trim and flashing conditions.

- D. Samples for Initial Selection: For fiber-cement **[siding] [and] [soffit]** including related accessories.

- E. Samples for Verification: **[For each type, color, texture, and pattern required.]**

1. 12-inch-long-by-actual-width Sample of siding.
2. 24-inch-wide-by-36-inch-high Sample panel of siding assembled on plywood backing.
3. 12-inch-long-by-actual-width Sample of soffit.
4. 12-inch-long-by-actual-width Samples of trim and accessories.

1.05 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of fiber-cement **[siding] [and] [soffit]**.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fiber-cement siding.
- C. Research/Evaluation Reports: For each type of fiber-cement siding required, from ICC-ES.
- D. Sample Warranty: For special warranty.

1.06 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of fiber-cement **[siding] [and] [soffit]**, including related accessories, to include in maintenance manuals.

1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Furnish full lengths of fiber-cement **[siding] [and] [soffit]** including related accessories, in a quantity equal to 2 percent of amount installed.

1.08 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Build mockups for fiber-cement **[siding] [and] [soffit]** including accessories.
 - a. Size: **[48 inches long by 60 inches high]** <Insert dimensions>.
 - b. Include outside corner on one end of mockup **[and inside corner on other end]**.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with labels intact until time of use.
- B. Store materials on elevated platforms, under cover, and in a dry location.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace products that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including cracking and deforming.
 - b. Deterioration of materials beyond normal weathering.

- c. Defects shall include, but not be limited to:
 - 1) Cracking.
 - 2) Rotting.
 - 3) Delaminating.
 - 4) Damage due to moisture or termites.
- 2. Warranty Period: **[10] [25] [50]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain products, including related accessories, from single source from single manufacturer.

2.02 FIBER-CEMENT SIDING

- B. Fiber-Cement Siding: ASTM C1186, Type A, Grade II, fiber-cement board, noncombustible when tested in accordance with ASTM E136; with a flame-spread index of 25 or less when tested in accordance with ASTM E84.
- C. Labeling: Provide fiber-cement siding that is tested and labeled in accordance with ASTM C1186 by a qualified testing agency acceptable to authorities having jurisdiction.
- D. Nominal Thickness: Not less than 5/16 inch.
- E. Horizontal Pattern: Boards **[5-1/4 inches] [6-1/4 to 6-1/2 inches] [7-1/4 to 7-1/2 inches] [8-1/4 to 8-1/2 inches] [9-1/4 to 9-1/2 inches]** <Insert dimensions> wide in **[plain] [beaded-edge]** <Insert requirement> style.
 - 1. Texture: **[Smooth] [Rough sawn] [Wood grain]** <Insert requirement>.
- F. Vertical Pattern: 48-inch-wide sheets with wood-grain texture and grooves **[8 inches] [12 inches]** <Insert dimension> o.c.
- G. Shingle Pattern: 48-inch-wide, **[straight-edge notched] [staggered-edge notched]** <Insert requirement> sheets with wood-grain texture.
- H. Panel Texture: 48-inch-wide sheets with **[smooth] [stucco] [wood-grain]** <Insert requirement> texture.
- I. Factory Priming: Manufacturer's standard acrylic primer.

2.03 FIBER-CEMENT SOFFIT

- J. Fiber-Cement Soffit: ASTM C1186, Type A, Grade II, fiber-cement board, noncombustible when tested in accordance with ASTM E136; with a flame-spread index of 25 or less when tested in accordance with ASTM E84.
- K. Nominal Thickness: Not less than 5/16 inch.

- L. Pattern: **[12-inch-]** **[16-inch-]** **[24-inch-]** <Insert dimension> wide sheets with **[smooth]** **[wood-grain]** <Insert requirement> texture.
- M. Ventilation: Provide **[perforated]** **[unperforated]** soffit **[unless otherwise indicated]**.
- N. Factory Priming: Manufacturer's standard acrylic primer.

2.04 ACCESSORIES

- A. Siding Accessories, General: Provide starter strips, edge trim, outside and inside corner caps, and other items as recommended by siding manufacturer for building configuration.
 - 1. Provide accessories matching color and texture of adjacent siding unless otherwise indicated.
- B. Decorative Accessories: Provide the following fiber-cement decorative accessories as indicated:
 - 1. Corner posts.
 - 2. Door and window casings.
 - 3. Fasciae.
 - 4. Moldings and trim.
 - 5. **<Insert accessories>**.
- C. Flashing: Provide **[aluminum]** **[stainless steel]** **<Insert metal>** flashing complying with Section 07 62 00 "Sheet Metal Flashing and Trim" at window and door heads and where indicated.
 - 1. Finish for Aluminum Flashing: **[Siliconized polyester coating]** **[High-performance organic finish]** **[Factory-prime coating]** **<Insert finish>**.
- D. Fasteners:
 - 1. For fastening to wood, use **[siding nails]** **[ribbed bugle-head screws]** of sufficient length to penetrate a minimum of 1 inch into substrate.
 - 2. For fastening to metal, use ribbed bugle-head screws of sufficient length to penetrate a minimum of 1/4 inch, or three screw-threads, into substrate.
 - 3. For fastening fiber cement, use **[hot-dip galvanized]** **[stainless steel]** fasteners.
- E. Insect Screening for Soffit Vents: **[Aluminum, 18-by-16 mesh]** **[PVC-coated, glass-fiber fabric, 18-by-14 or 18-by-16 mesh]** **[Stainless steel, 18-by-18 mesh]** **<Insert requirement>**.
- F. Continuous Soffit Vents: Aluminum, hat-channel shape, with **[stamped louvers]** **[perforations]**; 2 inches wide and not less than 96 inches long.
 - 1. Net-Free Area: **[4 sq. in./linear ft.]** **[6 sq. in./linear ft.]** **[8 sq. in./linear ft.]** **<Insert dimension>**.
 - 2. Finish: **[Mill finish]** **[White paint]** **[Brown paint]** **<Insert requirement>**.
- G. Round Soffit Vents: Stamped aluminum louvered vents, **[2 inches]** **[2-1/2 inches]** **[3 inches]** **[4 inches]** **<Insert dimension>** in diameter, made to be inserted in round holes cut into soffit.
 - 1. Finish: **[Mill finish]** **[White paint]** **[Brown paint]** **<Insert requirement>**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of fiber-cement **[siding] [and] [soffit]** and related accessories.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean substrates of projections and substances detrimental to application.

3.03 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions applicable to products and applications indicated unless more stringent requirements apply.
 - 1. Do not install damaged components.
 - 2. Install fasteners no more than **[24 inches] <Insert dimension>** o.c.
- B. Install joint sealants as specified in Section 07 92 00 "Joint Sealants" and to produce a weathertight installation.

3.04 ADJUSTING AND CLEANING

- A. Remove damaged, improperly installed, or otherwise defective materials and replace with new materials complying with specified requirements.
- B. Clean finished surfaces according to manufacturer's written instructions and maintain in a clean condition during construction.

END OF SECTION

This page intentionally left blank

SECTION 07 52 16

STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS MEMBRANE ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Styrene-butadiene-styrene (SBS) modified bituminous membrane roofing system.
2. Base sheet.
3. Cap sheet.
4. Base flashing sheet.
5. Asphalt materials.
6. Accessory roofing system materials.
7. Substrate board.
8. Vapor retarder.
9. Roof insulation.
10. Insulation accessories.
11. Cover board.
12. Walkways.

B. Section includes the installation of sound-absorbing insulation strips in ribs of roof deck. Sound-absorbing insulation strips are furnished under Section 05 31 00 "Steel Decking."

C. Related Requirements:

1. Section 05 31 00 "Steel Decking" for roof deck panels **[and sound-absorbing insulation strips]**.
2. Section 06 10 00 "Rough Carpentry" for wood nailers, curbs, and blocking, and for wood-based, structural-use roof deck panels.
3. Section 06 16 00 "Sheathing" for wood-based, structural-use roof deck panels.
4. Section 07 62 00 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
5. Section 07 71 00 "Roof Specialties" for **[premanufactured metal copings] [roof edge fasciae] [gravel stops] [reglets] [roof edge flashings] [counterflashings]**.
6. Section 07 92 00 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
7. Section 22 14 23 "Storm Drainage Piping Specialties" for roof drains.

1.02 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D1079 and glossary of NRCA's "Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.03 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at **[Project site] <Insert location>**.

1. Meet with Owner, [**Construction Manager,**] Architect, Owner's insurer if applicable, testing and inspecting agency representative, Roofing System Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and other installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing system installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

B. Preinstallation Roofing Conference: Conduct conference at **[Project site] <Insert location>**.

1. Meet with Owner, [**Construction Manager,**] Architect, Owner's insurer if applicable, testing and inspecting agency representative, Roofing System Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and other installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing system installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.04 ACTION SUBMITTALS

- A. Product Data: Submit Data Sheets for each type of product.
- B. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:
 - 1. Layout and thickness of insulation.
 - 2. Base flashings and membrane terminations.
 - 3. Flashing details at penetrations.
 - 4. Tapered insulation, including slopes.
 - 5. Roof plan showing orientation of roof deck and orientation of roofing membrane, and fastener spacings and pattern for corner, perimeter, and field-of-roof locations.
 - 6. Crickets, saddles, and tapered edge strips, including slopes.
 - 7. Tie-in with adjoining wall system air barrier.
- C. Samples for Verification: For the following products:
 - 1. Cap Sheet: Samples of [manufacturer's standard colors for selection by Architect] [specified color].
 - a. Size: 12-inches square.
 - 2. Base Flashing Sheet: Samples of [manufacturer's standard colors for selection by Architect] [specified color].
 - a. Size: 12-inches square.
 - 3. Walkways: Samples of [manufacturer's standard colors for selection by Architect] [specified color].
 - a. Size: 12-inches square.
- D. Wind-Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

1.05 INFORMATIONAL SUBMITTALS

- A. Provide an Assembly Letter describing the complete system to be installed.
- B. Qualification Data: For roofing system **[Installer] [manufacturer] [and] [testing agency]**.
- C. Manufacturer Certificates:
 - 1. Performance Requirement Certificate: Signed by roofing membrane manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - 2. Submit evidence of complying with performance requirements.
 - 3. Special Warranty Certificate: Signed by roofing membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- D. Product Test Reports: For roofing membrane and insulation, tests performed by a qualified testing agency, indicating compliance with specified requirements.

- E. Evaluation Reports: For components of membrane roofing system, for tests performed by a qualified testing agency.
 - F. Field Test Reports:
 - 1. Concrete internal relative humidity test reports.
 - 2. Fastener pullout test results and manufacturer's revised requirements for fastener patterns.
 - G. Field quality-control reports.
 - H. Sample warranties.
- 1.06 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For roofing system to include in maintenance manuals.
 - B. Certified statement from existing roofing system manufacturer stating that existing roof warranty has not been affected by Work performed under this Section.
- 1.07 QUALITY ASSURANCE
- A. Manufacturer Qualifications: A qualified manufacturer that is **[UL listed] [listed in FM Approvals' RoofNav] [listed in SPRI's "Directory of Roof Assemblies"]** for roofing system identical to that used for this Project.
 - B. Installer Qualifications: A qualified firm that is approved, authorized, certified, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
- 1.08 DELIVERY, STORAGE, AND HANDLING
- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
 - B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer.
 - 1. Protect stored liquid material from direct sunlight.
 - 2. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
 - C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources.
 - 1. Store in a dry location.
 - 2. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
 - D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.
- 1.09 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed in accordance with manufacturer's written installation instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty to include all components of roofing system, such as **[substrate board,] [vapor retarder,]** roof insulation, fasteners, adhesives, **[cover board,] roofing membranes,** base flashing sheet, **[walkway products,] and** other components of roofing system.
 - 2. Warranty Period 30 years from date of Substantial Completion.
- B. Roofing System Installer's Warranty: Submit Roofing System Installer's warranty, on warranty form at end of this Section, signed by Roofing System Installer, covering the Work of this Section, including all components of roofing system, such as **[substrate board,] [vapor retarder,]** roof insulation, fasteners, adhesives, **[cover board,] roofing membranes,** base flashing sheet, **[walkway products,] and** other components of roofing system.
 - 1. Warranty Period: **[Two] [Five] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain components for roofing system from **[roofing membrane manufacturer] [or] [manufacturer approved by roofing membrane manufacturer].**

2.02 MANUFACTURER

- A. Manufacturers are subject to compliance with requirements; see LACCD Campus Matrix for preferred roofing membrane manufacturer.

2.03 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and flashings to withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing system and flashings to remain watertight.
 - 1. Accelerated Weathering: Roofing membrane to withstand 2000 hours of exposure when tested in accordance with ASTM G152, ASTM G154, or ASTM G155.
 - 2. Impact Resistance: Roofing membrane to resist impact damage when tested in accordance with ASTM D3746/D3746M, ASTM D4272/D4272M, or the "Resistance to Foot Traffic Test" section in FM Approvals 4470.
- B. Material Compatibility: Roofing system materials to be compatible with one another and adjacent materials under conditions of service and installation required, as demonstrated by roofing membrane manufacturer based on testing and field experience.

- C. Wind-Uplift Resistance: Design roofing system to resist the following wind-uplift pressures when tested in accordance with FM Approvals 4474, UL 580, or UL 1897:
1. Zone 1 (Roof Area Field): <Insert lbf/sq. ft. >.
 2. Zone 2 (Roof Area Perimeter): <Insert lbf/sq. ft. >.
 - a. Location: From roof edge to <Insert dimension> inside roof edge.
 3. Zone 3 (Roof Area Corners): <Insert lbf/sq. ft. >.
 - a. Location: <Insert dimension> in each direction from each building corner.
- D. FM Approvals' RoofNav Listing: Roofing membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in FM Approvals' RoofNav for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals Certification markings.
1. Fire/Windstorm Classification: [Class 1A-60] [Class 1A-75] [Class 1A-90] [Class 1A-105] [Class 1A-120] <Insert class>.
 2. Hail-Resistance Rating: FM 1-34 [MH] [SH] [VSH].
- E. SPRI's "Directory of Roof Assemblies" Listing: Roofing membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system and are listed in SPRI's "Directory of Roof Assemblies" for roof assembly identical to that specified for this Project.
1. Wind-Uplift Load Capacity: [60 psf] [75 psf] [90 psf] [105 psf] [120 psf] <Insert capacity>.
- F. Cool Roof Rating Council (CRRC): Roofing system to be listed by the CRRC for low-slope roof products.
- G. Energy Performance: Roofing system to have an initial solar reflectance index (SRI) of not less than [0.70] <Insert value> and an emissivity of not less than [0.75] <Insert value> when tested in accordance with CRRC S100.
- H. Exterior Fire-Test Exposure: [Class A] [Class B] [Class C]; for installation and roof slopes indicated; when tested by a qualified testing agency in accordance with ASTM E108 or UL 790.
1. Identify products with appropriate markings of applicable testing agency.
- I. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated.
1. Identify products with appropriate markings of applicable testing agency.
- 2.04 STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS MEMBRANE ROOFING SYSTEM
- A. Roofing System Components: See the following articles for individual roof materials required for [two-] [three-] ply roofing system; [cold-applied adhesive] [self-adhered] [mechanically fastened] installation method.
- 2.05 BASE SHEET
- A. SBS-Modified Bitumen Polyester-Mat Base Sheet: ASTM D6163/D6163M, [Type I] [Type II], Grade S, reinforced with polyester fabric, smooth surfaced, suitable for installation method specified.

- B. SBS-Modified Bitumen Glass-Fiber-Mat Base Sheet: ASTM D6163/D6163M, **[Type I] [Type II] [Type III]**, Grade S, reinforced with glass fibers, smooth surfaced, suitable for installation method specified.
- C. SBS-Modified Bitumen Polyester- and Glass-Fiber-Mat Base Sheet: ASTM D6162/D6162M, **[Type I] [Type II] [Type III]**, Grade S, reinforced with a combination of polyester fabric and glass fibers, smooth surfaced, suitable for installation method specified.
- D. Thickness in accordance with ASTM D5147.

2.06 CAP SHEET

- A. SBS-Modified Bitumen, Granule-Surfaced, Polyester-Mat Cap Sheet: ASTM D6164/D6164M, **[Type I] [Type II]**, Grade G, reinforced with polyester fabric, suitable for installation method specified.
 - 1. Granule Color: **[White] [Highly reflective white] [Gray] [Tan]** <Insert color>.
- B. SBS-Modified Bitumen, Granule-Surfaced, Glass-Fiber-Mat Cap Sheet: ASTM D6163/D6163M, **[Type I] [Type II] [Type III]**, Grade G, SBS-modified asphalt sheet, reinforced with glass fibers, suitable for installation method specified.
 - 1. Granule Color: **[White] [Highly reflective white] [Gray] [Tan]** <Insert color>.
- C. SBS-Modified Bitumen, Granule-Surfaced, Polyester and Glass-Fiber-Mat Cap Sheet: ASTM D6162/D6162M, **[Type I] [Type III]**, Grade G, reinforced with a combination of polyester fabric and glass fibers, suitable for installation method specified.
 - 1. Granule Color: **[White] [Highly reflective white] [Gray] [Tan]** <Insert color>.

2.07 BASE FLASHING SHEET

- A. SBS-Modified Bitumen, Smooth-Surfaced Backer Sheet: Matching base sheet, suitable for installation method specified.
- B. Asphalt-Coated, Glass-Fiber-Mat Backer Sheet: ASTM D4601/D4601M, **[Type I] [Type II]**, asphalt-impregnated and coated glass-fiber sheet, dusted with fine mineral surfacing on both sides, suitable for installation method specified.
- C. SBS-Modified Bitumen, Granule-Surfaced Base Flashing Sheet: Matching cap sheet, suitable for installation method specified.
- D. SBS-Modified Bitumen, Metal-Surfaced Base Flashing Sheet: ASTM D6298/D6298M, metal-foil-surfaced sheet, reinforced with glass fibers, suitable for installation method specified, and as follows:
 - 1. Metal Surfacing: **[Aluminum] [Copper] [Stainless steel] [Aluminum, fluoropolymer-coated finish]**, of color and gloss selected by Architect from manufacturer's full range].
- E. Liquid Base Flashing System: Roofing membrane manufacturer's standard moisture curing resin with low solvent content, consisting of a primer, flashing cement, and reinforcing scrim, suitable for installation method specified.

2.08 ASPHALT MATERIALS

- A. Asphalt Primer: ASTM D41/D41M.

- B. Roofing Asphalt: ASTM D312/D312M, **[Type III] [Type IV] [Type III or IV as recommended by roofing system manufacturer]**, suitable for installation method specified.
- C. SEBS-Modified Roofing Asphalt: ASTM D6152/D6152M, suitable for installation method specified.

2.09 ACCESSORY ROOFING SYSTEM MATERIALS

- A. General: Accessory materials as recommended in writing by roofing membrane manufacturer for intended use, compatible with other roofing components, and suitable for installation method specified.
 - 1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Prefabricated Pipe Flashings: As recommended in writing by roofing membrane manufacturer.
- C. Roof Vents: As recommended in writing by roofing membrane manufacturer.
 - 1. Size: Not less than 4-inch diameter.
- D. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft..
- E. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- F. Cold-Applied Trichloroethylene Asphalt Adhesive: ASTM D3019, Type III, roofing membrane manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive, specially formulated for compatibility and use with **[roofing membrane sheets] [and] [base flashing sheets]**; designed for adhering roofing system components to substrate and each other, tested by roofing system manufacturer to meet performance requirements.
- G. Cold-Applied Polymer-Modified Asphalt Adhesive: Roofing membrane manufacturer's standard solvent- and asbestos-free, cold-applied adhesive, specially formulated for compatibility and use with **[roofing membrane sheets] [and] [base flashing sheets]**; designed for adhering roofing system components to substrate and each other, tested by roofing system manufacturer to meet performance requirements.
- H. Liquid Flashings: PMMA or PUMA liquid flashings.
- I. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required by roofing membrane manufacturer.
- J. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.
- K. Self-Adhered Primer: Roofing membrane manufacturer's standard primer to enhance the adhesion of membrane to substrate.
- L. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate; tested for required pullout strength, and acceptable to roofing membrane manufacturer.

- M. Roofing Granules: Roofing membrane manufacturer's standard ceramic-coated mineral roofing granules, No. 11 screen size with 100 percent passing No. 8 sieve and 98 percent of mass retained on No. 40 sieve; color matching cap sheet.
- N. Safety Accessories: Roofing membrane manufacturer's standard yellow seaming tape for designating safety perimeters and rooftop hazards.
- O. Miscellaneous Accessories: As recommended in writing by roofing membrane manufacturer.

2.10 SUBSTRATE BOARD

- A. Glass-Mat Gypsum Roof Substrate Board: ASTM C1177/C1177M, water-resistant gypsum board.
 - 1. Thickness: **[1/4 inch] [1/2 inch] [Type X, 5/8 inch]**.
 - 2. Surface Finish: **[Factory primed] [Unprimed]**.
- B. Fiber-Reinforced Gypsum Roof Board: ASTM C1278/C1278M.
 - 1. Thickness: **[1/4 inch] [3/8 inch] [1/2 inch] [5/8 inch]**.
- C. High-Density Polyisocyanurate Cover Board: ASTM C1289, Type II, Class 4, Grade 1, 1/2 inch thick, having a minimum compressive strength of 80 psi.
- D. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

2.11 VAPOR RETARDER

- A. Rubberized-Asphalt-Sheet Vapor Retarder, Self-Adhering: ASTM D1970/D1970M polyethylene film laminated to layer of rubberized asphalt adhesive, minimum 40-mil total thickness; maximum permeance rating of 0.1 perm; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
- B. Butyl-Rubber-Sheet Vapor Retarder, Self-Adhering: Polyethylene film laminated to layer of butyl rubber adhesive, minimum 30-mil total thickness; maximum permeance rating of 0.1 perm; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
- C. Laminated Sheet Vapor Retarder: Two layers, fire-retardant polyethylene laminate, reinforced with cord grid.
 - 1. Permeance Rating: Not more than 0.062 perm when tested in accordance with ASTM E96/E96M.
 - 2. Flame Spread Index: Not more than 5 when tested in accordance with ASTM E84.
 - 3. Smoke-Developed Index: Not more than 35 when tested in accordance with ASTM E84.
 - 4. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

2.12 ROOF INSULATION

- A. General: Preformed roof insulation boards, manufactured **[or approved]** by roofing membrane manufacturer, approved for use in **[FM Approvals' RoofNav listed roof assemblies] [SPRI's "Directory of Roof Assemblies" listed roof assemblies]**.
- B. Extruded Polystyrene Board Insulation: ASTM C578, **[Type IV, 1.6 lb/cu. ft. minimum density, 25 psi minimum compressive strength] [Type V, 3.00 lb/cu. ft. minimum density, 100 psi minimum compressive strength]**, square edged.
1. Thermal Resistance: R-value of 5.0 per 1 inch.
 2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 3. Thickness:
 - a. Base Layer: **[1-1/2 inches]** <Insert thickness>.
 - b. Upper Layer: **<Insert thickness>**.
- C. Molded (Expanded) Polystyrene Board Insulation: ASTM C578, Type VIII, 1.15 lb/cu. ft. minimum density, 13 psi minimum compressive strength, square edge.
1. Thermal Resistance: R-value of 3.8 per 1 inch.
 2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 3. Thickness:
 - a. Base Layer: **[1-1/2 inches]** <Insert thickness>.
 - b. Upper Layer: **<Insert thickness>**.
- D. Composite Molded (Expanded) Polystyrene Board Insulation: ASTM C578, **[Type II, 1.35 lb/cu. ft.] [Type VIII, 1.15 lb/cu. ft.] [Type IX, 1.8 lb/cu. ft.]** minimum density, with factory-applied facings, as follows:
1. Facer: **[ASTM C208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch thick] [DOC PS 2, Exposure 1, oriented strand board, 7/16 inch thick]** <Insert material>.
 2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 3. Thickness: <Insert thickness>.
- E. Polyisocyanurate Board Insulation: ASTM C1289, Type II, Class 1, **[Grade 2] [Grade 3]**, felt or glass-fiber-mat facer on both major surfaces.
1. Compressive Strength: **[20 psi] [25 psi]**.
 2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 - a. Thickness:
 - b. Base Layer: **[1-1/2 inches]** <Insert thickness>.
 - c. Upper Layer: **<Insert thickness>**.
- F. Composite Polyisocyanurate Board Insulation: ASTM C1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber-mat facer on the other surface.
1. Facer: **[Type IV cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch thick] [Type V oriented strand board facer, 7/16 inch thick] [Type VII glass-mat-faced gypsum board facer, 1/4 inch thick]** <Insert material>.

2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 3. Thickness: <Insert thickness>.
- G. Perlite Board Insulation: ASTM C728, Type 1, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.
1. Thermal Resistance: R-value of 2.78 per 1 inch.
 2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 3. Thickness:
 - a. Base Layer: **[1-1/2 inches]** <Insert thickness>.
 - b. Upper Layer: **<Insert thickness>**.
- H. Cellulosic-Fiber Board Insulation: ASTM C208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.
1. Thermal Resistance: R-value of 2.78 per 1 inch.
 2. Size: **[48 by 48 inches] [48 by 96 inches]**.
 3. Thickness:
 - a. Base Layer: **[1 inch] [2 inches]** <Insert thickness>.
 - b. Upper Layer: **<Insert thickness>**.
- I. Cellular-Glass Board Insulation: ASTM C552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
1. Thermal Resistance: R-value of 3.44 per 1 inch.
 2. Size: 24 by 48 inches.
 3. Thickness: <Insert thickness>.
- J. Mineral Wool Insulation - Multi-Density: ASTM C726, Type I, Class 1, comprising monolithic fibrous material having an upper layer with a 11.2 lb/cu. ft. density and a lower layer with a 7.5 lb/cu. ft. density.
1. Thermal Resistance: R-value of 3.8 per 1 inch.
 2. Size: 48 by 48 inches.
 3. Thickness:
 - a. Base Layer: **[2 inches]** <Insert thickness>.
 - b. Upper Layer: **<Insert thickness>**.
 4. Face Treatment: Bitumen coating.
- K. Mineral Wool Insulation - Single Density: ASTM C726, Type II, Class 1, comprising monolithic fibrous material having a 12.5 lb/cu. ft. density.
1. Thermal Resistance: R-value of 4.0 per 1 inch.
 2. Size: 48 by 48 inches.
 3. Thickness: 1 inch.
 4. Face Treatment: Bitumen coating.

- L. Tapered Insulation: Provide factory-tapered insulation boards.
 - 1. Material: **[Match roof insulation]** <Insert material>.
 - 2. Minimum Thickness: 1/4 inch.
 - 3. Slope:
 - a. Roof Field: **[1/4 inch per foot]** <Insert slope> unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: **[1/2 inch per foot]** <Insert slope> unless otherwise indicated on Drawings.

2.13 INSULATION ACCESSORIES

- A. General: Roof insulation accessories as recommended in writing by roof membrane manufacturer for intended use, compatible with other roofing system components and suitable for installation method specified.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate, and acceptable to roofing membrane manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation **[to substrate]** **[and]** to another insulation layer as follows:
 - 1. Modified asphaltic, asbestos-free, cold-applied adhesive.
 - 2. Bead-applied, low-rise, one-component or multicomponent urethane adhesive.
 - 3. Full-spread, spray-applied, low-rise, two-component urethane adhesive.
- D. Insulation Cant Strips: **[ASTM C728, perlite insulation board]** **[ASTM C208, Type II, Grade 1, cellulosic-fiber insulation board]**.
- E. Wood Nailer Strips: Comply with requirements in Section 06 10 00 "Rough Carpentry."
- F. Tapered Edge Strips: **[ASTM C728, perlite insulation board]** **[ASTM C208, Type II, Grade 1, cellulosic-fiber insulation board]**.

2.14 COVER BOARD

- A. General: Cover board as recommended in writing by roof membrane manufacturer for intended use; compatible with other roofing system components and suitable for installation method specified.
- B. Cellulosic-Fiber Insulation Cover Board: ASTM C208, Type II, Grade 2, high-density cellulosic-fiber insulation board, having a minimum compressive strength of 40 psi.
 - 1. Thickness: **[1/2 inch]** **[1 inch]** <Insert thickness>.
 - 2. Surface Finish: **[Primed one side]** **[Primed two sides with non-asphaltic primer]** **[Integral coating, six sides]** **[Unprimed]** <Insert finish>.
- C. Oriented Strand Board: DOC PS 2, Exposure 1, 7/16 inch thick.
- D. Glass-Mat Gypsum Cover Board: ASTM C1177/C1177M, water-resistant gypsum board.
 - 1. Thickness: **[1/4 inch]** **[1/2 inch]** **[5/8 inch]**.

2. Surface Finish: [Fiberglass facer] [Factory primed] [Unprimed].
- E. Fiber-Reinforced Gypsum Panel Cover Board: ASTM C1278/C1278M, cellulosic-fiber-reinforced, water-resistant gypsum board.
 1. Thickness: [1/4 inch] [3/8 inch] [1/2 inch] [5/8 inch]
- F. Fiber-Reinforced Cementitious Cover Board: ASTM C1325, fiber-mat-reinforced cementitious board.
 1. Thickness: [7/16 inch] [1/2 inch] [5/8 inch].
- G. Fiber-Reinforced Recycled Plastic Cover Board: Cellulose fiber blended with recycled plastic board.
 1. Thickness: [1/4 inch] [1/2 inch].
 2. Surface Finish: [Fiberglass facer] [Paper facer].
- H. High-Density Polyisocyanurate Cover Board: ASTM C1289, Type II, Class 4, Grade 1, 1/2 inch thick, having a minimum compressive strength of 80 psi.
- I. Polyisocyanurate Cover Board: ASTM C1289, Type II, Class 1, 1/2 inch thick.

2.15 WALKWAYS

- A. Walkway Pads: [Reinforced asphaltic composition pads with slip-resisting mineral-granule surface] [Polymer-modified, reconstituted rubber pads with slip-resisting textured surface], manufactured as a traffic pad for foot traffic and acceptable to roofing membrane manufacturer.
 1. Pad Size: Approximately [36 by 60 inches] [30 by 30 inches] <Insert size>.
 2. Color: [Contrasting with cap sheet] [Gray] [Yellow] [White] <Insert color>.
- B. Walkway Cap Sheet Strips: Matching cap sheet; suitable for installation method specified, and as follows:
 1. Size: [30 by 60 inches] <Insert size>.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Roofing System Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 05 31 00 "Steel Decking."
 4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch out of plane relative to adjoining deck.
 5. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.

6. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than **[75] <Insert number>** percent, or as recommended by roofing system manufacturer, when tested in accordance with ASTM F2170.
 - a. Test Frequency: One test probe per each **[1000 sq. ft.] <Insert area>**, or portion thereof, of roof deck, with not less than three test probes.
 - b. Submit test reports within 24 hours of performing tests.
 7. Verify that concrete-curing compounds that impair adhesion of roofing components to roof deck have been removed.
 8. Verify that joints in concrete roof decks have been grouted flush with top of concrete.
 9. Verify that minimum curing period recommended by roofing system manufacturer for lightweight insulating concrete roof decks has passed.
 10. Verify that any damaged sections of cementitious wood-fiber decks have been repaired or replaced.
 11. Verify that adjacent cementitious wood-fiber panels are vertically aligned to within 1/8 inch at top surface.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation in accordance with roofing system manufacturer's written instructions.
 1. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction.
 1. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Prime surface of concrete roof deck with asphalt primer in accordance with roofing system manufacturer's written installation instructions and allow primer to dry.
- D. Perform fastener-pullout tests in accordance with roofing system manufacturer's recommendations.
 1. Submit test result within 24 hours of performing tests.
 - a. Include roofing system manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.
- E. Install sound-absorbing insulation strips in ribs of acoustical steel roof decks in accordance with acoustical roof deck manufacturer's written installation instructions.

3.03 INSTALLATION OF ROOFING, GENERAL

- A. Install roofing system materials and components in accordance with roofing system manufacturer's written installation instructions, **[FM Approvals' RoofNav listed roof] [SPRI's "Directory of Roof Assemblies" listed roof]** assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings. Provide temporary seals to prevent water from entering completed sections of roofing system at the end of workday or when rain is forecast.

1. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Install roofing membrane and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition **[and to not void warranty for existing roofing system]**.
- D. Coordinate installation and transition of roofing system component serving as an air barrier with wall system air barrier specified in Section 07 27 26 "Fluid-Applied Membrane Air Barriers."
- E. Asphalt Heating: Heat and apply hot asphalt in accordance with roofing system manufacturer's written installation instructions.
1. Heat asphalt to its equiviscous temperature, measured at the mop cart or mechanical spreader immediately before installation.
 2. Circulate asphalt during heating.
 3. Do not raise asphalt temperature above equiviscous temperature range more than one hour before time of installation.
 4. Do not exceed asphalt manufacturer's recommended temperature limits during asphalt heating.
 5. Do not heat asphalt within 25 deg F of flash point.
 6. Discard asphalt maintained at a temperature exceeding finished blowing temperature for more than four hours.
 7. Apply hot asphalt within plus or minus 25 deg F of equiviscous temperature.
- F. SEBS-Modified Asphalt Heating: Heat and apply hot asphalt in accordance with roofing system manufacturer's written installation instructions.
- G. Substrate-Joint Penetrations: Prevent hot-applied asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

3.04 INSTALLATION OF SUBSTRATE BOARD

- A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches in adjacent rows.
1. Install substrate board at right angle to flutes of steel roof deck. Locate end joints over crests of steel roof deck.
 2. Tightly butt substrate boards together.
 3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 4. Fasten substrate board to top flanges of steel roof deck in accordance with roofing system manufacturer's written installation instructions and **[FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's "Directory of Roof Assemblies" listed roof assembly requirements for specified Wind-Uplift Load Capacity]** and FM Global Property Loss Prevention Data Sheet 1-29.
 5. Fasten substrate board to top flanges of steel roof deck to resist uplift pressure at corners, perimeter, and field of roof in accordance with roofing system manufacturer's written installation instructions.
 6. Loosely lay substrate board over roof deck.

3.05 INSTALLATION OF VAPOR RETARDER

- A. Loosely lay vapor retarder sheet in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches, respectively.
 - 1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 - 2. Continuously seal side and end laps.
- B. Prime substrate, if required by manufacturer. Install sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 and 6 inches, respectively.
 - 1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 - 2. Seal laps by rolling.
- C. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.06 INSTALLATION OF INSULATION

- A. Coordinate installation of roofing system components, so insulation is not exposed to precipitation or left exposed at end of workday.
- B. Comply with roofing system and insulation manufacturer's written installation instructions. Install minimum of two layers of insulation under area of roofing to achieve required thickness.
- C. Install each layer of insulation with [joints staggered not less than **24 inches** in adjacent rows] [end joints staggered not less than **12 inches** in adjacent rows] and offset not less than 12 inches from previous layer.
 - 1. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - 2. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - 3. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus 24 inches.
 - 4. Trim insulation, so that water flow is unrestricted.
 - 5. Fill gaps exceeding 1/4 inch with insulation.
 - 6. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - 7. Secure insulation in accordance with [FM Approvals' RoofNav for specified Windstorm Resistance Classification] [SPRI's "Directory of Roof Assemblies" for specified Wind-Uplift Load Capacity].
 - 8. Secure insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
- D. Nailer Strips: Mechanically fasten 4-inch nominal-width, wood nailer strips of same thickness as insulation perpendicular to sloped roof deck at the following spacing:
 - 1. **[16 ft.] <Insert dimension>** apart for roof slopes greater than 1 inch per 12 inches but less than 3 inches per 12 inches.
 - 2. **[48 inches] <Insert dimension>** apart for roof slopes greater than 3 inches per 12 inches.

- E. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing system with vertical surfaces or angle changes greater than 45 degrees.

3.07 INSTALLATION OF COVER BOARD

- A. Comply with roofing system and insulation manufacturer's written installation instructions.
- B. Install cover board over insulation with long joints in continuous straight lines, with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 3. Trim cover board, so that water flow is unrestricted.
 4. Cut and fit cover board tight to nailers, projections, and penetrations.
 5. Secure cover board to insulation in accordance with [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's "Directory of Roof Assemblies" listed roof assembly requirements for specified Wind-Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29.
 6. Secure cover board to resist specified uplift pressure at corners, perimeter, and field of roof.
- C. Install sheathing paper over cover board and immediately beneath roofing membrane.

3.08 INSTALLATION OF ELD COMPONENTS

- A. Install conductive medium over **[cover board] [insulation] [and on vertical locations to receive roofing membrane]** in accordance with manufacturer's written installation instructions.
- B. Install sensors, **[wire loop,] [conductive fabric,]** connections, and accessory items required for complete system in accordance with manufacturer's written installation instructions.

3.09 INSTALLATION OF ROOFING MEMBRANE, GENERAL

- A. Install roofing system in accordance with roofing system manufacturer's written installation instructions and applicable recommendations in NRCA's "Quality-Control Guidelines for the Application of Polymer-Modified Bitumen Roofing."
- B. Start installation of roofing in presence of roofing system manufacturer's technical personnel **[and Owner's testing and inspection agency]**.
- C. Where roof slope exceeds **[1/2 inch per 12 inches] [3/4 inch per 12 inches] <Insert slope>**, install roofing membrane sheets parallel with slope.
 1. Backnail roofing sheets to **[nailer strips] [substrate]** in accordance with roofing system manufacturer's written installation instructions.
- D. Coordinate installation of roofing system so insulation and other components of roofing system not permanently exposed are not subjected to precipitation or left uncovered at end of workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in adhesive, with joints and edges sealed.
2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.
3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.10 INSTALLATION OF BASE SHEET

- A. Prime surface of substrate with primer in accordance with roofing membrane manufacturer's written installation instructions and allow primer to dry.
- B. Before installing, unroll base sheet, cut into workable lengths, and allow to lie flat for a time period recommended by roofing membrane manufacturer for the ambient temperature at which base sheet will be installed.
- C. Loosely lay one course of sheathing paper, lapping edges, and ends a minimum of 2 inches and 6 inches, respectively.
- D. Installation of Base Sheet:
 1. Install base sheet in accordance with roofing membrane manufacturer's written installation instructions, starting at low point of roof.
 2. Extend base sheet over and terminate above cants.
 3. Install base sheet in a shingle fashion.
 4. Adhere base sheet to substrate in a uniform coating of **[hot-applied asphalt] [cold-applied adhesive]**.
 5. Self-adhere base sheet to substrate.
 6. Mechanically fasten base sheet to substrate using fasteners specifically designed and sized for **[wood] [wood panel]** decks.
 - a. Fasten base sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 7. Install base sheet without wrinkles or rears, and free from air pockets.
 8. Laps: Accurately align base sheet, without stretching, and maintain uniform side and end laps.
 - a. Lap side laps as recommended by roofing membrane manufacturer but not less than 3 inches.
 - b. Lap end laps as recommended by roofing membrane manufacturer but not less than 12 inches. Stagger end laps not less than 18 inches.
 - c. Completely bond and seal laps, leaving no voids.
 - d. Roll laps with a 20 lb roller.
 9. Repair tears and voids in laps and lapped seams not completely sealed.
 10. Apply pressure to body of base sheet in accordance with roofing membrane manufacturer's written installation instructions, to remove air pockets and to result in complete adhesion of base sheet to substrate.
- E. Installation of Vented Base Sheet:

1. [Mechanically fasten, using fasteners specifically designed and sized for applicable substrate] [Spot or strip mop to substrate with hot-applied asphalt] vented base sheet with vented side down.
 - a. Fasten vented base sheet in accordance with [FM Approval's RoofNav for specified Windstorm Resistance Classification] [SPRI's "Directory of Roof Assemblies" for specified Wind-Uplift Load Capacity].
 - b. Fasten vented base sheet to resist uplift pressure at corners, perimeter, and field of roof.

3.11 INSTALLATION OF CAP SHEET

- A. Before installing, unroll cap sheet, cut into workable lengths, and allow to lie flat for a time period recommended by roofing membrane manufacturer for the ambient temperature at which cap sheet will be installed.
- B. Install cap sheet in accordance with roofing membrane manufacturer's written installation instructions, starting at low point of roof.
 1. Extend cap sheet over and terminate above cants.
 2. Install cap sheet in a shingle fashion.
 3. Adhere cap sheet to bottom layer in a uniform coating of **[hot-applied asphalt]** **[cold-applied adhesive]**.
 4. Self-adhere cap sheet to bottom layer.
 5. Mechanically fasten cap sheet to bottom layer using fasteners specifically designed and sized for **[wood]** **[wood panel]** decks.
 - a. Fasten cap sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 6. Install cap sheet without wrinkles or tears, and free from air pockets.
 7. Install cap sheet so side and end laps shed water.
- C. Laps: Accurately align roof sheets, without stretching, and maintain uniform side and end laps.
 1. Lap side laps as recommended by roofing membrane manufacturer but not less than 3 inches.
 2. Lap end laps as recommended by roofing membrane manufacturer but not less than 12 inches. Stagger end laps not less than 18 inches.
 3. Completely bond and seal laps, leaving no voids.
 4. Roll laps with a 20 lb roller.
 5. Repair tears and voids in laps and lapped seams not completely sealed.
- D. Apply pressure to body of cap sheet in accordance with roofing membrane manufacturer's written installation instructions, to remove air pockets and result in complete adhesion of cap sheet to substrate.
- E. Apply roofing granules of same color as cap sheet to cover exuded bead at laps while bead is hot, to provide a continuous color appearance.

3.12 INSTALLATION OF BASE FLASHING AND STRIPPING

- A. Install base flashing sheet over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates in accordance with roofing system manufacturer's written installation instructions and as follows:
1. Prime substrates with asphalt primer if required by roofing system manufacturer.
 2. Backer Sheet Installation: [Mechanically fasten backer sheet to walls or parapets. Adhere backer sheet over roofing membrane at cants] [Adhere backer sheet to substrate in a uniform layer of] cold-applied adhesive.
 3. Base Flashing Sheet Installation, Hot: Adhere base flashing sheet to substrate in a solid mopping of hot-applied asphalt applied at asphalt temperature recommended by base flashing sheet manufacturer. Apply hot-applied asphalt to back of base flashing sheet if recommended by roofing system manufacturer.
 - a. Perform heat-welded installation in accordance with NFPA 241, including two-hour fire watch after torches have been extinguished.
 4. Base Flashing Sheet Installation, Cold: Adhere base flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.
- B. Extend base flashing sheet up walls or parapets a minimum of 8 inches above roofing membrane and 4 inches onto field of roofing membrane.
- C. Mechanically fasten top of base flashing sheet securely at terminations and perimeter of roof.
1. Seal top termination of base flashing sheet.
- D. Install liquid flashing system in accordance with roofing system manufacturer's written installation instructions.
1. Extend liquid flashing not less than 3 inches in all directions from edges of item being flashed.
 2. Embed granules, matching color of cap sheet, into wet compound.
- E. Install cap sheet stripping where metal flanges and edgings are set on roof in accordance with roofing system manufacturer's written installation instructions.
- F. Roof Drains: Set **[30-by-30-inch-]** <Insert dimensions> 4 lb flashing in bed of adhesive on completed roofing membrane.
1. Cover flashing with cap sheet stripping, and extend a minimum of **[4 inches]** **[6 inches]** beyond edge of metal flashing onto field of roofing membrane.
 2. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring.
 3. Install stripping in accordance with roofing system manufacturer's written installation instructions.

3.13 INSTALLATION OF LIQUID FLASHINGS

- A. Preparation of Metal Substrates: Grind to generate a "bright metal" surface and remove loose particles. Extend preparation area a minimum of 1/2-inch (13 mm) beyond the termination of the roofing/flashing system. Notch steel surfaces to provide a rust-stop where detailed.
- B. Base Flashing Application:
1. Using masking tape, mask the perimeter of the area to receive the flashing system. Apply resin primer to substrates requiring additional preparation and allow primer to cure.

2. Pre-cut fleece to ensure a proper fit at transitions and corners prior to membrane application.
3. Apply an even, generous base coat of flashing resin to prepared surfaces using a roller at the rate specified by the resin manufacturer. Work the fleece into the wet, catalyzed resin using a brush or roller to fully embed the fleece in the resin and remove trapped air. Lap fleece layers a minimum of 2 inch (5 cm) and apply an additional coat of catalyzed resin between layers of overlapping fleece. Again using a roller, apply an even top coat of catalyzed resin immediately following embedment of the fleece at the rate specified by the resin manufacturer, ensuring that the fleece is fully saturated. Ensure that the flashing resin is applied to extend beyond the fleece (maximum ¼-inch (6 mm)). Remove the tape before the catalyzed resin cures. Make allowances for waste, including saturation of roller covers and application equipment.
4. Should work be interrupted for more than 12 hours or the surface of the cured resin becomes dirty or contaminated by the elements, wipe the surface to be lapped with new flashing resin using the specified cleaner/solvent. Allow the surface to dry for a minimum 20 minutes and a maximum 60 minutes before continuing work.

3.14 INSTALLATION OF WALKWAYS

- A. Walkway Pads: Install walkway pads using units of size indicated or, if not indicated, of manufacturer's standard size; secure to cap sheet in accordance with roofing system manufacturer's written installation instructions.
 1. Install walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roofing system manufacturer's warranty requirements.
 2. Provide 3-inch clearance between adjoining pads.
- B. Walkway Cap Sheet Strips: Install walkway cap sheet strips over roofing membrane, using same installation method as that used for cap sheet.
 1. Install walkways strips at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.

- f. Locations indicated on Drawings.
 - g. As required by roofing membrane manufacturer's warranty requirements.
2. Provide 3-inch clearance between adjoining strips.

3.15 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, roofing membrane installation, flashings, protection, and drainage components, and to furnish reports to Architect.
- B. Perform the following tests:
- 1. Infrared Thermography: Testing agency surveys entire roof area using infrared color thermography in accordance with ASTM C1153.
 - a. Perform tests before overlying construction is placed.
 - b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing, or by nuclear hydrogen detection testing.
 - c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - d. Cost of retesting is Contractor's responsibility.
 - e. Testing agency to prepare survey report of initial scan indicating locations of entrapped moisture if any.
- C. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:
- 1. Determine approximate quantities of components within roofing membrane in accordance with ASTM D3617/D3617M.
 - 2. Examine test specimens for voids between plies in accordance with ASTM D3617/D3617M and to comply with criteria established in Appendix 3 of NRCA's "Quality-Control Guidelines for the Application of Polymer-Modified Bitumen Roofing."
 - 3. Repair areas where test cuts were made in accordance with roofing system manufacturer's written installation instructions.
- D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.
- 1. Notify Architect and Owner 48 hours in advance of date and time of inspection.
- E. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- F. Roofing system will be considered defective if it does not pass tests and inspections.
- 1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.16 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period.

1. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and in accordance with warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.17 ROOFING SYSTEM INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing System Installer," has performed roofing and associated Work on the following Project:
1. Owner: <Insert name of Owner>.
 2. Owner Address: <Insert address>.
 3. Building Name/Type: <Insert information>.
 4. Building Address: <Insert address>.
 5. Area of Work: <Insert information>.
 6. Warranty Period: **[Two] [Five]** <Insert number> years from date of Substantial Completion..
 7. Date of Substantial Completion: _____.
- B. AND WHEREAS Roofing System Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said Work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing System Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing System Installer will, at Roofing System Installer's own cost and expense, make or cause to be made such repairs to or replacements of said Work as are necessary to correct faulty and defective Work and as are necessary to maintain said Work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the Work;
 - f. vapor condensation on bottom of roofing; and

- g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
- 2. When Work has been damaged by any of foregoing causes, Warranty will be null and void until such damage has been repaired by Roofing System Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
- 3. Roofing System Installer is responsible for damage to Work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of Work.
- 4. During Warranty Period, if Owner allows alteration of Work by anyone other than Roofing System Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty will become null and void on date of said alterations, but only to the extent said alterations affect Work covered by this Warranty. If Owner engages Roofing System Installer to perform said alterations, Warranty will not become null and void unless Roofing System Installer, before starting said Work, will have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate Work, thereby reasonably justifying a limitation or termination of this Warranty.
- 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty will become null and void on date of said change, but only to the extent said change affects Work covered by this Warranty.
- 6. Owner will promptly notify Roofing System Installer of observed, known, or suspected leaks, defects, or deterioration and afford reasonable opportunity for Roofing System Installer to inspect Work to examine evidence of such leaks, defects, or deterioration.
- 7. This Warranty is recognized to be the only warranty of Roofing System Installer on said Work and will not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty will not operate to relieve Roofing System Installer of responsibility for performance of original Work in accordance with requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of

_____, _____.

- 1. Authorized Signature: _____.
- 2. Name: _____.
- 3. Title: _____.

END OF SECTION

SECTION 07 54 19

POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Polyvinyl chloride (PVC) roofing system.
2. Accessory roofing materials.
3. Substrate board.
4. Vapor retarder.
5. Roof insulation.
6. Insulation accessories and cover board.
7. Asphalt materials.
8. Electronic leak detection (ELD) materials.
9. Ballast.
10. Walkways.

B. Section includes installation of sound-absorbing insulation strips in ribs of roof deck. Sound-absorbing insulation strips are furnished under Section 05 31 00 "Steel Decking."

C. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood nailers, curbs, and blocking; and for wood-based, structural-use roof deck panels.
2. Section 06 16 00 "Sheathing" for wood-based, structural-use roof deck panels.
3. Section 07 21 00 "Thermal Insulation" for insulation beneath the roof deck.
4. Section 07 27 19 "Self-Adhered Sheet Membrane Air & Water Barrier".
5. Section 07 27 26 "Fluid Applied Air, Water and Vapor Barrier" *.
6. Section 07 62 00 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
7. Section 07 71 00 "Roof Specialties" for [premanufactured copings] [and] [roof edge flashings].
8. Section 07 71 29 "Manufactured Roof Expansion Joints" for premanufactured roof expansion-joint assemblies.
9. Section 07 92 00 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
10. Section 22 14 23 "Storm Drainage Piping Specialties" for roof drains.

1.02 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D1079 and glossary in NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to work of this Section.

1.03 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at [Project site] <Insert location>.

1. Meet with Owner, Architect, [Construction Manager,] Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

B. Preinstallation Roofing Conference: Conduct conference at [Project site] <Insert location>.

1. Meet with Owner, Architect, [Construction Manager,] Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.04 ACTION SUBMITTALS

- A. Product Data:
 - 1. Polyvinyl chloride (PVC) roofing system.
 - 2. Accessory roofing materials.
 - 3. Substrate board.
 - 4. Vapor retarder.
 - 5. Roof insulation.
 - 6. Insulation accessories and cover board.
 - 7. Asphalt materials.
 - 8. Electronic leak detection (ELD) materials.
 - 9. Ballast.
 - 10. Walkways.
 - 11. For insulation and roof system component fasteners, include copy of [FM Approvals' RoofNav] [SPRI's Directory of Roof Assemblies] listing.

 - B. Shop Drawings: Include roof plans, sections, details, and attachments to other work, including the following:
 - 1. Layout and thickness of insulation.
 - 2. Base flashings and membrane terminations.
 - 3. Flashing details at penetrations.
 - 4. Retain one or more subparagraphs below.
 - 5. Tapered insulation thickness and slopes.
 - 6. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
 - 7. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
 - 8. Tie-in with air barrier.

 - C. Samples for Verification: For the following products:
 - 1. Retain one or more subparagraphs below.
 - 2. Roof membrane and flashing, of color required.
 - 3. Aggregate surfacing material in gradation [and color] required.
 - 4. Roof paver [, full sized,] in each color and texture required.
 - 5. Walkway pads or rolls, of color required.

 - D. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer and manufacturer.
 - B. Manufacturer Certificates:

1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - a. Submit evidence of compliance with performance requirements.
 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- C. Product Test Reports: For roof membrane and insulation, tests performed by independent qualified testing agency indicating compliance with specified requirements.
- D. Evaluation Reports: For components of roofing system, from ICC-ES.
- E. Field Test Reports:
1. Concrete internal relative humidity test reports.
 2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.
- F. Field quality-control reports.
- G. Sample Warranties: For manufacturer's special warranties.
- H. LEED Documentation: Submit documentation showing design compliance.
- 1.06 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For roofing system to include in maintenance manuals.
 - B. Certified statement from existing roof membrane manufacturer stating that existing roof warranty has not been affected by Work performed under this Section.
- 1.07 QUALITY ASSURANCE
- A. Qualifications:
1. Manufacturers: A qualified manufacturer that is [UL listed] [listed in FM Approvals' RoofNav] [listed in SPRI's Directory of Roof Assemblies] for roofing system identical to that used for this Project.
 2. Installers: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
- 1.08 DELIVERY, STORAGE, AND HANDLING
- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
 - B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.09 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes roof membrane, base flashings, [roof insulation,] [fasteners,] [cover boards,] [substrate board,] [roof pavers,] and other components of roofing system.
 - 2. Warranty Period: 30 years from date of Substantial Completion.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as roof membrane, base flashing, [roof insulation,] [fasteners,] [cover boards,] [substrate boards,] [vapor retarders,] [roof pavers,] and [walkway products,] for the following warranty period:
 - 1. Warranty Period: [Two] <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing and base flashings to withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings to remain watertight.
 - 1. Accelerated Weathering: Roof membrane to withstand 2000 hours of exposure when tested according to ASTM G152, ASTM G154, or ASTM G155.
 - 2. Impact Resistance: Roof membrane to resist impact damage when tested according to ASTM D3746, ASTM D4272/D4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.
- B. Material Compatibility: Roofing materials to be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.
- C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897:
 - 1. Zone 1 (Roof Area Field): <Insert lbf/sq. ft.>.

2. Zone 2 (Roof Area Perimeter): <Insert lbf/sq. ft.>.
 - a. Location: From roof edge to <Insert dimension> inside roof edge.
 3. Zone 3 (Roof Area Corners): <Insert lbf/sq. ft.>.
 - a. Location: <Insert dimension> in each direction from building corner.
- D. FM Approvals' RoofNav Listing: Roof membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in FM Approvals' RoofNav for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals Certification markings.
1. Fire/Windstorm Classification: [Class 1A-60] [Class 1A-75] [Class 1A-90] [Class 1A-105] [Class 1A-120] <Insert class>.
 2. Hail-Resistance Rating: FM Global Property Loss Prevention Data Sheet 1-34 [MH] [SH] [VSH].
- E. SPRI's Directory of Roof Assemblies Listing: Roof membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in SPRI's Directory of Roof Assemblies for roof assembly identical for that specified for this Project.
1. Wind Uplift Load Capacity: [60 psf] [75 psf] [90 psf] [105 psf] [120 psf] <Insert capacity>.
- F. Energy Star Listing: Roofing system to be listed on the DOE's Energy Star "Roof Products Qualified Product List" for [low] [steep]-slope roof products.
- G. Energy Performance: Roofing system to have an initial solar reflectance of not less than [0.70] <Insert value> and an emissivity of not less than [0.75] <Insert value> when tested in accordance with ANSI/CRRC S100.
- H. Exterior Fire-Test Exposure: ASTM E108 or UL 790, [Class A] [Class B] [Class C]; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- I. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated. Identify products with appropriate markings of applicable testing agency.
- 2.02 POLYVINYL CHLORIDE (PVC) ROOFING SYSTEM
- A. PVC Sheet Type III: ASTM D4434/D4434M, fabric reinforced.
1. Thickness: [50 mils] [60 mils] [80 mils] <Insert value>.
 2. Exposed Face Color: [White] [Gray] <Insert color>.
- B. PVC Sheet Type III, Fabric Backed: ASTM D4434/D4434M, fabric reinforced and fabric backed.
1. Membrane Thickness: [50 mils] [60 mils] [80 mils] <Insert value>.
 2. Exposed Face Color: [White] [Gray] <Insert color>.
- C. PVC Sheet Type II: ASTM D4434/D4434M, glass-fiber reinforced, felt backed.
1. Thickness: [60 mils] [72 mils] [80 mils] <Insert value>.
 2. Exposed Face Color: [Copper brown] [Evergreen] [Lead gray] [Patina green] <Insert color>.

- D. PVC Sheet Type II, Fabric Backed: ASTM D4434/D4434M, glass-fiber reinforced, fabric backed.
 - 1. Thickness: [50 mils] [60 mils] [80 mils] <Insert value>.
 - 2. Exposed Face Color: White.
- E. PVC Sheet Type IV: ASTM D4434/D4434M, fabric reinforced.
 - 1. Thickness: [40 mils] <Insert value>.
 - 2. Exposed Face Color: [White] [Tan] [Gray] [Dark gray] <Insert color>.
- F. PVC Nitrate Alloy Sheet: ASTM D4434/D4434M, Type III, polyester-reinforced, thermoplastic acrylonitrile-butadiene polymer (NBP) blend.
 - 1. Thickness: [50 mils, minimum] [60 mils] [80 mils] <Insert value>.
 - 2. Exposed Face Color: [White] [Tan] [Gray] <Insert color>.
- G. PVC Nitrate Alloy Sheet, Fabric Backed: ASTM D4434/D4434M, Type III, polyester-reinforced, thermoplastic acrylonitrile-butadiene polymer (NBP) blend; fabric backed.
 - 1. Membrane Thickness: 50 mils.
 - 2. Exposed Face Color: [White] [Tan] [Gray] <Insert color>.
- H. PVC Ketone Ethylene Ester (KEE) Sheet: ASTM D4434/D4434M, Type III.
 - 1. Membrane Thickness: [50 mils] [60 mils] [80 mils] <Insert value>.
 - 2. Exposed Face Color: [White] [Tan] [Gray] <Insert color>.
- I. PVC Ketone Ethylene Ester (KEE) Sheet, Fabric Backed: ASTM D4434/D4434M, Type III, with fabric backing.
 - 1. Membrane Thickness: [50 mils] [60 mils] [80 mils] <Insert value>.
 - 2. Exposed Face Color: [White] [Tan] [Gray] <Insert color>.
- J. Source Limitations: Obtain components for roofing system from [roof membrane manufacturer] [or] [manufacturers approved by roof membrane manufacturer].

2.03 ACCESSORY ROOFING MATERIALS

- A. General: Accessory materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.
 - 1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Liquid Flashings: PMMA or PUMA liquid flashings.
- C. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet.
- D. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.
- E. Roof Vents: As recommended by roof membrane manufacturer.
 - 1. Size: Not less than 4-inch diameter.
- F. Bonding Adhesive: Manufacturer's standard [, water based].

- G. Water-Based, Fabric-Backed Membrane Adhesive: Roofing system manufacturer's standard water-based, cold-applied adhesive formulated for compatibility and use with fabric-backed membrane roofing.
- H. Low-Rise, Urethane, Fabric-Backed Membrane Adhesive: Roof system manufacturer's standard spray-applied, low-rise, two-component urethane adhesive formulated for compatibility and use with fabric-backed membrane roofing.
 - 1. Slip Sheet: [ASTM D2178/D2178M, Type IV, glass fiber, asphalt-impregnated felt] [Manufacturer's standard, of thickness required for application].
- I. Asphalt-Coated, Glass-Fiber-Mat, Venting Base Sheet: ASTM D4897/D4897M, Type II; nonperforated, asphalt-impregnated fiberglass reinforced, with mineral granular patterned surfacing on bottom surface.
- J. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- K. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick, prepunched.
- L. Ballast Retaining Bar: Perimeter securement system consisting of a slotted extruded-aluminum retention bar with an integrated compression fastening strip.
 - 1. Fasteners: 1-1/2-inch stainless steel fasteners with neoprene washers.
- M. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate, and acceptable to roofing system manufacturer.
- N. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.04 SUBSTRATE BOARD

- A. Gypsum Board, Type X: ASTM C1396/C1396M.
 - 1. Thickness: 5/8 inch.
- B. Glass-Mat Gypsum Roof Substrate Board: ASTM C1177/C1177M, water-resistant gypsum board.
 - 1. Thickness: [1/4 inch] [1/2 inch] [Type X, 5/8 inch].
 - 2. Surface Finish: [Factory primed] [Unprimed].
- C. Fiber-Reinforced Gypsum Roof Board: ASTM C1278/C1278M, cellulosic-fiber reinforced, water-resistant gypsum board.
 - 1. Thickness: [1/4 inch] [3/8 inch] [1/2 inch] [5/8 inch].
- D. Perlite Board: ASTM C728, sealed coated.
 - 1. Thickness: [3/4 inch] [1 inch].

- E. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

2.05 VAPOR RETARDER

- A. Polyethylene Film: ASTM D4397, [6 mils] [10 mils] thick, minimum, with maximum permeance rating of [0.13 perm] [0.76 perm].
 - 1. Tape: Pressure-sensitive tape of type recommended by vapor retarder manufacturer for sealing joints and penetrations in vapor retarder.
 - 2. Adhesive: Manufacturer's standard lap adhesive, listed by FM Approvals for vapor retarder application.
- B. Laminated Sheet Vapor Retarder: Two layer, fire-retardant polyethylene laminate, reinforced with cord grid.
 - 1. Permeance Rating: Not more than 0.062 perm when tested in accordance with ASTM E96/E96M.
 - 2. Flame-Spread Index: Not more than 5 when tested in accordance with ASTM E84.
 - 3. Smoke-Developed Index: Not more than 35 when tested in accordance with ASTM E84.
 - 4. Tape: Pressure-sensitive tape of type recommended by vapor retarder manufacturer for sealing joints and penetrations in vapor retarder.
- C. Rubberized-Asphalt-Sheet Vapor Retarder, Self-Adhering: ASTM D1970/D1970M, polyethylene film laminated to layer of rubberized asphalt adhesive, minimum 40-mil total thickness; maximum permeance rating of 0.1 perm; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor retarder manufacturer.
- D. Butyl-Rubber-Sheet Vapor Retarder, Self-Adhering: Polyethylene film laminated to layer of butyl rubber adhesive, minimum 30-mil total thickness; maximum permeance rating of 0.1 perm; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor retarder manufacturer.
- E. Glass-Fiber Felts: ASTM D2178/D2178M, Type IV, asphalt impregnated.

