B. Subsills: [Thermally broken] [Nonthermal], extruded-aluminum subsills in configurations indicated on Drawings.

C. Interior Trim: Extruded-aluminum profiles in sizes and configurations indicated on Drawings.

D. Panning Trim: Profiles in sizes and configurations indicated on Drawings.

- E. Nail Fins: Manufacturer's standard mounting flanges with holes pre-punched for mechanical fasteners.

2.05 INSECT SCREENS

- A. General: Fabricate insect screens to integrate with window frame. Provide screen for each operable exterior sash. Screen wickets are not permitted.
 - 1. Type and Location: [Full, inside for outswing] [Full, inside for projected, awning] [Full, outside for inswing] [Full, outside for projected, hopper] [Full, outside for double-hung] [Half, outside for single-hung] [Full, outside for sliding] [Half, outside for sliding] sashes.
- B. Aluminum Frames: Manufacturer's standard aluminum alloy complying with SMA 1201. Fabricate frames with mitered or coped joints or corner extrusions, concealed fasteners, and removable PVC spline/anchor concealing edge of frame.
 - 1. Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet.
- C. Glass-Fiber Mesh Fabric: [18-by-14 or 18-by-16] [20-by-20 or 20-by-30] <Insert type> mesh of PVC-coated, glass-fiber threads; woven and fused to form a fabric mesh resistant to corrosion, shrinkage, stretch, impact damage, and weather deterioration. Comply with ASTM D3656/D3656M.
 - 1. Mesh Color: [Manufacturer's standard] <Insert color>.
- D. Aluminum Wire Fabric: 18-by-16 mesh of 0.011-inch-diameter, coated aluminum wire.
 - 1. Wire-Fabric Finish: [Natural bright] [Charcoal gray] [Black] <Insert finish>.

2.06 FABRICATION

- A. Fabricate aluminum windows in sizes indicated. Include a complete system for assembling components and anchoring windows.
- B. Glaze aluminum windows in the factory.
- C. Weather strip each operable sash to provide weathertight installation.
- D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.
- E. Provide water-shed members above side-hinged sashes and similar lines of natural water penetration.
- F. Window Assemblies: [Bow] [Bay] [Combination]. Provide window units in configuration indicated on Drawings. Provide window frames, sashes, hardware, and other trim and components necessary for a complete, secure, and weathertight installation, including the following:
 - 1. Combination and reinforcing mullions with interior and exterior trim.
 - 2. Interior and exterior extension and trim.
 - 3. Exterior head and sill casings and trim.

- G. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation.

2.07 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA AMP 500 "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.08 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - 1. Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>.
- C. Baked-Enamel or Powder-Coat Finish: [AAMA 2603] [AAMA 2604] except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- D. Organic Coatings:
 - 1. High-Performance Fluoropolymer Finish: Two coats complying with [AAMA 2604,] [AAMA 2605,] containing not less than [50] [70] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
 - 2. Superior-Performance Fluoropolymer Finish: [Three] [Four] coats complying with AAMA 2605, containing not less than [50] [70] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify rough opening dimensions, levelness of sill plate, and operational clearances.
- C. Examine wall flashings, **[vapor retarders,]**air and weather barriers, and other built-in components to ensure weathertight window installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components. For installation procedures and requirements not addressed in manufacturer's written instructions, comply with installation requirements in ASTM E2112.
- B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction to produce weathertight construction.
- C. Mullions: Install combination and reinforcing mullions for combination assemblies in accordance with manufacturer's written instructions.
- D. Install windows and components to drain water passing joints and condensation to the exterior.
- E. Separate aluminum from sources of corrosion or electrolytic action at points of contact with other materials.

3.03 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
 - 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
- B. Testing Services: Testing and inspection of installed windows as follows:
 - 1. Testing Methodology: Testing of windows for air infiltration and water resistance in accordance with AAMA 502.
 - 2. Air-Infiltration Testing:
 - a. Test Pressure: As required to determine compliance in accordance with AAMA/WDMA/CSA 101/I.S.2/A440 for performance class indicated.
 - b. Allowable Air-Leakage Rate: **[1.5] <Insert number>** times the applicable AAMA/WDMA/CSA 101/I.S.2/A440 rate for product type and performance class rounded down to one decimal place.

3. Water-Resistance Testing:
 - a. Test Pressure: **[Two-thirds]** <Insert number> times test pressure required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance grade indicated.
 - b. Allowable Water Infiltration: No water penetration.
4. Testing Extent: **[One] [Three]** <Insert number or description> window(s) of each type as selected by Architect and a qualified independent testing and inspecting agency. Windows will be tested **[immediately after installation] [at 5, 50, and 90 percent completion]** <Insert test schedule>.
5. Test Reports: Prepared in accordance with AAMA 502.

C. Tests and Inspections:

1. Windows will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.04 ADJUSTING

- A. Adjust operating sashes and hardware for a tight fit at contact points and weather stripping for smooth operation and weathertight closure.

3.05 CLEANING AND PROTECTION

- A. Clean exposed surfaces immediately after installing windows using manufacturer's written instructions. Avoid damaging finishes. Remove excess sealants, glazing materials, dirt, and other substances.
- B. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
- C. Protect window surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances do contact window surfaces, remove contaminants immediately in accordance with manufacturer's written instructions.

END OF SECTION

SECTION 08 56 59

SERVICE AND TELLER WINDOW UNITS

PART 1 GENERAL

1.01 SUMMARY

A. Section Include:

1. Exterior cashier windows with built-in counters and Speak Holes, Type ___ in the Window Schedule.
2. Glass and glazing for the work of this Section.
3. Manual pass, service and teller window units.
4. Bullet resistant pass, service and teller window units.
5. Drawers.
6. Glazing.
7. Air curtains.
8. Deal trays and shelves.
9. Intercom and talk through.

B. Related Requirements:

1. Section 07 62 00: Sheet Metal Flashing and Trim.
2. Section 07 92 00: Joint Sealants
3. Division 08 for all other windows and for glass and glazing.

1.02 SUBMITTALS

A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for window assemblies.

B. Shop Drawings:

1. Include window and counter plans, elevations, sections, and attachments to other work.
2. Full-size section details of framing members along with reinforcement, and stiffeners.
3. Location of weep holes.
4. Glazing details.

C. Samples:

1. Window manufacturer's standard size samples for each type of exposed material and finish required.
2. Framing: 12-inch- long sections of frame members.

D. Test Reports: Indicate compliance with specified bullet resistance performance.

E. Manufacturer's Installation Instructions: Submit installation instructions with requirements to accommodate specific site conditions.

F. Manufacturer's written instructions, including:

G. Delivery, storage, and handling recommendations.

H. Preparation and installation recommendations.

I. Installer's Experience: Submit verification of evidence of work similar to work of this Section.

J. Sample Warranty: For special warranty.

1.03 QUALITY ASSURANCE

A. Regulatory Requirements:

1. Windows shall conform to the reach and access requirements of CBC Section 11B for accessible transaction areas.
 2. Accessible pass-through shelf shall not exceed 34 inches above finished floor surface.
- B. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum 10 years documented experience.
- C. Installer Qualifications: Authorized representative who is trained and approved by manufacturer for installation of units required for this Project.
- D. Products Requiring Electrical Connection: Listed and classified by UL or testing firm acceptable to authority having jurisdiction.
- E. Testing Agency Qualifications:
1. Qualified according to ASTM E699 and experienced in [~~ballistics-~~] [~~and~~] [~~forced-entry-~~] resistance testing.
- F. Products Requiring Electrical Connection: Listed and classified by UL or testing firm acceptable to authority having jurisdiction.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Pack assemblies in wood crates for shipment. Crate glazing separate from frames unless factory glazed.
- B. Label packaging with drawing designation.
- C. Store crated assemblies on raised blocks to prevent moisture damage.

1.05 FIELD CONDITIONS

- A. Field-Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace service windows that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including deflections exceeding 1/4 inch.
 - b. Failure of welds.
 - c. Excessive air leakage.
 - d. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 2. Warranty Period: 3 years from Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. System Design: Design and size components to withstand dead loads and live loads caused by pressure and negative wind loads acting normal to plane of window as calculated in accordance with applicable code.
- B. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, and migrating moisture occurring within system, to exterior by weep drainage network.
- C. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with [~~inside~~] pane of glass and heel bead of glazing compound. [~~Position thermal insulation on exterior surface of air barrier and vapor retarder.~~]

- D. Ballistics-Resistance Performance: Provide units identical to those tested for compliance with requirements indicated, and as follows:
1. Listed and labeled as bullet resisting according to UL 752.
 2. Tested for ballistics resistance according to UL 752, [HPW-TP-0500.01], [HPW-TP-0500.02] [] by a testing agency acceptable to authorities having jurisdiction.
- E. Forced-Entry-Resistance Performance: Provide units identical to those tested for compliance with requirements indicated, and as follows:
1. Tested for forced-entry resistance according to ASTM F588 [] by a testing agency acceptable to authorities having jurisdiction.
 2. California Model Building Security Ordinance, CMBSO - Section 15.52.100, Tests CAWM 301-90, Forced Entry Resistance Tests for Windows.
 3. Provide glass and glazing materials for continuity of building enclosure vapor retarder and air barrier:
 4. To utilize the inner pane of multiple pane sealed units for the continuity of the air barrier and vapor retarder seal.
- F. Structural Design: Design glass and glazing in accordance with [applicable] [] code for most critical combination of wind, snow, seismic, and dead loads.
- G. Heating and cooling type equipment to comply with UL 1995.

2.02 TRANSACTION WINDOWS

- A. Manufacturers:
1. Teller Window and Deal Tray combination by Quikserv, basis of design.
 2. Acceptable manufacturers include the following:
 - a. Laurence, C.R. Co., Inc.
 - b. Ready-Access
 - c. Or equal.

2.03 MATERIALS

- A. Aluminum Extrusions: ASTM B221/B221M. Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength and not less than 0.125 inch (3.2 mm) thick at any location for main frame and sash members.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Metallic-Coated Steel Sheet:
1. ASTM A653/A653M, CS (Commercial Steel), Type B; with G90 (Z275) zinc (galvanized) coating designation.
 2. AMS 5511, steel, corrosion-resistant, sheet, strip, and plate, 19Cr - 9.5Ni (304L), solution heat treated.
 3. AMS 5513, steel, corrosion-resistant, sheet, strip, and plate 19cr 9.2Ni (SAE 30304) solution heat treated.
- D. Stainless Steel Sheet, Strip, Plate, and Flat Bars:
1. ASTM A666, austenitic stainless steel, Type 304, stretcher-leveled standard of flatness.
 2. ASME SA-240/SA-240M, chromium and chromium-nickel stainless steel plate, sheet, and strip for general applications.
- E. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.
- F. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to [four] [] times the load imposed, as determined by testing per ASTM E488, conducted by a qualified testing agency.

1. Threaded or wedge type; galvanized ferrous castings, either ASTM A27/A27M cast steel or ASTM A47/A47M malleable iron. Provide bolts, washers, and shims as required; hot-dip galvanized per ASTM A153/A153M or ASTM F2329.
- G. Embedded Plate Anchors: Fabricated from steel shapes and plates, minimum 3/16 inch thick; with minimum 1/2-inch- diameter, headed studs welded to back of plate..
- H. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 1. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30-mil thickness per coat.
- I. Sealants: For sealants required within fabricated security windows, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating.
- J. Gaskets: For gaskets required within fabricated security windows, provide type recommended by manufacturer for joint size and movement. Gaskets shall remain permanently elastic, nonshrinking, and nonmigrating.

2.04 WINDOW COMPONENTS

- A. Comply with requirements of UL listing for ballistics-resistance levels as specified.
- B. Glass:
 1. Tempered Glass: 1/4 inch thick.
 2. Insulated Glass: 5/8 inch thick overall thickness.
- C. Bullet Resistant Glazing:
 1. Model QSBR - Sheet:
 - a. LEXGARD® MP750 Level 1 - 9mm or .38 Special caliber rated.
 - b. SPARTECH POLYCAST MP 1.25 Level 1- 9mm or .38 Special caliber rated.
 - c. LEXGARD® SP1250 Level 3 - .44 Magnum caliber rated.
- D. Track/Slides: Stainless steel ball bearing slides on all windows and drawers.
- E. Miscellaneous Glazing Materials: Provide material, size, and shape complying with requirements of glass manufacturers, and with a proven record of compatibility with surfaces contacted in installation:
 1. Cleaners, Primers, and Sealers: Type recommended by sealant or gasket manufacturer.
 2. Setting Blocks: Elastomeric material with a Type A Shore durometer hardness of 85, plus or minus 5.
 3. Spacers: Elastomeric blocks or continuous extrusions with a Type A Shore durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
 4. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- F. Flashing.
- G. Welding Materials.
- H. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, of sufficient strength to withstand design pressure indicated.

2.05 FABRICATION

- A. General: Fabricate windows to provide a complete system for assembly of components and anchorage of window units with countertops. Provide units that are re-grazable from the secure side without dismantling the non-secure side of framing.

- B. Provide weep holes and internal water passages to conduct infiltrating water to the exterior.
- C. Framing: Miter or cope corners the full depth of framing; weld and dress smooth.
- D. Prior to fabrication, clean stainless-steel components.
- E. Fabricate window in accordance with approved Shop Drawings, to a tolerance of plus or minus 1/16-inch in any dimension, free of rack, and with flush, invisible joints.
- F. Fabricate frames of 1/8-inch wall 6063-T5 Aluminum lined with bullet-resistant fiberglass and wrapped in 16-gage stainless steel.
- G. Miter or cope corners of frame and weld continuously.
- H. The deal tray shall be fully integrated into the stainless steel top. Drawer shall have a minimum depth of 1-5/8-inch from the bottom of the glazing.
- I. Voice communication:
 - 1. Stainless voice port shall be the manufacturer standard unit, offset pattern design, with proper weather seals.
 - 2. Sound transmission shall be achieved thru natural voice communication.
 - 3. Factory-install speak hole. Conceal all raw glass edges.
- J. Glazing:
 - 1. Design window for inside glazing. Provide integral exterior glass stop.
 - 2. Provide continuous screw on interior stainless-steel glazing beads to suit glass indicated and specified, using glass bites indicated on the approved Shop Drawings to maintain the ballistic rating.
- K. Anchors: Ship loose for field installation. Provide a minimum of 3 anchors per side, not less than 0.042-inch thick or 0.167-inch diameter wire, suitable for the adjoining wall construction.
- L. Finishing exposed surfaces:
 - 1. Finish surfaces to match approved Samples.
 - 2. Finish components with a NAAMM No. 4 satin finish with the grain belting running parallel with the long dimension of the component being fabricated.

2.06 GENERAL FINISH REQUIREMENTS

- A. Finish components with a NAAMM No. 4 satin finish with the grain belting running parallel with the long dimension of the component being fabricated.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of windows.
- B. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of windows.
- C. For glazing materials whose orientation is critical for performance, verify installation orientation.
- D. Proceed with installation only after unsatisfactory conditions are corrected.

3.02 PREPARATION

- A. Coordination: Furnish layouts for cast-in-place anchors, clips, and other security window anchors whose installation is specified in other Sections. Furnish cast-in-place anchors and similar devices to other trades for installation well in advance of time needed for coordinating other work.

3.03 INSTALLATION

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing windows to in-place construction. Include threaded fasteners for inserts, security fasteners, and other connectors.
- B. Glazed Framing: Provide gasket-glazed framing. Comply with installation requirements in Division 08 Section "Security Glazing."
- C. Removable Glazing Stops and Trim: Fasten components with security fasteners.
- D. Fasteners: Install windows using fasteners recommended by manufacturer with head style appropriate for installation requirements, strength, and finish of adjacent materials. Provide stainless-steel fasteners in stainless-steel materials.
- E. Sealants: Comply with requirements in Division 07 Section "Joint Sealants" for installing sealants, fillers, and gaskets.
 - 1. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction unless otherwise indicated.
 - 2. Seal frame perimeter with sealant to provide weathertight construction unless otherwise indicated.
- F. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended in writing by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

3.04 FIELD QUALITY CONTROL

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.

3.05 ADJUSTING

- A. Remove and replace defective work, including windows that are warped, bowed, or otherwise unacceptable.

3.06 CLEANING AND PROTECTION

- A. Clean surfaces promptly after installation of windows. Take care to avoid damaging the finish. Remove excess glazing and sealant compounds, dirt, and other substances.
- B. Provide temporary protection to ensure that windows are without damage at time of Substantial Completion.

END OF SECTION

SECTION 08 62 23
TUBULAR SKYLIGHTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes tubular skylights consisting of skylight dome, reflective tube, and diffuser assembly.
- B. Related requirements: Division 07 for membrane roofing for flashing skylight base.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing
- B. Pre-installation meeting

1.03 REFERENCES

- A. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2001.
- B. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc Coated (Galvanized), by the Hot Dip Process; 2001a.
- C. ASTM E 283 - Test Method for Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- D. ASTM E 308-95 - Standard Practice for Computing the Colors of Objects by Using the CIE System.
- E. ASTM E 330 - Structural Performance of Exterior Windows, Curtain Walls and Doors.
- F. ASTM E 331 - Test Method for Water Penetration of Exterior Windows, Curtain walls and Doors by Static Air Pressure Difference.
- G. ASTM D 635 - Test Method for Rate of Burning and/or Extent of Time of Burning of Self-Supporting Plastics in a Horizontal Position.
- H. ASTM D-1929 - Test Method for Ignition Properties of Plastics.
- I. UL 181 - Factory Made Air Ducts and Air Connectors; 1998.
- J. UL 790 - Standard for Tests for Fire Resistance of Roof Covering Materials; 1997.
- K. ICBO/ICC AC-16 - Acceptance Criteria for Plastic Skylights; 2002.

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Performance: Completed skylight assemblies shall be capable of meeting the following performance requirements:
1. Air infiltration test: None at 6.24 psf pressure differential when tested in accordance with ASTM E283.
 2. Water resistance test: No leakage at 6.00 psf pressure differential with water rate of 5 gallons/hours/square foot when tested in accordance with ASTM E331.
 3. Uniform load test: No breakage, permanent damage to fasteners, hardware parts, or damage to make tubular skylight inoperable, or cause permanent deflection of any section in excess of one percent of its span at either a maximum Positive or Negative Load of 35 psf for the 21-inch unit. Units shall be tested with a safety factor of 3 for positive pressure and 2 for negative pressure, acting normal to plane of roof in accordance with ASTM E 330.
 4. Fire resistance:
 - a. Class 'B' Burning Brand – The burning brand shall self-extinguish without transferring the fire to the dome Per CBC Class 'B' Burning Brand Test. See ASTM E 108 and UL 790.
 - b. Self-ignition temperature: Greater than 650 degrees F Per CBC. See ASTM D-1929.
 - c. Smoke density: Rating no greater than 75 Per: U.B.C. Standard 26-5. (See ASTM D-2843-70) or no greater than 450 Per UBC 8-1 (See ASTM Standard E 84) in way intended for use.
 - d. Rate of burn - minimum burning rate: 2.5 inches/minute Classification CC-2: CBC and ASTM D 635.

1.05 SUBMITTALS

- A. Data: Manufacturer Product Data sheets on each product to be used, including.
- a. Preparation instructions and recommendations.
 - b. Storage and handling requirements and recommendations.
 - c. Installation methods.
- B. Shop Drawings: Show attachment to supports and a section thru the unit detailing flashing to roof.
- C. Test Reports: Independent testing agency or evaluation service reports verifying compliance with specified performance requirements.

1.06 HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.

1.07 WARRANTY

- A. Skylight manufacturer's standard 10-year warranty.

PART 2 PRODUCTS

2.01 MANUFACTURER / MODEL

- A. Manufacturer: Solatube International, Inc.
- B. Model: Solatube SolaMaster Series.

2.02 TUBULAR SKYLIGHTS

- A. General: Transparent roof-mounted skylight dome and self-flashing curb, reflective tube, and ceiling level diffuser assembly, transferring sunlight to interior spaces; complying with ICC AC-16. II components made and assembled by one manufacturer.
- B. Components: Transparent, UV and impact resistant dome with flashing base supporting dome and top of tube.
 - 1. Dome glazing: 0.143-inch minimum thickness injection molded acrylic classified as CC2 material and meeting characteristics of Duradome DR-101 blend.
 - 2. Low-angled sun reflector: LITD(r) light intercepting transfer device, made of same material as main tube, to capture low angle sunlight.
 - 3. Roof flashing base: One piece, seamless, leak-proof flashing functioning as base support for dome and top of tube.
 - a. Base material: Sheet steel, corrosion resistant conforming to ASTM A 653/A 653M or ASTM A 463/A 463M, 0.028-inch thick.
 - b. Base style: Self mounted, 11 inches high.
 - 4. Dome ring: Attached to top of base section; 0.090-inch nominal thickness. Injection molded high impact ABS; to prevent thermal bridging between base flashing and tubing and channel condensed moisture out of tubing.
 - 5. Dome seal: Polypropylene fiber pile weather – strip 0.27-inch by 0.27-inch.
 - 6. Reflective tube: Aluminum sheet 0.015-inch thick.
 - a. Interior finish: Spectralight Infinity high reflectance specular finish on exposed reflective surface; specular reflectance 99 percent for visible spectrum, less than 93 percent for total solar spectrum at 1.5 degree field angle.
 - b. Color: a* and b* (defined by CIE L*a*b* color model) shall not exceed plus 2 or be less than minus 2 as determined in accordance to ASTM E 308.
 - c. Tube diameter: As indicated.
 - 7. Diffuser assemblies: Diffuser attached directly to bottom of tube.
 - a. Lens: Curved prismatic lens of molded acrylic plastic classified as CC2, 0.028-inch minimum thickness, minimum light transmission of 90 percent at thickness of 0.125-inch.
 - b. Seal: Closed cell polyethylene foam, 3 pcf, and white polyvinyl chloride seal butt joint welded, EPDM rubber, or silicone foam.
 - 8. Accessories: Security Bars 0.375-inch diameter stainless steel bar across opening.

2.03 ACCESSORIES

- A. Fasteners: Same material as metals being fastened, non-magnetic steel, non-corrosive metal of type recommended by manufacturer, or injection molded nylon.
- B. Sealant: As specified in Section 07 92 00 and compatible with roofing membrane.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine adjacent construction and supports.
- B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
- C. Correct detrimental conditions before proceeding with installation.

3.02 INSTALLATION

- A. Install skylights plumb, in accordance with the approved Shop Drawings and the skylight manufacturer's instructions. Attach securely to supports.
- B. After installation of first unit, field test to determine adequacy of installation. Conduct water test in presence of Architect. Correct if needed before proceeding with installation of subsequent units.

3.03 PROTECTION

- A. Protect installed skylights until completion of Project.
- B. Touchup, repair or replace damaged components before Substantial Completion.

END OF SECTION

SECTION 08 63 00
METAL-FRAMED SKYLIGHTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes skylights with metal framing.
- B. Related Requirements:
 - 1. Section 084433 "Sloped Glazing Assemblies" for glazed curtain walls in which the glazed panels are primarily on a sloped plane.
 - 2. Section 086200 "Unit Skylights" for skylights without framing except at the perimeter of the glazing.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for metal-framed skylights.
 - 2. Motors: Show nameplate data, power requirements, ratings, characteristics, and mounting arrangements.
- B. Shop Drawings: For metal-framed skylights.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Indicate structural loadings and reactions to be transmitted to supporting curbs.
 - 3. Include details of provisions for assembly expansion and contraction and for draining moisture within the assembly to the exterior.
 - 4. Include full-size isometric details of each vertical-to-horizontal intersection of assembly, showing the following:
 - a. Joinery including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 - f. Or Equal.
 - 5. Manual Operators: Show locations, mounting, and details for installing operator components and controls.

6. Motor Operators: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
 - a. Wiring Diagrams: For power, signal, and control wiring for electric motors of operable metal-framed skylights.
 - C. Samples for Initial Selection: For units with factory-applied finishes.
 - D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
 - E. Fabrication Sample: Of each framing intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
 1. Joinery including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
 - F. Delegated Design Submittal: For metal-framed skylights indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Compatibility and Adhesion Test Reports: For structural-sealant-glazed skylights, test reports from sealant manufacturer indicating that joint sealants have been tested for each material that will come in contact with sealants.
 - C. Product Test Reports: For metal-framed skylights, for tests performed by a qualified testing agency.
 - D. Field quality-control reports.
 - E. Sample Warranties: For special warranties.
- 1.05 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For metal-framed skylights **[and] [metal-framed skylight operating system]** to include in maintenance manuals.
- 1.06 QUALITY ASSURANCE
- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of metal-framed skylights required for this Project.
 - B. Structural-Sealant Glazing: Comply with recommendations in ASTM C1401, "Guide for Structural Sealant Glazing," for joint design and quality-control procedures.

1. Joint designs are reviewed and approved by structural-sealant manufacturer.
 2. Quality-control program development and reporting comply with ASTM C1401 recommendations for material qualification procedures, preconstruction sealant-testing program, and procedures and intervals for fabrication and installation reviews and checks.
 3. Perform manufacturer's standard tests for compatibility and adhesion of sealants with each material that will come in contact with sealants.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockup of typical metal-framed skylights as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal framed skylights that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals [**metal finishes,**] and other materials beyond normal weathering.
 - d. Adhesive or cohesive sealant failures.
 - e. Water leakage.
 2. Warranty Period: [**Two**] [**Five**] [**10**] <Insert number> years from date of Substantial Completion.
- B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: [**Five**] [**10**] [**20**] <Insert number> years from date of Substantial Completion.

- C. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, peeling, or chipping.
 2. Warranty Period: **[Five] [10]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design metal-framed skylights.
- B. Structural Loads: **[As indicated on Drawings]** <Insert loads>.
- C. Deflection of Framing Members: At design wind pressure, as follows:
1. Deflection Normal to Glazing Plane: Limited to **[edge of glass in a direction perpendicular to glass plane not exceeding L/175 of the glass edge length for each individual glazing lite]** **[1/175 of clear span for spans up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans more than 13 feet 6 inches]** <Insert deflection limit> or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
 2. Deflection Parallel to Glazing Plane: Limited to **[L/360 of clear span or 1/8 inch, whichever is smaller]** **[amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch]** <Insert deflection limit>.
- D. Lateral Bracing of Framing Members: Compression flanges of flexural members are laterally braced by cross members with minimum depth equal to 50 percent of flexural member that is braced. Glazing does not provide lateral support.
- E. Structural-Test Performance: Metal-framed skylights tested in accordance with ASTM E330, as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified deflection limits.
 2. When tested at **[150]** <Insert number> percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding **[0.2]** <Insert number> percent of span.
 3. Test Durations: As required by design wind velocity, but not less than **[10]** <Insert number> seconds.

- F. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone **[1] [2] [3] [4]** for **[basic] [enhanced]** protection.
1. Large-Missile Test: For glazing located within **[30 feet]** <Insert dimension> of grade.
 2. Small-Missile Test: For glazing located between 30 feet and **[60 feet]** <Insert dimension> above grade.
- G. Air Leakage: Metal-framed skylights with maximum air leakage through fixed glazing and framing areas of **[0.06 cfm/sq. ft.]** <Insert value> of when tested in accordance with ASTM E283 at a minimum static-air-pressure difference of **[1.57 lbf/sq. ft.] [6.24 lbf/sq. ft.]** <Insert value>.
- H. Water Penetration under Static Pressure: Metal-framed skylights that do not evidence water penetration through fixed glazing and framing areas when tested in accordance with ASTM E331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than **[6.24 lbf/sq. ft.]** <Insert value>.
- I. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: **[120 deg F, ambient; 180 deg F, material surfaces]** <Insert temperature change>.
- J. Condensation Resistance: Metal-framed skylights with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than **[45] [53]** <Insert number> when tested in accordance with AAMA 1503.
1. Haze Factor: Greater than 90 percent when tested in accordance with ASTM D1003.
- K. Structural Sealant: Capable of withstanding tensile and shear stresses imposed without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant occurs before adhesive failure.
- L. Energy Performance: Provide metal-framed skylights with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below **[and certified and labeled according to NFRC]:**
1. Thermal Transmittance (U-Factor): Fixed glazing and framing areas have U-factor of not more than **[0.80 Btu/sq. ft. x h x deg F] [0.65 Btu/sq. ft. x h x deg F]** <Insert value> as determined in accordance with NFRC 100.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas have a solar heat gain coefficient of no greater than **[0.6] [0.7]** <Insert value> as determined in accordance with NFRC 200.
- M. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 2.02 METAL-FRAMED SKYLIGHTS
- A. Metal-Framed Skylights: Glazed skylight assemblies supported by aluminum framing.

- B. Aluminum Framing Systems: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.
- C. Aluminum: Alloy and temper as recommended in writing by manufacturer for type of use and finish indicated.
 - 1. Sheet and Plate: ASTM B209.
 - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
 - 3. Extruded Structural Pipe and Tubes: ASTM B429/B429M.
 - 4. Structural Profiles: ASTM B308/B308M.
- D. Operable Systems: Equip operable metal-framed skylights with manufacturer's standard hinges, chain-driven operating hardware, and weather-sealing gaskets.
 - 1. Manual Operator: Manufacturer's standard, rotary-crank extension device.
 - a. Pole Operator: [Manual, **60 inches** long] [Manual, telescoping to **144 inches**] [Rechargeable-motor, power-driven type, telescoping to **144 inches**] <Insert requirements>.
 - 2. Motor Operator: Manufacturer's standard electronic control, including switch, transformer, low-voltage motor, cover, and mounting hardware.
 - a. Provide motor of size and capacity recommended by metal-framed skylight manufacturer to suit metal-framed skylight indicated.
 - b. Rain Sensors: Provide rain sensor that automatically closes operable unit when water is detected.
 - c. Remote Control: Provide motor operator with portable remote-control device.
- E. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.
 - 1. Include snap-on aluminum trim that conceals fasteners.
- F. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.
- G. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. At pressure caps, use ASTM A193/A193M stainless steel screws.
 - 2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 3. Reinforce members as required to receive fastener threads.
 - 4. Use exposed fasteners with countersunk Phillips screw heads [, finished to match framing system] [, fabricated from Series 300 stainless steel].
- H. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
- I. Anchor Bolts: ASTM A307, Grade A, galvanized steel.

- J. Concealed Flashing: [Manufacturer's standard, corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials] [Dead-soft, **0.018-inch**- thick stainless steel, ASTM A240/A240M of type recommended in writing by manufacturer].
- K. Exposed Flashing and Closures: Manufacturer's standard aluminum components not less than **[0.030 inch] [0.040 inch] [0.060 inch] <Insert dimension>** thick.
- L. Framing Sealants: As [recommended in writing by manufacturer.] [specified in Section 079200 "Joint Sealants."]
- M. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.03 GLAZING

- A. Glazing: As specified in [Section 088000 "Glazing."]
- B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.
- C. Spacers and Setting Blocks: [Manufacturer's standard elastomeric types.] [As specified in Section 088000 "Glazing."]
- D. Glazing Sealants: As recommended in writing by manufacturer.
- E. Structural Glazing Sealants:
 - 1. Structural Sealant: ASTM C1184, neutral-curing silicone formulation compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant, and approved by structural-sealant manufacturer for use in metal-framed skylights indicated.
 - a. Color: [Black] [Gray] [As selected by Architect from manufacturer's full range].
 - 2. Weatherseal Sealant: ASTM C920 for Type S, Grade NS, Class 25, Uses NT, G, A, and O; neutral-curing silicone formulation compatible with structural sealant and other components with which it comes in contact; and recommended in writing by structural- and weatherseal-sealant and metal-framed skylight manufacturers for this use.
 - a. Color: Matching structural sealant.
 - 3. Bond-Breaker Tape: [Manufacturer's standard tetrafluoroethylene-fluorocarbon or polyethylene material to which sealants will not develop adhesion] <Insert requirements>.

2.04 FABRICATION

- A. Where practical, fit and assemble metal-framed skylights in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Fabricate aluminum components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Internal guttering systems or other means to drain water passing joints and moisture migrating within skylight to exterior.
 - 4. Physical and thermal isolation of glazing from framing members.

5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
- C. Fabricate aluminum sill closures with weep holes and for installation as continuous component.
 - D. Reinforce aluminum components as required to receive fastener threads.
 - E. Factory-Glazed, Metal-Framed Skylights:
 1. Factory install glazing to comply with requirements in **[Section 088000 "Glazing."]**
 - F. Structural-Sealant-Glazed, Metal-Framed Skylights: Prepare surfaces that will contact structural sealant according to structural-sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 - G. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.
- 2.05 ALUMINUM FINISHES
- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm]** **[AA-M12C22A31, Class II, 0.010 mm]** or thicker.
 - B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm]** **[AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
 1. Color: **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors and color densities]** **<Insert color>**.
 - C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **<Insert color and gloss>**.
 - D. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with **[AAMA 2604]** **[AAMA 2605]** and containing not less than **[50]** **[70]** percent PVDF resin by weight in color coat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **<Insert color and gloss>**.
 - E. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- F. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- G. Superior-Performance Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- H. Superior-Performance Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- 2.06 SOURCE QUALITY CONTROL
- A. Structural-Sealant Glazing: Perform quality-control procedures complying with ASTM C1401 recommendations including, but not limited to, material qualification procedures, sealant testing, and fabrication reviews and checks.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Comply with manufacturer's written instructions.

1. Do not install damaged components.
 2. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
 3. Rigidly secure nonmovement joints.
 4. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 5. Seal joints watertight unless otherwise indicated.
- B. Metal Protection: Where aluminum will contact dissimilar materials, protect against galvanic action by painting contact surfaces with protective coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.
- C. Install continuous aluminum sill closure with weatherproof expansion joints and locked and sealed or welded corners. Locate weep holes at rafters.
- D. Install components to drain water passing joints, and moisture migrating within skylight to exterior.
- E. Install components plumb and true in alignment with established lines and elevations.
- F. Glazing: Install glazing as specified in **[Section 088000 "Glazing."]**
- G. Structural-Sealant Glazing:
1. Prepare surfaces that will contact structural sealant according to structural-sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 2. Install weatherseal sealant according to weatherseal-sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind weatherseal sealant as recommended in writing by weatherseal-sealant manufacturer.
- H. Erection Tolerances: Install metal-framed skylights to comply with the following maximum tolerances:
1. Alignment: Limit offset from true alignment to 1/32 inch where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches; otherwise, limit offset to 1/8 inch.
 2. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet but no greater than 1/2 inch over total length.

3.03 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
1. Water-Spray Test: Before installation of interior finishes has begun, skylights are tested in accordance with AAMA 501.2 and do not evidence water penetration.
 2. Water Penetration under Static Pressure: Before installation of interior finishes has begun, areas are tested in accordance with ASTM E1105.
 - a. Test Procedures: Test under **[uniform] [and] [cyclic]** static-air pressure.
 - b. Static-Air-Pressure Difference: **<Insert pressure>**.
 - c. Water Penetration: None.

3. Structural-Sealant Compatibility and Adhesion: Structural sealant is tested in accordance with ASTM C1401.
 - a. Destructive test method, Method A, Hand Pull Tab (Destructive) in ASTM C1401, Appendix X2, is used.
 - 1) A minimum of **[one] [two] <Insert number>** area(s) on each skylight face is tested.
 - 2) Repair installation areas damaged by testing.
 4. Structural-Sealant Glazing Inspection: After installation of metal-framed skylights is complete, structural-sealant glazing is inspected and evaluated in accordance with ASTM C1401 recommendations for quality-control procedures.
- B. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
 - C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 - D. Prepare test and inspection reports.

3.04 CLEANING AND PROTECTION

- A. Clean exposed surfaces immediately after installing skylights. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.
- B. Remove and replace **[glass] [plastic glazing]** that has been broken, chipped, cracked, abraded, or damaged during construction period.
- C. Protect skylights from contact with contaminating substances resulting from construction operations. If contaminating substances do contact skylight surfaces, remove contaminants immediately according to manufacturer's written instructions.
- D. Metal-Framed Skylight Operating System: Clean and lubricate joints and hardware. Adjust for proper operation.

3.05 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain metal-framed skylight operating system.

END OF SECTION

SECTION 08 71 00

DOOR HARDWARE

PART 1 GENERAL

1.01 WORK INCLUDED

- A. Door hardware.
- B. Thresholds, weather seals and smoke seals.
- C. Electrified door hardware.
- D. Scope of Work in this Section: Provide door hardware necessary to complete work. Hardware items not specifically specified or identified are to be provided of type and quality suitable to the service required and comparable to other hardware, and at no additional cost to Owner.

1.02 WORK FURNISHED BUT INSTALLED UNDER OTHER SECTIONS

- A. Provide templates to:
 - 1. Section 08 11 13 for door and frame preparation.
 - 2. Section 08 11 16 for door and frame preparation.
 - 3. Section 08 14 16 for door preparation.
 - 4. Section 08 41 13 for door and frame preparation.
 - 5. Section 08 41 26 for door and frame preparation.
 - 6. Division 32 (Gates) for gate and frame preparation.

1.03 RELATED WORK

- A. Division 3-Concrete – Core Drilling for Stop Anchors
- B. Section 08 11 13-Hollow Metal Doors and Frames.
- C. Section 08 11 16-Aluminum Doors and Frames.
- D. Section 08 14 16-Flush Wood Doors.
- E. Section 08 33 13-Overhead Coiling Counter Doors.
- F. Section 08 33 16-Overhead Coiling Counter Grilles
- G. Section 08 33 23-Overhead Coiling Doors.
- H. Section 08 33 26-Overhead Coiling Grilles.
- I. Section 08 41 13-Aluminum Framed Entrance and Storefront.
- J. Section 08 41 26-All Glass Entrance and Storefront.
- K. Section 08 42 29-Sliding Automatic Entrances.

- L. Section 08 71 13-Automatic Swing Door Operators.
- M. Section 09 90 00-Painting.
- N. Division 26-Electrical.
- O. Division 28-Electronic Safety and Security.
- P. Division 32-Exterior Improvements (Gates).

1.04 REFERENCES

- A. Steel Door Institute (SDI) standards as specified.
- B. Architectural Woodwork Institute (AWI) as specified.
- C. California Building Code (CBC), permit edition.
- D. California Referenced Standards Code (CRSC).
- E. Americans with Disabilities Act (ADA) of 2010 ADA Standards.
- F. Underwriters Laboratories Inc. standards as specified.
- G. National Fire Protection (NFPA) standards as specified.

1.05 QUALITY ASSURANCE

- A. Hardware Supplier: Provide hardware from company specializing in supplying institutional door hardware with five years' experience and approved by specified hardware manufacturers as a factory direct supplier.
- B. Hardware Supplier Personnel: Employ an Architectural Hardware Consultant (AHC) or equivalent to prepare submittal required by this section.
- C. Hardware Consultant: All door hardware specifications, designs and submittals shall be made by an independent hardware consultant/contractor with a minimum of five years of direct experience doing similar work in the door hardware industry.

1.06 REGULATORY REQUIREMENTS

- A. Conform to CBC "Means of Egress" requirements.
- B. Conform to UL10C requirements applicable to positive pressure fire rated doors and frames. Provide all necessary hardware for complete fire labeled opening including anti-friction hinges, latching hardware, non-flaming fluid closers, smoke seals and intumescent hot seals.
- C. Conform to CRSC Standard 12-7-4 requirements applicable to fire rated doors and frames.
- D. Conform to applicable requirements of the Americans with Disabilities Act of 1990 regarding accessibility requirements for door and entrance hardware.
- E. Conform to applicable requirements of California Building Code regarding exiting and accessibility requirements for door and entrance hardware.
- F. All hardware shall meet the requirements of CBC Chapter 11B.

1.07 SUBMITTALS

- A. Submit schedule and product data under provisions of Division 1.
- B. Submit schedule with date of field survey of existing doors, frames, and hardware, along with any noted conflicts, otherwise schedule will be rejected.
- C. Provide five (5) copies of vertical format hardware schedule showing each application including door index, headings, hardware sets, door number and location, door and frame size and material, door and hardware handing, degrees of opening, quantity required, part numbers and finish of each item. For exterior doors, provide threshold shop drawings submittals with cross section and floor plan dimensioned drawings showing floor, threshold, door bottom seal, door, and frame for Architect's review and approval.
 - 1. Projects with multiple buildings and/or multiple floor levels must be submitted so each building and/or floor level is not mixed with another starting with Building A, 1st floor etc.
 - 2. Architect's review of such schedule does not relieve the Contractor of providing hardware required for the work, whether or not such hardware was inadvertently omitted from this Section.
- D. Accompanying the schedules, provide two (2) manufacturer's brochures of each item scheduled, indicating function, finish, dimensions, and related features. No hardware schedule will be accepted for review without submission of such brochure package.
- E. Submit manufacturer's certificate of warranty with submittal; otherwise material will be rejected.
- F. When alternate manufacturers are proposed by contractor, provide two (2) brochures of proposed items two weeks prior of bid date.
- G. Submit only manufacturers specified as approved or alternate.
- H. Provide samples indicating hardware design and finish when required by Architect.