2.06 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured [or approved] by PVC roof membrane manufacturer [, approved for use in FM Approvals' RoofNav listed roof assemblies] [, approved for use in SPRI's Directory of Roof Assemblies listed roof assemblies].
- B. Extruded-Polystyrene Board Insulation: ASTM C578, [Type IV, 1.45-lb/cu. ft.] [minimum density, 25 psi minimum compressive strength] [Type V, 3.00-lb/cu. ft. minimum density, 100 psi minimum compressive strength], square edged.
 - 1. Thermal Resistance: R-value of 5.0 per 1 inch.
 - 2. Size: [48 by 48 inches] [48 by 96 inches].
 - 3. Thickness:
 - a. Base Layer: [1-1/2 inches] <Insert thickness>.
 - b. Upper Layer: <Insert thickness>.

- C. Molded (Expanded) Polystyrene Board Insulation: ASTM C578, Type VIII, 1.15-lb/cu. ft. minimum density, 13-psi minimum compressive strength, square edge.
1. Thermal Resistance: R-value of 3.8 per 1 inch.
 2. Size: [48 by 48 inches] [48 by 96 inches].
 3. Thickness:
 - a. Base Layer: [1-1/2 inches] <Insert thickness>.
 - b. Upper Layer: <Insert thickness>.
- D. Composite Molded (Expanded) Polystyrene Board Insulation: ASTM C578, [Type II, 1.35-lb/cu. ft.] [Type VIII, 1.15-lb/cu. ft.] [Type IX, 1.8-lb/cu. ft.] minimum density, with factory-applied facings, as follows:
1. Facer: [ASTM C208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch thick] [DOC PS 2, Exposure 1, oriented strand board, 7/16 inch thick] <Insert material>.
 2. Size: [48 by 48 inches] [48 by 96 inches].
 3. Thickness: <Insert thickness>.
- E. Polyisocyanurate Board Insulation: ASTM C1289, [Type II, Class 1, Grade 2] [Type II, Class 2, Grade 2], felt or glass-fiber mat facer on both major surfaces.
1. Compressive Strength: [20 psi] [25 psi].
 2. Size: [48 by 48 inches] [48 by 96 inches].
 3. Thickness:
 - a. Base Layer: [1-1/2 inches] <Insert thickness>.
 - b. Upper Layer: <Insert thickness>.
- F. Composite Polyisocyanurate Board Insulation: ASTM C1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other.
1. Facer: [Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch thick] [Type V, oriented strand board facer, 7/16 inch thick] [Type VII, glass-mat-faced gypsum board facer, 1/4 inch thick] <Insert material>.
 2. Size: [48 by 48 inches] [48 by 96 inches].
 3. Thickness: <Insert thickness>.
- G. Perlite Board Insulation: ASTM C728, Type 1, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.
1. Thermal Resistance: R-value of 2.78 per 1 inch.
 2. Size: [48 by 48 inches] [48 by 96 inches].
 3. Thickness:
 - a. Base Layer: [1-1/2 inches] <Insert thickness>.
 - b. Upper Layer: <Insert thickness>.

- H. Cellulosic-Fiber Board Insulation: ASTM C208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.
1. Thermal Resistance: R-value of 2.78 per 1 inch.
 2. Size: **[48 by 48 inches]** **[48 by 96 inches]**.
 3. Thickness:
 - a. Base Layer: **[1 inch]** **[2 inches]** <Insert thickness>.
 - b. Upper Layer: <Insert thickness>.
- I. Cellular Glass Board Insulation: ASTM C552, Type IV, rigid, cellular glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
1. Thermal Resistance: R-value of 3.44 per 1 inch.
 2. Size: 24 by 48 inches.
 3. Thickness: <Insert thickness>.
- J. Mineral Wool Insulation - Multi-Density: ASTM C726, Type I, Class 1, comprising monolithic fibrous material having an upper layer of 11.2-lb/cu. ft. density, and a lower layer of 7.5-lb/cu. ft. density.
1. Thermal Resistance: R-value of 3.8 per 1 inch.
 2. Size: 48 by 48 inches.
 3. Thickness:
 - a. Base Layer: **[2 inches]** <Insert thickness>.
 - b. Upper Layer: <Insert thickness>.
 4. Face Treatment: Bitumen coating.
- K. Mineral Wool Insulation - Single Density: ASTM C726, Type II, Class 1, comprising monolithic fibrous material having 12.5-lb/cu. ft. density.
1. Thermal Resistance: R-value of 4.0 per 1 inch.
 2. Size: 48 by 48 inches.
 3. Thickness: 1 inch.
 4. Face Treatment: Bitumen coating.
- L. Tapered Insulation: Provide factory-tapered insulation boards.
1. Material: **[Match roof insulation]** <Insert material>.
 2. Minimum Thickness: 1/4 inch.
 3. Slope:
 - a. Roof Field: **[1/4 inch per foot]** <Insert slope> unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: **[1/2 inch per foot]** <Insert slope> unless otherwise indicated on Drawings.

2.07 INSULATION ACCESSORIES AND COVER BOARD

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation [and cover boards] to substrate, and acceptable to roofing system manufacturer.
- C. Induction-Welding Plates: Minimum 3-inch diameter with recessed center, 0.034-inch thick, aluminum-zinc-alloy-coated steel plates, factory-coated with adhesive formulated for roof membrane, with corresponding corrosion-resistant fasteners [and thermal isolation spacers below plates].
- D. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 - 1. Modified asphaltic, asbestos-free, cold-applied adhesive.
 - 2. Bead-applied, low-rise, one-component, or multicomponent urethane adhesive.
 - 3. Full-spread, spray-applied, low-rise, two-component urethane adhesive.
- E. Cellulosic-Fiber Insulation Cover Board: ASTM C208, Type II, Grade 2, high-density cellulosic-fiber insulation board, having a minimum compressive strength of 40 psi.
 - 1. Thickness: [1/2 inch] [1 inch] <Insert thickness>.
 - 2. Surface finish: [Primed one side] [Primed two sides with non-asphaltic primer] [Integral coating, six sides] [Unprimed] <Insert finish>.
- F. Oriented Strand Board: DOC PS 2, Exposure 1, 7/16 inch thick.
- G. Glass-Mat Gypsum Cover Board: ASTM C1177/C1177M, water-resistant gypsum board.
 - 1. Thickness: [1/4 inch] [1/2 inch] [5/8 inch].
 - 2. Surface Finish: [Fiberglass facer] [Factory primed] [Unprimed].
- H. Fiber-Reinforced Gypsum Roof Board: ASTM C1278/C1278M, cellulosic-fiber reinforced, water-resistant gypsum board.
 - 1. Thickness: [1/4 inch] [3/8 inch] [1/2 inch] [5/8 inch].
- I. Fiber-Reinforced Cementitious Cover Board: ASTM C1325, fiber-mat-reinforced cementitious board.
 - 1. Thickness: [7/16 inch] [1/2 inch] [5/8 inch].
- J. Fiber-Reinforced Recycled Plastic Cover Board: Cellulose fiber blended with recycled plastic board.
 - 1. Thickness: [1/4 inch] [1/2 inch].
 - 2. Surface finish: [Fiberglass facer] [Paper facer].
- K. Polyisocyanurate Insulation Cover Board: ASTM C1289 Type II, Class 4, Grade 1, 1/2 inch thick, having a minimum compressive strength of 80 psi.
- L. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

2.08 ASPHALT MATERIALS

- A. Roofing Asphalt: [ASTM D312/D312M, Type III or Type IV] [ASTM D6152/D6152M, SEBS modified].
- B. Asphalt Primer: ASTM D41/D41M.

2.09 ELECTRONIC LEAK DETECTION (ELD) MATERIALS

- A. Conductive Medium: Materials providing less than 104 ohms per square as determined in accordance with ASTM D4496 and approved by roof membrane manufacturer.
 - 1. Electrically Conductive Primer: Water-based, non-flammable, nonmetallic, low-VOC primer [, UL listed and FM Global approved].
 - 2. Grounding Screen: [Welded, stainless steel mesh] [Aluminum screen], for use with vector mapping system [, FM Global approved].
 - 3. Electrically Conductive Fabric: Non-abrasive felt.
- B. Leak Detection and Moisture-Monitoring System: Permanent, embedded leak detection and moisture-monitoring system.
 - 1. Sensors measuring moisture content [, temperature, and vapor drive], placed [below roof insulation] [over vapor barrier] and connected to a monitoring program, with a notification indicating location of breach.
 - 2. Sensors measuring moisture content [, temperature, and vapor drive], in a conductive fabric placed below roof membrane and connected to a monitoring program, with a notification indicating location of breach.

2.10 BALLAST

- A. Aggregate Ballast: [Smooth, washed, riverbed gravel or other acceptable smooth-faced stone] [Crushed gravel or crushed stone] that withstands weather exposure without significant deterioration and does not contribute to membrane degradation, of the following size:
 - 1. Size: [ASTM D448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches] [ASTM D448, Size 3, ranging in size from 1 to 2 inches] [Size 4, ranging in size from 3/4 to 1-1/2 inches] <Insert size>.
- B. Lightweight Roof Pavers: Interlocking, lightweight concrete units, grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled; and as follows:
 - 1. Size: <Insert actual size(s) of pavers>.
 - 2. Weight: <Insert weight or weight range>.
 - 3. Compressive Strength: [2500 psi] [5000 psi] <Insert value>, minimum.
 - 4. Colors and Textures: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].
- C. Heavyweight Roof Pavers: Heavyweight, hydraulically pressed concrete units, [square edged] [with top edges beveled 3/16 inch], factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C140/C140M; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C67; and as follows:
 - 1. Size: [24 by 24 inches] <Insert dimensions>. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch in length, height, and thickness.

2. Weight: [18 lb/sq. ft.] [22 lb/sq. ft.] <Insert value>.
3. Compressive Strength: [7500 psi] [6500 psi] <Insert value>, minimum.
4. Colors and Textures: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].

2.11 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway [pads] [or] [rolls], approximately 3/16 inch thick and acceptable to roofing system manufacturer.
 1. Size: Approximately 36 by 60 inches.
 2. Color: Contrasting with roof membrane.
- B. Walkway Roof Pavers: Heavyweight, hydraulically pressed concrete units, [square edged] [with top edges beveled 3/16 inch], factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C140/C140M; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C67; and as follows:
 1. Size: [24 by 24 inches] <Insert dimensions>. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch in length, height, and thickness.
 2. Weight: [18 lb/sq. ft.] [22 lb/sq. ft.] <Insert value>.
 3. Compressive Strength: [7500 psi] [6500 psi] <Insert value>, minimum.
 4. Colors and Textures: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 05 31 00 "Steel Decking."
 4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 5. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than [75] <Insert number> percent, or as recommended by roofing system manufacturer, when tested according to ASTM F2170.
 - a. Test Frequency: One test probe per each [1000 sq. ft.] <Insert area>, or portion thereof, of roof deck, with no fewer than three test probes.
 - b. Submit test reports within 24 hours of performing tests.

6. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.
 7. Verify that joints in precast concrete roof decks have been grouted flush with top of concrete.
 8. Verify that minimum curing period recommended by roofing system manufacturer for lightweight insulating concrete roof decks has passed.
 9. Verify that any damaged sections of cementitious wood-fiber decks have been repaired or replaced.
 10. Verify that adjacent cementitious wood-fiber panels are vertically aligned to within 1/8 inch at top surface.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Perform fastener-pullout tests according to roof system manufacturer's written instructions.
 1. Submit test result within 24 hours of performing tests.
 - a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.
- D. Install sound-absorbing insulation strips according to acoustical roof deck manufacturer's written instructions.

3.03 INSTALLATION OF ROOFING, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions, [FM Approvals' RoofNav] [SPRI's Directory of Roof Assemblies] listed roof assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Install roof membrane and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition [and to not void warranty for existing roofing system].
- D. Coordinate installation and transition of roofing system component serving as an air barrier with air barrier specified under Section 07 27 19 "Self-Adhered Sheet Membrane Air & Water Barrier" and Section 07 27 26 "Fluid-Applied Membrane Air Barriers."

3.04 INSTALLATION OF SUBSTRATE BOARD

- A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches in adjacent rows.

1. At steel roof decks, install substrate board at right angle to flutes of deck.
 - a. Locate end joints over crests of steel roof deck.
2. Tightly butt substrate boards together.
3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
4. Fasten substrate board to top flanges of steel deck according to recommendations in [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29.
5. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions.
6. Loosely lay substrate board over roof deck.

3.05 INSTALLATION OF VAPOR RETARDER

- A. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches, respectively.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 2. Continuously seal side and end laps with [tape] [adhesive].
- B. Laminate Sheet: Loosely lay laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches, respectively.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 2. Continuously seal side and end laps with tape.
- C. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 and 6 inches, respectively.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 2. Seal laps by rolling.
- D. Built-Up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches over preceding felt.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 2. Embed each felt in a solid mopping of hot roofing asphalt.
 3. Glaze coat completed surface with hot roofing asphalt.
 4. Apply hot roofing asphalt within plus or minus 25 deg F of equiviscous temperature.
- E. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.06 INSTALLATION OF INSULATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at end of workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Installation Over Metal Decking:
 - 1. Install base layer of insulation with [joints staggered not less than 24 inches in adjacent rows] [end joints staggered not less than 12 inches in adjacent rows] [and with long joints continuous at right angle to flutes of decking].
 - a. Locate end joints over crests of decking.
 - b. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - f. Trim insulation so that water flow is unrestricted.
 - g. Fill gaps exceeding 1/4 inch with insulation.
 - h. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - i. Loosely lay base layer of insulation units over substrate.
 - j. Mechanically attach base layer of insulation [and substrate board] using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - 1) Fasten insulation according to requirements in [FM Approvals' RoofNav for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity].
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 2. Install upper layers of insulation [and tapered insulation] with joints of each layer offset not less than 12 inches from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - f. Trim insulation so that water flow is unrestricted.
 - g. Fill gaps exceeding 1/4 inch with insulation.

- h. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - i. Loosely lay each layer of insulation units over substrate.
 - j. Adhere each layer of insulation to substrate using adhesive according to [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- D. Installation Over Wood and Wood Panel Decking:
- 1. Mechanically fasten slip sheet to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to [wood] [wood panel] decks.
 - a. Fasten slip sheet according to requirements in SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity.
 - b. Fasten slip sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 2. Install base layer of insulation with [joints staggered not less than 24 inches in adjacent rows] [end joints staggered not less than 12 inches in adjacent rows].
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch with insulation.
 - f. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Mechanically attach base layer of insulation [**and substrate board**] using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to [wood] [wood panel] decks.
 - 1) Fasten insulation according to requirements in SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 3. Install upper layers of insulation [and tapered insulation] with joints of each layer offset not less than 12 inches from previous layer of insulation.

- a. Staggered end joints within each layer not less than 24 inches in adjacent rows.
- b. Install with long joints continuous and with end joints staggered not less than 12 inches in adjacent rows.
- c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
- d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
- e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - 1) Trim insulation so that water flow is unrestricted.
- f. Fill gaps exceeding 1/4 inch with insulation.
- g. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
- h. Loosely lay each layer of insulation units over substrate.
- i. Adhere each layer of insulation to substrate using adhesive according to SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

E. Installation Over Concrete Decks:

1. Install base layer of insulation with [joints staggered not less than 24 inches in adjacent rows] [end joints staggered not less than 12 inches in adjacent rows].
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - b. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - c. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - 1) Trim insulation so that water flow is unrestricted.
 - d. Fill gaps exceeding 1/4 inch with insulation.
 - e. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - f. Loosely lay base layer of insulation units over substrate.
 - g. Adhere base layer of insulation to [concrete roof deck] [vapor retarder] according to [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft., and allow primer to dry.

- 2) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 3) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
 2. Install upper layers of insulation **[and tapered insulation]** with joints of each layer offset not less than 12 inches from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch with insulation.
 - g. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to **[FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification]** **[SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity]** and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- F. Installation Over Cementitious Wood-Fiber Decks:
1. Mechanically fasten slip sheet to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to cementitious wood-fiber decks.
 - a. Fasten slip sheet according to requirements in SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity.
 - b. Fasten slip sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 2. Install base layer of insulation with **[joints staggered not less than 24 inches in adjacent rows]** **[end joints staggered not less than 12 inches in adjacent rows]**.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

- b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch with insulation.
 - f. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to slip sheet according to SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
3. Install upper layers of insulation [and tapered insulation] with joints of each layer offset not less than 12 inches from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch with insulation.
 - g. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

- G. Installation Over Lightweight Insulating Concrete Decks:
1. Mechanically fasten vented base sheet to lightweight insulating concrete roof deck, with vented side down, using mechanical fasteners specifically designed and sized for fastening to lightweight insulating concrete decks.
 - a. Fasten vented base sheet according to requirements in [FM Approvals' RoofNav for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity].
 - b. Fasten vented base sheet to resist uplift pressure at corners, perimeter, and field of roof.
 2. Install base layer of insulation with [joints staggered not less than 24 inches in adjacent rows] [end joints staggered not less than 12 inches in adjacent rows].
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.
 - e. Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch with insulation.
 - g. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 - h. Loosely lay base layer of insulation units over substrate.
 - i. Adhere base layer of insulation to vented base sheet according to [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
 3. Install upper layers of insulation [and tapered insulation] with joints of each layer offset not less than 12 inches from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.

- 1) Trim insulation so that water flow is unrestricted.
- f. Fill gaps exceeding 1/4 inch with insulation.
- g. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
- h. Loosely lay each layer of insulation units over substrate.
- i. Adhere each layer of insulation to substrate using adhesive according to [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- H. Place [thermal spacers and] plates on insulation in required fastening patterns [to achieve FM rating] and secure in accordance with manufacturer's instructions.
 1. Install plates and fasteners tight and flat to substrate with no dimpling, and with fastener extending 1 inch minimum into roof deck; do not overdrive fasteners.

3.07 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 4. Adhere cover board to substrate using adhesive according to [FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification] [SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity] and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - a. Set cover board in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - b. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - c. Set cover board in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- B. Install slip sheet over cover board and immediately beneath roof membrane.
- C. Place plates on insulation in required fastening patterns [to achieve FM rating] and secure in accordance with manufacturer's instructions.

1. Install plates and fasteners tight and flat to substrate with no dimpling, and with fastener extending 1 inch minimum into roof deck; do not overdrive fasteners.

3.08 INSTALLATION OF ELD COMPONENTS

- A. Install conductive medium over [cover board] [insulation] [and on vertical locations to receive roof membrane] in accordance with manufacturer's written instructions.
- B. Install sensors, [wire loop] [conductive fabric], connections, and accessory items required for complete system in accordance with manufacturer's written instructions.

3.09 INSTALLATION OF ADHERED ROOF MEMBRANE

- A. Adhere roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roof membrane and allow to relax before installing.
- C. Start installation of roofing in presence of roofing system manufacturer's technical personnel [Owner's testing and inspection agency].
- D. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- E. Bonding Adhesive: Apply to substrate and underside of roof membrane at rate required by manufacturer, and allow to partially dry before installing roof membrane. Do not apply to splice area of roof membrane.
- F. Fabric-Backed Roof Membrane Adhesive: Apply to substrate at rate required by manufacturer, and install fabric-backed roof membrane.
- G. In addition to adhering, mechanically fasten roof membrane securely at terminations, penetrations, and perimeter of roofing.
- H. Apply roof membrane with side laps shingled with slope of roof deck where possible.
- I. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roof membrane and sheet flashings to ensure a watertight seam installation.
 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- J. Spread sealant bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.

3.10 INSTALLATION OF MECHANICALLY FASTENED ROOF MEMBRANE

- A. Mechanically fasten roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roof membrane and allow to relax before installing.

- C. For in-splice attachment, install roof membrane with long dimension perpendicular to steel roof deck flutes.
- D. Start installation of roofing in presence of roofing system manufacturer's technical personnel [and Owner's testing and inspection agency].
- E. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- F. Mechanically fasten or adhere roof membrane securely at terminations, penetrations, and perimeter of roofing.
- G. Apply roof membrane with side laps shingled with slope of roof deck where possible.
- H. In-Seam Attachment: Secure one edge of PVC sheet using fastening plates or metal battens centered within seam, and mechanically fasten PVC sheet to roof deck.
- I. Seams: Clean seam areas, overlap roof membrane, and hot-air weld side and end laps of roof membrane and sheet flashings to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- J. Spread sealant bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.

3.11 INSTALLATION OF INDUCTION-WELDED ROOF MEMBRANE

- A. Unroll roof membrane and allow to relax before installing.
- B. Start installation of roofing in presence of roofing system manufacturer's technical personnel [and Owner's testing and inspection agency].
- C. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer, with side laps shingled with slope of roof deck where possible.
- D. Seams: Clean seam areas, overlap roof membrane, and hot-air-weld side and end laps of roof membrane and sheet flashings to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity.
 - 2. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
 - 3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- E. Spread sealant bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.

- F. Induction-weld roof membrane to plates in accordance with roofing system manufacturer's written instructions, creating 100 percent bond between underside of membrane and top of plates; a partial bond is unacceptable.
 - 1. Test welds to verify adhesion of roof membrane to top of plates in accordance with membrane manufacturer's instructions.

3.12 INSTALLATION OF LOOSELY LAID AND BALLASTED ROOF MEMBRANE

- A. Loosely lay roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roof membrane and allow to relax before installing.
- C. Comply with requirements in ANSI/SPRI RP-4 for [System 1] [System 2] [System 3].
- D. Start installation of roofing in presence of roofing system manufacturer's technical personnel [and Owner's testing and inspection agency].
- E. Accurately align roof membrane, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- F. Mechanically fasten or adhere perimeter of roofing according to requirements in ANSI/SPRI RP-4.
- G. [Mechanically fasten] [or] [adhere] roof membrane at corners, perimeters, and transitions according to requirements in ANSI/SPRI RP-4.
 - 1. At corners and perimeters, omit aggregate ballast leaving roof membrane exposed.
 - 2. At corners and perimeters, adhere a second layer of roof membrane.
- H. Apply roof membrane with side laps shingled with slope of deck where possible.
- I. Seams: Clean seam areas, overlap roof membrane, and hot-air weld side and end laps of roof membrane and sheet flashings to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashing.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- J. Spread sealant bed over deck-drain flange at roof drains and securely seal roof membrane in place with clamping ring.
- K. Install protection mat over roof membrane, overlapping a minimum of 6 inches. Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of 12 inches.
- L. Aggregate Ballast: Apply uniformly over roof membrane at the rate required by roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to roofing system. Lay ballast as roof membrane is installed, leaving roofing ballasted at end of workday.
 - 1. Ballast Weight:

- a. Size 4 aggregate, 10 lb/sq. ft..
 - b. Size 2 aggregate, 13 lb/sq. ft., at corners and perimeter; Size 4 aggregate, 10 lb/sq. ft., elsewhere.
 - c. Size 2 aggregate, 13 lb/sq. ft..
 - d. Size 3 aggregate, <Insert weight>, at corners, <Insert weight> at perimeter, and <Insert weight>, elsewhere.
- M. Roof-Paver Ballast: Install [lightweight] [heavyweight] roof-paver ballast according to manufacturer's written instructions.
- N. Roof-Paver and Aggregate Ballast: Install heavyweight roof pavers according to manufacturer's written instructions on roof corners and perimeter.
1. Install Size 4 aggregate ballast elsewhere on roof membrane at a minimum rate of 10 lb/sq. ft..
 2. Install Size 2 aggregate ballast elsewhere on roof membrane at a minimum rate of 13 lb/sq. ft..
- 3.13 INSTALLATION OF BASE FLASHING
- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
 - B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
 - C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
 - D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
 - E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.14 INSTALLATION OF WALKWAYS

- A. Flexible Walkways: Install walkway products according to manufacturer's written instructions.
 1. Install flexible walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.

2. Provide 6-inch clearance between adjoining pads.
3. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

B. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions.

1. Install roof paver walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.
2. Provide 3 inches of space between adjacent roof pavers.

3.15 FIELD QUALITY CONTROL

A. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, sheet flashings, protection, and drainage components, and to furnish reports to Architect.

B. Perform the following tests:

1. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Perform tests before overlying construction is placed.
 - b. Flood to an average depth of **[2-1/2 inches]** <Insert depth> with a minimum depth of **[1 inch]** <Insert depth> and not exceeding a depth of **[4 inches]** <Insert depth>. Maintain 2 inches of clearance from top of base flashing.
 - c. Flood each area for **[24]** **[48]** **[72]** hours.
 - d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - e. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final survey report.
2. Infrared Thermography: Testing agency surveys entire roof area using infrared color thermography according to ASTM C1153.
 - a. Perform tests before overlying construction is placed.
 - b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing or nuclear hydrogen detection tests.

- c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - d. Testing agency to prepare survey report of initial scan indicating locations of entrapped moisture, if any.
 3. Electrical Capacitance/Impedance Testing: Testing agency surveys entire roof area for entrapped water within roof assembly according to ASTM D7954/D7954M.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of entrapped moisture, if any.
 4. Nuclear Hydrogen Detection Testing: Testing agency surveys entire roof area for entrapped water within roof assembly according to ANSI/SPRI/RCI NT-1.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of entrapped moisture, if any.
 5. Low-Voltage ELD Testing: Testing agency surveys entire roof area and flashings to locate discontinuities in the roof membrane using low-voltage **[horizontal membrane scanning platform] [membrane electric field vector mapping] [or] [vertical membrane scanning]** in accordance with ASTM D8231.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
 6. High-Voltage Membrane Testing: Testing agency surveys entire **[roof area,] [flashings,] [and] [parapet walls]** to locate discontinuity in the roof membrane using an electrically charged metal "broom head."
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 7. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
- C. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.

- D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.16 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.17 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
 - 1. Owner: <Insert name of Owner>.
 - 2. Owner Address: <Insert address>.
 - 3. Building Name/Type: <Insert information>.
 - 4. Building Address: <Insert address>.
 - 5. Area of Work: <Insert information>.
 - 6. Acceptance Date: _____.
 - 7. Warranty Period: <Insert time>.
 - 8. Expiration Date: _____.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
 - 1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph>;

- c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
 6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
 7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

SECTION 07 62 00

SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Roof-drainage sheet metal fabrications.
2. Low-slope roof sheet metal fabrications.
3. Steep-slope roof sheet metal fabrications.
4. Wall sheet metal fabrications.
5. Miscellaneous sheet metal fabrications.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking.
2. Section <Insert Section number> "<Insert Section title>" for **[materials and installation]** of manufactured sheet metal through-wall flashing and trim integral with masonry.
3. Section <Insert Section number> "<Insert Section title>" for **[materials and installation]** of sheet metal flashing and trim integral with roofing.
4. Section <Insert Section number> "<Insert Section title>" for sheet metal flashing and trim integral with metal wall panels.
5. Section 077100 "Roof Specialties" for manufactured copings, roof-edge specialties, roof-edge drainage systems, reglets, and counterflashings.
6. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
7. Section 079513.13 "Interior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for interior floors, walls, and ceilings.
8. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for exterior building walls, soffits, and parapets.
9. Section 079513.19 "Parking Deck Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies subject to vehicular traffic.

1.02 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
3. Review requirements for insurance and certificates if applicable.
4. Review sheet metal flashing observation and repair procedures after flashing installation.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Roof-drainage sheet metal fabrications.
2. Low-slope roof sheet metal fabrications.
3. Steep-slope roof sheet metal fabrications.
4. Wall sheet metal fabrications.
5. Miscellaneous sheet metal fabrications.

B. Product Data Submittals:

1. Underlayment materials.
2. Elastomeric sealant.
3. Butyl sealant.
4. Epoxy seam sealer.

C. Shop Drawings: For sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
6. Include details of termination points and assemblies.
7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, flashings, and counterflashings.
10. Include details of special conditions.
11. Include details of connections to adjoining work.
12. Detail formed flashing and trim at scale of not less than **[1-1/2 inches per 12 inches] [3 inches per 12 inches] <Insert scale>**.

- D. Samples: For each exposed product and for each color and texture specified, 12 inches long by actual width.
- E. Samples for Initial Selection: For each type of sheet metal and accessory indicated with factory-applied finishes.
- F. Samples for Verification: For each type of exposed finish.
 - 1. Sheet Metal Flashing: 12 inches long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
 - 2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
 - 3. Unit-Type Accessories and Miscellaneous Materials: Full-size Sample.
 - 4. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.
- B. Product Certificates: For each type of coping and roof edge flashing that is **[ANSI/SPRI/FM 4435/ES-1 tested] [and] [FM Approvals approved]**.
- C. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- D. Evaluation Reports: For copings and roof edge flashing, from **[an agency acceptable to authority having jurisdiction] [ICC-ES] <Insert evaluation agency>** showing compliance with ANSI/SPRI/FM 4435/ES-1.
- E. Sample Warranty: For special warranty.

1.06 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.
- B. Special warranty.

1.07 QUALITY ASSURANCE

- A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
 - 1. For copings and roof edge flashings that are ANSI/SPRI/FM 4435/ES-1 tested **[and FM Approvals approved]**, shop is to be listed as able to fabricate required details as tested and approved.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockup of typical roof **[edge] [eave]**, including **[built-in gutter] [fascia] [fascia trim] [apron flashing] <Insert item>**, approximately **[10 feet] <Insert dimension>** long, including supporting construction cleats, seams, attachments, **[underlayment,]** and accessories.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
 1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
 2. Protect stored sheet metal flashing and trim from contact with water.
- B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.09 WARRANTY

- A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: **[20] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers named within specification are approved for use on the Project providing:
 1. Their products meet or exceed the specifications.
 2. Company has a minimum of five (5) years' experience manufacturing products of the type specified.
 3. Products have been tested in conjunction with roofing membrane system as an assembly and as such has obtained the same approval and rating as the roofing membrane system.
 4. Products are approved for use by the roofing membrane manufacturer.

- B. Substitutions shall be in accordance with Division 01 requirements regarding substitutions.

2.02 PERFORMANCE REQUIREMENTS

- A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, are to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim are not to rattle, leak, or loosen, and are to remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with [NRCA's "The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing"] [and] [SMACNA's "Architectural Sheet Metal Manual"] requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. Sheet Metal Standard for Copper: Comply with CDA's "Copper in Architecture Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.
- D. SPRI Wind Design Standard: Manufacture and install [copings] [roof edge flashings] tested in accordance with ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressure:
1. Design Pressure: [As indicated on Drawings] <Insert design pressure>.
- E. FM Approvals Listing: Manufacture and install [copings] [roof edge flashings] that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, [Class 1-60] [Class 1-75] [Class 1-90] [Class 1-105] [Class 1-120] <Insert class>. Identify materials with name of fabricator and design approved by FM Approvals.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change: [120 deg F, ambient; 180 deg F, material surfaces] <Insert temperature change>.

2.03 SHEET METALS

- A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.
- B. Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 or H01 temper.
1. Source Limitations: Obtain sheet from single source from single manufacturer.
 2. Nonpatinated, Exposed Finish: Mill.
 3. Nonpatinated, Exposed, Lacquered Finish: Finish designations for copper alloys comply with system defined in NAAMM/NOMMA 500.
 - a. Brushed Satin (Lacquered): M32-06x (Mechanical Finish: directionally textured, medium satin; with clear organic coating); coating of "Incralac," [waterborne,] [solvent-borne,] methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats in accordance with manufacturer's written instructions to total thickness of 1 mil.

- b. Mirror Polished (Lacquered): M22-06x (Mechanical Finish: buffed, specular; with clear organic coating); coating of "Incralac," **[waterborne,] [solvent-borne,]** air-drying, methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats in accordance with manufacturer's written instructions to total thickness of 1 mil.
 4. Prepatinated Copper-Sheet Finish: **[Dark brown] [Verdigris] <Insert color>**, prepatinated in accordance with ASTM B882.
- C. Aluminum Sheet: ASTM B209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with **[smooth, flat] [embossed]** surface.
 1. As-Milled Finish: **[Mill] [One-side bright mill] [Standard one-side bright] [Standard two-side bright]**.
 2. Alclad Finish: Metallurgically bonded surfacing alloy on both sides, forming aluminum sheet with reflective luster.
 3. Factory Prime Coating: Where painting after installation is required, pretreat metal with white or light-colored, factory-applied, baked-on epoxy primer coat; minimum dry film thickness of 0.2 mil.
 4. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
 5. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: **[Champagne] [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>**.
 - b. Color Range: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 6. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - b. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - c. Mica Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

- d. Metallic Fluoropolymer: AAMA 2605. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - e. FEVE Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - f. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than 0.2 mil for primer and 0.8 mil for topcoat.
7. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
 8. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.
- D. Stainless Steel Sheet: ASTM A240/A240M, **[Type 304]** **[Type 316]**, dead soft, fully annealed; with **[smooth, flat]** **[embossed]** surface.
1. Finish: **[ASTM A480/A480M, No. 2D (dull, cold rolled)]** **[ASTM A480/A480M, No. 2B (bright, cold rolled)]** **[ASTM A480/A480M, No. 3 (coarse, polished directional satin)]** **[ASTM A480/A480M, No. 4 (polished directional satin)]** <Insert finish>.
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1) Run grain of directional finishes with long dimension of each piece.
 - 2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- E. Zinc-Tin Alloy-Coated Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 temper; coated on both sides with zinc-tin alloy (50 percent zinc, 50 percent tin).
1. Source Limitations: Obtain sheet from single source from single manufacturer.
- F. Metallic-Coated Steel Sheet: Provide **[zinc-coated (galvanized) steel sheet in accordance with ASTM A653/A653M, **G90** coating designation]** **[or]** **[aluminum-zinc alloy-coated steel sheet in accordance with ASTM A792/A792M, **Class AZ50** coating designation, **Grade 40**]**; prepainted by coil-coating process to comply with ASTM A755/A755M.
1. Surface: **[Smooth, flat]** **[Embossed]** **[and mill phosphatized for field painting]** **[and with manufacturer's standard clear acrylic coating on both sides]**.
 2. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

- b. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - c. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - d. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - e. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - f. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than 0.2 mil for primer and 0.8 mil for topcoat.
- 3. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
 - 4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.
- G. Zinc Sheet: **[99.995 percent electrolytic high-grade zinc with alloy additives of copper (0.08 to 0.20 percent), titanium (0.07 to 0.12 percent), and aluminum (0.015 percent)]** **[Zinc, 99 percent pure, alloyed with 0.08 to 1.00 percent copper, 0.06 to 0.20 percent titanium, and up to 0.015 percent aluminum]**; with manufacturer's standard factory-applied, flexible, protective back coating.
- 1. Source Limitations: Obtain sheet from single source from single manufacturer.
 - 2. Finish: **[Bright rolled]** **[Preweathered gray]** **[Preweathered black]** <Insert finish>.
- H. Copper-Clad Stainless Steel Sheet: ASTM B506, annealed Temper O61.
- 1. Source Limitations: Obtain sheet from single source from single manufacturer.
 - 2. Nonpatinated, Exposed Finish: Mill.
 - 3. Nonpatinated, Exposed, Lacquered Finish: Finish designations for copper alloys comply with system defined in NAAMM/NOMMA 500.
- Brushed Satin (Lacquered): M32-06x (Mechanical Finish: directionally textured, medium satin; with clear organic coating); coating of "Incralac," **[waterborne,]** **[solvent-borne,]** methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to total thickness of 1 mil.

Mirror Polished (Lacquered): M22-06x (Mechanical Finish: buffed, specular; with clear organic coating); coating of "Incralac," **[waterborne,] [solvent-borne,]** air-drying, methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to total thickness of 1 mil.

2.04 UNDERLAYMENT MATERIALS

- A. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt; nonperforated.
- B. Synthetic Underlayment: Laminated or reinforced, woven polyethylene or polypropylene, synthetic roofing underlayment; bitumen free; slip resistant; suitable for high temperatures over 220 deg F; and complying with physical requirements of ASTM D226/D226M for Type I and Type II felts.
 - 1. Source Limitations: Obtain underlayment from single source from single manufacturer.
- C. Self-Adhering, High-Temperature Sheet Underlayment: Minimum 30 mils thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer in accordance with underlayment manufacturer's written instructions.
 - 1. Source Limitations: Obtain underlayment from single source from single manufacturer.
 - 2. Low-Temperature Flexibility: ASTM D1970/D1970M; passes after testing at minus 20 deg F or lower.
- D. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft. minimum.

2.05 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners **[, solder]**, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal **[or manufactured item]** unless otherwise indicated.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal **[or manufactured item]**.
 - 1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 - b. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.
 - c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
 - 2. Fasteners for Copper, Zinc-Tin Alloy-Coated Copper, or Copper-Clad Stainless Steel Sheet: Copper, hardware bronze or passivated Series 300 stainless steel.
 - 3. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 - 4. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.

5. Fasteners for Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel in accordance with ASTM A153/A153M or ASTM F2329/F2329M.
 6. Fasteners for Zinc Sheet: Series 300 stainless steel [or hot-dip galvanized steel in accordance with ASTM A153/A153M or ASTM F2329/F2329M].
- C. Solder:
1. For Copper or Copper-Clad Stainless Steel: ASTM B32, [Grade Sn50, 50 percent tin and 50 percent lead] [with maximum lead content of 0.2 percent].
 2. For Stainless Steel: ASTM B32, **[Grade Sn60] [Grade Sn96]**, with acid flux of type recommended by stainless steel sheet manufacturer.
 3. For Zinc-Tin Alloy-Coated Copper: ASTM B32, 100 percent tin, with maximum lead content of 0.2 percent, as recommended by sheet metal manufacturer.
 4. For Zinc-Coated (Galvanized) Steel: ASTM B32, [Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead] [with maximum lead content of 0.2 percent].
 5. For Zinc: ASTM B32, [40 percent tin and 60 percent lead with low antimony,] [with maximum lead content of 0.2 percent,] as recommended by zinc manufacturer.
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
- E. Elastomeric Sealant: ASTM C920, elastomeric **[polyurethane] [polysulfide] [silicone]** polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- F. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
- G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- H. Bituminous Coating: Cold-applied asphalt emulsion in accordance with ASTM D1187/D1187M.
- I. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.
- J. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated **[with factory-mitered and -welded corners and junctions] [and] [with interlocking counterflashing on exterior face, of same metal as reglet]**.
1. Source Limitations: Obtain reglets from single source from single manufacturer.
 2. Material: [Stainless steel, **0.0188 inch thick**] [Copper, **16 oz./sq. ft.**] [Aluminum, **0.024 inch thick**] [Galvanized steel, **0.022 inch thick**].
 3. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.

4. Stucco Type: Provide with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
5. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
6. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
7. Accessories:
 - a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
 - b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.
8. Finish: [Mill] [With manufacturer's standard color coating] <Insert finish>.

2.06 FABRICATION, GENERAL

- A. Custom fabricate sheet metal flashing and trim to comply with details indicated and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required.
 1. Fabricate sheet metal flashing and trim in shop to greatest extent possible.
 2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
 4. Form sheet metal flashing and trim to fit substrates without excessive oil-canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
 5. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.
- B. Fabrication Tolerances:
 1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
 2. Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified.
- C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
 1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
 2. Use lapped expansion joints only where indicated on Drawings.
- D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal in accordance with cited sheet metal standard to provide for proper installation of elastomeric sealant.

- E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- F. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard [**and by FM Global Property Loss Prevention Data Sheet 1-49**] for application, but not less than thickness of metal being secured.
- G. Seams:
 - 1. Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 2. Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. **[Rivet joints where necessary for strength.]**
 - 3. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. **[Rivet joints where necessary for strength.]**
- H. Do not use graphite pencils to mark metal surfaces.

2.07 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Hanging Gutters:
 - 1. Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required.
 - 2. Fabricate in minimum 96-inch- long sections.
 - 3. Furnish flat-stock gutter brackets and **[flat-stock] [twisted]** gutter spacers and straps fabricated from same metal as gutters, of size recommended by cited sheet metal standard, but with thickness not less than **[twice the gutter thickness] [dimension indicated on Drawings]** <Insert dimension>.
 - 4. Fabricate expansion joints, expansion-joint covers, **[gutter bead reinforcing bars,]** and gutter accessories from same metal as gutters. **[Shop fabricate interior and exterior corners.]**
 - 5. Gutter Profile: **[Style A] [Style B] [Style C] [Style D] [Style E] [Style F] [Style G] [Style H] [Style I] [Style J] [Style K] [Style L]** in accordance with cited sheet metal standard.
 - 6. Expansion Joints: **[Lap type] [Butt type] [Butt type with cover plate] [Built in].**
 - 7. Accessories: **[Continuous, removable leaf screen with sheet metal frame and hardware cloth screen] [Wire-ball downspout strainer] [Valley baffles].**
 - 8. Gutters with Girth up to 15 Inches (380 mm): Fabricate from the following materials:
 - a. Copper: **[16 oz./sq. ft.]** <Insert value>.
 - b. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 - c. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 - e. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 - g. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 - h. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.

9. Gutters with Girth 16 to 20 Inches (410 to 510 mm): Fabricate from the following materials:
 - a. Copper: **[16 oz./sq. ft.]** <Insert value>.
 - b. Aluminum: **[0.040 inch]** <Insert dimension> thick.
 - c. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 - e. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 - g. Zinc: **[0.039 inch] [0.048 inch]** <Insert dimension> thick.
 - h. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
 10. Gutters with Girth 21 to 25 Inches (530 to 640 mm): Fabricate from the following materials:
 - a. Copper: **[20 oz./sq. ft.]** <Insert value>.
 - b. Aluminum: **[0.050 inch]** <Insert dimension> thick.
 - c. Stainless Steel: **[0.0250 inch]** <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: **[20 oz./sq. ft.]** <Insert value>.
 - e. Galvanized Steel: **[0.034 inch]** <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: **[0.034 inch]** <Insert dimension> thick.
 - g. Zinc: **[0.048 inch] [0.059 inch]** <Insert dimension> thick.
 - h. Copper-Clad Stainless Steel: **[0.027 inch]** <Insert dimension> thick.
 11. Gutters with Girth 26 to 30 Inches (660 to 760 mm): Fabricate from the following materials:
 - a. Copper: **[24 oz./sq. ft.]** <Insert value>.
 - b. Aluminum: **[0.063 inch]** <Insert dimension> thick.
 - c. Stainless Steel: **[0.0313 inch]** <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: **[24 oz./sq. ft.]** <Insert value>.
 - e. Galvanized Steel: **[0.040 inch]** <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: **[0.040 inch]** <Insert dimension> thick.
 12. Gutters with Girth 31 to 35 Inches (790 to 890 mm): Fabricate from the following materials:
 - a. Copper: **[24 oz./sq. ft.]** <Insert value>.
 - b. Stainless Steel: **[0.0375 inch]** <Insert dimension> thick.
 - c. Zinc-Tin Alloy-Coated Copper: **[25 oz./sq. ft.]** <Insert value>.
 - d. Galvanized Steel: **[0.052 inch]** <Insert dimension> thick.
 - e. Aluminum-Zinc Alloy-Coated Steel: **[0.052 inch]** <Insert dimension> thick.
- B. Built-in Gutters:
1. Fabricate to cross section required, with riveted and soldered joints, complete with end pieces, outlet tubes, and other special accessories as required.

2. Fabricate in minimum 96-inch- long sections. Fabricate expansion joints and accessories from same metal as gutters unless otherwise indicated.
 3. Fabricate gutters with built-in expansion joints [**and gutter-end expansion joints at walls**].
 4. Accessories: [Continuous, removable leaf screen with sheet metal frame and hardware cloth screen] [Bronze wire-ball downspout strainer] [Wire-ball downspout strainer].
 5. Fabricate from the following materials:
 - a. Copper: [16 oz./sq. ft.] <Insert value>.
 - b. Stainless Steel: [0.0156 inch] <Insert dimension> thick.
 - c. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft.] <Insert value>.
 - d. Zinc: [0.032 inch] [0.039 inch] <Insert dimension> thick.
 - e. Copper-Clad Stainless Steel: [0.016 inch] <Insert dimension> thick.
- C. Downspouts: Fabricate [round] [rectangular] [open-face] downspouts to dimensions indicated on Drawings, complete with mitered elbows. Furnish with metal hangers from [same material as downspouts and anchors] <Insert material>. [Shop fabricate elbows.]
1. Fabricated Hanger Style: [Fig. 1-35A] [Fig. 1-35B] [Fig. 1-35C] [Fig. 1-35D] [Fig. 1-35E] [Fig. 1-35F] [Fig. 1-35G] [Fig. 1-35H] [Fig. 1-35I] [Fig. 1-35J] in accordance with SMACNA's "Architectural Sheet Metal Manual."
 2. Manufactured Hanger Style: [Fig. 1-34A] [Fig. 1-34B] [Fig. 1-34C] [Fig. 1-34D] [Fig. 1-34E] in accordance with SMACNA's "Architectural Sheet Metal Manual."
 3. Hanger Style: <Insert description>.
 4. Fabricate from the following materials:
 - a. Copper: [16 oz./sq. ft.] <Insert value>.
 - b. Aluminum: [0.024 inch] <Insert dimension> thick.
 - c. Stainless Steel: [0.0156 inch] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft.] <Insert value>.
 - e. Galvanized Steel: [0.022 inch] <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch] <Insert dimension> thick.
 - g. Zinc: [0.032 inch] [0.039 inch] <Insert dimension> thick.
 - h. Copper-Clad Stainless Steel: [0.016 inch] <Insert dimension> thick.
- D. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch- wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. [**Fasten gravel guard angles to base of scupper.**] Fabricate from the following materials:
1. Copper: [16 oz./sq. ft.] <Insert value>.
 2. Aluminum: [0.032 inch] <Insert dimension> thick.
 3. Stainless Steel: [0.0188 inch] <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft.] <Insert value>.
 5. Galvanized Steel: [0.028 inch] <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch] <Insert dimension> thick.

7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- E. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes **[, exterior flange trim,] [and] [built-in overflows]**. Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- F. Splash Pans: Fabricate to dimensions and shape required and from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.040 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 6. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.

2.08 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Roof Edge Flashing (Gravel Stop) and Fascia Cap: Fabricate in minimum 96-inch- long, but not exceeding 12-foot- long sections. Furnish with 6-inch- wide, joint cover plates. **[Shop fabricate interior and exterior corners.]**
1. Joint Style: **[Overlapped, 4 inches wide] [Butted with expansion space and 6-inch-wide, concealed backup plate] [Butted with expansion space and 6-inch- wide, exposed cover plate]** <Insert description>.
 2. Fabricate with scuppers spaced **[10 feet]** <Insert dimension> apart, to dimensions required with 4-inch- wide flanges and base extending 4 inches beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper.
 3. Fabricate from the following materials:
 - a. Copper: **[20 oz./sq. ft.]** <Insert value>.
 - b. Aluminum: **[0.050 inch]** <Insert dimension> thick.
 - c. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: **[20 oz./sq. ft.]** <Insert value>.
 - e. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 - g. Zinc: **[0.048 inch] [0.059 inch]** <Insert dimension> thick.

- h. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- B. Copings: Fabricate in minimum 96-inch- long, but not exceeding 12-foot- long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and **[drill elongated holes for fasteners on]** interior leg. Miter corners, **[fasten and seal] [solder or weld]** watertight. **[Shop fabricate interior and exterior corners.]**
1. Coping Profile: **[Fig. 3-4A] [Fig. 3-4B] [Fig. 3-4C] [Fig. 3-4D] [Fig. 3-4E] [Fig. 3-4F] [Fig. 3-4G]** in accordance with SMACNA's "Architectural Sheet Metal Manual."
 2. Joint Style: **[Butted with expansion space and 6-inch- wide, concealed backup plate] [Butted with expansion space and 6-inch- wide, exposed cover plate]** <Insert description>.
 3. Fabricate from the following materials:
 - a. Copper: **[24 oz./sq. ft.]** <Insert value>.
 - b. Aluminum: **[0.050 inch]** <Insert dimension> thick.
 - c. Stainless Steel: **[0.0250 inch]** <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: **[24 oz./sq. ft.]** <Insert value>.
 - e. Galvanized Steel: **[0.040 inch]** <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: **[0.040 inch]** <Insert dimension> thick.
 - g. Zinc: **[0.048 inch] [0.059 inch]** <Insert dimension> thick.
 - h. Copper-Clad Stainless Steel: **[0.027 inch]** <Insert dimension> thick.
- C. Expansion-Joint Cover: **[Shop fabricate interior and exterior corners.]** Fabricate **[roof] [and] [roof-to-wall transition] [roof-to-roof edge-flashing (gravel-stop) transition] [roof-to-roof edge-flashing (gravel-stop) and fascia-cap transition]** expansion-joint cover from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.050 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0250 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.034 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.034 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.027 inch]** <Insert dimension> thick.
- D. Base Flashing: **[Shop fabricate interior and exterior corners.]** Fabricate from the following materials:
1. Copper: **[20 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.040 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[20 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.

7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- E. Counterflashing: **[Shop fabricate interior and exterior corners.]** Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- F. Flashing Receivers: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- G. Roof-Penetration Flashing: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 4. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 5. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 7. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
 8. Lead: **[4 lb]** <Insert weight>.
- H. Roof-Drain Flashing: Fabricate from the following materials:
1. Copper: **[12 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 3. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.

2.09 STEEP-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Apron, Step, Cricket, and Backer Flashing: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- B. Valley Flashing: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 4. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 5. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 7. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- C. Drip Edges: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- D. Eave, Rake, Ridge, and Hip Flashing: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.

- E. Counterflashing: **[Shop fabricate interior and exterior corners.]** Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- F. Flashing Receivers: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- G. Roof-Penetration Flashing: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 4. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 5. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.
 7. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
 8. Lead: **[4 lb]** <Insert weight>.

2.10 WALL SHEET METAL FABRICATIONS

- A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch- long, but not exceeding 12-foot- long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches beyond each side of wall openings; and form with 2-inch- high, end dams. Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 4. Zinc: **[0.032 inch] [0.039 inch]** <Insert dimension> thick.

5. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- B. Opening Flashings in Frame Construction: Fabricate head, sill, **[jamb,]** and similar flashings to extend **[4 inches]** <Insert dimension> beyond wall openings. Form head and sill flashing with 2-inch- high, end dams. Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.032 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0156 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.022 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch]** **[0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.016 inch]** <Insert dimension> thick.
- C. Wall Expansion-Joint Cover: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Aluminum: **[0.040 inch]** <Insert dimension> thick.
 3. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 5. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 7. Zinc: **[0.032 inch]** **[0.039 inch]** <Insert dimension> thick.
 8. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.

2.11 MISCELLANEOUS SHEET METAL FABRICATIONS

- A. Equipment Support Flashing: Fabricate from the following materials:
1. Copper: **[16 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0188 inch]** <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft.]** <Insert value>.
 4. Galvanized Steel: **[0.028 inch]** <Insert dimension> thick.
 5. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch]** <Insert dimension> thick.
 6. Copper-Clad Stainless Steel: **[0.018 inch]** <Insert dimension> thick.
- B. Overhead-Piping Safety Pans: Fabricate from the following materials:
1. Copper: **[24 oz./sq. ft.]** <Insert value>.
 2. Stainless Steel: **[0.0250 inch]** <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Copper: **[24 oz./sq. ft.]** <Insert value>.
 4. Galvanized Steel: **[0.040 inch]** <Insert dimension> thick.
 5. Aluminum-Zinc Alloy-Coated Steel: **[0.040 inch]** <Insert dimension> thick.
 6. Copper-Clad Stainless Steel: **[0.027 inch]** <Insert dimension> thick.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
1. Verify compliance with requirements for installation tolerances of substrates.
 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
 3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF UNDERLAYMENT

- A. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim.
1. Install in shingle fashion to shed water.
 2. Lap joints not less than 2 inches.
- B. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, in accordance with manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal.
1. Lap horizontal joints not less than 4 inches.
 2. Lap end joints not less than 12 inches.
- C. Self-Adhering, High-Temperature Sheet Underlayment:
1. Install self-adhering, high-temperature sheet underlayment; wrinkle free.
 2. Prime substrate if recommended by underlayment manufacturer.
 3. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures.
 4. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses.
 5. Overlap side edges not less than 3-1/2 inches. Roll laps and edges with roller.
 6. Roll laps and edges with roller.
 7. Cover underlayment within 14 days.
- D. Install slip sheet, wrinkle free, **[over underlayment] [directly on substrate]** <Insert requirement> before installing sheet metal flashing and trim.
1. Install in shingle fashion to shed water.
 2. Lapp joints not less than 4 inches.

3.03 INSTALLATION, GENERAL

- A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
1. Install fasteners **[, solder]**, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
 2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of **[solder] [welds] [sealant]**.
 3. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
 4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
 5. Install continuous cleats with fasteners spaced not more than 12 inches o.c.
 6. Space individual cleats not more than 12 inches apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
 7. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
 8. Do not field cut sheet metal flashing and trim by torch.
 9. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
1. Coat concealed side of **[uncoated-aluminum] [and] [stainless steel]** sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
1. Space movement joints at maximum of **[10 feet] <Insert dimension>** with no joints within 24 inches of corner or intersection.
 2. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
 3. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate **[wood blocking or sheathing not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws] [substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance] <Insert size requirement>**.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.
1. Use sealant-filled joints unless otherwise indicated.

- a. Embed hooked flanges of joint members not less than 1 inch into sealant.
 - b. Form joints to completely conceal sealant.
 - c. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way.
 - d. Adjust setting proportionately for installation at higher ambient temperatures.
 - 1) Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter.
1. Pretin edges of sheets with solder to width of 1-1/2 inches; however, reduce pretinning where pretinned surface would show in completed Work.
 2. Do not solder [metallic-coated steel] [and] [aluminum] sheet.
 3. Do not pretin zinc-tin alloy-coated copper.
 4. Do not use torches for soldering.
 5. Heat surfaces to receive solder, and flow solder into joint.
 - a. Fill joint completely.
 - b. Completely remove flux and spatter from exposed surfaces.
 6. Stainless Steel Soldering:
 - a. Tin edges of uncoated sheets, using solder for stainless steel and acid flux.
 - b. Promptly remove acid-flux residue from metal after tinning and soldering.
 - c. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
 7. Copper Soldering: Tin edges of uncoated sheets, using solder for copper.
 8. Copper-Clad Stainless Steel Soldering: Tin edges of uncoated sheets, using solder for copper-clad stainless steel.
- H. Rivets: Rivet joints in [uncoated aluminum] [zinc] where necessary for strength.
- 3.04 INSTALLATION OF ROOF-DRAINAGE SYSTEM
- A. Install sheet metal roof-drainage items to produce complete roof-drainage system in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.
- B. Hanging Gutters:
1. Join sections with [riveted and soldered joints] [or] [joints sealed with sealant].
 2. Provide for thermal expansion.
 3. Attach gutters at eave or fascia to firmly anchor them in position.
 4. Provide end closures and seal watertight with sealant.
 5. Slope to downspouts.
 6. Fasten gutter spacers to front and back of gutter.

7. Anchor and loosely lock back edge of gutter to continuous **[cleat] [eave or apron flashing]**.
 8. Anchor back of gutter that extends onto roof deck with cleats spaced not more than **[24 inches] <Insert dimension>** apart.
 9. Anchor gutter with **[gutter brackets] [straps] [twisted straps]** spaced not more than **[24 inches] [30 inches] [36 inches] <Insert dimension>** apart to roof deck unless otherwise indicated, and loosely lock to front gutter bead.
 10. Anchor gutter with spikes and ferrules spaced not more than **[24 inches] [30 inches] <Insert dimension>** apart.
 11. Install gutter with expansion joints at locations indicated on Drawings, but not exceeding, **[50 feet] <Insert dimension>** apart. Install expansion-joint caps.
 12. Install continuous gutter screens on gutters with noncorrosive fasteners, **[removable] [hinged to swing open]** for cleaning gutters.
- C. Built-in Gutters:
1. Join sections with **[riveted and soldered joints] [or] [joints sealed with sealant]**.
 2. Provide for thermal expansion.
 3. Slope to downspouts.
 4. Provide end closures and seal watertight with sealant.
 5. Install underlayment layer in built-in gutter trough and extend to drip edge at eaves and under underlayment on roof sheathing.
 - a. Lap sides minimum of 2 inches over underlying course.
 - b. Lap ends minimum of 4 inches.
 - c. Stagger end laps between succeeding courses at least 72 inches.
 - d. Fasten with roofing nails.
 - e. Install slip sheet over underlayment.
 6. Anchor and loosely lock back edge of gutter to continuous **[cleat] [eave or apron flashing]**.
 7. Anchor back of gutter that extends onto roof deck with cleats spaced not more than **[18 inches] <Insert dimension>** apart.
 8. Install gutter with expansion joints at locations indicated on Drawings, but not exceeding, **[50 feet] <Insert dimension>** apart. Install expansion-joint caps.
- D. Downspouts:
1. Join sections with 1-1/2-inch telescoping joints.
 2. Provide hangers with fasteners designed to hold downspouts securely to walls.
 3. Locate hangers at top and bottom and at approximately 60 inches o.c.
 4. Provide elbows at base of downspout to direct water away from building.
 5. Connect downspouts to underground drainage system.
- E. Splash Pans:
1. Install where downspouts discharge on **[low-slope roofs] <Insert surface>**.

2. Set in **[asphalt roofing cement] [or] [elastomeric sealant]** compatible with the substrate.

F. Parapet Scuppers:

1. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
2. Anchor scupper closure trim flange to exterior wall and **[solder] [or] [seal with elastomeric sealant]** to scupper.
3. Loosely lock front edge of scupper with conductor head.
4. **[Solder] [or] [seal with elastomeric sealant]** exterior wall scupper flanges into back of conductor head.

G. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inch below **[scupper] [or] [gutter]** discharge.

H. Expansion-Joint Covers: Install expansion-joint covers at locations and of configuration indicated on Drawings. Lap joints minimum of 4 inches in direction of water flow.

3.05 INSTALLATION OF ROOF FLASHINGS

A. Install sheet metal flashing and trim to comply with performance requirements **[, sheet metal manufacturer's written installation instructions,]** and cited sheet metal standard.

1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes.
2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Roof Edge Flashing:

1. Install roof edge flashings in accordance with ANSI/SPRI/FM 4435/ES-1.
2. Anchor to resist uplift and outward forces in accordance with recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at **[staggered 3-inch] <Insert spacing>** centers.
3. Anchor to resist uplift and outward forces in accordance with recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for FM Approvals' listing for required windstorm classification.

C. Copings:

1. Install roof edge flashings in accordance with ANSI/SPRI/FM 4435/ES-1.
2. Anchor to resist uplift and outward forces in accordance with recommendations in cited sheet metal standard unless otherwise indicated.
 - a. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate at **[24-inch] [16-inch] <Insert dimension>** centers.
 - b. Anchor interior leg of coping with washers and screw fasteners through slotted holes at **[24-inch] <Insert dimension>** centers.
3. Anchor to resist uplift and outward forces in accordance with recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for specified FM Approvals' listing for required windstorm classification.

- D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches over base flashing. Install stainless steel draw band and tighten.
- E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing.
 - 1. Insert counterflashing in reglets or receivers and fit tightly to base flashing.
 - 2. Extend counterflashing 4 inches over base flashing.
 - 3. Lap counterflashing joints minimum of 4 inches.
 - 4. Secure in waterproof manner by means of [snap-in installation and sealant or lead wedges and sealant] [interlocking folded seam or blind rivets and sealant] [anchor and washer spaced at **12 inches** o.c. along perimeter and **6 inches** o.c. at corners areas] <Insert requirement> unless otherwise indicated.
- F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with **[elastomeric]** **[butyl]** sealant and clamp flashing to pipes that penetrate roof.

3.06 INSTALLATION OF WALL FLASHINGS

- A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
- B. Opening Flashings in Frame Construction: Install continuous head, sill, **[jamb,]** and similar flashings to extend **[4 inches]** <Insert dimension> beyond wall openings.
- C. Reglets: Installation of reglets is specified in Section 033000 "Cast-in-Place Concrete." Section 042200 "Concrete Unit Masonry." **[Section <Insert Section number> "<Insert Section title>".]**

3.07 INSTALLATION OF MISCELLANEOUS FLASHING

- A. Equipment Support Flashing:
 - 1. Coordinate installation of equipment support flashing with installation of roofing and equipment.
 - 2. Weld or seal flashing with elastomeric sealant to equipment support member.
- B. Overhead-Piping Safety Pans:
 - 1. Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings.
 - 2. Pipe and install drain line to plumbing waste or drainage system.

3.08 INSTALLATION TOLERANCES

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.09 CLEANING

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder.
- C. Clean off excess sealants.

3.10 PROTECTION

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
- C. Maintain sheet metal flashing and trim in clean condition during construction.
- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Architect.

SECTION 07 71 00
ROOF SPECIALTIES

PART 1 GENERAL

A. Section Includes:

1. Copings.
2. Roof-edge specialties.
3. Roof-edge drainage systems.
4. Reglets and counterflashings.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for downspout guards and downspout boots.
2. Section 06 10 00 "Rough Carpentry" for wood nailers, curbs, and blocking.
3. Section 07 41 13.13 "Formed Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
4. Section 07 41 13.16 "Standing-Seam Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
5. Section 07 41 13.19 "Batten-Seam Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
6. Section 07 41 16 "Insulated Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
7. Section 07 62 00 "Sheet Metal Flashing and Trim" for custom- and site-fabricated sheet metal flashing and trim.
8. Section 07 71 29 "Manufactured Roof Expansion Joints" for manufactured roof expansion-joint cover assemblies.
9. Section 07 72 00 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
10. Section 07 72 53 "Snow Guards" for manufactured snow guard devices.
11. Section 07 92 00 "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.

C. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1. Meet with Owner, Architect, Owner's insurer if applicable, roofing-system testing and inspecting agency representative, roofing Installer, roofing-system manufacturer's representative, Installer, structural-support Installer, and installers whose work interfaces with or affects roof specialties, including installers of roofing materials and accessories.
 2. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 3. Review special roof details, roof drainage, and condition of other construction that will affect roof specialties.
- A. Product Data:
1. Copings.
 2. Roof-edge specialties.
 3. Roof-edge drainage systems.
 4. Reglets and counterflashings.
- B. Product Data Submittals: For each product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- C. Shop Drawings: For roof specialties.
1. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work.
 2. Include details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
 3. Indicate profile and pattern of seams and layout of fasteners, cleats, clips, and other attachments.
 4. Detail termination points and assemblies, including fixed points.
 5. Include details of special conditions.
- D. Samples: For each type of roof specialty, each color and texture specified.
- E. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.
- F. Samples for Verification:
1. Include Samples of each type of roof specialty to verify finish and color selection, in manufacturer's standard sizes.
 2. Include **[copings] [roof-edge specialties] [roof-edge drainage systems] [reglets and counterflashings]** made from 12-inch lengths of full-size components in specified material, and including fasteners, cover joints, accessories, and attachments.

- A. Qualification Data: For manufacturer.
- B. Product Certificates: For each type of roof specialty.
- C. Product Test Reports: For **[copings] [and] [roof-edge flashings]**, for tests performed by a qualified testing agency.
- D. Sample Warranty: For manufacturer's special warranty.
- A. Maintenance Data: For roofing specialties to include in maintenance manuals.
- A. Manufacturer Qualifications: A qualified manufacturer offering products meeting requirements that are **[FM Approvals listed for specified class] [and] [SPRI ES-1 tested to specified design pressure]**.
- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof edge as indicated on Drawings.
 - 2. Build mockup of typical roof edge as part of Integrated Exterior Mockup specified in Section 01 40 00 "Quality Requirements"
 - 3. Build mockup of typical roof edge, including **[fascia] [gutter] [and] [downspout] <Insert item>**, approximately **[10 feet] <Insert dimension>** long, including supporting construction, seams, attachments, **[underlayment,]** and accessories.
 - 4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
- B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.
- A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.
- B. Coordination: Coordinate roof specialties with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.
- A. Roofing-System Warranty: Roof specialties are included in warranty provisions in Section **<Insert Section number> "<Insert roof Section title>."**
- B. Special Warranty on Painted Finishes: Manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. **Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.**
 - b. **Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.**
 - c. **Cracking, checking, peeling, or failure of paint to adhere to bare metal.**
2. Finish Warranty Period: **[20] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

- A. Obtain roof specialties approved by manufacturer providing roofing-system warranty specified in Section **<Insert Section number and title>**.
- A. General Performance: Roof specialties to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. FM Approvals' Listing: Manufacture and install **[copings] [roof-edge specialties]** that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, **[Class 1-60] [Class 1-75] [Class 1-90] [Class 1-105] [Class 1-120] <Insert class>**. Identify materials with FM Approvals' markings.
- C. SPRI Wind Design Standard: Manufacture and install **[copings] [roof-edge specialties]** tested in accordance with SPRI ES-1 and capable of resisting the following design pressures:
 1. Design Pressure: **[As indicated on Drawings] <Insert design pressure>**.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change (Range): **[120 deg F, ambient; 180 deg F] <Insert temperature range>**, material surfaces.
- A. Metal Copings: Manufactured coping system consisting of metal coping cap in section lengths not exceeding **[12 feet] <Insert dimension>**, concealed anchorage; with corner units, end cap units, and concealed splice plates with finish matching coping caps.
 1. Metallic-Coated Steel Sheet Coping Caps: Zinc-coated (galvanized) steel, nominal **[0.028-inch thickness] [0.034-inch thickness] [thickness as required to meet performance requirements] <Insert thickness>**.
 - a. **Surface: [Smooth, flat] [Embossed] finish.**
 - b. **Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] <Insert finish>**.

- c. **Color:** [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
2. Formed Aluminum Sheet Coping Caps: Aluminum sheet, [0.040 inch thick] [0.050 inch thick] [0.063 inch thick] [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Surface:** [Smooth, flat] [Embossed] finish.
 - b. **Finish:** [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
 - c. **Color:** [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
3. Extruded-Aluminum Coping Caps: Extruded aluminum, [0.080 inch thick] [0.125 inch thick] [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Finish:** [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
 - b. **Color:** [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
4. Formed Stainless Steel Sheet Coping Caps: Stainless steel sheet, nominal [0.0313-inch thickness] [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Finish:** [ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 3 (coarse, polished directional satin)] [ASTM A480/A480M No. 4 (bright, polished directional satin)] <Insert finish>.
5. Formed Copper Sheet Coping Caps: Copper sheet, [20 oz./sq. ft. thick] [weight as required to meet performance requirements] <Insert weight>.
 - a. **Copper Finish:** [Non-patinated, mill] [Pre-patinated dark brown] [Pre-patinated verdigris] <Insert finish>.
6. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
7. Special Fabrications: [Radiussed sections] [Arched sections] [Bullnose-face leg] [Two-way sloped coping cap] <Insert description>.
8. Coping-Cap Attachment Method: [Snap-on] [or] [face leg hooked to continuous cleat with back leg fastener exposed], fabricated from coping-cap material.
 - a. **Snap-on Coping Anchor Plates:** Concealed, galvanized-steel sheet, 12 inches wide, with integral cleats.

- b. Face-Leg Cleats: Concealed, continuous [galvanized-steel sheet] [stainless steel].**
- A. Canted Roof-Edge Fascia and Gravel Stop <Insert drawing designation>: Manufactured, two-piece, roof-edge fascia consisting of **[snap-on] [compression-clamped]** metal fascia cover in section lengths not exceeding **[12 feet]** <Insert dimension> and a continuous formed galvanized-steel sheet cant, 0.028 inch thick, minimum, with extended vertical leg terminating in a drip-edge cleat. Provide matching corner units.
1. Metallic-Coated Steel Sheet Fascia Covers: Zinc-coated (galvanized) steel, nominal **[0.028-inch thickness] [0.034-inch thickness] [thickness as required to meet performance requirements]** <Insert thickness>.
 - a. **Surface: [Smooth, flat] [Embossed] finish.**
 - b. **Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] <Insert finish>.**
 - c. **Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.**
 2. Formed Aluminum Sheet Fascia Covers: Aluminum sheet, **[0.040 inch thick] [0.050 inch thick] [0.063 inch thick] [thickness as required to meet performance requirements]** <Insert thickness>.
 - a. **Surface: [Smooth, flat] [Embossed] finish.**
 - b. **Finish: [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.**
 - c. **Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.**
 3. Extruded-Aluminum Fascia Covers: Extruded aluminum, **[0.080 inch thick] [0.125 inch thick] [thickness as required to meet performance requirements]** <Insert thickness>.
 - a. **Finish: [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.**
 - b. **Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.**
 4. Corners: Factory mitered and **[soldered] [continuously welded] [mechanically clinched and sealed watertight]**.
 5. Splice Plates: **[Concealed] [Exposed]**, of same material, finish, and shape as fascia cover.

6. Special Fabrications: [Radiussed sections] [Arched sections] [Bullnose fascia cover] [Cornice fascia cover] [Cove fascia cover] <Insert description>.
 7. Fascia Accessories: [Fascia extenders with continuous hold-down cleats] [Wall cap] [Soffit trim] [Overflow scuppers] [Overflow scuppers with perforated screens] [Spillout scuppers] [Downspout scuppers with integral conductor head and downspout adapters] [Downspout scuppers with integral conductor head and downspout adapters and perforated screens] <Insert description>.
- B. Roof-Edge Fascia: Manufactured, two-piece, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding **[12 feet]** <Insert dimension> and a continuous metal receiver with integral drip-edge cleat to engage fascia cover **[and secure single-ply roof membrane]**. Provide matching corner units.
1. Metallic-Coated Steel Sheet Fascia Covers: Zinc-coated (galvanized) steel, nominal **[0.028-inch thickness]** **[0.034-inch thickness]** [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Surface:** [Smooth, flat] [Embossed] finish.
 - b. **Finish:** [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] <Insert finish>.
 - c. **Color:** [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 2. Formed Aluminum Sheet Fascia Covers: Aluminum sheet, **[0.040 inch thick]** **[0.050 inch thick]** **[0.063 inch thick]** [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Surface:** [Smooth, flat] [Embossed] finish.
 - b. **Finish:** [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
 - c. **Color:** [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 3. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
 4. Splice Plates: **[Concealed]** **[Exposed]**, of same material, finish, and shape as fascia cover.
 5. Receiver: [Galvanized-steel sheet, nominal **0.040-inch** thickness] [Aluminum sheet, **0.050 inch** thick] [Extruded aluminum, **0.080 inch** thick] [Manufacturer's standard material and thickness].
 6. Special Fabrications: [Radiussed sections] [Arched sections] [Bullnose fascia cover] [Cornice fascia cover] [Cove fascia cover] <Insert description>.

7. Fascia Accessories: [Fascia extenders with continuous hold-down cleats] [Wall cap] [Soffit trim] [Overflow scuppers] [Overflow scuppers with perforated screens] [Spillout scuppers] [Downspout scuppers with integral conductor head and downspout adapters] [Downspout scuppers with integral conductor head and downspout adapters and perforated screens] <Insert description>.
- C. One-Piece Gravel Stops: Manufactured, one-piece, metal gravel stop in section lengths not exceeding **[12 feet]** <Insert dimension>, with a horizontal flange and vertical leg [, **drain-through**] fascia [**terminating in a drip edge**], and concealed splice plates of same material, finish, and shape as gravel stop. Provide matching corner units.
1. Retain one of five metal gravel stops subparagraphs below. Retain thickness of gravel stop that meets performance requirements and has the rigidity to suit Project.
 2. Metallic-Coated Steel Sheet Gravel Stops: Zinc-coated (galvanized) steel, nominal **[0.028-inch thickness]** **[0.034-inch thickness]** [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Surface:** [Smooth, flat] [Embossed] finish.
 - b. **Finish:** [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] <Insert finish>.
 - c. **Color:** [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 3. Formed Aluminum Sheet Gravel Stops: Aluminum sheet, **[0.040 inch thick]** **[0.050 inch thick]** **[0.063 inch thick]** [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Surface:** [Smooth, flat] [Embossed] finish.
 - b. **Finish:** [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
 - c. **Color:** [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 4. Extruded-Aluminum Gravel Stops: Extruded aluminum, **[0.080 inch thick]** **[0.125 inch thick]** [thickness as required to meet performance requirements] <Insert thickness>.
 - a. **Finish:** [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
 - b. **Color:** [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 5. Formed Stainless Steel Sheet Gravel Stops: Stainless steel sheet, nominal **[0.0313-inch thickness]** [thickness as required to meet performance requirements] <Insert thickness>.

- a. **Finish:** [ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 3 (coarse, polished directional satin)] [ASTM A480/A480M No. 4 (bright, polished directional satin)] <Insert finish>.
6. Formed Copper Sheet Gravel Stops: Copper sheet, [20 oz./sq. ft.] [weight as required to meet performance requirements] <Insert weight>.
- a. **Copper Finish:** [Non-patinated, mill] [Pre-patinated dark brown] [Pre-patinated verdigris] <Insert finish>.
7. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
8. Accessories: [Fascia extenders with continuous hold-down cleats] [Wall cap] [Soffit trim] <Insert description>.
- A. Gutters: Manufactured in uniform section lengths not exceeding [12 feet] <Insert dimension>, with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.
- 1. Zinc-Coated Steel: Nominal [0.028-inch] [0.034-inch] <Insert value> thickness.
 - 2. Aluminum Sheet: [0.032 inch] [0.040 inch] [0.050 inch] [0.063 inch] <Insert value> thick.
 - 3. Copper Sheet: [16 oz./sq. ft.] [20 oz./sq. ft.] <Insert value>.
 - 4. Gutter Profile: [Style A] [Style B] [Style F] [Style G] [Style H] [Style I] [Style K] [Style K highback] [Half-round single bead] [Half-round highback] [Quarter round] [Ogee] [As indicated] <Insert style> in accordance with SMACNA's "Architectural Sheet Metal Manual."
 - 5. Embossed Surface: Embossed with design [as indicated by manufacturer's designations] [As selected by Architect from manufacturer's full range] <Insert description>.
 - 6. Applied Fascia Cover (Concealed Gutter): Exposed, formed [copper, 16 oz./sq. ft.] [aluminum, 0.040 inch thick] <Insert material and weight or thickness>, with factory-mitered corners, ends, and concealed splice joints.
 - 7. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
 - 8. Gutter Supports: [Gutter brackets] [Straps] [Spikes and ferrules] [Manufacturer's standard supports as selected by Architect] <Insert description> with finish matching the gutters.
 - 9. Special Fabrications: [Radiussed sections] <Insert description>.
 - 10. Gutter Accessories: [Continuous screened leaf guard with sheet metal frame] [Continuous hinged leaf guard of solid metal designed to shed leaves] [Continuous snap-in plastic leaf guard] [Bronze wire ball downspout strainer] [Wire ball downspout strainer] [Flat ends] [Bullnose ends for half-round gutter] <Insert description>.

- B. Downspouts: [Plain round] [Corrugated round] [Plain rectangular] [Corrugated rectangular] [Open-face rectangular] <Insert shape> complete with [machine-crimped] [mitered] [smooth-curve] elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.
1. Zinc-Coated Steel: Nominal [0.028-inch] [0.034-inch] <Insert value> thickness.
 2. Formed Aluminum: [0.032 inch] [0.040 inch] [0.050 inch] [0.063 inch] <Insert value> thick.
 3. Extruded Aluminum: [0.125 inch] <Insert value> thick.
 4. Copper: [16 oz./sq. ft.] <Insert value>.
- C. Parapet Scuppers: Manufactured with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. [**Fasten gravel guard angles to base of scuppers.**]
1. Zinc-Coated Steel: Nominal [0.028-inch] <Insert value> thickness.
 2. Formed Aluminum: [0.032 inch] <Insert value> thick.
 3. Stainless Steel: [0.0188 inch] <Insert value> thick.
 4. Copper: [16 oz./sq. ft.] <Insert weight>.
- D. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge, and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout [, exterior flange trim,] [and] [built-in overflow].
1. Zinc-Coated Steel: Nominal [0.028-inch] <Insert value> thickness.
 2. Formed Aluminum: [0.032 inch] <Insert value> thick.
 3. Stainless Steel: [0.0156 inch] <Insert value> thick.
 4. Copper: [16 oz./sq. ft.] <Insert weight>.
- E. Splash Pans: Fabricate from the following exposed metal:
1. Zinc-Coated Steel: Nominal [0.028-inch] <Insert value> thickness.
 2. Formed Aluminum: [0.040 inch] <Insert value> thick.
 3. Stainless Steel: [0.0188 inch] <Insert value> thick.
 4. Copper: [16 oz./sq. ft.] <Insert weight>.
- F. Zinc-Coated Steel Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] <Insert finish>.
1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.

- G. Aluminum Finish: [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
1. Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
- H. Stainless Steel Finish: [ASTM A480/A480M No. 2B (bright, cold rolled, unpolished)] [ASTM A480/A480M No. 3 (coarse, polished directional satin)] [ASTM A480/A480M No. 4 (bright, polished directional satin)] <Insert finish>.
- I. Copper Finish: [Non-patinated, mill] [Pre-patinated dark brown] [Pre-patinated verdigris] <Insert finish>.
- A. Reglets: Manufactured units formed to provide secure interlocking of separate reglet and counterflashing pieces, from the following exposed metal:
1. Zinc-Coated Steel: Nominal [0.022-inch] [0.028-inch] <Insert value> thickness.
 2. Formed Aluminum: [0.024 inch] [0.050 inch] <Insert value> thick.
 3. Stainless Steel: [0.0188 inch] [0.0250 inch] <Insert value> thick.
 4. Copper: [16 oz./sq. ft.] <Insert weight>.
 5. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
 6. Surface-Mounted Type: Provide reglets with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 7. Stucco Type, Embedded: Provide reglets with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
 8. Concrete Type, Embedded: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
 9. Masonry Type, Embedded: Provide reglets with offset top flange for embedment in masonry mortar joint.
 10. Multiuse Type, Embedded: For multiuse embedment in [cast-in-place concrete] [masonry mortar joints].
- B. Counterflashings: Manufactured units of heights to overlap top edges of base flashings by 4 inches and in lengths not exceeding [12 feet] <Insert dimension> designed to snap into [reglets] [or] [through-wall-flashing receiver] and compress against base flashings with joints lapped, from the following exposed metal:
1. Zinc-Coated Steel: Nominal [0.022-inch] [0.028-inch] <Insert value> thickness.
 2. Formed Aluminum: [0.024 inch] [0.032 inch] <Insert value> thick.

3. Stainless Steel: **[0.0188 inch] [0.0250 inch]** <Insert value> thick.
 4. Copper: **[16 oz./sq. ft.]** <Insert weight>.
- C. Accessories:
1. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where reglet is provided separate from metal counterflashing.
 2. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.
- D. Zinc-Coated Steel Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer]** <Insert finish>.
1. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color>.
- E. Aluminum Finish: **[Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat mica fluoropolymer] [Three-coat metallic fluoropolymer] [Clear anodic] [Color anodic]** <Insert finish>.
1. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color>.
- F. Stainless Steel Finish: **[ASTM A480/A480M No. 2B (bright, cold rolled, unpolished)] [ASTM A480/A480M No. 3 (coarse, polished directional satin)] [ASTM A480/A480M No. 4 (bright, polished directional satin)]** <Insert finish>.
- G. Copper Finish: **[Non-patinated, mill] [Pre-patinated verdigris]** <Insert finish>.
- A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 coating designation.
- B. Aluminum Sheet: ASTM B209, alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.
- C. Aluminum Extrusions: ASTM B221, alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:
- D. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304.
- E. Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 or H01 temper.
- A. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
1. Thermal Stability: ASTM D1970/D1970M; stable after testing at 240 deg F (116 deg C).
 2. Low-Temperature Flexibility: ASTM D1970/D1970M; passes after testing at minus 20 deg F.

- B. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
- C. Slip Sheet: Rosin-sized building paper, 3-lb/100 sq. ft. minimum.
- A. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:
 - 1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
 - 2. Fasteners for Copper Sheet: Copper, hardware bronze, or passivated Series 300 stainless steel.
 - 3. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.
 - 4. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
 - 5. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel in accordance with ASTM A153/A153M or ASTM F2329.
- B. Elastomeric Sealant: ASTM C920, elastomeric **[polyurethane]** **[silicone]** polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.
- C. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type joints with limited movement.
- D. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- E. Asphalt Roofing Cement: ASTM D4586, asbestos free, of consistency required for application.
- F. Solder for Copper: ASTM B32, **[lead-free solder]** **[Grade Sn50, 50 percent tin and 50 percent lead]** **<Insert solder grade>**.
- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Coil-Coated Galvanized-Steel Sheet Finishes:
 - 1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with ASTM A755/A755M and coating and resin manufacturers' written instructions.

- a. **Two-Coat Fluoropolymer: AAMA 621.** Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
- b. **Three-Coat Fluoropolymer: AAMA 621.** Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
- c. **Two-Coat Mica Fluoropolymer: AAMA 621.** Fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
- d. **Three-Coat Metallic Fluoropolymer: AAMA 621.** Fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
- e. **Concealed Surface Finish:** Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

E. Coil-Coated Aluminum Sheet Finishes:

1. **High-Performance Organic Finish:** Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. **Two-Coat Fluoropolymer: AAMA 2605.** Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
 - b. **Three-Coat Fluoropolymer: AAMA 2605.** Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
 - c. **Two-Coat Mica Fluoropolymer: AAMA 2605.** Fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].

- d. **Three-Coat Metallic Fluoropolymer: AAMA 2605.** Fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
 - e. **Concealed Surface Finish: Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.**
2. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
 3. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
- F. Aluminum Extrusion Finishes:
1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. **Two-Coat Fluoropolymer: AAMA [2604] [2605].** Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. **Three-Coat Fluoropolymer: AAMA [2604] [2605].** Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - c. **Two-Coat Mica Fluoropolymer: AAMA [2604] [2605].** Fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - d. **Three-Coat Metallic Fluoropolymer: AAMA [2604] [2605].** Fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - e. **Concealed Surface Finish: Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.**
 2. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
 3. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.

G. Copper Sheet Finishes:

1. Non-Patinated Finish: Mill finish.
2. Pre-Patinated Finish: Chemically treated in accordance with ASTM B882.

PART 3 EXECUTION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.
- C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage where applicable, and securely anchored.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.
- A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.
 1. Apply continuously under [copings] [roof-edge specialties] [and] [reglets and counterflashings].
 2. Coordinate application of self-adhering sheet underlayment under roof specialties with requirements for continuity with adjacent air barrier materials.
- B. Felt Underlayment: Install with adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.
- C. Slip Sheet: Install with tape or adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.
- A. Install roof specialties in accordance with manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.
 1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 2. Provide uniform, neat seams with minimum exposure of solder and sealant.
 3. Install roof specialties to fit substrates and to result in weathertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
 4. Torch cutting of roof specialties is not permitted.
 5. Do not use graphite pencils to mark metal surfaces.

- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
1. Coat concealed side of **[uncoated aluminum] [and] [stainless steel]** roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.
- C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
1. Space movement joints at a maximum of **[12 feet] <Insert dimension>** with no joints within **[18 inches] <Insert dimension>** of corners or intersections unless otherwise indicated on Drawings.
 2. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.
- D. Fastener Sizes: Use fasteners of sizes that penetrate **[wood blocking or sheathing not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws] [substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance] <Insert size requirement>**.
- E. Seal concealed joints with butyl sealant as required by roofing-specialty manufacturer.
- F. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F.
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches; however, reduce pre-tinning where pre-tinned surface would show in completed Work. Tin edges of uncoated copper sheets using solder for copper. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
- A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.
- B. Anchor copings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.
1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at **[30-inch centers] [40-inch centers] [manufacturer's required spacing that meets performance requirements] <Insert spacing>**.
 2. Interlock face-leg drip edge into continuous cleat anchored to substrate at **[24-inch centers] [16-inch centers] [manufacturer's required spacing that meets performance requirements] <Insert spacing>**. Anchor back leg of coping with screw fasteners and elastomeric washers at **[24-inch centers] [16-inch centers] [manufacturer's required spacing that meets performance requirements] <Insert spacing>**.

- A. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.
- B. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.
- A. Install components to produce a complete roof-edge drainage system in accordance with manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.
- B. Gutters: Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than **[12 inches] [24 inches] [30 inches] <Insert dimension>** apart. Attach ends with rivets and **[seal with sealant] [solder]** to make watertight. Slope to downspouts.
 - 1. Install gutter with expansion joints at locations indicated but not exceeding **[50 feet] <Insert dimension>** apart. Install expansion-joint caps.
 - 2. Install continuous leaf guards on gutters with noncorrosive fasteners, **[removable] [hinged to swing open]** for cleaning gutters.
- C. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch away from walls; locate fasteners at top and bottom and at approximately **[60 inches] <Insert dimension>** o.c.
 - 1. Provide elbows at base of downspouts at grade to direct water away from building.
 - 2. Connect downspouts to underground drainage system indicated.
- D. Splash Pans: Install where downspouts discharge on **[low-slope roofs] <Insert surface>**. Set in **[asphalt roofing cement] [elastomeric sealant]**.
- E. Parapet Scuppers: Install scuppers through parapet where indicated. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
 - 1. Anchor scupper closure trim flange to exterior wall and seal or solder to scupper.
 - 2. Loosely lock front edge of scupper with conductor head.
 - 3. Seal or solder exterior wall scupper flanges into back of conductor head.
- F. Conductor Heads: Anchor securely to wall with elevation of conductor top edge 1 inch below **[scupper] [gutter]** discharge.
- A. Coordinate installation of reglets and counterflashings with installation of base flashings.
- B. Embedded Reglets: See **[Section 03 30 00 "Cast-in-Place Concrete"] [and] [Section 04 22 00 "Concrete Unit Masonry"]** for installation of reglets.
- C. Surface-Mounted Reglets: Install reglets to receive flashings where flashing without embedded reglets is indicated on Drawings. Install at height so that inserted counterflashings overlap 4 inches over top edge of base flashings.

- D. Counterflashings: Insert counterflashings into reglets or other indicated receivers; ensure that counterflashings overlap 4 inches over top edge of base flashings. Lap counterflashing joints a minimum of 4 inches and bed with butyl sealant. Fit counterflashings tightly to base flashings.
- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.
- D. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

SECTION 07 72 00
ROOF ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Roof curbs.
2. Equipment supports.
3. Roof hatches.
4. Heat and smoke vents.
5. Gravity ventilators.
6. Pipe and duct supports.
7. Pipe portals.
8. Preformed flashing sleeves.
9. Roof walkways.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for metal vertical ladders, ships' ladders, and stairs for access to roof hatches.
2. Section 055213 "Pipe and Tube Railings" for safety railing systems not attached to roof-hatch curbs.
3. Section 076100 "Sheet Metal Roofing" for shop- and field-formed roof curbs and snow guards for sheet metal roofing.
4. Section 076200 "Sheet Metal Flashing and Trim" for shop- and field-formed metal flashing, roof-drainage systems, roof expansion-joint covers, and miscellaneous sheet metal trim and accessories.
5. Section 077100 "Roof Specialties" for manufactured fasciae, copings, gravel stops, gutters and downspouts, and counterflashing.
6. Section 077129 "Manufactured Roof Expansion Joints" for manufactured roof expansion-joint covers.
7. Section 077253 "Snow Guards" for snow guards.

8. Section 086200 "Unit Skylights" for single- and double-glazed domed plastic skylights with curb frame.
9. Section 230548 "Vibration and Seismic Controls for HVAC" for special curbs designed to accommodate seismic and vibration controls.
10. Section 233423 "HVAC Power Ventilators" for power roof-mounted ventilators.
11. Section 237413 "Packaged, Outdoor, Central-Station Air-Handling Units" for standard curbs specified with rooftop units.
12. **[Section 284621.11 "Addressable Fire-Alarm Systems"] [Section 28462.13 "Conventional Fire-Alarm Systems"]** for interconnects to automatically operate heat and smoke vents.

1.02 COORDINATION

- A. Coordinate layout and installation of roof accessories with **[roofing membrane and base flashing and] interfacing** and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of roof accessory.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For roof accessories.
 1. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
- C. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.
- D. Delegated Design Submittals: For **[roof curbs] [equipment supports] [and] [walkways]** indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 1. Detail mounting, securing, and flashing of roof-mounted items to roof structure. Indicate coordinating requirements with roof membrane system.
 2. Wind-Restraint Details: Detail fabrication and attachment of wind restraints. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.

1.04 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:

1. Size and location of roof accessories specified in this Section.
2. Method of attaching roof accessories to roof or building structure.
3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
4. Required clearances.

B. Sample Warranties: For manufacturer's special warranties.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

1.06 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested according to ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Finish Warranty Period: **[20] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, provide products by one of the manufacturers listed in other Part 2 articles.

2.02 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof accessories to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design **[roof curbs] [and] [equipment supports]** to comply with wind performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Wind-Restraint Performance: **[As indicated on Drawings] <Insert requirements>**.

2.03 ROOF CURBS

- A. Roof Curbs: Provide metal roof curbs, internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing continuously on roof structure, and capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, **[straight sides,] [integral metal cant,] [stepped integral metal cant raised the thickness of roof insulation,]** and integrally formed deck-mounting flange at perimeter bottom.
1. Manufacturers (Butler IF Curb):
 - a. Colony Custom Curbs.
 - b. Commodity Products Company, Inc.
 - c. Conn-Fab Sales, Inc.
 - d. Curbs Plus Inc.
 - e. Custom Curb, Inc.
 - f. LM Curbs.
 - g. Loren Cook Company.
 - h. Metallic Products Corporation.
 - i. Pate Company (The).
 - j. Roof Products & Systems Corporation.
 - k. Roof Products, Inc.
 - l. Thaler Metal Industries Ltd.
 - m. ThyCurb; Div. of Thybar Corporation.
 - n. Uni-Curb, Inc.
 - o. Vent Products Company, Inc.
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- C. Supported Load Capacity: **[Coordinate load capacity with information on Shop Drawings of equipment to be supported] <Insert load requirements>**.
- D. Steel: **[Zinc-coated (galvanized)] [Aluminum-zinc alloy-coated] steel sheet, [0.052 inch] [0.064 inch] [0.079 inch] <Insert dimension> thick.**
1. Finish: **[Mill phosphatized] [Factory prime coating] [Two-coat fluoropolymer] [Baked enamel or powder coat] <Insert finish>**.
 2. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>**.
- E. Aluminum: **[0.090 inch] [0.125 inch] <Insert dimension> thick sheet.**
1. Finish: **[Mill] [Factory prime coating] [Clear anodic] [Color anodic] [Two-coat fluoropolymer] [Baked enamel or powder coat] <Insert finish>**.
 2. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Light bronze] [Medium bronze] [Dark bronze] <Insert color>**.

- F. Stainless Steel: **[0.0781 inch]** <Insert dimension> thick sheet.
1. Finish: **[Manufacturer's standard]** **[ASTM A480/A480M, No. 2D, directional polish finish]** <Insert finish>.
- G. Construction:
1. Curb Profile: **[Manufacturer's standard]** **[Profile as indicated on Drawings]** compatible with roofing system.
 2. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
 3. Fabricate curbs to minimum height of **[12 inches]** <Insert dimension> above roofing surface unless otherwise indicated.
 4. Top Surface: Level top of curb, with roof slope accommodated **[by sloping deck-mounting flange]** **[or]** **[by use of leveler frame]**.
 5. Sloping Roofs: Where roof slope exceeds 1:48, fabricate curb with perimeter curb height tapered to accommodate roof slope so that top surface of perimeter curb is level. Equip unit with water diverter or cricket on side that obstructs water flow.
 6. Insulation: Factory insulated with **[1-1/2-inch-]** <Insert dimension> thick glass-fiber board insulation.
 7. Liner: Same material as curb, of manufacturer's standard thickness and finish.
 8. Nailer: Factory-installed wood nailer **[along top flange of curb]** **[under top flange on side of curb]**, continuous around curb perimeter.
 9. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb, of size and spacing required to meet wind uplift requirements.
 10. Platform Cap: Where portion of roof curb is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
 11. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as curb.
 12. Security Grille: **[Provide for all units]** **[Provide where indicated]**.
 13. Damper Tray: Provide damper tray or shelf with opening **[3 inches]** <Insert dimension> **[less than interior curb dimensions indicated]** **[of size indicated]**.

2.04 EQUIPMENT SUPPORTS

- A. Equipment Supports: **[Internally reinforced perimeter]** **[Rail-type]** metal equipment supports capable of supporting superimposed live and dead loads between structural supports, including equipment loads and other construction indicated on Drawings, spanning between structural supports; capable of meeting performance requirements; with welded **[or mechanically fastened and sealed]** corner joints, **[integral metal cant,]** **[stepped integral metal cant raised the thickness of roof insulation,]** and integrally formed structure-mounting flange at bottom.
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- C. Supported Load Capacity: **[Coordinate load capacity with information on Shop Drawings of equipment to be supported]** <Insert load requirements>.
- D. Steel: **[Zinc-coated (galvanized)]** **[Aluminum-zinc alloy-coated]** steel sheet, **[0.052 inch]** **[0.064 inch]** **[0.079 inch]** <Insert dimension> thick.
1. Finish: **[Mill phosphatized]** **[Factory prime coating]** **[Two-coat fluoropolymer]** **[Baked enamel or powder coat]** <Insert finish>.
 2. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
- E. Aluminum: **[0.090 inch]** **[0.125 inch]** <Insert dimension> thick sheet.
1. Finish: **[Mill]** **[Factory prime coating]** **[Clear anodic]** **[Color anodic]** **[Two-coat fluoropolymer]** **[Baked enamel or powder coat]** <Insert finish>.
 2. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **[Light bronze]** **[Medium bronze]** **[Dark bronze]** <Insert color>.
- F. Stainless Steel: **[0.0781 inch]** <Insert dimension> thick sheet.
1. Finish: **[Manufacturer's standard]** **[ASTM A480/A480M, No. 2D, directional polish finish]** <Insert finish>.
- G. Construction:
1. Curb Profile: **[Manufacturer's standard]** **[Profile as indicated on Drawings]** compatible with roofing system.
 2. Insulation: Factory insulated with **[1-1/2-inch-]** <Insert dimension> thick glass-fiber board insulation.
 3. Liner: Same material as equipment support, of manufacturer's standard thickness and finish.
 4. Nailer: Factory-installed continuous wood nailers **[3-1/2 inches]** **[5-1/2 inches]** <Insert dimension> wide **[on top flange of equipment supports]** **[under top flange on side of curb]**, continuous around support perimeter.

5. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb of size and spacing required to meet wind uplift requirements.
6. Platform Cap: Where portion of equipment support is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
7. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
8. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
9. Fabricate equipment supports to minimum height of **[12 inches]** <Insert dimension> above roofing surface unless otherwise indicated.
10. Sloping Roofs: Where roof slope exceeds 1:48, fabricate each support with height to accommodate roof slope so that tops of supports are level with each other. Equip supports with water diverters or crickets on sides that obstruct water flow.
11. Security Grille: **[Provide for all units]** **[Provide where indicated on Drawings]**.

2.05 ROOF HATCHES

- A. Roof Hatches: Metal roof-hatch units with lids and insulated **[single]** **[double]**-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, **[straight sides,]** **[integral metal cant,]** **[stepped integral metal cant raised the thickness of roof insulation,]** and integrally formed deck-mounting flange at perimeter bottom.
- B. Type and Size:
 1. Single-leaf lid, **[30 by 36 inches]** **[36 by 36 inches]** **[30 by 54 inches]** **[30 by 96 inches]** <Insert dimensions>.
 2. Double-leaf lid, **[72 by 96 inches]** <Insert dimensions>.
- C. Loads: Minimum **[40-lbf/sq. ft.]** <Insert value> external live load and **[20-lbf/sq. ft.]** <Insert value> internal uplift load.
 1. Dome Glazing: Minimum **[40-lbf/sq. ft.]** <Insert value> external live load and **[20-lbf/sq. ft.]** <Insert value> internal uplift load.
- D. Hatch Material, Steel: **[Zinc-coated (galvanized)]** **[Aluminum-zinc alloy-coated]** steel sheet.
 1. Thickness: **[Manufacturer's standard thickness for hatch size indicated]** **[0.079 inch]** <Insert dimension>.
 2. Finish: **[Mill phosphatized]** **[Factory prime coating]** **[Two-coat fluoropolymer]** **[Baked enamel or powder coat]** <Insert finish>.
 3. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.

E. Hatch Material, Aluminum:

1. Thickness: [Manufacturer's standard thickness for hatch size indicated] **[0.079 inch]** <Insert dimension>.
2. Finish: [Mill] [Factory prime coating] [Clear anodic] [Color anodic] [Two-coat fluoropolymer] [Baked enamel or powder coat] <Insert finish>.
3. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Light bronze] [Medium bronze] [Dark bronze] <Insert color>.

F. Hatch Material, Stainless Steel:

1. Thickness: [Manufacturer's standard thickness for hatch size indicated] **[0.0781 inch]** <Insert dimension>.
2. Finish: [Manufacturer's standard] [ASTM A480/A480M, No. 2D, directional polish finish] <Insert finish>.

G. Construction:

1. Insulation: **[1-inch- thick, cellulosic-fiber board]** **[1-inch- thick, glass-fiber board]** **[2-inch- thick, polyisocyanurate board]**.
 - a. R-Value: **[2.78]** **[4.3]** **[12.0]** <Insert R-value> according to ASTM C1363.
2. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
3. Hatch Lid: **[Opaque]** **[Glazed]**, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
4. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
5. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
6. Fabricate curbs to minimum height of **[12 inches]** <Insert dimension> above roofing surface unless otherwise indicated.
7. Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate curb with perimeter curb height that is **[constant]** **[tapered to accommodate roof slope so that top surfaces of perimeter curb are level]**. Equip hatch with water diverter or cricket on side that obstructs water flow.

H. Hatch-Lid Glazing: **[Single]** **[Double]** **[acrylic]** **[polycarbonate]** glazing of thickness capable of resisting indicated loads.

1. Single-Dome Color: [Colorless, transparent] [White, translucent] [Gray tinted, transparent] [Bronze tinted, transparent] <Insert requirement>.
2. Outer Double-Dome Color: [Colorless, transparent] [White, translucent] [Gray tinted, transparent] [Bronze tinted, transparent] <Insert requirement>.
3. Inner Double-Dome Color: [Colorless, transparent] [White, translucent] [Gray tinted, transparent] [Bronze tinted, transparent] <Insert requirement>.

- I. Hardware: Spring operators, hold-open arm, **[galvanized] [stainless]** steel spring latch with turn handles, **[galvanized] [stainless]** steel butt- or pintle-type hinge system, and padlock hasps inside and outside.
1. Provide two-point latch on lids larger than 84 inches.
 2. Provide remote-control operation.
- J. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.
1. Height: **[42 inches]** <Insert dimension> above finished roof deck.
 2. Posts and Rails: Galvanized-steel pipe, 1-1/4 inches in diameter or galvanized-steel tube, 1-5/8 inches in diameter.
 3. Flat Bar: Galvanized steel, 2 inches high by 3/8 inch thick.
 4. Maximum Opening Size: System constructed to prevent passage of a sphere 21 inches in diameter.
 5. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
 6. Self-Latching Gate: Fabricated of same materials and rail spacing as safety railing system. Provide manufacturer's standard hinges and self-latching mechanism.
 7. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
 8. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
 9. Fabricate joints exposed to weather to be watertight.
 10. Fasteners: Manufacturer's standard, finished to match railing system.
 11. Finish: **[Manufacturer's standard]** <Insert finish>.
 - a. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color>.
- K. Ladder-Assist Post: Roof-hatch manufacturer's standard device for attachment to roof-access ladder.
1. Operation: Post locks in place on full extension; release mechanism returns post to closed position.
 2. Height: **[42 inches]** <Insert dimension> above finished roof deck.
 3. Material: **[Steel tube] [Stainless steel] [Aluminum]**.
 4. Post: **[1-5/8-inch-]** <Insert dimension> diameter pipe.

5. Finish: [Manufacturer's standard baked enamel or powder coat] <Insert finish>.
 - a. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.

2.06 HEAT AND SMOKE VENTS

- A. Hatch-Type Heat and Smoke Vents: Manufacturer's standard, with **[single]** **[double]**-walled insulated curbs, welded or mechanically fastened and sealed corner joints, integral condensation gutter, and cap flashing. Fabricate with insulated double-walled lid and continuous weathertight perimeter lid gaskets, and equip with automatic self-lifting mechanisms and UL-listed **[fusible links rated at 165 deg F]** <Insert temperature rating> **[fire-suppression system]** **[smoke-detection system]**.

1. Type and Size:
 - a. Single-leaf lid, [size as indicated on Drawings] **[30 by 36 inches]** **[30 by 54 inches]** **[30 by 96 inches]** <Insert dimensions>.
 - b. Double-leaf lid, **[72 by 96 inches]** <Insert dimensions>.
2. Loads: Minimum **[40-lbf/sq. ft.]** <Insert value> external live load and **[30-lbf/sq. ft.]** <Insert value> internal uplift load.
 - a. When release is actuated, lid to open against **[10-lbf/sq. ft.]** <Insert value> snow or wind load and lock in position.
 - b. Hatch-Lid Glazing: Minimum **[40-lbf/sq. ft.]** <Insert value> external live load and **[20-lbf/sq. ft.]** <Insert value> internal uplift load.
3. Heat and Smoke Vent Standard: Provide units that have been tested and **[listed to comply with UL 793]** **[and]** **[are FM Approved]**.
4. Curb, Framing, and Lid Material, Steel: **[Zinc-coated (galvanized)]** **[Aluminum-zinc alloy-coated]** steel sheet.
 - a. Thickness: [Manufacturer's standard thickness for hatch size indicated] **[0.079 inch]** <Insert dimension>.
 - b. Finish: [Mill phosphatized] [Factory prime coating] [Two-coat fluoropolymer] [Baked enamel or powder coat] <Insert finish>.
 - c. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
5. Curb, Framing, and Lid Material, Aluminum:
 - a. Thickness: [Manufacturer's standard thickness for hatch size indicated] **[0.079 inch]** <Insert dimension>.
 - b. Finish: [Mill] [Factory prime coating] [Clear anodic] [Color anodic] [Two-coat fluoropolymer] [Baked enamel or powder coat] <Insert finish>.
 - c. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Light bronze] [Medium bronze] [Dark bronze] <Insert color>.
6. Construction:
 - a. Insulation: **[1-inch-** thick, cellulosic-fiber board] **[or]** **[1-inch-** thick, glass-fiber board] **[2-inch-** thick, polyisocyanurate board].

- 1) R-Value: **[2.78] [4.3] [12.0]** <Insert R-value> according to ASTM C1363.
 - b. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
 - c. Hatch Lid: **[Opaque] [Glazed]**, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
 - d. Exterior Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
 - e. Fabricate curbs to minimum height of **[12 inches]** <Insert dimension> above roofing surface unless otherwise indicated.
 - f. Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate curb with perimeter curb height that is **[constant] [tapered to accommodate roof slope so that top surfaces of perimeter curb are level]**. Equip hatch with water diverter or cricket on side that obstructs water flow.
 - g. Security Grille: **[Provide for all units] [Provide where indicated on Drawings]**.
7. Hatch-Lid Glazing: **[Single] [Double] [acrylic] [polycarbonate]** glazing of thickness capable of resisting indicated loads; **[colorless, transparent] [white, translucent]** <Insert color requirement>.
 8. Hardware: Manufacturer's standard **[corrosion resistant] [stainless steel]**; with hinges, hold-open devices, and independent manual-release devices for **[inside] [and] [outside]** operation of lids.
- B. Dropout-Type Heat and Smoke Vents: Manufacturer's standard, gravity operated and automatic; with **[single] [double]**-walled insulated curbs and frame, welded or mechanically fastened and sealed corner joints, integral condensation gutter, cap flashing, and heat-sensitive dome glazing that will deform and drop out of vent opening according to heat and smoke vent standard indicated.
1. Size: **[As indicated on Drawings] [48 by 48 inches] [48 by 60 inches] [48 by 72 inches] [48 by 90 inches] [48 by 96 inches]** <Insert dimensions>.
 2. Loads: Minimum **[40-lbf/sq. ft.]** <Insert value> external live load and **[30-lbf/sq. ft.]** <Insert value> internal uplift load.
 - a. Dome Glazing: Minimum **[40-lbf/sq. ft.]** <Insert value> external live load and **[20-lbf/sq. ft.]** <Insert value> internal uplift load.
 3. Heat and Smoke Vent Standard: Provide units that have been tested and **[listed to comply with UL 793] [and] [are FM Approved]**.
 4. Curb and Framing Material: Aluminum sheet.
 - a. Thickness: **[Manufacturer's standard thickness for vent size indicated] [0.079 inch]** <Insert dimension>.
 - b. Finish: **[Mill] [Factory prime coating] [Clear anodic] [Color anodic] [Two-coat fluoropolymer] [Baked enamel or powder coat]** <Insert finish>.
 - c. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Light bronze] [Medium bronze] [Dark bronze]** <Insert color>.
 5. Construction:

- a. Insulation: Manufacturer's standard.
 - b. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
 - c. Exterior Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
 - d. Fabricate curbs to minimum height of **[12 inches]** <Insert dimension> above roofing surface unless otherwise indicated.
 - e. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb with perimeter curb height that is **[constant]** **[tapered to accommodate roof slope so that top surfaces of perimeter curb are level]**. Equip unit with water diverter or cricket on side that obstructs water flow.
6. Dome Glazing: **[Single]** **[Double]** **[acrylic]** **[polycarbonate]** glazing of thickness capable of resisting indicated loads.
 - a. Single-Dome Color: **[Colorless, transparent]** **[White, translucent]** **[Gray tinted, transparent]** **[Bronze tinted, transparent]** <Insert requirement>.
 - b. Outer Double-Dome Color: **[Colorless, transparent]** **[White, translucent]** **[Gray tinted, transparent]** **[Bronze tinted, transparent]** <Insert requirement>.
 - c. Inner Double-Dome Color: **[Colorless, transparent]** **[White, translucent]** **[Gray tinted, transparent]** **[Bronze tinted, transparent]** <Insert requirement>.
 7. Fall Protection Safety Structure: Manufacturer's standard meeting impact load requirements of 29 CFR 1910.23 and authorities having jurisdiction, **[equipped with hail protection galvanized steel wire mesh screen,]** and manually operable from exterior without special tools.
 8. Hardware: Manufacturer's standard, corrosion resistant; with hinges, hold-open devices, and independent manual-release devices for **[inside]** **[and]** **[outside]** operation of lids.

2.07 GRAVITY VENTILATORS

- A. Low-Profile, Cylindrical-Style Gravity Ventilators: Manufacturer's standard, fabricated as indicated, with manufacturer's standard welded or sealed mechanical joints.
 1. Construction: Integral base flange, vent cylinder, cylinder bird screen, and **[rain cap]** **[hood]**.
 2. Dimensions: **[As indicated on Drawings]** <Insert dimensions>.
 3. Configuration: **[As indicated on Drawings]** <Insert requirements>.
 4. Bird Screens: Manufacturer's standard mesh with rewirable frame.
 5. Insect Screens: Manufacturer's standard mesh with rewirable frame.
 6. Security Grille: **[Provide for all units]** **[Provide where indicated on Drawings]**.
 7. Vent Cylinder, Base Flange, Rain-Cap, and Hood Material: **[Zinc-coated (galvanized) steel]** **[Aluminum]** **[Stainless steel]** sheet, of manufacturer's standard thickness.
 8. Finish: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert finish>.

- B. Louvered Penthouse-Style Gravity Ventilators: Manufacturer's standard, fabricated as indicated, with manufacturer's standard welded or sealed mechanical joints.
1. Construction: Integral frame with base flange, weathertight cap [**with clear acrylic dome**] [**with white translucent acrylic dome**], and weatherproof sidewall louvers.
 2. Dimensions: [As indicated on Drawings] <Insert dimensions>.
 3. Configuration: [As indicated on Drawings] <Insert requirements>.
 4. Bird Screens: Manufacturer's standard mesh with rewireable frame.
 5. Insect Screens: Manufacturer's standard mesh with rewireable frame.
 6. Security Grille: [Provide for all units] [Provide where indicated on Drawings].
 7. Frame, Base Flange, Cap, and Louver Material: [Zinc-coated (galvanized) steel] [Aluminum] [Stainless steel] sheet, of manufacturer's standard thickness.
 8. Finish: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert finish>.
- C. Turbine-Style Gravity Ventilators: Manufacturer's standard, fabricated as indicated, with manufacturer's standard welded or sealed mechanical joints:
1. Provide integral weathertight base cap, outlet duct, and rotating louvered turbine.
 2. Throat Size and Height: [As indicated on Drawings] <Insert dimensions>.
 3. Configuration: [As indicated on Drawings] <Insert requirements>.
 4. Bird Screens: Manufacturer's standard mesh with rewireable frame.
 5. Insect Screens: Manufacturer's standard mesh with rewireable frame.
 6. Security Grille: [Provide for all units] [Provide where indicated on Drawings].
 7. Weathertight Base Cap, Outlet Duct, and Turbine Material: [Manufacturer's standard] [Zinc-coated (galvanized) steel] [Aluminum] sheet, of manufacturer's standard thickness.
 8. Finish: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert finish>.

2.08 PIPE AND DUCT SUPPORTS

- A. Fixed-Height Cradle-Type Pipe Supports: Polycarbonate pipe stand accommodating up to [1-1/2-inch] <Insert dimension> diameter pipe or conduit; with provision for pipe retainer and with manufacturer's support pad or deck plate as recommended for penetration-free installation over roof membrane type; as required for quantity of pipe runs and sizes.

- B. Fixed-Height Roller-Bearing Pipe Supports: Polycarbonate pipe stand with **[polycarbonate]** **[stainless steel]** roller carrying assembly accommodating up to **[7-inch-]** **<Insert dimension>** diameter pipe or conduit; with provision for pipe retainer and with manufacturer's support pad or deck plate as recommended for penetration-free installation over roof membrane type; as required for quantity of pipe runs and sizes.
- C. Adjustable-Height Roller-Bearing Pipe Supports: Polycarbonate pipe stand base, pipe support, and roller housing, with stainless steel threaded rod designed for adjusting support height, accommodating up to **[18 inch]** **<Insert dimension>** diameter pipe or conduit; with provision for pipe retainer and with manufacturer's support pad or deck plate as recommended for penetration-free installation over roof membrane type; as required for quantity of pipe runs and sizes.
- D. Adjustable-Height Structure-Mounted Pipe Supports: Extruded-aluminum tube, filled with urethane insulation; **[2 inches]** **<Insert dimension>** in diameter; accommodating up to **[7-inch-]** **<Insert dimension>** diameter pipe or conduit, with provision for pipe retainer; with aluminum baseplate, EPDM base seal, manufacturer's recommended hardware for mounting to structure or structural roof deck as indicated, stainless steel roller and retainer, and extruded-aluminum carrier assemblies; as required for quantity of pipe runs and sizes.
- E. Curb-Mounted Pipe Supports: Galvanized steel support with welded or mechanically fastened and sealed corner joints, **[straight sides,]** **[integral metal cant,]** **[stepped integral metal cant raised the thickness of roof insulation,]** and integrally formed deck-mounting flange at perimeter bottom; with adjustable-height roller-bearing pipe support accommodating up to **[20-inch-]** **<Insert dimension>** diameter pipe or conduit and with provision for pipe retainer; as required for quantity of pipe runs and sizes.
- F. Duct Supports: Extruded-aluminum, urethane-insulated supports, **[2 inches]** **<Insert dimension>** in diameter; with manufacturer's recommended hardware for mounting to structure or structural roof deck.
 - 1. Finish: **[Manufacturer's standard]** **<Insert finish>**.

2.09 PIPE PORTALS

- A. Curb-Mounted Pipe Portal: Insulated roof-curb units with welded or mechanically fastened and sealed corner joints, **[straight sides,]** **[integral metal cant,]** **[stepped integral metal cant raised the thickness of roof insulation,]** and integrally formed deck-mounting flange at perimeter bottom; with weathertight curb cover with single or multiple collared openings and pressure-sealed conically shaped EPDM protective rubber caps sized for piping indicated, with stainless steel snaplock swivel clamps.
- B. Flashing Pipe Portal: Formed aluminum membrane-mounting flashing flange and sleeve with collared opening and pressure-sealed conically shaped EPDM protective rubber cap sized for piping indicated, with stainless steel snaplock swivel clamps.

2.10 PREFORMED FLASHING SLEEVES

- A. Exhaust Vent Flashing: Double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, **[12 inches]** **<Insert dimension>** high, with removable metal hood and **[slotted]** **[perforated]** metal collar.
 - 1. Metal: Aluminum sheet, **[0.063 inch]** **<Insert thickness>** thick.

2. Diameter: [As indicated on Drawings] **[3 inches]** **[4 inches]** **[5 inches]** **[6 inches]** **[7 inches]** **[8 inches]** **[9 inches]** **[10 inches]** <Insert dimension>.
3. Finish: [Manufacturer's standard] <Insert finish>.

B. Vent Stack Flashing: Metal flashing sleeve, uninsulated, with integral deck flange.

1. Metal: [Aluminum sheet, **0.063 inch** thick] <Insert material and thickness>.
2. Height: **[7 inches]** **[13 inches]** **[19 inches]** <Insert dimension>.
3. Diameter: [As indicated on Drawings] **[2 inches]** **[3 inches]** **[4 inches]** **[5 inches]** **[6 inches]** <Insert dimension>.
4. Finish: [Manufacturer's standard] <Insert finish>.

2.11 ROOF WALKWAYS

A. Roof Walkway: Metal planking formed from multiple C-shaped channels with upper surface punched in serrated diamond or rectangular shapes to produce raised slip-resistant surface and drainage holes. Provide support framing, brackets, connectors, nosings, and other accessories and components needed for complete installation.

1. Include step units or stairs of similar construction for changes in elevation. Comply with ASCE-7, 29 CFR 1910.23, and requirements of authorities having jurisdiction.
2. Equip walkways with safety railings where required.
3. Plank Width: **[4-3/4 inches]** **[7 inches]** **[9-1/2 inches]** **[11-3/4 inches]** **[18-3/4 inches]** **[24 inches]** [As indicated].
4. Walkway Width: [As indicated] <Insert dimension>.
5. Channel Depth: **[1-1/2 inches]** **[2 inches]** **[2-1/2 inches]** **[3 inches]** [As indicated].
6. Metal Material: **[0.079-inch-** thick zinc-coated (galvanized) steel sheet] **[0.108-inch-** thick zinc-coated (galvanized) steel sheet] **[0.0625-inch-** thick stainless steel sheet] **[0.0781-inch-** thick stainless steel sheet] **[0.080-inch-** thick aluminum sheet] **[0.100-inch-** thick aluminum sheet] <Insert material and thickness>, perforated, with serrated slip-resistant walking surface.
7. Support Stands: Manufacturer's standard, with protective pads compatible with roofing material.
8. Support Pads: Continuous wood isolation pads, pressure-preservative treated as specified in Section 061000 "Rough Carpentry"; attach roof-walkway supports to pads so that supports are separated from roof membrane surface and walkway support loads are distributed evenly.
9. Wind Restraint: Provide wind restraint attachment to roof structure of size and spacing required to meet wind uplift requirements.
10. Finish: [Manufacturer's standard] <Insert finish>.

2.12 METAL MATERIALS

- A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 coating designation [**and mill phosphatized for field painting where indicated**].
1. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
 2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
 3. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A755/A755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 4. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
 5. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.
- B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A792/A792M, AZ50 coated.
1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
 2. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A755/A755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 3. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
 4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.
- C. Aluminum Sheet: ASTM B209, manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.
1. Mill Finish: As manufactured.
 2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.

3. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
 4. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
 5. Exposed Coil-Coated Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 2605. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 6. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 7. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.
- D. Aluminum Extrusions and Tubes: ASTM B221, manufacturer's standard alloy and temper for type of use, finished to match assembly where used; otherwise mill finished.
- E. Stainless Steel Sheet and Shapes: ASTM A240/A240M or ASTM A666, Type 304.
- F. Steel Shapes: ASTM A36/A36M, hot-dip galvanized according to ASTM A123/A123M unless otherwise indicated.
- G. Steel Tube: ASTM A500/A500M, round tube.
- H. Galvanized-Steel Tube: ASTM A500/A500M, round tube, hot-dip galvanized according to ASTM A123/A123M.
- I. Steel Pipe: ASTM A53/A53M, galvanized.

2.13 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Acrylic Glazing: ASTM D4802, thermoformable, monolithic sheet, manufacturer's standard, Type UVA (formulated with UV absorber), Finish 1 (smooth or polished).
- C. Polycarbonate Glazing: Thermoformable, monolithic polycarbonate sheets manufactured by extrusion process, burglar-resistance rated according to UL 972 with an average impact strength of **[12 to 16 ft-lbf/in.]** <Insert value> of width when tested according to ASTM D256, Method A (Izod).
- D. Cellulosic-Fiber Board Insulation: ASTM C208, Type II, Grade 1, thickness as indicated.
- E. Glass-Fiber Board Insulation: ASTM C726, nominal density of 3 lb/cu. ft., thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F, thickness as indicated.
- F. Polyisocyanurate Board Insulation: ASTM C1289, thickness and thermal resistivity as indicated.

- G. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, **[containing no arsenic or chromium,]** and complying with AWPA C2; not less than 1-1/2 inches thick.
- H. Security Grilles: **[3/4-inch]** <Insert dimension> diameter, ASTM A1011/A1011M steel bars spaced **[6 inches]** <Insert dimension> o.c. in one direction and **[12 inches]** <Insert dimension> o.c. in the other; factory finished as follows:
1. Surface Preparation: Remove mill scale and rust, if any, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 2. Factory Priming for Field-Painted Finish: Apply shop primer specified below immediately after surface preparation and pretreatment.
 3. Shop Primer: Manufacturer's or fabricator's standard, fast-curing, lead- and chromate-free, universal primer; selected for resistance to normal atmospheric corrosion, for compatibility with substrate and field-applied finish paint system indicated, and for capability to provide a sound foundation for field-applied topcoats under prolonged exposure.
- I. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- J. Underlayment:
1. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
 2. Polyethylene Sheet: 6-mil- thick polyethylene sheet complying with ASTM D4397.
 3. Slip Sheet: Building paper, 3 lb/100 sq. ft. minimum, rosin sized.
 4. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
- K. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
1. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A153/A153M or ASTM F2329.
 2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 3. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
- L. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- M. Elastomeric Sealant: ASTM C920, elastomeric **[polyurethane]** **[silicone]** polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

- N. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.
- O. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.

2.14 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install roof accessories according to manufacturer's written instructions.
 - 1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
 - 2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
 - 3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
 - 4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 - 1. Coat concealed side of **[uncoated aluminum]** **[stainless steel]** roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.

2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of underlayment and cover with manufacturer's recommended slip sheet.
 3. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.
- C. Roof Curb Installation: Install each roof curb so top surface is level.
- D. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.
- E. Roof-Hatch Installation:
1. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
 2. Attach safety railing system to roof-hatch curb.
 3. Attach ladder-assist post according to manufacturer's written instructions.
- F. Heat and Smoke Vent Installation:
1. Install heat and smoke vent so top perimeter surfaces are level.
 2. Install and test heat and smoke vents and their components for proper operation according to NFPA 204.
- G. Gravity Ventilator Installation: Verify that gravity ventilators operate properly and have unrestricted airflow. Clean, lubricate, and adjust operating mechanisms.
- H. Pipe Support Installation: Comply with MSS SP-58 and MSS SP-89. Install supports and attachments as required to properly support piping. Arrange for grouping of parallel runs of horizontal piping, and support together.
1. Pipes of Various Sizes: Space supports for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
- I. Preformed Flashing-Sleeve and Flashing-Pipe Portal Installation: Secure flashing sleeve to roof membrane according to flashing-sleeve manufacturer's written instructions; flash sleeve flange to surrounding roof membrane according to roof membrane manufacturer's instructions.
- J. Security Grilles: Weld bar intersections and **[, using tamper-resistant bolts, attach the]** ends of bars to structural frame or primary curb walls.
- K. Roof Walkway Installation:
1. Verify that locations of access and servicing points for roof-mounted equipment are served by locations of roof walkways.
 2. Remove ballast from top surface of low-slope roofing at locations of contact with roof-walkway supports.
 3. Install roof walkway support pads prior to placement of roof walkway support stands onto low-slope roofing.

4. Redistribute removed ballast after installation of support pads.

L. Seal joints with **[elastomeric] [or] [butyl]** sealant as required by roof accessory manufacturer.

3.03 REPAIR AND CLEANING

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A780/A780M.

B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Section 099113 "Exterior Painting."

C. Clean exposed surfaces according to manufacturer's written instructions.

D. Clean off excess sealants.

E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

This page intentionally left blank

SECTION 07 81 00
APPLIED FIRE PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Sprayed fire-resistive materials.

B. Related Requirements:

1. Section 072100 "Thermal Insulation."
2. Section 078123 "Intumescent Fire Protection" for mastic and intumescent fire-resistive coatings.
3. Section 099646 "Intumescent Painting" for intumescent paints that are fire retarding but not fire resistive.

1.02 DEFINITIONS

- A. SFRM: Sprayed fire-resistive materials.

1.03 PRE-INSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, and other performance requirements.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Sprayed fire-resistive materials.
2. Substrate primers.
3. Bonding agent.
4. Metal lath.
5. Reinforcing fabric.
6. Reinforcing mesh.
7. Sealer.
8. Topcoat.

- B. Shop Drawings: Framing plans or schedules, or both, indicating the following:

1. Extent of fire protection for each construction and fire-resistance rating.
2. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.

3. Minimum sprayed fire-resistive material thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
 4. Treatment of sprayed fire-resistive material after application.
- C. Samples: For each exposed product and for each color and texture specified, **[in manufacturer's standard dimensions] [4 inches square] <Insert dimensions>** in size.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [and] [testing agency]**.
- B. Product Certificates: For each type of sprayed fire-resistive material.
- C. Evaluation Reports: For sprayed fire-resistive material, from ICC-ES.
- D. Preconstruction Test Reports: For fire protection.
- E. Field quality-control reports.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by sprayed fire-resistive material manufacturer as experienced and with sufficient trained staff to install manufacturer's products in accordance with specified requirements.
- B. Mockups: Build mockups **[to verify selections made under Sample submittals and to demonstrate aesthetic effects] [to set quality standards for materials and execution] [and] [for preconstruction testing]**.
 1. Build mockup of **[each type of fire protection and different substrate] [and] [each required finish]** <Insert description> as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on **[field mockups of]** fire protection.
 1. Field Mockup: <Insert sizes and configurations of assemblies>.
 2. Provide test specimens and assemblies representative of proposed materials and construction.
- B. Preconstruction Adhesion and Compatibility Testing: Test for compliance with requirements for specified performance and test methods.
 1. Bond Strength: Test for cohesive and adhesive strength in accordance with ASTM E736. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 2. Density: Test for density in accordance with ASTM E605. Provide density indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.

3. Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with sprayed fire-resistive material.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, obtain sprayed fire-resistive material manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply fire protection when ambient or substrate temperature is **[44 deg F]** <Insert temperature> or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. Ventilation: Ventilate building spaces during and after application of fire protection, providing complete air exchanges in accordance with manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fire protection dries thoroughly.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of design: Isolatek International **[Other products are available]**.
 1. Other manufacturers are subject to compliance with requirements:
 - a. Grace Construction Products.
 - b. Carbolite Company; a subsidiary of RPM International.
 - c. Southwest Fireproofing Products Co.
 - d. E-Z Path cable wall penetrations.
- B. Basis of design: CAFCO Fendolite, Type M-II as manufactured by Isolatek International (High Density SFRMs).

2.02 PERFORMANCE REQUIREMENTS

- A. Assemblies: Provide fire protection, including auxiliary materials, in accordance with requirements of each fire-resistance design and manufacturer's written instructions.
- B. Source Limitations: Obtain fire protection **[for each fire-resistance design]** from single source.
- C. Fire-Resistance Design: Indicated on Drawings, tested in accordance with **[ASTM E119 or UL 263]** <Insert requirement>; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Steel members are to be considered unrestrained unless specifically noted otherwise.
- D. Asbestos: Provide products containing no detectable asbestos.

2.03 SPRAYED FIRE-RESISTIVE MATERIALS

- A. Sprayed Fire-Resistive Material: **<Insert drawing designation or UL-design number>** Manufacturer's standard, factory-mixed, lightweight, dry formulation, complying with indicated fire-resistance design, and **[mixed with water at Project site to form a slurry or mortar before conveyance and application] [or] [conveyed in a dry state and mixed with atomized water at place of application]**.
1. Application: Designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
 2. Bond Strength: Minimum **[150-lbf/sq. ft.] [430-lbf/sq. ft.] [1000-lbf/sq. ft.] <Insert value>** cohesive and adhesive strength based on field testing in accordance with ASTM E736.
 3. Density: Not less than density specified in the approved fire-resistance design, in accordance with ASTM E605.
 4. Thickness: As required for fire-resistance design indicated, measured in accordance with requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch.
 5. Combustion Characteristics: ASTM E136.
 6. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[10] <Insert number>** or less.
 - b. Smoke-Developed Index: **[10] <Insert number>** or less.
 7. Compressive Strength: Minimum **[10 lbf/sq. in.] [100 lbf/sq. in.] [300 lbf/sq. in.] <Insert value>** in accordance with ASTM E761.
 8. Corrosion Resistance: No evidence of corrosion in accordance with ASTM E937.
 9. Deflection: No cracking, spalling, or delamination in accordance with ASTM E759.
 10. Effect of Impact on Bonding: No cracking, spalling, or delamination in accordance with ASTM E760.
 11. Air Erosion: Maximum weight loss of **[0.025 g/sq. ft.] <Insert value>** in 24 hours in accordance with ASTM E859.
 12. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in **[no growth on specimens per ASTM G21] [or] [rating of 10 in accordance with ASTM D3274 when tested in accordance with ASTM D3273]**.
 13. Sound Absorption: **[NRC] [or] [SAA] of [0.50 to 0.75] [0.60 to 0.70] [0.65 to 0.75] [not less than 0.60] <Insert range or single value>** in accordance with ASTM C423 for Type A mounting in accordance with ASTM E795.
 14. Finish: **[As selected by Architect from manufacturer's standard finishes] [Spray-textured finish] [Rolled, spray-textured finish] [Skip-troweled finish] [Skip-troweled finish with corner beads] <Insert requirement>**. **[Apply separate, colored topcoat after finishing.]**
 - a. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>**.

2.04 AUXILIARY MATERIALS

- A. Provide auxiliary materials that are compatible with sprayed fire-resistive material and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

- B. Substrate Primers: Primers approved by sprayed fire-resistive material manufacturer and complying with one or both of the following requirements:
1. Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 2. Primer's bond strength in required fire-resistance design complies with specified bond strength for sprayed fire-resistive material and with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests in accordance with ASTM E736.
- C. Bonding Agent: Product approved by sprayed fire-resistive material manufacturer and complying with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.
- D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required, in accordance with fire-resistance designs indicated and sprayed fire-resistive material manufacturer's written instructions. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.
- E. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by sprayed fire-resistive material manufacturer.
- F. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by sprayed fire-resistive material manufacturer. Include pins and attachment.
- G. Sealer: Transparent-drying, water-dispersible, tinted protective coating recommended in writing by sprayed fire-resistive material manufacturer for each fire-resistance design.
- H. Topcoat: Suitable for application over sprayed fire-resistive material; of type recommended in writing by sprayed fire-resistive material manufacturer for each fire-resistance design.
1. Cement-Based Topcoat: Factory-mixed, cementitious hard-coat formulation for trowel or spray application over SFRM.
 2. Water-Based Permeable Topcoat: Factory-mixed formulation for brush, roller, or spray application over applied SFRM. Provide application at a rate of **[30 sq. ft./gal.] [60 sq. ft./gal.] [120 sq. ft./gal.] <Insert value>**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and in accordance with each fire-resistance design.
1. Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fire protection with substrates under conditions of normal use or fire exposure.

2. Verify that objects penetrating fire protection, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
 3. Verify that substrates receiving fire protection are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fire protection application.
- B. Verify that concrete work on steel deck is complete before beginning Work.
 - C. Verify that roof construction, installation of rooftop HVAC equipment, and other related work are complete before beginning Work.
 - D. Conduct tests in accordance with sprayed fire-resistive material manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.
 - E. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
 - F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Cover other work subject to damage from fallout or overspray of fire protection materials during application.
- B. Clean substrates of substances that could impair bond of fire protection.
- C. Prime substrates where included in fire-resistance design and where recommended in writing by sprayed fire-resistive material manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fire protection.
- D. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fire protection. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.03 APPLICATION

- A. Construct fire protection assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, finishing, and other materials and procedures affecting fire protection Work.
- B. Comply with sprayed fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fire protection; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- C. Coordinate application of fire protection with other construction to minimize need to cut or remove fire protection.
 1. Do not begin applying fire protection until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
 2. Defer installing ducts, piping, and other items that would interfere with applying fire protection until application of fire protection is completed.
- D. Metal Decks:

1. Do not apply fire protection to underside of metal deck substrates until concrete topping, if any, is completed.
 2. Do not apply fire protection to underside of metal roof deck until roofing is completed; prohibit roof traffic during application and drying of fire protection.
- E. Install auxiliary materials as required, as detailed, and in accordance with fire-resistance design and sprayed fire-resistive material manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by sprayed fire-resistive material manufacturer.
- F. Spray apply fire protection to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by sprayed fire-resistive material manufacturer.
- G. Extend fire protection in full thickness over entire area of each substrate to be protected.
- H. Install body of fire protection in a single course unless otherwise recommended in writing by sprayed fire-resistive material manufacturer.
- I. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply fire protection that differs in color from that of encapsulant over which it is applied.
- J. Where sealers are used, apply products that are tinted to differentiate them from fire protection over which they are applied.
- K. Provide a uniform finish complying with description indicated for each type of fire protection material and matching finish approved for required mockups.
- L. Cure fire protection in accordance with sprayed fire-resistive material manufacturer's written instructions.
- M. Do not install enclosing or concealing construction until after fire protection has been applied, inspected, and tested and corrections have been made to deficient applications.
- N. Finishes: Where indicated, apply fire protection to produce the following finishes:
1. Manufacturer's Standard Finishes: Finish in accordance with manufacturer's written instructions for each finish selected.
 2. Spray-Textured Finish: Finish left as spray applied with no further treatment.
 3. Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.
 4. Skip-Troweled Finish: Even leveled surface produced by troweling spray-applied finish to smooth out the texture and neaten edges.
 5. Skip-Troweled Finish with Corner Beads: Even, leveled surface produced by troweling spray-applied finish to smooth out the texture, eliminate surface markings, and square off edges.

3.04 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections:
1. Test and inspect as required by the IBC [, Subsection 1705.13, "Sprayed Fire-Resistant Materials."] [, as indicated on Schedule of Special Inspections.] <Insert requirement.>

- B. Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fire protection for the next area until test results for previously completed applications of fire protection show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
- C. Fire protection will be considered defective if it does not pass tests and inspections.
 - 1. Remove and replace fire protection that does not pass tests and inspections, and retest.
 - 2. Apply additional fire protection, in accordance with manufacturer's written instructions, where test results indicate insufficient thickness, and retest.
- D. Prepare test and inspection reports.

3.05 CLEANING

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

3.06 PROTECTION

- A. Protect fire protection, according to advice of manufacturer and Installer, from damage resulting from construction operations or other causes, so fire protection is without damage or deterioration at time of Substantial Completion.

3.07 REPAIRS

- A. As installation of other construction proceeds, inspect fire protection and repair damaged areas and fire protection removed due to work of other trades.
- B. Repair fire protection damaged by other work before concealing it with other construction.
- C. Repair fire protection by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

END OF SECTION

SECTION 07 81 23
INTUMESCENT FIRE PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Mastic and intumescent fire-resistive coatings.

B. Related Requirements:

1. Section 07 81 00 "Applied Fire Protection" for sprayed fire-resistive materials (SFRM).
2. Section 09 96 46 "Intumescent Painting" for intumescent paints that are fire retarding, but not fire resistive.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1. Review products, design ratings, restrained and unrestrained conditions, thicknesses, and other performance requirements.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Mastic and intumescent fire-resistive coatings.
2. Substrate primers.
3. Reinforcing fabric.
4. Reinforcing mesh.
5. Topcoat.

B. Shop Drawings: Framing plans or schedules, or both, indicating the following:

1. Extent of fire protection for each construction and fire-resistance rating.
2. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
3. Minimum mastic and intumescent fire-resistive coating thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
4. Treatment of mastic and intumescent fire-resistive coating after application.

5. Samples: For each exposed product and for each color and texture specified, in manufacturer's standard dimensions in size.

1.04 INFORMATIONAL SUBMITTALS

- A. Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 01 40 00 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.
- B. Qualification Data: For installer and testing agency.
- C. Product Certificates: For each type of mastic and intumescent fire-resistive coating.
- D. Evaluation Reports: For mastic and intumescent fire-resistive coating, from ICC-ES.
- E. Field quality-control reports.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by mastic and intumescent fire-resistive coating manufacturer as experienced and with sufficient trained staff to install manufacturer's products in accordance with specified requirements.
- B. Mockups: Build mockups [to verify selections made under Sample submittals and to demonstrate aesthetic effects] [and] [to set quality standards for materials and execution].
 1. Build mockup of [each type of fire protection and different substrate] [and] [each required finish] <Insert description> as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply fire protection when ambient or substrate temperature is **[50 deg F]** <Insert temperature> or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. Ventilation: Ventilate building spaces during and after application of fire protection, providing complete air exchanges in accordance with manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fire protection dries thoroughly.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers are subject to compliance with requirements; provide products by one of the following:
 - 1. Isolatek International, CAFCO SprayFilm WB 4 System (basis of design).
 - 2. Albi Manufacturing; a division of StanChem, Inc.
 - 3. Carboline Company; a subsidiary of RPM International.

2.02 PERFORMANCE REQUIREMENTS

- A. Assemblies: Provide fire protection, including auxiliary materials, in accordance with requirements of each fire-resistance design and manufacturer's written instructions.
- B. Source Limitations: Obtain fire protection **[for each fire-resistance design]** from single source.
- C. Fire-Resistance Design: Indicated on Drawings, tested in accordance with **[ASTM E119 or UL 263] <Insert requirement>**; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Steel members are to be considered unrestrained unless specifically noted otherwise.
- D. Asbestos: Provide products containing no detectable asbestos.

2.03 MASTIC AND INTUMESCENT FIRE-RESISTIVE COATINGS

- A. Mastic and Intumescent Fire Resistive Coating, Interior Use:
 - 1. Factory mixed formulation consisting of intumescent base coat and topcoat (if required), and complying with indicated fire resistance design:
 - 2. Interior application: Designated for interior general purpose, conditioned interior space purpose use by a qualified testing agency acceptable to authorities having jurisdiction.
 - 3. Thickness: Required for fire-resistance design indicated, measured according to requirements of fire-resistance design.
 - 4. Hardness: Not less than 65 Type D durometer, according to ASTM D2240.
 - 5. Finish is as selected by Architect from manufacturer's standard finishes or spray-textured finish:
 - 6. Color and gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.
- B. Mastic and Intumescent Fire Resistive Coating, Exterior Use:
 - 1. Factory mixed formulation consisting of intumescent base coat and topcoat (if required) and complying with indicated fire resistance design:
 - 2. Exterior application: Designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.

3. Thickness: Required for fire-resistance design indicated, measured according to requirements of fire-resistance design.
4. Hardness: Not less than 65 Type D durometer, according to ASTM D2240.
5. Finish is as selected by Architect from manufacturer's standard finishes or spray-textured finish:
6. Color and gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

2.04 AUXILIARY MATERIALS

- A. Provide auxiliary materials that are compatible with mastic and intumescent fire-resistive coating and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
- B. Substrate Primers: Primers approved by mastic and intumescent fire-resistive coating manufacturer and complying with required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
- C. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by mastic and intumescent fire-resistive coating manufacturer.
- D. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by mastic and intumescent fire-resistive coating manufacturer. Include pins and attachment.
- E. Topcoat: Suitable for application over mastic and intumescent fire-resistive coating; of type recommended in writing by mastic and intumescent fire-resistive coating manufacturer for each fire-resistance design.

PART 3 EXECUTION

3.01 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is 50 degrees F (10 degrees C) or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

3.02

3.03 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and in accordance with each fire-resistance design.

1. Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fire protection with substrates under conditions of normal use or fire exposure.
 2. Verify that objects penetrating fire protection, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
 3. Verify that substrates receiving fire protection are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fire protection application.
- B. Conduct tests in accordance with mastic and intumescent fire-resistive coating manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.04 PREPARATION

- A. Cover other work subject to damage from fallout or overspray of fire protection materials during application.
- B. Clean substrates of substances that could impair bond of fire protection.
- C. Prime substrates where included in fire-resistance design and where recommended in writing by mastic and intumescent fire-resistive coating manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fire protection.
- D. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fire protection. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.05 APPLICATION

- A. Construct fire protection assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, topcoats, finishing, and other materials and procedures affecting fire protection Work.
- B. Comply with mastic and intumescent fire-resistive coating manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fire protection; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- C. Coordinate application of fire protection with other construction to minimize need to cut or remove fire protection.
 1. Do not begin applying fire protection until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.

2. Defer installing ducts, piping, and other items that would interfere with applying fire protection until application of fire protection is completed.
- D. Install auxiliary materials as required, as detailed, and in accordance with fire-resistance design and mastic and intumescent fire-resistive coating manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by mastic and intumescent fire-resistive coating manufacturer.
- E. Spray apply fire protection to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by mastic and intumescent fire-resistive coating manufacturer.
- F. Extend fire protection in full thickness over entire area of each substrate to be protected.
- G. Install body of fire protection in a single course unless otherwise recommended in writing by mastic and intumescent fire-resistive coating manufacturer.
- H. Provide a uniform finish complying with description indicated for each type of fire protection material and matching finish approved for required mockups.
- I. Cure fire protection in accordance with mastic and intumescent fire-resistive coating manufacturer's written instructions.
- J. Do not install enclosing or concealing construction until after fire protection has been applied, inspected, and tested and corrections have been made to deficient applications.
- K. Finishes: Where indicated, apply fire protection to produce the following finishes:
 1. Manufacturer's Standard Finishes: Finish in accordance with manufacturer's written instructions for each finish selected.
 2. Spray-Textured Finish: Finish left as spray applied with no further treatment.
 3. Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.

3.06 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform special inspections for tests and inspections as required by the CBC and DSA classified projects.
 1. Test and inspect as required by the IBC [, Subsection 17 05 .14, "Mastic and Intumescent Fire-Resistant Coatings."] [as indicated on Schedule of Special Inspections.] <Insert requirement.>
- B. Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fire protection for the next area until test results for previously completed applications of fire protection show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
- C. Fire protection will be considered defective if it does not pass tests and inspections.
 1. Remove and replace fire protection that does not pass tests and inspections, and retest.

2. Apply additional fire protection, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.

D. Prepare test and inspection reports.

3.07 CLEANING, PROTECTING, AND REPAIRING

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Protect fireproofing, according to advice of manufacturer and installer, from damage resulting from construction operations or other causes, so fireproofing is without damage or deterioration at time of Substantial Completion.
- C. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to Work of other trades.
- D. Repair fireproofing damaged by other work before concealing it with other construction.
- E. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

SECTION 07 84 13
PENETRATION FIRESTOPPING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Penetration firestopping systems.
- B. Related Requirements:
 - 1. Section 07 84 43 "Joint Firestopping" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.

1.02 ALLOWANCES

- A. Penetration firestopping Work is part of an allowance.

1.03 UNIT PRICES

- A. Work of this Section is affected by unit prices.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.
 - 1. <Insert participants>.

1.05 ACTION SUBMITTALS

- A. Product Data: Penetration firestopping systems.
- B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly developed in accordance with current International Firestop Council (IFC) guidelines. Obtain approval of authorities having jurisdiction prior to submittal.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Listed System Designs: For each penetration firestopping system, for tests performed by a qualified testing agency.

1.07 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.08 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval Standard for Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

1.09 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install penetration firestopping system when ambient or substrate temperatures are outside limits permitted by penetration firestopping system manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.
- B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.010 COORDINATION

- A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain penetration firestop systems for each type of opening indicated from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics:
 - 1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Test in accordance with testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Penetration firestop systems installed with products bearing the classification marking of a qualified product certification agency in accordance with listed system designs published by a qualified testing agency.
 - 1) UL in its online directory "Product iQ."
 - 2) Intertek Group in its "Directory of Building Products."
 - 3) FM Approvals in its "Approval Guide."

4) <Insert name of qualified testing and inspecting agency>.

2.03 PENETRATION FIRESTOPPING SYSTEMS

- A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems are to be compatible with one another, with the substrates forming openings, and with penetrating items if any.
- B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined in accordance with ASTM E814 or UL 1479.
 - 1. F-Rating: Not less than the fire-resistance rating of the wall penetrated.
 - 2. Membrane Penetrations: Install recessed fixtures such that the required fire resistance will not be reduced.
- C. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined in accordance with ASTM E814 or UL 1479.
 - 1. F-Rating: At least one hour, but not less than the fire-resistance rating of the floor penetrated.
 - 2. T-Rating: At least one hour, but not less than the fire-resistance rating of the floor. The following floor penetrations do not require a T-rating:
 - a. Those within the cavity of a wall.
 - b. Floor, tub, or shower drains within a concealed space.
 - c. 4-inch or smaller metal conduit penetrating directly into metal-enclosed electrical switchgear.
 - 3. W-Rating: Provide penetration firestopping systems with a Class 1 W-rating in accordance with UL 1479.
- D. Penetrations in Smoke Barriers: Penetration firestopping systems with ratings determined in accordance with UL 1479.
 - 1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening and no more than 50-cfm cumulative total for any 100 sq. ft. at both ambient and elevated temperatures.
- E. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, in accordance with ASTM E84.
- F. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.
 - 1. Permanent forming/damming/backing materials.
 - 2. Substrate primers.
 - 3. Collars.

4. Steel sleeves.

2.04 FILL MATERIALS

- A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.
- C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced intumescent elastomeric sheet bonded to galvanized-steel sheet.
- E. Intumescent Putties: Nonhardening, water-resistant, intumescent putties containing no solvents or inorganic fibers.
- F. Intumescent Wrap Strips: Single-component intumescent elastomeric strips for use around combustible penetrants.
- G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- H. Pillows/Bags: Compressible, removable, and reusable intumescent pillows encased in fire-retardant polyester or glass-fiber cloth. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.
- I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.
- K. Fire-Rated Cable Sleeve Kits: Complete kits designed for new or existing cable penetrations through walls to accept standard accessories.
- L. Thermal Wrap: Flexible protective wrap tested and listed for up to 2-hour fire ratings in accordance with ASTM E814 or UL 1479 for membrane penetrations or ASTM E1725 or UL 1724 for thermal barrier and circuit integrity protection.
- M. Fire-Rated Cable Pathways: Single or gangable device modules composed of a steel raceway with integral intumescent material and requiring no additional action in the form of plugs, twisting closure, putty, pillows, sealant, or otherwise to achieve fire and air-leakage ratings.
- N. Retrofit Device for Cable Bundles: Factory-made, intumescent, collar-like device for firestopping existing over-filled cable sleeves and capable of being installed around projecting sleeves and cable bundles.
- O. Wall-Opening Protective Materials: Intumescent, non-curing putty pads or self-adhesive inserts for protection of electrical switch and receptacle boxes.

- P. Fire-Rated HVAC Retaining Angles: Steel angle system with integral intumescent firestop gasket for use around rectangular steel HVAC ducts without fire dampers.
- Q. Firestop Plugs: Flexible, re-enterable, intumescent, foam-rubber plug for use in blank round openings and cable sleeves.
- R. Fire-Rated Cable Grommet: Molded two-piece grommet made of plenum-grade polymer and foam inner core for sealing small cable penetrations in gypsum walls up to 1/2 inch in diameter.
- S. Closet Flange Gasket: Molded, single-component, flexible, intumescent gasket for use beneath a water closet (toilet) flange in floor applications.
- T. Endothermic Wrap: Flexible, insulating, fire-resistant, endothermic wrap for protecting membrane penetrations of utility boxes, critical electrical circuits, communications lines, and fuel lines.

2.05 MIXING

- A. Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.03 INSTALLATION OF PENETRATION FIRESTOPPING SYSTEMS

- A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.
- C. Install fill materials by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

- A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches high and with minimum 0.375-inch strokes.
 - 1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet from end of wall and at intervals not exceeding 30 feet.
- B. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
 - 1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
 - 2. Contractor's name, address, and phone number.
 - 3. Designation of applicable testing and inspecting agency.
 - 4. Date of installation.
 - 5. Manufacturer's name.
 - 6. Installer's name.

3.05 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections according to ASTM E2174.

- B. Where deficiencies are found or penetration firestopping system is damaged or removed because of testing, repair or replace penetration firestopping system to comply with requirements.
- C. Proceed with enclosing penetration firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.06 CLEANING AND PROTECTION

- A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping material and install new materials to produce systems complying with specified requirements.

SECTION 07 84 43
JOINT FIRESTOPPING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Intumescent gypsum wall framing gaskets.
2. Perimeter fire-barrier system.
3. Joints in or between fire-resistance-rated construction.
4. Joints at exterior curtain-wall/floor intersections.
5. Joints in smoke barriers.

B. Related Requirements:

1. Section 07 84 13 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers **[and for wall identification]**.
2. Section 07 95 13.13 "Interior Expansion Joint Cover Assemblies" for fire-resistive manufactured expansion-joint cover assemblies for interior floors, walls, and ceilings.
3. Section 07 95 13.16 "Exterior Expansion Joint Cover Assemblies" for fire-resistive manufactured expansion-joint cover assemblies for exterior building walls, soffits, and parapets.
4. Section 07 95 13.19 "Parking Deck Expansion Joint Cover Assemblies" for fire-resistive manufactured expansion-joint cover assemblies subject to vehicular traffic.
5. Section 09 22 16 "Non-Structural Metal Framing" for firestop tracks for metal-framed partition heads.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.03 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

- B. Unlisted Firestopping Systems: Obtain an Engineering Judgment (EJ) from firestop manufacturer where no UL, FM Approvals, or other listed assembly is available for particular firestop configuration. Follow International Firestop Council (IFC) recommended guidelines for evaluating firestop systems in EJs.

- C. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an EJ or equivalent fire-resistance-rated assembly developed in accordance with current IFC guidelines.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Listed System Designs: For each joint firestopping system, for tests performed by a qualified testing agency.

1.05 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written installation instructions.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Approvals in accordance with FM Approvals 4991 or been evaluated by UL and found to comply with UL's "UL Solutions Qualified Firestop Contractor Program."

1.07 FIELD CONDITIONS

- A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure joint firestopping systems in accordance with manufacturer's written installation instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.08 COORDINATION

- A. Coordinate construction of joints to ensure that joint firestopping systems can be installed in accordance with specified firestopping system design.
- B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain joint firestop systems for each type of joint opening indicated from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics:

1. A qualified testing agency, acceptable to authorities having jurisdiction, will perform joint firestopping system tests.
2. Test in accordance with testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Joint firestop systems installed with products bearing the classification marking of a qualified product certification agency in accordance with listed system designs published by a qualified testing agency.
 - 1) UL in its online directory "Product iQ."
 - 2) Intertek Group in its "Directory of Building Products."
 - 3) <Insert name of qualified testing agency>.
- B. Rain/Water Resistance: For perimeter fire-barrier system applications, where inclement weather or greater-than-transient water exposure is expected, use products that dry rapidly and cure in the presence of atmospheric moisture sufficient to pass ASTM D6904 early rain-resistance test (24-hour exposure).

2.03 JOINT FIRESTOPPING SYSTEM TYPES

- A. General: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems must accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
 1. Joint firestopping systems that are compatible with one another, with the substrates forming openings, and with penetrating items, if any.
 2. Provide products that, upon curing, do not re-emulsify, dissolve, leach, break down, or otherwise deteriorate over time from exposure to atmospheric moisture, sweating pipes, ponding water or other forms of moisture.
 3. Provide firestop products that do not contain ethylene glycol.
- B. Intumescent Gypsum Wall Framing Gaskets: Applied to steel tracks, runners, and studs prior to framing installation. Provide products with fire, smoke, and acoustical ratings that allow movement of up to 100 percent compression and/or extension when tested in accordance with UL 2079 or ASTM E1966; have an L Rating of less than 1 cfm/ft. when tested in accordance with UL 2079; and a minimum Sound Transmission Class (STC) rating of 56 when tested in accordance with ASTM E90 or ASTM C919.
- C. Perimeter Fire-Barrier System: Provide perimeter fire-barrier system that does not require direct screw attachment to mullions and transoms to support and fasten curtain-wall insulation for aluminum curtain-wall assemblies with one- or two-piece rectangular mullions at least 2-1/2 by 5 inches. System will be tested in accordance with ASTM E2307 for up to two-hour fire resistance and with ASTM E1233/E1233M for wind cycling equivalent to 108 mph wind for 500 cycles.
- D. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined in accordance with ASTM E1966 or UL 2079, with published L-Ratings for ambient and elevated temperatures as evidence of the ability of the fire-resistive joint system to restrict the movement of smoke.

1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.
- E. Joints at Exterior Curtain-Wall/Floor Intersections: Provide joint firestopping systems with rating determined in accordance with ASTM E2307.
1. F-Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
- F. Joints in Smoke Barriers: Provide joint firestopping systems with ratings determined in accordance with UL 2079 based on testing at a positive pressure differential of 0.30 inch wg.
1. L-Rating: Not exceeding 5.0 cfm/ft. of joint at both ambient and elevated temperatures.
- G. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined in accordance with ASTM E84.

2.04 ACCESSORIES

- A. Provide components of joint firestopping systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Before installing joint firestopping systems, clean joints in accordance with fire-resistive joint system manufacturer's written installation instructions and the following requirements:
1. Remove foreign materials from substrate surfaces that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form-release agents from concrete.
- B. Prime substrates in accordance with joint firestopping system manufacturer's written installation instructions, using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Apply a suitable bond breaker to prevent three-sided adhesion in applications where condition occurs.

3.03 INSTALLATION

- A. General: Install joint firestopping systems in accordance with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install elastomeric fill materials for joint firestopping systems by proven techniques to produce the following results:
 - 1. Apply elastomeric fill in voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
 - 3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

- A. Wall Identification: Permanently label walls containing firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches high and with minimum 0.375-inch strokes.
 - 1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 ft. from end of wall and at intervals not exceeding 30 ft..
- B. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of joint edge, so labels are visible to anyone seeking to remove joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
 - 1. The words "Warning - Joint Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
 - 2. Contractor's name, address, and phone number.
 - 3. Designation of applicable testing agency.
 - 4. Date of installation.
 - 5. Manufacturer's name.
 - 6. Installer's name.

3.05 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections in accordance with ASTM E2393.
- B. Where deficiencies are found or joint firestopping systems are damaged or removed due to testing, repair or replace joint firestopping systems so they comply with requirements.
- C. Proceed with enclosing joint firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.06 CLEANING AND PROTECTION

- A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated joint firestopping systems immediately and install new materials to produce joint firestopping systems complying with specified requirements.

3.07 JOINT FIRESTOPPING SYSTEM SCHEDULE

- A. Where UL-classified systems are indicated, they refer to system numbers in UL's online directory "Product iQ" under product **[Category XHBN] [or] [Category XHDG]**.
- B. Where Intertek Group-listed systems are indicated, they refer to design numbers in Intertek Group's "Directory of Building Products" under product category **[Expansion/Seismic Joints] [or] [Firestop Systems]**.
- C. Floor-to-Floor, Joint Firestopping Systems: **<Insert drawing designation>**.
 - 1. UL-Classified Systems: FF- [D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 - 2. Assembly Rating: [One hour] [Two hours] <Insert number of hours>.
 - 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 - 4. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent [compression or extension] [compression, extension, or horizontal shear].
 - 5. L-Rating at Ambient: Less than **<Insert cfm/ft. >**.
 - 6. L-Rating at 400 Deg F (204 Deg C): Less than **<Insert cfm/ft. >**.
 - 7. W-Rating: No leakage of water at completion of water-leakage testing.
- D. Wall-to-Wall, Joint Firestopping Systems: **<Insert drawing designation>**.
 - 1. UL-Classified Systems: WW- [D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 - 2. Assembly Rating: [One hour] [Two hours] <Insert number of hours>.

3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent [compression or extension].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. >.
 6. L-Rating at 400 Deg F (204 Deg C): Less than <Insert cfm/ft. >.
- E. Floor-to-Wall, Joint Firestopping Systems: <Insert drawing designation>.
1. UL-Classified Systems: FW- [D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [One hour] [Two hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent [compression or extension] [compression, extension, or horizontal shear].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. >.
 6. L-Rating at 400 Deg F (204 Deg C): Less than <Insert cfm/ft. >.
- F. Head-of-Wall, Fire-Resistive Joint Firestopping Systems: <Insert drawing designation>.
1. UL-Classified Systems: HW- [D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Intertek Group-Listed Systems: <Insert design number>.
 3. Assembly Rating: [One hour] [Two hours] <Insert number of hours>.
 4. Nominal Joint Width: [As indicated] <Insert dimension>.
 5. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent [compression or extension].
 6. L-Rating at Ambient: Less than <Insert cfm/ft. >.
 7. L-Rating at 400 Deg F (204 Deg C): Less than <Insert cfm/ft. >.
- G. Bottom-of-Wall, Joint Firestopping Systems: <Insert drawing designation>.
1. UL-Classified Systems: BW- [D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [One hour] [Two hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent [compression or extension].

5. L-Rating at Ambient: Less than **<Insert cfm/ft. >**.
 6. L-Rating at 400 Deg F (204 Deg C): Less than **<Insert cfm/ft. >**.
- H. Wall-to-Wall, Joint Firestopping Systems Intended for Use as Corner Guards: **<Insert drawing designation>**.
1. UL-Classified Systems: CG- **[D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999]**.
 2. Assembly Rating: **[One hour] [Two hours] <Insert number of hours>**.
 3. Nominal Joint Width: **[As indicated] <Insert dimension>**.
 4. Movement Capabilities: **[Class I] [Class II] [Class III] - <Insert number> percent [compression or extension]**.
 5. L-Rating at Ambient: Less than **<Insert cfm/ft. >**.
 6. L-Rating at 400 Deg F (204 Deg C): Less than **<Insert cfm/ft. >**.
- I. Perimeter Joint Firestopping Systems: **<Insert drawing designation>**.
1. UL-Classified Perimeter Fire-Containment Systems: CW- **[D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999]**.
 2. Intertek Group-Listed, Perimeter Fire-Barrier Systems: **<Insert design number>**.
 3. Integrity Rating: **[One hour] [Two hours] <Insert number of hours>**.
 4. Insulation Rating: **[Zero hour] [1/4 hour] [3/4 hour] [1 hour] <Insert number of hours>**.
 5. Linear Opening Width: **[2-1/2 inches] [8 inches] [As indicated] <Insert dimension>**, maximum.
 6. Movement Capabilities: **[Class I] [Class II] [Class III] - <Insert number> percent [compression or extension]**.
 7. F-Rating: **[One hour] [Two hours] <Insert number of hours>**.

END OF SECTION

SECTION 07 92 00

JOINT SEALANTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Silicone joint sealants.
2. Nonstaining silicone joint sealants.
3. Urethane joint sealants.
4. Immersible joint sealants.
5. Silane-modified polymer joint sealants.
6. Mildew-resistant joint sealants.
7. Polysulfide joint sealants.
8. Butyl joint sealants.
9. Latex joint sealants.

B. Related Requirements:

1. Section 07 91 00 "Preformed Joint Seals" for preformed compressible foam and precured joint seals.
2. Section 07 92 19 "Acoustical Joint Sealants" for sealing joints in sound-rated construction.
3. Section 32 13 73 "Concrete Pavement Joint Sealants" for sealing joints in paved roads, parking lots, walkways, and curbing.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Silicone joint sealants.
2. Nonstaining silicone joint sealants.
3. Urethane joint sealants.
4. Immersible joint sealants.
5. Silane-modified polymer joint sealants.
6. Mildew-resistant joint sealants.
7. Polysulfide joint sealants.
8. Butyl joint sealants.

9. Latex joint sealants.

- B. Samples for Initial Selection: Manufacturer's standard color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
- C. Samples for Verification: For each type and color of joint sealant required, provide Samples with joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- D. Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.

1.04 INFORMATIONAL SUBMITTALS

- A. Preconstruction Laboratory Test Schedule: Include the following information for each joint sealant and substrate material to be tested:
 - 1. Joint-sealant location and designation.
 - 2. Manufacturer and product name.
 - 3. Type of substrate material.
 - 4. Proposed test.
 - 5. Number of samples required.
- B. Preconstruction Laboratory Test Reports: For each joint sealant and substrate material to be tested from sealant manufacturer, indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation are needed for adhesion.
- C. Preconstruction Field-Adhesion-Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.
- D. Field Quality-Control Reports: For field-adhesion-test reports, for each sealant application tested.
- E. Sample warranties.

1.05 CLOSEOUT SUBMITTALS

- A. Manufacturers' special warranties.
- B. Installer's special warranties.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: Authorized representative who is trained and approved by manufacturer.

- B. Testing Agency Qualifications: Qualified in accordance with ASTM C1021 to conduct the testing indicated.

1.07 MOCKUPS

- A. Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.08 PRECONSTRUCTION TESTING

- A. Preconstruction Laboratory Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
 1. Adhesion Testing: Use ASTM C794 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 2. Compatibility Testing: Use ASTM C1087 to determine sealant compatibility when in contact with glazing and gasket materials.
 3. Stain Testing: Use ASTM C1248 to determine stain potential of sealant when in contact with **[stone] [masonry] <Insert substrate>** substrates.
 4. Submit manufacturer's recommended number of pieces of each type of material, including joint substrates, joint-sealant backings, and miscellaneous materials.
 5. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 6. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures, including use of specially formulated primers.
 7. Testing will not be required if joint-sealant manufacturers submit data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, staining of, and compatibility with joint substrates and other materials matching those submitted.
- B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
 1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
 2. Conduct field tests for each kind of sealant and joint substrate.
 3. Notify Architect seven days in advance of dates and times when test joints will be erected.
 4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
 5. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 6. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.

7. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.09 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer **[or are below 40 deg F]**.
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.10 WARRANTY

- A. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: **[Two]** <Insert number> years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
 1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.
 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain joint sealants from single manufacturer **[for each sealant type]**.

2.02 JOINT SEALANTS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

- B. Colors of Exposed Joint Sealants: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].**

2.03 SILICONE JOINT SEALANTS

- A. Silicone, S, NS, 100/50, NT: Single-component, nonsag, plus 100 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
- B. Silicone, S, NS, 50, NT: Single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
- C. Silicone, S, NS, 35, NT: Single-component, nonsag, plus 35 percent and minus 35 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 35, Use NT.
- D. Silicone, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
- E. Silicone, Acid Curing, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
- F. Silicone, S, NS, 100/50, T, NT: Single-component, nonsag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Uses T and NT.
- G. Silicone, S, NS, 50, T, NT: Single-component, nonsag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 50, Uses T and NT.
- H. Silicone, S, NS, 25, T, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Uses T and NT.
- I. Silicone, S, P, 100/50, T, NT: Single-component, pourable, plus 100 percent and minus 50 percent movement capability traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade P, Class 100/50, Uses T and NT.
- J. Silicone, M, P, 100/50, T, NT: Multicomponent, pourable, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type M, Grade P, Class 100/50, Uses T and NT.

2.04 NONSTAINING SILICONE JOINT SEALANTS

- A. Nonstaining Joint Sealants: No staining of substrates when tested in accordance with ASTM C1248.
- B. Silicone, Nonstaining, S, NS, 100/50, NT: Nonstaining, single-component, nonsag, plus 100 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Use NT.

- C. Silicone, Nonstaining, S, NS, 50, NT: Nonstaining, single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
- D. Silicone, Nonstaining, S, NS, 100/50, T, NT: Nonstaining, single-component, nonsag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Uses T and NT.
- E. Silicone, Nonstaining, M, NS, 50, NT: Nonstaining, multicomponent, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type M, Grade NS, Class 50, Use NT.

2.05 URETHANE JOINT SEALANTS

- A. Urethane, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
- B. Urethane, S, NS, 100/50, T, NT: Single-component, nonsag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Uses T and NT.
- C. Urethane, S, NS, 25, T, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 25, Uses T and NT.
- D. Urethane, S, P, 35, T, NT: Single-component, pourable, plus 35 percent and minus 35 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 35, Uses T and NT.
- E. Urethane, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T and NT.
- F. Urethane, M, NS, 50, NT: Multicomponent, nonsag, plus 50 percent and minus 50 percent movement capability nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 50, Use NT.
- G. Urethane, M, NS, 25, NT: Multicomponent, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 25, Use NT.
- H. Urethane, M, NS, 50, T, NT: Multicomponent, nonsag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 50, Uses T and NT.
- I. Urethane, M, NS, 25, T, NT: Multicomponent, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 25, Uses T and NT.
- J. Urethane, M, P, 50, T, NT: Multicomponent, pourable, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade P, Class 50, Uses T and NT.

- K. Urethane, M, P, 25, T, NT: Multicomponent, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade P, Class 25, Uses T and NT.

2.06 IMMERSIBLE JOINT SEALANTS

- A. Immersible Joint Sealants: Suitable for immersion in liquids; ASTM C1247, **[Class 1]** **[Class 2]**; tested in deionized water unless otherwise indicated.
- B. Urethane, Immersible, S, NS, 100/50, NT, I: Immersible, single-component, nonsag, plus 100 percent and minus 50 percent movement capability, nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Uses NT and I.
- C. Urethane, Immersible, S, NS, 35, NT, I: Immersible, single-component, nonsag, plus 35 percent and minus 35 percent movement capability, nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 35, Uses NT and I.
- D. Urethane, Immersible, S, NS, 50, T, NT, I: Immersible, single-component, nonsag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 50, Uses T, NT, and I.
- E. Urethane, Immersible, S, NS, 35, T, NT, I: Immersible, single-component, nonsag, plus 35 percent and minus 35 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 35, Uses T, NT, and I.
- F. Urethane, Immersible, S, NS, 25, T, NT, I: Immersible, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 25, Uses T, NT, and I.
- G. Urethane, Immersible, S, P, 50, T, NT, I: Immersible, single-component, pourable, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 50, Uses T, NT, and I.
- H. Urethane, Immersible, S, P, 25, T, NT, I: Immersible, single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T, NT, and I.
- I. Polysulfide, Immersible, M, NS, 25, NT, I: Immersible, multicomponent, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, polysulfide joint sealant; ASTM C920, Type M, Grade NS, Class 25, Uses NT and I.
- J. Urethane, Immersible, M, NS, 50, T, NT, I: Immersible, multicomponent, nonsag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 50, Uses T, NT, and I.
- K. Urethane, Immersible, M, NS, 25, T, NT, I: Immersible, multicomponent, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 25, Uses T, NT, and I.
- L. Polysulfide, Immersible, M, NS, 25, T, NT, I: Immersible, multicomponent, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, polysulfide joint sealant; ASTM C920, Type M, Grade NS, Class 25, Uses T, NT, and I.

- M. Urethane, Immersible, M, P, 25, T, NT, I: Immersible, multicomponent, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade P, Class 25, Uses T, NT, and I.

2.07 SILANE-MODIFIED POLYMER JOINT SEALANTS

- A. Silane-Modified Polymer, S, NS, 50, NT: Single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
- B. Silane-Modified Polymer, S, NS, 35, NT: Single-component, nonsag, plus 35 percent and minus 35 percent movement capability, nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 35, Use NT.
- C. Silane-Modified Polymer, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
- D. Silane-Modified Polymer, S, NS, 100/50, T, NT: Single-component, nonsag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 100, Uses T and NT.
- E. Silane-Modified Polymer, S, NS, 50, T, NT: Single-component, nonsag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 50, Uses T and NT.
- F. Silane-Modified Polymer, S, NS, 35, T, NT: Single-component, nonsag, plus 35 percent and minus 35 percent movement capability, traffic- and nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 35, Uses T and NT.
- G. Silane-Modified Polymer, S, NS, 25, T, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 25, Uses T and NT.
- H. Silane-Modified Polymer, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T and NT.

2.08 MILDEW-RESISTANT JOINT SEALANTS

- A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.
- B. Silicone, Mildew Resistant, Acid Curing, S, NS, 25, NT: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.

- C. Silane-Modified Polymer, Mildew Resistant, S, NS, 50, NT: Mildew-resistant, single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, **[silyl-terminated polyether] [silyl-terminated polyurethane] [polyurea]** joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.

2.09 POLYSULFIDE JOINT SEALANTS

- A. Polysulfide, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, polysulfide joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
- B. Polysulfide, M, NS, 25, T, NT: Multicomponent, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, polysulfide joint sealant; ASTM C920, Type M, Grade NS, Class 25, Use NT.
- C. Polysulfide, M, P, 25, T, NT: Multicomponent, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, polysulfide joint sealant; ASTM C920, Type M, Grade P, Class 25, Uses T and NT.

2.10 BUTYL JOINT SEALANTS

- A. Butyl-Rubber-Based Joint Sealants: ASTM C1311.

2.11 LATEX JOINT SEALANTS

- A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.

2.12 JOINT-SEALANT BACKING

- A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C1330, **[Type C (closed-cell material with a surface skin)] [Type O (open-cell material)] [Type B (bicellular material with a surface skin)] [or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated]**, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.13 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
 - 1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 - 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 - d. Exterior insulation and finish systems.
 - e. **<Insert other porous joint substrate>**.
 - 3. Remove laitance and form-release agents from concrete.
 - 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
 - e. **<Insert other nonporous joint substrate>**.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install sealant backings of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of sealant backings.
 - 2. Do not stretch, twist, puncture, or tear sealant backings.
 - 3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.
- D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses in each joint configuration.
 - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants in accordance with requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 - 1. Remove excess sealant from surfaces adjacent to joints.
 - 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 - 3. Provide concave joint profile in accordance with Figure 8A in ASTM C1193 unless otherwise indicated.
 - 4. Provide flush joint profile at **[locations indicated on Drawings]** <Insert locations> in accordance with Figure 8B in ASTM C1193.
 - 5. Provide recessed joint configuration of recess depth and at **[locations indicated on Drawings]** <Insert locations> in accordance with Figure 8C in ASTM C1193.
 - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.04 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
1. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
 - a. Extent of Testing: Test completed and cured sealant joints as follows:
 - 1) Perform **[10] <Insert number>** tests for the first **[1000 ft.] <Insert dimension>** of joint length for each kind of sealant and joint substrate.
 - 2) Perform one test for each **[1000 ft.] <Insert dimension>** of joint length thereafter or one test per each floor per elevation.
 - b. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 - c. Inspect tested joints and report on the following:
 - 1) Whether sealants filled joint cavities and are free of voids.
 - 2) Whether sealant dimensions and configurations comply with specified requirements.
 - 3) Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
 - d. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
 - e. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
 2. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.
- C. Prepare test and inspection reports.

3.05 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.06 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 07 95 13

SEISMIC JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes prefabricated joint cover assemblies.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing:
 - 1. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.
- B. Pre-installation meeting:
 - 1. Convene minimum two weeks prior to starting work of this section.

1.03 SUBMITTALS

- A. Data: Manufacturer Product Data for each type and profile of assembly, including material list, finish, and test results for fire-rated assemblies.
- B. Shop drawings: Supplement data with Shop Drawings showing the following.
 - 1. Joint system schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
 - a. Manufacturer and model number for each joint system.
 - b. Joint system location cross-referenced to Drawings.
 - c. Loads used in design of the floor joint systems.
 - d. Nominal joint width.
 - e. Movement capability.
 - f. Classification as thermal or seismic.
 - g. Materials, colors, and finishes.
 - h. Materials, colors, and finishes.
 - i. Product options.
 - j. Fire-resistance ratings.
- C. Layout Drawings:
 - 1. Placement drawings showing line diagrams for the entire route of each joint system, in plan, elevation, and section, full size details, splices, blockout requirement, and attachments to other work.
 - 2. Where joint systems change planes, provide isometric or clearly detailed drawing depicting how components interconnect.
 - 3. Show and identify fasteners and anchors to be embedded in concrete, dimensioned location, setting-out dimensions and acceptable setting tolerances.

4. Details of each type of embedded anchor required for the work of this Section.
5. Identify areas of the building to which the work of this Section is attached with embedded anchorage, as well as areas of the building to which the work of this Section will be attached without the use of embedded anchorage.

D. Samples:

1. For each joint, complete assembly of each type. Include prototype units for custom fabrication.
2. Each color and finish selected. Include custom colors.
3. Representative transition and corner fitting fabrications to confirm quality of work as a standard for work on the Project.

E. Certificates: Certificates, research report number, or other proof that assemblies used in fire-rated construction are approved by the authorities having jurisdiction for the conditions of use.

1.04 QUALITY ASSURANCE

A. Requirements of regulatory agencies:

1. Comply with fire resistance ratings indicated and required by Code.
2. Provide materials, accessories and application procedures which have been tested by a testing agency acceptable to authorities having jurisdiction.

B. Single source responsibility: Provide all components for each assembly from one manufacturer.

1.05 HANDLING

A. Wrap joint assemblies individually, and provide strippable protection on metal surfaces to avoid damage during handling and installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following, or equal:

1. Specialties Building Components, Inc.
2. Balco, a CSW Industrial Company.
3. Construction Specialties, Inc. (CS Group).
4. MM Systems.
5. Or equal.

2.02 PERFORMANCE REQUIREMENTS:

A. Joint assemblies shall permit unrestrained movement of joint without disengagement of and, where applicable, remain watertight and maintain the fire-rated protection of the adjacent assemblies.

B. Provisions for movement of the structure:

1. The building is in the Seismic Design Category (SDC) indicated, as defined by the CBC. Install joint assemblies requiring special bracing or mounting to meet seismic movements for the SDC indicated.

2. This work shall be engineered, detailed, and installed to accommodate dead load and live load deflection, thermal expansion, creep, sway, drift, and torsion of the structure as may be anticipated by seismic and other conditions. Live loads used in design shall be the same as adjacent floor with the highest live load.
3. Identify on the Shop Drawings the amount of movement that is accommodated in the engineering and details.

2.03 MATERIALS

- A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6, sheet and plate. Apply protective coating on aluminum surfaces in contact with cementitious materials.
- B. Stainless steel: ASTM A 167 and A 480, non-magnetic, 300 series.
- C. Non-metallic products:
 1. Extruded preformed seals: Single- or multi-layered rubber extrusions as classified under ASTM D 2000, designed with or without continuous, longitudinal, internal baffles and formed to fit compatible frames, in color indicated, or, if not indicated, as selected by Architect from manufacturer's standard colors.
 2. Elastomeric sealant: Manufacturer's standard elastomeric sealant complying with ASTM C 920, Use T, factory-formed and bonded to metal frames or anchor members; in color selected by Architect from manufacturer's palette.
 3. Seismic seals: Typically 2 single layered rubber extrusions, one interior and one exterior, as classified under ASTM D 2000, retained in a set of compatible frames, in color indicated selected by Architect from manufacturer's palette.
 4. Water barrier sheets: Neoprene or EPDM flexible sheet materials minimum 45 mils thick.
 5. Nonmetallic, Shrinkage Resistant Grout: ASTM C1107/C1107M, factory packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.
 6. Fire barriers: Designed for indicated or required dynamic structural movement without material degradation or fatigue. Tested in maximum joint width condition with a field splice as a component of an expansion joint in compliance with UL 263, NFPA 251, UBC 43-1, or ASTM E 119 and E 814 including hose stream test at full-rated period by a nationally recognized testing and inspecting organization or by other means acceptable to authorities having jurisdiction.
- D. Protective coatings:
 1. Bituminous paint: FS TT-C-494.
 2. Zinc-dust primer: FS TT-P-460.
 3. Galvanized repair paint: "94-H20 Hydro-Zinc" by Tnemec Co., or equal
- E. Fastening devices:
 1. General: Provide recommended attachment devices required to suit each loading condition. Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations. If not otherwise indicated, fasteners and anchors shall be non-magnetic stainless steel, Series 300.
 2. Threaded fasteners:
 - a. Metal-to-metal: Machine bolts and nuts, self-tapping screws, and other as engineered by unit manufacturer to suit condition.

- b. Metal-to-concrete: Expansion bolts, drilled-in type.
 - c. For stainless steel and aluminum: Stainless steel, ANSI Type 304 at exterior conditions; aluminum or stainless steel at interior conditions.
 - d. For steel: Low carbon steel, ASTM A 307, hot-dip galvanized for exterior use and where galvanized assemblies are indicated.
- F. Accessories: Manufacturer's standard spacers, flexible vapor seals and filler materials, drain tubes, adhesive, and other accessories compatible with material in contact.

2.04 FABRICATION

- A. Provide joint assemblies of design, basic profile, materials, and operation indicated.
- B. Furnish units in longest practicable lengths to minimize number of joints. Provide hairline mitered corners where joint changes directions or abuts other materials.
- C. Include closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories required to provide continuous joint assemblies.
- D. Fabricate special transitions and closures, corner fittings and the like as required to minimize field joints. Miter and weld joints as applicable to condition. Provide monolithic elastomeric seal and sealed butt joints where indicated and to form watertight or airtight seals.
- E. Shop prime/protective coat metals to be in contact with cementitious materials for corrosion resistance. Use aluminum primer (alkyd barium metaborate) on aluminum.

2.05 FINISHING

- A. Aluminum: Finish exposed surfaces with a clear anodized finish complying with AA-C22A41; medium matte etched finish with 0.7 mil minimum thick anodic coating.
- B. Stainless steel:
 - 1. Bright, directional polish: NAAMM No. 4 finish.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions and measurements affecting the work of this Section at site.
- B. Notify Architect where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.
- C. Proceed with installation after correcting unsatisfactory conditions.

3.02 PREPARATION

- A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.

- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.
- C. Furnish units in longest practicable lengths to minimize field splicing.
- D. Include factory fabricated closure materials and transition pieces, T joints, corners, curbs, cross connections, and other accessories as required to provide continuous expansion joint cover assemblies.

3.03 INSTALLATION

A. General:

- 1. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.
- 2. Comply with the joint assembly manufacturer's instructions and the tested procedure for fire-rated assemblies.
- 3. Install assemblies over the prepared opening, plumb, level and square, with hairline, flush joints.
- 4. Provide concealed back-up plates at sliding joints to avoid exposed fasteners, whenever possible. Attach assemblies securely to supports. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches o.c.
- 5. Protect aluminum surfaces in contact with cementitious materials as specified above.
- 6. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.
- 7. Terminate exposed ends of expansion joint cover assemblies with field or factory fabricated termination devices.
- 8. Fire Resistance Rated Assemblies:
 - a. Coordinate installation of expansion joint cover assembly materials and associated work so complete assemblies comply with performance requirements:
 - 1) Fire barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.
- 9. Moisture Barrier Drainage: If indicated, provide drainage fittings and connect to drains.

B. Cutting, fitting and placement:

- 1. Perform cutting, drilling, and fitting required for installation of joint assemblies.
- 2. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling.
- 3. Set floor covers flush with adjacent finished floor materials.
- 4. Locate wall and ceiling covers flush with, and in continuous contact with adjacent surfaces.

C. Joinery and continuity:

- 1. Maintain continuity of joint assemblies with end joints held to a minimum and metal members aligned mechanically using splice joints.

2. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal without buckling of frames.
3. Adhere flexible filler materials to frames as recommended by manufacturer.

D. Extruded preformed seals:

1. Install with minimum number of end joints. For straight sections provide preformed seals in continuous lengths. Vulcanize or heat-seal field splice joints to provide watertight joints using manufacturer's recommended procedures. Seal transitions in compliance with manufacturer's instructions.
2. Where joints change direction and must be weathertight, vulcanize or chemically-bond flexible components; seal metal components with compatible sealants finished flush with adjacent surfaces.

- E. Remove protective covers and touchup damaged finishes when the results are satisfactory to the Architect, otherwise replace damaged components.

3.04 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Protect the installation from damage by work of other Sections. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion joint cover assemblies. Reinstall cover plates or seals prior to Substantial Completion.

SECTION 08 11 13

HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Interior standard steel doors and frames.
2. Exterior standard steel doors and frames.
3. Interior custom hollow-metal doors and frames.
4. Exterior custom hollow-metal doors and frames.

B. Related Requirements:

1. Section 081119 "Stainless-Steel Doors and Frames" for hollow-metal doors and frames manufactured from stainless steel.
2. Section 087100 "Door Hardware" for door hardware for hollow-metal doors.
3. Section 119812 "Detention Doors and Frames" for hollow-metal doors and frames for detention facilities.
4. Section 134900 "Radiation Protection" for lead-lined, hollow-metal doors and frames.

1.02 DEFINITIONS

- A. Minimum Thickness: Minimum thickness of base metal without coatings in accordance with NAAMM-HMMA 803 or ANSI/SDI A250.8.

1.03 COORDINATION

- A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.05 ACTION SUBMITTALS

A. Product Data:

1. Interior standard steel doors and frames.
2. Exterior standard steel doors and frames.

3. Interior custom hollow-metal doors and frames.
4. Exterior custom hollow-metal doors and frames.

B. Product Data Submittals: For each product.

1. Include construction details, material descriptions, core descriptions, **[fire-resistance ratings,] [temperature-rise ratings,]** and finishes.

C. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
7. Details of anchorages, joints, field splices, and connections.
8. Details of accessories.
9. Details of moldings, removable stops, and glazing.

D. Samples for Initial Selection: For hollow-metal doors and frames with factory-applied color finishes.

E. Samples for Verification:

1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches.
2. Fabrication: Prepare Samples approximately **[12 by 12 inches] [8 by 10 inches]** **<Insert dimension>** to demonstrate compliance with requirements for quality of materials and construction:
 - a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
 - b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.

F. Product Schedule: For hollow-metal doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For door inspector.

1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.

2. Egress Door Inspector: Submit documentation of compliance with NFPA 101, Section 7.2.1.15.4.
3. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.

- B. Product Test Reports: For each type of [fire-rated hollow-metal door and frame assembly] [fire-rated borrowed-lite assembly] [windborne-debris impact resistance door] [and] [thermally rated door assemblies] for tests performed by a qualified testing agency indicating compliance with performance requirements.
- C. Oversize Construction Certification: For assemblies required to be fire-rated and exceeding limitations of labeled assemblies.
- D. Field quality-control reports.

1.07 CLOSEOUT SUBMITTALS

- A. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.08 QUALITY ASSURANCE

- A. Fire-Rated Door Inspector Qualifications: Inspector for field quality-control inspections of fire-rated door assemblies is to meet the qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.
- B. Egress Door Inspector Qualifications: Inspector for field quality-control inspections of egress door assemblies is to meet the qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow-metal doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow-metal doors and frames vertically under cover at Project site with head up. Place on minimum 4-inch- high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings **[and temperature-rise limits]** indicated on Drawings, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
1. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.
 2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 3. Temperature-Rise Limit: **[Where indicated on Drawings] [At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
- B. Fire-Rated, Borrowed-Lite Assemblies: Assemblies complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing in accordance with NFPA 257 or UL 9.
- C. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone **[1] [2] [3] [4]** for **[basic] [enhanced]** protection.
1. Large-Missile Test: For glazed openings located within **[30 feet]** <Insert dimension> of grade.
- D. Thermally Rated Door Assemblies: Provide door assemblies with U-factor of not more than **[0.50 deg Btu/F x h x sq. ft.] [0.40 deg Btu/F x h x sq. ft.] [0.38 deg Btu/F x h x sq. ft.]** <Insert U-factor> when tested in accordance with ASTM C1363 or ASTM E1423.

2.02 INTERIOR STANDARD STEEL DOORS AND FRAMES

- A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Standard-Duty Doors and Frames: ANSI/SDI A250.8, Level 1; ANSI/SDI A250.4, Level C. **[At locations indicated in the Door and Frame Schedule on Drawings]** <Insert locations>.
1. Doors:
 - a. Type: As indicated in the Door and Frame Schedule on Drawings.

- b. Thickness: **[1-3/4 inches]** **[1-3/8 inches]**.
 - c. Face: **[Uncoated]** **[Metallic-coated]** steel sheet, minimum thickness of 0.032 inch.
 - d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless].
 - e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
 - f. Core: [Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
 - g. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.
2. Frames:
- a. Materials: **[Uncoated]** **[Metallic-coated]** steel sheet, minimum thickness of 0.042 inch.
 - b. Sidelite and Transom Frames: Fabricated from same thickness material as adjacent door frame.
 - c. Construction: [Knocked down] [Slip-on drywall] [Face welded] [Full profile welded].
3. Exposed Finish: **[Prime]** **[Factory]**.
- C. Heavy-Duty Doors and Frames: ANSI/SDI A250.8, Level 2; ANSI/SDI A250.4, Level B. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.
1. Doors:
- a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: **[Uncoated]** **[Metallic-coated]** steel sheet, minimum thickness of 0.042 inch.
 - d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless].
 - e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
 - f. Core: [Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
 - g. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.
2. Frames:
- a. Materials: **[Uncoated]** **[Metallic-coated]** steel sheet, minimum thickness of 0.053 inch.

- b. Sidelites and Transom Frames: Fabricated from same thickness material as adjacent door frame.
 - c. Construction: [Knocked down] [Slip-on drywall] [Face welded] [Full profile welded].
3. Exposed Finish: **[Prime] [Factory]**.
- D. Extra-Heavy-Duty Doors and Frames: ANSI/SDI A250.8, Level 3; ANSI/SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.
1. Doors:
- a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.053 inch.
 - d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless] [Model 3, Stile and Rail].
 - e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
 - f. Core: [Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
 - g. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.
2. Frames:
- a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.053 inch.
 - b. Sidelite and Transom Frames: Fabricated from same thickness material as adjacent door frame.
 - c. Construction: [Knocked down] [Slip-on drywall] [Face welded] [Full profile welded].
3. Exposed Finish: **[Prime] [Factory]**.
- E. Maximum-Duty Doors and Frames: ANSI/SDI A250.8, Level 4; ANSI/SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.
1. Doors:
- a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.067 inch.

- d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless].
 - e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
 - f. Core: [Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
 - g. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.
2. Frames:
- a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.067 inch.
 - b. Sidelites and Transom Frames: Fabricated from same thickness material as adjacent door frame.
 - c. Construction: [Knocked down] [Slip-on drywall] [Face welded] [Full profile welded].
3. Exposed Finish: **[Prime] [Factory]**.

2.03 EXTERIOR STANDARD STEEL DOORS AND FRAMES

- A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Heavy-Duty Doors and Frames: ANSI/SDI A250.8, Level 2; ANSI/SDI A250.4, Level B. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.

1. Doors:
- a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: Metallic-coated steel sheet, minimum thickness of 0.042 inch, with minimum **[A40] [A60]** coating.
 - d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless].
 - e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
 - f. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
 - g. Bottom Edges: Close bottom edges of doors **[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.

- h. Core: [Manufacturer's standard] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
 - i. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener with insulation] [laminated mineral board]** core for fire-rated doors.
 - 2. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum **[A40] [A60]** coating.
 - b. Construction: [Knocked down] [Face welded] [Full profile welded].
 - 3. Exposed Finish: **[Prime] [Factory]**.
- C. Extra-Heavy-Duty Doors and Frames: ANSI/SDI A250.8, Level 3; ANSI/SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.
- 1. Doors:
 - a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum **[A40] [A60]** coating.
 - d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless] [Model 3, Stile and Rail].
 - e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
 - f. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
 - g. Bottom Edges: Close bottom edges of doors **[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
 - h. Core: [Manufacturer's standard] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
 - i. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener with insulation] [laminated mineral board]** core for fire-rated doors.
 - 2. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum **[A40] [A60]** coating.
 - b. Construction: [Knocked down] [Face welded] [Full profile welded].