1.08 COORDINATION

- A. Coordinate work of this Section with other directly affected Sections involving manufacturers of any internal reinforcement for door hardware.
- B. In particular, coordinate door preparation in accordance with applicable regulatory and trade standards specified.
- C. Field Survey: For projects with existing doors, frames, and or hardware within the project scope, prior to submitting the hardware schedule submittal, conduct a door-by-door survey of all openings in project scope to confirm existing doors, frames, door hardware, and hardware preps. Notify Architect of any conflicts between existing conditions and specified hardware; recommend a solution.
- D. Review details and conditions prior to ordering hardware. When a door hand is changed during construction, coordinate and change hardware as necessary at no cost to the Owner.
- E. Coordinate aluminum frame head stop heights to be minimum 5/8" so that overhead stop cut outs are not visible when the door is closed.

1.09 OPERATIONS AND MAINTENANCE DATA

- A. Submit operation and maintenance data under provisions of Division 1.

- B. Include data on operating hardware. Lubrication requirements and inspection procedures related to preventive maintenance.

1.10 KEYING CONFERENCE:

- A. In addition to Owner, Contractor, and Architect, conference participants shall also include Installer's Architectural Hardware Consultant. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including, but not limited to, the following:
 1. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
 2. Preliminary key system schematic diagram.
 3. Requirements for key control system.
 4. Requirements for access control.
 5. Address for delivery of keys.

1.11 SOURCE LIMITATIONS:

- A. Obtain each type and variety of door hardware from a single manufacturer, unless otherwise indicated.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to site under provisions of Division 01.
- B. Store and protect products under provisions of Division 01.
- C. Package hardware items individually; label and identify packages with door opening code to match hardware schedule.

1.13 MAINTENANCE MATERIALS

- A. Provide special wrenches and tools applicable to each different or special hardware component.
- B. Provide maintenance tools and accessories supplied by hardware component manufacturer.

1.14 WARRANTY

- A. Provide two year guarantee against defects on hardware, including electrical components, five years warranty for cylindrical locks, mortise locks and exit devices and ten year warranty for surface, floor concealed closers and continuous hinges.
- B. Submit guarantee on form provided in Documents.
- C. Submit manufacturer's certificate of warranty with submittal, otherwise material will be rejected.

PART 2 PRODUCTS - DOOR HARDWARE CRITERIA

2.01 MANUFACTURERS

Item	Manufacturer	Approved Alternates
Hinges:	(HAG)-Hager	Best, Ives, McKinney

Continuous Hinges:	(MAR)-Markar	ABH, Best, Ives, Select
Continuous Gear Hinges:	(SEL)-Select	None
Gate Hinge/Closer System:	(LOC)-Locinox	None
Floor Closers:	(RIX)-Rixson	None
Pivots:	(ABH)-ABH Mfg.	Rixson
Power Transfers:	(VON)-Von Duprin	None
Armored Door Loops:	(KED)-Keedex	None
Wire Harnesses:	(COM)-Command Access	Or Equal
Push/Pull Plates:	(TRM)-Trimco	Ives, Rockwood, Tice
Anti-Vandal Pulls:	(TRM)-Trimco	None
Pulls:	(ROC)-Rockwood	Ives, Tice, Trimco
Manual Flush Bolts:	(ABH)-ABH Mfg.	Ives, Rockwood, Trimco
Wood Door Automatic Flush Bolts:	(ABH)-ABH Mfg.	Rockwood
Metal Door Automatic Flush Bolts:	(ABH)-ABH Mfg.	Ives, Rockwood, Trimco
Cane Bolts:	(CRW)-Crown Industrial	Richards-Wilcox
Weldable Lock Boxes:	(KED)-Kedex	None
Locks and Latchsets:	MATCH CAMPUS STANDARD (VOLUME 1)	
Cylinders:	MATCH CAMPUS STANDARD (VOLUME 1)	
Custom Strikes:	(TIC)-Tice Industries	Or Equal
Lock Guards:	(D-J)-Don-Jo	Or Equal
Exit Devices:	MATCH CAMPUS STANDARD (VOLUME 1)	
Glass Door Exit Devices:	(CRL)-C.R. Laurence	Access Door, Assa Abloy Glass Solutions, Dorma Glas, Frameless Hardware Co., PRL Glass
Strike Support:	(TIC)-Tice Industries	Or Equal
Coordinators:	(ABH)-ABH Mfg.	Ives, Rockwood, Trimco
Surface Closers:	(MATCH CAMPUS STANDARD (VOLUME 1)	
H.D. Floor Stops:	(IVE)-Ives	Rockwood, Trimco
Floor Stops:	(TRM)-Trimco	Tice
Wall Stops:	(ROC)-Rockwood	Tice
H.D. Wall Stops:	(TRM)-Trimco	None
Overhead Stops:	(ABH)-ABH Mfg.	Rixson
Magnetic Holders:	(RIX)-Rixson	ABH, LCN
Armor, Kick, & Mop Plates:	(TRM)-Trimco	Ives, Rockwood
Adhesive Seals with 3M Tape:	(ZER)-Zero	Legacy
Door Sweeps:	(ZER)-Zero	Legacy
Door Sweeps:	(NGP)-National Guard	Legacy, Zero
Automatic Door Bottoms:	(ZER)-Zero	Legacy
Thresholds:	(PEM)-Pemko	Legacy, National Guard, Zero
Coat Hooks:	(TIC)-Tice Industries	Or Equal

2.02 HINGES & PIVOTS

- A. Field-verify installed hinges or pivots per Condition Code Schedule in this section or per Architectural Door Schedule condition codes and take the noted actions
- B. Unless noted otherwise, provide steel hinges, with finish as shown in schedule. Provide non-ferrous hinges at exterior doors.
- C. Provide hinges in accordance with following schedule:

1. Doors up to 4 feet high: 2 hinges.
 2. Doors 4 feet to 7 feet 5 inches high: 3 hinges minimum.
 3. Doors greater than 7 feet 5 inches high: 4 hinges.
 4. Doors up to 3 feet wide, standard weight: 4-1/2" x 4-1/2" hinges.
 5. Doors 3'6" wide to under 4'0" wide, standard weight: 5" x 4-1/2".
 6. Doors 4'0" wide, heavy weight: 5" x 4-1/2".
 7. Provide heavy-weight hinges where specified.
 8. At doors weighing 150 lbs. or more, furnish hinges with leaf height as recommended by the hinge manufacturer.
 9. At doors in aluminum frames: standard weight 4-1/2" x 4-1/2" hinges, or continuous hinges as scheduled.
- D. Unless otherwise noted or required, provide full mortise five-knuckle ball-bearing hinges, with non-rising loose pins.
- E. Provide set screw (NRP) type at key lockable outswing doors to prevent pin removal when door is in closed position. Provide security stud (SH) type at key lockable exterior outswing doors.
- F. Where necessary to maintain door clearance at jamb trim, frame conditions, door reveals and similar conditions, provide wide throw hinges as approved by the Architect.
- G. Continuous Hinges
1. Where piano-type hinges are scheduled, to be barrel-type of 14 gauge 304 stainless steel, 14 gauge 1012 cold-rolled steel or 6063-T5 aluminum material with stainless steel Teflon-coated pin. Provide with "medical bearings" to reduce noise and accumulation of dust.
 2. Hinge guard models to be furnished with Adjusta-screw fasteners.
 3. Provide with self-lubricating fiber-reinforced polymer bearings ("MB" option) for noise-free operation and resistance to dust and dirt accumulation.
- H. Provide with piano-type with welded end pins.
- I. Where necessary to maintain door clearance at jamb trim, frame conditions, door reveals and similar conditions, provide wide throw hinges as approved by the Architect. Provide wide throw hinges as required for doors swinging 180° into a room to avoid conflict between the door closer cover and the wall or frame.
- J. Provide with factory cut-outs for mortise hardware that must penetrate the hinge (e.g. concealed power transfer, etc.) where they occur.
- K. Provide mortar guard frame box by hinge manufacturer for electric hinges where not provided by frame manufacturer.
- 2.03 KEYING
- A. Keying to be tied into the campus grand mastered keyway system. Provide per Campus Standards (Volume 1). Contractor to coordinate with campus Locksmith to determine keying requirements and keyway.
1. Cut keys at manufacturer's factory, where permanent key records are maintained.
 2. Provide padlocks and miscellaneous locking hardware where specified.

3. Provide each cylinder or lock with three change keys (customer keys).
 4. Provide twelve submaster keys (floor master key) for each master key group.
 5. Provide twenty master keys per master, ten grandmaster keys per grandmaster, and five great grandmaster keys per great grandmaster. Provide twenty-five permanent control keys for project.
 6. Stamp master keys and grand master keys with a registry number. Do not stamp "Master" or letter "M".
 7. Stamp individual room keys with plain identification number. Do not indicate key cut.
 8. Provide all permanent cores with Concealed Key Control (CKC) marking identifying the key symbol on the core's side or back.
 9. Cut keys and stamp DO NOT DUPLICATE.
 10. Tag cylinders and keys to indicate intended location and to establish key control system.
 11. Convene a keying meeting to determine final keying with Supplier, Contractor, Architect and Owner's Representative.
 12. Ship all permanent cores, permanent keys, and key blanks via registered means directly from the lock factory to the Owner's representative.
 13. Finish: Indicated in Hardware Schedule.
- B. Construction Keying: Contractor to provide temporary keyed alike cores for all lockable doors and gates in scope with 50 construction master keys and 10 construction control keys for use during the construction period. Return construction cores for credit.
- C. Provide cylinder collars and spacers to match key cylinder finish for each locking device. Provide collar and spacers to ensure a tight, secure fit of the key cylinder to the locking device with no gaps or spaces.
- 2.04 LOCKSETS, LATCHSETS, AND STRIKES
- A. Unless noted otherwise in schedule, locksets, latchsets, cylinders and component parts shall be the products of single manufacturer.
- B. Provide strikes at locks with curved lip strike of sufficient length to protect trim and jamb. Each strike will include wrought strike box (similar to Tice Industries No. 1502). At outswing doors with overlapping astragals installed on the pull side, provide a flat strike with 7/8" lip-to-center dimension.
- C. Mortise Locks:
1. Lock Body shall include quick reversibility mechanism without removing lock body cover.
 2. Provide cast or forged levers only. Roses, where specified, shall be wrought. Escutcheons, where specified, shall be cast or forged.
- D. Unless noted otherwise, provide 2-3/4 inch backset.
- E. Lock Throw: Comply with UL requirements for throw of bolts and latch bolts on rated fire openings.
- F. Field-verify installed locks per Condition Code Schedule in this section or per Architectural Door Schedule condition codes and take the noted actions.

- G. Auto Flush Bolts: Minimum ½” throw latch bolts, fully automatic extending into top strike and dust proof strike at sill. Provide longer rods as necessary for doors exceeding 7’0” in height. Where auto flush bolts are specified as top bolts only with bottom fire bolt at wood pairs rated above 20-minutes, provide bottom auto flush bolt and dust proof strike (DCI 82 or approved equal) in lieu of specified bottom fire bolt. Provide type of auto flush bolt required by door material (metal or wood), regardless of type specified.

2.05 PANIC EXIT DEVICES

- A. Where specified, provide panic exit device with required UL labels. Where panic device is required on fire rated doors, provide UL label with supplementary marking on door and hardware indicating compliant fire exit hardware.
- B. Provide modern push-pad type, reversible exit devices. Provide exit device manufacturer’s shims as required to clear glass lite frames.
- C. Push-pad shall be mounted at a height of not less than 34 inches (864mm) nor more than 44 inches (1118mm) above floor. The unlatching force shall not exceed 5 pounds.
- D. Exit Devices shall comply with CRSC Standard 12-10-3 and CBC Chapter 10 requirements. Provide device width as recommended by the exit device manufacturer for the door width.
- E. Provide exit devices levers of design to match lock levers.

2.06 DOOR CLOSERS

- A. Surface mounted closers to be full rack and pinion type with cast shell.
 - 1. Provide drop brackets, mortise shoes, and long arms as required. Provide 5th hole spacers where parallel arm shoes are mounted to narrow frame stops.
 - 2. Provide with drop plates where required to fit narrow top rails.
 - 3. Provide all closers with metal covers.
 - 4. Provide non-handed door closers with multi-sized springs, with separate adjustable valves for latch, sweep speed, and backcheck.
 - 5. Template and adjust closers per manufacturer’s recommendations and to meet accessibility requirements.
 - 6. Where regular arm closers are specified at doors that must swing past 120° and LCN 4040XP closers are used, revise closer to LCN 4040XPT-Series (top jamb) x 4040XPTJ-18 plate and provide minimum 4-1/2” wide hinges.
 - 7. Where used in conjunction with an overhead stop, provide special template, special arms, back plates, and other items as needed to allow the closer to be installed without conflicting with the overhead stop.

2.07 MAGNETIC HOLDERS

- A. Provide magnetic holders with tri-volts coils only.
- B. Provide assemblies consisting of an armature contact plate with adjustable mounting pivot.
- C. Use extensions as necessary to align door at parallel with wall.

2.08 PROTECTIVE PLATES

- A. Provide stainless steel kick, mop, and armor plates as scheduled, with all edges beveled. Where armor plates are specified at rated doors, provide with U.L. listing. Provide with all four edges heavy-beveled. Provide with countersunk fastener holes and oval-head countersunk screws.

2.09 STOPS

- A. Provide a floor or wall stop at every door.
- B. Provide carpet risers for floor stops where required.
- C. Where specified floor or wall stop would present a pedestrian hazard or cannot be used, furnish heavy-duty overhead concealed stop with stop degree adjustable in door track. Floor stops must impact the door no greater than 4" from the leading edge and be installed no more than 4" from an adjacent wall or pillar.
- D. Template overhead stops for maximum available swing.

2.10 SILENCERS

- A. Provide silencers at hollow metal or wood door frames that are without seals in quantities as follows:
 - 1. Single Doors: 3 silencers
 - 2. Pairs: 4 silencers

2.11 SEALS

- A. Provide seals complete with retainers, fasteners and trim.
- B. Provide UL listed seals at rated openings.
- C. Provide UL listed intumescent hot seal at fire rated wood doors when doors are not being furnish with intumescent hot seal.
- D. Unless noted otherwise, furnish fastener-applied silicone or neoprene seals at door jamb and head conditions. Use of vinyl seal prohibited.
- E. Where flat bar head seals are specified to accommodate hardware mounted to the underside of the frame stop, furnish factory-cut as required for frame stops narrower than the standard seal width.
- F. Where specified, furnish solid neoprene seals complying with MilSpec R6855, Class II, Grade 40.
- G. At doors in aluminum frames, omit frame seals. Frame seals will be provided by aluminum frame section.
- H. Where adhesive frame seals are scheduled, provide only type with genuine 3M adhesive tape for superior adhesion.
- I. Provide automatic door bottoms with the below features:
 - 1. Automatic door bottom fastened to door with screws from underneath door.
 - 2. Door edge mounting plates that allow the automatic door bottom mechanism to be removed for service or replacement without de-mounting the door from the frame.

- J. Where frame seals, astragals, or door bottoms are not specified at exterior hollow metal doors, provide weather seals as below:
1. Outswing door frame seals: Pemko 2891AS x CSK SCREWS.
 2. Inswing door frame seals: Pemko 332CS.
 3. Meeting stile astragals for pairs with panic hardware: Pemko 351C x 351CP.
 4. Overlapping astragals for pairs with locksets and auto flush bolts: Pemko 357SP x TB x SPECIAL HOLE PATTERN TO AVOID CONFLICT WITH LOCK AND AUTO FLUSH BOLTS x S88BL.
 5. Door bottoms: National Guard Products 200NA.

2.12 THRESHOLDS

- A. General: Except as otherwise indicated furnish standard metal threshold unit of type, size and profile as shown or scheduled. Where required by fire code, furnish appropriate model thresholds at openings where combustible floor material extends through the door opening. Provide threshold as indicated in details. Provide ¼-20 stainless steel fasteners with combo anchors.
- B. Thresholds must comply with the requirements of ADA and ANSI-117.1 and CBC Chapter 11B.
- C. Provide thresholds with aluminum composite filler where so specified for increased strength.

2.13 FINISHES

- A. Finishes are identified in Schedule at end of this Section.
- B. Where finish not shown, match finish of lockset.
- C. Where finish is noted in the hardware schedule as "TBD", request finish selection from the Architect and provide the selected finish.
- D. Provide fasteners matching in finish, base material and color.

2.14 FASTENERS

- A. Fasteners: Provide hardware manufacture to conform to publish templates, generally prepared for machine screws installation.
- B. Install hardware with manufacturer supplied screws for each item.
- C. Provide screws for installation, with each hardware item. Provide Phillips flat-head screws except as otherwise indicated. Finish exposed (exposed under any condition) screws to match hardware finish or, if exposed in surfaces of other work, to match finish of such other work as closely as possible, including "prepared for paint" in surfaces to receive painted finish.
- D. Provide concealed fasteners for hardware units which are exposed when door is closed, except to extent no standard units of type specified are available with concealed fasteners.
- E. Provide ¼-20 stainless steel machine screws and combo anchors for all thresholds.

2.15 ELECTRICAL DRAWINGS

- A. Provide custom point-to-point wiring diagram for each electric hardware application.
- B. Provide custom electric hardware elevation riser diagram for each hardware application.

PART 3 EXECUTION

3.01 INSPECTION

- A. Verify that doors and frames are ready to receive work and dimensions are as indicated on shop drawings, instructed by the manufacturer.
- B. Beginning of installation means acceptance of existing conditions.

3.02 INSTALLATION

- A. A QUALIFIED MECHANIC skilled in the application of institutional grade builder's hardware shall install hardware.
- B. Install hardware in accordance with manufacturer's instructions and requirements of SDI, ANSI/NFPA 80, AWI, and BHMA. Select applicable standard based on door function, type and regulatory criteria.
- C. Install hardware in accordance with NFPA 80 in fire labeled doors.
- D. Where door is designated as receiving new hardware, package and label hardware by type and function, and deliver to Owner.
- E. Predrill pilot holes in wood for screws. Drill and tap for surface mounted hardware on metal. Set hinge leaf snug and flat in mortises, turn screws to flat seat [do not drive].
- F. Mount surface closers on side of door away from corridor, inside rooms or in stairs. Install regular or parallel rigid arm closers as required.
- G. Provide ADEQUATE BACKING in stud partitions for the attachment of all respective finish hardware.
- H. Floor mounted door stops are to be installed at maximum of four inches from the face of the wall or partition.
- I. Install thresholds in full bed of sealant at front and side edges.

3.03 INSTALL HARDWARE USING TEMPLATES PROVIDED BY HARDWARE ITEM MANUFACTURER

- A. Prior to finishing door, fit hardware to door, utilizing fasteners and templates as specified.
- B. Remove hardware, carefully label and store. Where door exists and is designated to receive new finish, remove existing hardware.
- C. Re-install after door finish is complete

3.04 UNLESS NOTED OTHERWISE OR SHOWN ON DRAWINGS, MOUNT HARDWARE IN ACCORDANCE WITH THE FOLLOWING CRITERIA:

- A. Latchset and Lockset handle: 38 inches above finish floor. Verify manufacturer's template with door design.
- B. Glass locks: 40 inches above finish floor to center line. Verify manufacturer's template with door design.

- C. Auxiliary Locks: 40 inches to center line.
 - D. Panic Devices: 40 inches above floor; at storefront doors, aligned with center muntin on adjacent window wall. Verify manufacturer's template with door design.
 - E. Push and Pull Plates: 44 inches to center line.
 - F. Door Pulls: 40 inches above finish floor to center line.
- 3.05 ADJUST CLOSER OPERATING EFFORT CONFORM TO CALIFORNIA BUILDING CODE CHAPTER 11B.
- A. Exterior and Interior Doors: 5.0 pounds force. At exterior doors that lead into the same interior space a nearby exterior automatic door, 8.5 pounds force.
 - B. Fire Rated Doors: Verify with AHJ (Authority Having Jurisdiction) not to exceed 15.0 pounds force.
- 3.06 ADJUST CLOSER DELAY AND OPERATING SPEEDS TO COMPLY WITH REQUIREMENTS OF CALIFORNIA BUILDING CODE CHAPTER 11B.
- A. The sweep period of the door closers shall be adjusted so that from an open position of 90 degrees, the door will take at least 5 seconds to move to a point 12 degrees from the latch.
 - B. At non-rated interior and exterior door with closers, the door shall be able to open with no more than 5 lbs. opening force (or 8.5 lbs. per 3.5 A.) and still latch under balanced air pressure. Doors with closers shall be tested prior to closers being installed; doors shall be adjusted for no more than one-half pound force friction and ease of latching prior to closers being installed.
 - C. Closer Certification: Provide written certification, signed by door closer representative, stating closers were inspected and installed in accordance with specified opening force and delay requirements.
- 3.07 CLEAN AND ADJUST
- A. At completion, all hardware shall be left clean and free from disfigurement. Contractor shall make a final adjustment to all door closers and other items of hardware. Where hardware is found defective, repair, replace, or otherwise correct as directed.
 - B. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Adjust hardware so that moving parts operate freely, without bind, or excessive play. Hardware shall be free of paint, corrosion, or damage of any kind.
- 3.08 POST-INSTALLATION INSPECTION
- A. Provide written certification, signed by the hardware manufacturer representative, stating the locks, panics, and door closers were inspected and installed in accordance with specified operational requirements.

SECTION 08 71 13

AUTOMATIC SWING DOOR OPERATORS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

1.02 Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.03 SUMMARY

- A. This Section includes the following types of automatic door operators:
- B. Exterior and interior automatic swing door operators, low energy, with concealed-in-ground, overhead concealed, or surface mounting per Door Schedule and automatic door operator equipment schedule.
- C. Automatic door operators shall be configured for doors as follows:
 - 1. Simultaneous pairs out swing (available for independent operation).
 - 2. Single doors, inswing or outswing.

1.04 RELATED SECTIONS

- A. Section 08 71 00 Door Hardware for hardware to the extent not specified in this Section.
- B. Division 26 Sections for electrical connections including conduit and wiring for automatic door operators.
- C. Division 28 Electronic Safety and Security for Access control coordination.

1.05 REFERENCES

- A. General: Standards listed by reference, including revisions by issuing authority, form a part of this specification section to extent indicated. Standards listed are identified by issuing authority, authority abbreviation, designation number, title or other designation established by issuing authority. Standards subsequently referenced herein are referred to by issuing authority abbreviation and standard designation.
- B. Underwriters Laboratories (UL):
 - 1. UL 325 – Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.
 - 2. UL 228 – Standard for Automatic Closing Devices.
- C. American National Standards Institute (ANSI)/Builders' Hardware Manufacturers Association (BHMA):
 - 1. ANSI/BHMA A156.19: Standard for Power Assist and Low Energy Power Operated Doors.
- D. American Society for Testing and Materials (ASTM):
 - 1. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

2. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - E. American Association of Automatic Door Manufacturers (AAADM):
 - F. National Fire Protection Association (NFPA):
 1. NFPA 101 – Life Safety Code.
 2. NFPA 70 – National Electric Code.
 - G. CBC: California Building Code (permit edition)
 - H. California Department of Forestry and Fire Protection, Office of the State Fire Marshall.
 - I. International Standards Organization (ISO):
 1. ISO 9001 - Standard for Manufacturing Quality Management Systems
 - J. National Association of Architectural Metal Manufacturers (NAAMM):
 1. Metal Finishes Manual for Architectural and Metal Products.
 - K. American Architectural Manufacturers Association (AAMA):
 1. AAMA 607.1 - Clear Anodic Finishes for Architectural Aluminum.
 2. AAMA 611 Voluntary Specification for Anodized Architectural Aluminum.
- 1.06 DEFINITIONS
- A. Activation Device: Device that, when actuated, sends an electrical signal to the door operator to open the door.
- 1.07 PERFORMANCE REQUIREMENTS
- 1.08 Provide automatic door operators capable of withstanding structural loads and thermal movements based on testing manufacturer's standard units in assemblies similar to those indicated for this Project.
- 1.09 Operating Range: Minus 30 deg F (29 deg C) to 130 deg F (54 deg C).
- 1.10 Opening-Force Requirements for Egress Doors: In the event power failure to the operator, swinging automatic entrance doors shall open with a manual force, not to exceed 30 lbf (133 N) applied at 1" (25 mm) from the latch edge of the door.
- 1.11 Door Energy: The kinetic energy of a door in motion shall not exceed 1.25 lbs-ft (1.69 Nm).
- 1.12 Closing Time:
1. Doors shall be field adjusted to close from 90 degrees to 10 degrees in 3 seconds or longer.
 2. Doors shall be field adjusted to close from 10 degrees to fully closed in not less than 1.5 seconds.
- 1.13 SUBMITTALS
- 1.14 Submit listed submittals in accordance with Conditions of the Contract and Division 01 submittal procedures.

- 1.15 Shop Drawings: Include project-specific and door-specific plans, elevations, sections, details, hardware mounting heights, and attachments to other work. Indicate wiring for electrical supply. Provide custom point-to-point wiring diagrams showing connection to other work.
- 1.16 Color Samples for selection of factory-applied color finishes.
- 1.17 Closeout Submittals: Provide the following with project close-out documents.
1. Owner's Manual.
 2. Warranties.
- 1.18 QUALITY ASSURANCE
- 1.19 Supplier and Installer Qualifications: Manufacturer's authorized representative who is trained for installation and maintenance of units required for this Project.
- 1.20 Manufacturer Qualifications: A qualified manufacturer with a manufacturing facility certified under ISO 9001 and with company certificate issued by AAADM.
- 1.21 Certifications: Automatic door operators shall be certified by the manufacturer to meet performance design criteria in accordance with the following standards:
1. ANSI A156.19.
 2. NFPA 101.
 3. UL 228 Listed (Fire Door Operator).
 - a. Variance from local authority having jurisdiction required to allow automatic door operators to remain powered during a fire event to maintain stair pressurization in high rise construction.
 4. UL 325 Listed.
 5. ICBO (UBC Standard 10-1).
 6. California State Fire Marshall (CSFM) Listed.
 7. Source Limitations: Obtain automatic door operators through one source from a single manufacturer.
- 1.22 Product Options: Drawings indicate sizes, profiles, and dimensional requirements of automatic door assemblies and are based on the specific system indicated. Refer to Division 1 Section "Product Requirements."
- 1.23 Power Operated Door Standard: ANSI/BHMA A156.19.
- 1.24 Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- 1.25 Emergency-Exit Door Requirements: Comply with requirements of authorities having jurisdiction for swinging automatic entrance doors serving as a required means of egress.
- 1.26 PROJECT CONDITIONS
- 1.27 Field Measurements: General Contractor shall verify openings to receive automatic door operators by field measurements before fabrication and indicate measurements on Shop Drawings.

- 1.28 Mounting Surfaces: General Contractor shall verify all surfaces to be plumb, straight and secure; substrates to be of proper dimension and material.
- 1.29 Other trades: General Contractor Advise of any inadequate conditions or equipment.
- 1.30 COORDINATION
- 1.31 Templates: Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing automatic door operators, safety sensors, activation switches, and control switches to comply with indicated requirements.
- 1.32 Electrical System Roughing-in: Coordinate layout and installation of automatic door operators with connections to, power supplies, and remote activation devices.
- 1.33 System Integration: Integrate automatic door operators with other systems as required for a complete working installation. Provide all connection wires and electric connection points with labels indicating use and function.
1. Provide electrical interface control capability for card reader or keypad operation of automatic door operators on doors with electric locking.
 2. Where required for proper operation, provide a time delay relay to signal automatic door operator to activate only after electric lock system is released.
- 1.34 WARRANTY
- 1.35 Automatic door operators shall be free of defects in material and workmanship for a period of five (5) years from the date of substantial completion.
- 1.36 During the warranty period the Owner shall engage a factory-trained technician to perform service and affect repairs. A safety inspection shall be performed after each adjustment or repair and a completed inspection form shall be submitted to the Owner.
- 1.37 During the warranty period all warranty work, including but not limited to emergency service, shall be performed during normal working hours and within one (1) business day of the service request.

PART 2 PRODUCTS

2.01 AUTOMATIC DOOR OPERATORS

- A. Manufacturers: ASSA Abloy Entrance Systems SW200i-Series or Horton 4100LE/4900LE-Series; surface-mounted, overhead concealed, or concealed-in-ground, as indicated in the Automatic Door Operator Equipment Schedule in this section. Provide for each leaf of each opening scheduled with an automatic door operator hardware set.

2.02 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Headers: 6063-T6.
 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 3. Sheet and Plate: ASTM B 209.

- B. Sealants and Joint Fillers: Refer to Division 7 Section "Interior Joint Sealants".

2.03 COMPONENTS

- A. Surface-mounted Operator Enclosures: Provide for the full-width of the opening, length to match the frame head. Provide combined enclosures for pairs of doors.
- B. Door Arms: A combination of door arms and linkage shall provide positive control of door through entire swing; units shall permit use center pivot -hung doors. Center-pivoted overhead concealed units shall include "power arm" that will serve as the direct drive top pivot.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
- D. Signage: Provide signage in accordance with ANSI/BHMA A156.19.
- E. Threshold Assemblies at In-Ground Operators: Provide architectural grooved metal threshold assemblies by National Guard Products, Pemko, Zero, or Legacy of accessible profile approved by the Architect, aluminum material, to cover in-ground operators. Where these occur at banks of doors, provide continuous threshold assembly for non-automatic doors as well. All threshold assemblies to provide for easy access to in-ground operators. Provide with mitered (returned closed) ends. Provide with stainless steel 1/4-20 machine screws and minimum 2" long anchors.
- F. Cover Pans: Where finish floor material runs through opening at in-ground operators, provide cover pans as needed to hold finish floor material and conceal operators.
- G. Special Cement Cases: Provide special cement cases with special anchoring as required to suit slab conditions.

2.04 SWINGING DOOR OPERATORS

- A. Operator Type: Low energy; readily convertible to full energy; no tools required to change type.
 - 1. Mounting: Concealed-in-ground at all-glass doors, Surface mounted at hollow metal doors, aluminum storefront doors, and fire-rated steel-and-glass doors, unless noted otherwise per condition codes. Install inside room or on least-public side except where referenced otherwise in Section 087100.
 - a. Adjustable opening and closing speeds.
 - b. Adjustable opening and closing force.
 - c. Adjustable back-check.
 - d. Adjustable hold-open time between 0 and 30 seconds.
 - e. Reverse on obstruction.
 - f. Variable rate open/closed speed control.
 - g. Closed loop speed control with active braking and acceleration.
 - h. Variable obstruction recycle time delay.
 - i. When operators are provided in pairs, adjustable features are independently adjustable for each operator. Provide for independent opening.

2.05 ELECTRICAL CONTROLS

- A. Safety Search Circuitry: Provide system to recycle the swinging panels when an obstruction is encountered during the closing cycle. If an obstruction is detected, the system shall search for that object on the next closing cycle by reducing door closing speed prior to the previously encountered obstruction location, and will continue to close in check speed until doors are fully closed, at which time the doors will reset to normal speed. If obstruction is encountered again, the door will come to a full stop. The doors shall remain stopped until obstruction is removed and operate signal is given, resetting the door to normal operation.
- B. Control Switch: Automatic door operators shall be equipped with a Camden four position key switch to control the operation of the door. Control switch shall provide four modes of operation: On, Off, Exit (Night Mode), and Hold-Open. Assume Camden CM-180/24 for pricing purposes.
- C. Safety Sensing at Doors with Knowing Switch Activation: Provide BEA LZR-Flatscan 3D re-activation and stall sensors and both sides of each leaf. Push side sensor to sense when a person is in the doorway and signal the automatic door operator to re-activate until the doorway is clear. Pull-side sensor to sense when a person is in the doorway and signal the automatic door operator to stall until the doorway is clear. Installed with concealed wiring through power transfer unless noted otherwise.
- D. Time Delay Relays: Provide 2 each BEA Br3-X time delay relays per opening to coordinate electric unlatching and to facilitate REX signal splitting from interior touchless activation switch.
- E. Power Switch: Provide toggle switch for 120V power connection directly on top of operator enclosure for surface-mounted operators, on header face for overhead-concealed operators, or where directed by the Architect for concealed-in-floor operators.

2.06 ACTIVATION DEVICES

- A. Knowing Activation: Per Automatic Door Operator Equipment Schedule in this Section and as modified by condition codes scheduled in the Door Schedule.
 - 1. Vertical Actuation Bars: Wikk Industries.
 - 2. Touchless Activation Switches: BEA Sensors, or Camden Controls.
- B. Pedestals: Where shown in the Drawings and Door Schedules and as noted by the condition codes scheduled in the Door Schedule.
 - 1. Manufacturer: Wikk Industries.
 - 2. Provide of suitable height for all required vertical actuation bars, touchless activation switches, and card readers. Factory prep pedestals for electronic devices.
 - 3. Provide with sloped top.

2.07 FINISHES

- A. Provide operator enclosure and mounting plate in custom anodized finish to match door and frame finish.
- B. Provide arm assembly in custom powdercoated finish to match door and frame assembly.

2.08 AUTOMATIC DOOR OPERATOR EQUIPMENT SCHEDULE

Operator Type / Hardware Set	Activation	Safety Sensors	Other

PART 3 EXECUTION

3.01 INSPECTION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of swinging automatic entrance doors. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion. Rigidly secure non-movement joints.
- B. Mounting: Install automatic door operators/headers plumb and true in alignment with established lines and grades. Anchor securely in place.
 - 1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 - 2. Set headers, arms and linkages level and true to location with anchorage for permanent support.
- C. Door Operators: Connect door operators to electrical power distribution system as specified in Division 26 Sections.
- D. Sealants: Comply with requirements specified in Division 7 Section "Joint Sealants" to provide weather tight installation.

3.03 FIELD QUALITY CONTROL

- A. Testing Services: Factory Trained Installer shall test and inspect each swinging automatic entrance door to determine compliance of installed systems with applicable ANSI standards.

3.04 ADJUSTING

- A. Adjust door operators, controls, and hardware for smooth and safe operation, for weather-tight closure, and complying with requirements in ANSI/BHMA A156.19 by AAADM Certified Technician.

3.05 CLEANING AND PROTECTION

- A. Clean surfaces promptly after installation. Remove excess sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.

SECTION 08 80 00

GLAZING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Glass products.
2. Laminated glass.
3. Insulating glass.
4. Glazing sealants.
5. Glazing tapes.
6. Miscellaneous glazing materials.

B. Related Requirements:

1. Section 057313 "Glazed Decorative Metal Railings" for glazing in railings.
2. Section 084126 "All-Glass Entrances and Storefronts."
3. Section 084233 "Revolving Door Entrances" for glass in revolving door entrances.
4. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for glazing sealants used in structural-sealant-glazed curtain walls.
5. Section 088113 "Decorative Glass Glazing."
6. Section 088300 "Mirrors."
7. Section 088733 "Glazing Surface Films – Anti-Graffiti".
8. Section 088813 "Fire-Rated Glazing."
9. Section 088853 "Security Glazing."

1.02 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C1036.
- C. IBC: International Building Code.

- D. Interspace: Space between lites of an insulating-glass unit.

1.03 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances to achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for glazing during and after installation.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Glass Samples: For each type of [glass product other than clear monolithic vision glass] [the following products]; 12 inches square.
 - 1. Tinted glass.
 - 2. Coated glass.
 - 3. Laminated glass.
 - 4. Insulating glass.
 - 5. Spandrel glass.
- C. Glazing Accessory Samples: For [sealants] [and] [colored spacers], in 12-inch lengths. [Install sealant Samples between two strips of material representative in color of adjoining framing system.]
- D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
- E. Delegated Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by qualified professional engineer responsible for their preparation.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [manufacturers of fabricated glass units] [glass testing agency] [and] [sealant testing agency].
- B. Product Certificates: For glass.
- C. Product Test Reports: For **[fabricated glass]** [and] **[glazing sealants]**, for tests performed by a qualified testing agency.

1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

D. Preconstruction adhesion and compatibility test report.

E. Sample Warranties: For special warranties.

1.07 QUALITY ASSURANCE

A. Fabricated-Glass Manufacturer Qualifications: A qualified manufacturer of fabricated glass units who is approved [**and certified**] by primary glass manufacturer.

B. Installer Qualifications: A qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors [**and who employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program**].

C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

E. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Install glazing in mockups specified in [Section 084113 "Aluminum-Framed Entrances and Storefronts"] [Section 085113 "Aluminum Windows"] [Section 084413 "Glazed Aluminum Curtain Walls"] <Insert Section number and title> to match glazing systems required for Project, including glazing methods.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.

2. Use ASTM C1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.

3. Test no fewer than [**eight**] <Insert number> Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.

4. Schedule enough time for testing and analyzing results to prevent delaying the Work.

5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F.

1.11 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
 - 1. Warranty Period: [**10**] <Insert number> years from date of Substantial Completion.
- B. Manufacturer's Special Warranty for Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 - 1. Warranty Period: [**Five**] [**10**] <Insert number> years from date of Substantial Completion.
- C. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is obstruction of vision by dust, moisture, or film on interior surfaces of glass.
 - 1. Warranty Period: [**10**] <Insert number> years from date of Substantial Completion.
- D. Manufacturer's Special Warranty for Heat-Soaked Tempered Glass: Manufacturer agrees to replace heat-soaked tempered glass units that spontaneously break due to nickel sulfide (NiS) inclusions at a rate exceeding 0.3 percent (3/1000) within specified warranty period. Coverage for any other cause is excluded.
 - 1. Warranty Period: [**Five**] [**10**] <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations for Glass: Obtain **[tinted]** **[and]** **[coated]** glass from single source from single manufacturer.
- B. Source Limitations for Glazing Accessories: For each product and installation method, obtain from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design glazing.
- C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300:
 - 1. Design Wind Pressures: [As indicated on Drawings] [Determine design wind pressures applicable to Project in accordance with ASCE/SEI 7, based on heights above grade indicated on Drawings].
 - a. Wind Design Data: As indicated on Drawings.
 - b. Basic Wind Speed: **[85 mph]** **[90 mph]** **[100 mph]** **[110 mph]** <Insert value>.
 - c. Importance Factor: **[1.0]** <Insert factor>.
 - d. Exposure Category: **[B]** **[C]** **[D]**.
 - 2. Design Snow Loads: <Insert design snow load> [As indicated on Drawings].
 - 3. Probability of Breakage for Sloped Glazing: For glass sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.
 - 4. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
 - 5. Thermal Loads: Design glazing to resist thermal stress breakage induced by differential temperature conditions and limited air circulation within individual glass lites and insulated glazing units.
- D. Windborne-Debris-Impact Resistance: Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone **[1]** **[2]** **[3]** **[4]** for **[basic]** **[enhanced]** protection.
 - 1. Large-Missile Test: For glazing located within **[30 feet]** <Insert dimension> of grade.
 - 2. Small-Missile Test: For glazing located between 30 feet and **[60 feet]** <Insert dimension> above grade.

- E. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.
- F. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
 - 1. For monolithic-glass lites, properties are based on units with lites **[6 mm thick] [of thickness indicated]**.
 - 2. For laminated-glass lites, properties are based on products of construction indicated.
 - 3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 - 4. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW computer program, expressed as Btu/sq. ft. x h x deg F.
 - 5. SHGC and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on most current non-beta version of LBL's WINDOW computer program.
 - 6. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.
- G. Acoustic Performance:
 - 1. Exterior Glazing: **[28] [33] [35] <Insert number>** OITC.
 - 2. Interior Glazing: **[35] [37] [41] <Insert number>** STC.

2.03 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 - 1. NGA Publications: ["Laminated Glazing Reference Manual" and] "Glazing Manual."
 - 2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR A7, "Sloped Glazing Guidelines."
 - 3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
 - 4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of **[the SGCC] [the SGCC or another certification agency acceptable to authorities having jurisdiction] [or] [manufacturer]**. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the IGCC.

- D. Thickness: Where glass thickness is indicated, it is a minimum. [Provide glass that complies with performance requirements and is not less than thickness indicated.]
1. Minimum Glass Thickness for Exterior Lites: [**6 mm**] <Insert thickness designation>.
 2. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass [**as needed to comply with "Performance Requirements" Article**]. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass [**as needed to comply with "Performance Requirements" Article**]. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.04 GLASS PRODUCTS

- A. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.
- B. Low-Iron Annealed Float Glass: ASTM C1036, Type I, Class I (clear), Quality-Q3; and with visible light transmission of not less than 91 percent [**and SHGC of not less than 0.87**].
- C. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.
- D. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
- E. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
- F. Pyrolytic-Coated, Low-Maintenance Glass: Clear float glass with coating on first surface having both photocatalytic and hydrophilic properties that act to loosen dirt and to cause water to sheet evenly over the glass instead of beading.
- G. Reflective- and Low-E-Coated Vision Glass: ASTM C1376.
- H. Ceramic-Coated Vision Glass: ASTM C1048, Condition C, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3; and complying with Specification No. 95-1-31 in NGA's "Engineering Standards Manual."
- I. Ceramic-Coated Spandrel Glass: ASTM C1048, Type I, Condition B, Quality-Q3.
- J. Silicone-Coated Spandrel Glass: ASTM C1048, Type I, Condition C, Quality-Q3.
- K. Reflective- and Low-E-Coated Spandrel Glass: ASTM C1376, Kind CS.

2.05 LAMINATED GLASS

- A. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
1. Construction: Laminate glass with [**polyvinyl butyral interlayer**] [**ionoplast interlayer**] [**or**] [**cast-in-place and cured-transparent-resin interlayer**] to comply with interlayer manufacturer's written instructions.
 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 3. Interlayer Color: Clear unless otherwise indicated.
- B. Windborne-Debris-Impact-Resistant Laminated Glass: Comply with requirements specified above for laminated glass except laminate glass with [**one of**] the following to comply with interlayer manufacturer's written instructions:
1. Construction: Laminate glass with [polyvinyl butyral interlayer reinforced with polyethylene terephthalate film] [ionoplast interlayer] [or] [cast-in-place and cured-transparent-resin interlayer reinforced with polyethylene terephthalate film] to comply with interlayer manufacturer's written instructions.
 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 3. Interlayer Color: Clear unless otherwise indicated.

2.06 INSULATING GLASS

- A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E2190.
1. Sealing System: Dual seal, with [manufacturer's standard] [polyisobutylene and polysulfide] [polyisobutylene and silicone] [polyisobutylene and hot-melt butyl] [polyisobutylene and polyurethane] <Insert description> primary and secondary sealants.
 2. Perimeter Spacer: [Manufacturer's standard spacer material and construction] [Aluminum with mill or clear anodic finish] [Aluminum with black, color anodic finish] [Aluminum with bronze, color anodic finish] [Aluminum with powdered metal paint finish in color selected by Architect] [Galvanized steel] [Stainless steel] [Polypropylene-covered stainless steel in color selected by Architect] [Thermally broken aluminum] [Nonmetallic laminate] [Nonmetallic tube] [Silicone with integral desiccant and vapor barrier] <Insert material>.
 3. Desiccant: Molecular sieve or silica gel, or a blend of both.

2.07 GLAZING SEALANTS

- A. General:
1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 3. Colors of Exposed Glazing Sealants: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range of industry colors].
- B. Neutral-Curing Silicone Glazing Sealant, Class 100/50: Complying with ASTM C920, Type S, Grade NS, Use NT.
1. Applications: <Describe types of glazing applications where sealant is required>.
- C. Neutral-Curing Silicone Glazing Sealant, Class 50: Complying with ASTM C920, Type S, Grade NS, Use NT.
1. Applications: <Describe types of glazing applications where sealant is required>.
- D. Neutral-Curing Silicone Glazing Sealant, Class 25: Complying with ASTM C920, Type S, Grade NS, Use NT.
1. Applications: <Describe types of glazing applications where sealant is required>.
- E. Acid-Curing Silicone Glazing Sealant, Class 25: Complying with ASTM C920, Type S, Grade NS, Use NT.
1. Applications: <Describe types of glazing applications where sealant is required>.

2.08 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
1. AAMA 804.3 tape, where indicated.
 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
1. AAMA 810.1, Type 1, for glazing applications in which tape acts as primary sealant.
 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.09 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks:
 - 1. **[EPDM] [Silicone] <Insert type>** with Shore A durometer hardness of 85, plus or minus 5.
 - 2. Type recommended in writing by sealant or glass manufacturer.
- D. Spacers:
 - 1. **[Neoprene] <Insert type>** blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
 - 2. Type recommended in writing by sealant or glass manufacturer.
- E. Edge Blocks:
 - 1. **[EPDM] [Silicone] <Insert type>** with Shore A durometer hardness per manufacturer's written instructions.
 - 2. Type recommended in writing by sealant or glass manufacturer.
- F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.10 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
 - 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - a. Temperature Change: [**120 deg F**, ambient; **180 deg F**, material surfaces] <Insert temperature change>.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
- C. Grind smooth and polish exposed glass edges and corners.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep systems.
 - 3. Minimum required face and edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.03 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches.
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch- minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.
- H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended in writing by gasket manufacturer.

3.04 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.05 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended in writing by gasket manufacturer.

- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended in writing by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

3.06 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.07 CLEANING AND PROTECTION

- A. Immediately after installation, remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- C. Remove and replace glass that is damaged during construction period.
- D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.08 MONOLITHIC GLASS SCHEDULE

- A. Clear Glass Type <Insert drawing designation>: [Annealed] [Heat-strengthened] [Fully tempered] float glass.
 - 1. Minimum Thickness: [**6 mm**] <Insert thickness>.
 - 2. Safety glazing required.
- B. Low-Iron Glass Type <Insert drawing designation>: [Annealed] [Heat-strengthened] [Fully tempered] float glass.
 - 1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 - 2. Minimum Thickness: [**6 mm**] <Insert thickness>.

3. Safety glazing required.
- C. Pyrolytic-Coated, Low-Maintenance Glass Type <Insert drawing designation>: Clear [annealed] [heat-strengthened] [fully tempered] float glass.
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Minimum Thickness: [6 mm] <Insert thickness>.
 3. Safety glazing required.
- D. Tinted Glass Type <Insert drawing designation>: [Annealed] [Heat-strengthened] [Fully tempered] float glass.
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 3. Minimum Thickness: [6 mm] <Insert thickness>.
 4. Winter Nighttime U-Factor: <Insert value> maximum.
 5. Summer Daytime U-Factor: <Insert value> maximum.
 6. Visible Light Transmittance: <Insert number> percent minimum.
 7. SHGC: <Insert value> maximum.
 8. Safety glazing required.
- E. Ceramic-Coated Vision Glass Type <Insert drawing designation>: [Heat-strengthened] [Fully tempered] float glass.
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Glass: [Clear] [Low-iron] [Tinted] float glass.
 3. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 4. Ceramic Coating Color and Pattern: [As selected by Architect from manufacturer's full range] [Match Architect's samples] <Insert one manufacturer's color and pattern designation if matching is required> <Insert manufacturer's name; color and pattern designation>.
 5. Minimum Thickness: [6 mm] <Insert thickness>.
 6. Coating Location: Second surface.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. Visible Light Transmittance: <Insert number> percent minimum.

10. SHGC: **<Insert value>** maximum.
 11. Safety glazing required.
- F. Reflective-Coated Vision Glass Type **<Insert drawing designation>**: [Annealed] [Heat-strengthened] [Fully tempered] float glass.
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Kind CV (coated vision glass) [, except that Kind CO (coated overhead glass) may be used where lower edge of glass is more than **6 feet** above the adjacent floor level or cannot be approached closer than **10 feet**].
 3. Coating Type: [Pyrolytic] [Sputter-coating (vacuum deposition process)].
 4. Coating Color: [Gold] [Pewter] [Silver] **<Insert color>**.
 5. Glass: [**Clear**] [**Tinted**] float glass.
 6. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] **<Insert color>**.
 7. Minimum Thickness: [**6 mm**] **<Insert thickness>**.
 8. Coating Location: [**First**] [**Second**] surface.
 9. Outdoor Visible Reflectance: **<Insert number>** percent maximum.
 10. Winter Nighttime U-Factor: **<Insert value>** maximum.
 11. Summer Daytime U-Factor: **<Insert value>** maximum.
 12. Visible Light Transmittance: **<Insert number>** percent minimum.
 13. SHGC: **<Insert value>** maximum.
 14. Low-Maintenance Coating: Pyrolytic coating on first surface.
 15. Safety glazing required.
- G. Ceramic-Coated Spandrel Glass Type **<Insert drawing designation>**: [**Heat-strengthened**] [**Fully tempered**] float glass.
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Glass: [**Clear**] [**Low-iron**] [**Tinted**] float glass.
 3. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] **<Insert color>**.
 4. Coating Color: [As selected by Architect from manufacturer's full range] [Match Architect's samples] **<Insert one manufacturer's color designation if matching is required>** **<Insert manufacturer's name; color designation>**.
 5. Minimum Thickness: [**6 mm**] **<Insert thickness>**.
 6. Coating Location: Second surface.

7. Winter Nighttime U-Factor: **<Insert value>** maximum.
 8. Summer Daytime U-Factor: **<Insert value>** maximum.
 9. Fallout Resistance: Passes fallout-resistance test in ASTM C1048 for an assembly of glass and adhered reinforcing material.
- H. Silicone-Coated Spandrel Glass Type **<Insert drawing designation>**: **[Heat-strengthened]** **[Fully tempered]** float glass.
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Glass: **[Clear]** **[Low-iron]** **[Tinted]** float glass.
 3. Tint Color: **[Blue]** **[Blue-green]** **[Bronze]** **[Green]** **[Gray]** **<Insert color>**.
 4. Coating Color: **[As selected by Architect from manufacturer's full range]** **[Match Architect's samples]** **<Insert one manufacturer's color designation if matching is required>** **<Insert manufacturer's name; color designation>**.
 5. Minimum Thickness: **[6 mm]** **<Insert thickness>**.
 6. Coating Location: Second surface.
 7. Winter Nighttime U-Factor: **<Insert value>** maximum.
 8. Summer Daytime U-Factor: **<Insert value>** maximum.
 9. Fallout Resistance: Passes fallout-resistance test in ASTM C1048 for an assembly of glass and adhered reinforcing material.
- I. Reflective-Coated Spandrel Glass Type **<Insert drawing designation>**: **[Heat-strengthened]** **[Fully tempered]** float glass.
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Coating Type: **[Pyrolytic]** **[Sputter-coating (vacuum deposition process)]**.
 3. Coating Color: **[Gold]** **[Pewter]** **[Silver]** **<Insert color>**.
 4. Glass: **[Clear]** **[Low-iron]** **[Tinted]** float glass.
 5. Tint Color: **[Blue]** **[Blue-green]** **[Bronze]** **[Green]** **[Gray]** **<Insert color>**.
 6. Minimum Thickness: **[6 mm]** **<Insert thickness>**.
 7. Coating Location: **[First]** **[Second]** surface.
 8. Outdoor Visible Reflectance: **<Insert number>** percent maximum.
 9. Winter Nighttime U-Factor: **<Insert value>** maximum.
 10. Summer Daytime U-Factor: **<Insert value>** maximum.

11. Fallout Resistance: Passes fallout-resistance test in ASTM C1048 for an assembly of glass and adhered reinforcing material.
12. Factory apply manufacturer's standard opacifier of the following material to coated on second surface of lites, with resulting products complying with Specification No. 89-1-6 in NGA's "Engineering Standards Manual":
 - a. Manufacturer's standard opacifier material.
 - b. Polyester film laminated to glass with solvent-based adhesive.

3.09 LAMINATED GLASS SCHEDULE

- A. Clear Laminated Glass Type <Insert drawing designation>: Two plies of [annealed] [heat-strengthened] [fully tempered] [low-iron annealed] [low-iron heat-strengthened] [low-iron fully tempered] float glass.
 1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Minimum Thickness of Each Glass Ply: [3 mm] [4 mm] [5 mm] [6 mm] [As indicated] <Insert thickness>.
 3. Interlayer Thickness: [0.030 inch] [0.060 inch] [0.090 inch].
 4. Safety glazing required.
- B. Laminated Tinted Glass Type <Insert drawing designation>: Two plies of [annealed] [heat-strengthened] [fully tempered] float glass with outer ply tinted and inner ply clear.
 1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 3. Minimum Thickness of Each Glass Ply: [3 mm] [4 mm] [5 mm] [6 mm] [As indicated] <Insert thickness>.
 4. Interlayer Thickness: [0.030 inch] [0.060 inch] [0.090 inch].
 5. Winter Nighttime U-Factor: <Insert value> maximum.
 6. Summer Daytime U-Factor: <Insert value> maximum.
 7. Visible Light Transmittance: <Insert number> percent minimum.
 8. SGHC: <Insert value> maximum.
 9. Safety glazing required.
- C. Tinted Interlayer Laminated Glass Type <Insert drawing designation>: Two plies of clear [annealed] [heat-strengthened] [fully tempered] float glass and tinted interlayer.
 1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 3. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 4. Interlayer Color: [Blue-green] [Bronze light] [Gray] <Insert color>.
 5. Winter Nighttime U-Factor: <Insert value> maximum.
 6. Summer Daytime U-Factor: <Insert value> maximum.
 7. Visible Light Transmittance: <Insert number> percent minimum.
 8. SGHC: <Insert value> maximum.
 9. Safety glazing required.
- D. Ceramic-Coated, Laminated Vision Glass Type <Insert drawing designation>: Two plies of [**heat-strengthened**] [**fully tempered**] float glass.
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Outer Ply: [**Clear**] [**Low-iron**] [**Tinted**] float glass.
 3. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 4. Inner Ply: [**Clear**] [**Low-iron**] float glass.
 5. Ceramic Coating Color and Pattern: [As selected by Architect from manufacturer's full range] [Match Architect's samples] <Insert one manufacturer's color and pattern designation if matching is required> <Insert manufacturer's name; color and pattern designation>.
 6. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 7. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 8. Coating Location: [**Second**] [**Third**] [**Fourth**] surface.
 9. Winter Nighttime U-Factor: <Insert value> maximum.
 10. Summer Daytime U-Factor: <Insert value> maximum.
 11. Visible Light Transmittance: <Insert number> percent minimum.
 12. SGHC: <Insert value> maximum.
 13. Safety glazing required.
- E. Reflective-Coated, Laminated Vision Glass Type <Insert drawing designation>: Two plies of [**heat-strengthened**] [**fully tempered**] float glass.
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Kind CV (coated vision glass) [, except that Kind CO (coated overhead glass) may be used where lower edge of glass is more than **6 feet** above the adjacent floor level or cannot be approached closer than **10 feet**].
 3. Coating Type: [Pyrolytic] [Sputter-coating (vacuum deposition process)].
 4. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.
 5. Outer Ply: [**Clear**] [**Tinted**] float glass.
 6. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 7. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 8. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 9. Coating Location: [**First**] [**Second**] [**Third**] surface.
 10. Outdoor Visible Reflectance: <Insert number> percent maximum.
 11. Winter Nighttime U-Factor: <Insert value> maximum.
 12. Summer Daytime U-Factor: <Insert value> maximum.
 13. Visible Light Transmittance: <Insert number> percent minimum.
 14. SGHC: <Insert value> maximum.
 15. Low-Maintenance Coating: Pyrolytic coating on first surface.
 16. Safety glazing required.
- F. Low-E-Coated, Laminated Vision Glass Type <Insert drawing designation>: Two plies of clear [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 3. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 4. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 5. Winter Nighttime U-Factor: <Insert value> maximum.
 6. Summer Daytime U-Factor: <Insert value> maximum.
 7. Visible Light Transmittance: <Insert number> percent minimum.
 8. SGHC: <Insert value> maximum.

9. Safety glazing required.

G. Reflective-Coated, Laminated Spandrel Glass Type <Insert drawing designation>: Two plies of [heat-strengthened] [fully tempered] float glass.

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Coating Type: [Pyrolytic] [Sputter-coating (vacuum deposition process)].

3. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.

4. Outer Ply: [Clear] [Tinted] float glass.

5. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.

6. Minimum Thickness of Each Glass Ply: [3 mm] [4 mm] [5 mm] [6 mm] [As indicated] <Insert thickness>.

7. Interlayer Thickness: [0.030 inch] [0.060 inch] [0.090 inch].

8. Coating Location: [First] [Second] [Third] surface.

9. Outdoor Visible Reflectance: <Insert number> percent maximum.

10. Winter Nighttime U-Factor: <Insert value> maximum.

11. Summer Daytime U-Factor: <Insert value> maximum.

3.10 INSULATING GLASS SCHEDULE

A. Clear Insulating Glass Type <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Overall Unit Thickness: [1 inch] [5/8 inch] <Insert dimension>.

3. Minimum Thickness of Each Glass Lite: [3 mm] [4 mm] [5 mm] [6 mm] <Insert thickness>.

4. Outdoor Lite: [Annealed] [Heat-strengthened] [Fully tempered] float glass.

5. Interspace Content: [Air] [Argon].

6. Indoor Lite: [Annealed] [Heat-strengthened] [Fully tempered] float glass.

7. Winter Nighttime U-Factor: <Insert value> maximum.

8. Summer Daytime U-Factor: <Insert value> maximum.

9. Safety glazing required.

B. Low-Iron Insulating Glass Type <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Overall Unit Thickness: [**1 inch**] [**5/8 inch**] <Insert dimension>.
 3. Minimum Thickness of Each Glass Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 4. Outdoor Lite: Low-iron [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 5. Interspace Content: [**Air**] [**Argon**].
 6. Indoor Lite: Low-iron [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. Safety glazing required.
- C. Pyrolytic-Coated, Low-Maintenance Insulating Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: [Cardinal Glass Industries; Neat] [Pilkington North America Inc.; Activ] <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [**1 inch**] [**5/8 inch**] <Insert dimension>.
 3. Minimum Thickness of Each Glass Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 4. Outdoor Lite: Pyrolytic-coated, low-maintenance, clear [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 5. Interspace Content: [**Air**] [**Argon**].
 6. Indoor Lite: [Annealed] [Heat-strengthened] [Fully tempered] float glass.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. Safety glazing required.
- D. Low-E-Coated, Clear Insulating Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [**1 inch**] [**5/8 inch**] <Insert dimension>.
 3. Minimum Thickness of Each Glass Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 4. Outdoor Lite: [Annealed] [Heat-strengthened] [Fully tempered] [Low-iron annealed] [Low-iron heat-strengthened] [Low-iron fully tempered] float glass.
 5. Interspace Content: [**Air**] [**Argon**].

6. Indoor Lite: [Annealed] [Heat-strengthened] [Fully tempered] [Low-iron annealed] [Low-iron heat-strengthened] [Low-iron fully tempered] float glass.
 7. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Visible Light Transmittance: <Insert number> percent minimum.
 11. SGHC: <Insert value> maximum.
 12. Safety glazing required.
- E. Pyrolytic-Coated, Low-Maintenance, Low-E-Coated, Clear Insulating Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [1 inch] [5/8 inch] <Insert dimension>.
 3. Minimum Thickness of Each Glass Lite: [3 mm] [4 mm] [5 mm] [6 mm] <Insert thickness>.
 4. Outdoor Lite: Pyrolytic-coated, low-maintenance, clear [annealed] [heat-strengthened] [fully tempered] float glass.
 5. Interspace Content: [Air] [Argon].
 6. Indoor Lite: [Annealed] [Heat-strengthened] [Fully tempered] float glass.
 7. Low-E Coating: [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Visible Light Transmittance: <Insert number> percent minimum.
 11. SGHC: <Insert value> maximum.
 12. Safety glazing required.
- F. Tinted Insulating Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [1 inch] [5/8 inch] <Insert dimension>.
 3. Minimum Thickness of Each Glass Lite: [3 mm] [4 mm] [5 mm] [6 mm] <Insert thickness>.

4. Outdoor Lite: Tinted [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 5. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 6. Interspace Content: [**Air**] [**Argon**].
 7. Indoor Lite: Clear [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Visible Light Transmittance: <Insert number> percent minimum.
 11. SGHC: <Insert value> maximum.
 12. Safety glazing required.
- G. Low-E-Coated, Tinted Insulating Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [**1 inch**] [**5/8 inch**] <Insert dimension>.
 3. Minimum Thickness of Each Glass Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 4. Outdoor Lite: Tinted [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 5. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 6. Interspace Content: [**Air**] [**Argon**].
 7. Indoor Lite: Clear [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 8. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 9. Winter Nighttime U-Factor: <Insert value> maximum.
 10. Summer Daytime U-Factor: <Insert value> maximum.
 11. Visible Light Transmittance: <Insert number> percent minimum.
 12. SGHC: <Insert value> maximum.
 13. Safety glazing required.
- H. Ceramic-Coated, Insulating Vision Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Ceramic Coating Color and Pattern: [As selected by Architect from manufacturer's full range] [Match Architect's samples] <Insert one manufacturer's color and pattern designation if matching is required> <Insert manufacturer's name; color and pattern designation>.
 3. Overall Unit Thickness: [**1 inch**] [**5/8 inch**] <Insert dimension>.
 4. Minimum Thickness of Each Glass Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 5. Outdoor Lite: [Clear heat-strengthened] [Clear fully tempered] [Low-iron heat-strengthened] [Low-iron fully tempered] [Tinted heat-strengthened] [Tinted fully tempered] float glass.
 6. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 7. Interspace Content: [**Air**] [**Argon**].
 8. Indoor Lite: [Clear heat-strengthened] [Clear fully tempered] [Low-iron annealed] [Low-iron heat-strengthened] [Low-iron fully tempered] float glass.
 9. Coating Location: [**Second**] [**Third**] [**Fourth**] surface.
 10. Winter Nighttime U-Factor: <Insert value> maximum.
 11. Summer Daytime U-Factor: <Insert value> maximum.
 12. Visible Light Transmittance: <Insert number> percent minimum.
 13. SGHC: <Insert value> maximum.
 14. Safety glazing required.
- I. Reflective-Coated Insulating Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Kind CV (coated vision glass) [, except that Kind CO (coated overhead glass) may be used where lower edge of glass is more than **6 feet** above the adjacent floor level or cannot be approached closer than **10 feet**].
 3. Coating Type: [Pyrolytic] [Sputter-coating (vacuum deposition process)].
 4. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.
 5. Overall Unit Thickness: [**1 inch**] [**5/8 inch**] <Insert dimension>.
 6. Minimum Thickness of Each Glass Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 7. Outdoor Lite: [Clear annealed] [Clear heat-strengthened] [Clear fully tempered] [Tinted heat-strengthened] [Tinted fully tempered] float glass.
 8. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.

9. Interspace Content: **[Air]** **[Argon]**.
 10. Indoor Lite: Clear **[annealed]** **[heat-strengthened]** **[fully tempered]** float glass.
 11. Coating Location: **[First]** **[Second]** **[Third]** surface.
 12. Outdoor Visible Reflectance: **<Insert number>** percent maximum.
 13. Winter Nighttime U-Factor: **<Insert value>** maximum.
 14. Summer Daytime U-Factor: **<Insert value>** maximum.
 15. Visible Light Transmittance: **<Insert number>** percent minimum.
 16. SGHC: **<Insert value>** maximum.
 17. Low-Maintenance Coating: Pyrolytic coating on first surface.
 18. Safety glazing required.
- J. **[Ceramic]** **[Silicone]**-Coated, Insulating Spandrel Glass Type **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Coating Color: **[As selected by Architect from manufacturer's full range]** **[Match Architect's samples]** **<Insert one manufacturer's color designation if matching is required>** **<Insert manufacturer's name; color designation>**.
 3. Overall Unit Thickness: **[1 inch]** **<Insert dimension>**.
 4. Minimum Thickness of Each Glass Lite: **[5 mm]** **[6 mm]** **<Insert thickness>**.
 5. Outdoor Lite: **[Clear annealed]** **[Clear heat-strengthened]** **[Clear fully tempered]** **[Low-iron annealed]** **[Low-iron heat-strengthened]** **[Low-iron fully tempered]** float glass.
 6. Interspace Content: **[Air]** **[Argon]**.
 7. Indoor Lite: **[Clear annealed]** **[Clear heat-strengthened]** **[Clear fully tempered]** **[Low-iron annealed]** **[Low-iron heat-strengthened]** **[Low-iron fully tempered]** float glass.
 8. Coating Location: Fourth surface.
 9. Winter Nighttime U-Factor: **<Insert value>** maximum.
 10. Summer Daytime U-Factor: **<Insert value>** maximum.
- K. **[Ceramic]** **[Silicone]**-Coated, Low-E, Insulating Spandrel Glass Type **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Coating Color: **[As selected by Architect from manufacturer's full range]** **[Match Architect's samples]** **<Insert one manufacturer's color designation if matching is required>** **<Insert manufacturer's name; color designation>**.

3. Overall Unit Thickness: [**1 inch**] <Insert dimension>.
4. Minimum Thickness of Each Glass Lite: [**5 mm**] [**6 mm**] <Insert thickness>.
5. Outdoor Lite: [Clear heat-strengthened] [Clear fully tempered] [Low-iron heat-strengthened] [Low-iron fully tempered] float glass.
6. Interspace Content: [**Air**] [**Argon**].
7. Indoor Lite: [Clear heat-strengthened] [Clear fully tempered] [Low-iron heat-strengthened] [Low-iron fully tempered] float glass.
8. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
9. Opaque Coating Location: Fourth surface.
10. Winter Nighttime U-Factor: <Insert value> maximum.
11. Summer Daytime U-Factor: <Insert value> maximum.

L. [**Ceramic**] [**Silicone**]-Coated, Tinted, Insulating Spandrel Glass Type <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Coating Color: [As selected by Architect from manufacturer's full range] [Match Architect's samples] <Insert one manufacturer's color designation if matching is required> <Insert manufacturer's name; color designation>.
3. Overall Unit Thickness: [**1 inch**] <Insert dimension>.
4. Minimum Thickness of Each Glass Lite: [**5 mm**] [**6 mm**] <Insert thickness>.
5. Outdoor Lite: Tinted [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
6. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
7. Interspace Content: [**Air**] [**Argon**].
8. Indoor Lite: Clear [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
9. Coating Location: Fourth surface.
10. Winter Nighttime U-Factor: <Insert value> maximum.
11. Summer Daytime U-Factor: <Insert value> maximum.

3.11 INSULATING-LAMINATED-GLASS SCHEDULE

A. Clear Insulating, Laminated Glass Type <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Overall Unit Thickness: [**1-3/16 inch**] [**1 inch**] [**3/4 inch**] <Insert dimension>.

3. Minimum Thickness of Outdoor Lite: [3 mm] [4 mm] [5 mm] [6 mm] <Insert thickness>.
 4. Outdoor Lite: Clear [heat-strengthened] [fully tempered] float glass.
 5. Interspace Content: [Air] [Argon].
 6. Indoor Lite: Clear laminated glass with two plies of [annealed] [heat-strengthened] [fully tempered] float glass.
 - a. Minimum Thickness of Each Glass Ply: [3 mm] [4 mm] [5 mm] [6 mm] [As indicated] <Insert thickness>.
 - b. Interlayer Thickness: [0.030 inch] [0.060 inch] [0.090 inch].
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. SGHC: <Insert value> maximum.
 10. Safety glazing required.
- B. Low-E-Coated, Clear Insulating Laminated Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [1-3/16 inch] [1 inch] [3/4 inch] <Insert dimension>.
 3. Minimum Thickness of Outdoor Lite: [3 mm] [4 mm] [5 mm] [6 mm] <Insert thickness>.
 4. Outdoor Lite: Clear [heat-strengthened] [fully tempered] float glass.
 5. Interspace Content: [Air] [Argon].
 6. Indoor Lite: Clear laminated glass with two plies of [annealed] [heat-strengthened] [fully tempered] float glass.
 - a. Minimum Thickness of Each Glass Ply: [3 mm] [4 mm] [5 mm] [6 mm] [As indicated] <Insert thickness>.
 - b. Interlayer Thickness: [0.030 inch] [0.060 inch] [0.090 inch].
 7. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Visible Light Transmittance: <Insert number> percent minimum.
 11. SGHC: <Insert value> maximum.
 12. Safety glazing required.

- C. Tinted, Insulating Laminated Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [**1-3/16 inch**] [**1 inch**] [**3/4 inch**] <Insert dimension>.
 3. Minimum Thickness of Outdoor Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 4. Outdoor Lite: Tinted [**heat-strengthened**] [**fully tempered**] float glass.
 5. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 6. Interspace Content: [**Air**] [**Argon**].
 7. Indoor Lite: Clear laminated glass with two plies of [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 - a. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 - b. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Visible Light Transmittance: <Insert number> percent minimum.
 11. SGHC: <Insert value> maximum.
 12. Safety glazing required.
- D. Low-E-Coated, Tinted, Insulating Laminated Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Overall Unit Thickness: [**1-3/16 inch**] [**1 inch**] [**3/4 inch**] <Insert dimension>.
 3. Minimum Thickness of Outdoor Lite: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] <Insert thickness>.
 4. Outdoor Lite: Tinted [**heat-strengthened**] [**fully tempered**] float glass.
 5. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 6. Interspace Content: [**Air**] [**Argon**].
 7. Indoor Lite: Clear laminated glass with two plies of [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 - a. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 - b. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].

8. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 9. Winter Nighttime U-Factor: <Insert value> maximum.
 10. Summer Daytime U-Factor: <Insert value> maximum.
 11. Visible Light Transmittance: <Insert number> percent minimum.
 12. SGHC: <Insert value> maximum.
 13. Safety glazing required.
- E. Reflective-Coated, Insulating Laminated Glass Type <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Kind CV (coated vision glass) [, except that Kind CO (coated overhead glass) may be used where lower edge of glass is more than **6 feet** above the adjacent floor level or cannot be approached closer than **10 feet**].
 3. Coating Type: [Pyrolytic] [Sputter-coating (vacuum deposition process)].
 4. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.
 5. Overall Unit Thickness: [**1-3/16 inch**] [**1 inch**] <Insert dimension>.
 6. Minimum Thickness of Outdoor Lite: [**6 mm**] <Insert thickness>.
 7. Outdoor Lite: [Clear heat-strengthened] [Clear fully tempered] [Tinted heat-strengthened] [Tinted fully tempered] float glass.
 8. Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 9. Interspace Content: [**Air**] [**Argon**].
 10. Indoor Lite: Clear laminated glass with two plies of [**annealed**] [**heat-strengthened**] [**fully tempered**] float glass.
 - a. Minimum Thickness of Each Glass Ply: [**3 mm**] [**4 mm**] [**5 mm**] [**6 mm**] [**As indicated**] <Insert thickness>.
 - b. Interlayer Thickness: [**0.030 inch**] [**0.060 inch**] [**0.090 inch**].
 11. Coating Location: [**First**] [**Second**] [**Third**] surface.
 12. Outdoor Visible Reflectance: <Insert number> percent maximum.
 13. Winter Nighttime U-Factor: <Insert value> maximum.
 14. Summer Daytime U-Factor: <Insert value> maximum.
 15. Visible Light Transmittance: <Insert number> percent minimum.
 16. SGHC: <Insert value> maximum.

17. Low-Maintenance Coating: Pyrolytic coating on first surface.
18. Safety glazing required.

END OF SECTION

SECTION 08 83 00

MIRRORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Silvered flat glass mirrors.
- B. Related Requirements:
 - 1. Section 08 80 00 "Glazing" for glass with reflective coatings used for vision and spandrel lites.
 - 2. Section 10 28 00 "Toilet, Bath, and Laundry Accessories" for metal-framed mirrors.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Mirrors: Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.
- B. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachment details.
- C. Samples: For each type of the following:
 - 1. Mirrors: 12 inches square, including edge treatment on two adjoining edges.
 - 2. Mirror Clips: Full size.
 - 3. Mirror Trim: 12 inches long.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of mirror [**and mirror mastic**].
- C. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing and substrates on which mirrors are installed.
- D. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For mirrors to include in maintenance manuals.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified Installer, who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

1.06 PRECONSTRUCTION TESTING

- A. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing.
 - 1. Testing is not required if data are submitted based on previous testing of mirror mastic products and mirror backing matching those submitted.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Protect mirrors in accordance with mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.09 WARRANTY

- A. Special Warranty: Manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.
 - 1. Warranty Period: [Five] <Insert number> years from date of [Substantial Completion] [manufacture].

PART 2 PRODUCTS

2.01 MANUFACTURER

- A. Manufacturers: Subject to compliance with requirements, provide mirrors by one of the following:
 - 1. Guardian Industries Corp.
 - 2. Arch Aluminum & Glass Co., Inc.
 - 3. Virginia Mirror Company, Inc.
 - 4. VVP America, Inc.; Binswanger Mirror Products.
 - 5. Walker Glass Co., Ltd.
 - 6. Or Equal.

2.02 SOURCE LIMITATIONS

- A. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.
- B. Source Limitations for Mirror Accessories: Obtain mirror-glazing accessories from single source.

2.03 SILVERED FLAT GLASS MIRRORS

- A. Mirrors, General: ASTM C1503[; manufactured using copper-free, low-lead mirror coating process].
- B. Annealed Monolithic Glass Mirrors: Mirror [Select] [Glazing] Quality, [clear] [low-iron (low-iron) float glass with a minimum 91 percent visible light transmission] [tinted].
1. Nominal Thickness: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness>.
 2. Tint Color: [Blue] [Black] [Bronze] [Gold] [Gray] [Green] [Peach] [Pink] <Insert color>.
- C. Tempered Glass Mirrors: Mirror Glazing Quality for blemish requirements and complying with ASTM C1048 for Kind FT, Condition A, tempered float glass before silver coating is applied; [clear] [tinted].
1. Nominal Thickness: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness>.
 2. Tint Color: [Blue] [Black] [Bronze] [Gold] [Gray] [Green] [Peach] [Pink] <Insert color>.
- D. Laminated Mirrors: ASTM C1172, Type II.
1. Glass for Outer Lite: Annealed float glass, Mirror [Select] [Glazing] Quality, [clear] [low-iron (low-iron) float glass with a minimum 91 percent visible light transmission] [tinted].
 - a. Tint Color: [Blue] [Black] [Bronze] [Gold] [Gray] [Green] [Peach] [Pink] <Insert color>.
 2. Nominal Thickness for Outer Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness>.
 3. Glass for Inner Lite: [Annealed float glass; ASTM C1036, Type I (transparent flat glass), Quality-Q3; Class 1 (clear)] [Heat-strengthened float glass; ASTM C1048, Type I; Quality-Q3; Class I (clear) Kind HS, Condition A] [Tempered float glass; ASTM C1048, Type I; Quality-Q3; Class I (clear), Kind FT, Condition A].
 4. Nominal Thickness: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness>.
 5. Interlayer: Mirror manufacturer's standard 0.030-inch-thick, clear polyvinyl-butylal interlayer with a proven record of showing no tendency to delaminate from, or cause damage to, silver coating.
- E. Safety Glazing Products: For [film-backed] [laminated] [tempered] mirrors, provide products that comply with 16 CFR 1201, Category II.

2.04 MISCELLANEOUS MATERIALS

- A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.
- C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.

- D. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.05 MIRROR HARDWARE

- A. Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.
 - 1. Aluminum J-Channel Bottom and Side Trim: J-channels formed with front leg and back leg not less than 3/8 and 7/8 inch in height, respectively, and a thickness of not less than 0.04 inch.
 - 2. Aluminum J-Channel Top Trim: J-channels formed with front leg and back leg not less than 5/8 and 1 inch in height, respectively, and a thickness of not less than 0.04 inch.
 - 3. Finish: **[Clear]** **[Gold]** bright anodized.
- B. Aluminum J-Channels and Cleat: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.
 - 1. Aluminum J-Channel and Cleat, Bottom and Side Trim: J-channels formed with front leg and back leg not less than 5/16 and 3/4 inch in height, respectively.
 - 2. Aluminum J-Channel and Cleat, Top Trim: Formed with front leg with a height matching bottom trim and back leg designed to fit into the pocket created by wall-mounted aluminum cleat.
 - 3. Finish: **[Clear]** **[Gold]** bright anodized.
- C. Mirror Bottom Clips: **[As indicated]** <Insert description and finish or product designation and manufacturer's name>.
- D. Mirror Top Clips: **[As indicated]** <Insert description and finish or product designation and manufacturer's name>.
- E. Plated Steel Hardware: Formed-steel shapes with plated finish indicated.
 - 1. Profile: As indicated.
 - 2. Finish: <Insert manufacturer's finish designation and name>.
- F. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
- G. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield, expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

2.06 FABRICATION

- A. Shop fabricate mirrors to greatest extent possible.
- B. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts, so they fit closely around penetrations in mirrors.
- C. Mirror Edge Treatment: **[Flat polished]** **[Rounded polished]** **[Flat high polished]** **[Rounded high polished]** **[Beveled polished edge of width shown]**.

1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.
 2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.
- D. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint, as recommended in writing by film-backing manufacturer, to produce a surface free of bubbles, blisters, and other imperfections.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.
- B. Verify compatibility with and suitability of substrates, including compatibility of existing finishes or primers with mirror mastic.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.02 PREPARATION

- A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

3.03 INSTALLATION

- A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced National Glass Association (NGA) publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.
 1. NGA Publications: **["Laminated Glazing Reference Manual,"]"Glazing Manual" and "Installation Techniques Designed to Prolong the Life of Flat Glass Mirrors."**
- B. Provide a minimum airspace of 1/8 inch between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.
- C. Install mirrors with **[mastic and] mirror** hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
 1. Aluminum J-Channels: Provide setting blocks 1/8 inch thick by 4 inches long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch wide by 3/8 inch long at bottom channel.
 2. Aluminum J-Channels and Cleat: Fasten J-channel directly to wall and attach top trim to continuous cleat fastened directly to wall.
 3. Mirror Clips: Place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges. Locate clips **[where indicated] [so they are symmetrically placed and evenly spaced]**.
 4. Install mastic as follows:

- a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.
- b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
- c. After mastic is applied, align mirrors and press into place while maintaining a minimum airspace of 1/8 inch between back of mirrors and mounting surface.

3.04 CLEANING AND PROTECTION

- A. Protect mirrors from breakage and contaminating substances resulting from construction operations.
- B. Do not permit edges of mirrors to be exposed to standing water.
- C. Maintain environmental conditions that prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.
- D. Clean exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Clean mirrors as recommended in writing by mirror manufacturer and NGA's publication "Proper Procedures for Cleaning Flat Glass Mirrors."

END OF SECTION

SECTION 08 87 33

ARCHITECTURAL WINDOW FILM

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:

1. Removing existing window film and preparing surface for new solar shading and safety film.
2. Providing new solar shading and safety film applied to glass where indicated on the Drawings.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation meeting:

1. Arrange for a Preinstallation meeting between the Contractor, Architect and Installer, at least a week prior to the start of installation to review proposed methods and processes.
2. Review Project schedule, scope of work indicated to receive the film, coordination between glazier and film Installer, scheduled finish, acceptability of glass, submittals and approvals.
3. Review procedures to be followed for protection of film during and after installation.
4. Record minutes of the meeting, decisions made and corrective measures to be taken before application starts. Send copy of the minutes to those present and the Architect no later than 3 days following the meeting.

1.03 SUBMITTALS

- A. Shop Drawings: Where joints will occur in the film due to the size of the glass, submit Shop Drawings showing joint locations which are subject to rejection by the Architect.
- B. Samples: Submit three 24-inch square Samples of clear glass with the film applied to one half of the glass on both glass surfaces.
- C. Product Data: Manufacturer Product Data sheets on each product to be used, including.
 1. Physical properties and independent testing agency reports showing compliance with specified tests.
 2. Preparation instructions and recommendations.
 3. Storage and handling requirements and recommendations.
 4. Provide detailed description of the installation method.
- D. Closeout Submittals:
 1. Film manufacturer's instructions for maintenance and precautions to be used to clean film without damaging it.
 2. Minimum quantity of film: properly packaged and labeled, equal to one percent of the quantity installed.
 3. Name, address (physical and email), and telephone number of Installer.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: All primary products specified in this section will be supplied by a single manufacturer with a minimum of 10 years' experience.
- B. Installer's Qualifications: Firm and individuals with a minimum of 5 consecutive years' experience in installation of window films for projects similar in material, design, complexity and extent to this Project, and whose work has resulted in applications with a record of successful in-service performance.
- C. Mockup: Provide a mockup for evaluation of surface preparation techniques and application workmanship.
 - 1. Apply film to one window designated by the Architect.
 - 2. Do not proceed with remaining work until workmanship and color, is approved by Architect.
- D. Fire Performance: Surface burning characteristics when tested in accordance ASTM E 84:
 - 1. Flame Spread: 25, maximum.
 - 2. Smoke Developed: 450, maximum.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Store products indoors, off the floor, in manufacturer's unopened packaging until ready for installation.