3. Exposed Finish: **[Prime] [Factory]**.

D. Maximum-Duty Doors and Frames: ANSI/SDI A250.8, Level 4; ANSI/SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.

1. Doors:

- a. Type: As indicated in the Door and Frame Schedule on Drawings.
- b. Thickness: 1-3/4 inches.
- c. Face: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum **[A40] [A60]** coating.
- d. Edge Construction: [Model 1, Full Flush] [Model 2, Seamless].
- e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**] [Provide manufacturer's standard beveled or square edges].
- f. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
- g. Bottom Edges: Close bottom edges of doors **[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
- h. Core: [Manufacturer's standard] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener].
- i. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener with insulation] [laminated mineral board]** core for fire-rated doors.

2. Frames:

- a. Materials: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum **[A40] [A60]** coating.
- b. Construction: [Knocked down] [Face welded] [Full profile welded].

3. Exposed Finish: **[Prime] [Factory]**.

2.04 INTERIOR CUSTOM HOLLOW-METAL DOORS AND FRAMES

A. Hollow-Metal Doors and Frames: NAAMM-HMMA 860; ANSI/SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.

1. Doors:

- a. Type: As indicated in the Door and Frame Schedule on Drawings.
- b. Thickness: 1-3/4 inches.

- c. Face: [Uncoated] [Metallic-coated] steel sheet, minimum thickness of **[0.032 inch] [0.042 inch] [0.053 inch]**.
 - d. Edge Construction: [Continuously welded with no] [Projection or tack welded with no] [Interlocking with] [Projection or tack welded with] visible seam.
 - e. Core: Steel stiffened.
 - f. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.
2. Frames:
- a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.053 inch.
 - b. Sidelite and Transom Frames: Fabricated from same thickness material as adjacent door frame.
 - c. Construction: [Knocked down] [Slip-on drywall] [Face welded] [Full profile welded].
3. Exposed Finish: Prime.
- B. Commercial Doors and Frames: NAAMM-HMMA 861; ANSI/SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.
1. Doors:
 - a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.042 inch.
 - d. Edge Construction: Continuously welded with no visible seam.
 - e. Core: Steel stiffened.
 - f. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.
 2. Frames:
 - a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.053 inch, except 0.067 inch for openings exceeding 4 feet wide.
 - b. Sidelite and Transom Frames: Fabricated from same material as adjacent door frame.
 - c. Construction: **[Face] [Full profile]** welded.
 3. Exposed Finish: Prime.

C. Commercial Laminated Doors and Frames: NAAMM-HMMA 867; ANSI/SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.

1. Doors:

- a. Type: As indicated in the Door and Frame Schedule on Drawings.
- b. Thickness: 1-3/4 inches.
- c. Face: [Uncoated] [Metallic-coated] steel sheet, minimum thickness of **[0.032 inch] [0.042 inch] [0.053 inch]**.
- d. Edge Construction: [Continuously welded with no visible seam] [Interlocking with visible seam] [Interlocking with no visible seam] [Projection, spot, or tack welded with or without visible seams].
- e. Edge Bevel: [Bevel lock and hinge edges **1/8 inch in 2 inches**] [Bevel lock edge **1/8 inch in 2 inches**].
- f. Core: [Kraft-paper honeycomb] [Polyisocyanurate] [Polystyrene] [Polyurethane] [Vertical steel stiffener].
- g. Fire-Rated Core: Manufacturer's standard [vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated] doors.

2. Frames:

- a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.053 inch.
- b. Sidelite and Transom Frames: Fabricated from same thickness material as adjacent door frame.
- c. Construction: [Knocked down] [Slip-on drywall] [Face welded] [Full profile welded].

3. Exposed Finish: [Prime] [Unprimed].

2.05 EXTERIOR CUSTOM HOLLOW-METAL DOORS AND FRAMES

A. Commercial Doors and Frames: NAAMM-HMMA 861; ANSI/SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.

1. Doors:

- a. Type: As indicated in the Door and Frame Schedule on Drawings.
- b. Thickness: 1-3/4 inches.
- c. Face: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum G60 or A60 coating.
- d. Edge Construction: Continuously welded with no visible seam.

- e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
 - f. Bottom Edges: Close bottom edges of doors [**where required for attachment of weather stripping**] with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
 - g. Core: Steel stiffened.
2. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch, except 0.067 inch for openings exceeding 4 feet wide; with minimum G60 or A60 coating.
 - b. Construction: **[Face] [Full profile]** welded.
 3. Exposed Finish: Prime.
- B. Commercial Laminated Doors and Frames: NAAMM-HMMA 867; ANSI/SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule on Drawings] <Insert locations>**.
1. Doors:
 - a. Type: As indicated in the Door and Frame Schedule on Drawings.
 - b. Thickness: 1-3/4 inches.
 - c. Face: Metallic-coated steel sheet, minimum thickness of **[0.053 inch] [0.042 inch]**, with minimum G60 or A60 coating.
 - d. Edge Construction: [Continuously welded with no visible seam] [Interlocking with visible seam] [Interlocking with no visible seam] [Projection, spot, or tack welded with or without visible seams].
 - e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
 - f. Bottom Edges: Close bottom edges of doors [**where required for attachment of weather stripping**] with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
 - g. Core: [Kraft-paper honeycomb] [Polyisocyanurate] [Polystyrene] [Polyurethane] [Vertical steel stiffener].
 2. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum G60 or A60 coating.
 - b. Construction: [Knocked down] [Face welded] [Full profile welded].

3. Exposed Finish: [Prime] [Unprimed].

2.06 BORROWED LITES

- A. Fabricate of [uncoated] [metallic-coated] steel sheet, minimum thickness of **[0.053 inch]** **[0.042 inch]**.
- B. Construction: **[Knocked down]** **[Face welded]** **[Full profile welded]**.
- C. Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as metal as frames.
- D. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

2.07 HOLLOW-METAL PANELS

- A. Provide hollow-metal panels of same materials, construction, and finish as adjacent door assemblies.

2.08 FRAME ANCHORS

- A. Jamb Anchors:
 1. Type: Anchors of minimum size and type required by applicable door and frame standard, and suitable for performance level indicated.
 2. Quantity: Minimum of three anchors per jamb, with one additional anchor for frames with no floor anchor. Provide one additional anchor for each 24 inches of frame height above 7 feet.
 3. Postinstalled Expansion Anchor: Minimum 3/8-inch- diameter bolts with expansion shields or inserts, with manufacturer's standard pipe spacer.
- B. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor.
- C. Floor Anchors for Concrete Slabs with Underlayment: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at top of underlayment.
- D. Material: ASTM A879/A879M, Commercial Steel (CS), 04Z coating designation; mill phosphatized.
 1. For anchors built into exterior walls, steel sheet complying with ASTM A1008/A1008M or ASTM A1011/A1011M; hot-dip galvanized in accordance with ASTM A153/A153M, Class B.

2.09 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

- B. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- C. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B.
- D. Inserts, Bolts, and Fasteners: Hot-dip galvanized in accordance with ASTM A153/A153M.
- E. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.
- F. Mineral-Fiber Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E136 for combustion characteristics.
- G. Glazing: Comply with requirements in Section 088000 "Glazing."

2.10 FABRICATION

- A. Door Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.
- B. Hollow-Metal Frames: Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames.
 - 1. Sidelite and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by welding **[, or by rigid mechanical anchors]**.
 - 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 3. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
 - 4. Terminated Stops (Hospital Stops): Terminate stops **[6 inches]** <Insert dimension> above finish floor with a **[45] [90]**-degree angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.
- C. Hardware Preparation: Factory prepare hollow-metal doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping in accordance with ANSI/SDI A250.6, the Door Hardware Schedule on Drawings, and templates.
 - 1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
 - 2. Comply with BHMA A156.115 for preparing hollow-metal doors and frames for hardware.
- D. Glazed Lites: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with **[butted] [or] [mitered]** hairline joints.

1. Provide stops and moldings flush with face of door, and with **[beveled] [square]** stops unless otherwise indicated.
2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames. Provide loose stops and moldings on inside of hollow-metal doors and frames.
4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.
5. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

2.11 STEEL FINISHES

- A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.
1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
- B. Factory Finish: Clean, pretreat, and apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, complying with ANSI/SDI A250.3.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.

2.12 LOUVERS

- A. Provide louvers for interior doors, where indicated, which comply with SDI 111, with blades or baffles formed of 0.020-inch- thick, cold-rolled steel sheet set into 0.032-inch- thick steel frame.
1. Sightproof Louver: Stationary louvers constructed with inverted-V or inverted-Y blades.
 2. Lightproof Louver: Stationary louvers constructed with baffles to prevent light from passing from one side to the other.
 3. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible link, and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same qualified testing and inspecting agency that established fire-resistance rating of door assembly.
- B. Form corners of moldings with hairline joints. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.

PART 3 EXECUTION

3.01 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces. Touch up factory-applied finishes where spreaders are removed.
- B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.02 INSTALLATION

- A. Install hollow-metal doors and frames plumb, rigid, properly aligned, and securely fastened in place. Comply with approved Shop Drawings and with manufacturer's written instructions.
- B. Hollow-Metal Frames: Comply with [ANSI/SDI A250.11] [NAAMM-HMMA 840].
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces without damage to completed Work.
 - a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces. Touch-up finishes.
 - b. Install frames with removable stops located on secure side of opening.
 - 2. Fire-Rated Openings: Install frames in accordance with NFPA 80.
 - 3. Floor Anchors: Secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 - 4. Solidly pack mineral-fiber insulation inside frames.
 - 5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout or mortar.
 - 6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. **[Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.]**
 - 7. Installation Tolerances: Adjust hollow-metal frames to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.
- C. Hollow-Metal Doors: Fit and adjust hollow-metal doors accurately in frames, within clearances specified below.

1. Non-Fire-Rated Steel Doors: Comply with [ANSI/SDI A250.8] [NAAMM-HMMA 841 and NAAMM-HMMA guide specification indicated].
 2. Fire-Rated Doors: Install doors with clearances in accordance with NFPA 80.
 3. Smoke-Control Doors: Install doors in accordance with NFPA 105.
- D. Glazing: Comply with installation requirements in Section 088000 "Glazing" and with hollow-metal manufacturer's written instructions.

3.03 FIELD QUALITY CONTROL

- A. Inspection Agency: **[Owner will engage] [Engage]** a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
1. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
 2. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements in accordance with NFPA 101, Section 7.2.1.15.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in **[NFPA 80] [and] [NFPA 101]**.

3.04 REPAIR

- A. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
- B. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint in accordance with manufacturer's written instructions.
- C. Factory-Finish Touchup: Clean abraded areas and repair with same material used for factory finish in accordance with manufacturer's written instructions.
- D. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

SECTION 08 11 16

INTERIOR ALUMINUM DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Pre-finished aluminum door frames for interior use.
 - 2. Pre-finished aluminum window frames for interior use.
 - 3. Pre-finished aluminum framing system for interior use.
 - 4. Pre-finished aluminum doors for interior use.
- B. Related Requirements: Section 08 11 13 Hollow Metal Doors and Frames.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing
- B. Pre-installation meeting

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.
- B. Templates: Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the interior aluminum door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.
- C. Shop Drawings: Include the following:
 - 1. Frame details for each frame type, including dimensioned profiles.
 - 2. Locations of reinforcement and preparations for hardware.
 - 3. Details of each different wall opening condition. Include requirements for steel framing at partitions for fit and securing of frames, partition widths and tolerances, direction of framing members, clips and attachments.
 - 4. Details of anchorages, joints, field splices, and connections.
 - 5. Details of accessories.
 - 6. Details of moldings, removable stops, and glazing.
 - 7. Elevations of each door design.
 - 8. Details of doors, including vertical and horizontal edge details.
 - 9. Details of preparations for power, signal, and control systems.
- D. Samples for verification: Provide, at the request of architect, prepared Samples as indicated below:

1. Framing Member: 12 inches long
 2. Corner Fabrication: 12-by-12-inch-long, full size window corner, including full-size sections of extrusions with factory-applied finish.
 3. Aluminum chips in full range of manufacturer's standard finishes for architect's color selection.
- E. Interior Aluminum Door and Frame Schedule: Use same designations indicated on Drawings. Coordinate with Door Hardware schedule and glazing.

1.04 QUALITY ASSURANCE

- A. Source Limitations: Obtain aluminum frames and doors through one source from a single qualified manufacturer.
- B. Manufacturer Qualifications: A firm experienced in the manufacturing of interior aluminum framing systems and doors with a minimum five (5) years successful in-service performance providing product similar to those indicated, including pre-engineering and pre-fabricating all components of aluminum framing systems and doors.
- C. Installer Qualifications: An experienced installer with a minimum five (5) years experience who has completed aluminum framing systems and door installations similar in material, design, and extent to those indicated and whose work has resulted in construction with a record of successful in-service performance.
- D. Aesthetic Effects: Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- E. Fire Rated Assemblies: In locations where fire-rated openings are scheduled or required by regulatory agencies, provide fire-rated aluminum frames that have been tested and certified for specified exposure by an agency acceptable to governing authorities.
1. Provide labels permanently fastened on each frame that is within size limits established by NFPA and the testing authority.
 - a. Provide 20-minute labels.
 - b. Provide 90-minute labels.
 - c. Provide labels for openings as scheduled on the drawings.
- F. Pre-Installation Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing interior aluminum frames and doors and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver interior aluminum frames and doors individually protective wrapped within cartons and marked for the corresponding scheduled opening. Do not bulk pack frames.
- B. Inspect frames upon delivery for damage.
1. Repair minor damage to pre-finished products as recommended by Manufacturer.
 2. Replace frames that cannot be satisfactorily repaired.

- C. Store Interior aluminum frames and doors at Project site under cover and as near as possible to final installation location. Do not use covering material that will cause discoloration of aluminum finish.

1.06 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of interior aluminum frame openings by field measurements before fabrication and indicate measurements on Shop Drawings submittals.
- B. Do not begin installation of aluminum frames and doors until area of work has been completely enclosed and interior is protected from the elements.
- C. Maintain temperature and humidity in areas of installation within reasonable limits, as close as possible to final occupancy standards. If necessary, provide artificial heating, cooling, and ventilation to maintain required environmental conditions.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Aluminum knock-down frames shall be used for interior doors to private offices, closets, conference rooms, break rooms, private toilets and other infrequent use doors.
- B. Provide door assemblies that have been designed and fabricated in compliance with specified performance requirements.
- C. Conform to applicable Building Code for fire rated assemblies.
- D. Fire rated assembly construction to conform to UL 10C.
- E. Installed Frame and Door Assemblies: Comply with NFPA 80 for fire rated class indicated.
- F. Installed Fire-rated Window Assemblies: Comply with NFPA 257 for fire rated class indicated.
- G. Installed Smoke Control Frame and Door Assemblies: Comply with NFPA 105.

2.02 GENERAL

- A. Locations: Private offices, closets, conference rooms, break rooms, private toilets and other infrequent use doors
- B. Accessibility: Comply with ICC A117.1 and ADA Standards.

2.03 DOORS

- A. Flush Aluminum Doors with Aluminum Face Sheets: Aluminum internal framing and faces; no steel components.
 - 1. Thickness: 1-3/4-inches.

2.04 FRAMES

- A. Locations: Private offices, closets, conference rooms, break rooms, private toilets and other infrequent use doors

- B. Door Frames: Extruded aluminum hollow or C-shaped sections; no steel components.
 - 1. Frame Depth: To fit wall thicknesses as indicated on drawings.
 - 2. Frames for Fire-Rated Doors Specified Elsewhere: Tested in accordance with NFPA 252, listed and labeled by UL (DIR), ITS (DIR), or testing agency acceptable to authorities having jurisdiction.
- C. Dimensions and Shapes: As indicated on drawings; dimensions indicated are nominal.
 - 1. Provide the following clearances:
 - a. Hinge and Lock Stiles: 1/8 inch.
 - b. Between Meeting Stiles: 1/4 inch.
 - c. At Top Rail and Bottom Rail: 1/8 inch.

2.05 MATERIALS

- A. Aluminum Materials - General: Comply with recycled content product requirements specified in Section 01 81 13 - Sustainable Design Requirements.
- B. Recycled Content of Aluminum Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent.
- C. Aluminum Sheet: ASTM B209 (ASTM B209M), alloy 5005-H14, stretcher leveled.
- D. Extruded Aluminum: ASTM B221 (ASTM B221M), alloy 6063-T5 or alloy 6463-T5.

2.06 FABRICATION-DOORS

- A. Factory pre-engineer aluminum doors and components to the greatest extent practical.
- B. Hardware Preparations: Factory interior aluminum doors to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tap ping according to the Door Hardware Schedule and templates as specified in Section 08 71 00 Door Hardware:
 - 1. Reinforce doors to receive surface mounted door hardware. Machine and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required and fastened within door with concealed screws.
 - 2. Locate hardware as indicated.
 - 3. Coordinate locations of conduit and power transfers for electrical connections with Division 26 Sections.
- C. Clearances for Non-Fire-Rated Door Frames: Not more than 1/8" at jambs and heads, not more than 1/4-inch between pairs of doors. Not more than 3/4-inch at bottom.
- D. Fabricate kits for glazing with removable stops to allow glazing replacement without dismantling.

2.07 FABRICATION-FRAMES

- A. Shop fabricate and finish the frames with rigid connections and hairline, flush fit at corners.
- B. Provide concealed corner reinforcements and alignment clips for precise joints at butt or mitered connections.
- C. Fabricate all components to allow secure installation without exposed fasteners.

- D. Reinforce frames to receive finish hardware specified in Section 08 71 00. Provide closer reinforcement in the head of all frames.

2.08 FINISHES

- A. Class I Clear Anodized Finish: Clear anodic coating; AAMA 611 AA-M12C22A41, minimum dry film thickness (DFT) of 0.7 mils, 0.0007 inch.
- B. Class I Color Anodized Finish: Electrolytically deposited colored anodic coating; AAMA 611 AA-M12C22A44, minimum dry film thickness (DFT) of 0.7 mils, 0.0007 inch.
- C. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify that wall surfaces and openings are ready to receive frames and are within tolerances specified in manufacturer's instructions.

3.02 INSTALLATION

- A. Install doors and frames in accordance with manufacturer's instructions and approved shop drawings.
 - 1. At fire-protection-rated openings, install frames according to NFPA 80.
- B. Set frames plumb, square, level, and aligned to receive doors. Anchor frames to adjacent construction in strict accordance with manufacturer's recommendations and within specified tolerances.
- C. Where aluminum surfaces contact metals other than stainless steel, zinc, or small areas of white bronze, protect from direct contact by painting dissimilar metal with heavy coating of bituminous paint.
- D. Install door hardware as specified in Section 08 71 00 - Door Hardware.
- E. Do not use screws or other fasteners exposed to view when installation is complete.
- F. Install glazing; set glazing stops and glazing gaskets flush with face of door or frame.
- G. Comply with glazing installation requirements of Section 08 80 00 - Glazing.

3.03 INSTALLATION TOLERANCES

- A. Adjust frames for squareness, alignment, twist, and plumb to the following tolerances:

- B. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
- C. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
- D. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
- E. Plumbness: Plus or minus 1/16-inch, measured at jambs at floor.

3.04 ADJUSTING

- A. Inspect installation, correct misalignments, and tighten loose connections.
- B. Doors: Adjust doors to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly, and lubricate as recommended by manufacturer.
- C. Touch Up: Repair marred frame surfaces to blend inconspicuously with adjacent unrepaired surface so touchup is not visible from a distance of 48 inches (1220 mm) as viewed by Architect. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

END OF SECTION

SECTION 08 14 16
FLUSH WOOD DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Solid-core five-ply flush wood veneer-faced doors and transom panels for transparent finish.
2. Solid-core five-ply flush wood doors and transom panels for opaque finish.
3. **[Solid-core seven-ply flush wood veneer-faced doors and transom panels for transparent finish.]**
4. **[Solid-core seven-ply flush wood doors and transom panels for opaque finish.]**
5. Fire-rated wood door frames.
6. Light frames and louvers.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Solid-core five-ply flush wood veneer-faced doors and transom panels for transparent finish.
2. Solid-core five-ply flush wood doors and transom panels for opaque finish.
3. **[Solid-core seven-ply flush wood veneer-faced doors and transom panels for transparent finish.]**
4. **[Solid-core seven-ply flush wood doors and transom panels for opaque finish.]**
5. Solid-core flush wood doors and transom panels with plastic-laminate-faces.
6. Hollow-core flush wood veneer-faced doors for transparent finish.
7. Hollow-core flush wood doors for opaque finish.
8. Hollow-core flush wood doors with plastic-laminate faces.
9. Fire-rated wood door frames.
10. Light frames and louvers.

B. Product Data Submittals: For each product, including the following:

1. Door core materials and construction.
2. Door edge construction

3. Door face type and characteristics.
 4. Door louvers.
 5. Door trim for openings.
 6. Door frame construction.
 7. Factory-machining criteria.
 8. Factory-**[priming]** **[finishing]** specifications.
- C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each type of door; construction details not covered in Product Data; and the following:
1. Door schedule indicating door **[and frame]** location, type, size, fire protection rating, and swing.
 2. Door elevations, dimension and locations of hardware, lite and louver cutouts, and glazing thicknesses.
 3. Details of frame for each frame type, including dimensions and profile.
 4. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
 5. Dimensions and locations of blocking for hardware attachment.
 6. Dimensions and locations of mortises and holes for hardware.
 7. Clearances and undercuts.
 8. Requirements for veneer matching.
 9. Doors to be factory **[primed]** **[finished]** and application requirements.
 10. Apply **[NAAWS Quality Certification]** **[NAAWS Certified Compliance]** **[AWI Quality Certification]** **[WI Certified Compliance]** Program label to Shop Drawings.
- D. Samples for Initial Selection: For **[plastic-laminate door faces]** **[polymer edging]** **[factory-finished doors]** **[and]** **[factory-finished door frames]**.
- E. Samples for Verification:
1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. **[For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.]**
 2. Plastic laminate, 6 inches square, for each color, texture, and pattern selected.
 3. Polymer edging, in manufacturer's standard colors.
 4. Corner sections of doors, approximately 8 by 10 inches, with door faces and edges representing actual materials to be used.
 5. Louver blade and frame sections, 6 inches long, for each material and finish specified.
 6. Frames for light openings, 6 inches long, for each material, type, and finish required.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For door inspector.

1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
 2. Egress Door Inspector: Submit documentation of compliance with NFPA 101, Section 7.2.1.15.4.
 3. Submit copy of DHI's Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.
- 1.05 CLOSEOUT SUBMITTALS
- A. Special warranties.
- B. Quality Standard Compliance Certificates: **[NAAWS Quality Certification] [NAAWS Certified Compliance] [AWI Quality Certification] [WI Certified Compliance]** Program certificates.
- C. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.
- 1.06 QUALITY ASSURANCE
- A. Manufacturer's Certification: Licensed participant in **[NAAWS Quality Certification] [NAAWS Certified Compliance] [AWI's Quality Certification Program] [WI's Certified Compliance Program]**.
- B. Fire-Rated Door Inspector Qualifications: Inspector for field quality-control inspections of fire-rated door assemblies complies with qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
1. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.
- C. Egress Door Inspector Qualifications: Inspector for field quality-control inspections of egress door assemblies complies with qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
1. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.
- 1.07 DELIVERY, STORAGE, AND HANDLING
- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in **[plastic bags or cardboard cartons] [cardboard cartons, and wrap bundles of doors in plastic sheeting]**.
- C. Mark each door on **[top and]** bottom rail with opening number used on Shop Drawings.
- 1.08 FIELD CONDITIONS
- A. Environmental Limitations:

1. Do not deliver or install doors until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupants for the remainder of construction period.
2. Do not deliver or install doors until building is enclosed and weathertight, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between **[25 and 55] [43 and 70] [17 and 50] <Insert numbers>** percent during remainder of construction period.

1.09 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace doors **[and frames]** that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Delamination of veneer.
 - b. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
 - c. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
 2. Warranty also includes installation and finishing that may be required due to repair or replacement of defective doors **[and frames]**.
 3. Warranty Period for Solid-Core Exterior Doors: **[Two] [Five] <Insert number>** years from date of Substantial Completion.
 4. Warranty Period for Solid-Core Interior Doors: Life of installation.
 5. Warranty Period for Hollow-Core Interior Doors: **[One] [Two] <Insert number>** year(s) from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain flush wood doors **[indicated to be blueprint matched with paneling] [and wood paneling]** from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Wood Door and Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings **[and temperature-rise limits] indicated** on Drawings, based on testing at positive pressure in accordance with **[UL 10C] [or] [NFPA 252]**.
1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

2. Temperature-Rise Limit: **[Where indicated on Drawings] [At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.

- B. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.

2.03 FLUSH WOOD DOORS AND FRAMES, GENERAL

- A. Quality Standard: In addition to requirements specified, comply with **[AWI/AWMAC/WI's "Architectural Woodwork Standards."]** **[ANSI/WDMA I.S. 1A.]**

1. Provide **[labels] [and] [certificates]** from **[NAAWS] [AWI] [WI]** certification program indicating that doors **[and frames]** comply with requirements of grades specified.
 - a. This project has been registered with AWI as AWI Quality Certification Program Number **<Insert number>**.
 - b. Contractor registers the Work under this Section with the **[NAAWS Quality Certification Program at www.NAAWS.com or by calling 916-372-9943.] [AWI Quality Certification Program at www.awiqcp.org or by calling 855-345-0991.]**
2. The Contract Documents contain requirements that are more stringent than the referenced quality standard. Comply with the Contract Documents in addition to those of the referenced quality standard.

2.04 SOLID-CORE FIVE-PLY FLUSH WOOD VENEER-FACED DOORS AND TRANSOM PANELS FOR TRANSPARENT FINISH

- A. Exterior Doors, Solid-Core Five-Ply Veneer-Faced **<Insert drawing designation>**:

1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [as indicated on Drawings]**.
2. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
3. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
4. Faces: Single-ply wood veneer not less than 1/50 inch thick.
 - a. Species: **[Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] <Insert species>**.
 - b. Cut: **[Rotary cut] [Plain sliced (flat sliced)] [Quarter sliced] [Rift cut]**.
 - c. Match between Veneer Leaves: **[Book] [Slip] [Random]** match.
 - d. Assembly of Veneer Leaves on Door Faces: **[Center-balance] [Balance] [Running]** match.
 - e. Pair and Set Match: Provide for doors hung in same opening **[or separated only by mullions]**.

5. Exposed Vertical and Top Edges: **[Same species as faces or a compatible species - Architectural Woodwork Standards edge Type A] [Same species as faces - Architectural Woodwork Standards edge Type A] [Applied wood-veneer edges of same species as faces and covering edges of faces - Architectural Woodwork Standards edge Type B] [Applied wood edges of same species as faces and covering edges of crossbands - Architectural Woodwork Standards edge Type D].**
 6. Core:
 - a. ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.
 - b. Glued wood stave.
 - c. WDMA I.S. 10 structural composite lumber.
 - 1) Screw Withdrawal, Door Face: **[550 lbf] [475 lb]**.
 - 2) Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lb]**.
 - d. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
 7. Construction: Five plies, hot-pressed bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.
 8. Adhesives: Type I in accordance with WDMA T.M. 6.
- B. Interior Doors, Solid-Core Five-Ply Veneer-Faced **<Insert drawing designation>**:
1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [Standard Duty] [as indicated on Drawings]**.
 2. Performance Grade by Location:
 - a. ANSI/WDMA I.S. 1A Extra Heavy Duty: [Classrooms] [public toilets] [janitor's closets] [assembly spaces] [exits] [and] [patient rooms] **<Insert locations>** [and where indicated on Drawings].
 - b. ANSI/WDMA I.S. 1A Standard Duty: [Closets (not including janitor's closets)] [and] [private toilets] **<Insert locations>** [and where indicated on Drawings].
 3. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
 4. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 5. Faces: Single-ply wood veneer not less than 1/50 inch thick.
 - a. Species: [Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] **<Insert species>**.
 - b. Cut: [Rotary cut] [Plain sliced (flat sliced)] [Quarter sliced] [Rift cut].
 - c. Match between Veneer Leaves: **[Book] [Slip] [Random]** match.

- d. Assembly of Veneer Leaves on Door Faces: **[Center-balance] [Balance] [Running]** match.
 - e. Pair and Set Match: Provide for doors hung in same opening **[or separated only by mullions]**.
 - f. Room Match:
 - 1) Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by **[10 feet] [20 feet] <Insert dimension>** or more.
 - 2) Provide door faces of compatible color and grain within each separate room or area of building.
 - g. Transom Match: **[Continuous match] [End match] [As indicated]**.
 - h. Blueprint Match: Where indicated, provide doors with faces produced from same flitches as adjacent wood paneling and arranged to provide blueprint match with wood paneling. Comply with requirements in Section 06 42 16 "Flush Wood Paneling."
6. Exposed Vertical and Top Edges: **[Same species as faces or a compatible species - Architectural Woodwork Standards edge Type A] [Same species as faces - Architectural Woodwork Standards edge Type A] [Applied wood-veneer edges of same species as faces and covering edges of faces - Architectural Woodwork Standards edge Type B] [Applied wood edges of same species as faces and covering edges of crossbands - Architectural Woodwork Standards edge Type D]**.
- a. Fire-Rated Single Doors: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed vertical edges.
 - b. Fire-Rated Pairs of Doors:
 - 1) Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
 - 2) Provide formed-steel edges and astragals with intumescent seals.
 - a) Finish steel edges and astragals with baked enamel **[same color as doors]**.
 - b) Finish steel edges and astragals to match door hardware (locksets or exit devices).
 - c. Mineral-Core Doors: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
 - 1) Screw-Holding Capability: **[550 lbf] [475 lbf] [400 lbf]** in accordance with WDMA T.M. 10.

7. Core for Non-Fire-Rated Doors:
- a. ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.
 - 1) Blocking: Provide wood blocking in particleboard-core doors as **[needed to eliminate through-bolting hardware.] [follows:]**
 - a) 5-inch top-rail blocking, in doors indicated to have closers.
 - b) 5-inch bottom-rail blocking, in exterior doors and doors indicated to have kick, mop, or armor plates.
 - c) 5-inch midrail blocking, in doors indicated to have exit devices.
 - 2) Provide doors with **[glued-wood-stave] [or] [WDMA I.S. 10 structural-composite-lumber]** cores instead of particleboard cores for doors scheduled to receive exit devices in **[Section 08 71 00 "Door Hardware."]**
 - b. Glued wood stave.
 - c. WDMA I.S. 10 structural composite lumber.
 - 1) Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - 2) Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
 - d. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
8. Core for Fire-Rated Doors: As required to achieve fire-protection rating indicated on Drawings.
- a. Blocking for Mineral-Core Doors: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated on Drawings as **[needed to eliminate through-bolting hardware.] [follows:]**
 - 1) 5-inch top-rail blocking.
 - 2) 5-inch bottom-rail blocking, in doors indicated to have protection plates.
 - 3) 5-inch midrail blocking, in doors indicated to have armor plates.
 - 4) **[4-1/2-by-10-inch lock blocks] [5-inch midrail blocking]**, in doors indicated to have exit devices.
9. Construction: Five plies, hot-pressed bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.

2.05 SOLID-CORE FIVE-PLY FLUSH WOOD DOORS AND TRANSOM PANELS FOR OPAQUE FINISH

- A. Exterior Doors, Solid-Core Five-Ply for Opaque Finish **<Insert drawing designation>**:
1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [as indicated on Drawings]**.
 2. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.

3. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 4. Faces: **[MDO] [Any closed-grain hardwood of mill option]**.
 - a. Apply MDO to [standard-thickness, closed-grain, hardwood face veneers] [or] [directly to high-density hardboard crossbands].
 5. Exposed Vertical and Top Edges: Any closed-grain hardwood.
 6. Core:
 - a. ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.
 - b. Glued wood stave.
 - c. WDMA I.S. 10 structural composite lumber.
 - 1) Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - 2) Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
 - d. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
 7. Construction: Five plies, hot-pressed, bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.
 8. Adhesives: Type I in accordance with WDMA T.M. 6.
- B. Interior Doors, Solid-Core Five-Ply for Opaque Finish <Insert drawing designation>:
1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [Standard Duty] [as indicated on Drawings]**.
 2. Performance Grade by Location:
 - a. ANSI/WDMA I.S. 1A Extra Heavy Duty: [Classrooms] [public toilets] [janitor's closets] [assembly spaces] [exits] [and] [patient rooms] <Insert locations> [and where indicated on Drawings].
 - b. ANSI/WDMA I.S. 1A Standard Duty: [Closets (not including janitor's closets)] [and] [private toilets] <Insert locations> [and where indicated on Drawings].
 3. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
 4. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 5. Faces: **[MDO] [Any closed-grain hardwood of mill option] [Hardboard or MDF]**.
 - a. Apply MDO to [standard-thickness, closed-grain, hardwood face veneers] [or] [directly to high-density hardboard crossbands].
 - b. Hardboard Faces: ANSI A135.4, Class 1 (tempered) or Class 2 (standard).
 - c. MDF Faces: ANSI A208.2, Grade 150 or Grade 160.
 6. Exposed Vertical and Top Edges: Any closed-grain hardwood.

- a. Fire-Rated Single Doors: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed vertical edges.
 - b. Fire-Rated Pairs of Doors:
 - 1) Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
 - 2) Provide formed-steel edges and astragals with intumescent seals.
 - a) Finish steel edges and astragals with baked enamel [**same color as doors**].
 - b) Finish steel edges and astragals to match door hardware (locksets or exit devices).
 - c. Mineral-Core Doors: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
 - 1) Screw-Holding Capability: **[550 lbf] [475 lbf] [400 lbf]** in accordance with WDMA T.M. 10.
7. Core for Non-Fire-Rated Doors:
- a. ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.
 - 1) Blocking: Provide wood blocking in particleboard-core doors as **[needed to eliminate through-bolting hardware.] [follows:]**
 - a) 5-inch top-rail blocking, in doors indicated to have closers.
 - b) 5-inch bottom-rail blocking, in exterior doors and doors indicated to have kick, mop, or armor plates.
 - c) 5-inch midrail blocking, in doors indicated to have exit devices.
 - 2) Provide doors with [glued-wood-stave] [or] [WDMA I.S. 10 structural-composite-lumber] cores instead of particleboard cores for doors scheduled to receive exit devices in [Section 08 71 00 "Door Hardware."] [Section 08 71 11 "Door Hardware (Descriptive Specification)."]
 - b. Glued wood stave.
 - c. WDMA I.S. 10 structural composite lumber.
 - 1) Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - 2) Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
 - d. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
8. Core for Fire-Rated Doors: As required to achieve fire-protection rating indicated on Drawings.

- a. Blocking for Mineral-Core Doors: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated on Drawings as **[needed to eliminate through-bolting hardware.] [follows:]**
 - 1) 5-inch top-rail blocking.
 - 2) 5-inch bottom-rail blocking, in doors indicated to have protection plates.
 - 3) 5-inch midrail blocking, in doors indicated to have armor plates.
 - 4) **[4-1/2-by-10-inch lock blocks] [5-inch midrail blocking]**, in doors indicated to have exit devices.
 - 9. Construction: Five plies, hot-pressed bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.
- 2.06 SOLID-CORE SEVEN-PLY FLUSH WOOD VENEER-FACED DOORS AND TRANSOM PANELS FOR TRANSPARENT FINISH
- A. Exterior Doors, Seven-Ply Veneer-Faced <Insert drawing designation>:
- 1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [as indicated on Drawings]**.
 - 2. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
 - 3. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 - 4. Faces: **[Single-ply wood veneer not less than 1/50 inch thick] [or] [two-ply wood panel with wood veneer not less than 1/50 inch thick]**.
 - a. Species: [Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] <Insert species>.
 - b. Cut: [Rotary cut] [Plain sliced (flat sliced)] [Quarter sliced] [Rift cut].
 - c. Match between Veneer Leaves: **[Book] [Slip] [Random]** match.
 - d. Assembly of Veneer Leaves on Door Faces: **[Center-balance] [Balance] [Running]** match.
 - e. Pair and Set Match: Provide for doors hung in same opening **[or separated only by mullions]**.
 - 5. Exposed Vertical and Top Edges: **[Same species as faces or a compatible species - Architectural Woodwork Standards edge Type A] [Same species as faces - Architectural Woodwork Standards edge Type A] [Applied wood-veneer edges of same species as faces and covering edges of faces - Architectural Woodwork Standards edge Type B] [Applied wood edges of same species as faces and covering edges of crossbands - Architectural Woodwork Standards edge Type D]**.
 - 6. Core:
 - a. ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.

- b. Glued wood stave.
 - c. WDMA I.S. 10 structural composite lumber.
 - 1) Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - 2) Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
 - d. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
7. Construction: Seven plies, **[hot-pressed] [or] [cold-pressed]** bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.
8. Adhesives: Type I in accordance with WDMA T.M. 6.
- B. Interior Doors, Seven-Ply Veneer-Faced **<Insert drawing designation>**:
- 1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [Standard Duty] [as indicated on Drawings]**.
 - 2. Performance Grade by Location:
 - a. ANSI/WDMA I.S. 1A Extra Heavy Duty: [Classrooms] [public toilets] [janitor's closets] [assembly spaces] [exits] [and] [patient rooms] <Insert locations> [and where indicated on Drawings].
 - b. ANSI/WDMA I.S. 1A Standard Duty: [Closets (not including janitor's closets)] [and] [private toilets] <Insert locations> [and where indicated on Drawings].
 - 3. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
 - 4. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 - 5. Faces: **[Single-ply wood veneer not less than 1/50 inch thick] [or] [two-ply wood panel with wood veneer not less than 1/50 inch thick]**.
 - a. Species: [Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] <Insert species>.
 - b. Cut: [Rotary cut] [Plain sliced (flat sliced)] [Quarter sliced] [Rift cut].
 - c. Match between Veneer Leaves: **[Book] [Slip] [Random]** match.
 - d. Assembly of Veneer Leaves on Door Faces: **[Center-balance] [Balance] [Running]** match.
 - e. Pair and Set Match: Provide for doors hung in same opening **[or separated only by mullions]**.
 - f. Room Match:
 - 1) Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by **[10 feet] [20 feet] <Insert dimension>** or more.

- 2) Provide door faces of compatible color and grain within each separate room or area of building.
 - g. Transom Match: [Continuous match] [End match] [As indicated on Drawings].
 - h. Blueprint Match: Where indicated, provide doors with faces produced from same flitches as adjacent wood paneling and arranged to provide blueprint match with wood paneling. Comply with requirements in Section 06 42 16 "Flush Wood Paneling."
6. Exposed Vertical and Top Edges: **[Same species as faces or a compatible species - Architectural Woodwork Standards edge Type A] [Same species as faces - Architectural Woodwork Standards edge Type A] [Applied wood-veneer edges of same species as faces and covering edges of faces - Architectural Woodwork Standards edge Type B] [Applied wood edges of same species as faces and covering edges of crossbands - Architectural Woodwork Standards edge Type D].**
- a. Fire-Rated Single Doors: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed vertical edges.
 - b. Fire-Rated Pairs of Doors:
 - 1) Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
 - 2) Provide formed-steel edges and astragals with intumescent seals.
 - a) Finish steel edges and astragals with baked enamel **[same color as doors]**.
 - b) Finish steel edges and astragals to match door hardware (locksets or exit devices).
 - c. Mineral-Core Doors: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
 - 1) Screw-Holding Capability: **[550 lbf] [475 lbf] [400 lbf]** in accordance with WDMA T.M. 10.
7. Core for non-fire-rated doors, ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.
- a. Blocking: Provide wood blocking in particleboard-core doors as **[needed to eliminate through-bolting hardware.] [follows:]**
 - 1) 5-inch top-rail blocking, in doors indicated to have closers.
 - 2) 5-inch bottom-rail blocking, in exterior doors and doors indicated to have kick, mop, or armor plates.
 - 3) 5-inch midrail blocking, in doors indicated to have exit devices.

- b. Provide doors with [glued-wood-stave] [or] [WDMA I.S. 10 structural-composite-lumber] cores instead of particleboard cores for doors scheduled to receive exit devices in [Section 08 71 00 "Door Hardware."] [Section 08 71 11 "Door Hardware (Descriptive Specification)."]
 - 8. Core for non-fire-rated doors, glued wood stave.
 - 9. Core for non-fire-rated doors, WDMA I.S. 10 structural composite lumber.
 - a. Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - b. Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
 - 10. Core for non-fire-rated doors, either glued wood stave or WDMA I.S. 10 structural composite lumber.
 - 11. Core for fire-rated doors, as required to achieve fire-protection rating indicated on Drawings.
 - a. Blocking for Mineral-Core Doors: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated on Drawings as **[needed to eliminate through-bolting hardware.] [follows:]**
 - 1) 5-inch top-rail blocking.
 - 2) 5-inch bottom-rail blocking, in doors indicated to have protection plates.
 - 3) 5-inch midrail blocking, in doors indicated to have armor plates.
 - 4) **[4-1/2-by-10-inch lock blocks] [5-inch midrail blocking]**, in doors indicated to have exit devices.
 - 12. Construction: Seven plies, **[hot-pressed] [or] [cold-pressed]**, bonded or unbonded.
- 2.07 SOLID-CORE SEVEN-PLY FLUSH WOOD DOORS AND TRANSOM PANELS FOR OPAQUE FINISH
- A. Exterior Doors, Seven-Ply for Opaque Finish <Insert drawing designation>:
 - 1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [as indicated on Drawings]**.
 - 2. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
 - 3. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 - 4. Faces: **[MDO] [Any closed-grain hardwood of mill option]**.
 - a. Apply MDO to [standard-thickness, closed-grain, hardwood face veneers] [or] [directly to high-density hardboard crossbands].
 - 5. Exposed Vertical and Top Edges: Any closed-grain hardwood.
 - 6. Core:
 - a. ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.

- b. Glued wood stave.
 - c. WDMA I.S. 10 structural composite lumber.
 - 1) Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - 2) Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
 - d. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
7. Construction: Seven plies, **[hot-pressed] [or] [cold-pressed]**, bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.
8. Adhesives: Type I in accordance with WDMA T.M. 6.
- B. Interior Doors, Seven-Ply for Opaque Finish **<Insert drawing designation>**:
- 1. Performance Grade: ANSI/WDMA I.S. 1A **[Extra Heavy Duty] [Heavy Duty] [Standard Duty] [as indicated on Drawings]**.
 - 2. Performance Grade by Location:
 - a. ANSI/WDMA I.S. 1A Extra Heavy Duty: [Classrooms] [public toilets] [janitor's closets] [assembly spaces] [exits] [and] [patient rooms] <Insert locations> [and where indicated on Drawings].
 - b. ANSI/WDMA I.S. 1A Standard Duty: [Closets (not including janitor's closets)] [and] [private toilets] <Insert locations> [and where indicated on Drawings].
 - 3. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
 - 4. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
 - 5. Faces: **[MDO] [Any closed-grain hardwood of mill option] [Hardboard or MDF]**.
 - a. Apply MDO to [standard-thickness, closed-grain, hardwood face veneers] [or] [directly to high-density hardboard crossbands].
 - b. Hardboard Faces: ANSI A135.4, Class 1 (tempered) or Class 2 (standard).
 - c. MDF Faces: ANSI A208.2, Grade 150 or Grade 160.
 - 6. Exposed Vertical and Top Edges: Any closed-grain hardwood.
 - a. Fire-Rated Single Doors: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed vertical edges.
 - b. Fire-Rated Pairs of Doors:
 - 1) Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
 - 2) Provide formed-steel edges and astragals with intumescent seals.

- a) Finish steel edges and astragals with baked enamel [**same color as doors**].
 - b) Finish steel edges and astragals to match door hardware (locksets or exit devices).
- c. Mineral Core Doors: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
 - 1) Screw-Holding Capability: **[550 lbf] [475 lbf] [400 lbf]** in accordance with WDMA T.M. 10.
7. Core for non-fire-rated doors, ANSI A208.1, **[Grade LD-1] [Grade LD-2]** particleboard.
 - a. Blocking: Provide wood blocking in particleboard-core doors as **[needed to eliminate through-bolting hardware.] [follows:]**
 - 1) 5-inch top-rail blocking, in doors indicated to have closers.
 - 2) 5-inch bottom-rail blocking, in exterior doors and doors indicated to have kick, mop, or armor plates.
 - 3) 5-inch midrail blocking, in doors indicated to have exit devices.
 - b. Provide doors with **[glued-wood-stave] [or] [WDMA I.S. 10 structural-composite-lumber]** cores instead of particleboard cores for doors scheduled to receive exit devices in **[Section 08 71 00 "Door Hardware."]**
8. Core for non-fire-rated doors, glued wood stave.
9. Core for non-fire-rated doors, WDMA I.S. 10 structural composite lumber.
 - a. Screw Withdrawal, Door Face: **[550 lbf] [475 lbf] [400 lbf]**.
 - b. Screw Withdrawal, Vertical Door Edge: **[550 lbf] [475 lbf] [400 lbf]**.
10. Core for non-fire-rated doors, either glued wood stave or WDMA I.S. 10 structural composite lumber.
11. Core for fire-rated doors, as required to achieve fire-protection rating indicated on Drawings.
 - a. Blocking for Mineral-Core Doors: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated on Drawings as **[needed to eliminate through-bolting hardware.] [follows:]**
 - 1) 5-inch top-rail blocking.
 - 2) 5-inch bottom-rail blocking, in doors indicated to have protection plates.
 - 3) 5-inch midrail blocking, in doors indicated to have armor plates.
 - 4) **[4-1/2-by-10-inch lock blocks] [5-inch midrail blocking]**, in doors indicated to have exit devices.
12. Construction: Seven plies, **[hot-pressed] [or] [cold-pressed]**, bonded or unbonded.

2.08 FIRE-RATED WOOD DOOR FRAMES

A. Interior Fire-Rated Door Frames:

1. ANSI/WDMA I.S. 1A Quality Grade: **[Premium] [Custom]**.
2. Architectural Woodwork Standards Quality Grade: **[Premium] [Custom]**.
3. Wood Species and Cut: Match species and cut indicated for wood doors unless otherwise indicated.
4. Species: **[Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] <Insert species>**.
5. Cut: **[Plain sliced/plain sawn] [Quarter cut/quarter sawn] [Rift cut/rift sawn]**.
6. Wood Moisture Content: **[5 to 10] [8 to 13] [4 to 9]** percent.
7. Profile: **[T-stop] [Flat] [Single rabbet] [Double rabbet] [As indicated on Drawings]**.
8. Construction: Solid lumber, fire-retardant particleboard, or fire-retardant medium density fiberboard (MDF) with veneered exposed surfaces and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated on Drawings.

2.09 LIGHT FRAMES AND LOUVERS

A. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.

1. Wood Species: **[Same species as door faces] [Species compatible with door faces] [Any closed-grain hardwood]**.
2. Profile: **[Flush rectangular beads] [Recessed tapered beads] [Recessed tapered beads with exposed banding] [Lipped tapered beads] [Manufacturer's standard shape]**.
3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.

B. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated on Drawings. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.

C. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard frame formed of 0.048-inch-thick, cold-rolled steel sheet; **[factory primed for paint] [with baked-enamel- or powder-coated]** finish; and approved for use in doors of fire-protection rating indicated on Drawings.

D. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.

1. Wood Species: **[Same species as door faces] [Species compatible with door faces] [Any closed-grain hardwood]**.
2. Profile: **[Flat] [Chevron]**.

E. Metal Louvers:

1. Blade Type: **[Vision-proof, inverted V] [Vision-proof, inverted Y] [Darkroom-type, double inverted V]**.
 2. Metal and Finish:
 - a. Hot-dip galvanized steel, 0.040 inch thick, [factory primed for paint] [with baked-enamel- or powder-coated] finish.
 - b. Extruded aluminum with Class II, clear anodic finish, AA-M12C22A31.
 - c. Extruded aluminum with **[light bronze] [medium bronze] [dark bronze] [black]**, Class II, color anodic finish, AA-M12C22A32/A34.
- F. Louvers for Fire-Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire-protection rating of 1-1/2 hours and less.
1. Metal and Finish: Hot-dip galvanized steel, 0.040 inch thick, **[factory primed for paint] [with baked-enamel- or powder-coated]** finish.
- 2.10 FABRICATION
- A. Factory fit doors to suit frame-opening sizes indicated.
1. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
 2. Comply with NFPA 80 requirements for fire-rated doors.
- B. Factory machine doors for hardware that is not surface applied.
1. Locate hardware to comply with DHI-WDHS-3.
 2. Comply with final hardware schedules, door frame Shop Drawings, ANSI/BHMA-156.115-W, and hardware templates.
 3. Coordinate with hardware mortises in metal frames, to verify dimensions and alignment before factory machining.
 4. For doors scheduled to receive electrified locksets, provide factory-installed raceway and wiring to accommodate specified hardware.
 5. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.
- C. Transom and Side Panels:
1. Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors.
 2. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.
 3. Fabricate door and transom panels with full-width, solid-lumber **[, rabbeted,]** meeting rails.
 4. Provide factory-installed spring bolts for concealed attachment into jambs of metal door frames.
- D. Openings: Factory cut and trim openings through doors.

1. Light Openings: Trim openings with moldings of material and profile indicated.
 2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Section 08 80 00 "Glazing."
 3. Louvers: Factory install louvers in prepared openings.
- E. Exterior Doors: Factory treat exterior doors with water repellent after fabrication has been completed but before factory **[priming] [finishing]**.
1. Flash top of outswinging doors with manufacturer's standard metal flashing.
- 2.11 FACTORY PRIMING
- A. Doors for Opaque Finish: Factory prime faces, all four edges, edges of cutouts, and mortises with one coat of wood primer specified in **[Section 09 91 13 "Exterior Painting.]"**
[Section 09 91 23" Interior Painting.]"
- 2.12 FACTORY FINISHING
- A. Comply with referenced quality standard for factory finishing.
1. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 2. Finish faces, all four edges, edges of cutouts, and mortises.
 3. Stains and fillers may be omitted on **[top and]** bottom edges, edges of cutouts, and mortises.
- B. Factory finish doors.
- C. Factory finish doors that are indicated on Drawings to receive transparent finish.
- D. Factory finish doors where indicated in schedules or on Drawings as factory finished.
- E. Transparent Finish:
1. Architectural Woodwork Standards Grade: **[Premium] [Custom]**.
 - a. System-5, Varnish, Conversion.
 - b. System-9, UV Curable, Acrylated Epoxy, Polyester or Urethane.
 - c. System-10, UV Curable, Water Based.
 - d. System-11, Polyurethane, Catalyzed.
 2. ANSI/WDMA I.S. 1A Grade: **[Premium] [Custom]**.
 - a. TR-4 Conversion Varnish.
 - b. TR-6 Catalyzed Polyurethane.
 - c. TR-8 UV Cured Acrylated Polyester/Urethane.

3. Staining: **[Match Architect's sample] [As selected by Architect from manufacturer's full range] [None required]**.
4. Sheen: **[Satin] [Semigloss]**.

F. Opaque Finish:

1. Architectural Woodwork Standards Grade: **[Premium] [Custom]**.
 - a. System-5, Varnish, Conversion.
 - b. System-9, UV Curable, Acrylated Epoxy, Polyester, or Urethane.
 - c. System-10, UV Curable, Water Based.
 - d. System-11, Polyurethane, Catalyzed.
2. ANSI/WDMA I.S. 1A Grade: **[Premium] [Custom]**.
 - a. OP-4 Conversion Varnish.
 - b. OP-6 Catalyzed Polyurethane.
3. Color: **[Match Architect's sample] [As selected by Architect from manufacturer's full range]**.
4. Sheen: **[Satin] [Semigloss] [Gloss]**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine doors and installed door frames, with Installer present, before hanging doors.
 1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Hardware: For installation, see **[Section 08 71 00 "Door Hardware."]**
- B. Install doors **[and frames]** to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
- C. Install frames level, plumb, true, and straight.
 1. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.
 2. Anchor frames to anchors or blocking built in or directly attached to substrates.

- a. Secure with countersunk, concealed fasteners and blind nailing.
 - b. Use fine finishing nails **[or finishing screws]** for exposed fastening, countersunk and filled flush with woodwork.
 - 1) For factory-finished items, use filler matching finish of items being installed.
3. Install fire-rated doors and frames in accordance with NFPA 80.
 4. Install smoke- and draft-control doors in accordance with NFPA 105.
- D. Job-Fitted Doors:
1. Align and fit doors in frames with uniform clearances and bevels as indicated below.
 - a. Do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors.
 2. Machine doors for hardware.
 3. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
 4. Clearances:
 - a. Provide 1/8 inch at heads, jambs, and between pairs of doors.
 - b. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated on Drawings.
 - c. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated.
 - d. Comply with NFPA 80 for fire-rated doors.
 5. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
 6. Bevel fire-rated doors 1/8 inch in 2 inches at lock edge; trim stiles and rails only to extent permitted by labeling agency.
- E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- F. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.
- 3.03 FIELD QUALITY CONTROL
- A. Inspection Agency: **[Owner will engage] [Engage]** a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
1. Provide inspection of installed Work through **[AWI's Quality Certification Program] [WI's Certified Compliance Program]**, certifying that wood doors and frames, including installation, comply with requirements of AWI/AWMCA/WI's "Architectural Woodwork Standards" for the specified grade.

2. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
 3. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements in accordance with NFPA 101, Section 7.2.1.15.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
 - D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
 - E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in **[NFPA 80] [and] [NFPA 101]**.
- 3.04 ADJUSTING
- A. Operation: Rehang or replace doors that do not swing or operate freely.
 - B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 08 14 23

PLASTIC LAMINATE-FACED WOOD DOORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes high pressure decorative plastic laminate faced flush wood doors.

1.02 SUBMITTALS

- A. Data: Manufacturer product data for doors.
- B. Shop drawings: Show the following.
 - 1. Door schedule indicating opening identifying number, door type, grade, size, thickness, swing, label requirements, and undercuts.
 - 2. Door elevations indicating type of construction.
 - 3. Prefitting and premachining requirements, including hardware locations.
 - 4. Use same reference numbers for openings and details as Contract Drawings.
- C. Samples:
 - 1. Minimum 6-inch square samples of plastic laminate for each color and texture.
 - 2. Corner samples showing face veneer, edge and core construction for each type of door specified.
- D. Warranty: Warranty form from the door manufacturer.

1.03 QUALITY ASSURANCE

- A. Source Limitations: Obtain impact resistant Acrovyn Door Systems doors through one source from a single manufacturer.
- B. Quality Standard: Comply with WDMA Industry Standard (I.S. 1A-04 "Architectural Wood Flush Doors").
- C. Doors shall meet performance attributes for the following performance duty level: Extra Heavy Duty (Standard Duty for FC5-NR)
- D. Tolerances for warp, telegraphing, squareness and pre-fitting dimensions as per the latest edition of WDMA I.S.1A-04.
- E. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-ratings indicated, based on testing according to UBC Standard 7-2, UL-10C Positive Pressure and NFPA 252.
- F. Doors or trial doors of the type specified herein should be installed in an existing facility for over 6 months to verify quality and durability performance of product.

1.04 HANDLING

- A. Delivery:
 - 1. Deliver doors factory-wrapped in polyethylene bags, unitized and palletized. Shrink-wrap each pallet and provide corner guards for protection.
 - 2. Mark each door with architectural opening number in distribution and installation.
 - 3. Do not deliver doors to the Project until proper storage space is available.
- B. Storage:
 - 1. Store doors in an assigned space having controlled temperature and humidity as recommended by AWI, flat, on factory pallets or on 3 full 2 by 4s, one centered and the other two 12 inches from each end.
 - 2. Protect doors from construction activity with plywood and store away from direct sunlight.
- C. Handling:
 - 1. Handle doors with clean hands.
 - 2. Do not drag doors across one another.
 - 3. Maintain factory packaging or other means of protection of doors until Substantial Completion.

1.05 JOB CONDITIONS

- A. Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized and will be maintained in storage and installation areas during remainder of construction period.
- B. Comply with applicable WI quality standards.

1.06 WARRANTY

- A. Provide manufacturer's warranty against doors delaminating, telegraphing core through face veneer or do not conform to tolerance limitations of referenced quality standards for 5 years after installation.
- B. Warranty shall also include reinstallation required due to repair or replacement of defective doors where defect was not apparent prior to hanging.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. CS Acrovyn doors by Construction Specialties, basis of design.
- B. Marlite.
- C. VT Industries.
- D. Or Equal.

2.02 DOORS

A. High pressure decorative laminate faced wood doors - General:

1. The following high pressure decorative laminate faced doors complying with WDMA "Extra Heavy Duty" classification, except that "Heavy Duty" classification may be used in spaces such as offices, closets and similar rooms.
2. Grade: Custom.
3. Type: PC-HPDL-3, 3-ply, bonded particleboard core.
4. Sealer: Seal top and bottom edges in the factory.

B. Door Face:

1. Acrovyn® Woodgrains or solid color impact resistant, PVC-free Acrovyn. Finish to be:_____.
2. Engineered PVC-free rigid sheet to be Acrovyn by Design: High-definition graphic file digitally printed on reverse side of clear sheet and sealed with protective backer. Either to be customer provided artwork with copyright clearance file, or one of Acrovyn by Design Pattern Collections. Specify color-matched caulk, clear caulk, Acrovyn trims or aluminum trims as needed for joints/transitions. Specific files used on the project are noted below. See floor plans and finish schedule for coordinating locations.
3. Face material base color must be integral throughout to eliminate discoloration caused by scratching.
4. Face Veneer Wear Index - Abrasion Resistance Testing - ASTM D4060-90: 28,000 cycles to prove out resistant to scuffing and scratching.
5. Face Veneer Impact Resistance - ASTM D-4226: 86 in/lb. (99.08kg/cm³) to confirm impact resistance of face finish.

C. Door Edges:

1. Edges are to fully wrap the door vertical stiles to eliminate banded edges thus improving durability and impact resistance.
2. Door edges shall be exclusive of fasteners to improve appearance.
3. Profile of edges shall be a minimum height/thickness of 3/4-inch for maximum durability and ease of replacement.
4. Edges must be flush with face of door thus eliminating raised edges that could be torn off.
5. Edges to include 1/4-inch radius edges to improve impact deflection. Square or banded edges should not be permitted.
6. Edges are to be extruded (not formed) to ensure correct appearance and proper door fit.
7. Edges to be provided as part of the construction of the door from single source manufacturer.

2.03 FABRICATION, GENERAL

- A. Doors shall be pre fit and beveled at the factory to fit the openings to reduce handling an onsite labor costs. Pre fit tolerances shall be in accordance with the requirements of WDMA I.S.1A-04, latest edition.
- B. For fire rated doors comply with clearance requirements of referenced quality standard for fitting in accordance with requirements listed in NFPA 80.

- C. Coordinate measurements of hardware mortises in metal frames. Contractor or door distributor to verify dimensions and alignment before factory machining.
- D. Factory machine doors for hardware that is not surface applied. Comply with final hardware schedules, door frame shop drawings, and hardware templates.
- E. Light openings must be cut by the manufacturer or by a certified machining distributor.
- F. Top and bottom rails shall be factory sealed with an approved wood sealer to eliminate moisture from entering core thus eliminating warp.
- G. Blocking: provide blocking approved for use in doors of fire ratings indicated as needed to eliminate through-bolting for surface applied hardware.

2.04 FACTORY-MACHINING DOORS

- A. Factory-machine doors by manufacturer or qualified distributor for cutouts, hinges, louvers, vision panels, locks and all hardware requiring routing or mortising.

2.05 ADHESIVES

- A. Crossbanding to core adhesives shall be Type II, urea formaldehyde free I to improve structural integrity of door.
- B. Door faces are to be applied to the crossbanded core using Type I, urea formaldehyde free adhesives to eliminate delamination.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine adjacent construction and supports.
- B. Verify that frames are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
- C. Correct condition's detrimental to the proper or timely completion of this work before proceeding with installation.

3.02 INSTALLING FINISH HARDWARE/HANGING DOORS

- A. Install finish hardware in compliance with its manufacturer's instructions and the requirements of Section 08 71 00.
- B. Install doors [and frames] to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
- C. Install frames level, plumb, true, and straight.
 - 1. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.
 - 2. Anchor frames to anchors or blocking built in or directly attached to substrates.
 - a. Secure with countersunk, concealed fasteners and blind nailing.

- b. Use fine finishing nails [or finishing screws] for exposed fastening, countersunk and filled flush with woodwork.
- c. For factory-finished items, use filler matching finish of items being installed.
- 3. Install fire-rated doors and frames in accordance with NFPA 80.
- 4. Install smoke- and draft-control doors in accordance with NFPA 105.
- D. Condition doors to average prevailing humidity in installation area prior to hanging.
- E. Hang doors to operate freely for their entire travel, but not loosely, without sticking or hinge binding, with all hardware adjusted and functioning properly.
- F. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.03 FIELD QUALITY CONTROL

- A. Inspection Agency: Owner will engage a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
 - 1. Provide inspection of installed Work through WI's Certified Compliance Program, certifying that wood doors and frames, including installation, comply with requirements of AWI/AWMCA/WI's "North American Architectural Woodwork Standards" for the specified grade.
 - 2. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
- C. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements in accordance with NFPA 101, Section 7.2.1.15.
- D. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- E. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- F. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in [NFPA 80] [and] [NFPA 101].

3.04 REPLACING DAMAGED DOORS

- A. Replace doors showing chips, scratches, unbonded face veneers, glue stains, excessive warp or other damage that cannot be satisfactorily repaired, as determined by the Architect, with acceptable doors.