1.06 PROJECT CONDITIONS

- A. Maintain environmental conditions {temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. 3M Window Film (basis of design.)
- B. Hanita Coatings RCA LTD, distributed under the Sabra Window Films.
- C. Or equal.

2.02 SOLAR SHADING AND SAFETY FILM

- A. Design is based on 3M Prestige Series PR70.

PART 3 EXECUTION

3.01 EXAMINATION`

- A. Examination: Examine conditions affecting the work of this Section.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions,

3.03 INSTALLATION

- A. Install film in accordance with its manufacturer's instructions by recognized professional installers of film. Completed work must meet IWFA and these Specifications visual acceptance standard; in case of conflicts, the most stringent requirement shall take precedence.
- B. Install without bubbles, ripples, drips, dirt, cuts, tears or gaps between film and frame and between film panels when the length or width exceeds manufacturer's standard size; in all cases obtain the Architect's approval of joint locations.
- C. Clean newly installed film and window frames immediately after installation, using caution not to displace the film.
- D. Clean up cleaning solutions, run-off cleaning water and adhesive mounting solution.

3.04 PROTECTING

- A. Protect installed products until completion of Project.
- B. Where installed film could be damaged by subsequent construction provide tape warning strips or barricades to prevent contact. Do not apply tape directly to film.

SECTION 08 91 19

FIXED LOUVERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fixed [extruded-aluminum] [and] [formed-metal] louvers.
2. Fixed formed-metal acoustical louvers.
3. Blank-off panels for louvers

B. Related Requirements:

1. Section 08 11 13 "Hollow Metal Doors and Frames" for louvers in hollow-metal doors.
2. Section 08 14 16 "Flush Wood Doors" for louvers in flush wood doors.
3. Section 09 91 13 "Exterior Painting" for field painting exterior louvers.
4. Section 09 91 23 "Interior Painting" for field painting interior louvers.

1.02 DEFINITIONS

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades (i.e., the axis of the blades are horizontal).
- C. Vertical Louver: Louver with vertical blades (i.e., the axis of the blades are vertical).
- D. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- E. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven-rain performance, as determined by testing in accordance with AMCA 500-L.
- F. Windborne-Debris-Impact-Resistant Louver: Louver that provides specified windborne-debris-impact resistance, as determined by testing in accordance with AMCA 540.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
 - 1. Show weep paths, gaskets, flashings, sealants, and other means of preventing water intrusion.
 - 2. Show mullion profiles and locations.
- C. Samples: For each type of metal finish required.
- D. Delegated Design Submittal: For louvers indicated to comply with structural **[and seismic]** performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed in accordance with AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.
- B. Windborne-debris-impact-resistance test reports.
- C. Sample Warranties: For manufacturer's special warranties.

1.05 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
 - 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.06 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.07 WARRANTY

- A. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.

- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: **[Five] [10] [20] <Insert number>** years from date of Substantial Completion.
- B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, peeling, or chipping.
 2. Warranty Period: **[Five] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain fixed **[and operable]** louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural **[and seismic]** performance requirements and design criteria indicated.
- B. Structural Performance: Louvers withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures are considered to act normal to the face of the building.
 1. Wind Loads:
 - a. Determine loads based on pressures as indicated on Drawings.
 - b. Determine loads based on a uniform pressure of **[20 lbf/sq. ft.] [30 lbf/sq. ft.] <Insert value>**, acting inward or outward.
 - c. Determine loads based on pressures indicated below:

- 1) Corner Zone: Within **<Insert distance>** of building corners, uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
 - 2) Other Than Corner Zone: Uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
- C. Windborne-Debris-Impact Resistance: Louvers located within 30 feet of grade pass **[basic]** **[enhanced]** protection, when tested in accordance with AMCA 540.
- D. Seismic Performance:
1. As indicated on Drawings.
 2. Louvers, including attachments to other construction, withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]** **<Insert requirement>**.
 - a. Design earthquake spectral response acceleration, short period (Sds) for Project is **<Insert value>**.
 - b. Component Importance Factor: **[1.5]** **[1.0]**.
- E. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width in accordance with AMCA 500-L.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change (Range): **[120 deg F, ambient; 180 deg F, material surfaces]** **<Insert temperature range>**.
- G. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

2.03 FIXED EXTRUDED-ALUMINUM LOUVERS

- A. Horizontal Nondrainable-Blade Louver, Extruded Aluminum **<Insert drawing designation>**:
1. Louver Depth: **[2 inches]** **[4 inches]** **[6 inches]** **<Insert dimension>**.
 2. Blade Profile: **[Plain blade without]** **[Blade with]** center baffle.
 3. Frame and Blade Nominal Thickness: Not less than **[0.080 inch]** **[0.060 inch]** for blades and **0.080 inch** for frames].
 4. Mullion Type: **[Exposed]** **[Semirecessed]** **[Fully recessed]**.
 5. Louver Performance Ratings:
 - a. Free Area: Not less than **[7.5 sq. ft.]** **[8.0 sq. ft.]** **[8.5 sq. ft.]** **<Insert value>** for 48-inch-wide by 48-inch-high louver.

- b. Point of Beginning Water Penetration: Not less than **[700 fpm] [750 fpm] [800 fpm] [850 fpm] [900 fpm] [950 fpm]** <Insert value>.
 - c. Air Performance: Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[650-fpm] [700-fpm] [750-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- B. Horizontal Drainable-Blade Louver, Extruded Aluminum **<Insert drawing designation>**:
1. Louver Depth: **[4 inches] [6 inches]** <Insert dimension>.
 2. Frame and Blade Nominal Thickness: Not less than **[0.080 inch] [0.060 inch for blades and 0.080 inch for frames]**.
 3. Mullion Type: Exposed.
 4. Louver Performance Ratings:
 - a. Free Area: Not less than **[7.0 sq. ft.] [7.5 sq. ft.] [8.0 sq. ft.] [8.5 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Point of Beginning Water Penetration: Not less than **[900 fpm] [950 fpm] [1000 fpm] [1050 fpm] [1100 fpm]** <Insert value>.
 - c. Air Performance:
 - 1) Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[700-fpm] [750-fpm] [800-fpm] [850-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 - 2) Not more than **[0.15-inch wg]** <Insert value> static pressure drop at **[900-fpm] [950-fpm] [1000-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- C. Horizontal, Continuous-Line, Drainable-Blade Louver, Extruded Aluminum **<Insert drawing designation>**: Drainable-blade louver with blade gutters (drains) in rear two-thirds of blades only.
1. Louver Depth: **[6 inches]** <Insert dimension>.
 2. Frame and Blade Nominal Thickness: Not less than 0.080 inch.
 3. Mullion Type: Semirecessed.
 4. Louver Performance Ratings:
 - a. Free Area: Not less than **[7.8 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Point of Beginning Water Penetration: Not less than **[850 fpm]** <Insert value>.

- c. Air Performance: Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[800-fpm]** <Insert value> free-area **[exhaust]** **[intake]** velocity.
 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- D. Horizontal, Wind-Driven-Rain-Resistant Louver, Extruded Aluminum <Insert drawing designation>:
 1. Louver Depth: **[4 inches]** **[5 inches]** **[7 inches]** **[8 inches]** **[9 inches]** <Insert dimension>.
 2. Frame and Blade Nominal Thickness: Not less than **[0.080 inch]** **[0.060 inch]** for blades and **0.080 inch** for frames].
 3. Louver Performance Ratings:
 - a. Free Area: Not less than **[5.0 sq. ft.]** **[6.0 sq. ft.]** **[7.0 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Air Performance: Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[600-fpm]** **[700-fpm]** **[800-fpm]** <Insert value> free-area **[exhaust]** **[intake]** velocity.
 - c. Wind-Driven Rain Performance: Not less than **[99]** **[95]** **[80]** <Insert number> percent effectiveness when subjected to a rainfall rate of **[3 inches per hour and a wind speed of 29 mph]** **[8 inches per hour and a wind speed of 50 mph]** at a core-area intake velocity of **[300 fpm]** **[400 fpm]** **[500 fpm]** <Insert value>.
 4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- E. Vertical, Wind-Driven-Rain-Resistant Louver, Extruded Aluminum <Insert drawing designation>:
 1. Louver Depth: **[4 inches]** **[6 inches]** **[8 inches]** **[9 inches]** **[12 inches]** <Insert dimension>.
 2. Frame and Blade Nominal Thickness: Not less than **[0.080 inch]** **[0.060 inch]** for blades and **0.080 inch** for frames].
 3. Louver Performance Ratings:
 - a. Free Area: Not less than **[5.0 sq. ft.]** **[6.0 sq. ft.]** **[7.0 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Air Performance: Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[600-fpm]** **[700-fpm]** **[800-fpm]** <Insert value> free-area **[exhaust]** **[intake]** velocity.
 - c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of **[3 inches per hour and a wind speed of 29 mph]** **[8 inches per hour and a wind speed of 50 mph]** at a core-area intake velocity of **[300 fpm]** **[400 fpm]** **[500 fpm]** <Insert value>.
 4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

- F. Horizontal, Drainable-Blade, Windborne-Debris-Impact-Resistant Louver, Extruded Aluminum **<Insert drawing designation>**:
1. Louver Depth: **[4 inches] [6 inches]** <Insert dimension>.
 2. Frame and Blade Nominal Thickness: Not less than **[0.080 inch]** <Insert dimension>.
 3. Mullion Type: Exposed.
 4. Louver Performance Ratings:
 - a. Free Area: Not less than **[8.5 sq. ft.] [9.0 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Point of Beginning Water Penetration: Not less than **[1077 fpm] [1100 fpm]** <Insert value>.
 - c. Air Performance:
 - 1) Not more than **[0.16-inch wg]** <Insert value> static pressure drop at **[989-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 - 2) Not more than **[0.15-inch wg]** <Insert value> static pressure drop at **[1077-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
 6. AMCA Rating: AMCA 540.
- G. Vertical, Wind-Driven-Rain-Resistant, Windborne-Debris-Impact-Resistant Louver, Extruded Aluminum **<Insert drawing designation>**:
1. Louver Depth: **[5 inches] [6 inches]** <Insert dimension>.
 2. Frame and Blade Nominal Thickness: Not less than **[0.080 inch] [0.060 inch]** for blades and **0.080 inch** for frames] **[0.060 inch]** for blades and **0.095 inch** for frames].
 3. Louver Performance Ratings:
 - a. Free Area: Not less than **[7.0 sq. ft.] [8.5 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Air Performance: Not more than **[0.18-inch wg]** <Insert value> static pressure drop at **[1250-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 - c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of **[3 inches per hour and a wind speed of 29 mph]** **[8 inches per hour and a wind speed of 50 mph]** at a core-area intake velocity of **[782 fpm] [875 fpm] [989 fpm]** <Insert value>.
 4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
 5. AMCA Rating: AMCA 540, AMCA 550.
- H. Horizontal, Sightproof, Drainable-Blade Louver, Extruded Aluminum **<Insert drawing designation>**:

1. Louver Depth: **[5 inches]** <Insert dimension>.
2. Frame and Blade Nominal Thickness: Not less than **[0.080 inch]** **[0.060 inch]** for blades and **0.080 inch** for frames].
3. Mullion Type: Exposed.
4. Louver Performance Ratings:
 - a. Free Area: Not less than **[8.3 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Point of Beginning Water Penetration: Not less than **[750 fpm]** **[950 fpm]** <Insert value>.
 - c. Air Performance: Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[550-fpm]** <Insert value> free-area **[exhaust]** **[intake]** velocity.
5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

I. Vertical Sightproof Louver, Extruded Aluminum <Insert drawing designation>:

1. Louver Depth: **[4 inches]** <Insert dimension>.
2. Blade Profile: **[Chevron]** **[Y]** **[Labyrinth]**-shaped blade.
3. Frame and Blade Nominal Thickness: Not less than **[0.080 inch]** **[0.060 inch]** for blades and **0.080 inch** for frames].
4. Blade Spacing: **[2 inches]** **[4 inches]** <Insert dimension> o.c.
5. Mullion Type: **[Exposed]** **[Semirecessed]** **[Fully recessed]**.

2.04 FIXED FORMED-METAL LOUVERS

A. Horizontal Nondrainable-Blade Louver, Formed Metal <Insert drawing designation>:

1. Louver Depth: **[4 inches]** **[6 inches]** <Insert dimension>.
2. Blade Profile: **[Plain blade without]** **[Blade with]** center baffle.
3. Frame and Blade Material and Nominal Thickness:
 - a. Galvanized-steel sheet, not less than **[0.052 inch]** for frames and **0.040 inch** for blades] **[0.052 inch]** **[0.064 inch]**.
 - b. Stainless steel sheet, not less than **[0.050 inch]** **[0.062 inch]**.
4. Mullion Type: **[Exposed]** **[Semirecessed]** **[Fully recessed]**.
5. Louver Performance Ratings:
 - a. Free Area: Not less than **[6.5 sq. ft.]** **[7.0 sq. ft.]** **[7.5 sq. ft.]** **[8.0 sq. ft.]** <Insert value> for 48-inch-wide by 48-inch-high louver.
 - b. Point of Beginning Water Penetration: Not less than **[550 fpm]** **[600 fpm]** **[650 fpm]** **[700 fpm]** <Insert value>.

- c. Air Performance: Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[550-fpm]** **[600-fpm]** **[650-fpm]** **[700-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 - 6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- B. Horizontal Drainable-Blade Louver, Formed Metal **<Insert drawing designation>**:
 - 1. Louver Depth: **[4 inches]** **[6 inches]** <Insert dimension>.
 - 2. Frame and Blade Material and Nominal Thickness:
 - a. Galvanized-steel sheet, not less than **[0.052 inch]** for frames and **0.040 inch** for blades] **[0.052 inch]** **[0.064 inch]**.
 - b. Stainless steel sheet, not less than **[0.050 inch]** **[0.062 inch]**.
 - 3. Mullion Type: Exposed.
 - 4. Louver Performance Ratings:
 - a. Free Area: Not less than **[7.0 sq. ft.]** **[7.5 sq. ft.]** **[8.0 sq. ft.]** **[8.5 sq. ft.]** **<Insert value>** for 48-inch-wide by 48-inch-high louver.
 - b. Point of Beginning Water Penetration: Not less than **[800 fpm]** **[850 fpm]** **[900 fpm]** **[950 fpm]** **[1000 fpm]** <Insert value>.
 - c. Air Performance:
 - 1) Not more than **[0.10-inch wg]** <Insert value> static pressure drop at **[700-fpm]** **[750-fpm]** **[800-fpm]** **[850-fpm]** <Insert value> free-area [exhaust] [intake] velocity.
 - 2) Not more than **[0.15-inch wg]** <Insert value> static pressure drop at **[900-fpm]** **[950-fpm]** **[1000-fpm]** <Insert value> free-area velocity.
 - 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.05 FIXED ACOUSTICAL LOUVERS

- A. Acoustic Performance: Provide acoustical louvers complying with ratings specified, as demonstrated by testing manufacturer's stock units identical to those specified, except for length and width for **[airborne sound-transmission loss in accordance with ASTM E90]** **[outdoor-indoor, sound-transmission loss in accordance with ASTM E966]**.
- B. Fixed, Acoustical Louver, Formed Metal **<Insert drawing designation>**: Louver with formed-metal blades filled on interior with mineral-fiber, rigid-board, acoustical insulation retained by perforated metal sheet of same material and finish as blade.
 - 1. Louver Depth: **[6 inches]** **[8 inches]** **[12 inches]** <Insert dimension>.
 - 2. Frame Material:

- a. Extruded aluminum or aluminum sheet, not less than 0.080-inch nominal thickness.
- b. Galvanized-steel sheet, not less than **[0.052-inch]** **[0.064-inch]** nominal thickness.
3. Blade Material:
 - a. Aluminum sheet, not less than **[0.063-inch]** **[0.080-inch]** nominal thickness.
 - b. Galvanized-steel sheet, not less than **[0.034-inch]** **[0.040-inch]** **[0.052-inch]** nominal thickness.
4. Blade Shape: [Straight] [Airfoil] [Chevron].
5. Blade Angle: 45 degrees unless otherwise indicated.
6. Blade Spacing:
 - a. 6 inches o.c. for 6-inch-deep louvers.
 - b. **[6 inches]** **[8 inches]** o.c. for 8-inch-deep louvers.
 - c. **[9 inches]** **[12 inches]** o.c. for 12-inch-deep louvers.
7. Free Area: Not less than 4 sq. ft. for 48-inch-wide by 48-inch-high louver.
8. Airborne Sound-Transmission Loss: **[STC 10]** **<Insert STC value>** in accordance with ASTM E413, determined by testing in accordance with ASTM E90.
9. Outdoor-Indoor, Sound-Transmission Loss: **[OITC 10]** **<Insert OITC value>** in accordance with ASTM E1332, determined by testing in accordance with ASTM E966.

2.06 LOUVER SCREENS

- A. General: Provide screen at [each exterior louver] [louvers indicated].
 1. Screen Location for Fixed Louvers: Interior face.
 2. Screening Type: **[Bird screening]** **[Bird screening, except where insect screening is indicated]** **[Insect screening]**.
- B. Secure screen frames to louver frames with **[stainless steel machine screws]** **[machine screws with heads finished to match louver]**, spaced a maximum of 6 inches from each corner and at 12 inches o.c.
- C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.
 1. Metal: Same type and form of metal as indicated for louver to which screens are attached. **[Reinforce extruded-aluminum screen frames at corners with clips.]**
 2. Finish: **[Same finish as louver frames to which louver screens are attached]** **[Mill finish unless otherwise indicated]**.
 3. Type: **[Rewirable frames with a driven spline or insert]** **[Non-rewirable, U-shaped frames]**.

D. Louver Screening for Aluminum Louvers:

1. Bird Screening, Aluminum: 1/2-inch-square mesh, 0.063-inch wire.
2. Bird Screening, Stainless Steel: 1/2-inch-square mesh, 0.047-inch wire.
3. Bird Screening, Flattened, Expanded Aluminum: 3/4 by 0.050 inch thick.
4. Insect Screening, Aluminum: 18-by-16 mesh, 0.012-inch wire.
5. Insect Screening, Stainless Steel: 18-by-18 mesh, 0.009-inch wire.

E. Louver Screening for Galvanized-Steel Louvers:

1. Bird Screening, Galvanized Steel: 1/2-inch-square mesh, 0.041-inch wire.
2. Bird Screening, Stainless Steel: 1/2-inch-square mesh, 0.047-inch wire.
3. Insect Screening, Galvanized Steel: 18-by-14 mesh, 0.011-inch wire.
4. Insect Screening, Stainless Steel: 18-by-18 mesh, 0.009-inch wire.

F. Louver Screening for Stainless Steel Louvers:

1. Bird Screening, Stainless Steel: 1/2-inch-square mesh, 0.047-inch wire.
2. Insect Screening, Stainless Steel: 18-by-18 mesh, 0.009-inch wire.

2.07 BLANK-OFF PANELS

A. Uninsulated Blank-Off Panels: Metal sheet attached to back of louver.

1. Aluminum sheet for aluminum louvers, not less than 0.050-inch nominal thickness.
2. Galvanized-steel sheet for galvanized-steel louvers, not less than **[0.040-inch] [0.052-inch]** nominal thickness.
3. Stainless steel sheet for stainless steel louvers, not less than **[0.038-inch] [0.050-inch]** nominal thickness, with grain running in same direction as grain of louver blades.
4. Panel Finish: **[Same finish applied to louvers] [Same finish type applied to louvers, but black color]**.
5. Attach blank-off panels with **[clips] [sheet metal screws] <Insert method>**.

B. Insulated Blank-Off Panels: Laminated panels consisting of an insulating core surfaced on back and front with metal sheets and attached to back of louver.

1. Thickness: **[1 inch] [2 inches]**.
2. Metal Facing Sheets, Aluminum: Not less than 0.032-inch nominal thickness.
3. Metal Facing Sheets, Galvanized Steel: Not less than 0.028-inch nominal thickness.
4. Metal Facing Sheets, Stainless Steel: Not less than 0.031-inch nominal thickness.
5. Insulating Core: **[Rigid, glass-fiber-board insulation] [or] [extruded-polystyrene foam] <Insert insulation material>**.

6. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard **[extruded-aluminum-channel frames, not less than 0.080-inch nominal thickness] [channel frames]**, with corners mitered and with same finish as panels.
7. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
8. Panel Finish: [Same finish applied to louvers] [Same type of finish applied to louvers, but black color].
9. Attach blank-off panels with [clips] [sheet metal screws] <Insert method>.

2.08 MATERIALS

- A. Aluminum Extrusions: ASTM B221, Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B209, Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Galvanized-Steel Sheet: ASTM A653/A653M, **[G60] [G90]** zinc coating, mill phosphatized.
- D. Stainless Steel Sheet: ASTM A240/A240M, Type 304, [No. 2B finish] [No. 2D finish] [No. 4 finish, with grain running parallel to length of blades and frame members] [No. 4 finish, with grain running perpendicular to length of blades and frame members] [No. 4 finish, with grain running perpendicular to length of blades and parallel to length of frame members] [No. 6 finish].
- E. Fasteners: Use types and sizes to suit unit installation conditions.
 1. Use [Phillips flat-head] [hex-head or Phillips pan-head] [tamper-resistant] screws for exposed fasteners unless otherwise indicated.
 2. For fastening aluminum, use aluminum or 300 series stainless steel fasteners.
 3. For fastening galvanized steel, use hot-dip-galvanized-steel or 300 series stainless steel fasteners.
 4. For fastening stainless steel, use 300 series stainless steel fasteners.
 5. For color-finished louvers, use fasteners with heads that match color of louvers.
- F. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, fabricated from stainless steel components, with allowable load or strength design capacities calculated in accordance with ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing in accordance with ASTM E488/E488M conducted by a qualified testing agency.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.09 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern **[unless horizontal mullions are indicated] [where indicated]**.
 2. Horizontal Mullions: Provide horizontal mullions at joints **[unless continuous vertical assemblies are indicated] [where indicated]**.
- C. Maintain equal louver blade spacing [, including separation between blades and frames at head and sill,] to produce uniform appearance.
- D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
1. Frame Type: [Channel] [Exterior flange] [Interior flange] unless otherwise indicated.
- E. Include supports, anchorages, and accessories required for complete assembly.
- F. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches o.c., whichever is less.
1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
 2. Semirecessed Mullions: Where indicated, provide mullions partly recessed behind louver blades, so louver blades appear continuous. Where length of louver exceeds fabrication and handling limitations, fabricate with interlocking split mullions and close-fitting blade splices designed to permit expansion and contraction.
 3. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.
 4. Exterior Corners: Prefabricated corner units with mitered [and welded blades] [blades with concealed close-fitting splices] and with [fully recessed] [semirecessed] mullions at corners.
- G. Provide [subsills made of same material as louvers] [or] [extended sills] for recessed louvers.
- H. Join frame members to each other and to fixed louver blades with fillet welds **[concealed from view] [, threaded fasteners, or both, as standard with louver manufacturer]** unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.
- 2.10 ALUMINUM FINISHES
- A. Finish louvers after assembly.

- B. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
- C. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.
1. Color: [Champagne] [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities] <Insert color>.
- D. Conversion-Coated Finish: AA-C12C42, nonetched, cleaned with inhibited chemicals, and chemical conversion coated with acid chromate-fluoride-phosphate.
- E. Factory-Primed Finish: AA-C12C42R1x with air-dried primer of not less than 2-mil dry film thickness.
- F. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- G. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with **[AAMA 2604]** **[AAMA 2605]** and containing not less than **[50]** **[70]** percent PVDF resin by weight in color coat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- H. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- I. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- J. Superior-Performance Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- K. Superior-Performance Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- 2.11 GALVANIZED-STEEL SHEET FINISHES
- A. Finish louvers after assembly.
- B. Surface Preparation: Clean surfaces with nonpetroleum solvent, so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and repair in accordance with ASTM A780/A780M.
- C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 2 mils.
1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- 2.12 STAINLESS STEEL SHEET FINISHES
- A. Repair sheet finish by grinding and polishing irregularities, weld spatter, scratches, and forming marks to match surrounding finish.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.03 INSTALLATION

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- C. Form closely fitted joints with exposed connections accurately located and secured.
- D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- E. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- F. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 07 92 00 "Joint Sealants" for sealants applied during louver installation.

3.04 ADJUSTING AND CLEANING

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION

SECTION 08 95 16

WALL VENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wall vents.
2. Flood and air vents.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each type of metal finish required.

1.03 INFORMATIONAL SUBMITTALS

- A. Evaluation Reports: For flood vents, from ICC-ES.
- B. Sample Warranties: For manufacturer's special warranties.

1.04 WARRANTY

- A. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: **[Five] [10] [20]** <Insert number> years from date of Substantial Completion.

- B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.

- b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, peeling, or chipping.
2. Warranty Period: **[Five] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain vents from single source from single manufacturer.

2.02 WALL VENTS (BRICK VENTS)

- A. Extruded-Aluminum Wall Vents:

1. Extruded-aluminum louvers and frames, not less than 0.125-inch nominal thickness, assembled by welding; with 18-by-14-mesh, aluminum insect screening on inside face; incorporating weep holes, continuous drip at sill, and integral waterstop on inside edge of sill; of load-bearing design and construction.
2. Dampers: Aluminum blades and frames mounted on inside of wall vents; operated from exterior with Allen wrench in socket-head cap screw. Fabricate operating mechanism from Type 304 stainless steel components.
3. Finish: **[Mill]** <Insert finish>.

- B. Cast-Aluminum Wall Vents:

1. One-piece, cast-aluminum louvers and frames; with 18-by-14-mesh, aluminum insect screening on inside face; incorporating integral waterstop on inside edge of sill; of load-bearing design and construction.
2. Dampers: Aluminum blades and frames mounted on inside of wall vents; operated from exterior with Allen wrench in socket-head cap screw. Fabricate operating mechanism from Type 304 stainless steel components.
3. Finish: Mill.

2.03 FLOOD AND AIR VENTS

- A. Stainless Steel Flood and Air Vents: Type 316 stainless steel welded frame and flood door assembly, designed to automatically release under hydrostatic pressure or rising water level.

1. Ventilation Area: **[0.354 sq. ft.] [0.708 sq. ft.] [1.417 sq. ft.]** <Insert area>.
2. Flood Coverage: **[200 sq. ft.] [400 sq. ft.] [800 sq. ft.]** <Insert area>.
3. Finish: **[Mill]** <Insert finish>.

2.04 MATERIALS

- A. Aluminum Extrusions: ASTM B221, Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B209, Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Aluminum Castings: ASTM B26/B26M, Alloy 319.
- D. Stainless Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, **[Type 304] [Type 316] [Type 304 or 316 as indicated]** <Insert type>.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.

2.05 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
 - 1. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities]** <Insert color>.
- C. Conversion-Coated Finish: AA-C12C42, nonetched, cleaned with inhibited chemicals, and chemical conversion coated with acid chromate-fluoride-phosphate.
- D. Factory-Primed Finish: AA-C12C42R1x with air-dried primer of not less than 2-mil dry film thickness.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and gloss>.
- F. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat.
 - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 - 2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and gloss>.
- G. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
 - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- H. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- I. Superior-Performance Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- J. Superior-Performance Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 2. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- 2.06 STAINLESS STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces.
 3. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Stainless Steel Sheet and Plate Finishes:
1. Cold-Rolled, Bright Finish: ASTM A480/A480M, No. 2B.
 2. Directional Satin Finish: ASTM A480/A480M, No. 4.

- D. Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
 - 1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Install according to manufacturer's written instructions.
- B. Locate and place vents level, plumb, and at indicated alignment with adjacent work.
- C. Attach vents securely in place using fasteners supplied or approved by manufacturer.
- D. Protect unpainted surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- E. Build vents into masonry work as construction progresses; comply with requirements in Section 04 20 00 "Unit Masonry."
- F. Provide perimeter reveals of uniform width for sealants and joint fillers, where indicated.
- G. Use concealed anchorages.

3.02 ADJUSTING AND CLEANING

- A. Adjust flood vents for proper operation.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore vents damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

SECTION 09 05 16

WATER VAPOR EMISSION CONTROL SYSTEM

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes system for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs.

1.02 SUBMITTALS

- A. Submit the following product data:
 - 1. Product Data: Manufacturer's descriptive data and product attributes.
 - 2. Installation Instructions.
 - 3. Independent Test Data.
 - 4. Certification Requirements.
 - 5. Warranty Information.
- B. Manufacturer's certification that moisture vapor control products meet requirements of current version of ASTM F3010
- C. Independent test reports supporting product manufacturer's certificate of conformance to ASTM F3010
- D. Tests: Submit concrete floor moisture test results required by floor covering manufacturer. Perform moisture testing as described in ASTM Practice F710. Testing shall be performed according to the floor covering manufacturer's specified ASTM Standard Test Method by an independent Testing Agency. Testing shall be performed by ICRI Tier 2 Certified Moisture Testing Technician. Provide moisture test results to the Architect, Owner, General Contractor, and Moisture Vapor Control System Manufacturer's Representative.

1.03 QUALITY ASSURANCE

- A. Manufacturer qualifications: Firm with not less than 10 years experience in manufacturing water vapor reduction systems.
 - 1. The water vapor reduction system must be specifically formulated and marketed for water vapor reduction and alkalinity control without change of system design for a minimum period of five (5) years.
 - 2. Submit list of product use and performance history, for the same formulation and system design, listing reference sources for at least 3 projects dating back for a minimum of 5 years.
- B. Applicator qualifications: Entity currently approved or certified by the manufacturer, experienced in surface preparation and application of the material and subject to inspection of the manufacturer.

1.04 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to the job site in their original unopened containers, clearly labeled with the manufacturer's name and brand designation.
- B. Store products in an approved ventilated dry area; protect from dampness, freezing, and direct sun light. Product should not be stored in areas with temperatures in excess of 90 degrees F or below 50 degrees F.
- C. Handle product in a manner that will prevent breakage of containers and damage products.

1.05 PROJECT/SITE CONDITIONS

- A. Environmental conditions
 - 1. Do not apply moisture vapor reduction system to unprotected surfaces or when water is accumulated on the surface of the concrete.
 - 2. Do not apply water vapor reduction system when temperature is lower than 50 degrees F or expected to fall below this temperature within 24 hours from time of application.
- B. Protection: Protect water vapor reduction system to prevent damage from active rain or topical water for a minimum period of 24 hours from time of application.

1.06 SCHEDULING

- A. Before installation of LVF, VCT, carpet and/or epoxy flooring systems over the interior concrete slabs, anhydrous calcium chloride testing ASTM F 1869 (latest revision) and RH Probe Tests ASTM F 2170 shall be performed by the Special Inspector as outlined In Article 3.1 below.
- B. Submit and install the water vapor reduction system, where required, before installation of floor finish.
- C. Allow for as much time as is reasonable for the concrete slab to dry before installing anhydrous calcium chloride tests and/or RH Probe Tests. All mastics, glues, and/or contaminants shall be removed to provide a clean, sound, concrete substrate prior to installing anhydrous calcium chloride tests as per ASTM F 1869 (latest revision).
- D. The water vapor reduction system must allow installation as early as 7 days after concrete placement.

1.07 WARRANTY

- A. Provide manufacturer's warranty against defects in materials and workmanship for 15 years from Substantial Completion.
- B. Correct failures during the warranty period at no cost to Owner.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Minimum 97 percent water vapor transmission reduction compared to untreated concrete, ASTM E 96, Water Vapor Transmission (wet methods).

- B. Not exceeding one perm rating, ASTM E 96 Perm Rating.
- C. Insensitivity to alkaline environment up to, and including, pH 14 in a 14-day bath test, ASTM D 1308.
- D. Certified acceptance and exposure to continuous topical water exposure after final cure.
- E. Water Vapor reduction system shall be a single coat, stand alone system with no requirements for additional components such as sand broadcast for adhesion of flooring systems.
- F. Reduce Calcium Chloride readings of up to 25lbs/1000 ft²/24 hrs by 97 percent in one coat.
- G. Perform as required with RH Probe readings of 100 percent.

2.02 MANUFACTURERS

- A. Water vapor reduction system, which may be incorporated in the work, shall be the product of a single manufacturer.
 - 1. VAP I® 2000 System by KOSTER American Corporation, basis of design.
 - 2. VaporSeal 390 by Floor Seal.
 - 3. Or equal.

2.03 MATERIALS

- A. General: Use materials of one manufacturer throughout the project.
 - 1. Moisture Vapor Control Coating: Select from among the following products
 - 2. KOSTER VAP I® 2000 12 hour setting time, low VOC, 2-part epoxy resin coating.
 - 3. KOSTER VAP I® 2000 FS 4 - 5 hour setting time, Zero VOC. 2-part epoxy resin coating
 - 4. KOSTER VAP I® 2000 UFS 3 - 4 hour setting time, low VOC, 2-part epoxy resin coating
 - 5. KOSTER VAP I® 2000 ZERO VOC 12 hour setting time, Zero VOC, 2-part epoxy resin coating
- B. Primer for underlayment: KOSTER VAP I® 06 Primer - non-porous substrate primer for use on VAP I® 2000 resin coating.
- C. Self-Leveling underlayment: Select from among the following products:
 - 1. KOSTER SL
 - 2. KOSTER SL Premium
 - 3. KOSTER SC
- D. Primer for porous concrete containing excessive near-surface voids or high concrete surface profile: KOSTER KB-Pox IN, low viscosity, high modulus, 2-part epoxy resin.
- E. Repair resin for non-movement joints and cracks: KOSTER KB-Pox IN low-viscosity, high modulus 2-part epoxy gravity-feed, crack injection resin.
- F. Thickening agent for repairing spalls and excessively rough concrete: KOSTER TA fiber thickening agent, non-silica.

- G. Movement joint sealant:
 - 1. KOSTER FS-H polysulfide resin joint sealant.
 - 2. Backer rod and accessory materials.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Provide information required in moisture control system manufacturer's pre-job checklist. Submit completed checklist to moisture control system manufacturer for review before installation of the moisture control system.
- B. Inspect all surfaces with regard to their suitability to receive moisture vapor reduction system with manufacturer's representative.
- C. Calcium Chloride and/or RH Probe test requirements:
 - 1. Conduct anhydrous calcium chloride tests according ASTM F 1869 protocols.
 - 2. Provide RH Probe Tests according to ASTM F 2170 protocols.
 - 3. Only conduct calcium chloride tests at the same temperature and humidity expected during normal use. If this is not possible, then the test conditions should be 75 degrees F +/-10 degrees F and 50+/-10 percent relative humidity. Maintain these conditions 48 hours prior to and during testing. Water vapor transmission levels are directly affected by ambient room temperature and readings conducted without a sustained ambient temperature are not acceptable.
 - 4. Submit test results with a marked up floor finish plan showing test results along with a written clarification on status of the ambient air temperature and humidity before start of testing.
- D. Concrete Slab Inspection:
 - 1. Test existing slabs (primarily), for concrete deficiencies and contaminates such as un-reacted water-soluble silicates, chlorides, A.S.R. (alkali-silica reaction), to avoid bonding issues. This testing shall be performed by Owner's independent testing agency using standard coring methods and review of the history of the slab installation if available. Concrete shall conform to ACI Committee 201 Report "Guide to Durable Concrete."
- E. Floor treatment calcium chloride tests: After proper cure (>72 hrs min.) of the moisture vapor reduction system, conduct calcium chloride tests to determine if the level of water vapor transmission and alkalinity are reduced to the Owner's specified levels in conjunction with the flooring manufacturer's installation requirements.
- F. Adhesion tests: Verify proper adhesion of flooring adhesives, coatings, and leveling compounds to the final vapor reduction coating system for acceptability.

3.02 PREPARATION

- A. Clean all surfaces to receive moisture vapor reduction system. Shot blast all floors to a Concrete Surface Profile (CSP) #3 or #4 and clean surfaces with an industrial vacuum cleaner and remove all residues from the substrate. Grinding is allowed only in areas not accessible by shot blasting. Remove defective materials, and foreign matter such as dust, adhesives, leveling compounds, paint, dirt, floor hardeners, bond breakers, oil, grease, curing agents, form release agents, efflorescence, laitance, Shot blast bee bees. Repair cracks, expansion joints, control joints, and open surface honeycombs and fill in accordance with vapor reduction manufacturer's recommendations. If concrete additives such as chlorides or any other soluble compounds that may contaminate surfaces have been used in the concrete mix do not use this product on that floor without written approval from the vapor reduction system manufacturer. Reinforcing fibers that are visible after shot blasting must be removed and vacuumed leaving no fibers left on the concrete surfaces. Provide an uncontaminated, sound surface. Do not acid-etch.
- B. Repair concrete prior to vapor reduction system installation by using system manufacturer-recommended bonding agent with approved concrete repair materials. Comply with all requirements as listed in vapor reduction manufacturer's technical data information.
- C. Ensure surfaces to be treated with moisture vapor reduction system have not previously been treated with other materials such as underlayments, screeds, penetrating sealants, or silicates. If this is the case, consult with the manufacturer prior to any application of moisture vapor reduction system.
- D. Testing for concrete deficiencies or contamination such as alkali silica reaction, untreated silicates, or organic residue is recommended.
- E. Shot blast a small test area and inspect surface profile with the finished flooring applicator. As the specified vapor reduction system is not a leveling material, make sure the flooring installer is aware that a feather finish or leveling material may be required to "flatten" or level the vapor reduction-treated concrete prior to flooring installation.

3.03 APPLICATION

- A. Coverage rates depend on the surface profile and porosity of the concrete substrate as well as the measured level of moisture. On average, a coverage rate of 75-150 ft²/gal.
- B. Apply one coat, using a squeegee and or 3/8 inch nap roller leaving no areas untreated. Allow to cure a minimum of 12 hours before installing flooring system.

3.04 PROTECTION

- A. Protect each coat during specified cure period from traffic, topical water and contaminants.

END OF SECTION

SECTION 09 21 16

GYPSUM BOARD SHAFT WALL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes vertical gypsum board shaftwall assemblies consisting of gypsum shaftwall boards, U-shaped metal floor and ceiling tracks, specially shaped studs, and gypsum boards on finished side or sides.
- B. Related requirements:
 - 1. Section 01 81 13 for Sustainable Design Requirements.
 - 2. Division 09 for other gypsum board systems.

1.02 SUBMITTALS

- A. Data: Manufacturer Product Data and installation instructions for shaftwall assemblies, including provisions for fixture and equipment anchorage.
- B. Shop Drawings: Large scale (minimum 1:4), dimensioned Shop Drawings showing provisions for fixture and equipment anchorage to systems.

1.03 QUALITY ASSURANCE

- A. Fire resistance: Where a fire resistance classification is indicated, provide materials, accessories, and application procedures listed by UL or tested according to ASTM E 119 for the type of construction shown, and approved by AHJ.
- B. Single source responsibility: Obtain shaftwall products from a single manufacturer, or from manufacturers recommended by the prime manufacturer of shaftwall systems.

1.04 HANDLING AND JOB CONDITIONS

- A. As specified in Section 09 29 00 Gypsum Board. Store materials under cover, off the ground or floor, in a dry, ventilated space.

PART 2 PRODUCTS

2.01 GYPSUM BOARD MANUFACTURERS

- A. As specified in Section 09 29 00.

2.02 PERFORMANCE REQUIREMENTS

- A. Structural performance characteristics: Provide shaftwall assemblies designed and tested by its manufacturer, or a nationally recognized testing laboratory, to withstand the lateral loads specified, within the specified deflection limit.
 - 1. Lateral loading: 5 psf, except where otherwise indicated.

2. Deflection limit: L/240 of partition height except where more restrictive limits are specified or noted on the Drawings to avoid fracture or other damage, and/or delamination of finish material applied to gypsum board.
3. Modify and supplement manufacturer's standard systems to comply with performance requirements.

2.03 MATERIALS

- A. Metal framing: One of the following systems of the size indicated and gage required to comply with performance requirements specified.
 1. Clark Dietrick.
 2. Gold Bond I-Stud/J-Track.
 3. SCAFCO Corp. Shaftwall Studs.
 4. CEMCO/USG J-runners, E and C-H studs.
- B. Deflection compensation: Where studs extend to the underside of floor or roof slabs, secure at top with "Fire Trak Cavity Shadowline" track by Fire Trak Corp. or other Code-compliant assemblies acceptable to the Architect.
- C. Gypsum shaftliner board:
 1. ASTM C 1396, Type X, with moisture-resistant paper facings, maximum lengths available to eliminate or minimize end-to-end butt joints, thickness indicated by one of the manufacturers specified in Section 09 29 00.
 2. Georgia-Pacific DensGlass Shaft liner boards, or equal: Moisture-resistant, one-inch thick gypsum core with coated glass mat facings, meeting ASTM E 136 for non-combustibility, and passing ASTM D 3273 test for mold resistance.
- D. Gypsum board, accessories, including joint tape, compound, and laminating adhesive: As specified in Section 09 29 00.
- E. Acoustical insulation and sealant: As specified in Section 09 80 00.

PART 3 EXECUTION

3.01 EXAMINATION/PREPARATION

- A. Where offset anchor plates are required, install continuous units formed from hot-dip galvanized steel sheet of thickness indicated.
 1. Attach plates to building structure with fasteners spaced not more than 24 inches o.c. Secure ceiling runners (tracks) to offset plates with screws spaced not more than 24 inches o.c.
- B. Before enclosing cavity walls, thoroughly clean space and floor tracks of debris.
- C. Verify conditions and measurements affecting the work of this Section at site.
- D. Correct detrimental conditions before proceeding with installation.

3.02 INSTALLATION

- A. Comply with shaftwall components manufacturer's installation instructions, with applicable provisions of ASTM C 754 and C 840, and the following.
- B. Anchor and attach materials to comply with indicated fire-rating and performance requirements, and to comply with governing regulations.
- C. Install supplementary framing, blocking and bracing to support fixtures, equipment, services, heavy trim, furnishing and similar work which cannot be adequately supported directly on shaftwall systems.
- D. Isolate shaftwall systems from transfer of structural loading, both horizontally and vertically. Provide slip or cushioned type joints to attain lateral support and avoid axial loading.
- E. Seal perimeter of each portion of work where it abuts other work.
 - 1. Install a bead of sealant to prevent dislocation by air pressure differential as specified in Section 09 80 00.
 - 2. Seal joints and penetrations in compliance with manufacturer's instructions.
- F. Trim:
 - 1. Where room side of system will be finished, install trim accessories in compliance with shaftwall manufacturer's instructions.
 - 2. Apply trim where edge of gypsum board would otherwise be exposed or semi-exposed, including terminations, openings, external corners, expansion and control joints and similar edges.
- G. Finish exposed gypsum board surfaces as specified in Section 09 29 00.

END OF SECTION

SECTION 09 22 16

NON-STRUCTURAL METAL FRAMING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Framing systems.
2. Suspension systems.
3. Grid suspension systems.

B. Related Requirements:

1. Section 05 40 00 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs; floor joists; and roof rafters and ceiling joists.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Framing systems.
2. Suspension systems.
3. Grid suspension systems.

1.03 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of code-compliance certification for studs and tracks.

B. Evaluation Reports: For **[high-strength steel studs and tracks] [firestop tracks] [post-installed anchors] [and] [power-actuated fasteners]**, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.04 QUALITY ASSURANCE

A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of **[the Certified Steel Stud Association] [the Steel Framing Industry Association] [the Steel Stud Manufacturers Association] [or] [the Supreme Steel Framing System Association]**.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Notify manufacturer of damaged materials received prior to installation.
- B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, in accordance with ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.
- C. Horizontal Deflection: For **[composite]** **[non-composite]** wall assemblies, limited to **[1/240]** **[1/360]** of the wall height based on horizontal loading of **[5 lbf/sq. ft.]** **[10 lbf/sq. ft.]** **<Insert value>**.
- D. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members," unless otherwise indicated.
- E. Design Loads: As indicated on architectural Drawings or 5 lbf/sq. ft. minimum as required by the IBC.
- F. Design framing systems to accommodate deflection of primary building structure and construction tolerances and to withstand design loads with a maximum deflection of **<Insert inches>**.

2.02 FRAMING SYSTEMS

- A. Framing Members, General: Comply with **[ASTM C645]** **[AISI S220 and ASTM C645, Section 10]** **[AISI S220]** for conditions indicated.
 - 1. Steel Sheet Components: Comply with **[ASTM C645]** **[AISI S220 and ASTM C645, Section 10]** **[AISI S220]** requirements for metal unless otherwise indicated
 - 2. Protective Coating: Comply with **[ASTM C645]** **[AISI S220]**; ASTM A653/A653M, G40; or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
 - a. Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.

- B. Studs and Track: [ASTM C645] [AISI S220 and ASTM C645, Section 10] [AISI S220].
1. Minimum Base-Steel Thickness: [As indicated on Drawings] [As required by performance requirements for horizontal deflection] **[0.0147 inch] [0.0179 inch] [0.0296 inch] [0.0329 inch]**.
 2. Depth: [As indicated on Drawings] **[3-5/8 inches] [6 inches] [4 inches] [2-1/2 inches] [1-5/8 inches]**.
- C. High-Strength Steel Studs and Tracks: Roll-formed with surface deformations to stiffen the framing members.
1. Minimum Base-Steel Thickness: [As indicated on Drawings] [As required by horizontal deflection performance requirements] **[0.0147 inch] [0.0180 inch]** <Insert thickness>.
 2. Depth: [As indicated on Drawings] **[3-5/8 inches] [6 inches] [4 inches] [2-1/2 inches] [1-5/8 inches]**.
- D. Slip-Type Head Joints: Where indicated, provide **[one of]** the following:
1. Clip System: Clips designed for use in head-of-wall deflection conditions that provide a positive attachment of studs to tracks while allowing **[1-1/2-inch] [2-inch] [2-1/2-inch] [3-inch]** <Insert dimension> minimum vertical movement.
 2. Single Long-Leg Track System: Top track with 2-inch-deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
 3. Double-Track System: Top outer tracks, inside track with 2-inch-deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
 4. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
- E. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
1. Minimum Base-Steel Thickness: [As indicated on Drawings] **[0.0179 inch] [0.0269 inch] [0.0296 inch] [0.0329 inch]** <Insert thickness>.
- G. Cold-Rolled Channel Bridging: Steel, 0.0538-inch minimum base-steel thickness, with minimum 1/2-inch-wide flanges.
1. Depth: [As indicated on Drawings] **[1-1/2 inches]** <Insert depth>.

2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch-thick, galvanized steel.

H. Hat-Shaped, Rigid Furring Channels:

1. Minimum Base-Steel Thickness: [As indicated on Drawings] **[0.0179 inch]** **[0.0296 inch]** **[0.0329 inch]** <Insert thickness>.
2. Depth: [As indicated on Drawings] **[7/8 inch]** **[1-1/2 inches]**.

I. Resilient Furring Channels: 1/2-inch-deep, steel sheet members designed to reduce sound transmission.

1. Configuration: [Asymmetrical] [or] [hat shaped].

J. Cold-Rolled Furring Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges.

1. Depth: [As indicated on Drawings] **[3/4 inch]** <Insert depth>.
2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch.
3. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

K. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 3/4 inch, minimum uncoated-steel thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.

2.03 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

B. Hanger Attachments to Concrete:

1. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES **[AC01]** **[AC193]** **[AC58]** [or] **[AC308]** as appropriate for the substrate.
 - a. Uses: Securing hangers to structure.
 - b. Type: [Torque-controlled, expansion anchor] [torque-controlled, adhesive anchor] [or] [adhesive anchor].
 - c. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.

- d. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated:
Alloy **[Group 1]** **[Group 2]** stainless steel bolts, ASTM F593, and nuts,
ASTM F594.
- 2. Power-Actuated Anchors: Fastener systems with an evaluation report acceptable to
authorities having jurisdiction, based on ICC-ES AC70.
- C. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.16 inch in diameter.
- D. Flat Hangers: Steel sheet, [in size indicated on Drawings] **[1 by 3/16 inch]** by length
indicated] <Insert size>.
- E. Carrying Channels (Main Runners): Cold-rolled, commercial-steel sheet with a base-steel
thickness of 0.0538 inch and minimum 1/2-inch-wide flanges.
 - 1. Depth: [As indicated on Drawings] **[2-1/2 inches]** **[2 inches]** **[1-1/2 inches]**.
- F. Furring Channels (Furring Members):
 - 1. Cold-Rolled Channels: 0.0538-inch uncoated-steel thickness, with minimum 1/2-inch-
wide flanges, 3/4 inch deep.
 - 2. Steel Studs and Tracks:
 - a. Minimum Base-Steel Thickness: [As indicated on Drawings] **[0.0179 inch]**
[0.0269 inch] **[0.0296 inch]** **[0.0329 inch]**.
 - b. Depth: [As indicated on Drawings] **[1-5/8 inches]** **[2-1/2 inches]** **[3-5/8 inches]**.
 - 3. High-Strength Steel Studs and Tracks:
 - a. Minimum Base-Steel Thickness: [As indicated on Drawings] **[0.0147 inch]**
[0.0180 inch] <Insert thickness>.
 - b. Depth: [As indicated on Drawings] **[1-5/8 inches]** **[2-1/2 inches]** **[3-5/8 inches]**.
 - 4. Hat-Shaped, Rigid Furring Channels: 7/8 inch deep.
 - a. Minimum Base-Steel Thickness: [As indicated on Drawings] **[0.0179 inch]**
[0.0296 inch] **[0.0329 inch]** <Insert thickness>.
 - 5. Resilient Furring Channels: 1/2-inch-deep members designed to reduce sound
transmission.
 - a. Configuration: [Asymmetrical] [or] [hat shaped].

2.04 GRID SUSPENSION SYSTEMS

- A. Grid Suspension Systems for Gypsum Board Ceilings: ASTM C645, direct-hung system composed of main beams and cross-furring members that interlock.

2.05 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
 - 1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide **[one of]** the following:
 - 1. Asphalt-Saturated Organic Felt: ASTM D226/D226M, Type I (No. 15 asphalt felt), nonperforated.
 - 2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Coordination with Sprayed Fire-Resistive Materials:
 - 1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.

2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that are required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.03 INSTALLATION, GENERAL

A. Installation Standard: ASTM C754.

1. Gypsum Plaster Assemblies: Also comply with requirements in ASTM C841 that apply to framing installation.
2. Portland Cement Plaster Assemblies: Also comply with requirements in ASTM C1063 that apply to framing installation.
3. Gypsum Veneer Plaster Assemblies: Also comply with requirements in ASTM C844 that apply to framing installation.
4. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.

B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.

C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

D. Install bracing at terminations in assemblies.

E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.04 INSTALLATION OF FRAMING SYSTEMS

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

1. Single-Layer Application: [As required by horizontal deflection performance requirements] **[16 inches o.c.] [24 inches o.c.]** unless otherwise indicated.
2. Multilayer Application: [As required by horizontal deflection performance requirements] **[16 inches o.c.] [24 inches o.c.]** unless otherwise indicated.
3. Tile Backing Panels: [As required by horizontal deflection performance requirements] **[16 inches o.c.]** unless otherwise indicated.

B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

- C. Install studs so flanges within framing system point in same direction.
- D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
 - 1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 - 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
 - a. Install two studs at each jamb unless otherwise indicated.
 - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
 - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
 - 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
 - 4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
 - 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
 - 6. Curved Partitions:
 - a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
 - b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs 6 inches o.c.
- E. Direct Furring:
 - 1. Screw to wood framing.
 - 2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.

F. Z-Shaped Furring Members:

1. Erect insulation, specified in Section 07 21 00 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced **[24 inches]** <Insert dimension> o.c.
2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

- G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.05 INSTALLATION OF SUSPENSION SYSTEMS

- A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

1. Hangers: **[48 inches]** <Insert dimension> o.c.
2. Carrying Channels (Main Runners): **[48 inches]** <Insert dimension> o.c.
3. Furring Channels (Furring Members): **[16 inches]** **[24 inches]** <Insert dimension> o.c.

- B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

- C. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
 - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
 - a. Size supplemental suspension members and hangers to support ceiling loads within **[performance limits established by referenced installation standards]** <Insert deflection limit>.

3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 5. Do not attach hangers to steel roof deck.
 6. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
 7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
 8. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
- E. Seismic Bracing: Sway-brace suspension systems [with hangers used for support] <Insert requirements>.
- 3.06 INSTALLATION OF GRID SUSPENSION SYSTEMS
- A. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- 3.07 FIELD QUALITY CONTROL
- A. Installation Tolerances: Install suspension systems that are level to within **[1/8 inch in 12 feet]** <Insert dimensions> measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

SECTION 09 24 00
CEMENT PLASTERING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
1. Metal lath.
 2. Accessories.
 3. Base-coat cement plaster.
 4. Cement plaster finish coats.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.03 ACTION SUBMITTALS

- A. Product Data:
1. For each type of product.
- B. Shop Drawings: Locations and installation of control and expansion joints, including plans, elevations, sections, and attachment details.
- C. Samples for Initial Selection: For each type of factory-prepared finish coat and for each color and finish texture specified.
- D. Samples for Verification: For each type of factory-prepared finish coat and for each color and finish texture specified, 12 by 12 inches, and prepared on rigid backing.

1.04 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
1. Build mockups for each substrate and color and finish texture indicated for cement plastering, including accessories.
 - a. Size: **[100 sq. ft.] <Insert dimension>** in surface area.
 2. For interior plasterwork, simulate finished lighting conditions for review of mockups.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.

4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.05 DELIVERY, STORAGE AND HANDLING

- A. Store materials inside under cover, and keep them dry and protected against damage from weather, moisture, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

1.06 FIELD CONDITIONS

- A. Comply with ASTM C926 requirements.
- B. Exterior Plasterwork:
 1. Apply and cure plaster to prevent plaster drying out during curing period. Use procedures required by climatic conditions, including moist curing, providing coverings, and providing barriers to deflect sunlight and wind.
 2. Apply plaster when ambient temperature is greater than 40 deg F.
 3. Protect plaster coats from freezing for not less than 48 hours after set of plaster coat has occurred.
- C. Interior Plasterwork: Maintain room temperatures at greater than 40 deg F for at least 48 hours before plaster application, and continuously during and after application.
 1. Avoid conditions that result in plaster drying out during curing period. Distribute heat evenly; prevent concentrated or uneven heat on plaster.
 2. Ventilate building spaces as required to remove water in excess of that required for hydrating plaster in a manner that prevents drafts of air from contacting surfaces during plaster application and until plaster is dry.
- D. Factory-Prepared Finish Coats: Comply with manufacturer's written instructions for environmental conditions for applying finish coats.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: Where indicated on Drawings, provide cement plaster assemblies identical to those of assemblies tested for fire resistance in accordance with ASTM E119 by a qualified testing agency.

2.02 METAL LATH

- A. Expanded Metal Lath: ASTM C847; cold-rolled carbon steel sheet, hot-dip galvanized with ASTM A653/A653M **[G60]** **[G90]** zinc coating.
 1. Flat Diamond-Mesh Lath: **[2.5 lb/sq. yd.] [3.4 lb/sq. yd.]**.

- a. Water-Resistive Barrier: Vapor-permeable paper, factory bonded to back of lath; complying with requirements in FS UU-B-790a for Type I, Grade D and with **[10-minute] [60-minute]** water resistance.
 - 1) Provide water-resistive barrier **[at exterior locations]** **[where indicated on Drawings]** <Insert requirements>.
 2. Self-Furring Diamond-Mesh Lath: **[V-grooved] [Dimpled]**.
 - a. Weight: **[2.5 lb/sq. yd.] [3.4 lb/sq. yd.]**.
 - b. Water-Resistive Barrier: Vapor-permeable paper, factory bonded to back of lath; complying with requirements in FS UU-B-790a for Type I, Grade D and with **[10-minute] [60-minute]** water resistance.
 - 1) Provide water-resistive barrier **[at exterior locations]** **[where indicated on Drawings]** <Insert requirements>.
 - c. Kraft-Paper Backing: Factory bonded to back of lath.
 - 1) Provide kraft-paper backing **[at interior locations]** **[where indicated on Drawings]** <Insert requirements>.
 3. 3/8-Inch (10-mm) Rib Lath: **[3.4 lb/sq. yd.] [4 lb/sq. yd.]**.
 - a. Kraft-Paper Backing: Factory bonded to back of lath.
- B. Wire-Fabric Lath:
1. Welded-Wire Lath: ASTM C933; self-furring, **[1.14 lb/sq. yd.] [1.95 lb/sq. yd.]**.
 2. Woven-Wire Lath: ASTM C1032; self-furring, with stiffener wires, 1.4 lb/sq. yd., with 1.5-inch openings, and woven from 0.051-inch diameter wire.
 3. Water-Resistive Barrier: Vapor-permeable paper, factory bonded to back of lath; complying with requirements in FS UU-B-790a for Type I, Grade D and **[in double layer, each having 10-minute] [with 10-minute] [with 60-minute]** water resistance.
 - a. Provide water-resistive barrier **[at exterior locations]** **[where indicated on Drawings]** <Insert requirements>.
- 2.03 ACCESSORIES
- A. General: Comply with requirements in ASTM C1063, and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.
- B. Metal Accessories:
1. Foundation Weep Screed: Fabricated from hot-dip-galvanized steel sheet with ASTM A653/A653M **[G60] [G90]** zinc coating.
 2. Cornerite: Fabricated from metal lath, hot-dip galvanized with ASTM A653/A653M **[G60] [G90]** zinc coating.

3. External- (Outside-) Corner Reinforcement: Fabricated from metal lath, hot-dip galvanized with ASTM A653/A653M **[G60] [G90]** zinc coating.
 4. Cornerbeads: Fabricated from **[zinc] [zinc-coated (galvanized) steel] [or] [anodized aluminum]**.
 - a. Smallnose cornerbead with expanded flanges; use **[unless otherwise indicated] [at locations indicated on Drawings]** <Insert requirements>.
 - b. Smallnose cornerbead with perforated flanges; use **[on curved corners] [at locations indicated on Drawings]** <Insert requirements>.
 - c. Smallnose cornerbead with expanded flanges reinforced by perforated stiffening rib; use **[on columns and for finishing unit masonry corners] [at locations indicated on Drawings]** <Insert requirements>.
 - d. Bullnose cornerbead, radius 3/4-inch minimum, with expanded flanges; use **[unless otherwise indicated] [at locations indicated on Drawings]** <Insert requirements>.
 5. Casing Beads: Fabricated from **[zinc] [zinc-coated (galvanized) steel] [or] [anodized aluminum]**; square-edged style; with expanded flanges.
 6. Control Joints: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on exposed face of control joint.
 7. One-Piece Expansion Joints: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
 8. Two-Piece Expansion Joints: Fabricated from **[zinc] [zinc-coated (galvanized) steel] [or] [anodized aluminum]**; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch wide; with perforated flanges.
- C. Plastic Accessories: Manufactured from high-impact PVC.
1. Cornerbeads: With perforated flanges.
 - a. Smallnose cornerbead; use **[unless otherwise indicated] [at locations indicated on Drawings]** <Insert requirements>.
 - b. Bullnose cornerbead, radius 3/4-inch minimum; use **[unless otherwise indicated] [at locations indicated on Drawings]** <Insert requirements>.
 2. Casing Beads: Square-edge style, with perforated flanges in depth required to suit plaster bases indicated and flange length required to suit applications indicated.
 3. Control Joints: One-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on exposed face of control joint.

4. Expansion Joints: Two-piece type, formed to produce slip-joint and square-edged **[1/2-inch-] [1-inch-] [1-1/2-inch-] <Insert dimension>** wide reveal; with perforated concealed flanges.

2.04 BASE-COAT CEMENT PLASTER

- A. General: Comply with requirements in ASTM C926 for applications indicated.
 1. Fiber Content: Add fiber to base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber/cu. yd. of cementitious materials.
 2. Aggregate:
 - a. Sand: Use **[unless otherwise indicated] <Insert requirements>**.
 - b. Perlite: Use **[where required by fire-resistance-rated design designations from listing organization and publication indicated on Drawings] <Insert requirements>**.
- B. Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:
 1. Portland Cement Mixes:
 - a. Scratch Coat: For cementitious material, mix 1 part portland cement and **[0 to 3/4] [3/4 to 1-1/2]** parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Brown Coat: For cementitious material, mix 1 part portland cement and **[0 to 3/4] [3/4 to 1-1/2]** parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.
 2. Masonry Cement Mixes:
 - a. Scratch Coat: Mix 1 part masonry cement and 2-1/2 to 4 parts aggregate.
 - b. Brown Coat: Mix 1 part masonry cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.
 3. Portland and Masonry Cement Mixes:
 - a. Scratch Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Brown Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.
 4. Plastic Cement Mixes:
 - a. Scratch Coat: Mix 1 part plastic cement and 2-1/2 to 4 parts aggregate.
 - b. Brown Coat: Mix 1 part plastic cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.

5. Portland and Plastic Cement Mixes:
 - a. Scratch Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Brown Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

C. Base-Coat Mix for Use over Solid Plaster Bases: Single base (scratch) coat for two-coat plasterwork as follows:

1. Low-Absorption Unit Masonry and Concrete Substrates:
 - a. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 0 to 3/4 part lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - c. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.
2. High-Absorption Unit Masonry and Concrete Substrates:
 - a. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Masonry Cement Mix: Use 1 part masonry cement and 2-1/2 to 4 parts aggregate.
 - c. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - d. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.

2.05 CEMENT PLASTER FINISH COATS

A. Job-Mixed Finish-Coat Mix: Comply with requirements in ASTM C926.

1. Aggregates:
 - a. Sand: Use over base coats containing sand.
 - b. Perlite: Use over base coats containing perlite.
 - c. Exposed Aggregates: Use [where indicated on Drawings] <Insert requirements>.
2. Portland Cement Mix: For cementitious material, mix 1 part portland cement and **[3/4 to 1-1/2] [1-1/2 to 2]** parts lime. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
3. Masonry Cement Mix: Use 1 part masonry cement and 1-1/2 to 3 parts aggregate.

4. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
 5. Plastic Cement Mix: Use 1 part plastic cement and 1-1/2 to 3 parts aggregate.
- B. Ready-Mixed Finish-Coat Plaster: Factory-mixed portland cement, aggregates, coloring agents, and proprietary ingredients.
1. Color: **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
 2. Source Limitations: Obtain ready-mixed finish-coat plaster from single source from single manufacturer.
- C. Acrylic-Based Finish Coatings: Factory-mixed, acrylic-emulsion coating systems formulated with colorfast mineral pigments and fine aggregates; for use over cement plaster base coats. Include manufacturer's recommended primers and sealing topcoats for acrylic-based finishes.
1. Color: **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
 2. Texture: **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert texture>.
 3. Source Limitations: Obtain acrylic-based finish coating from single source from single manufacturer.

2.06 PLASTER MATERIALS

- A. Portland Cement: ASTM C150/C150M, **[Type I]** **[Type II]**.
1. Color for Finish Coats: **[White]** **[Gray]**.
- B. Masonry Cement: ASTM C91/C91M, Type N.
1. Color for Finish Coats: **[White]** **[Gray]**.
- C. Plastic Cement: ASTM C1328/C1328M.
- D. Colorants for Job-Mixed Finish Coats: Colorfast mineral pigments that produce finish plaster color **[to match Architect's sample]** <Insert requirements>.
- E. Lime: ASTM C206, Type S; or ASTM C207, Type S.
- F. Sand Aggregate: ASTM C897.
1. Color for Job-Mixed Finish Coats: **[White]** **[In color matching Architect's sample]**.
- G. Perlite Aggregate: ASTM C35.
- H. Exposed Aggregates for Finish Coats: **[For marblecrete finish, clean, sound, crushed marble matching color and size gradation of Architect's sample]** <Insert requirements>.

2.07 MISCELLANEOUS MATERIALS

- A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.
- B. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch long, free of contaminants, manufactured for use in cement plaster.
- C. Bonding Compound: ASTM C932.
- D. Fasteners for Attaching Metal Lath to Substrates: ASTM C1063.
- E. Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch diameter unless otherwise indicated.
- F. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - 1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
- G. Sealant: As specified in Section 07 92 00 "Joint Sealants."

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Reject plaster materials that are wet or moisture damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protect adjacent work from soiling, spattering, moisture deterioration, and other harmful effects caused by plastering.
- B. Prepare smooth, solid substrates for plaster in accordance with ASTM C926.

3.03 INSTALLATION, GENERAL

- A. Fire-Resistance-Rated Assemblies: Install components in accordance with requirements for design designations from listing organization and publication indicated on Drawings.
- B. Sound-Attenuation Blankets: Where indicated on Drawings, install blankets before installing lath unless blankets are readily installed after lath has been installed on one side.
- C. Sealant: Where indicated on Drawings, seal joints between edges of plasterwork and abutting construction with sealant.

3.04 INSTALLATION OF METAL LATH

- A. Metal Lath: Install in accordance with ASTM C1063.
 - 1. Partition Framing and Vertical Furring: Install **[flat diamond-mesh] [welded-wire] [woven-wire]** lath.
 - 2. Flat-Ceiling and Horizontal Framing: Install **[flat diamond-mesh] [3/8-inch rib] [welded-wire] [woven-wire]** lath.
 - 3. Curved-Ceiling Framing: Install **[flat diamond-mesh] [welded-wire] [woven-wire]** lath.
 - 4. On Solid Surfaces, Not Otherwise Furred: Install **[self-furring diamond-mesh] [welded-wire] [woven-wire]** lath.

3.05 INSTALLATION OF ACCESSORIES

- A. Install in accordance with ASTM C1063 and at locations indicated on Drawings.
- B. Reinforcement for External (Outside) Corners:
 - 1. Install **[lath-type, external-corner reinforcement] [cornerbead]** at exterior locations.
 - 2. Install cornerbead at interior locations.
- C. Control Joints: Locate as approved by Architect for visual effect and as follows:
 - 1. As required to delineate plasterwork into areas (panels) of the following maximum sizes:
 - a. Vertical Surfaces: 144 sq. ft..
 - b. Horizontal and Other Nonvertical Surfaces: 100 sq. ft..
 - 2. At distances between control joints of not greater than 18 ft. o.c.
 - 3. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.
 - 4. Where control joints occur in surface of construction directly behind plaster.
 - 5. Where plastered ceiling framing or furring changes direction.
 - 6. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.
- D. Expansion Joints: Locate where expansion joints occur in supporting construction.

3.06 APPLICATION OF BASE-COAT CEMENT PLASTER

- A. General: Comply with ASTM C926.
 - 1. Install so that finished plaster surfaces will not deviate more than plus or minus 1/4 inch in 10 ft. from a true plane when measured by a 10-ft. straightedge placed on surface.

2. Install so finished plaster surfaces will be flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets.
- B. Bonding Compound: Apply on **[unit masonry] [and] [concrete]** substrates for direct application of plaster.
- C. Moisture cure for a minimum of 48 hours must be provided. Environmental conditions such as low humidity or windy conditions may dictate additional curing.
- D. Wall/Vertical Base Coats:
1. Three-Coat Plasterwork Over Metal Lath: Install base-coat mixes for use over metal lath to produce scratch and brown coats having 3/4-inch total thickness.
 2. Two-Coat Plasterwork Over Solid Plaster Bases: Install base-coat mix for use over solid plaster bases in **[3/8-inch thickness on masonry] [1/4-inch thickness on concrete]**.
- E. Ceiling/Horizontal Base Coats:
1. Three-Coat Plasterwork Over Metal Lath: Install base-coat mixes for use over metal lath to produce scratch and brown coats with **[1/2-inch total thickness] [3/4-inch total thickness for metal lath on concrete]**.
 2. Two-Coat Plasterwork Over Solid Plaster Bases: Install base-coat mix for use over solid plaster bases in 1/4-inch thickness on concrete.
- 3.07 APPLICATION OF CEMENT PLASTER FINISH COATS
- A. General: Comply with ASTM C926.
1. Do not deviate more than plus or minus 1/4 inch in 10 ft. from a true plane in finished plaster surfaces when measured by a 10-ft. straightedge placed on surface.
 2. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, groove finish coat at junctures with metal.
 3. Provide plaster surfaces that are ready to receive field-applied finishes indicated.
- B. Plaster Finish Coats: Apply to provide **[float] [dash] [scraped trowel-textured] [skip trowel-textured] [brocade (knock-down dash)] [trowel sweep] [combed] [sacked (California mission)] [English] [marblecrete]** <Insert requirements> finish to match Architect's sample.
- C. Acrylic-Based Finish Coatings: Apply coating system, including primers, finish coats, and sealing topcoats, in accordance with manufacturer's written instructions.
- D. Concealed Exterior Plasterwork: Where plaster application is used as a base for adhered finishes, omit finish coat.
- E. Concealed Interior Plasterwork:
1. Where plaster application is concealed behind built-in cabinets, similar furnishings, and equipment, apply finish coat.

2. Where plaster application is concealed above suspended ceilings and in similar locations, omit finish coat.
3. Where plaster application is used as a base for adhesive application of tile and similar finishes, omit finish coat.

3.08 REPAIR

- A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

3.09 CLEANING

- A. Remove temporary protection and enclosure of other work after plastering is complete.
- B. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered.
- C. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

END OF SECTION

SECTION 09 28 13

CEMENTITIOUS BACKING BOARDS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Waterproof board for [interior and exterior] [restroom] [countertops] [shower] [utility room] [steam room] [swimming pool] [mechanical rooms] [wet areas] where [tiling] is being installed.
 - a. Install at [floor] [wall] [ceilings]
 - 2. Fasteners and joint tape.
- B. Related requirements: Other Section of Division 09 for shower pans and ceramic tile.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing:
- B. Pre-installation meeting:

1.03 SUBMITTALS

- A. Data: Manufacturer Product Data for materials specified below.

1.04 JOB CONDITIONS

- A. Provide adequate ventilation to dissipate excess moisture.
- B. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform this work and as will occur in the room or space after the building is in operation.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Cement backerboard: One of the following, 5/8-inch thick by 48-inch wide by 96-inch long cementitious fiber-mat reinforced sheathing complying with ASTM C 1325, Type A, ANSI A118.9.
 - 1. PermaBase by National Gypsum Co. (basis of design).
 - 2. Util-A-Crete by FinPan.
 - 3. Durock by US Gypsum Co.
- B. Joint reinforcement: Alkali-resistant, 2-inch wide, coated fiberglass mesh tape acceptable to the board manufacturer.

- C. Fasteners: Self-drilling, galvanized, No. 2 flat, reduced Philips head recessed with nibs by 1-1/4-inch long by Pro-Twist Construction Fasteners, or equal.
- D. Washers: 3/4-inch diameter, countersunk, stainless steel washer for use where panels abut over a framing member.
- E. Tape bonding materials: Latex-modified Portland cement mortar as specified in Section 09 31 00.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions and measurements affecting the work of this Section at the site.
- B. Correct detrimental conditions before proceeding with installation.

3.02 INSTALLATION

- A. General:
 - 1. Comply with the board manufacturer instructions and the following.
 - 2. Use longest possible board length in all cases.
 - 3. Install boards with vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
 - 4. Refer to, and comply with, Section 09 30 00 for allowable tolerances.
- B. Boards: Support edges of board parallel to framing continuously.
 - 1. Precut panels and make accurate cutouts for penetrations.
 - 2. Install boards with a 3/8-inch gap where non-load-bearing construction they abut structural elements.
 - 3. To prevent wicking, install boards with a 1/4-inch gap where they abut materials that might retain moisture.
 - 4. Attach board at 8 inches o.c.; set fasteners back 3/8-inch minimum from edges. Drive fasteners so heads bear tightly against face of boards but do not cut into facing.
 - 5. Pre-fill gap between boards with bonding material then embed 2-inch mesh tape and smooth material over joint and corner.

END OF SECTION

SECTION 09 29 00

GYPSUM BOARD

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Interior gypsum board.
2. Exterior gypsum board for ceilings and soffits.
3. Tile backing panels.
4. Texture finishes.
5. Acoustical Sealant.

B. Related Requirements:

1. Section 06 16 00 "Sheathing" for gypsum sheathing for exterior walls.
2. Section 07 92 00 "Joint Sealants" for joint sealants installed in gypsum board assemblies.
3. Section 09 21 16 "Gypsum Board Shaft Wall Systems" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
4. Section 09 22 16 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.
5. Section 09 30 13 "Ceramic Tiling" for cementitious backer units installed as substrates for ceramic tile.

1.02 ACTION SUBMITTALS

A. Product Data: For the following:

1. Gypsum wallboard.
2. Gypsum board, Type X.
3. Flexible gypsum board.
4. Gypsum ceiling board.
5. Foil-backed gypsum board.
6. Abuse-resistant gypsum board.
7. Impact-resistant gypsum board.

8. Mold-resistant gypsum board.
 9. Gypsum board, Type C.
 10. Glass-mat interior gypsum board.
 11. Acoustically enhanced gypsum board.
 12. Skim-coated gypsum board.
 13. Exterior gypsum soffit board.
 14. Glass-mat gypsum sheathing board.
 15. Glass-mat, water-resistant backing board.
 16. Cementitious backer units.
 17. Water-resistant gypsum backing board.
 18. Interior trim.
 19. Exterior trim.
 20. Aluminum trim.
 21. Joint treatment materials.
 22. Laminating adhesive.
 23. Sound-attenuation blankets.
 24. Acoustical Sealant.
 25. Textured finishes.
- B. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.
- C. Samples: For the following products:
1. Trim Accessories: Full-size Sample in 12-inch-long length for each trim accessory indicated.
 2. Textured Finishes: **[Manufacturer's standard size]** <Insert size> for each textured finish indicated and on same backing indicated for Work.
- D. Samples for Initial Selection: For each type of **[trim accessory]** **[and]** **[textured finish]** indicated.
- E. Samples for Verification: For the following products:
1. Trim Accessories: Full-size Sample in 12-inch-long length for each trim accessory indicated.

2. Textured Finishes: **[Manufacturer's standard size] <Insert size>** for each textured finish indicated and on same backing indicated for Work.

1.03 MOCKUPS

- A. Build mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and to set quality standards for materials and execution.
 1. Build mockups for the following:
 - a. Each level of gypsum board finish indicated for use in exposed locations.
 - b. Each texture finish indicated.
 2. Apply or install final decoration indicated, including painting and wallcoverings, on exposed surfaces for review of mockups.
 3. Simulate finished lighting conditions for review of mockups.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.04 DELIVERY, STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.05 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
- B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, and mold damaged.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or blotchy surface contamination and discoloration.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain each type of gypsum panel and joint finishing material from single source with resources to provide products of consistent quality in appearance and physical properties.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated in accordance with ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.

2.03 GYPSUM BOARD, GENERAL

Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.04 INTERIOR GYPSUM BOARD

- A. Gypsum Wallboard: ASTM C1396/C1396M.
 - 1. Thickness: 1/2 inch.
 - 2. Long Edges: [Tapered] [Tapered and featured (rounded or beveled) for prefilling].
- B. Gypsum Board, Type X: ASTM C1396/C1396M.
 - 1. Thickness: 5/8 inch.
 - 2. Long Edges: [Tapered] [Tapered and featured (rounded or beveled) for prefilling].
- C. Flexible Gypsum Board: ASTM C1396/C1396M. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.
 - 1. Thickness: 1/4 inch.
 - 2. Long Edges: Tapered.
- D. Gypsum Ceiling Board: ASTM C1396/C1396M.
 - 1. Thickness: 1/2 inch.
 - 2. Long Edges: Tapered.
- E. Foil-Backed Gypsum Board: ASTM C1396/C1396M.
 - 1. Core: [As indicated on Drawings] **[3/8 inch, regular type]** **[1/2 inch, regular type]** **[5/8 inch, Type X]** [Type C as required by fire-resistance-rated assembly indicated on Drawings].
 - 2. Long Edges: [Tapered] [Tapered and featured (rounded or beveled) for prefilling].
- F. Abuse-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested in accordance with ASTM C1629/C1629M.
 - 1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[5/8 inch, Type X]**.

2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements.
 3. Indentation: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements.
 4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements.
 5. Long Edges: Tapered.
 6. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.
- G. Impact-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested in accordance with ASTM C1629/C1629M.
1. Core: **[As indicated on Drawings]** **[1/2 inch, regular type]** **[5/8 inch, Type X]**.
 2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements.
 3. Indentation: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements.
 4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements.
 5. Hard-Body Impact: ASTM C1629/C1629M, meets or exceeds **[Level 1]** **[Level 2]** **[Level 3]** requirements in accordance with test in Annex A1.
 6. Long Edges: Tapered.
 7. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.
- H. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
1. Core: **[As indicated on Drawings]** **[1/2 inch, regular type]** **[5/8 inch, Type X]**.
 2. Long Edges: Tapered.
 3. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.
- 2.05 SPECIALTY GYPSUM BOARD
- A. Gypsum Board, Type C: ASTM C1396/C1396M. Manufactured to have increased fire-resistive capability.
1. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
 2. Long Edges: Tapered.
- B. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.

1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[1/2 inch, Type C]** **[5/8 inch, Type X]** **[5/8 inch, abuse resistant]**.
 2. Long Edges: Tapered.
 3. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.
- C. Acoustically Enhanced Gypsum Board: ASTM C1766. Multilayer products constructed of two layers of gypsum boards sandwiching a viscoelastic sound-absorbing polymer core.
1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[1/2 inch, Type X]** **[5/8 inch, regular type]** **[5/8 inch, Type X]** **[1-3/8 inch, regular type]**.
 2. Long Edges: Tapered.
- D. Skim-Coated Gypsum Board: ASTM C1396/C1396M. Manufactured with a factory-applied skim coat.
1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[5/8 inch, Type X]**.
 2. Long Edges: Tapered.
- 2.06 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS
- A. Exterior Gypsum Soffit Board: ASTM C1396/C1396M, with manufacturer's standard edges.
1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[5/8 inch, Type X]**.
- B. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M, with fiberglass mat laminated to both sides and with manufacturer's standard edges.
1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[5/8 inch, Type X]**.
- 2.07 TILE BACKING PANELS
- A. Glass-Mat, Water-Resistant Backing Board: ASTM C1178/C1178M, with manufacturer's standard edges.
1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[5/8 inch, Type X]**.
 2. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.
- B. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.
1. Thickness: **[1/4 inch]** **[1/2 inch]** **[5/8 inch]** [As indicated on Drawings].
 2. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.
- C. Water-Resistant Gypsum Backing Board: ASTM C1396/C1396M, with manufacturer's standard edges.
1. Core: [As indicated on Drawings] **[1/2 inch, regular type]** **[5/8 inch, Type X]** [Type C as required by fire-resistance-rated assembly indicated on Drawings].

2.08 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.

1. Material: [Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet] [Galvanized or aluminum-coated steel sheet or rolled zinc] [Plastic] [Paper-faced galvanized-steel sheet].
2. Shapes:
 - a. Cornerbead.
 - b. Bullnose bead.
 - c. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - d. L-Bead: L-shaped; exposed long flange receives joint compound.
 - e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
 - f. Expansion (control) joint.
 - g. Curved-Edge Cornerbead: With notched or flexible flanges.
 - h. Base-of-Wall Galvanized Moisture Barrier Trim: Galvanized-steel sheet, 2 inches high.
 - i. Base-of-Wall PVC Moisture Barrier Trim: Extruded PVC, [1/2 inch] [1-3/4 inch] [3-1/2 inch] high.

B. Exterior Trim: ASTM C1047.

1. Material: [Hot-dip galvanized-steel sheet, plastic, or rolled zinc] <Insert material>.
2. Shapes:
 - a. Cornerbead.
 - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - c. Expansion (Control) Joint: One-piece, rolled zinc with V-shaped slot and removable strip covering slot opening.

C. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.

1. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B221, Alloy 6063-T5.
2. Finish: [Corrosion-resistant primer compatible with joint compound and finish materials specified] <Insert requirements for Class II anodic finishes and factory-painted, baked-enamel finishes>.

2.09 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475/C475M.