END OF SECTION

This page intentionally left blank

SECTION 08 31 13
ACCESS DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Access doors and frames.
2. Fire-rated access doors and frames.

B. Related Requirements:

1. Section 07 72 00 "Roof Accessories" for roof hatches.
2. Section 08 31 13.53 "Security Access Doors and Frames" for access doors and frames for security applications.
3. Section 08 31 23 "Floor Doors" for doors installed in floors.
4. Section 23 33 00 "Air Duct Accessories" for heating and air-conditioning duct access doors.

1.02 ALLOWANCES

- A. Access doors and frames are part of an access door and frame allowance.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details **[, fire ratings,]** material descriptions, dimensions of individual components and profiles, and finishes.

- B. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches in size.

- C. Product Schedule: For access doors and frames. **[Use same designations indicated on Drawings.]**

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing and inspecting agency.

1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.

1.05 CLOSEOUT SUBMITTALS

- A. Record Documents: For fire-rated doors, list of applicable room name and number in which access door is located.

1.06 QUALITY ASSURANCE

- A. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies meets the qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
 - 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection [**and temperature-rise limit**] ratings indicated, according to NFPA 252 or UL 10B.

2.02 ACCESS DOORS AND FRAMES

- A. Flush Access Doors with Exposed Flanges <Insert drawing designation>:
 - 1. Description: Face of door flush with frame, with exposed flange and concealed hinge.
 - 2. Optional Features: [Gasketing] [Double-leaf doors] [Piano hinges] [Louvers] [Masonry anchors] [Removable doors] <Insert feature>.
 - 3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
 - 4. Door Size: <Insert door size>.
 - 5. Uncoated Steel Sheet for Door: [Nominal **0.060 inch**, 16 gage] <Insert thickness>, factory [primed] [finished].
 - 6. Metallic-Coated Steel Sheet for Door: [Nominal **0.064 inch**, 16 gage] <Insert thickness>, factory [primed] [finished].
 - 7. Stainless Steel Sheet for Door: [Nominal **0.062 inch**, 16 gage] <Insert thickness>, ASTM A480/A480M No. 4 finish.
 - 8. Frame Material: [Same material, thickness, and finish as door] <Insert material, thickness, and finish>.

9. Latch and Lock: [Cam latch, screwdriver operated] [Cam latch, key operated] [Cam latch, hex-head wrench operated] [Cam latch, pinned-hex-head wrench operated] [Cam latch, spanner-head wrench operated] [Latch bolt, knurled-knob operated] [Latch bolt, key operated] [Prepared for mortise cylinder] [As indicated on Drawings] [As indicated in schedule] <Insert operator> [with interior release].

B. Flush Access Doors with Concealed Flanges <Insert drawing designation>:

1. Description: Face of door flush with frame; with concealed flange for [gypsum board] [plaster] installation and concealed hinge.
2. Optional Features: [Gasketing] [Double-leaf doors] [Piano hinges] [Louvers] [Masonry anchors] [Removable doors] <Insert feature>.
3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
4. Door Size: <Insert door size>.
5. Uncoated Steel Sheet for Door: [Nominal 0.060 inch, 16 gage] <Insert thickness>, factory [primed] [finished].
6. Metallic-Coated Steel Sheet for Door: [Nominal 0.064 inch, 16 gage] <Insert thickness> factory [primed] [finished].
7. Stainless Steel Sheet for Door: [Nominal 0.062 inch, 16 gage] <Insert thickness>, ASTM A480/A480M No. 4 finish.
8. Frame Material: [Same material and thickness as door] <Insert material, thickness, and finish>.
9. Latch and Lock: [Cam latch, screwdriver operated] [Cam latch, key operated] [Cam latch, hex-head wrench operated] [Cam latch, pinned-hex-head wrench operated] [Cam latch, spanner-head wrench operated] [Latch bolt, knurled-knob operated] [Latch bolt, key operated] [Prepared for mortise cylinder] [As indicated on Drawings] [As indicated in schedule] <Insert operator> [with interior release].

C. Recessed Access Doors with Exposed Flanges<Insert drawing designation>:

1. Description: Door face recessed [1/2 inch] [5/8 inch] [1 inch] for [gypsum board] [plaster] [acoustical tile] <Insert material> infill, with exposed flange and concealed hinge.
2. Optional Features: [Gasketing] [Double-leaf doors] [Piano hinges] [Louvers] [Masonry anchors] [Removable doors] <Insert feature>.
3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
4. Door Size: <Insert door size>.
5. Uncoated Steel Sheet for Door: [Nominal 0.060 inch, 16 gage] <Insert thickness>, factory [primed] [finished].

6. Metallic-Coated Steel Sheet for Door: **[Nominal 0.064 inch, 16 gage]** <Insert **thickness**>, factory **[primed]** **[finished]**.
 7. Stainless Steel Sheet for Door: **[Nominal 0.062 inch, 16 gage]** <Insert **thickness**>, ASTM A480/A480M No. 4 finish.
 8. Frame Material: **[Same material and thickness as door]** <Insert material, thickness, and finish>.
 9. Latch and Lock: **[Cam latch, screwdriver operated]** **[Cam latch, key operated]** **[Cam latch, hex-head wrench operated]** **[Cam latch, pinned-hex-head wrench operated]** **[Cam latch, spanner-head wrench operated]** **[Latch bolt, knurled-knob operated]** **[Latch bolt, key operated]** **[Prepared for mortise cylinder]** **[As indicated on Drawings]** **[As indicated in schedule]** <Insert operator> **[with interior release]**.
- D. Recessed Access Doors with Concealed Flanges<Insert drawing designation>:
1. Description: Door face recessed **[1/2 inch]** **[5/8 inch]** **[1 inch]** for **[gypsum board]** **[plaster]** **[acoustical tile]** <Insert material> infill; with concealed flange for **[gypsum board]** **[plaster]** **[no bead for acoustical tile]** installation and concealed hinge.
 2. Optional Features: **[Gasketing]** **[Double-leaf doors]** **[Piano hinges]** **[Louvers]** **[Masonry anchors]** **[Removable door]** <Insert feature>.
 3. Locations: **[Wall]** **[Ceiling]** **[Wall and ceiling]** <Insert location or substrate>.
 4. Door Size: <Insert door size>.
 5. Uncoated Steel Sheet for Door: **[Nominal 0.060 inch, 16 gage]** <Insert thickness>, factory **[primed]** **[finished]**.
 6. Metallic-Coated Steel Sheet for Door: **[Nominal 0.064 inch, 16 gage]** <Insert **thickness**>, factory **[primed]** **[finished]**.
 7. Stainless Steel Sheet for Door: **[Nominal 0.062 inch, 16 gage]** <Insert thickness>, **[ASTM A480/A480M No. 4]** **[ASTM A480/A480M No. 2b]** finish.
 8. Latch and Lock: **[Cam latch, screwdriver operated]** **[Cam latch, key operated]** **[Cam latch, hex-head wrench operated]** **[Cam latch, pinned-hex-head wrench operated]** **[Cam latch, spanner-head wrench operated]** **[Latch bolt, knurled-knob operated]** **[Latch bolt, key operated]** **[Prepared for mortise cylinder]** **[As indicated on Drawings]** **[As indicated in schedule]** <Insert operator> **[with interior release]**.
- E. Aluminum Flush Access Doors <Insert drawing designation>:
1. Description: Face of door flush with frame, with exposed flange and concealed hinge.
 2. Optional Features: **[Gasketing]** **[Double-leaf doors]** **[Piano hinges]** **[Louvers]** **[Masonry anchors]** **[Removable doors]** <Insert feature>.
 3. Locations: **[Wall]** **[Ceiling]** **[Wall and ceiling]** <Insert location or substrate>.
 4. Door Size: <Insert door size>.

5. Aluminum Sheet for Door: [Nominal **0.045 inch**] <Insert thickness>, with [mill] [manufacturer's standard baked-enamel or powder-coat] finish.
6. Frame Material: [Same material, thickness, and finish as door] <Insert material, thickness, and finish>.
7. Latch and Lock: [Cam latch, screwdriver operated] [Cam latch, key operated] [Cam latch, hex-head wrench operated] [Cam latch, pinned-hex-head wrench operated] [Cam latch, spanner-head wrench operated] [Latch bolt, knurled-knob operated] [Latch bolt, key operated] [Prepared for mortise cylinder] [As indicated on Drawings] [As indicated in schedule] <Insert operator> [with interior release].

F. Lightweight Flush Access Doors <Insert drawing designation>:

1. Description: Face of door flush with exposed flange, with exposed piano hinge; frameless for surface installation.
2. Optional Features: [Gasketing] [Double-leaf doors] [Piano hinges] [Louvers] [Masonry anchors] [Removable door] <Insert feature>.
3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
4. Door Size: <Insert door size>.
5. Uncoated Steel Sheet for Door: [Nominal **0.018 inch**, 26 gage] <Insert thickness>, factory [primed] [finished].
6. Metallic-Coated Steel Sheet for Door: [Nominal **0.022 inch**, 26 gage] <Insert thickness>, factory [primed] [finished].
7. Frame Material: [Aluminum, nominal **0.045 inch**, mill finish] <Insert material, thickness, and finish>.
8. Latch and Lock: [Cam latch, screwdriver operated] [Cam latch, key operated] [Cam latch, hex-head wrench operated] [Cam latch, pinned-hex-head wrench operated] [Cam latch, spanner-head wrench operated] [Latch bolt, knurled-knob operated] [Latch bolt, key operated] [Prepared for mortise cylinder] [As indicated on Drawings] [As indicated in schedule] <Insert operator> [with interior release].

G. Exterior Flush Access Doors <Insert drawing designation>:

1. Description: Weatherproof assembly, with face of door fit flush with frame and with exposed frame. Include extruded door gaskets and minimum 2-inch-thick fiberglass insulation.
2. Optional Features: [Piano hinges] [Removable doors] <Insert feature>.
3. Locations: [Wall] <Insert location or substrate>.
4. Door Size: <Insert door size>.
5. Metallic-Coated Steel Sheet for Door: [Nominal **0.064 inch**, 16 gage] <Insert thickness>, factory [primed] [finished].

6. Aluminum Sheet for Door: [Nominal **0.045 inch**] <Insert thickness>, with [mill] [manufacturer's standard baked-enamel or powder-coat] finish.
 7. Stainless Steel Sheet for Door: [Nominal **0.062 inch**, 16 gage] <Insert thickness>, [ASTM A480/A480M No. 4] [ASTM A480/A480M No. 2b] finish.
 8. Frame Material: [Same material, thickness, and finish as door] <Insert material, thickness, and finish>.
 9. Latch and Lock: Cam latch operated by handle, [without lock] [with keyed lock in handle] [with separate mortise lock] [with preparation for mortise lock] [as indicated on Drawings] [as indicated in schedule] <Insert operator> [; with interior release].
- H. Interior Flush GFRG Access Doors with Concealed Flanges <Insert drawing designation>:
1. Description: Face of [drop-in] [concealed-hinge] door flush with frame, with concealed flange for gypsum board installation.
 2. Optional Features: [Gasketing] [Piano hinges] <Insert feature>.
 3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
 4. Door Size: <Insert door size>.
 5. Door Type [Drop in, radius corner] [Drop in, square corner] [Concealed-hinge, radius corner] [Concealed-hinge, square corner].
 6. Door and Frame Material: Unpainted glass-fiber-reinforced gypsum, with frames reinforced for hardware and fastenings.
 7. Latch and Lock: [Cam latch, screwdriver operated] [Cam latch, key operated] [As indicated on Drawings] [As indicated in schedule] <Insert operator>.
- I. Exterior Flush GFRC Access Doors with Concealed Flanges <Insert drawing designation>:
1. Description: Face of door flush with frame, neoprene gasketed, with concealed flange for gypsum board installation.
 2. Optional Features: [Piano hinges] <Insert feature>.
 3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
 4. Door Size: <Insert door size>.
 5. Door Type: [Drop in, radius corner] [Drop in, square corner] [Concealed-hinge, radius corner] [Concealed-hinge, square corner].
 6. Door and Frame Material: Unpainted glass-fiber-reinforced cement, with frames reinforced for hardware and fastenings.

7. Latch and Lock: [Cam latch, screwdriver operated] [Cam latch, key operated] [Cam latch, hex-head wrench operated] [Cam latch, pinned-hex-head wrench operated] [As indicated on Drawings] [As indicated in schedule] <Insert operator>.

2.03 FIRE-RATED ACCESS DOORS AND FRAMES

A. Fire-Rated, **[Flush] [Recessed]** Access Doors with Exposed Flanges <Insert drawing designation>:

1. Description: Door face flush with frame, **[with a core of mineral-fiber insulation enclosed in sheet metal] [uninsulated]**; with exposed flange, self-closing door, and concealed hinge.
2. Optional Features: [Upward-opening doors for ceilings] [Gasketing] [Double-leaf doors] [Piano hinges] [Masonry anchors] <Insert feature>.
3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
4. Door Size: <Insert door size>.
5. Fire-Resistance Rating: Not less than [that indicated] [that of adjacent construction] [45 minutes] [1 hour] [1-1/2 hours] [2 hours] [3 hours] <Insert requirement>.
6. Temperature-Rise Rating: **[450 deg F] [250 deg F]** at the end of 30 minutes.
7. Uncoated Steel Sheet for Door: [Nominal **0.036 inch**, 20 gage] <Insert thickness>, factory [primed] [finished].
8. Metallic-Coated Steel Sheet for Door: **[Nominal 0.040 inch, 20 gage]** <Insert thickness>, factory [primed] [finished].
9. Stainless Steel Sheet for Door: **[Nominal 0.038 inch, 20 gage]** <Insert thickness>, ASTM A480/A480M No. 4 finish.
10. Frame Material: [Same material, thickness, and finish as door] <Insert material, thickness, and finish>.
11. Latch and Lock: Self-latching door hardware, [operated by knurled-knob] [operated by key] [prepared for mortise cylinder] [as indicated on Drawings] [as indicated in schedule] <Insert operator> [with interior release].

B. Fire-Rated, **[Flush] [Recessed]** Access Doors with Concealed Flanges <Insert drawing designation>:

1. Description: Door face flush with frame, **[with a core of mineral-fiber insulation enclosed in sheet metal] [uninsulated]**; with concealed flange for **[gypsum board] [plaster]** installation, self-closing door, and concealed hinge.
2. Optional Features: [Upward-opening doors for ceilings] [Gasketing] [Double-leaf doors] [Piano hinges] [Masonry anchors] <Insert feature>.
3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.

4. Door Size: <Insert door size>.
5. Fire-Resistance Rating: Not less than [that indicated] [that of adjacent construction] [45 minutes] [1 hour] [1-1/2 hours] [2 hours] [3 hours] <Insert requirement>.
6. Temperature-Rise Rating: [450 deg F] [250 deg F] at the end of 30 minutes.
7. Uncoated Steel Sheet for Door: [Nominal 0.036 inch, 20 gage] <Insert thickness>, factory [primed] [finished].
8. Metallic-Coated Steel Sheet for Door: [Nominal 0.040 inch, 20 gage] <Insert thickness>, factory [primed] [finished].
9. Stainless Steel Sheet for Door: [Nominal 0.038 inch, 20 gage] <Insert thickness>, ASTM A480/A480M No. 4 finish.
10. Frame Material: [Same material, thickness, and finish as door] <Insert material, thickness, and finish>.
11. Latch and Lock: Self-closing, self-latching door hardware, [operated by knurled-knob] [operated by key] [prepared for mortise cylinder] [as indicated on Drawings] [as indicated in schedule] <Insert operator> [, with interior release].

2.04 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A879/A879M, with cold-rolled steel sheet substrate complying with ASTM A1008/A1008M, Commercial Steel (CS), exposed.
- C. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum G60 or A60 metallic coating.
- D. Stainless Steel Plate, Sheet, and Strip: ASTM A240/A240M or ASTM A666, [Type 304] [Type 316]. Remove tool and die marks and stretch lines, or blend into finish.
- E. Stainless Steel Flat Bars: ASTM A666, [Type 304] [Type 316]. Remove tool and die marks and stretch lines, or blend into finish.
- F. Aluminum Extrusions: ASTM B221, Alloy 6063.
- G. Aluminum Sheet: ASTM B209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- H. Frame Anchors: Same material as door face.
- I. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A153/A153M or ASTM F2329.

2.05 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.
 - 1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
 - 2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.
 - 1. For recessed doors with plaster infill, provide self-furring expanded-metal lath attached to door panel.
- E. Latch and Lock Hardware:
 - 1. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
 - 2. Keys: Furnish two keys per lock and key all locks alike.
 - 3. Mortise Cylinder Preparation: Where indicated, prepare door panel to accept cylinder specified in **[Section 08 71 00 "Door Hardware."]** **[Section 08 71 11 "Door Hardware (Descriptive Specification)."]**
- F. Aluminum: After fabrication, apply manufacturer's standard protective coating on aluminum that will come in contact with concrete.

2.06 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
 - 2. Factory Finished: Apply manufacturer's standard baked-enamel or powder-coat finish immediately after cleaning and pretreating, with minimum dry-film thickness of 1 mil for topcoat.

- a. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors] <Insert color>.

E. Stainless Steel Finishes:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: ASTM A480/A480M No. 4 finish. Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M No. 2B.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.

3.03 FIELD QUALITY CONTROL

- A. Inspection Agency: **[Owner will engage] [Engage]** a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
 1. Fire-Rated Door Inspections: Inspect each fire-rated access door in accordance with NFPA 80, Section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated access door indicating compliance with each item listed in **[NFPA 80] [and] [NFPA 101]**.

3.04 ADJUSTING

- A. Adjust doors and hardware, after installation, for proper operation.

END OF SECTION

This page intentionally left blank

SECTION 08 33 13

COILING COUNTER DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Overhead counter door assemblies.
2. Fire-rated overhead counter door assemblies.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for door-opening framing and corner guards.
2. Section 09 91 23 "Interior Painting" for finish painting of factory-primed doors.

1.02 ACTION SUBMITTALS

A. Product Data: For each type and size of coiling counter door and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
3. Include description of automatic closing device and testing and resetting instructions.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. Show locations of controls, locking devices, [**detectors or replaceable fusible links**], and other accessories.
5. Include diagrams for power, signal, and control wiring.

- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
 - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Curtain slats [, including full vision window secured to slat].
 - 2. Bottom bar [with sensor edge].
 - 3. Guides.
 - 4. Brackets.
 - 5. Hood.
 - 6. Laminate-clad counter panel product for each type, color, pattern, and surface finish; laminated to core.
 - 7. Locking device(s).
 - 8. Include similar Samples of accessories involving color selection.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [and] [testing and inspecting agency].
 - 1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, section 5.2.3.1.
 - 2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For coiling counter doors to include in maintenance manuals.
- B. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.

1. Maintenance Proximity: Not more than **[two]** <Insert number> hours' normal travel time from Installer's place of business to Project site.
- B. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies is to meet the qualifications set forth in NFPA 80, section 5.2.3.1 and the following:
 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain coiling counter doors from single source from single manufacturer.
 1. Obtain operators and controls from coiling counter door manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Complying with NFPA 80; listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to **[NFPA 252]** **[or]** **[UL 10B]**.
 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 2. Temperature-Rise Limit: **[Where indicated]** **[At exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
 3. Smoke Control: **[Where indicated]** **[In corridors and smoke barriers]**, provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to UL 1784; with maximum air-leakage rate of 3.0 cfm/sq. ft. of door opening at 0.10 inch wg for both ambient and elevated temperature tests.
- B. Sound-Control Doors: Assemblies tested in a laboratory for sound-transmission-loss performance according to ASTM E90, calculated according to ASTM E413, and rated for not less than the STC value indicated.

2.03 COUNTER DOOR ASSEMBLY <Insert drawing designation>

- A. Counter Door: Coiling counter door formed with curtain of interlocking metal slats.

- B. Operation Cycles: Door components and operators capable of operating for not less than **[10,000] [20,000] [50,000] [100,000] [200,000]** <Insert number>. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
1. Include tamperproof cycle counter.
- C. STC Rating: **[26]** <Insert value>.
- D. Curtain R-Value: **[4.5 deg F x h x sq. ft./Btu] [5.0 deg F x h x sq. ft./Btu] [6.0 deg F x h x sq. ft./Btu]** <Insert value>.
- E. Door Curtain Material: **[Galvanized steel] [Stainless steel] [Aluminum]**.
- F. Door Curtain Slats: **[Curved] [Flat]** profile slats of **[1-1/4-inch] [1-1/2-inch]** <Insert dimension> center-to-center height.
1. Perforated Slats: Approximately **[1/16-inch pinholes] [3/32-inch pinholes] [7/8-inch-wide by 3/8-inch-high slots]** <Insert dimensions>.
 2. Fenestrated Slats: Approximately **[3- by 5/8-inch] [4- by 5/8-inch] [10- by 1-5/8-inch]** <Insert dimensions> openings spaced approximately **[1-1/2 inches]** <Insert dimension> apart and beginning 12 inches from jamb guides.
 3. Vision Panels: Approximately 10- by 1-5/8-inch openings spaced approximately 2 inches apart and beginning 12 inches from end guides; in **[two] [three]** <Insert number> rows of slats at height indicated on Drawings; installed with **[insulated]** vision-panel glazing.
 4. Insulated-Slat Interior Facing: **[Metal] [Plastic]**.
 5. Gasket Seal. Manufacturer's standard continuous gaskets between slats.
- G. Bottom Bar: Manufacturer's standard continuous channel or tubular shape, fabricated **[hot-dip galvanized steel] [stainless steel] [or] [aluminum extrusion]** and finished **[to match door]** <Insert requirement>.
- H. Curtain Jamb Guides: **[Galvanized steel] [Stainless steel] [Aluminum]** with exposed finish matching curtain slats. **[Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.] [Provide removable post(s) and jamb guides where indicated on Drawings.]**
- I. Hood: **[Match curtain material and finish] [Galvanized steel] [Stainless steel] [Aluminum]**.
1. Shape: **[Round] [Square] [As indicated on Drawings]** <Insert shape>.
 2. Mounting: **[Face of wall] [Between jambs] [As indicated on Drawings]**.
- J. Integral Frame, Hood, and Fascia: **[Galvanized] [Stainless]** steel.

1. Mounting: [Face of wall] [Between jambs] [As indicated on Drawings].
- K. Sill Configuration: [No sill] [Integral metal sill].
- L. Locking Devices: Equip door with [slide bolt for padlock] [locking device assembly] [and] [chain lock keeper].
1. Locking Device Assembly: [Single-jamb side] [Cremona-type, both jamb sides] locking bars, operable from [inside with thumbturn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders] <Insert requirement>.
- M. Manual Door Operator: [Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator].
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- N. Electric Door Operator:
1. Usage Classification: [Heavy duty, 25 or more cycles per hour and more than 90 cycles per day] [Standard duty, up to 25 cycles per hour and up to 90 cycles per day] [Medium duty, up to 12 cycles per hour and up to 50 cycles per day] [Light duty, up to 10 cycles per hour] <Insert classification>.
 2. Operator Location: [Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As indicated on Drawings].
 3. Motor Exposure: [Interior] [Exterior, wet, and humid].
 4. Motor Electrical Characteristics:
 - a. Horsepower: [1/2] [1] [2] [3] <Insert value> hp.
 - b. Voltage:
 - 1) [115-V ac] [208-V ac] [230-V ac], single phase, 60 Hz.
 - 2) [208-V ac] [230-V ac] [460-V ac], three phase, 60 Hz.
 5. Emergency Manual Operation: [Push-up] [Chain] [Crank] type.
 6. Obstruction-Detection Device: Automatic [photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type] <Insert type>.
 - a. Sensor Edge Bulb Color: [Black] [As selected by Architect from manufacturer's full range] <Insert color>.

7. Control Station(s): [Interior-side mounted] [Exterior-side mounted] [Where indicated on Drawings] <Insert location>.
 8. Other Equipment: <Insert device>.
- O. Curtain Accessories: Equip door with [smoke seals] [weatherseals] [astragal] [push/pull handles] [pull-down strap] [pole hook] [and] [automatic closing device] <Insert item>.
- P. Door Finish:
1. Aluminum Finish: [Mill] [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Anodized color matching Architect's sample] [Anodized color as selected by Architect from full range of industry colors and color densities] <Insert color>.
 2. Baked-Enamel or Powder-Coated Finish: [Color as indicated by manufacturer's designations] [Color matching Architect's sample] [Color as selected by Architect from manufacturer's full range] <Insert color>.
 3. Factory Prime Finish: Manufacturer's standard color.
 4. Stainless Steel Finish: [ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 4 (polished directional satin)] <Insert finish>.
 5. Interior Curtain-Slat Facing: [Match finish of exterior curtain-slat face] [PVC plastic] <Insert finish>.
- 2.04 FIRE-RATED COUNTER DOOR ASSEMBLY <Insert drawing designation>
- A. Fire-Rated Counter Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.
 - B. Operation Cycles: Door components and operators capable of operating for not less than [10,000] [20,000] [50,000] [100,000] [200,000] <Insert number>. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
 1. Include tamperproof cycle counter.
 - C. Fire Rating: [3/4 hour] [1 hour] [1-1/2 hours] [3 hours] [4 hours] [with temperature-rise limit] [and] [with smoke control].
 - D. STC Rating: [27] <Insert value>.
 - E. Curtain R-Value: [4.5 deg F x h x sq. ft./Btu] [5.0 deg F x h x sq. ft./Btu] [6.0 deg F x h x sq. ft./Btu] <Insert value>.
 - F. Door Curtain Material: [Galvanized] [Stainless] steel.

- G. Door Curtain Slats: **[Curved]** **[Flat]** profile slats of **[1-1/4-inch]** **[1-1/2-inch]** **<Insert dimension>** center-to-center height.
1. Vision Panels: Approximately 10- by 1-5/8-inch openings spaced approximately 2 inches apart and beginning 12 inches from end guides; in **[two]** **[three]** **<Insert number>** rows of slats at height indicated on Drawings; installed with fire-rated vision-panel glazing.
 2. Insulated-Slat Interior Facing: Metal.
- H. Curtain Jamb Guides: **[Galvanized]** **[Stainless]** steel with exposed finish matching curtain slats.
- I. Hood: **[Match curtain material and finish]** **[Galvanized steel]** **[Stainless steel]**.
1. Shape: **[Round]** **[Square]** **[As indicated on Drawings]** **<Insert shape>**.
 2. Mounting: **[Face of wall]** **[Between jambs]** **[As indicated on Drawings]**.
- J. Integral Frame, Hood, and Fascia: **[Galvanized]** **[Stainless]** steel.
1. Mounting: **[Face of wall]** **[Between jambs]** **[As indicated on Drawings]**.
- K. Sill Configuration: **[No sill]** **[Integral metal sill]** **[Fire-rated, laminate counter]**.
1. High-Pressure Decorative Laminate: Match color, pattern, and finish **[as indicated by manufacturer's designations]** **[of Architect's sample]** **[as selected by Architect from manufacturer's full range]** **<Insert requirement>**.
- L. Locking Devices: Equip door with **[slide bolt for padlock]** **[locking device assembly]** **[and]** **[chain lock keeper]**.
1. Locking Device Assembly: **[Single-jamb side]** **[Cremona-type, both jamb sides]** locking bars, operable from **[inside with thumbturn]** **[outside with cylinder]** **[outside only, with cylinder]** **[inside and outside with cylinders]** **<Insert requirement>**.
- M. Manual Door Operator: **[Push-up operation]** **[Chain-hoist operator]** **[Manufacturer's standard crank operator]** **[Awning-crank operator]**.
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- N. Electric Door Operator:
1. Usage Classification: **[Heavy duty, 25 or more cycles per hour and more than 90 cycles per day]** **[Standard duty, up to 25 cycles per hour and up to 90 cycles per day]** **[Medium duty, up to 12 cycles per hour and up to 50 cycles per day]** **[Light duty, up to 10 cycles per hour]** **<Insert classification>**.

2. Operator Location: [Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As indicated on Drawings].
 3. Motor Exposure: [Interior] [Exterior, wet, and humid].
 4. Motor Electrical Characteristics:
 - a. Horsepower: [1/2] [1] [2] [3] <Insert value> hp.
 - b. Voltage:
 - 1) [115-V ac] [208-V ac] [230-V ac], single phase, 60 Hz.
 - 2) [208-V ac] [230-V ac] [460-V ac], three phase, 60 Hz.
 5. Emergency Manual Operation: [Push-up] [Chain] [Crank] type.
 6. Obstruction-Detection Device: Automatic [photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type] <Insert type>.
 - a. Sensor Edge Bulb Color: [Black] [As selected by Architect from manufacturer's full range] <Insert color>.
 7. Control Station(s): [Interior-side mounted] [Exterior-side mounted] [Where indicated on Drawings] <Insert location>.
 8. Other Equipment: <Insert device>.
- O. Curtain Accessories: Equip door with smoke seals, automatic closing device, **[astragal]** **[push/pull handles]** **[pull-down strap]** **[pole hook]** **[and]** <Insert item>.
- P. Door Finish:
1. Baked-Enamel or Powder-Coated Finish: [Color as indicated by manufacturer's designations] [Color matching Architect's sample] [Color as selected by Architect from manufacturer's full range] <Insert color>.
 2. Factory Prime Finish: Manufacturer's standard color.
 3. Stainless Steel Finish: [ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 4 (polished directional satin)] <Insert finish>.
 4. Interior Curtain-Slat Facing: [Match finish of exterior curtain-slat face] <Insert finish>.
- 2.05 MATERIALS, GENERAL
- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.06 DOOR CURTAIN MATERIALS AND FABRICATION

- A. Door Curtains: Fabricate coiling counter door curtain of interlocking metal slats in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural-steel sheet; complying with ASTM A653/A653M, with G90 zinc coating; nominal sheet thickness (coated) of 0.028 inch; and as required.
 2. Stainless Steel Door Curtain Slats: ASTM A240/A240M or ASTM A666, Type 304; sheet thickness of 0.025 inch; and as required.
 3. Aluminum Door Curtain Slats: ASTM B209 sheet or ASTM B221 extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of 0.050 inch; and as required.
 4. Vision-Panel Glazing: Manufacturer's standard clear glazing, fabricated from transparent acrylic sheet or fire-protection-rated glass as required for type of door; set in glazing channel secured to curtain slats.
 5. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723. Enclose insulation completely within slat faces.
 6. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.
 7. Plastic Interior Curtain-Slat Facing: Extruded PVC plastic with maximum flame-spread index of **[25] [75] [200]** and smoke-developed index of 450, according to ASTM E84 or UL 723.
- B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.
1. Removable Posts and Jamb Guides: Manufacturer's standard.

2.07 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
1. Galvanized Steel: Nominal 0.028-inch-thick, hot-dip galvanized-steel sheet with G90 zinc coating, complying with ASTM A653/A653M.

2. Stainless Steel: 0.025-inch-thick, stainless steel sheet, Type 304, complying with ASTM A240/A240M or ASTM A666.
 3. Aluminum: 0.040-inch-thick aluminum sheet complying with ASTM B209, of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
 4. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
- B. Integral Frame, Hood, and Fascia: Welded sheet metal assembly of the following sheet metal(s):
1. Galvanized Steel: Hot-dip galvanized-steel sheet with G90 zinc coating, complying with ASTM A653/A653M.
 2. Stainless Steel: Type 304, complying with ASTM A240/A240M or ASTM A666.
- C. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.08 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: As [specified in Section 08 71 00 "Door Hardware"] [standard with manufacturer] [and keyed to building keying system].
 2. Keys: [Two] [Three] <Insert number> for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.09 CURTAIN ACCESSORIES

- A. Smoke Seals: Equip each fire-rated door with replaceable smoke-seal perimeter gaskets or brushes for smoke and draft control as required for door listing and labeling by a qualified testing agency.
- B. Weatherseals: Equip door with weather-stripping gaskets fitted to entire perimeter of door for air-resistant installation unless otherwise indicated.
1. At door head, use 1/8-inch-thick, replaceable, continuous-sheet baffle secured to inside of hood or field-installed on the header.

2. At door jambs, use replaceable, adjustable, continuous, [flexible, **1/8-inch**-thick seals of flexible vinyl, rubber, or neoprene] [nylon brushes] <Insert material>.
- C. Astragal: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
- D. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
- E. Pull-Down Strap: Provide pull-down straps for doors more than 84 inches high.
- F. Pole Hooks: Provide pole hooks and poles for doors more than 84 inches high.
- G. Automatic-Closing Device: Equip each fire-rated door with an automatic-closing device or holder-release mechanism and governor unit complying with NFPA 80 and an easily tested and reset release mechanism. [**Testing for manually operated doors allows resetting by opening the door without re-tensioning the counterbalance mechanism.**] [**Release mechanism for motor-operated doors allows testing without mechanical release of the door.**] Automatic-closing device is to be designed for activation by the following:
 1. Replaceable fusible links with temperature rise and melting point of [**165 deg F**] <Insert temperature> interconnected and mounted on both sides of door opening.
 2. Manufacturer's standard UL-labeled smoke detector and door-holder-release devices.
 3. Manufacturer's standard UL-labeled heat detector and door-holder-release devices.
 4. Building fire-detection, smoke-detection, and -alarm systems.
- H. <Insert requirements>.

2.010 COUNTER DOOR ACCESSORIES

- A. Integral Metal Sill: Fabricate sills as integral part of frame assembly of Type 304 stainless steel in manufacturer's standard thickness with [**ASTM A480/A480M No. 4**] <Insert finish> finish.
- B. Fire-Rated, Laminate Counter: Fire-door manufacturer's high-pressure, decorative laminate-covered countertop; UL or ITS tested and labeled for 1-1/2-hour fire rating for approved use with fire-door assembly.
- C. <Insert requirements>.

2.011 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, **[seamless]** **[or]** **[welded]** carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
 - 1. Fire-Rated Doors: Equip with auxiliary counterbalance spring and prevent tension release from main counterbalance spring when automatic closing device operates.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.012 MANUAL DOOR OPERATORS

- A. General: Equip door with manual door operator by door manufacturer.
- B. Push-up Door Operation: Design counterbalance mechanism so that required lift or pull for door operation does not exceed **[25 lbf]** **<Insert value>**.
- C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum **[25-lbf]** **[30-lbf]** **<Insert value>** force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.
- D. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than **[25-lbf]** **[30-lbf]** **<Insert value>** force to turn crank. Fabricate gearbox to be oiltight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.013 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-rewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
 - 1. Comply with NFPA 70.
 - 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

- C. Door Operator Location(s): Operator location indicated for each door.
1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
 2. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
 3. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door and connected to door drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall-mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
 4. Bench Mounted: Operator is mounted to the right or left door head plate and connected to the door drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
 5. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of door.
- D. Motors: Reversible-type motor **[with controller (disconnect switch)]** for motor exposure indicated for each door assembly.
1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
 2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. **[For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.] [For fire-rated doors, activation delays closing.]**
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained or constant pressure on close button.

2. Electric Sensor Edge: Automatic safety sensor edge, located within astragal mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire-configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.
 3. Pneumatic Sensor Edge: Automatic safety sensor edge, located within astragal mounted to bottom bar. Contact with sensor activates device.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
1. Type: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed **[25 lbf] [30 lbf] <Insert value>**.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. <Insert requirements>.
- 2.014 GENERAL FINISH REQUIREMENTS
- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
 - B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- 2.015 ALUMINUM FINISHES
- A. Mill Finish: Manufacturer's standard.
 - B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
 - C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.

- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.016 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- C. <Insert requirements>.

2.017 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: ASTM A480/A480M No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M No. 2B.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Install coiling counter doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

- B. Install coiling counter doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Fire-Rated Doors: Install according to NFPA 80.
- D. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.

3.03 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections and to furnish reports to Architect.
- B. Perform the following tests and inspections [with the assistance of a factory-authorized service representative]:
 - 1. Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.
 - 2. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in **[NFPA 80] [and] [NFPA 101]**.

3.04 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.05 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.

- C. Adjust seals to provide tight fit around entire perimeter.

3.06 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service is to include **[three] [six] [nine] [12]** months' full maintenance by skilled employees of coiling-door Installer. Include **[monthly] [quarterly]** preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.

1. Perform maintenance, including emergency callback service, during normal working hours.
2. Include 24-hour-per-day, seven-day-per-week, emergency callback service.

3.07 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain coiling counter doors.

END OF SECTION

This page intentionally left blank

SECTION 08 33 23
OVERHEAD COILING DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Service doors.
2. Insulated service doors.
3. Fire-rated service doors.
4. Fire-rated, insulated service doors.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for miscellaneous steel supports, door-opening framing, corner guards, and bollards.
2. [Section 09 90 00 "Painting"] [and] [Section 099600 "High-Performance Coatings"] for finish painting of factory-primed grilles.
3. Section 11 12 00 "Parking Control Equipment" for parking control equipment interlocked to overhead coiling doors.

1.02 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
3. Include description of automatic-closing device and testing and resetting instructions.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.

4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
 5. Show locations of controls, locking devices [**detectors or replaceable fusible links**], and other accessories.
 6. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
1. Curtain slats [, including full vision window secured to slat].
 2. Bottom bar [with sensor edge].
 3. Guides.
 4. Brackets.
 5. Hood.
 6. Locking device(s).
 7. Include similar Samples of accessories involving color selection.
- 1.03 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For [**Installer**] [**and**] [**testing and inspecting agency**].
1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
 2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.
- C. Sample Warranty: For special warranty.
- 1.04 CLOSEOUT SUBMITTALS
- A. Special warranty.
- B. Maintenance Data: For overhead coiling doors to include in maintenance manuals.
- C. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.
- 1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
 - 1. Maintenance Proximity: Not more than **[two]** <Insert number> hours' normal travel time from Installer's place of business to Project site.
- B. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies is to meet the qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
 - 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAl) certification.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: **[Two]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
 - 1. Obtain operators and controls from overhead coiling-door manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Complying with NFPA 80; listed and labeled by qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to **[NFPA 252]** [or] **[UL 10B]**.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 - 2. Temperature-Rise Limit: **[Where indicated]** **[At exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
 - 3. Smoke Control: **[Where indicated]** **[In corridors and smoke barriers]**, provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to UL 1784; with maximum air-leakage rate of 3.0 cfm/sq. ft. of door opening at 0.10 inch wg for both ambient and elevated temperature tests.
- B. Sound-Control Doors: Assemblies tested in a laboratory for sound-transmission-loss performance according to ASTM E90, calculated according to ASTM E413, and rated for not less than the STC value indicated.

- C. Accessibility Standard: Comply with applicable provisions in **[the USDOJ's "2010 ADA Standards for Accessible Design"] [the ABA standards of the Federal agency having jurisdiction] [and] [ICC A117.1] <Insert requirement>**.
- D. Structural Performance, Exterior Doors: Capable of withstanding the following design wind loads:
1. Design Wind Load: **[As indicated on Drawings] [Uniform pressure (velocity pressure) of 20 lbf/sq. ft., acting inward and outward] <Insert loads>**.
 2. Testing: According to ASTM E330/E330M **[or DASMA 108 for garage doors and complying with acceptance criteria of DASMA 108] <Insert requirement>**.
 3. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
 4. Operability under Wind Load: Design overhead coiling doors to remain operable under **[design] [uniform pressure (velocity pressure) of 20-lbf/sq. ft.] <Insert load>** wind load, acting inward and outward.
- E. Windborne-Debris Impact Resistance: Provide **[glazed] [and] [impact-protective]** overhead coiling doors that pass ASTM E1886 missile-impact and cyclic-pressure tests according to **[ASTM E1996 for Wind Zone 1] [ASTM E1996 for Wind Zone 2] [ASTM E1996 for Wind Zone 3] [ASTM E1996 for Wind Zone 4] [or DASMA 115]** for **[basic] [enhanced]** protection.
1. Large-Missile Test: For overhead coiling doors located within **[30 ft.] <Insert dimension>** of grade.
 2. Small-Missile Test: For overhead coiling doors located between 30 ft. and **[60 ft.] <Insert dimension>** above grade.
- F. Seismic Performance: Overhead coiling doors are to withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
1. Component Importance Factor: **[1.5] [1.0]**.
- 2.03 DOOR ASSEMBLY <Insert drawing designation>
- A. **[Service] [Insulated Service]** Door: Overhead coiling door formed with curtain of interlocking metal slats.
- B. Operation Cycles: Door components and operators capable of operating for not less than **[10,000] [20,000] [50,000] [100,000] [200,000] <Insert number>**. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
1. Include tamperproof cycle counter.
- C. Air Infiltration: Maximum rate of **[0.4 cfm/sq. ft.] [1.0 cfm/sq. ft.] <Insert rate>** at 15 and 25 mph when tested according to **[ASTM E283] [or] [DASMA 105]**.
- D. STC Rating: **[26] <Insert value>**.

- E. Insulated Door Curtain R-Value: **[4.5 deg F x h x sq. ft./Btu]** <Insert value>.
- F. Insulated Door Assembly U-Factor: **[0.90 Btu/deg F x h x sq. ft.]** <Insert value>.
- G. Door Curtain Material: **[Galvanized steel]** **[Stainless steel]** **[Aluminum]**.
- H. Door Curtain Slats: **[Curved]** **[Flat]** profile slats of **[1-7/8-inch]** **[2-5/8-inch]** **[3-1/4-inch]** <Insert dimension> center-to-center height.
1. Perforated Slats: Approximately **[1/16-inch pinholes]** **[3/32-inch pinholes]** **[7/8-inch-wide by 3/8-inch-high slots]** <Insert dimensions>.
 2. Fenestrated Slats: Approximately **[3- by 5/8-inch]** **[4- by 5/8-inch]** **[10- by 1-5/8-inch]** <Insert dimensions> openings spaced approximately **[1-1/2 inches]** <Insert dimension> apart and beginning 12 inches from jamb guides.
 3. Vision Panels: Approximately 10- by 1-5/8-inch openings spaced approximately 2 inches apart and beginning 12 inches from end guides; in **[two]** **[three]** <Insert number> rows of slats at height indicated on Drawings; installed with **[insulated]** vision-panel glazing.
 4. Insulated-Slat Interior Facing: **[Metal]** **[Plastic]**.
 5. Gasket Seal. Manufacturer's standard continuous gaskets between slats.
- I. Bottom Bar: Two angles, each not less than **[1-1/2 by 1-1/2 by 1/8 inch thick]** <Insert dimensions>; fabricated from **[hot-dip galvanized steel]** **[stainless steel]** **[or]** **[aluminum extrusions]** and finished **[to match door]** <Insert requirement>.
- J. Curtain Jamb Guides: **[Galvanized steel]** **[Stainless steel]** **[Aluminum]** with exposed finish matching curtain slats.
- K. Pass Door(s): **[Hinged]** **[Rigid]** frame with **[lockset]** **[exit hardware]**.
- L. Hood: **[Match curtain material and finish]** **[Galvanized steel]** **[Stainless steel]** **[Aluminum]**.
1. Shape: **[Round]** **[Square]** **[As indicated on Drawings]** <Insert shape>.
 2. Mounting: **[Face of wall]** **[Between jambs]** **[As indicated on Drawings]**.
- M. Locking Devices: Equip door with **[slide bolt for padlock]** **[locking device assembly]** **[and]** **[chain lock keeper]**.
1. Locking Device Assembly: **[Single-jamb side]** **[Cremona-type, both jamb sides]** locking bars, operable from **[inside with thumbturn]** **[outside with cylinder]** **[outside only, with cylinder]** **[inside and outside with cylinders]** <Insert requirement>.
- N. Manual Door Operator: **[Push-up operation]** **[Chain-hoist operator]** **[Manufacturer's standard crank operator]** **[Awning-crank operator]** **[Wall-crank operator]**.
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.

- O. Electric Door Operator:
- Usage Classification: [Heavy duty, 25 or more cycles per hour and more than 90 cycles per day] [Standard duty, up to 25 cycles per hour and up to 90 cycles per day] [Medium duty, up to 12 cycles per hour and up to 50 cycles per day] [Light duty, up to 10 cycles per hour] <Insert classification>.
 - Operator Location: [Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As indicated on Drawings].
 - Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use [; moving parts of operator enclosed or guarded if exposed and mounted at 8 ft. or lower].
 - Motor Exposure: [Interior] [Exterior, wet, and humid].
 - Motor Electrical Characteristics:
 - Horsepower: [1/2] [1] [2] [3] <Insert value> hp.
 - Voltage: [115 V ac, single phase, 60 Hz] [208 V ac, single phase, 60 Hz] [230 V ac, single phase, 60 Hz] [208 V ac, three phase, 60 Hz] [230 V ac, three phase, 60 Hz] [460 V ac, three phase, 60 Hz].
 - Emergency Manual Operation: [Push-up] [Chain] [Crank] type.
 - Obstruction-Detection Device: Automatic [photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type] <Insert type>.
 - Sensor Edge Bulb Color: [Black] [As selected by Architect from manufacturer's full range] <Insert color>.
 - Control Station(s): [Interior mounted] [Exterior mounted] [Where indicated on Drawings] <Insert location>.
 - Other Equipment: [Audible and visual signals] [Portable radio-control system] <Insert device>.
- P. Curtain Accessories: Equip door with [smoke seals] [weatherseals] [astragal] [push/pull handles] [pull-down strap] [pole hook] [and] [automatic-closing device] <Insert item>.
- Q. Door Finish:
- Aluminum Finish: [Mill] [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Anodized color matching Architect's sample] [Anodized color as selected by Architect from full range of industry colors and color densities] <Insert color>.
 - Baked-Enamel or Powder-Coated Finish: [Color as indicated by manufacturer's designations] [Color matching Architect's sample] [Color as selected by Architect from manufacturer's full range] <Insert color>.
 - Factory Prime Finish: Manufacturer's standard color.

4. Stainless Steel Finish: [ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 4 (polished directional satin)] <Insert finish>.
5. Interior Curtain-Slat Facing: [Match finish of exterior curtain-slat face] [Finish as indicated by manufacturer's designations] [Finish matching Architect's sample] [Finish as selected by Architect from manufacturer's full range] <Insert finish>.

2.04 FIRE-RATED DOOR ASSEMBLY <Insert drawing designation>

- A. Fire-Rated **[Service]** **[Insulated Service]** Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.
- B. Operation Cycles: Door components and operators capable of operating for not less than **[10,000]** **[20,000]** **[50,000]** **[100,000]** **[200,000]** <Insert number>. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
 1. Include tamperproof cycle counter.
- C. Fire Rating: **[3/4 hour]** **[1 hour]** **[1-1/2 hours]** **[3 hours]** **[4 hours]** **[with temperature-rise limit]** **[and]** **[with smoke control]**.
- D. Air Infiltration: Maximum rate of **[0.4 cfm/sq. ft.]** **[1.0 cfm/sq. ft.]** <Insert rate> at 15 and 25 mph when tested according to **[ASTM E283]** **[or]** **[DASMA 105]**.
- E. STC Rating: **[27]** <Insert value>.
- F. Insulated Door Curtain R-Value: **[4.5 deg F x h x sq. ft./Btu]** <Insert value>.
- G. Insulated Door Assembly U-Factor: **[0.90 Btu/deg F x h x sq. ft.]** <Insert value>.
- H. Door Curtain Material: **[Galvanized]** **[Stainless]** steel.
- I. Door Curtain Slats: **[Curved]** **[Flat]** profile slats of **[1-7/8-inch]** **[2-5/8-inch]** **[3-1/4-inch]** <Insert dimension> center-to-center height.
 1. Vision Panels: Approximately 10- by 1-5/8-inch openings spaced approximately 2 inches apart and beginning 12 inches from end guides; in **[two]** **[three]** <Insert number> rows of slats at height indicated on Drawings; installed with fire-rated vision-panel glazing.
 2. Insulated-Slat Interior Facing: Metal.
- J. Bottom Bar: Two angles, each not less than **[1-1/2 by 1-1/2 by 1/8 inch thick]** <Insert dimensions>; fabricated from **[hot-dip galvanized steel]** **[stainless steel]** **[or]** **[aluminum extrusions]** and finished **[to match door]** <Insert requirement>.
- K. Curtain Jamb Guides: **[Galvanized]** **[Stainless]** steel with exposed finish matching curtain slats.
- L. Pass Door(s): **[Hinged]** **[Rigid]** frame with **[lockset]** **[exit hardware]**.
- M. Hood: **[Match curtain material and finish]** **[Galvanized steel]** **[Stainless steel]**.
 1. Shape: **[Round]** **[Square]** **[As indicated on Drawings]** <Insert shape>.

2. Mounting: [Face of wall] [Between jambs] [As indicated on Drawings].
- N. Locking Devices: Equip door with **[slide bolt for padlock] [locking device assembly] [and] [chain lock keeper]**.
1. Locking Device Assembly: [Single-jamb side] [Cremona-type, both jamb sides] locking bars, operable from [inside with thumbturn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders] <Insert requirement>.
- O. Manual Door Operator: **[Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator] [Wall-crank operator]**.
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- P. Electric Door Operator:
1. Usage Classification: [Heavy duty, 25 or more cycles per hour and more than 90 cycles per day] [Standard duty, up to 25 cycles per hour and up to 90 cycles per day] [Medium duty, up to 12 cycles per hour and up to 50 cycles per day] [Light duty, up to 10 cycles per hour] <Insert classification>.
 2. Operator Location: [Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As indicated on Drawings].
 3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; **[moving parts of operator enclosed or guarded if exposed and mounted at 8 ft. or lower]**.
 4. Motor Exposure: [Interior] [Exterior, wet, and humid].
 5. Motor Electrical Characteristics:
 - a. Horsepower: [1/2] [1] [2] [3] <Insert value> hp.
 - b. Voltage: **[115 V ac, single phase, 60 Hz] [208 V ac, single phase, 60 Hz] [230 V ac, single phase, 60 Hz] [208 V ac, three phase, 60 Hz] [230 V ac, three phase, 60 Hz] [460 V ac, three phase, 60 Hz]**.
 6. Emergency Manual Operation: **[Push-up] [Chain] [Crank]** type.
 7. Obstruction-Detection Device: Automatic [photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type] <Insert type>.
 - a. Sensor Edge Bulb Color: **[Black] [As selected by Architect from manufacturer's full range]** <Insert color>.
 8. Control Station(s): [Interior mounted] [Exterior mounted] [Where indicated on Drawings] <Insert location>.
 9. Other Equipment: [Audible and visual signals] [Portable radio-control system] <Insert device>.

- Q. Curtain Accessories: Equip door with smoke seals, automatic-closing device, **[astragal]** **[push/pull handles]** **[pull-down strap]** **[pole hook]** **[and]** **<Insert item>**.
- R. Door Finish:
1. Baked-Enamel or Powder-Coated Finish: **[Color as indicated by manufacturer's designations]** **[Color matching Architect's sample]** **[Color as selected by Architect from manufacturer's full range]** **<Insert color>**.
 2. Factory Prime Finish: Manufacturer's standard color.
 3. Stainless Steel Finish: **[ASTM A480/A480M No. 2B (bright, cold rolled)]** **[ASTM A480/A480M No. 4 (polished directional satin)]** **<Insert finish>**.
 4. Interior Curtain-Slat Facing: **[Match finish of exterior curtain-slat face]** **[Finish as indicated by manufacturer's designations]** **[Finish matching Architect's sample]** **[Finish as selected by Architect from manufacturer's full range]** **<Insert finish>**.

2.05 MATERIALS, GENERAL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.06 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural-steel sheet; complying with ASTM A653/A653M, with G90 zinc coating; nominal sheet thickness (coated) of 0.028 inch; and as required.
 2. Stainless Steel Door Curtain Slats: ASTM A240/A240M or ASTM A666, Type 304; sheet thickness of 0.025 inch; and as required.
 3. Aluminum Door Curtain Slats: ASTM B209 sheet or ASTM B221 extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of 0.050 inch; and as required.
 4. Vision-Panel Glazing: Manufacturer's standard clear glazing, fabricated from transparent acrylic sheet or fire-protection-rated glass as required for type of door; set in glazing channel secured to curtain slats.
 5. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723. Enclose insulation completely within slat faces.
 6. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face, with **[minimum steel thickness of 0.010 inch]** **[and]** **[minimum aluminum thickness of 0.032 inch]**.

7. Plastic Interior Curtain-Slat Facing: Extruded PVC plastic with maximum flame-spread index of **[25] [75] [200]** and smoke-developed index of 450, according to ASTM E84 or UL 723.
- B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, **[and a continuous bar for holding windlocks]**.
- C. Pass Door(s): Swinging-door and frame assembly constructed integrally with the coiling-door assembly **[and bearing the same fire rating]**. Comply with the accessibility standard of authorities having jurisdiction.
1. Door Frame and Integral Jamb Guide: Fabricate of angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading.
 2. Hinged Frame: Hinged pass door and frame that swings out of the way, as a unit, to allow use of the full coiling-door opening width. One jamb of the pass-door frame is hinged and the other jamb includes a guide for the lower, narrower part of the coiling-door curtain.
 3. Rigid Frame: Rigid pass door and frame that are built into the rigid, lower part of the door curtain and that raise with the curtain.
 4. Locking Hardware:
 - a. **[Lockset] [Exit Hardware]: [As specified in Section 08 71 00 "Door Hardware."]** **[As selected by Architect from manufacturer's full range.]** **<Insert requirement.>**
 - b. Lock Cylinders: As **[specified in Section 08 71 00 "Door Hardware"]** **[standard with manufacturer]** **[and keyed to building keying system].**
 - c. Keys: **[Two] [Three] <Insert number>** for each cylinder.
 5. Thresholds: Equip pass doors with integral thresholds that comply with the accessibility standard of authorities having jurisdiction.

2.07 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
1. Galvanized Steel: Nominal 0.028-inch-thick, hot-dip galvanized-steel sheet with G90 zinc coating, complying with ASTM A653/A653M.
 2. Stainless Steel: 0.025-inch-thick, stainless steel sheet, Type 304, complying with ASTM A240/A240M or ASTM A666.
 3. Aluminum: 0.040-inch-thick aluminum sheet complying with ASTM B209, of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.

4. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
 5. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.
- B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.08 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: As [specified in Section 08 71 00 "Door Hardware"] [standard with manufacturer] [and keyed to building keying system].
 2. Keys: **[Two] [Three] <Insert number>** for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.09 CURTAIN ACCESSORIES

- A. Smoke Seals: Equip each fire-rated door with replaceable smoke-seal perimeter gaskets or brushes for smoke and draft control as required for door listing and labeling by a qualified testing agency.
- B. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.
1. At door head, use 1/8-inch-thick, replaceable, continuous-sheet baffle secured to inside of hood or field-installed on the header.
 2. At door jambs, use replaceable, adjustable, continuous, [flexible, **1/8-inch**-thick seals of flexible vinyl, rubber, or neoprene] [nylon brushes] <Insert material>.
- C. Astragal for Interior Doors: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
- D. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
- E. Pull-Down Strap: Provide pull-down straps for doors more than 84 inches high.
- F. Pole Hooks: Provide pole hooks and poles for doors more than 84 inches high.

- G. Automatic-Closing Device: Equip each fire-rated door with an automatic-closing device or holder-release mechanism and governor unit complying with NFPA 80 and an easily tested and reset release mechanism. **[Testing for manually operated doors allows resetting by opening the door without re-tensioning the counterbalance mechanism] [Release mechanism for motor-operated doors allows testing without mechanical release of the door.]** Automatic-closing device is to be designed for activation by the following:
1. Replaceable fusible links with temperature rise and melting point of **[165 deg F deg C]** **<Insert temperature>** interconnected and mounted on both sides of door opening.
 2. Manufacturer's standard UL-labeled smoke detector and door-holder-release devices.
 3. Manufacturer's standard UL-labeled heat detector and door-holder-release devices.
 4. Building fire-detection, smoke-detection, and -alarm systems.

2.10 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, **[seamless] [or] [welded]** carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
1. Fire-Rated Doors: Equip with auxiliary counterbalance spring and prevent tension release from main counterbalance spring when automatic-closing device operates.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.11 MANUAL DOOR OPERATORS

- A. General: Equip door with manual door operator by door manufacturer.
- B. Push-up Door Operation: Lift handles and pull rope for raising and lowering doors, with counterbalance mechanism designed so that required lift or pull for door operation does not exceed **[25 lbf] <Insert value>**.
- C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum **[25-lbf] [30-lbf] <Insert value>** force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.

- D. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than **[25-lbf]** **[30-lbf]** **<Insert value>** force to turn crank. Fabricate gearbox to be oiltight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.12 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-rewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
1. Comply with NFPA 70.
 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door Operator Location(s): Operator location indicated for each door.
1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
 2. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
 3. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door and connected to door drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall-mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
 4. Bench Mounted: Operator is mounted to the right or left door head plate and connected to the door drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
 5. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of door.
- D. Motors: Reversible-type motor **[with controller (disconnect switch)]** for motor exposure indicated for each door assembly.
1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
 2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.

3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. **[For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.] [For fire-rated doors, activation delays closing.]**
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained or constant pressure on close button.
 2. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire-configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.
 3. Pneumatic Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior-Mounted Units: Full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed **[25 lbf] [30 lbf] <Insert value>**.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with the accessibility standard.

- L. Portable Radio-Control System: Consisting of **[one] [two] <Insert number>** of the following per door operator:
 - 1. Three-channel universal coaxial receiver to open, close, and stop door.
 - 2. Portable control device to open and stop door may be momentary-contact type; control to close door is to be sustained- or constant-pressure type.
 - 3. Remote-antenna mounting kit.

2.13 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.14 ALUMINUM FINISHES

- A. Mill Finish: Manufacturer's standard.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.15 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.16 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: ASTM A480/A480M No. 4.

- C. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M No. 2B.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with the accessibility standard.
- D. Fire-Rated Doors: Install according to NFPA 80.
- E. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.
- F. Power-Operated Doors: Install **[automatic garage doors openers]** according to UL 325.

3.03 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections and to furnish reports to Architect.
- B. Perform the following tests and inspections **[with the assistance of a factory-authorized service representative]**:
 - 1. Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.
 - 2. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.

- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in **[NFPA 80]** **[and]** **[NFPA 101]**.

3.04 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.05 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
 - 1. Adjust exterior doors and components to be weather resistant.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.06 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service includes **[three]** **[six]** **[nine]** **[12]** months' full maintenance by skilled employees of coiling-door Installer. Include **[monthly]** **[quarterly]** preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, seven-day-per-week, emergency callback service.

3.07 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

SECTION 08 33 26
OVERHEAD COILING GRILLES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Open-curtain overhead coiling grilles.
2. Closed-curtain overhead coiling grilles.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for miscellaneous steel supports, angle-framing of grille opening, corner guards, and bollards.
2. [Section 099000 "Painting"] [and] [Section 099600 "High-Performance Coatings"] for finish painting of factory-primed grilles.
3. Section 111200 "Parking Control Equipment" for parking control equipment interlocked to overhead coiling grilles.

1.02 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling grille and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for curtain components, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies. Indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. For exterior components, include details of provisions for assembly expansion and contraction.
5. Show locations of controls, locking devices, and other accessories.
6. Include diagrams for power, signal, and control wiring.

- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
 - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Open-curtain grille with full-size components consisting of rods, spacers, and links as required to illustrate each assembly **[, including glazed inserts]**.
 - 2. Closed-curtain grille with full-size components consisting of ribs and infill as required to illustrate each assembly.
 - 3. Bottom bar **[with sensor edge]**.
 - 4. Guides.
 - 5. Mounting frame.
 - 6. Brackets.
 - 7. Hood.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For overhead coiling grilles to include in maintenance manuals.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
- B. Accessibility Standard: Comply with applicable provisions in **[the USDOJ's "2010 ADA Standards for Accessible Design"] [the ABA standards of the Federal agency having jurisdiction] [and] [ICC A117.1] <Insert requirement>**.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of grilles that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: **[Two] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain overhead coiling grilles from single source from single manufacturer.
1. Obtain operators and controls from overhead coiling-grille manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Overhead coiling grilles withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
1. Component Importance Factor: **[1.5] [1.0]**.

2.03 OPEN-CURTAIN GRILLE ASSEMBLY **<Insert drawing designation>**

- A. Open-Curtain Grille: Overhead coiling, **[countertop]** grille with a curtain having a network of horizontal rods that interconnect with vertical links.
- B. Operation Cycles: Grille components and operators capable of operating for not less than **[10,000] [20,000] [50,000] [100,000] [200,000] <Insert number>**. One operation cycle is complete when a grille is opened from the closed position to the fully open position and returned to the closed position.
1. Include tamperproof cycle counter.
- C. Grille Curtain Material: **[Aluminum] [Stainless steel] [Galvanized steel]**.
1. Rod Spacing: Approximately **[1-1/2 inches] [2 inches] [3 inches] <Insert dimension>** o.c.
 2. Link Spacing: Approximately **[3 inches] [6 inches] [9 inches] <Insert dimension>** apart in a **[straight in-line] [brick (staggered)] <Insert pattern>** pattern.
 3. Glazing Inserts: **[Manufacturer's standard] <Insert description>**.
 4. Spacers: **[Metal tubes matching curtain material] [PVC] <Insert description>**.
- D. Bottom Bar: Continuous **[tubular shape] [channel] [or] [doubled angles]**, fabricated from **[aluminum extrusion] [hot-dip galvanized steel] [or] [stainless steel]** and finished **[to match grille] <Insert requirement>**.
- E. Curtain Jamb Guides: **[Aluminum] [Stainless steel] [Galvanized steel]** with exposed finish **[matching curtain slats] <Insert requirement>**. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise. **[Provide removable post(s) and jamb guides where indicated on Drawings.]**
- F. Hood: **[Match curtain material and finish] [Aluminum] [Stainless steel] [Galvanized steel]**.
1. Shape: **[Round] [Square] [As indicated on Drawings] <Insert shape>**.
 2. Mounting: **[Face of wall] [Between jambs] [On mounting frame] [As indicated on Drawings]**.