- B. Joint Tape:
1. Interior Gypsum Board: Paper.
 2. Exterior Gypsum Soffit Board: Paper.
 3. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
 4. Tile Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
1. Prefilling: At open joints **[, rounded or beveled panel edges,]** and damaged surface areas, use setting-type taping compound.
 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use **[setting-type taping] [drying-type, all-purpose]** compound.
 - a. Use setting-type compound for installing paper-faced metal trim accessories.
 3. Fill Coat: For second coat, use **[setting-type, sandable topping] [drying-type, all-purpose]** compound.
 4. Finish Coat: For third coat, use **[setting-type, sandable topping] [drying-type, all-purpose]** compound.
 5. Skim Coat: For final coat of Level 5 finish, use **[setting-type, sandable topping compound] [drying-type, all-purpose compound] [high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish].**
- D. Joint Compound for Exterior Applications:
1. Exterior Gypsum Soffit Board: Use setting-type taping compound and setting-type, sandable topping compound.
 2. Glass-Mat Gypsum Sheathing Board: As recommended by sheathing board manufacturer.
- E. Joint Compound for Tile Backing Panels:
1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
 2. Cementitious Backer Units: As recommended by backer unit manufacturer.
 3. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.
 4. <Insert products>.

2.10 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
- B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
- C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
 - 1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
 - 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- D. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - 1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
- E. Acoustical Sealant:
 - 1. Bulk sealant for closing small openings and joints up to a maximum of one-inch wide. Sealant backed with glass fiber packing, compressible joint filler or resilient backer rod. Do not use acetoxysilicone sealant where it might contact copper pipes.
 - a. Products:
 - 1) Pecora Corp.: AC-20.
 - 2) US Gypsum Co.: Sheetrock Acoustical Sealant.
 - 3) Tremco, Inc.: Acoustical Sealant.
 - 4) OSI Sealants: Henkel Corporation: OSI Pro-Series SC-175 Acoustical Sound Sealant.
 - 5) Or equal.
 - 2. Fire-barrier (acoustical) putty:
 - a. For closing large openings and joints typically over one inch wide. Applied full depth or backed with a dense safing, as detailed.
 - b. Non-shrinking, highly-adhesive, minimum 40-pcf density fire-barrier putty.
 - c. Products:
 - 1) Series SSP Firestop Putty and Putty Pads by Specified Technologies Inc.
 - 2) Nelson FSP Firestop Intumescent Putty by Chargar Corp.
 - 3) Fiberfrax Fyre Putty by Unifrax.
 - 4) Hilti CP 617 and CP 617L, intumescent moldable firestop putty for electrical outlet boxes.
 - 3. Foamed-in-place silicone sealant:
 - a. For closing electrical ducts and cable trays where they penetrate constructions. Apply full depth of construction between permanent or temporary dams.
 - b. Fire-resistant, minimum 17-pcf density, foamed-in-place silicone sealant.
 - 1) Products:

- a) Fire Barrier 2001 Silicone RTV Foam by 3M Fire Barrier Products Division.
 - b) Or equal.
- c. Fire-resistive acoustic foam tape:
- 1) "Norseal V740FR" compressible, closed cell polyvinyl chloride foam tape with pressure sensitive adhesive by Saint Gobain.
 - 2) Or equal.
 - 3) Provide one-inch wide by not less than 1/4-inch thick, self-extinguishing, 6 pcf density UL-listed acoustical foam tape.
 - 4) Furnish tape in rolls with protective release liner on non-adhesive face.
- F. Sealant: As specified in Section 07 92 00 "Joint Sealants."
- G. Acoustic Pads
- 1. Use: For sealing the backs and sides of standard electrical back boxes. Select size to completely cover the box and overlap wall facing material at least one-inch.
 - 2. Fire-rated assemblies:
 - a. Flamesafe FSP 1077 Putty Pads by WR Grace & Co.
 - b. Putty Pads by Specified Technologies Inc.
 - c. Hilti CP617 Putty Pads by Hilti.
 - d. 3M Fire Barrier Moldable Putty Pads by RectorSeal.
 - e. Putty Pads by International Protective Coatings.
 - 3. Elsewhere:
 - a. Type FSP Firestop Putty Pads by Nelson Electric.
 - b. Lowry's Outlet Box Pads by Harry A. Lowry & Associates.
 - c. Sound Pad #68 by L.H. Dottie Co.
 - 4. Self-adhesive sponge neoprene pads:
 - a. For providing a compressible filler and acoustical seal in the gaps of slip joints. Set in place with 10 to 15 percent compression. Airtight splices work in length-wise direction.
 - b. Closed-cell sponge or foam neoprene of 8- to 12-pcf density, self-adhesive on one side, thicknesses and widths as required.
 - c. Products:
 - 1) Type V760 Norseal Foam Sealants by American Saint-Gobain.
 - 2) DS Brown Co.
 - 3) Or equal.
 - 5. Felt-lined metal sleeves:

- a. For sealing around pipe, hanger rod or other round element penetrating a construction. Inside sleeve diameter to equal outside diameter of penetrating element. Exposed end of sleeve closed with acoustical sealant.
 - 1) Products:
 - a) Pipe Isolator by Eleen.
 - b) P-R Isolator by Potter-Roemer.
 - c) Trisolator by Stoneman Engineering.
 6. Self-adhesive bubble gaskets:
 - a. To seal around the edge of an operating access panels. Typically set on jamb or head frame or stop to act as a compression seal.
 - b. Nominal 1/4-inch by 1/2-inch compressible bulb of silicone rubber or polyprene with self-adhesive on one side.
 - c. Products:
 - 1) 5050 Self-Adhesive Gasket by National Guard Products.
 - 2) S88D or S88W Silicoseal by Pemko.
 - 3) 797 or 797W by Reese Enterprises.
 - 4) Or equal.
 - H. Thermal Insulation: As specified in Section 07 21 00 "Thermal Insulation."
 - I. Vapor Retarder: As specified in **[Section 07 27 15 "Non-Bituminous Self-Adhered Sheet Air Barriers.]" [Section 07 27 26 "Fluid-Applied Membrane Air Barriers.]**
- 2.11 TEXTURE FINISHES
- A. Primer: As recommended by textured finish manufacturer.
 - B. Polystyrene Aggregate Ceiling Finish: Water-based, job-mixed, polystyrene aggregate finish with flame-spread and smoke-developed indexes of not more than 25 when tested in accordance with ASTM E84.
 1. Texture: **[Fine] [Medium] [Coarse]**.
 - C. Aggregate Finish: Water-based, job-mixed, aggregated, drying-type texture finish for spray application.
 1. Texture: **[Light spatter] [Spatter knock-down] <Insert texture>**.
 - D. Non-Aggregate Finish: Premixed, vinyl texture finish for spray application.
 1. Texture: **[Orange peel] [Spatter] [Spatter knock-down] <Insert texture>**.
 - E. Acoustical Finish: Water-based, chemical-setting or drying-type, job-mixed texture finish for spray application.
 1. Application Thickness: **[1/2 inch] <Insert dimension>**.
 2. Surface-Burning Characteristics: As determined by testing identical products in accordance with ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

- a. Flame-Spread Index: **[25]** <Insert value> or less.
 - b. Smoke-Developed Index: **[50]** **[450]** <Insert value> or less.
3. NRC: **[0.55]** <Insert NRC> in accordance with ASTM C423.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION AND FINISHING OF PANELS, GENERAL

- A. Comply with ASTM C840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
 2. Fit gypsum panels around ducts, pipes, and conduits.
 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- I. Wood Framing: Install gypsum panels over wood framing, with floating internal corner construction. Do not attach gypsum panels across the flat grain of wide-dimension lumber, including floor joists and headers. Float gypsum panels over these members or provide control joints to counteract wood shrinkage.
- J. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- K. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.03 INSTALLATION OF INTERIOR GYPSUM BOARD

- A. Install interior gypsum board in the following locations:
 - 1. Wallboard Type: [As indicated on Drawings] [Vertical surfaces unless otherwise indicated].
 - 2. Type X: [As indicated on Drawings] [Where required for fire-resistance-rated assembly] [Vertical surfaces unless otherwise indicated] <Insert requirements>.
 - 3. Flexible Type: [As indicated on Drawings] [Apply in double layer at curved assemblies].
 - 4. Ceiling Type: [As indicated on Drawings] [Ceiling surfaces].
 - 5. Foil-Backed Type: [As indicated on Drawings] <Insert requirements>.
 - 6. Abuse-Resistant Type: [As indicated on Drawings] <Insert requirements>.
 - 7. Impact-Resistant Type: [As indicated on Drawings] <Insert requirements>.
 - 8. Mold-Resistant Type: [As indicated on Drawings] <Insert requirements>.
 - 9. Type C: [As indicated on Drawings] [Where required for specific fire-resistance-rated assembly indicated].
 - 10. Glass-Mat Interior Type: [As indicated on Drawings] <Insert requirements>.
 - 11. Acoustically Enhanced Type: [As indicated on Drawings] <Insert requirements>.
 - 12. Skim-Coated Type: [As indicated on Drawings] <Insert requirements>.
- B. Single-Layer Application:
 - 1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.

2. On partitions/walls, apply gypsum panels **[vertically (parallel to framing)] [horizontally (perpendicular to framing)]** unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
 - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
 - b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
 3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
- C. Multilayer Application:
1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
 2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
 4. Fastening Methods: Fasten base layers **[and face layers separately to supports with screws] [with screws; fasten face layers with adhesive and supplementary fasteners]**.
- D. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written instructions and temporarily brace or fasten gypsum panels until fastening adhesive has set.
- E. Curved Surfaces:
1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12-inch-long straight sections at ends of curves and tangent to them.
 2. For double-layer construction, fasten base layer to studs with screws 16 inches o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches o.c.
- 3.04 INSTALLATION OF EXTERIOR GYPSUM PANELS FOR CEILINGS AND SOFFITS
- A. Apply panels perpendicular to supports, with end joints staggered and located over supports.

1. Install with 1/4-inch open space where panels abut other construction or structural penetrations.
2. Fasten with corrosion-resistant screws.

3.05 INSTALLATION OF TILE BACKING PANELS

- A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at **[showers, tubs, and where indicated on Drawings] [locations indicated to receive tile]**. Install with 1/4-inch gap where panels abut other construction or penetrations.
- B. Cementitious Backer Units: ANSI A108.11, at **[showers, tubs, and where indicated on Drawings] [locations indicated to receive tile]**.
- C. Water-Resistant Backing Board: Install where indicated with 1/4-inch gap where panels abut other construction or penetrations.
- D. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.06 INSTALLATION OF TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Install control joints **[at locations indicated on Drawings] [in accordance with ASTM C840 and in specific locations approved by Architect for visual effect]**.
- C. Interior Trim: Install in the following locations:
 1. Cornerbead: Use at outside corners **[unless otherwise indicated]**.
 2. Bullnose Bead: Use **[at outside corners] [where indicated on Drawings] <Insert requirements>**.
 3. LC-Bead: Use **[at exposed panel edges] <Insert requirements>**.
 4. L-Bead: Use **[where indicated on Drawings] <Insert requirements>**.
 5. U-Bead: Use **[at exposed panel edges] [where indicated on Drawings] <Insert requirements>**.
 6. Curved-Edge Cornerbead: Use at curved openings.
- D. Exterior Trim: Install in the following locations:
 1. Cornerbead: Use at outside corners.
 2. LC-Bead: Use **[at exposed panel edges] <Insert requirements>**.
- E. Aluminum Trim: Install in locations **[indicated on Drawings] <Insert requirements>**.

3.07 INSTALLATION OF ACOUSTIC PADS

- A. Install acoustic pads behind all recessed boxes in walls that have acoustical insulation in their stud cavities.
- B. Clean the contact area of loose and foreign material in accordance with the pad manufacturer's instructions.
- C. Verify that all unused knockouts are plugged before installing the pad.
- D. Center the pad and cover the back and sides of all electrical, telephone and CATV boxes in sound-insulated walls with the acoustical pad.
- E. Mold around conduits and cables entering the box.
- F. Mold pads tightly to the boxes and to the adjacent surfaces.

3.08 ACOUSTIC SEALANT

- A. Comply with ASTM C 919 and the following.
- B. Clean space to be caulked of debris, dust and powdered materials which would prevent the sealant from adhering properly.
- C. Seal openings between gypsum board and the perimeter of items penetrating gypsum board, such as electrical boxes, continuously using sealant specified.
- D. Seal openings between the gypsum board and floors and ceilings along sound-insulated walls continuously, and along those intersecting walls for a minimum distance of 3-foot from insulated walls. When multiple layers occur, seal the perimeter of each layer continuously.
- E. Seal gypsum board edges in contact with door frames continuously.

3.09 FINISHING OF GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints **[, rounded or beveled edges,]** and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- D. Gypsum Board Finish Levels: Finish panels to levels indicated below and in accordance with ASTM C840:
 - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
 - 2. Level 2: **[Panels that are substrate for tile] [Panels that are substrate for acoustical tile] [Where indicated on Drawings] <Insert locations>.**
 - 3. Level 3: **[Where indicated on Drawings] <Insert locations>.**

4. Level 4: [At panel surfaces that will be exposed to view unless otherwise indicated] <Insert locations>.
 - a. Primer and its application to surfaces are specified in Section 09 91 23 "Interior Painting."
 5. Level 5: [Where indicated on Drawings] <Insert locations>.
 - a. Primer and its application to surfaces are specified in Section 09 91 23 "Interior Painting."
- E. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for use as exposed soffit board.
- F. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.
- G. Cementitious Backer Units: Finish according to manufacturer's written instructions.
- 3.10 APPLICATION OF TEXTURE FINISHES
- A. Surface Preparation and Primer: Prepare and apply primer to gypsum panels and other surfaces receiving texture finishes. Apply primer to surfaces that are clean, dry, and smooth.
 - B. Texture Finish Application: Mix and apply finish using powered spray equipment, to produce a uniform texture [**matching approved mockup and**] free of starved spots or other evidence of thin application or of application patterns.
 - C. Prevent texture finishes from coming into contact with surfaces not indicated to receive texture finish by covering them with masking agents, polyethylene film, or other means. If, despite these precautions, texture finishes contact these surfaces, immediately remove droppings and overspray to prevent damage according to texture-finish manufacturer's written instructions.
- 3.11 PROTECTION
- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
 - B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
 - C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

SECTION 09 30 13

CERAMIC TILING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Quarry tile.
2. Porcelain tile.
3. Ceramic mosaic tile.
4. Glazed wall tile.
5. Thresholds.
6. Tile backing panels.
7. Waterproof membranes.
8. Crack isolation membranes.
9. Setting material.
10. Grout materials.

B. Related Requirements:

1. [Section 071326 "Self-Adhering Sheet Waterproofing"] for waterproofing under thickset mortar beds.
2. Section 079200 "Joint Sealants" for sealing of movement joints in tile surfaces.
3. Section 092400 "Cement Plastering" for scratch coat for thickset mortar setting-bed installations.
4. Section 092613 "Gypsum Veneer Plastering" for cementitious backer units.
5. Section 092900 "Gypsum Board" for tile backing panels.
6. Section 093023 "Glass Tiling."
7. Section 093033 "Stone Tiling."
8. Section 096340 "Stone Flooring" for stone thresholds.

1.02 DEFINITIONS

- A. General: Definitions in ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Face Size: Actual tile size, excluding spacer lugs.
- C. Large Format Tile: Tile with at least one edge 15 inches (381 mm) or longer.
- D. Module Size: Actual tile size plus joint width indicated.

1.03 DEFINITIONS

- A. General: Definitions in ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Face Size: Actual tile size, excluding spacer lugs.
- C. Large Format Tile: Tile with at least one edge 15 inches or longer.
- D. Module Size: Actual tile size plus joint width indicated.

1.04 PRE-INSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.
1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.
 2. Review tile diagram layout.

1.05 SUBMITTALS

- A. Product Data:
1. Quarry tile.
 2. Porcelain tile.
 3. Ceramic mosaic tile.
 4. Glazed wall tile.
 5. Thresholds.
 6. Tile backing panels.
 7. Waterproof membranes.
 8. Crack isolation membranes.
 9. Setting material.
 10. Grout materials.
- B. Shop Drawings:
1. Show locations, plans, and elevations, of each type of tile and tile pattern.
 2. Show widths, details, and locations of movement joints in tile substrates and finished tile surfaces. Show thresholds.
 3. Show edge transitions..
- C. Samples for Initial Selection: For tile, grout, and accessories involving color selection or shade variation.
- D. Samples for Verification:
1. Full-size units of each type and composition of tile and for each color and finish required. **[For ceramic mosaic tile in color blend patterns, provide full sheets of each color blend.]** **[For tile with aesthetic classification V3 or V4, provide 12 tiles from same production run.]**
 2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least **[12 inches square] [36 inches square] <Insert size>**, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
 3. Full-size units of each type of trim and accessory **[for each color and finish required]**.
 4. Stone thresholds in 6-inch lengths.
 5. Metal flooring transitions 6-inch lengths.
- E. Qualification Data: For Installer.
- F. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- G. Product Certificates: For each type of product, including product use classification.
- H. Product Test Reports:

1. Tile-setting and -grouting products.
2. Certified porcelain tile.
3. Slip-resistance test reports from qualified independent testing agency.

I. Field Quality-Control Reports: Water test reports of membrane in wet areas.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units: [Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.]
 - a. <Insert, in separate subparagraphs, tile-type designation or description and quantity required for each category of tile for which extra material is required>.
2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.07 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer is [a Five-Star member of the National Tile Contractors Association] [or] [a Trowel of Excellence member of the Tile Contractors' Association of America].
2. Installer's supervisor for Project holds the International Masonry Institute's Supervisor Certification.
3. Installer employs only [Ceramic Tile Education Foundation Certified Installers] [or] [installers recognized by the U.S. Department of Labor as Journeyman Tile Layers] for Project.
4. Installer employs at least one installer for Project that has completed the Advanced Certification for Tile Installers (ACT) certification for installation of **[mud floors] [mud walls] [membranes] [shower receptors] [and] [large format tile]**.

1.08 MOCKUPS

A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockup of **[each type of]** floor tile installation.
2. Build mockup of **[each type of]** wall tile installation.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in "Referenced Standards" Article in the Evaluations and manufacturer's written instructions.

1.11 WARRANTY

- A. System Warranty: Manufacturer's non-prorated comprehensive warranty that agrees to repair and replace defective installation areas, material, and labor that fail under normal usage within specified warranty period.
 - 1. Warranty Period: **[Five years] [10 years] [25 years] [Lifetime]** from date of Product Purchase.

PART 2 PRODUCTS

2.01 MANUFACTURER

- A. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 SOURCE LIMITATIONS

- A. Tile: Obtain **[tile of each type and color or finish] [tile of each type] [tile of each color or finish] [tile]** from single source or producer.
 - 1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
 - 2. See College Campus Standards for preferred tile systems.
- B. Tiling System: Obtain system products from single manufacturer and each aggregate from single source or producer.
 - 1. Obtain setting and grouting materials, except for unmodified portland cement and aggregate, from single manufacturer.
 - 2. Obtain underlayment from manufacturer of setting and grouting materials.
 - 3. Obtain waterproof membrane, crack isolation, and other required membranes from manufacturer of setting and grouting materials.
 - 4. Obtain joint sealants from manufacturer of setting and grouting materials.
 - 5. Obtain large format adhesives and spacers for installation.
- C. Accessory Products: Obtain each of the following products specified in this Section from a single manufacturer:
 - 1. Stone thresholds.
 - 2. Backer units.

2.03 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 - 1. Provide tile complying with Standard Grade requirements **[unless otherwise indicated]**.

- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.
- C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
 - 1. Where tile is indicated for installation **[in swimming pools] [on exteriors] [or] [in wet areas]**, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
- E. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.04 QUARRY TILE

- A. Quarry Tile Type <Insert drawing designation>: **[Unglazed] [Glazed] [Chemical resistant]**.
 - 1. Face Size: **[3 by 3 inches] [4 by 4 inches] [6 by 3 inches] [6 by 6 inches] [8 by 3-7/8 inches] [8 by 8 inches]** <Insert dimensions>.
 - 2. Thickness: **[3/8 inch] [1/2 inch] [3/4 inch]**.
 - 3. Wearing Surface: **[Nonabrasive, smooth] [Abrasive aggregate embedded in surface]** <Insert description>.
 - 4. Product Use Classification: **[Interior, Dry (ID)] [Interior, Wet (IW)] [Interior, Wet Plus (IW+)] [Exterior, Wet (EW)] [Oil/Greases (O/G)]**.
 - 5. Physical Properties: Chemical resistant when tested with indicated chemicals in accordance with ASTM C650.
 - a. <Insert chemical reagent>.
 - 6. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and pattern>.
 - 7. Grout Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color>.
 - 8. Precoat with temporary protective coating.
 - 9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable **[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Base: Coved [with surface bullnose top edge], face size **[6 by 6 inches] [8 by 3-7/8 inches]** <Insert dimensions>.
 - b. Wainscot Cap: Surface bullnose, face size **[6 by 6 inches] [8 by 3-7/8 inches]** <Insert dimensions>.
 - c. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.

2.05 PORCELAIN TILE

- A. Porcelain Tile Type <Insert drawing designation>: [Unglazed] [Glazed] [Chemical resistant].
1. Certification: Tile certified by the Porcelain Tile Certification Agency.
 2. Face Size: [3 by 3 inches] [4 by 4 inches] [6 by 6 inches] [7-3/4 by 3-7/8 inches] [7-7/8 by 7-7/8 inches] [11-13/16 by 11-13/16 inches] <Insert dimensions>.
 3. Face Size Variation: Rectified.
 4. Thickness: [1/4 inch] [3/8 inch] [1/2 inch].
 5. Product Use Classification: [Interior, Dry (ID)] [Interior, Wet (IW)] [Interior, Wet Plus (IW+)] [Exterior, Wet (EW)] [Oil/Greases (O/G)].
 6. Physical Properties: Chemical resistant when tested with indicated chemicals in accordance with ASTM C650.
 - a. <Insert chemical reagent>.
 7. Tile Color, Glaze, and Pattern: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color, glaze, and pattern>.
 8. Grout Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 9. Precoat with temporary protective coating.
 10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable [**and matching characteristics of adjoining flat tile**]. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Base Cap: Surface bullnose, module size [same as adjoining flat tile] <Insert size>.
 - b. Wainscot Cap: Surface bullnose, module size [same as adjoining flat tile] <Insert size>.
 - c. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it; same size as adjoining flat tile.
 - d. External Corners: Surface bullnose, module size [same as adjoining flat tile] <Insert size>.
 - e. Internal Corners: Field-buttet square corners.
 - f. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch across nominal 4-inch dimension.

2.06 CERAMIC MOSAIC TILE

- A. Ceramic Mosaic Tile Type <Insert drawing designation>: [Unglazed] [Glazed] [Chemical resistant].
1. Certification: Porcelain tile certified by the Porcelain Tile Certification Agency.
 2. Module Size: [1 by 1 inch] [1 by 2 inches] [2 by 2 inches] <Insert dimensions>.
 3. Thickness: 1/4 inch.
 4. Face: [Plain] [Pattern of design indicated,] with cushion edges.
 5. Surface: [Smooth, without] [Slip resistant, with] abrasive admixture.
 6. Product Use Classification: [Interior, Dry (ID)] [Interior, Wet (IW)] [Interior, Wet Plus (IW+)] [Exterior, Wet (EW)] [Oil/Greases (O/G)].
 7. Physical Properties: Chemical resistant when tested with indicated chemicals in accordance with ASTM C650.
 - a. <Insert chemical reagent>.

8. Tile Color and Pattern: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and pattern>.
9. Grout Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable **[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Base Cove: Cove, module size **[1 by 1 inch] [2 by 1 inch]** <Insert dimensions>.
 - b. Base Cap for Portland Cement Mortar Installations: Bead (bullnose), module size **[1 by 1 inch] [2 by 1 inch]** <Insert dimensions>.
 - c. Base Cap for Thinset Mortar Installations: Surface bullnose, module size **[1 by 1 inch] [2 by 1 inch] [2 by 2 inches]** <Insert dimensions>.
 - d. Wainscot Cap for Portland Cement Mortar Installations: Bead (bullnose), module size **[1 by 1 inch] [2 by 1 inch]** <Insert dimensions>.
 - e. Wainscot Cap for Thinset Mortar Installations: Surface bullnose, module size **[1 by 1 inch] [2 by 1 inch] [2 by 2 inches]** <Insert dimensions>.
 - f. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it; same size as adjoining flat tile.
 - g. External Corners for Portland Cement Mortar Installations: Bead (bullnose), module size **[1 by 1 inch] [2 by 1 inch]** <Insert dimensions>.
 - h. External Corners for Thinset Mortar Installations: Surface bullnose, module size **[1 by 1 inch] [2 by 1 inch] [2 by 2 inches]** <Insert dimensions>.
 - i. Internal Corners:
 - 1) Cove, module size **[1 by 1 inch] [2 by 1 inch]** <Insert dimensions>.
 - 2) Field-buttet square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.
 - j. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch across nominal 4-inch dimension.

2.07 GLAZED WALL TILE

- A. Glazed Wall Tile Type <Insert drawing designation>:
 1. Module Size: **[4-1/4 by 4-1/4 inches] [6 by 4-1/4 inches] [6 by 6 inches]** <Insert dimensions>.
 2. Face Size Variation: Rectified.
 3. Thickness: 5/16 inch.
 4. Tile Color and Pattern: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and pattern>.
 5. Grout Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 6. Mounting:
 - a. Factory, back mounted.

- b. PregROUTED sheets of tiles are factory assembled and grouted with manufacturer's standard white silicone rubber.
- 7. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable **[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Base for Portland Cement Mortar Installations: Coved, module size **[4-1/4 by 4-1/4 inches] [6 by 6 inches] [6 by 3-3/4 inches]** <Insert dimensions>.
 - b. Base for Thinset Mortar Installations: Straight, module size **[4-1/4 by 4-1/4 inches] [6 by 6 inches] [6 by 2 inches]** <Insert dimensions>.
 - c. Wainscot Cap for Portland Cement Mortar Installations: Bullnose cap, module size **[4-1/4 by 4-1/4 inches] [6 by 6 inches] [6 by 2 inches]** <Insert dimensions>.
 - d. Wainscot Cap for Thinset Mortar Installations: Surface bullnose, module size **[4-1/4 by 4-1/4 inches] [6 by 6 inches] [6 by 2 inches]** <Insert dimensions>.
 - e. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it; same size as adjoining flat tile.
 - f. External Corners for Portland Cement Mortar Installations: Bullnose shape with radius of at least 3/4 inch unless otherwise indicated.
 - g. External Corners for Thinset Mortar Installations: Surface bullnose; same size as adjoining flat tile.
 - h. Internal Corners: Field-buttet square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.
- B. Accessories: Provide vitreous china accessories of type and size indicated; suitable for installing by same method as used for adjoining wall tile.
 - 1. One soap holder **[with grab handle]** for each shower and tub indicated.
 - 2. One paper holder at each water closet.
 - 3. Color and Finish: **[Match adjoining glazed wall tile] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [White, bright glaze]** <Insert color and finish>.

2.08 THRESHOLDS

- A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
 - 1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch or less above adjacent floor surface.
- B. Granite Thresholds: ASTM C615/C615M, with **[polished] [honed] <Insert finish>** finish.
 - 1. Description:
 - a. Uniform, [fine] [medium]-grained, [white] [gray] [black] <Insert color> stone without veining.
 - b. Match Architect's sample.
 - c. Provide **[one of]** the following:
 - 1) <Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>.

- C. Marble Thresholds: ASTM C503/C503M, with a minimum abrasion resistance of **[10] [12]** in accordance with ASTM C1353/C1353M or ASTM C241/C241M and with honed finish.

1. Description:

- a. Uniform, fine- to medium-grained white stone with gray veining.
- b. Match Architect's sample.
- c. Provide **[one of]** the following:

- 1) **<Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>**.

- D. Slate Thresholds: ASTM C629/C629M, Classification **[I Exterior] [II Interior]**, with fine, even grain and honed finish.

1. Description:

- a. Uniform, **[black] [blue-black] [gray] [blue-gray] [green]** **<Insert color>** stone **[and unfading]**.
- b. Match Architect's sample.
- c. Provide **[one of]** the following:

- 1) **<Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>**.

- E. Solid Surface: Homogeneous-filled plastic resin complying with ISFA-02-01.

1. Description:

- a. Type: Provide **[Standard] [Special Purpose]** type.
- b. Colors and Patterns: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range]**.

2.09 TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges in maximum lengths available to minimize end-to-end butt joints.

1. Thickness: **[1/4 inch] [1/2 inch] [5/8 inch]** **[As indicated on Drawings]**.
2. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.

- B. Water-Resistant Gypsum Backing Board: ASTM C1396/C1396M, with manufacturer's standard edges.

1. Core: **[As indicated on Drawings] [1/2 inch, regular type] [5/8 inch, Type X] [Type C as required by fire-resistance-rated assembly indicated on Drawings]**.

- C. Glass-Mat, Water-Resistant Gypsum Panel: ASTM C1658/C1658M, with fiberglass mat partially or completely embedded into the core.

1. Core: **[As indicated on Drawings] [1/2 inch, regular type] [1/2 inch, Type C] [5/8 inch, Type X] [5/8 inch, abuse resistant]**.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.

- D. Coated Glass-Mat, Water-Resistant Gypsum Backing Panel: ASTM C1178/C1178M, with a water-resistant coating on one surface, and manufacturer's standard edges.

1. Core: [As indicated on Drawings] [1/2 inch, regular type] [5/8 inch, Type X].
2. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.

2.10 WATERPROOF MEMBRANES

- A. General: Manufacturer's standard product [, **selected from the following,**] that complies with ANSI A118.10 [**and ANSI A118.12**] and is recommended by manufacturer for application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Waterproof Membrane, Sheet: Polyethylene sheet faced on one or both sides with polyester fabric.
 1. Nominal Thickness: [0.02 inch] [0.03 inch] [0.008 inch] <Insert thickness>.
- C. Waterproof Membrane, Fluid Applied: Liquid-latex rubber or elastomeric polymer [**with continuous fabric reinforcement**].

2.11 CRACK ISOLATION MEMBRANES

- A. General: Manufacturer's standard product [, **selected from the following,**] that complies with ANSI A118.12 for [**standard performance**] [**high performance**] and is recommended by manufacturer for application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Crack Isolation Membrane, Polyethylene Sheet: Polyethylene faced on both sides with polyester fabric.
- C. Crack Isolation Membrane, Asphaltic Sheet: Self-adhering, modified-asphalt sheet [**with fabric reinforcement facing**].
- D. Crack Isolation Membrane, Fluid Applied: Liquid-latex rubber or elastomeric polymer [**with continuous fabric reinforcement**].

2.12 SETTING MATERIALS

- A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
 1. Cleavage Membrane: Installer's option of material that complies with ANSI A108.02, paragraph 3.8.
 2. Reinforcing Wire Fabric: Galvanized, welded-wire fabric, 2 by 2 inches by 0.062-inch diameter; comply with ASTM A1064/A1064M except for minimum wire size.
 3. Expanded Metal Lath: Diamond-mesh lath complying with ASTM C847.
 - a. Base Metal and Finish for Interior Applications: Uncoated or zinc-coated (galvanized) steel sheet, with uncoated steel sheet painted after fabrication into lath.
 - b. Base Metal and Finish for Exterior Applications: Zinc-coated (galvanized) steel sheet.
 - c. Configuration over Studs and Furring: Flat.
 - d. Configuration over Solid Surfaces: Self-furring.
 - e. Weight: [2.5 lb/sq. yd.] [3.4 lb/sq. yd.].

4. Latex Additive: **[Manufacturer's standard] [acrylic resin] [or] [styrene-butadiene-rubber]** water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.
- B. Standard Dry-Set Mortar (Thinset): ANSI A118.1.
1. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to other requirements in ANSI A118.1.
- C. Modified Dry-Set Mortar (Thinset): ANSI A118.4.
1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
 3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to other requirements in ANSI A118.4.
- D. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.
1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
 3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to other requirements in ANSI A118.15.
- E. EGP (Exterior Glue Plywood) Latex-Portland Cement Mortar (Thinset): ANSI A118.11.
1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
- F. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3.
1. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 and 212 deg F, respectively, and certified by manufacturer for intended use.
- G. Organic Adhesive: ANSI A136.1, **[Type I] [Type II]**.
- H. Chemical-Resistant Furan Mortar: ANSI A118.5, with **[carbon] <Insert material>** filler.
- I. Sand-Portland Cement Grout: ANSI A108.10, consisting of white or gray cement and white or colored aggregate as required to produce color indicated.
- J. Standard Cement Grout: ANSI A118.6.
- K. High-Performance Tile Grout: ANSI A118.7.
1. Polymer Type:
 - a. Dry, redispersible form, prepackaged with other dry ingredients.
 - b. Liquid-latex form for addition to prepackaged dry-grout mix.

- L. Water-Cleanable Epoxy Grout: ANSI A118.3[**with a VOC content of 65 g/L or less**].
 - 1. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 and 212 deg F, respectively, and certified by manufacturer for intended use.
- M. Chemical-Resistant Furan Grout: ANSI A118.5, with carbon filler.
 - 1. MAPEI, LATRICRETE, or Equal.
- N. Grout for Pre-grouted Tile Sheets: Same product used in factory to pre-grout tile sheets.

2.13 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting and adhesive materials for installations indicated.
- B. Vapor-Retarder Membrane: Polyethylene sheeting, ASTM D4397, 4.0 mils thick.
- C. Metal Flooring Transitions: Profile designed specifically for flooring applications; height to match tile and setting-bed thickness.
 - 1. Description: [L-shaped] [Square] <Insert profile>.
 - 2. Material and Finish: Metallic or combination of metal and PVC or neoprene base; [chrome-plated brass] [polished chrome anodized aluminum] [polished nickel anodized aluminum] [color-coated aluminum] [half-hard brass] [white zinc alloy] <Insert finish> exposed-edge material.
 - a. Color: [Brown] [White] [Gray] <Insert color>.
- D. Metal Edge Trim: Profile designed for wall terminations and edge protection.
 - 1. Description: [L-shaped] [Square] [Beveled] <Insert profile>.
 - 2. Terminations: [End caps] [Inside corners] [Outside corners] matching edge-protection profile.
 - 3. Material and Finish: [Chrome-plated brass] [Polished chrome anodized aluminum] [Polished nickel anodized aluminum] [Color-coated aluminum] <Insert finish> exposed-edge material.
 - a. Color: [Brown] [White] [Gray] <Insert color>.
- E. Temporary Protective Coating: Formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products and easily removable after grouting is completed without damaging grout or tile.
- F. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
- G. Grout Sealer: Grout manufacturer's standard product for sealing grout joints that does not change color or appearance of grout.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 2. Verify that concrete substrates for tile floors installed with **[adhesives] [bonded mortar bed] [or] [thinset mortar]** comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
 4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Remove coatings, including curing compounds or other coatings, that are incompatible with tile-setting materials.
- B. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with **[adhesives] [or] [thinset mortar]** with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- C. Where indicated, prepare substrates to receive waterproof membrane by applying a reinforced mortar bed that complies with ANSI A108.1 and is sloped 1/4 inch per foot toward drains.
- D. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.
- E. Substrate Flatness:
1. For tile shorter than 15 inches, confirm that structure or substrate is limited to variation of 1/4 inch in 10 ft. from the required plane, and no more than 1/16 inch in 12 inches when measured from tile surface high points.
 2. For large format tile, tile with at least one edge 15 inches or longer, confirm that structure or substrate is limited to 1/8 inch in 10 ft. from the required plane, and no more than 1/16 inch in 24 inches when measured from tile surface high points.
- F. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.03 INSTALLATION OF CERAMIC TILE SYSTEM

- A. Install tile backing panels and treat joints in accordance with ANSI A108.11 and manufacturer's written instructions for type of application indicated.
- B. Install waterproof membrane to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.
 - 1. Allow waterproof membrane to cure and verify by testing that it is watertight before installing tile or setting materials over it.
- C. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.
 - 1. Allow crack isolation membrane to cure before installing tile or setting materials over it.
- D. Mix mortars and grouts to comply with "Referenced Standards" Article in the Evaluations and mortar and grout manufacturers' written instructions.
 - 1. Add materials, water, and additives in accurate proportions.
 - 2. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.
- E. Install tile in accordance with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of ANSI A108 series that are referenced in TCNA installation methods and specified in tile installation schedules, and apply to types of setting and grouting materials used.
 - 1. For the following installations, follow procedures in ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:
 - a. Exterior tile floors and walls.
 - b. Tile floors in wet areas.
 - c. Tile swimming pool decks.
 - d. Tile floors in laundries.
 - e. Tile floors consisting of tiles 8 by 8 inches or larger.
 - f. Tile floors consisting of rib-backed tiles.
 - 2. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
 - 3. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
 - 4. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
 - 5. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
 - 6. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
 - a. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets, so joints between sheets are not apparent in finished Work.

- b. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
 - c. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
 7. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
- F. Movement Joints: Provide movement joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated on Drawings. Form joints during installation of setting materials, mortar beds, and tile. Keep joints free of dirt, debris, and setting materials prior to filling with sealants. Do not saw-cut joints after installing tiles.
 1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
- G. Thresholds: Install stone and solid surface thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
 1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in **[modified dry-set] [improved modified dry-set]** mortar (thinset).
 2. Do not extend [cleavage membrane] [waterproof membrane] [or] [crack isolation membrane] under thresholds set in [standard dry-set] [modified dry-set] [or] [improved modified dry-set] mortar. Fill joints between such thresholds and adjoining tile set on [cleavage membrane] [waterproof membrane] [or] [crack isolation membrane] with elastomeric sealant.
- H. Metal Flooring Transitions: Install **[at locations indicated] [where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile] [where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated]**.
- I. Metal Wall Trim: Install at locations indicated on Drawings.
- J. Grout Sealer: Apply grout sealer to **[cementitious] grout joints [in tile floors]** in accordance with manufacturer's written instructions. As soon as sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

3.04 FIELD QUALITY CONTROL

- A. Water Test:
 1. Test of waterproofing membrane in showers and similar areas to be performed by Installation Contractor before setting tile.
 - a. Perform test after 24 hours of waterproof membrane installation.
 - b. Insert test plug in drain or waste line.
 - c. Fill shower base with water, high enough that the membrane-to-drain connection and floor-to-wall transition can be evaluated, and mark wall.
 - d. Check for leaks after 24 hours.
 2. Test to be witnessed by **[Inspector of Record] [Architect] [authorities having jurisdiction]** <Insert names or titles of witnesses>.
- B. Nonconforming Work:

1. Waterproof membrane will be considered defective if water level has dropped.
2. Remove and replace defective components and retest.

3.05 ADJUSTING AND CLEANING

- A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
- B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 1. Remove grout residue from tile as soon as possible.
 2. Clean grout smears and haze from tile in accordance with tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.06 PROTECTION

- A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.07 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

- A. Interior Floor Installations, Concrete Subfloor:
 1. TCNA F111 **<Insert designation>**: Method **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**. Cement mortar bed (thickset) installed over cleavage membrane.
 - a. Ceramic Tile Type: **<Insert tile-type designation>**.
 - b. Bond Coat for Cured-Bed Method: **[Dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
 - c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement]** grout.
 - d. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** **<Insert width>**.
 - e. Movement Joints: Types located on Drawings.
 2. TCNA F125-Full **<Insert designation>**: Thinset mortar on crack isolation membrane.
 - a. Ceramic Tile Type: **<Insert tile-type designation>**.
 - b. Thinset Mortar: **[Modified dry-set] [Improved modified dry-set]** mortar.
 - c. Grout: **[Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy]** grout.

- d. Crack Isolation Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Asphaltic sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.
- B. Interior Floor Installations, Wood Subfloor:
- 1. TCNA F141 <Insert designation>: Method [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]. Cement mortar bed (thickset) installed over cleavage membrane [over waterproof membrane].
 - a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Bond Coat for Cured-Bed Method: [Dry-set] [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.
 - 2. TCNA F142 <Insert designation>: Organic adhesive on plywood underlayment.
 - a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy] grout.
 - c. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - d. Movement Joints: Types located on Drawings.
- C. Interior Radiant Heat Floor Installations, Concrete Subfloor:
- 1. TCNA RH110 <Insert designation>: Thinset mortar [on crack isolation membrane]; hydronic piping installed in concrete.
 - a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Thinset Mortar: [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Crack Isolation Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Asphaltic sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.

2. TCNA RH115 **<Insert designation>**: Thinset mortar; electric radiant system encapsulated in thinset mortar.
 - a. Ceramic Tile Type: **<Insert tile-type designation>**.
 - b. Thinset Mortar: **[Modified dry-set] [Improved modified dry-set]** mortar.
 - c. Grout: **[Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy]** grout.
 - d. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** **<Insert width>**.
 - e. Movement Joints: Types located on Drawings.

- D. Interior Radiant Heat Floor Installations, Wood Subfloor:
 1. TCNA RH130 **<Insert designation>**: Thinset mortar on exterior-glue plywood; electric radiant system encapsulated in thinset mortar.
 - a. Ceramic Tile Type: **<Insert tile-type designation>**.
 - b. Thinset Mortar: **[EGP (exterior glue plywood) latex-portland cement] [Modified dry-set] [Improved modified dry-set]** mortar.
 - c. Grout: **[Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy]** grout.
 - d. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** **<Insert width>**.
 - e. Movement Joints: Types located on Drawings.
 2. TCNA RH141 **<Insert designation>**: Method **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**. Cement mortar bed (thickset) installed over cleavage membrane **[and waterproof membrane]** with hydronic piping installed in mortar bed.
 - a. Ceramic Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Cured-Bed Method: **[Modified dry-set] [Improved modified dry-set]** mortar.
 - c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy]** grout.
 - d. Waterproof Membrane: **[As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane]**.
 - e. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** **<Insert width>**.
 - f. Movement Joints: Types located on Drawings.

- E. Interior Wall Installations, Masonry or Concrete:
 1. TCNA W202I **<Insert designation>**: Thinset mortar **[over waterproof membrane]**.
 - a. Ceramic Tile Type: **<Insert tile-type designation>**.
 - b. Thinset Mortar: **[Dry-set] [Modified dry-set] [Improved modified dry-set] [Water-cleanable epoxy]** mortar.

- c. Grout: [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.
2. TCNA W211 <Insert designation>: Method [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]. Cement mortar bed (thickset) bonded to substrate [over waterproof membrane].
- a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Bond Coat for Cured-Bed Method: [Dry-set] [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.
- F. Interior Wall Installations, Wood or Metal Studs or Furring:
1. TCNA W242 <Insert designation>: Organic adhesive on gypsum board.
- a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - c. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - d. Movement Joints: Types located on Drawings.
2. TCNA W245 <Insert designation>: Thinset mortar on glass-mat, water-resistant gypsum backer board [over waterproof membrane].
- a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Thinset Mortar: [Dry-set] [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.

- f. Movement Joints: Types located on Drawings.
- G. Bathtub Wall Installations with No Shower Head, Wood or Metal Studs or Furring:
- 1. TCNA B413 <Insert designation>: [Thinset mortar] [Organic adhesive] on [water-resistant gypsum] [coated glass-mat, water-resistant gypsum] backer board.
 - a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Thinset Mortar: [Dry-set] [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - e. Movement Joints: Types located on Drawings.
- H. Bathtub/Shower Wall Installations:
- 1. TCNA B419 <Insert designation>: Thinset mortar [over waterproof membrane] on coated glass-mat, water-resistant gypsum backer board.
 - a. Ceramic Tile Type: <Insert tile-type designation>.
 - b. Thinset Mortar: [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Standard sanded cement] [Standard unsanded cement] [High-performance sanded cement] [High-performance unsanded cement] [Water-cleanable epoxy] grout.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.
- 3.08 CHEMICAL-RESISTANT TILE INSTALLATION SCHEDULE

- A. Interior Floor Installations, Concrete:
- 1. TCNA F115 <Insert designation>: Thinset mortar [over crack isolation membrane].
 - a. Chemical-Resistant Tile Type: <Insert tile-type designation>.
 - b. Thinset Mortar: [Dry-set] [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: [Water-cleanable epoxy] [Chemical-resistant furan].
 - d. Crack Isolation Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Asphaltic sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: [1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch] <Insert width>.
 - f. Movement Joints: Types located on Drawings.
 - 2. TCNA F131 <Insert designation>: Water-cleanable, tile-setting epoxy.
 - a. Chemical-Resistant Tile Type: <Insert tile-type designation>.
 - b. Grout: Water-cleanable epoxy.

- c. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** <Insert width>.
 - d. Movement Joints: Types located on Drawings.
- B. Interior Wall Installations, Masonry or Concrete:
- 1. TCNA W211 <Insert designation>: Method [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]. Cement mortar bed (thickset) bonded to substrate [over waterproof membrane].
 - a. Chemical-Resistant Tile Type: **<Insert tile-type designation>**.
 - b. Bond Coat for Cured-Bed Method: **[Dry-set] [Latex-]** portland cement mortar.
 - c. Grout: Water-cleanable epoxy.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** <Insert width>.
 - f. Movement Joints: Types located on Drawings.
- C. Interior Wall Installations, Solid Backing:
- 1. TCNA W222 <Insert designation>: Method [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]. One-coat cement mortar bed (thickset) installed [over cleavage membrane] [over waterproof membrane] on solid backing.
 - a. Chemical-Resistant Tile Type: **<Insert tile-type designation>**.
 - b. Bond Coat for Cured-Bed Method: [Dry-set] [Modified dry-set] [Improved modified dry-set] mortar.
 - c. Grout: Water-cleanable epoxy.
 - d. Waterproof Membrane: [As recommended by setting material manufacturer] [Polyethylene sheet] [Fluid-applied membrane] [Fabric-reinforced, fluid-applied membrane].
 - e. Joint Width: **[1/8 inch] [3/16 inch] [1/4 inch] [3/8 inch]** <Insert width>.
 - f. Movement Joints: Types located on Drawings.

SECTION 09 51 13
ACOUSTICAL PANEL CEILINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Acoustical panels.
2. Metal suspension system.
3. Metal edge moldings and trim.

B. Related Requirements:

1. Section 095123 "Acoustical Tile Ceilings" for ceilings consisting of mineral-base acoustical tiles used with fully concealed suspension systems, stapling, or adhesive bonding.
2. Section 095133 "Acoustical Metal Pan Ceilings" for ceilings consisting of metal-pan units with exposed and concealed suspension systems.

C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Acoustical panels.
2. Metal suspension system.
3. Metal edge moldings and trim.

B. Samples: For each exposed product and for each color and texture specified, 6 inches in size.

C. Samples for Initial Selection: For components with factory-applied finishes.

D. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of sizes indicated below:

1. Acoustical Panels: Set of **[full-size] [6-inch- square]** <Insert size> Samples of each type, color, pattern, and texture.
2. Exposed Suspension-System Members, Moldings, and Trim: Set of **[6-inch-]** <Insert dimension> long Samples of each type, finish, and color.
3. Clips: Full-size **[hold-down] [impact] [and] [seismic]** clips.

E. Delegated Design Submittals: For seismic restraints for ceiling systems.

1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension-system members.
2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.
 - a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Size and location of initial access modules for acoustical panels.
6. Items penetrating finished ceiling and ceiling-mounted items including the following:
 - a. Lighting fixtures.
 - b. Diffusers.
 - c. Grilles.
 - d. Speakers.
 - e. Sprinklers.
 - f. Access panels.
 - g. Perimeter moldings.
 - h. Microphones.
 - i. AV Accessories.
 - j. Fire and Life Safety Devices.
7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
8. Minimum Drawing Scale: **[1/4 inch = 1 foot] [1/8 inch = 1 foot] [1:50] [1:100]** <Insert scale>.

- B. Qualification Data: For testing agency.

- C. Product Test Reports: For each acoustical panel ceiling, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.

- D. Evaluation Reports: For each acoustical panel ceiling suspension system **[and anchor and fastener type]**, from ICC-ES.

- E. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials **[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Acoustical Ceiling Units: Full-size panels equal to **[2] <Insert number>** percent of quantity installed.
 2. Suspension-System Components: Quantity of each exposed component equal to **[2] <Insert number>** percent of quantity installed.
 3. Hold-Down Clips: Equal to **[2] <Insert number>** percent of quantity installed.
 4. Impact Clips: Equal to **[2] <Insert number>** percent of quantity installed.

1.07 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
1. Build mockup of typical ceiling area as indicated on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.09 FIELD CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

PART 2 PRODUCTS

2.01 MANUFACTURER

- A. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 SOURCE LIMITATIONS

- A. Source Limitations for Ceiling System: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.03 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints for ceiling systems.
- B. Seismic Performance: Suspended ceilings to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]** **<Insert requirement>**.
- C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Class **[A]** **[B]** **[C]** in accordance with ASTM E1264.
 - 2. Smoke-Developed Index: **[50]** **[450]** **<Insert value>** or less.
- D. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL or from the listings of another qualified testing agency.

2.04 ACOUSTICAL PANELS <Insert drawing designation>

- A. Acoustical Panel Standard: Provide manufacturer's standard panels in accordance with ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.
- B. Classification: Provide **[fire-resistance-rated]** panels as follows:
 - 1. Type and Form, Type III: Mineral base with painted finish; **[Form 1, nodular]** **[Form 2, water felted]** **[Form 4, cast or molded]**.
 - 2. Type and Form, Type IV Form 1: Mineral base with membrane-faced overlay; Form 1, nodular; with **[glass-fiber cloth]** **[washable vinyl-film]** overlay.
 - 3. Type and Form, Type IV Form 2: Mineral base with membrane-faced overlay; Form 2, water felted; with **[vinyl overlay on face]** **[vinyl overlay on face and back]** **[vinyl overlay on face, back, and sealed edges]** **[fiberglass-fabric overlay on face]**.
 - 4. Type and Form, Type XII: Glass-fiber base with membrane-faced overlay; **[Form 1, plastic]** **[Form 2, cloth]** **[Form 3, other]**. Binder may not contain urea formaldehyde.
 - 5. Type and Form, Type XX: High-density, ceramic- and mineral-base panels with scrubbable finish, resistant to heat, moisture, and corrosive fumes.
 - 6. Type and Form: <Insert type and form>.

7. Pattern: [C (perforated, small holes)] [CD (perforated, small holes and fissured)] [CE (perforated, small holes and lightly textured)] [D (fissured)] [E (lightly textured)] [F (heavily textured)] [G (smooth)] [GH (smooth and printed)] [I (embossed)] [J (embossed-in-register)] [K (surface scored)] [Z (other patterns as described)] [and] [as indicated by manufacturer's designation] <Insert pattern>.
- C. Color: [White] [As selected from manufacturer's full range] [Match Architect's sample] [As indicated by manufacturer's designation] [As indicated on Drawings] [As indicated in a schedule] <Insert color>.
- D. Light Reflectance (LR): Not less than [LR indicated in a schedule] [0.65] [0.70] [0.75] [0.80] [0.85] [0.90] <Insert LR>.
- E. Ceiling Attenuation Class (CAC): Not less than [CAC indicated in a schedule] [20] [25] [30] [35] [40] <Insert CAC>.
- F. Noise Reduction Coefficient (NRC): Not less than [NRC indicated in a schedule] [0.40] [0.50] [0.55] [0.60] [0.65] [0.70] [0.75] [0.80] [0.85] [0.90] [0.95] [1.00] <Insert NRC>.
- G. Articulation Class (AC): Not less than [AC indicated in a schedule] [170] [180] [190] [200] [210] <Insert AC>.
- H. Edge/Joint Detail: [Square] [Reveal sized to fit flange of exposed suspension-system members] [Flush reveal sized to fit flange of exposed suspension-system members] [Beveled, kerfed, and rabbeted long edges and square, butt-on short edges] [As indicated by manufacturer's designation] <Insert requirement>.
- I. Thickness:
1. [5/8 inch] [3/4 inch] [7/8 inch] [As indicated on Drawings] [As indicated in a schedule] <Insert thickness>.
 2. [1/8 inch] [7/16 inch] [9/16 inch] [5/8 inch] [3/4 inch] [7/8 inch] [1 inch] [1-1/2 inches] [2 inches] [3 inches] [As indicated on Drawings] [As indicated in a schedule] <Insert dimension>.
- J. Modular Size: [24 by 24 inches] [24 by 48 inches] [24 by 72 inches] [24 by 96 inches] [48 by 48 inches] [600 by 600 mm] [600 by 1200 mm] [As indicated on Drawings] [As indicated in a schedule] <Insert size>.
- K. Antimicrobial Treatment: Manufacturer's standard broad spectrum, antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested in accordance with ASTM D3273, ASTM D3274, or ASTM G21 and evaluated in accordance with ASTM D3274 or ASTM G21.
- 2.05 METAL SUSPENSION SYSTEM <Insert drawing designation>
- A. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, metal suspension system and accessories in accordance with ASTM C635/C635M and designated by type, structural classification, and finish indicated.
1. High-Humidity Finish: Where indicated, provide coating tested and classified for "severe environment performance" in accordance with ASTM C635/C635M.

- B. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; pre-painted, electrolytically zinc coated, or hot-dip galvanized, G30 coating designation; with prefinished 15/16-inch- wide metal caps on flanges.
1. Fire Rating: [As indicated on Drawings] <Insert fire rating>.
 2. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 3. End Condition of Cross Runners: **[Override (stepped)] [or] [butt-edge]** type.
 4. Face Design: Flat, flush.
 5. Cap Material: **[Cold-rolled steel] [or] [aluminum]**.
 6. Cap Finish: **[Painted white] [Painted in color as selected from manufacturer's full range] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Plated with metallic finish as selected from manufacturer's full range] [Plated with metallic finish indicated by manufacturer's designation] [Natural finish for aluminum]**.
- C. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; pre-painted, electrolytically zinc coated, or hot-dip galvanized, G30 coating designation; with prefinished 9/16-inch- wide metal caps on flanges.
1. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 2. End Condition of Cross Runners: **[Override (stepped)] [or] [butt-edge]** type.
 3. Face Design: **[Flat, flush] [Flanges formed with an integral center reveal]**.
 4. Cap Material: **[Cold-rolled steel] [or] [aluminum]**.
 5. Cap Finish: **[Painted white] [Painted in color as selected from manufacturer's full range] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Plated with metallic finish as selected from manufacturer's full range] [Plated with metallic finish indicated by manufacturer's designation] [Natural finish for aluminum]**.
- D. Narrow-Face, Steel-Capped, Double-Web, Fire-Rated Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; pre-painted, electrolytically zinc coated, or hot-dip galvanized, G30 coating designation; with prefinished, cold-rolled, 9/16-inch- wide metal caps on flanges.
1. Structural Classification: Intermediate-duty system.
 2. Face Design: Flat, flush.
 3. Cap Finish: **[Painted white] [Painted in color as selected from manufacturer's full range] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Plated with metallic finish as selected from manufacturer's full range] [Plated with metallic finish indicated by manufacturer's designation]**.
- E. Narrow-Face, Uncapped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; pre-painted, electrolytically zinc coated, or hot-dip galvanized, G30 coating designation; to produce structural members with 9/16-inch- wide faces.
1. Structural Classification: **[Intermediate] [Heavy]**-duty system.

2. Face Design: [With **1/8-inch-** wide, slotted, box-shaped flange] [With **1/4-inch-** wide, slotted, box-shaped flange] [Flanges formed in stepped design with a center protrusion projecting **19/64 inch** below flange surfaces supporting panel faces and forming **3/16-inch-** wide reveals between edges of protrusion and those of panels].
 3. Face Finish: Painted [white] [in color as selected from manufacturer's full range] [to match color indicated by manufacturer's designation] [to match color of acoustical unit].
 4. Reveal Finish: Painted [to match flange color] [white] [black] [in color other than flange color as selected from manufacturer's full range of contrasting reveal colors].
- F. Wide-Face, Aluminum-Capped, Double-Web, Hot-Dip Galvanized, G60 (Z180), Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; hot-dip galvanized, G60 coating designation; with prefinished, 15/16-inch- wide aluminum caps on flanges.
1. Fire Rating: [As indicated on the Drawings] <Insert fire rating>.
 2. Structural Classification: [Intermediate] [Heavy]-duty system.
 3. Face Design: Flat, flush.
 4. Cap Finish: [Painted white] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Natural finish].
- G. Wide-Face, Single-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet electrolytically zinc coated, with prefinished flanges of width indicated.
1. Structural Classification: Heavy-duty system.
 2. Face Finish: Painted [white] [black].
- H. Wide-Face, Capped, Double-Web, Stainless Steel Suspension System: Main and cross runners roll formed from Type 304 or 316 stainless steel sheet, with prefinished 15/16-inch- wide, stainless steel caps on flanges.
1. Structural Classification: Intermediate-duty system.
 2. Face Design: Flat, flush.
- I. Narrow-Face, Single-Web, Extruded-Aluminum Suspension System: Main and cross runners formed from extruded aluminum to produce structural members with 9/16-inch- wide faces.
1. Structural Classification: [Intermediate] [Heavy]-duty system.
 2. Face Design: Screw-slot profile.
 3. Face Finish: [Painted white] [Satin anodized in accordance with AAMA 611, AA-M12C22A31].
 4. Reveal Finish: [Match face finish] [Painted white] [Painted black].
- J. Extra-Wide-Face, Metal Suspension System: Main and cross runners formed from [extruded aluminum] [aluminum-capped steel] [steel-capped steel] <Insert description> to produce structural members with [1-1/2-inch-] [2-inch-] wide flanges.
1. Structural Classification: [Intermediate] [Heavy]-duty system.
 2. Face Design: Flat, flush.

3. Face Finish: **[Painted white]** **[Satin anodized in accordance with AAMA 611, AA-M12C22A31]**.
4. Gasket System: Clean-room type.

2.06 ACCESSORIES

- A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[five]** **<Insert safety factor>** times that imposed by ceiling construction, as determined by testing in accordance with ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: **[Cast-in-place]** **[Post-installed expansion]** **[Post-installed bonded]** anchors.
 - b. Corrosion Protection, Carbon Steel: Components zinc plated in accordance with ASTM B633, Class SC 1 (mild) service condition.
 - c. Corrosion Protection, Stainless Steel: Components complying with ASTM F593 and ASTM F594, Group 1 Alloy 304 or 316.
 - d. Corrosion Protection, Nickel-Copper Alloy: Components fabricated from nickel-copper-alloy rods complying with ASTM B164 for UNS No. N04400 alloy.
 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[10]** **<Insert safety factor>** times that imposed by ceiling construction, as determined by testing in accordance with ASTM E1190, conducted by a qualified testing and inspecting agency.
- B. Wire Hangers, Braces, and Ties: Provide wires as follows:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
 2. Stainless Steel Wire: ASTM A580/A580M, Type 304, nonmagnetic.
 3. Nickel-Copper-Alloy Wire: ASTM B164, nickel-copper-alloy UNS No. N04400.
 4. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C635/C635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than **[0.106-inch-]** **[0.135-inch-]** **<Insert dimension>** diameter wire.
- C. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- E. Angle Hangers: Angles with legs not less than 7/8 inch wide; formed with 0.04-inch- thick, galvanized-steel sheet complying with ASTM A653/A653M, G90 coating designation; with bolted connections and 5/16-inch- diameter bolts.
- F. Hold-Down Clips: Manufacturer's standard hold-down.

- G. Impact Clips: Manufacturer's standard impact-clip system designed to absorb impact forces against acoustical panels.
- H. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical panels in place during a seismic event.
- I. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
- J. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
- K. Clean-Room Gasket System: Where indicated, provide manufacturer's standard system, including **[manufacturer's standard] [closed-cell PVC] [neoprene] [antimicrobial]** gasket and related adhesives, tapes, seals, and retention clips, designed to seal out foreign material from and maintain positive pressure in clean room.

2.07 METAL EDGE MOLDINGS AND TRIM <Insert drawing designation>

- A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
 - 1. Edge moldings to fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
 - 2. For lay-in panels with reveal edge details, provide **[stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member]** <Insert description>.
 - 3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
- B. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements.
 - 1. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
 - 2. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of 1.5 mils. Comply with ASTM C635/C635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.08 ACOUSTICAL SEALANT

- A. Acoustical Sealant: As specified in Section 079219 "Acoustical Joint Sealants."

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
- B. Layout openings for penetrations centered on the penetrating items.

3.03 INSTALLATION OF ACOUSTICAL PANEL CEILINGS

- A. Install acoustical panel ceilings in accordance with ASTM C636/C636M [**seismic design requirements,**] and manufacturer's written instructions.
 - 1. Fire-Rated Assembly: Install fire-rated ceiling systems in accordance with tested fire-rated design.
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required [**and, if permitted with fire-resistance-rated ceilings,**] to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, post-installed mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or post-installed anchors.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends. Miter corners accurately and connect securely.
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
1. Arrange directionally patterned acoustical panels as follows:
 - a. As indicated on reflected ceiling plans.
 - b. Install panels with pattern running in one direction parallel to **[long]** **[short]** axis of space.
 - c. Install panels in a basket-weave pattern.
 2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
 3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
 4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.

5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
6. Install **[hold-down] [impact] [and] [seismic]** clips in areas indicated; space in accordance with panel manufacturer's written instructions unless otherwise indicated.
 - a. Hold-Down Clips: Space **[24 inches]** <Insert dimension> o.c. on all cross runners.
7. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
8. Protect lighting fixtures and air ducts in accordance with requirements indicated for fire-resistance-rated assembly.

3.04 ERECTION TOLERANCES

- A. Suspended Ceilings: Install main and cross runners level to a tolerance of **[1/8 inch in 12 feet]** <Insert dimensions>, non-cumulative.
- B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of **[1/8 inch in 12 feet]** <Insert dimensions>, non-cumulative.

3.05 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections:
 1. Periodic inspection during the installation of suspended ceiling grids in accordance with ASCE/SEI 7.
- B. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages and when installation of ceiling suspension systems on each floor has reached 20 percent completion, but no panels have been installed. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
 1. Within each test area, testing agency will select one of every 10 power-actuated fasteners and post-installed anchors used to attach hangers to concrete and will test them for 200 lbf of tension; it will also select one of every two post-installed anchors used to attach bracing wires to concrete and will test them for 440 lbf of tension.
 2. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.

- D. Acoustical panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.06 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
- B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

SECTION 09 54 23
LINEAR METAL CEILINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Linear metal ceilings.

1.02 ALLOWANCES

- A. See Section 01 21 00 "Allowances" for description of allowances affecting items specified in this Section.

1.03 UNIT PRICES

- A. See Section 01 22 00 "Unit Prices" for description of unit prices affecting items specified in this Section.

1.04 ALTERNATES

- A. See Section 01 23 00 "Alternates" for description of alternates affecting items specified in this Section.

1.05 COORDINATION

- A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.06 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.
 - 1. <Insert participant requirements>.

1.07 ACTION SUBMITTALS

- A. Product Data: For linear metal ceilings.
- B. Shop Drawings: For linear metal ceilings.
 - 1. Include reflected ceiling plans, sections, and details, drawn to scale, showing the following:
 - a. Linear ceiling patterns and joints.
 - b. Ceiling suspension members.

- c. Method of attaching hangers to building structure and locations of cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
 - d. Ceiling-mounted items including, but not limited to, light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
 - e. Ceiling perimeter and penetrations through ceiling; trim and moldings.
- C. Samples: For each exposed product and for each type, color, and finish specified, 12 inches long in size.
- D. Samples for Initial Selection: For units with factory-applied colors and finishes.
- 1. Include Samples of accessories involving color and finish selections.
- E. Samples for Verification: For the following products:
- 1. Linear Metal Pans: 12 inches long by full-width Samples of each type, color, and finish and a 12-inch-long spliced section.
 - 2. Suspension-System Members: 12-inch-long Sample of each type.
 - 3. Exposed Molding and Trim: 12-inch-long Samples of each type, color, and finish.
 - 4. Filler Strips: 12-inch-long Samples of each type, color, and finish.
 - 5. Sound Absorbers: 12 inches long by full width.
 - 6. End Caps: Full size.
- F. Delegated Design Submittals: For design of [**seismic restraints and**] attachment devices.
- 1.08 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For testing agency.
 - B. Product Test Reports: For each linear metal ceiling, for tests performed by a qualified testing agency.
 - C. Evaluation Reports: For linear-metal-ceiling framing systems.
 - D. Field quality-control reports.
- 1.09 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For finishes to include in maintenance manuals.
- 1.10 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Linear-Metal-Ceiling Components: Quantity of each pan, carrier, accessory, and exposed molding and trim equal to **[2]** <Insert number> percent of quantity installed.

1.11 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Accredited by National Voluntary Laboratory Accreditation Program for testing indicated.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.
 - 1. Build mockup of each type of linear metal ceiling as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ceiling components and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle ceiling components and accessories in a manner that prevents damage.

1.13 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install interior ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.

PART 2 PRODUCTS

2.01 MANUFACTURER

- A. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements" to design **[seismic restraints and]** attachment devices.
- B. Structural Performance: Exterior linear metal ceilings to withstand exterior exposure, the effects of gravity loads, and the following loads and stresses without showing permanent deformation of ceiling system components, including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of ceiling pans; or permanent damage to fasteners and anchors:
 - 1. Wind Load: Uniform pressure **[indicated on Drawings]** <Insert requirements>, acting inward or outward.

- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change (Range): **[120 deg F, ambient; 180 deg F material surfaces]** <Insert requirements>.
- D. Seismic Criteria: Provide linear metal ceilings designed and installed to withstand the effects of earthquake motions in accordance with **[ASTM E580/E580M]** **[CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings - Seismic Zones 0-2"]** **[CISCA's "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies - Seismic Zones 3 & 4"]** **[ASCE/SEI 7]** <Insert requirements> and requirements of authorities having jurisdiction.

2.03 LINEAR METAL CEILINGS <Insert drawing designation>

- A. Pans and Suspension System:
- B. Metal Pans: Complying with ASTM E1264 for **[Type XIII]** **[Type XX]** and formed to snap on to carriers securely, without separate fasteners.
 - 1. Surface-Burning Characteristics: For metal-pan assemblies, including backings, determined by testing in accordance with ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25]** <Insert value> or less.
 - b. Smoke-Developed Index: **[50]** **[55]** <Insert value> or less.
 - 2. Metal: **[Aluminum sheet, ASTM B209, alloy and temper recommended by producer and finisher for type of use and finish indicated]** **[Electrolytic zinc-coated steel sheet, ASTM A879/A879M, 04Z coating; surface treatment as recommended by finish manufacturer for type of use and painted finish indicated]** <Insert requirements>.
 - 3. Form: **[Perforated]** **[Nonperforated]**.
 - a. Perforation Pattern: **[As indicated by manufacturers designation]** <Insert requirements>.
 - 4. Noise Reduction Coefficient (NRC) Rating: Not less than **[0.70]** **[0.75]** **[0.85]** **[1.00]** <Insert requirements> when tested in accordance with ASTM C423.
 - 5. Backing: **[Manufacturer's standard to provide NRC rating indicated for perforation pattern indicated]** **[Nonwoven black fabric]** **[Nonwoven black fabric with 1-inch-thick glass fiber, 1 lb/cu. ft. density, enclosed in black polyethylene]** **[1-inch-thick glass fiber, 1 lb/cu. ft. density, enclosed in black polyethylene]** <Insert requirements>.
 - 6. Pan Thickness: Not less than **[0.020 inch]** **[0.025 inch]** **[0.028 inch]** **[0.040 inch]** <Insert dimension>.
 - 7. Pan Edge Detail: **[Beveled]** **[Square]** **[Round]** **[Manufacturer's standard]**.
 - 8. Pan Width: **[2-inch module width and 1-1/4-inch face width]** **[4-inch module width and 3-1/4-inch face width]** **[6-inch module width and 5-1/4-inch face width]** **[8-inch module width and 7-1/4-inch face width]** **[As indicated on Drawings]** <Insert dimensions>.

9. Pan Depth: **[5/8 inch] [3/4 inch] [1 inch] [1-1/2 inches]** [As indicated on Drawings] <Insert dimension>.
10. Metal-Pan Finish: Protected on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping and as follows:
 - a. Aluminum Anodic Finish: **[Clear finish, AAMA 611, AMP 500 AA-M12C22A31, Class II, 0.010 mm or thicker] [Clear, mirror finish, AMP 500 AA-M21C12A212, 0.005 mm or thicker]** <Insert requirements>.
 - b. Color-Coated Finish: Manufacturer's standard **[powder-coat]** baked paint finish complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
 - 1) Color and Pattern: **[As selected by Architect from manufacturer's full range] [Match Architect's sample] [As indicated by manufacturer's product designation]** <Insert requirements>.
 - 2) Light Reflectance (LR) Coefficient: Not less than **[0.61] [0.77] [0.81]** <Insert value> LR when tested in accordance with ASTM E1477.
 - c. Laminated-Film Finish: Provide **[manufacturer's standard] [vinyl] [PVC-free]** <Insert requirements> film permanently bonded to metal pan with adhesive.
 - 1) Color and Pattern: **[As selected by Architect from manufacturer's full range] [Match Architect's sample] [As indicated by manufacturer's product designation]** <Insert requirements>.
 - d. Wood-Veneer Finish: **[Match Architect's sample] [As indicated by manufacturer's product designation] [Wood veneer in species and finish selected by Architect from manufacturer's full range]** <Insert requirements>; permanently bonded to metal pan with adhesive.
 - e. Finish Bonding Adhesive: Manufacturer's standard that permanently bonds finish to aluminum.
- C. Pan Splices: Formed for snap fit into butt-cut pans, **[4 inches] [8 to 12 inches]** <Insert dimension> long.
 1. Finish: **[Manufacturer's standard] [Matte black] [Matching pan]** <Insert requirements>.
- D. End Caps: Manufacturer's standard material fabricated to fit and conceal exposed ends of pans.
 1. Finish: **[Manufacturer's standard] [Matte black] [Matching pan]** <Insert requirements>.
- E. Filler Strips: Manufacturer's standard, fabricated to close voids between pans.
 1. Type: **[Recessed] [Flush] [Integral extension of pan profile] [Expansion, for use with expansion carriers] [Slotted, for air diffusion]** <Insert requirements>.
 2. Finish: **[Manufacturer's standard] [Matte black] [Matching pan]** <Insert requirements>.

- F. Moldings and Trim: Manufacturer's standard for exposed members, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.
1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.
- G. Carrier Suspension System: Manufacturer's standard complying with requirements in ASTM C635/C635M for applications indicated; complete with carriers, splice sections, stabilizing components, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, fixture adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.
1. Material: [ASTM A653/A653M, hot-dip galvanized, cold-rolled sheet steel, **G60** coating designation] [ASTM A879/A879M, electrolytic zinc-coated, cold-rolled steel, **08Z** coating designation] [ASTM B209 aluminum] <Insert requirements>.
 2. Structural Classification: [**Heavy-duty**] <Insert requirements> system.
 3. Adaptable Carriers: Manufacturer's standard carriers for direct attachment to existing suspended tees.
 4. Flexible Radial Carriers: Manufacturer's standard radial carriers.
 5. Expansion Carriers: Manufacturer's standard carriers allowing for irregularities or other unusual space conditions.
 6. Stabilizer Channels, Tees, and Bars: Manufacturer's standard components for stabilizing main carriers.
 7. Carrier Splices: Same metal, profile, and finish as for carriers.
 8. Hold-Down Clips: Manufacturer's standard hold-down clips spaced as standard with manufacturer.
 9. Carrier Finish: [Flat black] <Insert requirements>.

2.04 CARRIER-SYSTEM HANGERS, BRACES, AND TIES

- A. Attachment Devices: Size for 5 times the design load indicated in ASTM C635/C635M, Table 1, Direct Hung, unless otherwise indicated.
1. Cast-in-Place and Postinstalled Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[5]** <Insert safety factor> times that imposed by ceiling construction as determined by testing in accordance with ASTM E488/E488M or ASTM E1512, as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: [Cast-in-place] [Postinstalled expansion] [Postinstalled bonded] anchors.
 - b. Corrosion Protection:

- 1) Carbon-steel components zinc plated to comply with ASTM B633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).
 - 2) Stainless steel components complying with ASTM F593 and ASTM F594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchors.
 - 3) Components fabricated from nickel-copper-alloy rods complying with ASTM B164 for UNS No. N04400 alloy.
2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to **[10] <Insert safety factor>** times that imposed by ceiling construction as determined by testing in accordance with ASTM E1190 conducted by a qualified testing and inspecting agency.
- B. Wire Hangers, Braces, and Ties: Provide wire complying with the following requirements:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
 2. Stainless Steel Wire: ASTM A580/A580M, Type 304, nonmagnetic.
 3. Nickel-Copper-Alloy Wire: ASTM B164, nickel-copper-alloy UNS No. N04400.
 4. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C635/C635M, Table 1, Direct Hung is less than yield stress of wire, but provides not less than **[0.106-inch-] [0.135-inch-] <Insert dimension>** diameter wire.
- C. Rods and Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Angle Hangers: Angles with legs not less than 7/8 inch wide; formed from 0.04-inch-thick, galvanized-steel sheet complying with ASTM A653/A653M, G90 coating designation; with bolted connections and 5/16-inch-diameter bolts.
- E. Seismic Struts: Suspension-system manufacturer's standard compression struts designed to accommodate seismic forces.
- F. Exterior Bracing: Cold-rolled steel channels and angles, hot-dip galvanized to comply with ASTM A653/A653M, G60 coating designation; size and profile as required to withstand wind load.

2.05 ACCESSORIES

- A. Access Panels: For access at locations indicated, provide door hinge assembly, retainer clip, and retainer bar, assembled with ceiling panels and carrier sections into access doors permitting upward or downward opening.
1. Size: **[As indicated on Drawings] [24 inches square] <Insert requirements>**.
- B. Air-Distribution Devices: Where indicated on Drawings, provide independently suspended air-distribution devices that are relocatable and adjustable from below finished ceiling, that do not interrupt ceiling components, and that are fully concealed by and integrated with ceiling system.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing and substrates to which linear metal ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of linear metal ceilings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Measure each ceiling area and establish layout of linear metal pans.
 - 1. Balance border widths at opposite edges of each ceiling.
 - 2. Avoid using less-than-half-width pans at borders.

3.03 INSTALLATION OF LINEAR METAL CEILINGS

- A. Comply with ASTM C636/C636M and seismic requirement indicated, in accordance with manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns in 3 inches. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate to which hangers are attached and for type of hanger involved.
 - 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 - 6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts [**power-actuated fasteners,**] or postinstalled mechanical or adhesive anchors that extend through forms into concrete.
 - 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.

8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns in 1-1/2 inches. Suspend bracing from building's structural members as required for hangers and without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim at perimeter of linear metal ceiling area and where necessary to conceal edges and ends of linear metal pans.
1. Screw attach moldings to substrate at intervals of not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
 2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system carriers so they are aligned and securely interlocked with one another.
1. Install stabilizer channels, tees, and bars at regular intervals to stabilize carriers and at light fixtures, air-distribution equipment, access doors, and other equipment; spaced as standard with manufacturer for use indicated.
 2. Remove and replace dented, bent, or kinked members.
- F. Cut linear metal pans for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness.
- G. Install linear metal pans in coordination with suspension system and exposed moldings and trim.
1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated on Drawings.
 2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
 - a. Install pans with butt joints **[aligned]** **[aligned, every other pan length]** **[staggered a minimum of 12 inches]** **[randomly aligned]** **[aligned as indicated on Drawings]** **<Insert requirements>** using internal pan splices.
 3. Install directionally textured or patterned metal pans in directions indicated.
 4. Where metal pan ends are visible, install end caps unless trim is indicated.

5. Install filler strips where indicated **[on Drawings]** **<Insert requirements>**.
 6. Install sound-absorbent pads at right angle to perforated metal pans so pads do not hang unsupported.
- H. Install hold-down clips where indicated.

3.04 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage]** **[Engage]** a qualified special inspector to perform the following special inspections:
1. Suspended ceiling system.
 2. Hangers, anchors, and fasteners.
 3. **<Insert special inspections>**.
- B. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.
- C. Tests and Inspections: Testing and inspecting of completed installations of linear metal ceiling hangers, anchors, and fasteners to take place in successive stages, in test areas and using methods as follows. Do not proceed with installations of linear metal ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
1. Test Areas: Test installation of ceiling suspension systems on each floor when installation has reached 20 percent completion but before pans have been installed.
 - a. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf of tension.
 - b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Linear metal ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.05 CLEANING

- A. Clean exposed surfaces of linear metal ceilings, including trim and edge moldings, after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

END OF SECTION

SECTION 09 64 33

LAMINATED WOOD FLOORING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Factory-finished laminated wood flooring.
 - 2. Sound control underlayment.

1.02 SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of floor assembly and accessory. Include plans, sections, and attachment details. Include expansion provisions and trim details.
- C. Samples: For each exposed product and for each color and texture specified, approximately 12 inches long and of same thickness and material indicated for the Work and showing the full range of normal color and texture variations expected.
- D. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors and finishes available for wood flooring.
 - 1. Include Samples of accessories involving color and finish selection.
- E. Samples for Verification: For each type of wood flooring and accessory, with stain color and finish required, approximately 12 inches long and of same thickness and material indicated for the Work and showing the full range of normal color and texture variations expected.

1.03 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Deliver wood flooring materials in unopened cartons or bundles.
- B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet-work is complete and dry.

- C. Store wood flooring materials in a dry, warm, ventilated, weathertight location.

1.05 FIELD CONDITIONS

- A. Conditioning period begins not less than seven days before wood flooring installation, is continuous through installation, and continues not less than seven days after wood flooring installation.
 - 1. Environmental Conditioning: Maintain ambient temperature between 65 and 75 deg F and relative humidity planned for building occupants in spaces to receive wood flooring during the conditioning period.
 - 2. Wood Flooring Conditioning: Move wood flooring into spaces where it will be installed, no later than the beginning of the conditioning period.
 - a. Do not install flooring until it adjusts to relative humidity of, and is at same temperature as, space where it is to be installed.
 - b. Open sealed packages to allow wood flooring to acclimatize immediately on moving flooring into spaces in which it will be installed.
- B. After conditioning period, maintain relative humidity and ambient temperature planned for building occupants.
- C. Install factory-finished wood flooring after other finishing operations, including painting, have been completed.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Hartco prefinished hardwood or equal.
- B. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 FACTORY-FINISHED LAMINATED WOOD FLOORING

- A. Engineered multi-ply laminated construction. Each plank to meet or exceed Hardwood Plywood Veneer Association (HPVA) Type II bond test.
 - 1. Species: As selected by Architect.
 - 2. Thickness: .
 - 3. Construction:
 - 4. Face Width:
 - 5. Length: Manufacturer's standard.
 - 6. Edge Style: Micro Edge / Micro Ends.

2.03 SOUND CONTROL UNDERLAYMENT

- A. Sound Control Underlayment: Sound reducing underlayment consisting of impact-absorbing materials. Minimum Impact Insulation Class (IIC) of 50 when tested according to ASTM E492.
 - 1. Material: Recycled rubber.
 - 2. Thickness: 3/16-inch.
 - 3. Manufacturer: Equal to Geniemat RST05 Sound Control Underlayment by Pliteq.
- B. Perimeter Isolation Strip: Equal to GenieMat PMI-PF-12.

2.04 ACCESSORY MATERIALS

- A. Wood Sleepers and Subfloor: As specified in Section 06 10 53 Miscellaneous Wood Carpentry."
- B. Wood Underlayment: As specified in Section 06 10 53 Miscellaneous Wood Carpentry."
- C. Wood Flooring Adhesive: As recommended by flooring fabricator.
- D. Fasteners: As recommended by manufacturer, but not less than that recommended in NWFA's "Installation Guidelines."
- E. Thresholds and Saddles: To match wood flooring. Tapered on each side.
- F. Reducer Strips: To match wood flooring. 2 inches wide, tapered, and in thickness required to match height of flooring.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of wood flooring.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 INSTALLATION

- A. Comply with flooring manufacturer's written installation instructions, but not less than applicable recommendations in NWFA's "Installation Guidelines."
- B. Wood Sleepers and Subfloor: Install according to requirements in Section 06 1053 Miscellaneous Rough Carpentry."
- C. Wood Underlayment: 06 10 53 Miscellaneous Rough Carpentry."

- D. Provide expansion space at walls and other obstructions and terminations of flooring of not less than 3/4 inch.
- E. Vapor Retarder: Comply with the following for vapor retarder installation:
 - 1. Wood Flooring Nailed to Wood Subfloor: Install flooring over a layer of asphalt-saturated felt.
 - 2. Wood Flooring Nailed to Sleepers over Concrete: Install flooring over a layer of polyethylene sheet with edges overlapped over sleepers and turned up behind baseboards.
 - 3. Wood Flooring Installed Directly on Concrete: Install a layer of polyethylene sheet according to flooring manufacturer's written instructions.
- F. Sound Control Underlayment: Install over vapor retarder according to manufacturer's written instructions.
- G. Engineered-Wood Flooring: Set in adhesive.