- G. Locking Devices: Equip grille with [slide bolt for padlock] [locking device assembly] [and] [chain lock keeper].
1. Locking Device Assembly: [Single-jamb side] [Cremona-type, both jamb sides] locking bars, operable from [inside with thumbturn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders] <Insert requirement>.
- H. Manual Grille Operator: [Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator] [Wall-crank operator].
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- I. Electric Grille Operator:
1. Usage Classification: [Heavy duty, 25 or more cycles per hour and more than 90 cycles per day] [Standard duty, up to 25 cycles per hour and up to 90 cycles per day] [Medium duty, up to 12 cycles per hour and up to 50 cycles per day] [Light duty, up to 10 cycles per hour] <Insert classification>.
 2. Operator Location: [Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As indicated on Drawings].
 3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; **[moving parts of operator enclosed or guarded if exposed and mounted at 8 feet or lower]**.
 4. Motor Exposure: [Interior] [Exterior, wet, and humid].
 5. Motor Electrical Characteristics:
 - a. Horsepower: [1/2] [1] [2] [3] <Insert value> hp.
 - b. Voltage, Single Phase, 60 Hz: [115-V ac] [208-V ac] [230-V ac].
 - c. Voltage, Three Phase, 60 Hz: [208-V ac] [230-V ac] [460-V ac].
 6. Emergency Manual Operation: **[Push-up]** [Chain] [Crank] type.
 7. Obstruction-Detection Device: Automatic [photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type] <Insert type>.
 - a. Sensor Edge Bulb Color: [Black] [As selected by Architect from manufacturer's full range] <Insert color>.
 8. Control Station: [Interior mounted] [Exterior mounted] [Where indicated on Drawings] <Insert location>.
 9. Other Equipment: [Audible and visual signals] [Emergency-egress release] [Self-opening mechanism] <Insert device>.

- J. Curtain Accessories: Equip grille with **[astragal]** **[push/pull handles]** **[and]** **[pole hook]** **<Insert item>**.
- K. Grille Finish:
1. Aluminum Finish: **[Mill]** **[Clear anodized]** **[Light bronze anodized]** **[Medium bronze anodized]** **[Dark bronze anodized]** **[Black anodized]** **[Anodized color matching Architect's sample]** **[Anodized color as selected by Architect from full range of industry colors and color densities]** **<Insert color>**.
 2. Baked-Enamel or Powder-Coat Finish: **[Color as indicated by manufacturer's designations]** **[Color matching Architect's sample]** **[Color as selected by Architect from manufacturer's full range]** **<Insert color and gloss>**.
 3. Factory Prime Finish: Manufacturer's standard color.
 4. Stainless Steel Finish: **[No. 2B (bright, cold rolled)]** **[No. 4 (polished directional satin)]** **<Insert finish>**.
 5. PVC Spacers: **[Color as indicated by manufacturer's designations]** **[Color as selected by Architect from manufacturer's full range]** **<Insert color>**.

2.04 CLOSED-CURTAIN GRILLE ASSEMBLY **<Insert drawing designation>**

- A. Closed-Curtain Grille: Overhead coiling, **[countertop]** grille with a curtain having a series of horizontal ribs alternating with continuous horizontal infill panels secured by the ribs.
- B. Operation Cycles: Grille components and operators capable of operating for not less than **[10,000]** **[20,000]** **[50,000]** **[100,000]** **[200,000]** **<Insert number>**. One operation cycle is complete when a grille is opened from the closed position to the fully open position and returned to the closed position.
1. Include tamperproof cycle counter.
- C. Grille Curtain Material: Aluminum ribs with continuous inserts indicated.
1. Rib Spacing: Approximately **[3 inches]** **<Insert dimension>** o.c.
 2. Inserts: **[Glass panels]** **[Clear, transparent plastic panels]** **[Translucent plastic panels]** **[Solid aluminum panels]** **[Perforated aluminum panels]**.
- D. Bottom Bar: Continuous **[tubular shape]** **[channel]** **[or]** **[doubled angles]**, fabricated from **[aluminum extrusion]** **[hot-dip galvanized steel]** **[or]** **[stainless steel]** and finished **[to match grille]** **<Insert requirement>**.
- E. Curtain Jamb Guides: Aluminum with exposed finish **[matching curtain slats]** **<Insert requirement>**. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise. **[Provide removable post(s) and jamb guides where indicated on Drawings.]**
- F. Hood: **[Match curtain material and finish]** **[Aluminum]** **[Stainless steel]** **[Galvanized steel]**.
1. Shape: **[Round]** **[Square]** **[As indicated on Drawings]** **<Insert shape>**.

2. Mounting: [Face of wall] [Between jambs] [On mounting frame] [As indicated on Drawings].
- G. Locking Devices: Equip grille with [slide bolt for padlock] [locking device assembly] [and] [chain lock keeper].
1. Locking Device Assembly: [Single-jamb side] [Cremone-type, both jamb sides] locking bars, operable from [inside with thumbturn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders] <Insert requirement>.
- H. Manual Grille Operator: [Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator] [Wall-crank operator].
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- I. Electric Grille Operator:
1. Usage Classification: [Heavy duty, 25 or more cycles per hour and more than 90 cycles per day] [Standard duty, up to 25 cycles per hour and up to 90 cycles per day] [Medium duty, up to 12 cycles per hour and up to 50 cycles per day] [Light duty, up to 10 cycles per hour] <Insert classification>.
 2. Operator Location: [Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As indicated on Drawings].
 3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; **[moving parts of operator enclosed or guarded if exposed and mounted at 8 feet or lower]**.
 4. Motor Exposure: [Interior] [Exterior, wet, and humid].
 5. Motor Electrical Characteristics:
 - a. Horsepower: [1/2] [1] [2] [3] <Insert value> hp.
 - b. Voltage, Single Phase, 60 Hz: [115-V ac] [208-V ac] [230-V ac].
 - c. Voltage, Three Phase, 60 Hz: [208-V ac] [230-V ac] [460-V ac].
 6. Emergency Manual Operation: **[Push-up]** [Chain] [Crank] type.
 7. Obstruction-Detection Device: Automatic [photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type] <Insert type>.
 - a. Sensor Edge Bulb Color: [Black] [As selected by Architect from manufacturer's full range] <Insert color>.
 8. Control Station: [Interior mounted] [Exterior mounted] [Where indicated on Drawings] <Insert location>.

9. Other Equipment: [Audible and visual signals] [Emergency-egress release] [Self-opening mechanism] <Insert device>.

J. Grille Finish:

1. Aluminum Finish: [Mill] [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Anodized color matching Architect's sample] [Anodized color as selected by Architect from full range of industry colors and color densities] <Insert color>.
2. Baked-Enamel or Powder-Coat Finish: [Color as indicated by manufacturer's designations] [Color matching Architect's sample] [Color as selected by Architect from manufacturer's full range] <Insert color and gloss>.
3. Factory Prime Finish: Manufacturer's standard color.
4. Stainless Steel Finish: [No. 2B (bright, cold rolled)] [No. 4 (polished directional satin)] <Insert finish>.

2.05 MATERIALS, GENERAL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.06 GRILLE CURTAIN MATERIALS AND CONSTRUCTION

- A. Open-Curtain Grilles: Fabricate metal grille curtain as an open network of horizontal rods, spaced at regular intervals, that are interconnected with vertical links, which are formed and spaced as indicated and are free to rotate on the rods.
1. Aluminum Grille Curtain: ASTM B221, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 2. Stainless Steel Grille Curtain: ASTM A666 or ASTM A240/A240M, Type 300 series.
 3. Steel Grille Curtain: Hot-dip zinc coated (galvanized) complying with ASTM A123/A123M, or electrogalvanized complying with ASTM 653/A653M, and phosphatized before fabrication.
 4. Glazing Insert: Manufacturer's standard glazing of clear polycarbonate sheet secured by the curtain links.
- B. Closed-Curtain Grilles: Fabricate curtain as a series of horizontal double-C ribs, spaced at regular intervals, that alternate with continuous horizontal infill panels secured by the ribs.
1. Aluminum Horizontal Ribs: ASTM B221, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 2. Glass Panels: Uncoated, clear, heat-treated, fully tempered float glass; complying with ASTM C1048, Condition A, Type I, Class I, Quality q3, Kind FT; manufacturer's standard panel dimensions and thickness.
 3. Plastic Panels: Fire-retardant polycarbonate sheet manufactured by the extrusion process; UV resistant; manufacturer's standard panel dimensions and thickness.

4. Aluminum Panels: ASTM B209, alloy and temper standard with manufacturer for type of use and finish indicated; manufacturer's standard panel dimensions and thickness; finished to match ribs.
 - a. Perforations: [Manufacturer's standard pinholes] <Insert description>.
- C. Bottom Bar: Manufacturer's standard continuous shape unless otherwise indicated, finished to match grille.
 1. Astragal: Equip grille bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
 2. Provide motor-operated grilles with combination bottom astragal and sensor edge.
- D. Grille Curtain Jamb Guides: Manufacturer's standard shape having curtain groove with return lips or bars to retain curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise; with removable stops on guides to prevent overtravel of curtain.
 1. Removable Posts and Jamb Guides: Manufacturer's standard.

2.07 HOODS AND ACCESSORIES

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
 1. Galvanized Steel: Nominal 0.028-inch- thick, hot-dip galvanized-steel sheet with G90 zinc coating, complying with ASTM A653/A653M.
 2. Stainless Steel: 0.025-inch- thick, stainless steel sheet, Type 304, complying with ASTM A666 or ASTM A240/A240M.
 3. Aluminum: 0.040-inch- thick aluminum sheet, complying with ASTM B209, of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
- B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.
- C. Mounting Frame: Manufacturer's standard mounting frame designed to support grille; factory fabricated from ASTM A36/A36M structural-steel **[tubes] [or] [shapes]**, hot-dip galvanized per ASTM A123/A123M; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners.
- D. Push/Pull Handles: Equip push-up-operated or emergency-operated grille with lifting handles on each side of grille, finished to match grille.
- E. Pull-Down Strap: Provide pull-down straps for grilles more than 84 inches high.
- F. Pole Hooks: Provide pole hooks and poles for grilles more than 84 inches high.

2.08 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
 - 1. Lock Cylinders: As [specified in Section 087100 "Door Hardware"] [standard with manufacturer] [and keyed to building keying system].
 - 2. Keys: **[Two] [Three] <Insert number>** for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated grilles with safety interlock switch to disengage power supply when grille is locked.

2.09 COUNTERBALANCE MECHANISM

- A. General: Counterbalance grilles by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, **[seamless] [or] [welded]** carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of parts and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.10 MANUAL GRILLE OPERATORS

- A. General: Equip grille with manual grille operator by grille manufacturer.
- B. Push-up Grille Operation: Lift handles and pull rope for raising and lowering grille, with counterbalance mechanism designed so that required lift or pull for grille operation does not exceed **[25 lbf] <Insert value>**.
- C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum **[25-lbf] [30-lbf] <Insert value>** force for grille operation. Provide alloy-steel hand chain with chain holder secured to operator guide.
- D. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than **[25-lbf] [30-lbf] <Insert value>** force to turn crank. Fabricate gearbox to be oiltight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.11 ELECTRIC GRILLE OPERATORS

- A. General: Electric grille operator assembly of size and capacity recommended and provided by grille manufacturer for grille and operation cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking grille, and accessories required for proper operation.
1. Comply with NFPA 70.
 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each grille.
- C. Grille Operator Location(s): Operator location indicated for each grille.
1. Top-of-Hood Mounted: Operator is mounted to the right or left grille head plate, with the operator on top of the grille-hood assembly and connected to the grille drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
 2. Front-of-Hood Mounted: Operator is mounted to the right or left grille head plate, with the operator on coil side of the grille-hood assembly and connected to the grille drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
 3. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of grille and connected to grille drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall-mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
 4. Bench Mounted: Operator is mounted to the right or left grille head plate and connected to the grille drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
 5. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of grille.
- D. Motors: Reversible-type motor [**with controller (disconnect switch)**] for motor exposure indicated for each grille assembly.
1. Electrical Characteristics: Minimum as indicated for each grille assembly. If not indicated, large enough to start, accelerate, and operate grille in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
 2. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized grille with adjustable switches interlocked with motor controls and set to automatically stop grille at fully opened and fully closed positions.

- F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of grille opening. Activation of sensor immediately stops and reverses downward grille travel.
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in grille opening without contact between grille and obstruction.
 - a. Self-Monitoring Type: Designed to interface with grille operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, grille closes only with sustained or constant pressure on close button.
 2. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire-configured device designed to interface with grille operator control circuit to detect damage to or disconnection of sensor edge.
 3. Pneumatic Sensor Edge: Automatic safety sensor edge, located within astragal mounted to bottom bar. Contact with sensor activates device.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior-Mounted Units: Full-guarded, standard-duty, surface-mounted, weatherproof type; NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip electrically powered grille with capability for emergency manual operation. Design manual mechanism so required force for grille operation does not exceed **[25 lbf] [30 lbf] <Insert value>**.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with the accessibility standard.
- L. Emergency-Egress Release: Flush, wall-mounted handle mechanism, for accessibility-code-compliant egress feature, not dependent on electric power. The release allows an unlocked grille to partially open without affecting limit switches to permit passage, and it automatically resets motor drive on return of handle to original position.

- M. Self-Opening Mechanism: Automatic release mechanism triggered by **[smoke detector,] [emergency push-button station,]** fire alarm or power failure. When activated, the grille self-opens by means of a fail-safe operator to the fully open position without the need for power operation or battery backup systems. When the **[emergency push-button is reset, and the]** alarm is cleared and power is restored, the grille will operate normally.

2.12 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.13 ALUMINUM FINISHES

- A. Mill Finish: Manufacturer's standard.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.14 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.15 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install overhead coiling grilles and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports, according to manufacturer's written instructions and as specified.
- B. Install overhead coiling grilles, hoods, controls, and operators at the mounting locations indicated for each grille.
- C. Accessibility: Install overhead coiling grilles, switches, and controls along accessible routes in compliance with the accessibility standard.
- D. Power-Operated Grilles: Install **[automatic garage grille openers]** according to UL 325.

3.03 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
 - 3. Test grille opening when activated by detector, fire-alarm system, emergency-egress release, or self-opening mechanism as required. Reset grille-opening mechanism after successful test.

3.04 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly, so that grilles operate easily, free of warp, twist, or distortion.
 - 1. Adjust exterior components to be weather resistant.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.

3.05 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service is to include **[three] [six] [nine] [12]** months' full maintenance by skilled employees of coiling-grille Installer. Include **[monthly] [quarterly]** preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper grille operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.

1. Perform maintenance, including emergency callback service, during normal working hours.
2. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.06 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling grilles.

END OF SECTION

SECTION 08 41 13

ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Aluminum-framed entrance and storefront systems.

B. Related Requirements:

1. Section 01 43 39 "Mockups" for preconstruction laboratory mockup testing.
2. Section 08 11 16 "Interior Aluminum Doors and Frames" for interior aluminum framing.
3. Section 08 41 26 "All-Glass Entrances and Storefronts" for systems without aluminum support framing.

1.02 ALLOWANCES

- A. See Section 01 21 00 "Allowances" for description of allowances affecting items specified in this Section.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Aluminum-framed entrance and storefront systems.

B. Product Data Submittals: For each product.

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Operating characteristics, electrical characteristics, and furnished accessories.

C. Shop Drawings:

1. Plans, elevations, sections, full-size details, and attachments to other work.
2. Details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
3. Full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrance and storefront systems, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.

- c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 4. Connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
 5. Point-to-point wiring diagrams showing the following:
 - a. Power requirements for each electrically operated door hardware.
 - b. Location and types of switches, signal device, conduit sizes, and number and size of wires.
 6. <Insert requirements>.
 7. Signed and sealed by the qualified professional engineer responsible for their preparation.
 - D. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of exposed finish.
 - E. Samples for Verification: Actual sample of finished products for each type of exposed finish.
 1. Size: **[Manufacturers' standard size]** <Insert size>.
 - F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
 1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
 - G. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.
 - H. Delegated Design Submittals: For aluminum-framed entrances and storefront systems, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Energy Performance Certificates: For aluminum-framed entrance and storefront systems, accessories, and components, from manufacturer.
 1. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront system.
 - B. Product Test Reports: For aluminum-framed entrance and storefront systems, for tests performed by **[a qualified testing agency] [manufacturer and witnessed by a qualified testing agency]**.

- C. Preconstruction Test Reports: For aluminum-framed entrance and storefront systems.
 - 1. Testing Program: Developed specifically for Project.
 - 2. Test Reports: Prepared by a qualified preconstruction testing agency for each preconstruction test.
 - 3. Record Drawings: As-built drawings of preconstruction laboratory mockups showing changes made during preconstruction laboratory mockup testing.
 - D. Source Quality-Control Reports: For aluminum-framed entrance and storefront systems.
 - E. Field Quality-Control Reports: For aluminum-framed entrance and storefront systems.
 - F. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C1401. Include periodic quality-control reports.
 - G. Qualification Statements:
 - 1. For Installer [and laboratory mockup preconstruction testing agency] [and field testing agency] [and egress door inspector].
 - H. Delegated Design Engineer Qualifications: For aluminum-framed entrance and storefront systems.
 - I. Sample Warranties: For aluminum-framed entrance and storefront systems.
- 1.06 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For aluminum-framed entrance and storefront systems.
 - B. Maintenance Data for Structural Sealant: For structural-sealant-glazed storefront. Include ASTM C1401 recommendations for post-installation-phase quality-control program.
- 1.07 QUALITY ASSURANCE
- A. Installer Qualifications:
 - 1. Fabricator of products.
 - 2. Entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 3. Authorized representative who is trained and approved by manufacturer.
 - 4. Entity that is certified under the North American Contractor Certification Program (NACC) and that employs installers and supervisors who are trained and approved by manufacturer [**and who are certified under the Architectural Glass and Metal Technician (AGMT) certification program**].
 - B. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in [state] <Insert jurisdiction> where Project is located and who is experienced in providing engineering services of the type indicated.

- C. Laboratory Mockup Testing Agency Qualifications: Qualified in accordance with ASTM E699 for testing indicated [and accredited by the International Accreditation Service or the International Laboratory Accreditation Cooperation Mutual Recognition Arrangement as complying with ISO/IEC 17025].
- D. Testing Agency Qualifications: Qualified in accordance with ASTM E699 for testing indicated **[and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025]** and acceptable to Owner and Architect.
- E. Egress Door Inspector Qualifications:
 - 1. Inspector for field quality-control inspections of egress door assemblies to comply with qualifications set forth in NFPA 101, Ch. 7 "Means of Egress," Section "Means of Egress Components," Article "Inspection of Door Openings."
 - 2. Inspector for field quality-control inspections of egress door assemblies to be certified under DHI's certification program as a Fire and Egress Door Assembly Inspector (FDAI) or a Certified Fire and Egress Door Assembly Inspector (CFDAI).
- F. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- G. Structural-Sealant Glazing: Comply with ASTM C1401 for design and installation of storefront systems that include structural glazing.

1.08 MOCKUPS

- A. Build mockups **[to verify selections made under Sample submittals] [to demonstrate aesthetic effects] [to set quality standards for materials and execution] [to set quality standards for fabrication and installation]**.
 - 1. Build mockup **[as indicated on Drawings]** <Insert mockup requirements>.
 - 2. Testing to be performed on mockups in accordance with requirements in "Field Quality Control" Article.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups.
 - 1. Build preconstruction laboratory mockups at testing agency facility; use personnel, products, and methods of construction that will be used at Project site.
 - 2. Size and Configuration: As indicated on Drawings.

3. Notify Architect **[seven]** <Insert number> days in advance of the dates and times when preconstruction laboratory mockups will be constructed and tested.
- B. Preconstruction Laboratory Mockup Testing: Performed by a qualified testing agency on manufacturer's standard assemblies.
1. Test preconstruction laboratory mockups in accordance with requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 - a. Structural, 50 Percent: ASTM E330/E330M at 50 percent of positive test load.
 - b. Air Leakage: ASTM E283.
 - c. Water Penetration under Static Pressure: ASTM E331.
 - d. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - e. Thermal Cycling: AAMA 501.5. Repeat the following:
 - 1) Air Leakage: ASTM E283.
 - 2) Water Penetration under Static Pressure: ASTM E331.
 - f. Structural, 100 Percent: ASTM E330/E330M at 100 percent of positive and negative test loads. Repeat the following:
 - 1) Air Leakage: ASTM E283.
 - 2) Water Penetration under Static Pressure: ASTM E331.
 - 3) Water Penetration under Dynamic Pressure: AAMA 501.1.
 - g. Structural, 150 Percent: ASTM E330/E330M at 150 percent of positive and negative test loads.
- C. Preconstruction Adhesion and Compatibility Testing: Submit to structural glazing sealant manufacturer, for testing indicated below, Samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that is in close proximity to or is touching the structural or nonstructural sealants of a structural glazed system.
1. Compatibility: Test materials or components using ASTM C1087.
 2. Adhesion: Test for adhesion or lack of adhesion of a structural sealant to the surface of another material or component using ASTM C1135.
 3. Submit no fewer than **[eight]** <Insert number> pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
 6. Testing will not be required if data based on previous testing of current sealant products match those submitted.

1.10 WARRANTY

- A. Special Warranty: **[Manufacturer agrees] [Installer agrees] [Manufacturer and Installer agree]** to repair or replace components of aluminum-framed entrance and storefront systems that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures, including **<Insert type of failure>**.
 - b. Faulty operation of **<Insert components>**.
 - c. Deterioration of metals **[, metal finishes,]** and other materials beyond normal **[weathering] [use]**.
 - d. **<Insert conditions relating to specified products>**.
 - e. **<Insert failure modes>**.
 2. Warranty Period: **[Two] [Five] [10] <Insert number>** years from date of Substantial Completion.
- B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: **[Five] [10] [20] <Insert number>** years from date of Substantial Completion.
- C. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
 - c. Cracking, peeling, or chipping.
 2. Warranty Period: **[Five] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain all components of aluminum-framed entrance and storefront system, including framing **[spandrel panels] [venting windows]** and accessories, from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design aluminum-framed entrance and storefront systems.
- B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrance and storefront systems representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Aluminum-framed entrance and storefront systems to withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 - 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Structural Loads:
 - 1. Wind Loads: As indicated on Drawings.
 - 2. Other Design Loads: **[As indicated on Drawings] <Insert loads>**.
- D. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
 - 1. Deflection Normal to Wall Plane: Limited to **[1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches] <Insert deflection limit>**.
 - 2. Deflection Parallel to Glazing Plane: Limited to **[amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch] <Insert deflection limit>**.
 - a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.
 - 3. Cantilever Deflection: Limited to 2L/175 at unsupported cantilevers.
- E. Structural: Test in accordance with ASTM E330/E330M as follows:
 - 1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.

2. When tested at **[150]** <Insert number> percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding **[0.2]** <Insert number> percent of span.
 3. Test Durations: As required by design wind velocity, but not less than **[10]** <Insert number> seconds.
- F. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than **[6.24 lbf/sq. ft.] [10 lbf/sq. ft.] [15 lbf/sq. ft.]** <Insert value>.
- G. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than **[6.24 lbf/sq. ft.] [10 lbf/sq. ft.] [15 lbf/sq. ft.]** <Insert value>.
 2. Maximum Water Leakage: [In accordance with AAMA 501.1] [No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation]. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
- H. Seismic Performance: Aluminum-framed entrance and storefront systems to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]** <Insert requirement>.
1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.6 at design displacement **[and 1.5 times the design displacement]**.
- I. Energy Performance: Certified and labeled by manufacturer for energy performance as follows:
1. Thermal Transmittance (U-factor):
 - a. Fixed Glazing and Framing Areas: U-factor for the system of not more than **[0.41 Btu/sq. ft. x h x deg F] [0.45 Btu/sq. ft. x h x deg F] [0.57 Btu/sq. ft. x h x deg F] [0.69 Btu/sq. ft. x h x deg F]** <Insert value> as determined in accordance with NFRC 100.
 - b. Entrance Doors: U-factor of not more than **[0.68 Btu/sq. ft. x h x deg F] [0.77 Btu/sq. ft. x h x deg F] [0.83 Btu/sq. ft. x h x deg F] [1.10 Btu/sq. ft. x h x deg F]** <Insert value> as determined in accordance with NFRC 100.
 - c. Venting Windows: Whole window U-factor of not more than **[0.37 Btu/sq. ft. x h x deg F] [0.43 Btu/sq. ft. x h x deg F] [0.45 Btu/sq. ft. x h x deg F] [0.60 Btu/sq. ft. x h x deg F] [0.65 Btu/sq. ft. x h x deg F]** <Insert value> as determined in accordance with NFRC 100.
 2. Solar Heat-Gain Coefficient (SHGC):
 - a. Fixed Glazing and Framing Areas: SHGC for the system of not more than **[0.26] [0.35] [0.40] [0.45]** <Insert value> as determined in accordance with NFRC 200.
 - b. Entrance Doors: SHGC of not more than **[0.22] [0.25] [0.35] [0.40] [0.45]** <Insert value> as determined in accordance with NFRC 200.

- c. Venting Windows: Whole window SHGC of not more than **[0.22] [0.27] [0.30] [0.40] <Insert value>** as determined in accordance with NFRC 200.
 - 3. Air Leakage:
 - a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than **[0.06 cfm/sq. ft.] <Insert value>** at a static-air-pressure differential of **[1.57 lbf/sq. ft.] [6.24 lbf/sq. ft.] <Insert value>** when tested in accordance with ASTM E283.
 - b. Entrance Doors: Air leakage of not more than **[1.0 cfm/sq. ft.] <Insert value>** at a static-air-pressure differential of 1.57 lbf/sq. ft..
 - c. Venting Windows: Whole window air leakage of not more than **[0.3 cfm/sq. ft.] <Insert value>** at a static-air-pressure differential of **[6.24 lbf/sq. ft.] <Insert value>** when tested in accordance with AAMA/WDMA/CSA 101/I.S.2/A440.
 - 4. Condensation Resistance Factor (CRF):
 - a. Fixed Glazing and Framing Areas: CRF for the system of not less than **[35] [55] [70] <Insert value>** as determined in accordance with AAMA 1503.
 - b. Entrance Doors: CRF of not less than **[57] [63] [68] <Insert value>** as determined in accordance with AAMA 1503.
 - c. Venting Windows: Whole window CRF of not less than **[45] [52] [55] <Insert value>** as determined in accordance with AAMA 1503.
- J. Noise Reduction: Test in accordance with ASTM E90, with ratings determined by ASTM E1332, as follows.
 - 1. Outdoor-Indoor Transmission Class: Minimum **[26] [30] [34] <Insert number>**.
- K. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
 - 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of **[180 deg F] <Insert temperature>**.
 - b. Low Exterior Ambient-Air Temperature: **[0 deg F] <Insert temperature>**.
 - c. Interior Ambient-Air Temperature: **[75 deg F] <Insert temperature>**.
- L. Structural-Sealant Joints:
 - 1. Designed to carry gravity loads of glazing.
- M. Structural Sealant: ASTM C1184. Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed, aluminum-framed entrance and storefront systems without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant to occur before adhesive failure.

1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate, because sealant-to-substrate bond strength exceeds sealant's internal strength.

2.03 ALUMINUM-FRAMED ENTRANCE AND STOREFRONT SYSTEMS

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 1. Exterior Framing Construction: [Thermally broken] [Thermally improved] [Nonthermal] <Insert description>.
 2. Interior Vestibule Framing Construction: **[Nonthermal]** <Insert description>.
 3. Glazing System: [Retained mechanically with gaskets on four sides] [Retained mechanically with gaskets on two sides and structural sealant on two sides].
 4. Glazing Plane: **[Front]** <Insert location>.
 5. Finish: [Clear anodic finish] [Color anodic finish] [Baked-enamel or powder-coat finish] [High-performance organic finish] [Superior-performance organic finish].
 6. Fabrication Method: Field-fabricated stick system.
 7. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 8. Steel Reinforcement: As required by manufacturer.
- B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.
- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- D. Insulated Spandrel Panels:
 1. Comply with Section 07 42 13.19 "Insulated Metal Wall Panels."
 2. Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
 - a. Overall Panel Thickness: **[As indicated]** [1 inch] <Insert thickness>.
 - b. Exterior Skin: Aluminum.
 - 1) Thickness: [Manufacturer's standard for finish and texture indicated] <Insert thickness>.
 - 2) Finish: [Match framing system] <Insert finish>.
 - 3) Texture: [Smooth] [Embossed] <Insert texture>.
 - 4) Backing Sheet: **[1/8-inch-thick tempered hardboard]** **[0.157-inch-thick cement board]** **[0.125-inch-thick, corrugated, high-density polyethylene]** <Insert material>.
 - c. Interior Skin: Aluminum.

- 1) Thickness: [Manufacturer's standard for finish and texture indicated] <Insert thickness>.
 - 2) Finish: [Matching storefront framing] [Low-gloss, white baked enamel] [Mill finish] <Insert finish>.
 - 3) Texture: [Smooth] [Embossed] <Insert texture>.
 - 4) Backing Sheet: [1/8-inch-thick tempered hardboard] [0.157-inch-thick cement board] [1/2-inch-thick gypsum board with proprietary fire-resistance-rated core] [0.125-inch-thick, corrugated, high-density polyethylene] <Insert material>.
- d. Thermal Insulation Core: Manufacturer's standard [rigid, closed-cell, polyisocyanurate board] [extruded-polystyrene board] [expanded-perlite, mineral-insulation board] <Insert insulation>.
- e. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- 1) Flame-Spread Index: [25] <Insert value> or less.
 - 2) Smoke-Developed Index: [50] [450] <Insert value> or less.
- E. Venting Windows:
1. As specified in Section 08 51 00 "Metal Windows."
 2. Manufacturer's standard units, complying with AAMA/WDMA/CSA 101/I.S.2/A440, with self-flashing mounting fins, and as follows:
 - a. Window Type: [Awning] [Casement] [As indicated on Drawings] <Insert type>.
 - b. Minimum Performance Class: [CW] [AW] <Insert class>.
 - c. Minimum Performance Grade: [30] [40] [60] [70] [80] [90] [As indicated on Drawings] <Insert number>.
 - d. Hardware: Manufacturer's standard; of aluminum, stainless steel, die-cast steel, malleable iron, or bronze; including the following:
 - 1) Cam handle locking system.
 - 2) Multi-point locking system.
 - 3) Pole-operated, cam handle locking system, where rail is more than 72 inches above floor.
 - 4) Rotary operator.
 - 5) Steel or bronze operating arms.
 - 6) Limit Devices: [Concealed friction adjustor and adjustable stay bar] <Insert type> limit devices designed to restrict sash opening.

- (a) Limit clear opening to **[4 inches]** <Insert dimension> for ventilation; with custodial key release.
 - e. Weather Stripping: Provide full-perimeter weather stripping for each operable sash unless otherwise indicated.
 - f. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:
 - 1) Aluminum Wire Fabric: 18-by-18, 0.0445-inch-by-0.0445-inch; 18-by-16, 0.0445-inch-by-0.0515-inch; or 18-by-14, 0.0445-inch-by-0.0624-inch mesh of 0.013-inch-diameter, coated aluminum wire.
 - 2) Glass-Fiber Mesh Fabric: 18-by-16 0.0445-inch-by-0.0515-inch or 18-by-14 0.0445-inch-by-0.0624-inch mesh of PVC-coated, glass-fiber threads, woven and fused to form a fabric mesh; complying with ASTM D3656/D3656M.
 - 3) Fabric: Manufacturer's standard aluminum wire fabric or glass-fiber mesh fabric.
 - g. Glazing: [Same as adjacent aluminum-framed entrances and storefront glazing] <Insert glazing>.
 - h. Finish: [Match adjacent aluminum-framed entrances and storefront finish] <Insert finish>.
- F. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.
- 1. Door Construction: **[1-3/4-inch overall thickness, with minimum 0.125-inch-] [2-inch overall thickness, with minimum 0.188-inch-] [2- to 2-1/4-inch overall thickness, with minimum 0.125-inch-]** thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
 - a. Thermal Construction: [High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior] <Insert description>.
 - 2. Door Design: [As indicated] [Narrow stile; **2-1/8-inch** nominal width] [Medium stile; **3-1/2-inch** nominal width] [Wide stile; **5-inch** nominal width] <Insert description>.
 - 3. Glazing Stops and Gaskets: **[Beveled] [Square] <Insert description>**, snap-on, extruded-aluminum stops and preformed gaskets.
 - a. Provide nonremovable glazing stops on outside of door.
 - 4. Finish: Match adjacent storefront framing finish.

2.04 ENTRANCE DOOR HARDWARE

- A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 08 71 00 "Door Hardware."

- B. General: Provide entrance door hardware and [entrance door hardware sets indicated in door and frame schedule] [entrance door hardware sets indicated in "Entrance Door Hardware Sets" Article] for each entrance door, to comply with requirements in this Section.
1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and [named manufacturers' products] [products equivalent in function and comparable in quality to named products] [products complying with BHMA standard referenced].
 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
 3. Opening-Force Requirements:
 - a. Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion [**and not more than 15 lbf to open the door to its minimum required width**].
 - b. Accessible Interior Doors: Not more than 5 lbf to fully open door.
- C. Designations: Requirements for design, grade, function, finish, quantity, size, and other distinctive qualities of each type of entrance door hardware are indicated in "Entrance Door Hardware Sets" Article. Products are identified by using entrance door hardware designations as follows:
1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in "Entrance Door Hardware Sets" Article.
 2. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.
- D. Pivot Hinges: BHMA A156.4, Grade 1.
1. Offset-Pivot Hinges: Provide top, bottom, and intermediate offset pivots at each door leaf.
- E. Butt Hinges: BHMA A156.1, Grade 1, radius corner.
1. Nonremovable Pins: Provide setscrew in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while entrance door is closed.
 2. Exterior Hinges: [Stainless steel, with stainless steel pin] [Nonferrous] <Insert material>.
 3. Quantities:
 - a. For doors up to [87 inches] <Insert dimension> high, provide three hinges per leaf.
 - b. For doors more than [87 and up to 120 inches] <Insert dimensions> high, provide four hinges per leaf.
- F. Continuous-Gear Hinges: BHMA A156.26.
- G. Mortise Auxiliary Locks: BHMA A156.5, Grade 1.
- H. Manual Flush Bolts: BHMA A156.16, Grade 1.
- I. Automatic and Self-Latching Flush Bolts: BHMA A156.3, Grade 1.

- J. Panic Exit Devices: BHMA A156.3, Grade 1, listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing in accordance with UL 305.
 - K. Cylinders:
 - 1. As specified in Section 08 71 00 "Door Hardware."
 - 2. BHMA A156.5, Grade 1.
 - a. Keying: **[No master] [Master]** key system. Permanently inscribe each key with a visual key control number and include notation **["DO NOT DUPLICATE"] [to be furnished by Owner]**.
 - L. Strikes: Provide strike with black-plastic dust box for each latch or lock bolt; fabricated for aluminum framing.
 - M. Operating Trim: BHMA A156.6.
 - N. Removable Mullions: BHMA A156.3 extruded aluminum.
 - 1. When used with panic exit devices, provide **[keyed]** removable mullions listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing in accordance with UL 305. Use only mullions that have been tested with exit devices to be used.
 - O. Closers: BHMA A156.4, Grade 1, with accessories required for a complete installation, sized as required by door size, exposure to weather, and anticipated frequency of use; adjustable to comply with field conditions and requirements for opening force.
 - P. Concealed Overhead Holders and Stops: BHMA A156.8, Grade 1.
 - Q. Door Stops: BHMA A156.16, Grade 1, floor or wall mounted, as appropriate for door location indicated, with integral rubber bumper.
 - R. Weather Stripping: Manufacturer's standard replaceable components.
 - 1. Compression Type: Made of ASTM D2000 molded neoprene or ASTM D2287 molded PVC.
 - 2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
 - S. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.
 - T. Thresholds: BHMA A156.21 raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2 inch.
 - U. Finger Guards: Manufacturer's standard collapsible neoprene or PVC gasket anchored to frame hinge-jamb at center-pivoted doors.
- 2.05 GLAZING
- A. Glazing: Comply with Section 08 80 00 "Glazing."

- B. Glazing Gaskets: [Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.] [Comply with Section 08 80 00 "Glazing."]
- C. Glazing Sealants: [As recommended by manufacturer.] [Comply with Section 08 80 00 "Glazing."]
- D. Structural Glazing Sealants: ASTM C1184 chemically curing silicone formulation that is compatible with system components with which it comes in contact; specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in storefront system indicated.
 - 1. Color: [Black] [Gray] [As selected by Architect from manufacturer's full range of colors] <Insert color>.
- E. Weatherseal Sealants: ASTM C920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed storefront manufacturers for this use.
 - 1. Color: Match structural sealant.

2.06 MATERIALS

- A. Sheet and Plate: ASTM B209.
- B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
- C. Structural Profiles: ASTM B308/B308M.
- D. Steel Reinforcement:
 - 1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
 - 2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
 - 3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.
- E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.

2.07 ACCESSORIES

- A. Automatic Door Operators: Section 08 42 29.23 "Sliding Automatic Entrances."
- B. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 2. Reinforce members as required to receive fastener threads.
 - 3. Use exposed fasteners with countersunk Phillips screw heads [, finished to match framing system] [, fabricated from 300 series stainless steel].

- C. Anchors: Three-way adjustable anchors with minimum adjustment of **[1 inch] <Insert dimension>** that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
- D. Concealed Flashing: **[Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials] [Dead-soft, 0.018-inch-thick stainless steel, complying with ASTM A240/A240M, of type recommended by manufacturer].**
- E. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.
- F. Rigid PVC filler.

2.08 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Physical and thermal isolation of glazing from framing members.
 - 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 - 5. Provisions for field replacement of glazing from **[exterior] [interior] [interior for vision glass and exterior for spandrel glazing or metal panels].**
 - 6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.
- F. Storefront Framing: Fabricate components for assembly using **[shear-block system] [screw-spline system] [head-and-sill-receptor system with shear blocks at intermediate horizontal members] <Insert system>**.
- G. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
 - 1. At interior and exterior doors, provide compression weather stripping at fixed stops.
- H. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
 - 1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.

2. At exterior doors, provide weather sweeps applied to door bottoms.
- I. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
- J. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.09 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
- B. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
 1. Color: [Light bronze] [Medium bronze] [Dark bronze] [Champagne] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- D. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with **[AAMA 2604]** **[AAMA 2605]** and containing not less than **[50]** **[70]** percent PVDF resin by weight in color coat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- E. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- F. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- G. Superior-Performance Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- H. Superior-Performance Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- 2.10 SOURCE QUALITY CONTROL
- A. Structural Sealant: Perform quality-control procedures complying with ASTM C1401 recommendations, including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF ALUMINUM-FRAMED ENTRANCE AND STOREFRONT SYSTEMS

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- F. Seal perimeter and other joints watertight unless otherwise indicated.
- G. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- H. Set continuous sill members and flashing in full sealant bed, as specified in Section 07 92 00 "Joint Sealants," to produce weathertight installation.
- I. Install joint filler behind sealant as recommended by sealant manufacturer.
- J. Install components plumb and true in alignment with established lines and grades.
- K. Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.
- L. Install entrance doors to produce smooth operation and tight fit at contact points.
1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware in accordance with entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
- M. Install glazing as specified in Section 08 80 00 "Glazing."
- N. Install structural glazing as follows:
1. Prepare surfaces that will contact structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 2. Set glazing into framing in accordance with sealant manufacturer and framing manufacturer's written instructions and standard practice. Use a spacer or backer as recommended by manufacturer.
 3. Set glazing with proper orientation so that coatings face exterior or interior as specified.
 4. Hold glazing in place using temporary retainers of type and spacing recommended by manufacturer, until structural sealant joint has cured.
 5. Apply structural sealant to completely fill cavity, in accordance with sealant manufacturer and framing manufacturer's written instructions and in compliance with local codes.
 6. Apply structural sealant at temperatures indicated by sealant manufacturer for type of sealant.
 7. Allow structural sealant to cure in accordance with manufacturer's written instructions.
 8. Clean and protect glass as indicated in Section 08 80 00 "Glazing."
 9. After structural sealant has completely cured, remove temporary retainers and insert backer rod between lites of glass as recommended by sealant manufacturer.
 10. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.03 ERECTION TOLERANCES

- A. Install aluminum-framed entrance and storefront systems to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.04 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests.
- B. Tests: Perform the following tests on **[representative areas of aluminum-framed entrance and storefront systems] [mockups]** <Insert requirements>.
 1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect to be tested in accordance with AAMA 501.2 and to not evidence water penetration.
 - a. Perform a minimum of **[two] [three]** <Insert number> tests in areas as directed by Architect.
 - b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to **[10, 35, and 70 percent completion]** <Insert requirements>.
 2. Air Leakage: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..
 - a. Perform a minimum of **[two] [three]** <Insert number> tests in areas as directed by Architect.
 - b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to **[10, 35, and 70 percent completion]** <Insert requirements>.
 3. Water Penetration: ASTM E1105 at a minimum **[uniform] [and] [cyclic]** static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and to not evidence water penetration.
 4. Structural-Sealant Adhesion: Test structural sealant in accordance with recommendations in ASTM C1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 - a. Test a minimum of **[two] [four] [six]** <Insert number> areas on each building facade.
 - b. Repair installation areas damaged by testing.

- C. Inspection Agency: **[Owner will engage] [Engage]** a qualified inspector to perform inspections.
 - D. Inspections:
 - 1. Egress Door Inspections: Inspect each aluminum-framed entrance door equipped with panic hardware, located in an exit enclosure, electrically controlled, and equipped with special locking arrangements, in accordance with NFPA 101, Ch. 7 "Means of Egress," Section "Means of Egress Components," Article "Inspection of Door Openings."
 - E. Aluminum-framed entrance and storefront systems will be considered defective if they do not pass tests and inspections.
 - F. Prepare test and inspection reports.
- 3.05 MAINTENANCE SERVICE
- A. Entrance Door Hardware Maintenance:
 - 1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
 - 2. Initial Maintenance Service: Beginning at Substantial Completion, provide **[six] <Insert number>** months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.
- 3.06 ENTRANCE DOOR HARDWARE SETS
- A. **<Insert schedule>**.

SECTION 08 41 26

ALL-GLASS ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Exterior all-glass entrance and storefront systems.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for overhead-steel support for all-glass systems.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Exterior all-glass entrance and storefront systems.

B. Product Data Submittals: For each product.

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes for all-glass system.

C. Shop Drawings: For exterior all-glass entrance and storefront systems.

1. Plans, elevations, and sections.
2. Details of fittings and glazing, including isometric drawings of fittings.
3. Door hardware locations, mounting heights, and installation requirements.
4. <Insert requirements>.
5. Signed and sealed by the qualified professional engineer responsible for their preparation.

D. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of fitting, accessory fitting, glass, and door hardware.

E. Samples for Verification: Actual sample of finished products for each type of fitting, accessory fitting, glass showing exposed edge finish, and door hardware.

1. Size: [Manufacturers' standard size] <Insert size>.

F. Fabrication Sample: **[Patch fitting at sill on pivot side only]** **[Continuous rail fitting at bottom]** <Insert requirements>, made from 12-inch lengths of full-size components and showing details of the following:

1. Joinery.

2. Anchorage.
 3. Glazing[with butt glazing].
- G. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with all-glass entrance-system components, assemblies, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.
- H. Delegated Design Submittals: For exterior all-glass entrance and storefront systems, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Product Test Reports: For each exterior all-glass entrance and storefront system, for tests performed by **[a qualified testing agency] [manufacturer and witnessed by a qualified testing agency]**.
- B. Field Quality-Control Reports: For exterior all-glass entrance and storefront systems.
- C. Qualification Statements:
1. For Installer[and testing agency][and egress door inspector].
- D. Delegated Design Engineer Qualifications: For exterior all-glass entrance and storefront systems.
- E. Sample Warranties: For exterior all-glass entrance and storefront systems.
- 1.05 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For exterior all-glass entrance and storefront systems.
- 1.06 QUALITY ASSURANCE
- A. Installer Qualifications:
1. Fabricator of products.
 2. Entity that employs installers and supervisors who are trained and approved by manufacturer.
 3. Authorized representative who is trained and approved by manufacturer.
 4. Entity that is certified under the North American Contractor Certification Program (NACC) and that employs installers and supervisors who are trained and approved by manufacturer[**and who are certified under the Architectural Glass and Metal Technician (AGMT) certification program**].
- B. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in **[state] <Insert jurisdiction>** where Project is located and who is experienced in providing engineering services of the type indicated.
- C. Testing Agency Qualifications: Qualified according to ASTM E699 for testing indicated[and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025].

D. Egress Door Inspector Qualifications:

1. Inspector for field quality-control inspections of egress door assemblies to comply with qualifications set forth in NFPA 101, Ch. 7 "Means of Egress," Section "Means of Egress Components," Article "Inspection of Door Openings."
2. Inspector for field quality-control inspections of egress door assemblies to be certified under DHI's certification program as a Fire and Egress Door Assembly Inspector (FDAI) or a Certified Fire and Egress Door Assembly Inspector (CFDAI).

E. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.07 MOCKUPS

A. Build mockups [to verify selections made under Sample submittals] [to demonstrate aesthetic effects] [to set quality standards for materials and execution] [to set quality standards for fabrication and installation].

1. Build mockup [as indicated on Drawings] <Insert mockup requirements>.
2. Testing must be performed on mockups in accordance with requirements in "Field Quality Control" Article.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 WARRANTY

A. Special Warranty: **[Manufacturer agrees] [Installer agrees] [Manufacturer and Installer agree]** to repair or replace components of exterior all-glass entrance and storefront systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including excessive deflection[, **air leakage, or water penetration**].
 - b. Faulty operation of **<Insert components>**.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal **[weathering] [use]**.
 - d. **<Insert conditions relating to specified products>**.
 - e. **<Insert failure modes>**.
2. Warranty Period: **[Two] <Insert number>** years from date of Substantial Completion.

- a. Concealed Floor Closers: **[Five] [10] [25]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain all components of exterior all-glass entrance and storefront systems, including framing and accessories, from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design exterior all-glass entrance and storefront systems.
- B. General Performance: Comply with performance requirements specified, as determined by testing of exterior all-glass entrance and storefront systems representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- C. Structural Loads:
 1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: [As indicated on Drawings] <Insert loads>.
 3. Deflection Limits: Deflection normal to glazing plane is limited to **[1 inch]** [1/175 of clear span or **3/4 inch**, whichever is smaller] <Insert deflection limit>.
- D. Seismic Performance: All-glass entrance and storefront systems to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]** <Insert requirement>.
- E. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
 1. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces]** <Insert temperature change>.

2.03 EXTERIOR ALL-GLASS ENTRANCE AND STOREFRONT SYSTEMS

- A. Fitting Configuration:
 1. Manual-Swinging, All-Glass Entrance Doors: [Patch fittings at head and sill on pivot side only (A-Style)] [Patch fittings at head and sill on pivot side, and for lock at sill of swing side (F-Style)] [Patch fitting at top and continuous rail fitting at bottom (BP-Style)] [Continuous rail fitting at top and bottom (P-Style)] <Insert fitting configuration>.
 2. All-Glass Storefronts: [Recessed glazing channel at top and continuous rail fitting at bottom] [Recessed glazing channel at top and bottom] [Continuous rail fitting at top and bottom] <Insert fitting configuration>.
- B. Fitting Material: [Aluminum] [Bronze-clad aluminum] [Brass-clad aluminum] [Stainless steel clad aluminum].
- C. Rail Fittings:

1. Height:
 - a. Top Rail: **[3-1/2 inches]** [As indicated] <Insert dimension>.
 - b. Bottom Rail: **[3-1/2 inches]** [**10 inches]** [As indicated] <Insert dimension>.
 2. Profile: [Tapered] [Tapered flat] [Tapered at 60 degrees minimum from horizontal] [Square] [Curved] [As indicated] <Insert profile>.
 3. End Caps: Manufacturer's standard precision-fit end caps for rail fittings.
- D. Accessory Fittings:
1. Overhead doorstep.
 2. Center-housing lock.
 3. U-channel.
 4. Glass-support-fin brackets.
- E. Anchors and Fastenings: Concealed.
- F. Weather Stripping: Pile type; replaceable without removing all-glass entrance doors from pivots.
- G. Materials:
1. Aluminum: ASTM B221, with strength and durability characteristics of not less than Alloy 6063-T5.
 - a. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
 - b. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
 - c. Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>.
 2. Bronze Cladding: ASTM B36/B36M, alloy [as standard with manufacturer] <Insert requirements>.
 - a. Finish: [Polished M21-O6x] [Satin M31-M34-O6x] [Statuary M31-C5] [Match Architect's sample] [As selected by Architect from full range of industry finishes] <Insert finish>.
 3. Brass Cladding: ASTM B36/B36M, alloy [as standard with manufacturer] <Insert requirements>.
 - a. Finish: [Polished M21-O6x] [Satin M31-M34-O6x] [As selected by Architect from full range of industry finishes] <Insert finish>.
 4. Stainless Steel Cladding: ASTM A240/A240M or ASTM A666, Type 304.
 - a. Finish: [ASTM A480/480M No. 4 directional satin finish] [ASTM A480/480M No. 8 mirrorlike reflective, nondirectional polish] <Insert finish>.

2.04 GLASS

- A. Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated surfaces), Type I (transparent), Quality-Q3, tested for surface and edge compression in accordance with ASTM C1048 and for impact strength in accordance with 16 CFR 1201 for Category II materials.
1. Class 1: Clear monolithic.
 - a. Thickness: [**10**] [**12**] [**16**] [**19**] mm.
 - b. Locations: [As indicated] <Insert locations>.
 2. Class 2: Tinted monolithic.
 - a. Color: [Gray] [Bronze] <Insert color>.
 - b. Thickness: [**10**] [**12**] mm.
 - c. Locations: [As indicated] <Insert locations>.
 - d. Visible Light Transmittance: <Insert number> percent minimum.
 - e. Solar Heat-Gain Coefficient: <Insert value> maximum.
 - f. Outdoor Visible Reflectance: <Insert number> percent maximum.
 3. Exposed Edges: Machine ground and flat polished.
 4. Butt Edges: Flat ground.
 5. Corner Edges: Lap-joint corners with exposed edges polished.

2.05 ENTRANCE DOOR HARDWARE

- A. General: Entrance door hardware units in sizes, quantities, and types recommended by manufacturer for all-glass entrance systems indicated. For exposed parts, match metal and finish of fittings.
- B. Concealed Floor Closers and Top Pivots: Center hung; ANSI/BHMA A156.4, Grade 1; including cases, bottom arms, top walking beam pivots, plates, and accessories required for complete installation.
1. Swing: [**Single**] [**Double**] acting.
 - a. Positive Dead Stop: Coordinated with hold-open angle if any, or at angle selected.
 2. Hold Open: [Automatic, at angle selected] [Selective] [None].
 3. Opening-Force Requirements:
 - a. Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion[**and not more than 15 lbf to open the door to its minimum required width**].
- C. Concealed Overhead Holder: ANSI/BHMA A156.8, Grade 1, with dead-stop setting coordinated with concealed floor closer.
- D. Push-Pull Set: [As selected from manufacturer's full range] [As indicated] <Insert description>.

- E. Single-Door and Active-Leaf Locksets: [Center-housing deadbolt with pulls] [Center-housing combination deadbolt and latchbolt with lever handles] [Bottom-fitting or bottom-rail deadbolt] <Insert description>.
 - 1. Deadbolt operated by key outside and [key] [thumbturn] inside.
 - F. Inactive-Leaf Locksets: Bottom-fitting or bottom-rail deadbolt.
 - 1. Deadbolt operated by key outside and [key] [thumbturn] inside.
 - G. Cylinders: [As specified in Section 08 71 00 "Door Hardware."] [As specified in Section 08 71 11 "Door Hardware (Descriptive Specification)."] [Six-pin cylinder, ANSI/BHMA A156.5, Grade 1.] <Insert requirements.>
 - H. Exit Devices: UL 305.
 - 1. Function: Operation by push-pull when [inside operator is locked down (dogged)] [inside operator is locked down (dogged); outside operation by key].
 - 2. Latching: At [threshold or floor plate] [door head] [threshold or floor plate and door head].
 - 3. Style: [Exposed vertical rod] [Concealed vertical rod in housing style indicated] <Insert style>.
 - 4. Provide exit devices on both leaves of pairs of doors.
 - I. Threshold: Not more than 1/2 inch high.
- 2.06 BUTT-GLAZING SEALANTS
- A. Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C920, Type S, Grade NS, Class 25, for Uses NT, G, and A.
- 2.07 FABRICATION
- A. Provide holes and cutouts in glass to receive hardware, fittings, and accessory fittings before tempering glass. Do not cut, drill, or make other alterations to glass after tempering.
 - 1. Fully temper glass using horizontal (roller-hearth) process, and fabricate so that when glass is installed, roll-wave distortion is parallel with bottom edge of door or lite.
 - B. Factory assemble components and factory install hardware and fittings to greatest extent possible.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF EXTERIOR ALL-GLASS ENTRANCE AND STOREFRONT SYSTEMS

- A. Install all-glass entrance and storefront systems and associated components according to manufacturer's written instructions.

- B. Set units level, plumb, and true to line, with uniform joints.
- C. Maintain uniform clearances between adjacent components.
- D. Lubricate hardware and other moving parts in accordance with manufacturer's written instructions.
- E. Set, seal, and grout floor closer cases as required to suit hardware and substrate indicated.
- F. Install butt-joint sealants according to manufacturer's written instructions and as specified in Section 07 92 00 "Joint Sealants" to produce weathertight installation.

3.03 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests.
- B. Tests: Perform the following tests on [representative areas of exterior all-glass storefront systems] [mockups] <Insert requirements>.
 - 1. Water-Spray Test: After completion of all-glass storefront installation and nominal curing of sealant and glazing compounds, but before installation of interior finishes, test storefront for water leaks in accordance with AAMA 501.2.
 - a. Perform test for total areas [as designated by Architect] <Insert description>.
- C. Inspection Agency: **[Owner will engage] [Engage]** a qualified inspector to perform inspections.
- D. Inspections:
 - 1. Egress Door Inspections: Inspect each exterior all-glass entrance door equipped with panic hardware, located in an exit enclosure, electrically controlled, and equipped with special locking arrangements, in accordance with NFPA 101, Ch. 7 "Means of Egress," Section "Means of Egress Components," Article "Inspection of Door Openings."
- E. Exterior all-glass entrance and storefront systems will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.04 ADJUSTING AND CLEANING

- A. Adjust all-glass entrance doors and hardware to function smoothly and fit tightly at contact points and weather stripping.
 - 1. For exterior all-glass entrance doors accessible to people with disabilities, adjust closers to provide a three-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch measured to the leading door edge.
- B. Remove excess sealant and glazing compounds and dirt from surfaces.

END OF SECTION

SECTION 08 42 29.23

SLIDING AUTOMATIC ENTRANCES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Sliding automatic entrances.
- B. Related Requirements:
 - 1. Section 03 30 00 "Cast-in-Place Concrete" for **[installing recessed metal frames for control mats in concrete] [and] [forming recesses in concrete for recessed thresholds]**.
 - 2. Section 08 71 13 "Automatic Swing Door Operators" for automatic door operators furnished separately from doors and frames.

1.02 DEFINITIONS

- A. AAADM: American Association of Automatic Door Manufacturers.
- B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
- C. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.
- D. For automatic door terminology, refer to BHMA A156.10 for definitions of terms.

1.03 COORDINATION

- A. Coordinate sizes and locations of recesses in concrete floors for **[recessed sliding tracks] [and] [recessed control mats]** that control automatic entrances. Concrete, reinforcement, and formwork requirements are specified elsewhere.
- B. Templates: Distribute for doors, frames, and other work specified to be factory prepared for installing automatic entrances.
- C. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish. Coordinate hardware for automatic entrances with hardware required for rest of Project.
- D. Electrical System Roughing-in: Coordinate layout and installation of automatic entrances with connections to power supplies **[and access-control system] [and remote activation devices] [and remote monitoring systems]**.
- E. System Integration: Integrate sliding automatic entrances with other systems as required for a complete working installation.
 - 1. Provide electrical interface control capability for activation of sliding automatic entrances by security access system on doors with electric locking.
 - 2. Provide electrical interface to deactivate door operators on activation of fire alarm system.

3. Provide electrical interface to allow for remote monitoring of automatic entrance door panel status.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.05 ACTION SUBMITTALS

- A. Product Data: Sliding automatic entrances.
- B. Product Data Submittals: For each product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic entrances.
 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- C. Sustainable Design Submittals:
- D. Shop Drawings: For sliding automatic entrances.
 1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
 2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
 4. Indicate locations of activation and safety devices.
 5. Include hardware schedule and indicate hardware types, functions, quantities, and locations.
- E. Samples for Initial Selection: For units with factory-applied **[color]** **[and]** **[metal-clad]** finishes.
 1. Include Samples of hardware and accessories involving color or finish selection.
- F. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- G. Delegated Design Submittals: For automatic entrances.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer]** **[manufacturer]** **[Certified Inspector]**.
- B. Product Certificates: For each type of automatic entrance. **[Include emergency-exit features of automatic entrances serving as a required means of egress.]**
- C. Product Test Reports: For each type of automatic entrance, for tests performed by a qualified testing agency.
- D. Field quality-control reports.
- E. Sample Warranties: For manufacturer's special warranties.

1.07 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For automatic entrances, safety devices, and control systems to include in operation and maintenance manuals.

1.08 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer with Company Certificate issued by AAADM indicating that manufacturer has a Certified Inspector on staff.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation and maintenance of units required for this Project **[and who employs a Certified Inspector]**.
 - 1. Maintenance Proximity: Not more than **[two]** <Insert number> hours' normal travel time from Installer's place of business to Project site.
- C. Certified Inspector Qualifications: Certified by AAADM.

1.09 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of automatic entrances that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Faulty operation of operators, controls, and hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 - 2. Warranty Period: **[Two]** <Insert number> years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Warranty Period: **[Five] [10] [20]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain sliding **[folding] [and] [swinging]** automatic entrances from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Power-Operated Door Standard: BHMA A156.10.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design automatic entrances.
- D. Structural Performance: Automatic entrances to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated in accordance with **[ASCE/SEI 7]** <Insert requirement>.
 - 1. Seismic Loads: <Insert loads>.
 - 2. Wind Loads: <Insert loads>.
- E. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone **[1] [2] [3] [4]** for **[basic] [enhanced]** protection.
 - 1. Large-Missile Test: For glazing located within **[30 feet]** <Insert dimension> of grade.
 - 2. Small-Missile Test: For glazing located between 30 feet and **[60 feet]** <Insert dimension> above grade.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces]** <Insert temperature change>.
- G. Operating Temperature Range: Automatic entrances to operate within **[minus 20 to plus 122 deg F]** <Insert temperature range>.
- H. Energy Performance: Certified and labeled by manufacturer for energy performance as follows:
 - 1. Thermal Transmittance (U-Factor):
 - a. Entrance Doors: U-factor of not more than **[0.63 Btu/sq. ft. x h x deg F] [0.68 Btu/sq. ft. x h x deg F] [0.77 Btu/sq. ft. x h x deg F] [0.83 Btu/sq. ft. x h x deg F] [0.90 Btu/sq. ft. x h x deg F]** <Insert value> as determined in accordance with NFRC 100.
 - 2. Solar Heat-Gain Coefficient (SHGC):
 - a. Entrance Doors: SHGC of not more than **[0.21] [0.25] [0.35] [0.40] [0.45]** <Insert value> as determined in accordance with NFRC 200.
 - 3. Air Leakage:
 - a. Power-Operated Sliding Doors: Air leakage of not more than **[1.0 cfm/sq. ft.]** <Insert value> at a static-air-pressure differential of 1.57 lbf/sq. ft..
 - 4. Condensation Resistance Factor (CRF):
 - a. Entrance Doors: CRF of not less than **[57] [63] [68]** <Insert value> as determined in accordance with AAMA 1503.
- I. Opening Force:

1. Power-Operated Doors: Not more than 50 lbf required to manually set door in motion if power fails, and not more than 15 lbf required to open door to minimum required width.
2. Breakaway Device for Power-Operated Doors: Not more than 50 lbf required for a breakaway door or panel to open.

J. Entrapment-Prevention Force:

1. Power-Operated Sliding Doors: Not more than 30 lbf required to prevent stopped door from closing.

2.03 SLIDING AUTOMATIC ENTRANCES

A. General: Provide manufacturer's standard automatic entrances, including doors, sidelites, framing, headers, carrier assemblies, roller tracks, door operators, controls, and accessories required for a complete installation.

B. Sliding, Power-Operated Automatic Entrances **<Insert drawing designation>**:

1. Configuration, Single-Sliding: Single-sliding door with one sliding leaf **[, transom,]** **[and]** **[pocketed]** sidelite.
 - a. Traffic Pattern: **[One]** **[Two]** way.
 - b. Emergency Breakaway Capability: **[As indicated on Drawings]** **[Sliding leaf only]** **[Sliding leaf and sidelite]**.
 - c. Mounting: **[Between jambs]** **[Surface]**.
2. Configuration, Biparting-Sliding: Biparting-sliding doors with two sliding leaves **[, transom,]** **[and]** **[pocketed]** sidelites on each side.
 - a. Traffic Pattern: **[One]** **[Two]** way.
 - b. Emergency Breakaway Capability: **[As indicated on Drawings]** **[Sliding leaves only]** **[Sliding leaves and sidelites]**.
 - c. Mounting: **[Between jambs]** **[Surface]**.
3. Configuration, Telescoping: **[Single-telescoping-sliding door with two]** **[Biparting-telescoping-sliding doors with four]** sliding leaves **[, transom,]** and sidelite(s).
 - a. Traffic Pattern: **[One]** **[Two]** way.
 - b. Emergency Breakaway Capability: **[As indicated on Drawings]** **[Center leaves only]** **[All leaves]**.
 - c. Mounting: Between jambs.
4. Operator Features:
 - a. Power opening and closing.
 - b. Drive System: **[Chain]** **[or]** **[belt]**.
 - c. Adjustable opening and closing speeds.

- d. Adjustable hold-open time between zero and 30 seconds.
 - e. Obstruction recycle.
 - f. On-off/hold-open switch to control electric power to operator **[, key operated]**.
 - g. <Insert features required>.
5. Sliding-Door Carrier Assemblies and Overhead Roller Tracks: Carrier assembly that allows vertical adjustment; consisting of nylon- or delrin-covered, ball-bearing-center steel wheels operating on a continuous roller track, or ball-bearing-center steel wheels operating on a nylon- or delrin-covered, continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly.
- a. Rollers: Minimum of two ball-bearing roller wheels and two antirise rollers for each active leaf.
6. Sliding-Door Threshold: Threshold members and bottom-guide-track system with stainless steel, ball-bearing-center roller wheels.
- a. Configuration, Threshold: Saddle-type threshold across door opening and **[surface-mounted] [recessed]** guide-track system at sidelites.
 - b. Configuration, No Threshold: No threshold across door opening and **[surface-mounted] [recessed]** guide-track system at sidelites.
7. Controls: Activation and safety devices **[as indicated on Drawings and]** in accordance with BHMA standards.
- a. Activation Device, Motion Sensor: Mounted on each side of door header to detect pedestrians in activating zone and to open door.
 - b. Activation Device, Control Mat: Installed on ingress side of door to detect pedestrians in activating zone and to open door.
 - c. Activation Device, Switch: **[Push-plate switch] [Push-button switch] [Key switch] [Touchless switch] [on each side of door]** to activate door operator.
 - d. Safety Device, Photoelectric Beams: Two photoelectric beams mounted in sidelite jambs on each side of door to detect pedestrians in presence zone and to prevent door from closing.
 - e. Safety Device, Presence Sensor Under Door Header and Photoelectric Beams: Presence sensor mounted to underside of door header and two photoelectric beams mounted in sidelite jambs on one side of the door to detect pedestrians in presence zone and to prevent door from closing.
 - f. Safety Device, Presence Sensor on Sides of Door Header and Photoelectric Beams: Presence sensor mounted on each side of door header and two photoelectric beams mounted in sidelite jambs on one side of the door to detect pedestrians in presence zone and to prevent door from closing.
 - g. Safety Device, Control Mat(s): Control mat(s) installed on egress side of door to detect pedestrians in presence and safety zones and to prevent door from closing.

- h. Sidelite Safety Device: Presence sensor, mounted above each sidelite on side of door opening through which doors travel, to detect obstructions and to prevent door from opening.
 - i. Opening-Width Control: Two-position switch that in the normal position allows sliding doors to travel to full opening width and in the alternate position reduces opening to a selected partial opening width.
8. Finish: Finish framing, door(s), and header with [Class I, clear anodic finish] [Class II, clear anodic finish] [Class I, color anodic finish] [Class II, color anodic finish] [baked-enamel or powder-coat finish] [high-performance organic finish (two-coat fluoropolymer)] [high-performance organic finish (three-coat fluoropolymer)] [finish matching adjacent curtain wall] [finish matching adjacent storefront].
- a. Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>.
9. Metal Cladding and Finish: Clad framing, door(s), and header with [No. 4 directional-satin-finish stainless steel sheet] [No. 8 mirrorlike reflective, nondirectional-polish-finish stainless steel sheet] [satin-brass sheet] [polished-brass sheet] [satin-bronze sheet] [polished-bronze sheet] [metal sheet in finish matching Architect's sample] [metal sheet in finish as selected by Architect from manufacturer's full range] [metal sheet in finish matching adjacent storefront] <Insert finish>.

2.04 ENTRANCE COMPONENTS

- A. Framing Members: Extruded aluminum, minimum 0.125 inch thick and reinforced as required to support imposed loads.
 - 1. Nominal Size: [As indicated on Drawings] [**1-3/4 by 4-1/2 inches**] [**1-3/4 by 6 inches**] <Insert dimensions>.
 - 2. Extruded Glazing Stops and Applied Trim: Minimum 0.062-inch wall thickness.
- B. Stile and Rail Doors: 1-3/4-inch-thick, glazed doors with minimum 0.125-inch-thick, extruded-aluminum tubular stile and rail members. Mechanically fasten corners with reinforcing brackets that are welded, or incorporate concealed tie-rods that span full length of top and bottom rails.
 - 1. Glazing Stops and Gaskets: [**Beveled**] [**Square**], snap-on, extruded-aluminum stops and preformed gaskets.
 - 2. Stile Design: [As indicated on Drawings] [Thin stile, less than **1-3/4-inch** nominal width] [**Narrow stile, 2-1/8-inch** nominal width] [Medium stile, **3-1/2-inch** nominal width] [Wide stile, more than **4-inch** nominal width].
 - 3. Rail Design: [As indicated on Drawings] [**5-inch** nominal height] [**6-1/2-inch** nominal height] [**10-inch** nominal height].
 - 4. Muntin Bars: Horizontal tubular rail member for each door; match stile design and finish.
- C. All-Glass Sliding Doors: Fabricated from 1/2-inch-thick tempered glass, with polished vertical edges and minimum 0.125-inch-thick, extruded-aluminum top and bottom rails.
 - 1. Rail Design: [**3-1/2-inch**] [**5-inch**] nominal height.
- D. Sidelite(s): 1-3/4-inch-deep sidelite(s) with minimum 0.125-inch-thick, extruded-aluminum tubular stile and rail members matching door design.

1. Glazing Stops and Gaskets: [Same materials and design as for stile and rail door] [Beveled, snap-on, extruded-aluminum stops and preformed gaskets] [Square, snap-on, extruded-aluminum stops and preformed gaskets].
 2. Muntin Bars: Horizontal tubular rail members for each sidelite; match stile design.
- E. Transom: 1-3/4-inch-deep transom with minimum 0.125-inch-thick, extruded-aluminum tubular stile and rail members matching door design.
1. Glazing Stops and Gaskets: [Same materials and design as for stile and rail door] [Beveled, snap-on, extruded-aluminum stops and preformed gaskets] [Square, snap-on, extruded-aluminum stops and preformed gaskets].
- F. Headers: Fabricated from minimum 0.125-inch-thick extruded aluminum and extending full width of automatic entrance units to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
1. Mounting: [Surface mounted] [Concealed, with one side of header flush with framing].
 2. Capacity: Capable of supporting doors of up to **175 lb per leaf over spans of up to 14 feet** <Insert load and span required> without intermediate supports.
 - a. Provide sag rods for spans exceeding 14 feet.
- G. Brackets and Reinforcements: High-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- H. Signage: As required by cited BHMA standard.
1. Application Process: [Decals] [Silk-screened] [Door manufacturer's standard process] <Insert requirement>.
 2. Provide sign materials with instructions for field application after glazing is installed.

2.05 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Extrusions: ASTM B221.
 2. Sheet: ASTM B209.
- B. Steel Reinforcement: Reinforcement with corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Use surface preparation methods in accordance with recommendations in SSPC-SP COM and prepare surfaces in accordance with applicable SSPC standard.
- C. Stainless Steel Bars: ASTM A276/A276M or ASTM A666, **[type 304] [type 316]** <Insert type>.
- D. Stainless Steel Tubing: ASTM A554, [Grade MT 304] [Grade MT 316] <Insert grade>.
- E. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, **[type 304] [type 316]** <Insert type>, stretcher-leveled standard of flatness, in entrance manufacturer's standard thickness.
- F. Brass Sheet: ASTM B36/B36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper), in entrance manufacturer's standard thickness.

- G. Bronze Sheet: ASTM B36/B36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper), in entrance manufacturer's standard thickness.
- H. Expanded Aluminum Mesh: **[Expanded] [Expanded and flattened]** aluminum sheet in accordance with the geometry of ASTM F1267.
- I. Polycarbonate Sheet: ASTM C1349, Appendix X1, type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on both surfaces.
- J. Glazing: As specified in **[Section 08 80 00 "Glazing."]** **[Section 08 88 53 "Security Glazing."]**
- K. Sealants and Joint Fillers: As specified in Section 07 92 00 "Joint Sealants."
- L. Nonmetallic, Shrinkage-Resistant Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout; complying with ASTM C1107/C1107M; of consistency suitable for application.
- M. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- N. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.06 DOOR OPERATORS AND CONTROLS

- A. General: Provide operators and controls, which include activation and safety devices, in accordance with BHMA standards, for condition of exposure, and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.
- B. Door Operators: Provide door operators of size recommended by manufacturer for door size, weight, and movement.
 - 1. Door Operator Performance: Door operators to open and close doors and maintain them in fully closed position when subjected to Project's design wind loads.
 - 2. Electromechanical Operators: Concealed, self-contained, overhead units powered by fractional-horsepower, permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor; with solid-state microprocessor controller; complying with UL 325; and with manual operation with power off.
- C. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed by their plastic housings; adjustable to provide detection-field sizes and functions required by BHMA A156.10.
 - 1. Provide capability for switching between bi- and unidirectional detection.
 - 2. For one-way traffic, sensor on egress side to not be active when doors are fully closed.
- D. Presence Sensors: Self-contained, active-infrared scanner units; adjustable to provide detection-field sizes and functions required by BHMA A156.10. Sensors remain active at all times.
- E. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams to not be active when doors are fully closed.

- F. Control Mats: 1/2-inch-thick, synthetic-rubber or flexible-plastic mat in safety-ribbed surface pattern, with extruded-aluminum frame; with pressure switches for low-voltage control wiring; and complying with performance requirements of BHMA A156.10.
1. Frame: [Recessed to fit flush with floor, with concealed anchors] [Surface mounted, with tapered safety edge].
 2. Size: As indicated, but no smaller than required by BHMA A156.10, including Appendix A.
 3. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities].
- G. Push-Plate Switch: Momentary-contact door-control switch with flat push-plate actuator [**with contrasting-colored, engraved message**].
1. Configuration, Round: Round push plate with 4-by-4-inch junction box.
 - a. Mounting: [As indicated on Drawings] [Recess mounted, semiflush in wall] [Surface mounted on wall].
 2. Configuration, Square: Square push plate with 4-by-4-inch junction box.
 - a. Mounting: [As indicated on Drawings] [Recess mounted, semiflush in wall] [Surface mounted on wall].
 3. Configuration, Rectangular: Rectangular push plate with 2-by-4-inch junction box.
 - a. Mounting: [As indicated on Drawings] [Recess mounted, semiflush in wall] [Recess mounted in door jamb] [Surface mounted on wall] [Surface mounted on post] [Surface mounted on guide rail].
 4. Push-Plate Material: [**Stainless steel**] [**Plastic**], as selected by Architect from manufacturer's full range.
 5. Message: [Plain face with no message.] ["Push to Open."] [International symbol of accessibility.] [International symbol of accessibility and "Push to Open."]
- H. Touchless Switch: Hands-free-activation door-control switch with flat motion sensor faceplate [**with contrasting-colored, engraved message**].
1. Configuration: [**6-inch round**] [**4.56-by-4.56-inch** (double gang) square] [**2.77-by-4.56-inch** (single gang) rectangular] [**1.68-by-4.56-inch** jamb-style] faceplate.
 - a. Mounting: [As indicated on Drawings] [Recess mounted in wall] [Recess mounted in door jamb] [Surface mounted on wall].
 2. Faceplate Material: [**Stainless steel**] [**Plastic**] [**Stainless steel with backlight acrylic window**], as selected by Architect from manufacturer's full range.
 3. Message: ["Wave to Open"] ["Wave to Open" and wave symbol] [International symbol of accessibility] [International symbol of accessibility, "Wave to Open," and wave symbol].
- I. Push-Button Switch: Momentary-contact door-control switch with one red-button actuator; enclosed in nominal [**2-by-4-inch**] [**4-by-4-inch**] junction box.
1. Provide faceplate engraved with "Press to Open" letters [**and international symbol of accessibility**] in contrasting color.

2. Provide blue plastic cover engraved with "Press Button to Open" in white letters and international symbol of accessibility.
 3. Mounting: [As indicated on Drawings] [Surface mounted on wall] [Surface mounted on post] [Surface mounted on guide rail] [Recess mounted in wall].
 4. Faceplate Material: **[Stainless steel]** **[Painted metal]**, as selected by Architect from manufacturer's full range.
- J. Key Switch: Recess-mounted, door-control switch with key-controlled actuator; enclosed in 2-by-4-inch junction box. Provide faceplate engraved with letters indicating switch functions.
1. Faceplate Material: **[Stainless steel]** **[Painted metal]**, as selected by Architect from manufacturer's full range.
 2. Functions: [On-off, momentary contact] [On-off, maintained contact] [Two-way automatic, hold open, one-way exit, and off] [Two-way automatic, hold open, one-way exit, off, full open, and partial open].
 3. Mounting: [As indicated on Drawings] [Recess mounted, semiflush in wall] [Recess mounted in door jamb] [Surface mounted on wall] [Surface mounted on post].
- K. Wireless or Remote Radio Control Switch: Auxiliary radio control system consisting of header-mounted receiver and **[wall-mounted]** **[hand-held, battery-operated]** transmitter switch **[for each entrance] <Insert requirement>**.
1. Wall-Mounted Transmitter Switch: One red-button, momentary-contact actuator enclosed in 4-by-4-inch junction box. Provide blue plastic cover engraved with "Press Button to Open" in white letters and international symbol of accessibility.
- L. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.07 HARDWARE

- A. General: Provide units in sizes and types recommended by automatic entrance and hardware manufacturers for entrances and uses indicated. Finish exposed parts to match door finish **[unless otherwise indicated]**.
- B. Breakaway Device for Power-Operated Doors: Device that allows door to swing out in direction of egress to full 90 degrees from any operating position. Maximum force to open door to be as stipulated in "Performance Requirements" Article. Interrupt powered operation of door operator while in breakaway mode.
1. Include **[one adjustable detent device mounted at the top of each breakaway panel]** **[two adjustable detent devices mounted in each breakaway panel; one top mounted and one bottom mounted]** to control breakaway force.
 - a. Panel Closer: Factory-installed concealed hydraulic door closer.
 - b. Limit Arms: Limit swing to 90 degrees, spring loaded with adjustable friction damping.
- C. Deadlocks: Deadbolt operated by exterior cylinder and interior thumb turn, with minimum 1-inch-long throw bolt; BHMA A156.5, Grade 1.
1. Cylinders: **[BHMA A156.5, Grade 1, six-pin mortise type.]** **[As specified in Section 08 71 00 "Door Hardware."]** **[As specified in Section 08 71 11 "Door Hardware (Descriptive Specification)."]**

- a. Keying: **[No master]** **[Integrate into building master]** key system.
 - b. Keys: **[Two]** **[Three]** **<Insert number>** for each cylinder.
 2. Deadbolts: **[Laminated-steel hook]** **[Steel]**, mortise type, BHMA A156.5, Grade 1.
 3. Two-Point Locking for Stile and Rail Sliding Doors: Mechanism in stile of active door leaf that automatically extends second lockbolt into **[overhead carrier assembly]** **[threshold]**.
 4. Three-Point Locking for Stile and Rail Sliding Doors: Mechanism in stile of active door leaf that automatically extends lockbolts into overhead carrier assembly and threshold.
 5. Lock/Unlock Indicator: Lock position indicators integrated with locking system. Stile is mounted on secure side of door. Visual display of lock position as follows: "OPEN" in black letters when unlocked, and "LOCKED" in red letters when locked.
 6. Armored Strike: Reinforced security strike plate.
- D. Automatic Locking: Electrically controlled device mounted in header that automatically locks sliding door in closed position, preventing door panels from sliding manually. Provide fail-**[secure]** **[safe]** operation if power fails.
1. Power Interruption: **[Lock to be engaged, preventing doors from sliding manually]** **[Lock to be disengaged, allowing doors to slide manually]**.
 2. Means of Egress: Standard breakaway feature.
- E. Access-Control Locking: Electrically controlled device mounted in header that automatically locks sliding door in closed position, preventing door panels from sliding manually. Provide fail-**[secure]** **[safe]** operation if power fails.
1. Include concealed, vertical-rod, tamper-proof exit devices, complying with UL 305, with latching into threshold and overhead carrier assembly and released by **[full-width panic bar]** **[push paddle]**, **[surface mounted]** **[recessed]** **[flush mounted and concealed within horizontal muntin bar]**, prohibiting manual breakout of door(s) from exterior.
 2. Power Interruption: **[Lock to be engaged, preventing doors from sliding manually]** **[Lock to be disengaged, allowing doors to slide manually]**.
 3. Means of Egress: Vertical rod exit device.
 4. Include locking devices for sidelites to prevent manual breakout.
- F. Uninterrupted Power Supply: UL 1778, fully integrated unit mounted **[within header]** **[above ceiling]**.
1. Power Interruption: Supply power to operator, controls, activation device, and safety systems of sliding automatic door for up to **[1.5]** **<Insert number>** hours of normal operation.
 2. Include low-battery shutdown feature to safely open or close door prior to complete battery discharge.
 3. Include audible battery replacement alarm to indicate that battery will no longer accept a charge and replacement is required.
- G. Dustproof Strikes for All-Glass Sliding Doors: **[Recessed, floor type, BHMA A156.16, Grade 1, to receive deadbolt.]** **[As specified in Section 08 71 00 "Door Hardware."]** **[As specified in Section 08 71 11 "Door Hardware (Descriptive Specification)."]**

- H. Weather Stripping: Replaceable components.
 - 1. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

2.08 ACCESSORIES

A. Guide Rails:

- 1. **[Anodized aluminum] [Baked-enamel or powder-coated aluminum] [Stainless steel]**, fabricated from **[bars] [or] [tubing]**, minimum 30 inches high, and finished to match doors unless otherwise indicated; positioned and projecting from face of door jamb for distance as indicated **[, but not less than that required by BHMA A156.10 for type of door and direction of travel]** <Insert requirement>; with filler panel.
 - a. Filler Panel: **[Expanded aluminum mesh] [Clear polycarbonate sheet] [Colored polycarbonate sheet]** <Insert material>.
 - 1) Orient expanded aluminum mesh with long dimension of diamonds **[parallel to top rail] [perpendicular to top rail]**.
 - 2) Color: **[Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color>.
 - b. Mounting: **[As indicated on Drawings] [Jamb and floor] [Floor, freestanding]**.
 - c. Aluminum Finish: **[Class I, clear anodic finish] [Class II, clear anodic finish] [Class I, color anodic finish] [Class II, color anodic finish] [Baked-enamel or powder-coat finish] [Finish matching door and frame]** <Insert finish>.
 - 1) Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities]** <Insert color>.
 - d. Stainless Steel Finish: **[No. 4 directional-satin-finish stainless steel] [Finish matching door and frame]** <Insert finish>.
- 2. See **[Section 05 52 13 "Pipe and Tube Railings."]** **[Section 05 73 00 "Decorative Metal Railings."]**

2.09 FABRICATION

- A. General: Factory fabricate automatic entrance components to designs, sizes, and thicknesses indicated and to comply with indicated standards.
 - 1. Form aluminum shapes before finishing.
 - 2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 - 3. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws **[, finished to match framing] [, fabricated from stainless steel]**.
 - a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.

- b. Reinforce members as required to receive fastener threads.
 4. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- B. Framing: Provide automatic entrances as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.
1. Fabricate tubular and channel frame assemblies with welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support required loads.
 2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 3. Form profiles that are sharp, straight, and free of defects or deformations.
 4. Provide components with concealed fasteners and anchor and connection devices.
 5. Fabricate components with accurately fitted joints, with ends coped or mitered to produce hairline joints free of burrs and distortion.
 6. Fabricate exterior components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior. Provide anchorage and alignment brackets for concealed support of assembly from building structure.
 7. Allow for thermal expansion of exterior units.
- C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.
- D. Metal Cladding: Factory-fabricated and -installed metal cladding, completely covering all visible surfaces as part of prefabricated entrance assembly before shipment to Project site.
1. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 2. Form profiles that are sharp, straight, and free of defects or deformations.
 3. Provide components with concealed fasteners and anchor and connection devices.
 4. Fabricate components with accurately fitted joints, with ends coped or mitered to produce hairline joints free of burrs and distortion.
 5. Fabricate exterior components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior. Allow for thermal expansion at exterior entrances.
- E. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.
- F. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated, in accordance with NGA's "GANA Glazing Manual."
- G. Hardware: Factory install hardware to greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site. Cut, drill, and tap for factory-installed hardware before applying finishes.
1. Provide sliding-type weather stripping, mortised into door, at perimeter of doors [**and breakaway sidelites**].

H. Controls:

1. General: Factory install activation and safety devices in doors and headers as required by BHMA A156.10 for type of door and direction of travel.
2. Install photoelectric beams in vertical jambs of sidelites, with dimension above finished floor as follows:
 - a. Top Beam: **[48 inches]** <Insert dimension>.
 - b. Bottom Beam: **[24 inches]** <Insert dimension>.

2.10 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm]** **[AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm]** **[AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.
- D. High-Performance Organic Finish, Two-Coat: Fluoropolymer finish complying with **[AAMA 2604]** **[AAMA 2605]** and containing not less than **[50]** **[70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.
- E. High-Performance Organic Finish, Three-Coat: Fluoropolymer finish complying with AAMA 2605 and containing not less than **[50]** **[70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic entrance installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install automatic entrances in accordance with manufacturer's written instructions and cited BHMA A156.10 for direction of pedestrian travel, including signage, controls, wiring, and connection to the building's power supply.
 - 1. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.
 - 2. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
 - 3. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous coating.
- B. Entrances: Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.
 - 1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 - 2. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.
 - 3. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior.
 - 4. Level recesses for recessed thresholds using nonshrink grout.
- C. Door Operators: Connect door operators to electrical power distribution system.
- D. Access-Control Devices: Connect access-control devices to access-control system, as specified in Section 28 13 00 "Access Control Software and Database Management."
- E. Controls: Install and adjust activation and safety devices in accordance with manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel. Connect control wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- F. Guide Rails: Install rails in accordance with BHMA A156.10, including Appendix A, and manufacturer's written instructions unless otherwise indicated.
- G. Glazing: Install glazing as specified in [Section 08 80 00 "Glazing."] [Section 08 88 53 "Security Glazing."]

- H. Sealants: Comply with requirements specified in Section 07 92 00 "Joint Sealants" to provide weathertight installation.
 - 1. Set **[thresholds,] [bottom-guide-track system,]** framing members and flashings in full sealant bed.
 - 2. Seal perimeter of framing members with sealant.
- I. Signage: Apply signage on both sides of each door **[and breakaway sidelite]**, as required by cited BHMA standard for direction of pedestrian travel.
- J. Wiring within Automatic Entrance Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's written limitations on bending radii. Provide and use lacing bars and distribution spools.

3.03 FIELD QUALITY CONTROL

- A. Certified Inspector: **[Owner will engage] [Engage]** a Certified Inspector to test and inspect components, assemblies, and installations, including connections.
- B. Perform the following tests and inspections **[with the assistance of a factory-authorized service representative]**:
 - 1. Test and inspect each automatic entrance, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.
- C. Automatic entrances will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.04 ADJUSTING

- A. Adjust hardware, moving parts, door operators, and controls to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 - 1. Adjust exterior doors for tight closure.
- B. Readjust door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- C. Occupancy Adjustments: When requested within **[12] <Insert number>** months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two] <Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.05 CLEANING

- A. Clean glass and metal surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.
 - 1. Comply with requirements in **[Section 08 80 00 "Glazing"] [Section 08 88 53 "Security Glazing"]** for cleaning and maintaining glass.

3.06 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service to include **[three] [six] [nine] [12]** months' full maintenance by skilled employees of automatic entrance Installer. Include **[monthly] [quarterly]** preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper automatic entrance operation. Parts and supplies to be manufacturer's authorized replacement parts and supplies.
1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
 2. Perform maintenance, including emergency callback service, during normal working hours.
 3. Include 24-hour-per-day, 7-day-per-week emergency callback service.

3.07 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic entrances.

END OF SECTION

SECTION 08 44 13

GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Glazed aluminum curtain wall systems:
 - a. Conventionally glazed.
 - b. Two-sided, structural-sealant-glazed.

B. Related Requirements:

1. Section 01 43 39 "Mockups" for preconstruction laboratory mockup testing.
2. Section 01 91 19.43 "Exterior Enclosure Commissioning."
3. Section 07 84 43 "Joint Firestopping" perimeter fire-containment systems field installed with glazed aluminum curtain walls.
4. Section 07 92 00 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants to the extent not specified in this Section.
5. Section 08 44 23 "Structural-Sealant-Glazed Curtain Walls" for four-sided structural-sealant-glazed curtain walls.
6. Section 08 44 33 "Sloped Glazing Assemblies" for sloped glazing.
7. Section 08 80 00 "Glazing" for curtain wall glazing.

1.02 ALLOWANCES

- A. [Preconstruction laboratory mockup] [Source quality-control] [and] [field quality-control] testing is part of testing and inspecting allowance.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.
 1. <Insert requirements>.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For glazed aluminum curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
 1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.

2. Include full-size isometric details of each type of vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
 1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- F. Delegated-Design Submittal: For glazed aluminum curtain walls, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Mockup Testing Submittals:
 1. Testing Program: Developed specifically for Project.
 2. Test Reports: Prepared by a qualified preconstruction testing agency for each mockup test.
 3. Record Drawings: As-built drawings of preconstruction laboratory mockups showing changes made during preconstruction laboratory mockup testing.
- B. Qualification Data:
 1. For Installer [and laboratory mockup testing agency] [and field testing agency].
 2. For professional engineer's experience with providing delegated-design engineering services of the kind indicated, including documentation that engineer is licensed in the **[jurisdiction] [state]** in which Project is located.
- C. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components from manufacturer.
 1. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall.

- D. Product Test Reports: For glazed aluminum curtain walls, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.
- E. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C1401. Include periodic quality-control reports.
- F. Source quality-control reports.
- G. Field quality-control reports.
- H. Sample Warranties: For special warranties.

1.06 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.
- B. Maintenance Data for Structural Sealant: For structural-sealant-glazed curtain walls to include in maintenance manuals. Include ASTM C1401 recommendations for post-installation-phase quality-control program.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AGM) contractors **[and that employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program]**.
- B. Laboratory Mockup Testing Agency Qualifications: Qualified in accordance with ASTM E699 for testing indicated **[and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025]**.
- C. Testing Agency Qualifications: Qualified in accordance with ASTM E699 for testing indicated **[and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025]** and acceptable to Owner and Architect.
- D. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- E. Structural-Sealant Glazing: Comply with ASTM C1401 for design and installation of structural-sealant-glazed curtain wall assemblies.

1.08 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.

2. Testing shall be performed on mockups in accordance with requirements in "Field Quality Control" Article.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups.
1. Build preconstruction laboratory mockups at testing agency facility; use personnel, products, and methods of construction that will be used at Project site.
 2. Size and Configuration: As indicated on Drawings.
 3. Notify Architect **[seven] <Insert number>** days in advance of the dates and times when preconstruction laboratory mockups will be constructed and tested.
- B. Preconstruction Laboratory Mockup Testing: Test preconstruction laboratory mockups according to requirements in "Performance Requirements" Article. Perform the following tests in the following order:
1. Structural, 50 percent: ASTM E330/E330M at 50 percent of positive test load.
 2. Air Leakage: ASTM E283.
 3. Water Penetration under Static Pressure: ASTM E331.
 4. Water Penetration under Dynamic Pressure: AAMA 501.1.
 5. Interstory Drift, 100 percent: AAMA 501.4 at 100 percent of design displacement. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 6. Vertical Interstory Movement: AAMA 501.7 at 100 percent of design displacement. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 7. Thermal Cycling: AAMA 501.5. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 8. Structural, 100 percent: ASTM E330/E330M at 100 percent of positive and negative test loads. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 - c. Water Penetration under Dynamic Pressure: AAMA 501.1.
 9. Structural, 150 percent: ASTM E330/E330M at 150 percent of positive and negative test loads.

10. Interstory Drift, 150 percent: AAMA 501.4 at 150 percent of design displacement.

C. Preconstruction Adhesion and Compatibility Testing: Submit to structural glazing sealant manufacturer, for testing indicated below, Samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that is in close proximity to or is touching the structural or nonstructural sealants of a structural glazed system.

1. Compatibility: Test materials or components using ASTM C1087.
2. Adhesion: Test for adhesion or lack of adhesion of a structural sealant to the surface of another material or component using ASTM C1135.
3. Submit no fewer than **[eight]** <Insert number> pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
6. Testing will not be required if data based on previous testing of current sealant products match those submitted.

1.10 WARRANTY

A. Special Assembly Warranty: **[Manufacturer]** **[Installer]** agrees to repair or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals **[, metal finishes,]** and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
2. Warranty Period: **[Two]** **[Five]** **[10]** <Insert number> years from date of Substantial Completion.

B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: **[Five]** **[10]** **[20]** <Insert number> years from date of Substantial Completion.

- C. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, peeling, or chipping.
 2. Warranty Period: **[Five] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design glazed aluminum curtain walls.
- B. General Performance: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Glazed aluminum curtain walls shall withstand movements of supporting structure, including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Structural Loads:
1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: **[As indicated on Drawings] <Insert loads>**.
- D. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
1. Deflection Normal to Wall Plane: Limited to **[1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans of greater than 13 feet 6 inches] <Insert deflection limit>**.
 2. Deflection Parallel to Glazing Plane: Limited to **[amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch] <Insert deflection limit>**.
 - a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.

3. Cantilever Deflection: Limited to $2l/175$ at unsupported cantilevers.
- E. Structural: Test in accordance with ASTM E330/E330M as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 2. When tested at **[150] <Insert number>** percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding **[0.2] <Insert number>** percent of span.
 3. Test Durations: As required by design wind velocity, but not less than **[10] <Insert number>** seconds.
- F. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than **[6.24 lbf/sq. ft.] [10 lbf/sq. ft.] [15 lbf/sq. ft.] <Insert value>**.
- G. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than **[6.24 lbf/sq. ft.] [10 lbf/sq. ft.] [15 lbf/sq. ft.] <Insert value>**.
 2. Maximum Water Leakage: **[In accordance with AAMA 501.1] [No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation].** Water leakage does not include water controlled by flashing and gutters or water that is drained to exterior.
- H. Interstory Drift: Accommodate design displacement of adjacent stories indicated.
1. Design Displacement: **[As indicated on Drawings] <Insert design displacement>**.
 2. Test Performance: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.4 at design displacement **[and 1.5 times the design displacement].**
- I. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7] <Insert requirement>**.
1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.6 at design displacement **[and 1.5 times the design displacement].**
 2. Vertical Interstory Movement: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.7 at design displacement **[and 1.5 times the design displacement].**
- J. Energy Performance: Certified and labelled by manufacturer for energy performance as follows:
1. Thermal Transmittance (U-factor):
 - a. Fixed Glazing and Framing Areas: U-factor for the system of not more than **[0.29 Btu/sq. ft. x h x deg F] [0.36 Btu/sq. ft. x h x deg F] [0.38 Btu/sq. ft. x h x deg F] [0.41 Btu/sq. ft. x h x deg F] [0.46 Btu/sq. ft. x h x deg F] [0.50 Btu/sq. ft. x h x deg F] <Insert value>** as determined in accordance with NFRC 100.

- b. Venting Windows: Whole window U-factor of not more than **[0.37 Btu/sq. ft. x h x deg F]** **[0.43 Btu/sq. ft. x h x deg F]** **[0.45 Btu/sq. ft. x h x deg F]** **[0.60 Btu/sq. ft. x h x deg F]** **[0.65 Btu/sq. ft. x h x deg F]** <Insert value> as determined in accordance with NFRC 100.
2. Solar Heat Gain Coefficient (SHGC):
 - a. Fixed Glazing and Framing Areas: SHGC for the system of not more than **[0.22]** **[0.25]** **[0.26]** **[0.29]** **[0.40]** **[0.45]** <Insert value> as determined in accordance with NFRC 200.
 - b. Venting Windows: Whole-window SHGC of not more than **[0.22]** **[0.27]** **[0.30]** **[0.40]** <Insert value> as determined in accordance with NFRC 200.
3. Air Leakage:
 - a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than **[0.06 cfm/sq. ft.]** <Insert value> at a static-air-pressure differential of **[1.57 lbf/sq. ft.]** **[6.24 lbf/sq. ft.]** <Insert value> when tested in accordance with ASTM E283.
 - b. Venting Windows: Whole-window air leakage of not more than **[0.3 cfm/sq. ft.]** <Insert value> at a static-air-pressure differential of **[6.24 lbf/sq. ft.]** <Insert value> when tested in accordance with AAMA/WDMA/CSA 101/I.S.2/A440.
4. Condensation Resistance Factor (CRF):
 - a. Fixed Glazing and Framing Areas: CRF for the system of not less than **[29]** **[55]** **[65]** **[80]** <Insert value> as determined in accordance with AAMA 1503.
 - b. Venting Windows: Whole-window CRF of not less than **[45]** **[52]** **[55]** <Insert value> as determined in accordance with AAMA 1503.
- K. Noise Reduction: Test in accordance with ASTM E90, with ratings determined by ASTM E1332, as follows:
 1. Outdoor-Indoor Transmission Class: Minimum **[26]** **[30]** **[34]** <Insert number>.
 2. Sound Transmission Class: Minimum **[31]** **[34]** **[37]** **[40]** <Insert number>.
- L. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of **[180 deg F]** <Insert temperature>.
 - b. Low Exterior Ambient-Air Temperature: **[0 deg F]** <Insert temperature>.
- M. Structural-Sealant Joints:
 1. Designed to carry gravity loads of glazing.
- N. Structural Sealant: ASTM C1184. Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.

1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate, because sealant-to-substrate bond strength exceeds sealant's internal strength.

2.02 SOURCE LIMITATIONS

- A. Obtain all components of curtain-wall system [**and storefront system**], including framing [**spandrel panels**] [**venting windows**] [**entrances**] [**sun control**] <Insert component> and accessories, from single manufacturer.

2.03 GLAZED ALUMINUM CURTAIN WALL SYSTEMS

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 1. Construction: [**Thermally broken**] [**Thermally improved**] [**Nonthermal**] <Insert description>.
 2. Glazing System: [**Retained mechanically with gaskets on four sides**] [**Retained mechanically with gaskets on two sides and structural sealant on two sides**].
 3. Glazing Plane: [**Front**] <Insert location>.
 4. Finish: [**Clear anodic finish**] [**Color anodic finish**] [**Baked-enamel or powder-coat finish**] [**High-performance organic finish**] [**Superior-performance organic finish**].
 5. System: [**Either stick or unitized system**] [**Stick system**] [**Unitized system**].
 6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 7. Steel Reinforcement: As required by manufacturer.
- B. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.
 1. Include snap-on aluminum trim that conceals fasteners.
- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- D. Insulated Spandrel Panels:
 1. Comply with Section 07 42 13.19 "Insulated Metal Wall Panels."
 2. Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
 - a. Overall Panel Thickness: [**As indicated**] [**1 inch**] <Insert thickness>.
 - b. Exterior Skin: Aluminum.
 - 1) Thickness: [**Manufacturer's standard for finish and texture indicated**] <Insert thickness>.
 - 2) Finish: [**Match framing system**] <Insert finish>.
 - 3) Texture: [**Smooth**] [**Embossed**] <Insert texture>.

- 4) Backing Sheet: **[1/8-inch-thick, tempered hardboard]** **[0.157-inch-thick, cement board]** **[0.125-inch-thick, corrugated, high-density polyethylene]** <Insert material>.
- c. Interior Skin: **[Aluminum]** **[Manufacturer's standard galvanized-steel sheet]**.
- 1) Thickness: **[Manufacturer's standard for finish and texture indicated]** <Insert thickness>.
 - 2) Finish: **[Matching curtain-wall framing]** **[Low-gloss, white baked enamel]** **[Mill finish]** <Insert finish>.
 - 3) Texture: **[Smooth]** **[Embossed]** <Insert texture>.
 - 4) Backing Sheet: **[1/8-inch-thick, tempered hardboard]** **[0.157-inch-thick, cement board]** **[1/2-inch-thick, gypsum board with proprietary fire-resistance-rated core]** **[0.125-inch-thick, corrugated, high-density polyethylene]** <Insert material>.
- d. Thermal Insulation Core: Manufacturer's standard **[rigid, closed-cell, polyisocyanurate board]** **[extruded-polystyrene board]** **[expanded-perlite, mineral-insulation board]** <Insert insulation>.
- e. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- 1) Flame-Spread Index: **[25]** <Insert value> or less.
 - 2) Smoke-Developed Index: **[50]** **[450]** <Insert value> or less.
- E. Venting Windows:
1. As specified in Section 08 51 13 "Aluminum Windows."
 2. Manufacturer's standard units, complying with AAMA/WDMA/CSA 101/I.S.2/A440, with self-flashing mounting fins, and as follows:
 - a. Window Type: **[Awning]** **[Casement]** **[As indicated on Drawings]** <Insert type>.
 - b. Minimum Performance Class: **[CW]** **[AW]** <Insert class>.
 - c. Minimum Performance Grade: **[30]** **[40]** **[60]** **[70]** **[80]** **[90]** **[As indicated on Drawings]** <Insert number>.
 - d. Hardware: Manufacturer's standard; of aluminum, stainless steel, die-cast steel, malleable iron, or bronze; including the following:
 - 1) Cam handle locking system.
 - 2) Multi-point locking system.
 - 3) Pole-operated, cam handle locking system, where rail is more than 72 inches above floor.
 - 4) Rotary operator.
 - 5) Steel or bronze operating arms.

- 6) Limit Devices: **[Concealed friction adjuster and adjustable stay bar]** **<Insert type>** limit devices designed to restrict sash opening.
 - (a) Limit clear opening to **[4 inches]** **<Insert dimension>** for ventilation; with custodial key release.
 - e. Weather Stripping: Provide full-perimeter weather stripping for each operable sash unless otherwise indicated.
 - f. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:
 - 1) Aluminum Wire Fabric: 18-by-18, 0.0445-inch-by-0.0445-inch; 18-by-16, 0.0445-inch-by-0.0515-inch; or 18-by-14, 0.0445-inch-by-0.0624-inch mesh of 0.013-inch-diameter, coated aluminum wire.
 - 2) Glass-Fiber Mesh Fabric: 18-by-16, 0.0445-inch-by-0.0515-inch or 18-by-14, 0.0445-inch-by-0.0624-inch mesh of PVC-coated, glass-fiber threads, woven and fused to form a fabric mesh; complying with ASTM D3656/D3656M.
 - 3) Fabric: Manufacturer's standard aluminum wire fabric or glass-fiber mesh fabric.
 - g. Glazing: **[As specified in Section 08 80 00 "Glazing"]** **[Same as adjacent glazed aluminum curtain-wall glazing]** **<Insert glazing>**.
 - h. Finish: **[Match adjacent glazed aluminum curtain-wall finish]** **<Insert finish>**.
- F. Entrance Door Systems: Comply with **[Section 08 41 13 "Aluminum-Framed Entrances and Storefronts"]** **[Section 08 42 13 "Aluminum-Framed Entrances"]**.

2.04 SUN CONTROL

- A. Sunshades: Assemblies consisting of manufacturer's standard outrigger brackets, louvers, and fascia, designed for attachment to curtain wall with mechanical fasteners.
 - 1. Orientation: **[Horizontal]** **[Vertical]**.
 - 2. Projection from Wall: **[As indicated on Drawings]** **[20 inches]** **[25 inches]** **[30 inches]** **[35 inches]** **<Insert projection>**.
 - 3. Outriggers: **[Straight with square edges]** **[Straight with rounded edge]** **[Curved]** **[Wedge]** **<Insert shape>**.
 - 4. Louvers:
 - a. Number: **[Three]** **[Four]** **[Five]** **<Insert number>** louvers per unit.
 - b. Shape: **[Planar]** **[Arched]** **[Circular]** **[Airfoil]** **[Square]**.
 - c. Width: **[6 inches]** **[8 inches]** **[10 inches]** **<Insert dimension>**.
 - d. Mounting Angle: **[25]** **[30]** **[35]** **<Insert number>** degrees.
 - 5. Fasciae: **[Rectangular]** **[Bullnose]** **[Angular]** **[Circular]**.
 - 6. Finish: **[Match adjacent glazed aluminum curtain wall]** **<Insert finish>**.
 - 7. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

8. Steel Reinforcement: As required by manufacturer.
- B. Light Shelves: Light-reflecting assemblies consisting of manufacturer's standard support brackets or channels, and aluminum tray, designed for attachment to interior of curtain wall with mechanical fasteners.
1. Projection from Wall: [As indicated on Drawings] [20 inches] [25 inches] [30 inches] [35 inches] <Insert projection>.
 2. Finish: [Match adjacent glazed aluminum curtain wall] <Insert finish>.
 3. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 4. Steel Reinforcement: As required by manufacturer.

2.05 GLAZING

- A. Glazing: Comply with Section 08 80 00 "Glazing."
- B. Glazing Gaskets: ASTM C509 or ASTM C864. [Manufacturer's standard] [Compression-type, replaceable EPDM] [Extruded silicone] [Comply with Section 08 80 00 "Glazing."] <Insert type>.
1. Color: [Black] <Insert color>.
- C. Glazing Sealants: [As recommended by manufacturer.] [Comply with Section 08 80 00 "Glazing."]
- D. Structural Glazing Sealants: ASTM C1184, chemically curing silicone formulation that is compatible with system components with which it comes into contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtain-wall assembly indicated.
1. Color: [Black] [Gray] [As selected by Architect from manufacturer's full range of colors] <Insert color>.
- E. Weatherseal Sealants: ASTM C920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes into contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed curtain-wall manufacturers for this use.
1. Color: Match structural sealant.

2.06 MATERIALS

- A. Sheet and Plate: ASTM B209.
- B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
- C. Structural Profiles: ASTM B308/B308M.
- D. Steel Reinforcement:
1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
 2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
 3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

- E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.

2.07 ACCESSORIES

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 2. Reinforce members as required to receive fastener threads.
 - 3. Use exposed fasteners with countersunk Phillips screw heads [, finished to match framing system] [, fabricated from 300 series stainless steel].
- B. Anchors: Three-way adjustable anchors with minimum adjustment of **[1 inch] <Insert dimension>** that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
- C. Concealed Flashing: [Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials] [Dead-soft, **0.018-inch**-thick stainless steel, ASTM A240/A240M of type recommended by manufacturer].
- D. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.

2.08 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Physical and thermal isolation of glazing from framing members.
 - 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 - 5. Provisions for field replacement of glazing from [exterior] [interior] [interior for vision glass and exterior for spandrel glazing or metal panels].
 - 6. Provisions for safety railings mounted [on interior face of mullions] [between mullions at interior].
 - 7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
 - 8. Components curved to indicated radii.

- D. Fabricate components to resist water penetration as follows:
1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
 2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.
- E. Curtain-Wall Framing: Fabricate components for assembly using [manufacturer's standard assembly method] [shear-block system] [screw-spline system] [head-and-sill-receptor system with shear blocks at intermediate horizontal members] <Insert description>.
- F. Factory-Assembled Frame Units:
1. Rigidly secure nonmovement joints.
 2. Prepare surfaces that are in contact with structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 3. Seal joints watertight unless otherwise indicated.
 4. Install glazing to comply with requirements in Section 08 80 00 "Glazing."
 5. Install structural glazing.
 - a. Set glazing into framing in accordance with sealant manufacturer and framing manufacturer's written instructions and standard practice. Use a spacer or backer as recommended by manufacturer.
 - b. Set glazing with proper orientation so that coatings face exterior or interior as specified.
 - c. Apply structural silicone sealant to completely fill cavity, in accordance with sealant manufacturers written instructions with the framing and glazing in a fully supported position.
 - d. Brace or stiffen framing and glazing in such a manner to prevent undue stresses on the glass edge seal and structural joints or movement of the glazing, until sealant is fully cured in accordance with manufacturer's recommendations.
 - e. After structural sealant has completely cured, insert backer rod between lites of glass as recommended by sealant manufacturer.
 - f. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.
 - g. Clean and protect glass as indicated in Section 08 80 00 "Glazing."
 - h. Retain bracing or stiffening until erected to prevent racking of units during transportation and erection.
- G. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.
- H. <Insert requirements>.

2.09 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.

- B. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
1. Color: [Light bronze] [Medium bronze] [Dark bronze] [Champagne] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- D. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with [AAMA 2604] [AAMA 2605] and containing not less than [50] [70] percent PVDF resin by weight in color coat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- E. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- F. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions [for seacoast and severe environments].
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- G. Superior Performance Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- H. Superior Performance Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.

2.10 SOURCE QUALITY CONTROL

- A. Structural Sealant: Perform quality-control procedures complying with ASTM C1401 recommendations, including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- F. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
- G. Seal joints watertight unless otherwise indicated.
- H. Metal Protection:
 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

- I. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
- J. Install components plumb and true in alignment with established lines and grades.

3.03 INSTALLATION OF OPERABLE UNITS

- A. Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.

3.04 INSTALLATION OF GLAZING

- A. Install glazing as specified in Section 08 80 00 "Glazing."

3.05 INSTALLATION OF STRUCTURAL GLAZING

- A. Prepare surfaces that will contact structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
- B. Set glazing into framing in accordance with sealant manufacturer's and framing manufacturer's written instructions and standard practice. Use a spacer or backer as recommended by manufacturer.
- C. Set glazing with proper orientation, so that coatings face exterior or interior as specified.
- D. Hold glazing in place using temporary retainers of type and spacing recommended by manufacturer, until structural sealant joint has cured.
- E. Apply structural sealant to completely fill cavity, in accordance with sealant manufacturer's and framing manufacturer's written instructions and in compliance with local codes.
- F. Apply structural sealant at temperatures indicated by sealant manufacturer for type of sealant.
- G. Allow structural sealant to cure in accordance with manufacturer's recommendations.
- H. Clean and protect glass as indicated in Section 08 80 00 "Glazing."

3.06 INSTALLATION OF WEATHERSEAL SEALANT

- A. After structural sealant has completely cured, remove temporary retainers and insert backer rod between lites of glass, as recommended by sealant manufacturer.
- B. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.07 ERECTION TOLERANCES

- A. Install glazed aluminum curtain walls to comply with the following maximum tolerances:
 - 1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
 - 2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
 - 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.

4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.08 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Test Area: Perform tests on **[one bay at least 30 feet, by one story] [representative areas of glazed aluminum curtain walls] [mockups] <Insert requirements>**.
- C. Field Quality-Control Testing: Perform the following test on **[representative areas of glazed aluminum curtain walls] [mockups] <Insert requirements>**.
 1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
 - a. Perform a minimum of **[two] [three] <Insert number>** tests in areas as directed by Architect.
 - b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to **[10, 35, and 70 percent completion] <Insert requirements>**.
 2. Air Leakage: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..
 - a. Perform a minimum of **[two] [three] <Insert number>** tests in areas as directed by Architect.
 - b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to **[10, 35, and 70 percent completion] <Insert requirements>**.
 3. Water Penetration: ASTM E1105 at a minimum **[uniform] [and] [cyclic]** static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.
- D. Structural-Sealant Adhesion: Test structural sealant in accordance with recommendations in ASTM C1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 1. Test a minimum of **[two] [four] [six] <Insert number>** areas on each building facade.
 2. Repair installation areas damaged by testing.
- E. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

END OF SECTION

SECTION 08 51 00

METAL WINDOWS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Aluminum windows.

1.02 DEFINITIONS

- A. Combination Assemblies: An assembly formed by a combination of two or more separate fenestration products whose frames are mullied together utilizing a combination mullion or reinforcing mullion.
- B. Combination Mullions: A horizontal or vertical member formed by joining two or more individual fenestration units together without a mullion stiffener.
- C. Reinforcing Mullions: A horizontal or vertical member with an added continuous mullion stiffener and joining two or more individual fenestration units along the sides of the mullion stiffener.

1.03 COORDINATION

- A. Finish Matching: Coordinate all exposed exterior aluminum components and trim to ensure uniform and consistent color and appearance. Use products specified in **[this Section] <Insert Section number and title>** as a benchmark. Architect's decision will be final as to whether a proposed product matches.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review and discuss finishing of aluminum windows that is required to be coordinated with finishing of other aluminum work for color and finish matching.
3. Review, discuss, and coordinate interrelationship of aluminum windows with other exterior wall components. Include provisions for anchoring, flashing, weeping, sealing perimeters, and protecting finishes.
4. Review and discuss sequence of work required to construct a watertight and weathertight exterior building envelope.
5. Inspect and discuss condition of substrate and other preparatory work performed by other trades.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, glazing and fabrication methods, dimensions of individual components and profiles, hardware, and finishes.
 - B. Shop Drawings:
 - 1. Plans, elevations, sections, hardware, accessories, insect screens, operational clearances, and details of installation, including anchor, flashing, and sealant installation.
 - C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of exposed finish.
 - D. Samples for Verification: Actual sample of finished products for each type of exposed finish:
 - 1. Exposed Aluminum Finishes: [Manufacturers' standard size] **[2 by 4 inches]** <Insert dimensions>.
 - 2. Exposed Hardware: Full-size units.
 - E. Product Schedule: For aluminum windows. Use same designations indicated on Drawings.
- 1.06 INFORMATIONAL SUBMITTALS
- A. Test and Evaluation Reports:
 - 1. Product Test Reports: For each aluminum window, for tests performed by [qualified testing agency] [manufacturer and witnessed by a qualified testing agency].
 - B. Field Quality-Control Reports: For aluminum windows.
 - C. Qualification Statements: For manufacturer and Installer.
 - D. Sample warranties.
- 1.07 CLOSEOUT SUBMITTALS
- A. Warranty Documentation:
 - 1. Manufacturers' special warranties.
- 1.08 QUALITY ASSURANCE
- A. Manufacturer Qualifications: A manufacturer capable of fabricating aluminum windows that meet or exceed performance requirements indicated and of documenting this performance by test reports and calculations.
 - B. Installer Qualifications: Authorized representative who is trained and approved by aluminum window manufacturer.
 - C. Testing Agency Qualifications: An FGIA-accredited testing agency for testing indicated.
- 1.09 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution. **[See Section 01 43 39 "Mockups" for additional construction requirements for integrated exterior mockups.]**
1. Build mockup [as indicated on Drawings] <Insert mockup requirements>.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver aluminum windows to Project site in original, unopened packages and store them in accordance with manufacturer's written instructions. Protect aluminum windows against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle aluminum windows in a manner that prevents damage before, during, and after installation.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not install aluminum windows outside of limits recommended in writing by manufacturer.

1.12 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Failure to meet performance requirements.
 - b. Structural failures, including excessive deflection, water leakage, condensation, and air infiltration.
 - c. Faulty operation of movable sash and hardware.
 - d. Deterioration of materials and finishes beyond normal weathering.
 - e. Failure of insulating glass.
 2. Warranty Period:
 - a. Window: **[Two] [Five] [10]** <Insert number> years from date of Substantial Completion.
 - b. Glazing Units: **[Five] [10]** <Insert number> years from date of Substantial Completion.

- c. Hardware: **[Three]** <Insert number> years from date of Substantial Completion.
- d. Aluminum Finish: **[10] [20]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain aluminum windows from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Product Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.
 - 1. Window Certification: FGIA certified with label attached to each window.
- B. Performance Class and Grade: AAMA/WDMA/CSA 101/I.S.2/A440 as follows:
 - 1. Minimum Performance Class: **[R] [LC] [CW] [AW]** [As indicated on Drawings] <Insert class>.
 - 2. Minimum Performance Grade: **[15] [20] [25] [30] [35] [40] [45] [50]** [As indicated on Drawings] <Insert grade>.
 - 3. Muller Window Systems: Evaluate and rate combination assemblies as single systems as determined by AAMA 450 in accordance with AAMA/WDMA/CSA 101/I.S.2/A440 requirements.
- C. Energy Performance: Certified and labeled by manufacturer for energy performance as follows:
 - 1. Thermal Transmittance (U-factor): As determined in accordance with NFRC 100:
 - a. Fixed Windows: Not more than **[0.50 Btu/sq. ft. x h x deg F]**
[0.45 Btu/sq. ft. x h x deg F] **[0.42 Btu/sq. ft. x h x deg F]**
[0.36 Btu/sq. ft. x h x deg F] **[0.34 Btu/sq. ft. x h x deg F]**
[0.29 Btu/sq. ft. x h x deg F] **[0.26 Btu/sq. ft. x h x deg F]** <Insert value>.
 - b. Operable Windows: Not more than **[0.62 Btu/sq. ft. x h x deg F]**
[0.60 Btu/sq. t. x h x deg F] **[0.54 Btu/sq. ft. x h x deg F]**
[0.45 Btu/sq. ft. x h x deg F] **[0.42 Btu/sq. ft. x h x deg F]**
[0.36 Btu/sq. ft. x h x deg F] **[0.32 Btu/sq. ft. x h x deg F]** <Insert value>.
 - 2. Solar Heat-Gain Coefficient (SHGC): As determined in accordance with NFRC 200:
 - a. Fixed Windows: Not more than **[0.23] [0.25] [0.36] [0.38] [0.40]** <Insert value>.
 - b. Operable Windows: Not more than **[0.21] [0.23] [0.33] [0.34] [0.36]** <Insert value> as determined in accordance with NFRC 200.

3. Condensation-Resistance Factor (CRF): Provide aluminum windows tested for thermal performance in accordance with AAMA 1503, showing a CRF of **[45] [52]** <Insert value>.
 - D. Thermal Movements: Provide aluminum windows, including anchorage, which allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change: **[120 deg F ambient; 180 deg F material surfaces]** <Insert temperature change>.
 - E. Outdoor-Indoor Transmission Class (OITC): Rated for not less than **[22] [26] [30]** <Insert rating> OITC when tested for laboratory sound transmission loss in accordance with ASTM E90 and determined by ASTM E1332.
- 2.03 ALUMINUM WINDOWS <Insert drawing designation>
- A. Provide manufacturer's standard aluminum window assemblies consisting of frames, sashes, glass, hardware, fasteners, and all components and accessories as required for a complete installation.
 - B. Operating Types: Provide the following operating types in locations indicated on Drawings:
 1. Casement: **[Outswing] [Inswing]**.
 2. Projected, awning.
 3. Projected, hopper.
 4. Single hung.
 5. Double hung.
 6. Horizontal sliding.
 7. Fixed.
 - C. Frames and Sashes: Aluminum extrusions of alloy, temper, and strength complying with AAMA/WDMA/CSA 101/I.S.2/A440.
 1. Thermally Broken Construction: Fabricate frames, sashes, and muntins with an integral, concealed, low-conductance thermal barrier located between exterior materials and window members exposed on interior side in a manner that eliminates direct metal-to-metal contact.
 - D. Glass: Clear annealed glass, ASTM C1036, Type 1, Class 1, q3.
 1. Kind: Fully tempered **[where indicated on Drawings]** <Insert requirements>.
 - E. Windborne-Debris-Impact-Resistant Laminated Glass: ASTM C1172, with two plies of float glass.

1. Float Glass: [Annealed] [Heat strengthened] [Fully tempered] [As required by performance requirements indicated].
 2. Inner Ply: Clear.
 3. Interlayer: [0.090 inch] [As required by performance requirements indicated] <Insert requirements>.
 4. Outer Ply: [Clear] [Gray] [Bronze] [Green] <Insert tint>.
 5. Low-E Coating: [Pyrolytic on second surface] [Sputtered on second surface] [Sputtered on third surface] [Sputtered on second or third surface] <Insert coating>.
- F. Insulating-Glass Units: ASTM E2190.
1. Glass: ASTM C1036, Type 1, Class 1, q3.
 - a. Tint: [Clear] [Gray] [Bronze] [Green] <Insert tint>.
 - b. Kind: Fully tempered [where indicated on Drawings] <Insert requirements>.
 2. Lites: [Two] [Three].
 3. Filling: Fill space between glass lites with [air] [argon].
 4. Low-E Coating: [Pyrolytic on second surface] [Sputtered on second surface] [Sputtered on third surface] [Sputtered on second or third surface] <Insert coating>.
 5. Integral Louver Blinds: Provide glass manufacturer's standard, horizontal louver blinds with aluminum slats and polyester fiber cords, located in space between glass lites, and operated by hardware located on inside face of sash.
 - a. Operation: [Tilt only] [Tilt, raising, and lowering].
 - b. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
- G. Windborne-Debris-Impact-Resistant Insulating-Glass Units: ASTM E2190, with two lites and complying with impact-resistance requirements in "Performance Requirements" Article.
1. Exterior Lite: ASTM C1036, Type 1, Class 1, q3.
 - a. Tint: [Clear] [Gray] [Bronze] [Green] <Insert tint>.
 - b. Kind: [Heat strengthened] [Fully tempered].
 2. Interior Lite: ASTM C1172, clear laminated glass with two plies of float glass.
 - a. Float Glass: [Annealed] [Heat strengthened] [Fully tempered] [As required by performance requirements indicated].
 - b. Interlayer Thickness: [0.090 inch] [As required by performance requirements indicated] <Insert requirements>.
 3. Filling: Fill space between glass lites with [air] [argon].

4. Low-E Coating: [Pyrolytic on second surface] [Sputtered on second surface] [Sputtered on third surface] [Sputtered on second or third surface] <Insert coating>.
- H. Glazing System: [Manufacturer's standard factory-glazing system that produces weathertight seal] <Insert glazing requirements>.
1. Dual Glazing System:
 - a. Interior Lite: [Glass] <Insert type>.
 - b. Exterior Lite: [Glass] [Insulating-glass unit] <Insert type>.
- I. Hardware, General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion-resistant material compatible with adjacent materials; designed to smoothly operate, tightly close, and securely lock windows, and sized to accommodate sash weight and dimensions.
1. Exposed Hardware Color and Finish: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and finish>.
- J. Window Hardware: [Casement] [and] [projected].
1. Gear-Type Rotary Operators: Complying with AAMA 901 when tested in accordance with ASTM E405, Method A. Provide operators that function without requiring the removal of interior screens or using screen wickets.
 - a. Type and Style: [Match Architect's sample] [As selected by Architect from manufacturer's full range of types and styles] <Insert type and style>.
 2. Hinges: [Non-friction type, not less than two per sash] <Insert requirements>.
 3. Lock: [Lift-type throw, cam-action lock with keeper] [Lever handle and cam-action lock with keeper] [Dual lever handles, tie rod, and cam-action lock with keepers] [Key-operated custodial lock with keeper and removable handle] [Concealed multipoint lock operated by single lever handle or lift-type throw] <Insert requirements>.
 4. Limit Devices: [Concealed friction adjustor, adjustable stay bar] [Concealed support arms with adjustable, limited, hold-open] <Insert type> limit devices designed to restrict sash opening.
 - a. Limit clear opening to [4 inches] <Insert dimension> for ventilation; with custodial key release.
 5. Pole Operators: Tubular-shaped anodized aluminum; with rubber-capped lower end and standard push-pull hook at top to match hardware design; of sufficient length to operate window without reaching more than 60 inches above floor; one pole operator and pole hanger per room that has operable windows more than 72 inches above floor.
- K. Hung Window Hardware:
1. Counterbalancing Mechanism: Complying with AAMA 902, concealed, of size and capacity to hold sash stationary at any open position.

2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only. [**Provide key-operated custodial locks.**]
3. Tilt Latch: Releasing latch allows sash to pivot about horizontal axis to facilitate cleaning exterior surfaces from the interior.

L. Horizontal-Sliding Window Hardware:

1. Sill Cap/Track: [Extruded-aluminum track with natural anodized finish] [Manufacturer's standard] <Insert track material and finish> of dimensions and profile indicated; designed to comply with performance requirements indicated and to drain to the exterior.
2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only. [**Provide key-operated custodial locks.**]
3. Roller Assemblies: Low-friction design.

M. Weather Stripping: Provide manufacturer's standard full-perimeter weather stripping for each operable sash unless otherwise indicated.

N. Fasteners: Noncorrosive and compatible with window members, trim, hardware, anchors, and other components.

1. Exposed Fasteners: Avoid exposed fasteners to greatest extent possible. For application of hardware, use fasteners that match finish hardware being fastened.

O. Mullions: Provide manufacturer's standard combination and reinforcing mullions and cover plates matching window units, complete with anchors for support to structure. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections. Provide reinforcing mullions and cover plates capable of withstanding design wind loads of window units.

2.04 ACCESSORIES

A. Dividers (False Muntins): Provide manufacturer's standard extruded-aluminum divider grilles in designs indicated for each sash lite.

1. Type: [Permanently located at exterior lite] [Permanently located between insulating-glass lites] <Insert type>.
2. Pattern: [As indicated on Drawings] <Insert pattern>.
3. Profile: [As selected by Architect from manufacturer's full range] <Insert profile>.