3.04 PROTECTION

- A. Protect installed wood flooring during remainder of construction period with covering of heavy kraft paper or other suitable material. Do not use plastic sheet or film that might cause condensation.
 - 1. Do not move heavy and sharp objects directly over kraft-paper-covered wood flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION

SECTION 09 65 13

RESILIENT BASE AND ACCESSORIES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Thermoset-rubber base.
 - 2. Thermoplastic-rubber base.
 - 3. Vinyl base.
 - 4. Rubber stair accessories.
 - 5. Vinyl stair accessories.
 - 6. Rubber molding accessories.
 - 7. Vinyl molding accessories.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each exposed product and for each color and texture specified, not less than 12 inches long.
- C. Samples for Initial Selection: For each type of product indicated.
- D. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches long.
- E. Product Schedule: For resilient base and accessory products. **[Use same designations indicated on Drawings.]**

1.04 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials **[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Furnish not less than **[10 linear feet]** <Insert dimension> for every **[500 linear feet]** <Insert dimension> or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.05 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Coordinate mockups in this Section with mockups specified in other Sections.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

1.07 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than **[70 deg F]** <Insert temperature> or more than **[95 deg F]** <Insert temperature>, in spaces to receive resilient products during the following periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than **[55 deg F]** <Insert temperature> or more than **[95 deg F]** <Insert temperature>.
- C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Products: See current Campus Specification Matrix for Preferred Manufacturers.

2.02 PERFORMANCE REQUIREMENTS

- A. <Insert requirements>.

2.03 THERMOSET-RUBBER BASE <Insert drawing designation>

- A. Product Standard: ASTM F1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).
 - 1. Style and Location:
 - a. Style A, Straight: **[Provide in areas with carpet]** <Insert requirements>.

- b. Style B, Cove: [Provide in areas with resilient floor coverings] <Insert requirements>.
 - c. Style C, Butt to: [Provide in areas indicated] <Insert requirements>.
 - B. Thickness: 0.125 inch.
 - C. Height: **[6 inches]** [As indicated on Drawings].
 - D. Lengths: [Cut lengths **48 inches** long] [Coils in manufacturer's standard length] [Cut lengths **48 inches** long or coils in manufacturer's standard length].
 - E. Outside Corners: [Job formed] [Preformed] [Job formed or preformed].
 - F. Inside Corners: [Job formed] [Preformed] [Job formed or preformed].
 - G. Colors: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors>.
- 2.04 THERMOPLASTIC-RUBBER BASE <Insert drawing designation>
- A. Product Standard: ASTM F1861, Type TP (rubber, thermoplastic).
 - 1. Group: [I (solid, homogeneous)] [or] [II (layered)].
 - 2. Style and Location:
 - a. Style A, Straight: [Provide in areas with carpet] <Insert requirements>.
 - b. Style B, Cove: [Provide in areas with resilient floor coverings] <Insert requirements>.
 - c. Style C, Butt to: [Provide in areas indicated] <Insert requirements>.
 - d. Style D, Sculptured: [Provide in areas indicated] <Insert requirements>.
 - 1) Profile: [As indicated] <Insert requirement>.
 - B. Thickness: **[0.125 inch]** <Insert dimension>.
 - C. Height: **[2-1/2 inches]** **[4 inches]** **[6 inches]** [As indicated on Drawings].
 - D. Lengths: [Cut lengths **48 inches** long] [Coils in manufacturer's standard length] [Cut lengths **48 inches** long or coils in manufacturer's standard length].
 - E. Outside Corners: [Job formed] [Preformed] [Job formed or preformed].
 - F. Inside Corners: [Job formed] [Preformed] [Job formed or preformed].
 - G. Colors: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors>.
- 2.05 VINYL BASE <Insert drawing designation>
- A. Product Standard: ASTM F1861, Type TV (vinyl, thermoplastic).
 - 1. Group: [I (solid, homogeneous)] [or] [II (layered)].
 - 2. Style and Location:

- a. Style A, Straight: [Provide in areas with carpet] <Insert requirements>.
 - b. Style B, Cove: [Provide in areas with resilient floor coverings] <Insert requirements>.
- B. Minimum Thickness: [0.125 inch] [0.080 inch] <Insert dimension>.
- C. Height: [2-1/2 inches] [4 inches] [6 inches] [As indicated on Drawings].
- D. Lengths: [Cut lengths 48 inches long] [Coils in manufacturer's standard length] [Cut lengths 48 inches long or coils in manufacturer's standard length].
- E. Outside Corners: [Job formed] [Preformed] [Job formed or preformed].
- F. Inside Corners: [Job formed] [Preformed] [Job formed or preformed].
- G. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors and patterns>.
- 2.06 RUBBER STAIR ACCESSORIES <Insert drawing designation>
- A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
- 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. Stair Treads: ASTM F2169.
- 1. Type: [TS (rubber, vulcanized thermoset)] [or] [TP (rubber, thermoplastic)].
 - 2. Class: [1 (smooth, flat)] [2 (pattern; embossed, grooved, or ribbed)].
 - 3. Group: [1 (embedded abrasive strips)] [2 (with contrasting color for the visually impaired)].
 - 4. Nosing Style: [Square, adjustable to cover angles between 60 and 90 degrees] [Square] [Round].
 - 5. Nosing Height: [1-1/2 inches] [2 inches] [2-3/16 inches] <Insert dimension>.
 - 6. Thickness: [1/4 inch and tapered to back edge] <Insert thickness>.
 - 7. Size: Lengths and depths to fit each stair tread in [one piece] [one piece or, for treads exceeding maximum lengths manufactured, in equal-length units].
 - 8. Integral Risers: Smooth, flat; in height that fully covers substrate.
 - 9. Provide contrasting stripe at top and bottom steps for visually impaired.
- C. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
- 1. Style: [Coved toe, 7 inches high by length matching treads] [Toeless, by length matching treads].
 - 2. Thickness: [0.125 inch] [Manufacturer's standard] <Insert thickness>.
- D. Stringers: Height and length after cutting to fit risers and treads and to cover stair stringers, produced by same manufacturer as treads, and recommended by manufacturer for installation with treads.
- 1. Thickness: [0.125 inch] [0.080 inch] [Manufacturer's standard] <Insert thickness>.

- E. Landing Tile: [Matching treads; produced by same manufacturer as treads and recommended by manufacturer for installation with treads] <Insert requirements>.
- F. Locations: [Provide rubber stair accessories in areas indicated] <Insert requirements>.
- G. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors and patterns>.

2.07 VINYL STAIR ACCESSORIES <Insert drawing designation>

- A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. Stair Treads: ASTM F2169, Type TV (vinyl, thermoplastic).
 - 1. Class: [1 (smooth, flat)] [2 (pattern; embossed, grooved, or ribbed)].
 - 2. Group: [1 (embedded abrasive strips)] [2 (with contrasting color for the visually impaired)].
 - 3. Nosing Style: [Square, adjustable to cover angles between 60 and 90 degrees] [Square] [Round].
 - 4. Nosing Height: [1-1/2 inches] [2 inches] [2-3/16 inches] <Insert dimension>.
 - 5. Thickness: [1/4 inch and tapered to back edge] <Insert thickness>.
 - 6. Size: Lengths and depths to fit each stair tread in [one piece] [one piece or, for treads exceeding maximum lengths manufactured, in equal-length units].
 - 7. Integral Risers: Smooth, flat; in height that fully covers substrate.
 - 8. Provide contrasting stripe at top and bottom steps for visually impaired.
- C. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
 - 1. Style: [Coved toe, 7 inches high by length matching treads] [Toeless, by length matching treads].
 - 2. Thickness: [0.125 inch] [0.080 inch] [Manufacturer's standard] <Insert thickness>.
- D. Stringers: Height and length after cutting to fit risers and treads and to cover stair stringers, produced by same manufacturer as treads, and recommended by manufacturer for installation with treads.
 - 1. Thickness: [0.125 inch] [0.080 inch] [Manufacturer's standard] <Insert thickness>.
- E. Landing Tile: [Matching treads; produced by same manufacturer as treads and recommended by manufacturer for installation with treads] <Insert requirements>.
- F. Locations: [Provide vinyl stair accessories in areas indicated] <Insert requirements>.
- G. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors and patterns>.

2.08 RUBBER MOLDING ACCESSORY <Insert drawing designation>

- A. Description: Rubber [stair-tread nosing] [cap for cove carpet] [cap for cove resilient floor covering] [carpet bar for tackless installations] [carpet edge for glue-down applications] [nosing for carpet] [nosing for resilient floor covering] [reducer strip for resilient floor covering] [joiner for tile and carpet] [transition strips] <Insert description>.
- B. Profile and Dimensions: [As indicated] <Insert profile and dimensions>.
- C. Locations: [Provide rubber molding accessories in areas indicated] <Insert requirements>.
- D. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors and patterns>.

2.09 VINYL MOLDING ACCESSORY <Insert drawing designation>

- A. Description: Vinyl [stair-tread nosing] [cap for cove carpet] [cap for cove resilient floor covering] [carpet bar for tackless installations] [carpet edge for glue-down applications] [nosing for carpet] [nosing for resilient floor covering] [reducer strip for resilient floor covering] [joiner for tile and carpet] [transition strips] <Insert description>.
- B. Profile and Dimensions: [As indicated] <Insert profile and dimensions>.
- C. Locations: [Provide vinyl molding accessories in areas indicated] <Insert requirements>.
- D. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's sample] <Insert colors and patterns>.

2.10 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.
- C. Stair-Tread Nose Filler: Two-part epoxy compound recommended by resilient stair-tread manufacturer to fill nosing substrates that do not conform to tread contours.
- D. Metal Edge Strips: **[Extruded aluminum with mill finish]** <Insert requirements>, nominal 2 inches wide, of height required to protect exposed edges of flooring, and in maximum available lengths to minimize running joints.
- E. Floor Polish: Provide protective, liquid floor-polish products recommended by resilient stair-tread manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates for Resilient Stair Accessories: Prepare horizontal surfaces according to ASTM F710.
1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than **[9] [10]** **<Insert number>** pH.
 4. Moisture Testing: Perform tests so that each test area does not exceed **[200 sq. ft.] [1000 sq. ft.] <Insert area>**, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[3 lb of water/1000 sq. ft.] <Insert rate>** in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum **[75] <Insert number>** percent relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install resilient products until materials are the same temperature as space where they are to be installed.
1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.03 RESILIENT BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient base.
- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

- C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Preformed Corners: Install preformed corners before installing straight pieces.
- H. Job-Formed Corners:
 - 1. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than **[3 inches]** <Insert dimension> in length.
 - a. Form without producing discoloration (whitening) at bends.
 - 2. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than **[3 inches]** <Insert dimension> in length.
 - a. **[Miter] [Cope] [Miter or cope]** comers to minimize open joints.

3.04 RESILIENT ACCESSORY INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient accessories.
- B. Resilient Stair Accessories:
 - 1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
 - 2. Tightly adhere to substrates throughout length of each piece.
 - 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.
- C. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.05 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
- B. Perform the following operations immediately after completing resilient-product installation:
 - 1. Remove adhesive and other blemishes from surfaces.
 - 2. Sweep and vacuum horizontal surfaces thoroughly.
 - 3. Damp-mop horizontal surfaces to remove marks and soil.
- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, adhesive, and blemishes from resilient stair treads before applying liquid floor polish.
 - 1. Apply **[one] [two] [three]** <Insert requirement> coat(s).

- E. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 09 65 19
RESILIENT TILE FLOORING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Solid vinyl floor tile.
 - 2. Rubber floor tile.
 - 3. Vinyl composition floor tile.
 - 4. Resilient terrazzo floor tile.
 - 5. Static dissipative tile.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of resilient floor tile.
 - 1. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 2. Show details of special patterns.
- C. Samples: Full-size units of each color, texture, and pattern of floor tile required.
 - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than **[9 inches]** <Insert dimension> long, of each color required.
- D. Samples for Initial Selection: For each type of floor tile indicated.
- E. Samples for Verification: Full-size units of each color and pattern of floor tile required.
 - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than **[9 inches]** <Insert dimension> long, of each color required.
- F. Welded-Seam Samples: For seamless-installation technique indicated and for each floor covering product, color, and pattern required; with seam running lengthwise and in center of **[6-by-9-inch]** <Insert dimensions> Sample applied to a rigid backing and prepared by Installer for this Project.
- G. Product Schedule: For floor tile. [Use same designations indicated on Drawings.]

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials **[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish one box for every **[50] <Insert number>** boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for floor tile installation and seaming method indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by floor tile manufacturer for installation techniques required.

- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Coordinate mockups in this Section with mockups specified in other Sections.
 - a. Size: Minimum 100 sq. ft. for each type, color, and pattern [in locations indicated] [in locations directed by Architect] <Insert locations>.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

1.09 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than **[70 deg F] <Insert temperature>** or more than **[95 deg F] <Insert temperature>**, in spaces to receive floor tile during the following periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than **[55 deg F] <Insert temperature>** or more than **[95 deg F] <Insert temperature>**.

- C. Close spaces to traffic during floor tile installation.
- D. Close spaces to traffic for 48 hours after floor tile installation.
- E. Install floor tile after other finishing operations, including painting, have been completed.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Products: See current Campus Specification Matrix for Preferred Manufacturers.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.03 SOLID VINYL FLOOR TILE <Insert drawing designation>

- A. Tile Standard: ASTM F1700.
 - 1. Class: [As indicated by product designations] [Class I, Monolithic Vinyl Tile] [Class II, Surface-Decorated Vinyl Tile] [Class III, Printed Film Vinyl Tile].
 - 2. Type: [A, Smooth Surface] [B, Embossed Surface].
- B. Thickness: [**0.080 inch**] [**0.100 inch**] [**0.120 inch**] [**0.125 inch**] <Insert dimension>.
- C. Size: [**12 by 12 inches**] [**18 by 18 inches**] [**24 by 24 inches**] [**36 by 36 inches**] [**3 by 36 inches**] <Insert dimensions>.
- D. Seamless-Installation Method: [Heat welded] [Chemically bonded] <Insert requirements>.
- E. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] <Insert colors and patterns>.

2.04 RUBBER FLOOR TILE <Insert drawing designation>

- A. Tile Standard: ASTM F1344, [Class I-A, Homogeneous Rubber Tile, solid color] [Class I-B, Homogeneous Rubber Tile, through mottled] [Class II-A, Laminated Rubber Tile, solid-color wear layer] [Class II-B, Laminated Rubber Tile, mottled wear layer].
- B. Hardness: [Grade 1, minimum hardness of 85] [Grade 2, minimum hardness of 70] [Manufacturer's standard hardness], measured using Shore, Type A durometer according to ASTM D2240.
- C. Wearing Surface: [Smooth] [Textured] [Molded pattern].
 - 1. Molded-Pattern Figure: [Raised discs] [Raised squares] <Insert pattern>.
- D. Thickness: [**0.125 inch**] <Insert dimension>.
- E. Size: [**12 by 12 inches**] [**24 by 24 inches**] <Insert dimensions>.

- F. Seamless-Installation Method: [Heat welded] [Chemically bonded] <Insert requirements>.
- G. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] <Insert colors and patterns>.

2.05 VINYL COMPOSITION FLOOR TILE <Insert drawing designation>

- A. Tile Standard: ASTM F1066, [Class 1, solid color] [Class 2, through pattern] [Class 3, surface pattern].
- B. Wearing Surface: **[Smooth] [Embossed]**.
- C. Thickness: **[0.125 inch]** <Insert dimension>.
- D. Size: 12 by 12 inches.
- E. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] <Insert colors and patterns>.

2.06 RESILIENT TERRAZZO FLOOR TILE <Insert drawing designation>

- A. Resilient Terrazzo Floor Tile: Marble or granite chips embedded in flexible, thermoset-polyester-resin matrix; electrically nonconductive and chemical, oil, and corrosion resistive, with smooth wearing surface and manufacturer's standard factory-applied, protective coating.
- B. Thickness: **[1/8 inch] [3/16 inch]**.
- C. Size: **[12 by 12 inches] [24 by 24 inches] [24 by 48 inches]**.
- D. Seamless-Installation Method: Chemically bonded.
- E. Accessories:
 - 1. Base: **[3 inches] [4 inches] [6 inches]** tall.
 - a. Type: [Sanitary, coved] [Straight].
 - 2. Divider strips.
 - 3. <Insert accessory>.
- F. Colors and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] <Insert colors and patterns>.

2.07 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.
- C. Seamless-Installation Accessories:
 - 1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.

- a. Colors: [As selected by Architect from manufacturer's full range to contrast with floor tile] [Match floor tile] <Insert colors>.
2. Chemical-Bonding Compound: Manufacturer's product for chemically bonding seams.
- D. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.
- E. Joint Sealant for Resilient Terrazzo Floor Tile: Silicone sealant of type and grade recommended in writing by floor tile manufacturer to suit resilient terrazzo floor tile.
 1. Joint-Sealant Color: [White] [As selected by Architect from manufacturer's full range to match floor tile] [Match floor tile] <Insert color>.
- F. Sealers and Finish Coats for Resilient Terrazzo Floor Tile: Products recommended by floor tile manufacturer for resilient terrazzo floor tile.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates: Prepare according to ASTM F710.
 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
 3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than **[9] [10]** <Insert number> pH.
 4. Moisture Testing: Perform tests so that each test area does not exceed **[200 sq. ft.] [1000 sq. ft.]** <Insert area>, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[3 lb of water/1000 sq. ft.]** <Insert rate> in 24 hours.

- b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum **[75]** <Insert number> percent relative humidity level measurement.
- C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.
- D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- E. Do not install floor tiles until materials are the same temperature as space where they are to be installed.
 - 1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.
- F. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

3.03 FLOOR TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
 - 1. Lay tiles [square with room axis] [at a 45-degree angle with room axis] [in pattern indicated] <Insert requirements>.
- C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
 - 1. Lay tiles [with grain running in one direction] [with grain direction alternating in adjacent tiles (basket-weave pattern)] [in pattern of colors and sizes indicated].
- D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.
- H. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- I. Seamless Installation:

1. Heat-Welded Seams: Comply with ASTM F1516. Rout joints and heat weld with welding bead to fuse sections permanently into a seamless flooring installation. Prepare, weld, and finish seams to produce surfaces flush with adjoining flooring surfaces.
 2. Chemically Bonded Seams: Bond seams with chemical-bonding compound to fuse sections permanently into a seamless flooring installation. Prepare seams and apply compound to produce tightly fitted seams without gaps, overlays, or excess bonding compound on flooring surfaces.
- J. Resilient Terrazzo Accessories: Install according to manufacturer's written instructions.

3.04 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.
- B. Perform the following operations immediately after completing floor tile installation:
1. Remove adhesive and other blemishes from surfaces.
 2. Sweep and vacuum surfaces thoroughly.
 3. Damp-mop surfaces to remove marks and soil.
- C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish.
1. Apply [one] [two] [three] <Insert requirements> coat(s).
- E. Joint Sealant: Apply sealant to resilient terrazzo floor tile perimeter and around columns, at door frames, and at other joints and penetrations.
- F. Sealers and Finish Coats: Remove soil, visible adhesive, and surface blemishes from resilient terrazzo floor tile surfaces before applying liquid cleaners, sealers, and finish products.
1. Sealer: Apply two base coats of liquid sealer.
 2. Finish: Apply **[two] [three]** <Insert requirements> coats of liquid floor finish.
- G. Cover floor tile until Substantial Completion.

SECTION 09 66 23

RESINOUS MATRIX TERRAZZO FLOORING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Thin-set, epoxy-resin terrazzo flooring.
2. Precast epoxy-resin terrazzo units.

B. Related Requirements:

1. Section 079200 "Joint Sealants" for sealants installed with terrazzo.
2. Section 096723 "Resinous Flooring" for decorative resinous flooring systems applied as self-leveling slurries or as troweled or screeded mortars.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1. Review methods and procedures related to terrazzo including, but not limited to, the following:
 - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 - b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - c. Review special terrazzo designs and patterns.
 - d. <Insert agenda items>.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work. Show layout of the following:

1. Divider strips.
2. Control-joint strips.
3. Accessory strips.
4. Abrasive strips.
5. Stair treads, risers, and landings.

6. Precast terrazzo jointing and edge configurations.
 7. Terrazzo patterns.
 8. <Insert requirements>.
- C. Samples: For each exposed product and for each color and texture specified, **[6 inches]** <Insert dimension> in size.
- D. Samples for Initial Selection: NTMA's "Terrazzo Color Palette" showing the full range of colors and patterns available for each terrazzo type.
- E. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo Sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in sizes indicated below:
1. Terrazzo: **[6-inch-]** <Insert dimension> square Samples.
 2. Precast Terrazzo: **[6-inch-]** <Insert dimension> square Samples.
 3. Accessories: **[6-inch-]** <Insert dimension> long Samples of each exposed strip item required.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Material Certificates: For each type of terrazzo material or product.
 - C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.
 - D. Preinstallation moisture-testing reports.
 - E. Slip Resistance Product Information / Testing.
- 1.06 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For terrazzo to include in maintenance manuals.
- 1.07 QUALITY ASSURANCE
- A. Installer Qualifications:
 1. Engage an installer who is a contractor member of NTMA.
 2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
 - B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 1. Build mockups for terrazzo including accessories.
 - a. Size: Minimum 100 sq. ft. of typical poured-in-place flooring **[and base]** condition for each color and pattern **[in locations indicated] [in locations directed by Architect]** <Insert location requirements>.

- b. Include [base] [first three stair treads] <Insert item>.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- 1.08 DELIVERY, STORAGE, AND HANDLING
 - A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.
 - B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
- 1.09 FIELD CONDITIONS
 - A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
 - B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.
 - C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
 - D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
 - E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.
- PART 2 PRODUCTS
 - 2.01 MANUFACTURERS
 - A. Products: See current Campus Specification Matrix for Preferred Manufacturers.
 - B. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
 - C. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.
 - 2.02 PERFORMANCE REQUIREMENTS
 - A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.
 - 2.03 EPOXY-RESIN TERRAZZO

- A. Epoxy-Resin Terrazzo **<Insert designation>**: Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing.
- B. Mix Color and Pattern: **[As selected by Architect from manufacturer's full range]** **[As selected by Architect from NTMA's "Terrazzo Color Palette" EI Series]** **[As selected by Architect from NTMA's "Terrazzo Color Palette" EII Series]** **[As selected by Architect from NTMA's "Terrazzo Color Palette" EIII Series]** **[As selected by Architect from NTMA's "Terrazzo Color Palette" EIV Series]** **[Match Architect's sample]** **[Match existing]** **<Insert NTMA designation or custom mix>..**
- C. Materials:
1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 3 lb of water/1000 sq. ft. in 24 hours.
 2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.
 - a. Reinforcement: Fiberglass scrim.
 3. Primer: **[Manufacturer's product recommended for substrate and use indicated]** **<Insert requirements>**.
 4. Epoxy-Resin Matrix: **[Manufacturer's standard recommended for use indicated]** **<Insert requirements>** and in color required for mix indicated.
 - a. Physical Properties without Aggregates:
 - 1) Hardness: 60 to 85 per ASTM D2240, Shore D.
 - 2) Minimum Tensile Strength: 3000 psi per ASTM D638 for a 2-inch specimen made using a "C" die per ASTM D412.
 - 3) Minimum Compressive Strength: 10,000 psi per ASTM D695, Specimen B cylinder.
 - 4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D1308.
 - a) Distilled water.
 - b) Mineral water.
 - c) Isopropanol.
 - d) Ethanol.
 - e) 0.025 percent detergent solution.
 - f) 1.0 percent soap solution.
 - g) 5 percent acetic acid.
 - h) 10 percent sodium hydroxide.
 - i) 10 percent hydrochloric acid.
 - j) 30 percent sulfuric acid.

- b. Physical Properties with Aggregates: For terrazzo blended according to manufacturer's recommendations with one part epoxy resin with three parts marble aggregate consisting of 60 percent No. 1 chips and 40 percent No. 0 chips that is ground and grouted to a 1/4-inch nominal thickness, and cured for 7 days at 75 deg F plus or minus 2 deg F and at 50 percent plus or minus 2 percent relative humidity.
 - 1) Flammability: Self-extinguishing, maximum extent of burning 1/4 inch according to ASTM D635.
 - 2) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F according to ASTM C531.
- 5. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
- 6. Finishing Grout: Resin based.

2.04 PRECAST EPOXY-RESIN TERRAZZO

- A. Precast Terrazzo Base **<Insert designation>**: Minimum 3/8-inch- thick, epoxy terrazzo units cast in maximum lengths possible, but not less than 36 inches. Comply with manufacturer's written instructions for fabricating precast terrazzo base units in sizes and profiles indicated.
 - 1. Type: **[As indicated]** **[Coved with minimum 3/4-inch radius]** **[Straight]** **[Splayed]** **<Insert requirements>**.
 - 2. Top Edge: **[Straight, unfinished]** **[Beveled with polished top surface]** **[Radius edge with polished top surface]** **<Insert requirements>**.
 - 3. Metal Toe Strip: **[Zinc]** **[Brass]**.
 - 4. Outside Corner Units: With finished returned edges at outside corner.
 - 5. Color, Pattern, and Finish: **[As selected by Architect from full range of industry colors]** **[Match Architect's sample]** **[Match adjacent poured-in-place terrazzo flooring]** **<Insert requirements>**.
- B. Precast Terrazzo Units **<Insert designation>**: Minimum **[3/4-inch]** **<Insert dimension>** thick, epoxy terrazzo units. Comply with manufacturer's written instructions for fabricating precast units in sizes and profiles indicated. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to 1/8-inch radius.
 - 1. Color, Pattern, and Finish: **[As selected by Architect from full range of industry colors]** **[Match Architect's sample]** **[Match adjacent poured-in-place terrazzo flooring]** **<Insert requirements>**.

2.05 STRIP MATERIALS

- A. Thin-Set Divider Strips: L-type angle in depth required for topping thickness indicated.
 - 1. Material: **[As indicated]** **[White-zinc alloy]** **[Brass]** **[Aluminum]** **[Plastic, in color selected from full range of industry colors]** **<Insert requirements>**.

2. Top Width: [As indicated] [1/8 inch] [1/4 inch] <Insert dimension>.
- B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.
1. Bottom-Section Material: [As indicated] [Galvanized steel] [Matching top-section material] <Insert requirements>.
 2. Top-Section Material: [As indicated] [White-zinc alloy] [Brass] [Aluminum] [Plastic, in color selected from full range of industry colors] <Insert requirements>.
 3. Top-Section Width: [As indicated] [1/8 inch] [1/4 inch] [3/8 inch] [1/2 inch] <Insert dimension>.
- C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.
- D. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
1. Base-bead strips for exposed top edge of terrazzo base.
 2. Edge-bead strips for exposed edges of terrazzo.
 3. Nosings for terrazzo stair treads and landings.
 4. <Insert requirements>.
- E. Abrasive Strips: [Three-line] [Two-line] [One-line] [Abrasive nosing strip and two-line] <Insert requirements> abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
1. Width: [1/2 inch] <Insert dimension>.
 2. Depth: As required by terrazzo thickness.
 3. Length: [4 inches less than stair width] [As indicated] <Insert dimension>.
 4. Color: [As selected by Architect from full range of industry colors] <Insert requirements>.
- 2.06 MISCELLANEOUS ACCESSORIES
- A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.
- B. Anchoring Devices:
1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
 2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
- C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

- F. Sealer: [Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer] [Acrylic] [Urethane] [Chemical-resistant epoxy] [Water based] <Insert requirements>.
1. Surface Friction: Not less than 0.6 according to ASTM D2047.
 2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.02 PREPARATION

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
- B. Concrete Slabs:
 1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
 - c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.
- C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
- D. Preinstallation Moisture Testing:
 1. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests.
 2. Moisture Testing: Perform tests so that each test area does not exceed **[200 sq. ft.] <Insert area>**, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Moisture-Vapor-Emission Test: Maximum moisture-vapor-emission rate of **[3 lb of water/1000 sq. ft.] <Insert rate>** in 24 hours when tested according to ASTM F1869 using anhydrous calcium chloride.
 - b. Relative Humidity Test: Maximum **[75] <Insert number>** percent relative humidity measurement when tested according to ASTM F2170 using in-situ probes.

3. Proceed with terrazzo installation only after concrete substrates pass moisture testing [or after installation of moisture-vapor-emission-control membrane on substrate areas that fail testing].
- E. Moisture-Vapor-Emission-Control Membrane: Install according to manufacturer's written instructions.
1. Install on concrete substrates that incorporate lightweight aggregates.
 2. Install concrete substrates that fail preinstallation moisture testing.
- F. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.
1. Prepare and prefill substrate cracks with membrane material.
 2. Install membrane [at substrate cracks] [to produce full substrate coverage] in areas to receive terrazzo.
 3. Reinforce membrane with fiberglass scrim.
- G. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.
- 3.03 EPOXY-RESIN TERRAZZO INSTALLATION
- A. Comply with NTMA's written recommendations for terrazzo and accessory installation.
- B. Strip Materials:
1. Divider and Control-Joint Strips:
 - a. Locate divider strips [in locations indicated] <Insert requirements>.
 - b. Install control-joint strips [back to back and directly above concrete-slab control joints] [in locations indicated] <Insert requirements>.
 - c. Install control-joint strips with [1/4-inch] <Insert dimension> gap between strips, and install sealant in gap.
 - d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 2. Accessory Strips: Install [as required to provide a complete installation] [in locations indicated] <Insert requirements>.
 3. Abrasive Strips: Install with surface of abrasive strip positioned [1/16 inch] <Insert dimension> higher than terrazzo surface.
- C. Apply primer to terrazzo substrates according to manufacturer's written instructions.
- D. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.
1. Installed Thickness: [1/4 inch] [3/8 inch] [As indicated on Drawings] <Insert dimension> nominal.

2. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
 - a. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
 - b. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.
 - c. Fine Grinding/Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with **[80] [120]**-grit stones or with comparable diamond abrasives until grout is removed from surface.
 3. Installation Tolerance: Limit variation in terrazzo surface from level to **[1/4 inch in 10 feet] <Insert dimensions>**; noncumulative.
- E. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.
- F. Install and finish poured-in-place terrazzo base at the same time the adjacent terrazzo flooring is installed.
- 3.04 PRECAST TERRAZZO INSTALLATION
- A. Install precast terrazzo units using method recommended in writing by NTMA and manufacturer unless otherwise indicated.
 - B. Do not install units that are chipped, cracked, discolored, or improperly finished.
 - C. Seal joints between units with **[joint compound matching precast terrazzo matrix] [joint sealant] <Insert requirements>**.
- 3.05 REPAIR
- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.
- 3.06 CLEANING AND PROTECTION
- A. Cleaning:
 1. Remove grinding dust from installation and adjacent areas.
 2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.
 - B. Sealing:
 1. Seal surfaces according to NTMA's written recommendations.
 2. Apply sealer according to sealer manufacturer's written instructions.
 - C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

SECTION 09 67 23

RESINOUS URETHANE AND EPOXY MORTAR FLOORING

PART 1 GENERAL

1.01 SUMMARY

- A. This section includes surface preparation and field application of polyurethane modified cement concrete floor coatings.
- B. Related Sections include the following:
- C. Division 01 Section "Sustainable Design Requirements."
- D. Division 09 Section "High Performance Coatings" for coatings in exterior steel and interior concrete, CMU and steel walls.

1.02 REFERENCES

- A. ASTM D 16 - Terminology Relating to Paint, Varnish, Lacquer, and Related Products.
- B. ASTM D 4259 – Standard Practice for Abrading Concrete.
- C. ASTM F 1869 - Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
- D. International Concrete Repair Institute (ICRI) Guideline No. 03732 - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays.
- E. SSPC-SP 13/NACE 6 - Surface Preparation of Concrete.

1.03 DEFINITIONS

- A. Definitions of Painting Terms: ASTM D 16, unless otherwise specified.
- B. Dry Film Thickness (DFT): Thickness of a coat of paint in fully cured state measured in mils (1/1000 inch).

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Preapplication Meeting: Convene a preapplication meeting 2 weeks before start of application of coating systems. Require attendance of parties directly affecting work of this section, including Contractor, Architect, applicator, and manufacturer's representative. Review the following:
 - 1. Environmental requirements.
 - 2. Protection of surfaces not scheduled to be coated.
 - 3. Surface preparation.
 - 4. Application.
 - 5. Repair.

6. Field quality control.
7. Cleaning.
8. Protection of coating systems.
9. One-year inspection.
10. Coordination with other work.

1.05 SUBMITTALS

- A. Product Data: Submit manufacturer's product data for each coating, including generic description, complete technical data, surface preparation, and application instructions.
- B. Samples for Verification: For each color and material to be applied, with texture to simulate actual conditions, on representative samples of the actual substrate.
 1. Provide stepped Samples defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.
 2. List of material and application for each coat of each sample. Label each sample for location and application.
 3. Submit samples on the following substrates for Architect's review of color and texture:
 - a. Concrete: Provide 8-inches square samples on rigid backing.
- C. Manufacturer's Quality Assurance: Submit manufacturer's certification that coatings comply with specified requirements and are suitable for intended application.
 1. Applicator's Quality Assurance: Submit list of a minimum of 5 completed projects of similar size and complexity to this Work. Include for each project:
 - a. Project name and location.
 - b. Name of owner.
 - c. Name of contractor.
 - d. Name of architect.
 - e. Name of coating manufacturer.
 - f. Approximate area of coatings applied.
 - g. Date of completion.
 - h. Warranty: Submit manufacturer's standard warranty.

1.06 QUALITY ASSURANCE

- A. Manufacturer's Qualifications:
 1. Specialize in manufacture of coatings with a minimum of 5 years successful experience.
 2. Able to demonstrate successful performance on comparable projects.
- B. Single Source Responsibility: Coatings and coating application accessories shall be products of a single manufacturer.
- C. Applicator's Qualifications:

1. Experienced in application of specified coatings for a minimum of 5 years on projects of similar size and complexity to this Work.
2. Applicator's Personnel: Employ persons trained for application of specified coatings.

1.07 DELIVERY, HANDLING AND STORAGE

- A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying:
1. Coating or material name.
 2. Manufacturer.
 3. Color name and number.
 4. Batch or lot number.
 5. Date of manufacture.
 6. Mixing and thinning instructions.
 - a. Storage:
 7. Store materials in a clean dry area and within temperature range in accordance with manufacturer's instructions.
 8. Keep containers sealed until ready for use.
 9. Do not use materials beyond manufacturer's shelf-life limits.
- B. Handling: Protect materials during handling and application to prevent damage or contamination.

1.08 ENVIRONMENTAL REQUIREMENTS

- A. Weather:
1. Air and Surface Temperatures: Prepare surfaces and apply and cure coatings within air and surface temperature range in accordance with manufacturer's instructions.
 2. Surface Temperature: Minimum of 5 degrees F (3 degrees C) above dew point.
 3. Relative Humidity: Prepare surfaces and apply and cure coatings within relative humidity range in accordance with manufacturer's instructions.
- B. Ventilation: Provide ventilation during coating evaporation stage in confined or enclosed areas in accordance with manufacturer's instructions.
- C. Dust and Contaminants:
1. Schedule coating work to avoid excessive dust and airborne contaminants.
 2. Protect work areas from excessive dust and airborne contaminants during coating application and curing.

1.09 EXTRA MATERIALS

- A. Furnish extra coating materials from the same production run as materials applied and in quantities described below. Package coating materials in unopened, factory-sealed containers for storage and identify with labels describing contents.
1. Quantity: Furnish an additional 5 percent, but not less than 1 gal. or 1 case, as appropriate, of each material and color applied.

PART 2 PRODUCTS

2.01 MANUFACTURER

- A. Products: Subject to compliance with requirements, products that may be incorporated into the Work include products indicated in the coating system descriptions or equal products by manufacturer listed below. Provide products from one of the following:
1. Tnemec Company, Inc. (Tnemec) (Basis-of-Design). Tel # 310-637-2363
 2. Or approved equal.
- B. Requests for substitution shall include manufacturer's literature for each product giving the name, generic type, descriptive information, solids by volume, recommended film thicknesses and a list of five projects where each product has been used and rendered satisfactory service. No request for substitution shall be considered that would decrease film thickness or offer a change in the generic type of flooring specified.

2.02 MVT SYSTEM FOR CONCRETE FLOORS

- A. Material Compatibility: Provide primers, undercoats, and finish-coat materials that are compatible with one another and substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- B. Material Quality: Provide manufacturer's highest grade of the various high-performance coatings specified. Materials not displaying manufacturer's product identification are not acceptable.
- C. VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that have a VOC classification equal to or less than that required per local Air Quality Management District.
- D. Interior concrete floor system:
1. MVT /Epoxy/ CR Urethane System:
 2. Surface Preparation: Shot Blast or Mech. Abrade (CSP 3-4).
 3. Prime Coat: Series 208 Epoxoprime MVT. DFT 16 to 20 mils.
 4. Intermediate Coat: Series 237 Power-Tread. DFT 8.0 to 10.0 Mils.
 5. Finish Coat: Series 248 Everthane (with color pak). DFT 2.0 to 3.0 Mils.
 6. Accent Colors: Series 248 Everthane (with color pak). DFT 2.0 to 3.0 Mils.
- E. Colors: Refer to Material Finish Schedule on Drawings for colors.

2.03 ACCESSORIES

- A. Coating Application Accessories:
1. Accessories required for application of specified coatings in accordance with manufacturer's instructions, including thinners.
 2. Products of coating manufacturer.
- B. Concrete Testing Equipment: American Moisture Test, Inc.:
1. ASTM F1869 water vapor emission test kit

2.04 SOURCE QUALITY CONTROL

- A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:
1. Owner may engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 2. Testing agency will perform tests for compliance with product requirements.
 3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 EXECUTION

3.01 EXAMINATION

- A. With Applicator present, examine substrates and conditions under which high-performance coatings will be applied, for compliance with coating application requirements.
1. Apply coatings only after unsatisfactory conditions have been corrected and surfaces to receive coatings are thoroughly dry.
 2. Moisture Vapor Emission Rate: When measured using ASTM F1869 test kit at a minimum of one (1) test for each 1,000 square foot of coating:
 - a. Concrete: 15 lbs.
 3. Start of application is construed as Applicator's acceptance of surfaces within that particular area.
- B. Coordination of Work: Review other Sections in which primers or other coatings are provided to ensure compatibility of total systems for various substrates. On request, furnish information on characteristics of specified finish materials to ensure compatible primers.
1. If a potential incompatibility of primers applied by others exists, obtain the following from the primer Applicator before proceeding:
 - a. Confirmation of primer's suitability for expected service conditions.
 - b. Confirmation of primer's ability to be top coated with materials specified.
 2. Notify Architect about anticipated problems before using the coatings specified over substrates primed by others.

3.02 PREPARATION

- A. Protection of surfaces not scheduled to be coated:
1. Protect surrounding areas and surfaces not scheduled to be coated from damage during surface preparation and application of coatings.
 2. Immediately remove coatings that fall on surrounding areas and surfaces not scheduled to be coated.

- B. Surface preparation of concrete floors: Clean and prepare surfaces to be coated according to manufacturer's written instructions for each substrate condition and as specified.
 - 1. Prepare concrete surfaces in accordance with manufacturer's instructions, SSPC-SP 13/NACE 6, and ICRI 03732.
 - 2. Ensure surfaces are clean, dry, and free of oil, grease, dirt, dust, and other contaminants.
 - 3. Diamond grind near wall base, columns and edges to expose absorbent concrete.
 - 4. Test concrete for moisture in accordance with ASTM D 4263 and F 1869.
 - 5. Allow concrete to cure for a minimum of 28 days before coating.
 - 6. Level protrusions and mortar spatter.
- C. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.
 - 1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.
 - 2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.
 - 3. Use only the type of thinners approved by manufacturer and only within recommended limits.

3.03 APPLICATION

- A. Apply coatings in accordance with manufacturer's instructions.
- B. Mix and thin coatings, including multi-component materials, in accordance with manufacturer's instructions.
- C. Keep containers closed when not in use to avoid contamination.
- D. Do not use mixed coatings beyond pot life limits.
- E. Use application equipment, tools, pressure settings, and techniques in accordance with manufacturer's instructions.
- F. Uniformly apply coatings at spreading rate required to achieve specified DFT.
- G. Apply coatings to be free of film characteristics or defects that would adversely affect performance or appearance of coating systems.
- H. Before applying 248 Everthane thoroughly scarify 237 Power -Tread using a power sander and 100 grit sandpaper, No 60 mesh sanding screen or coarse striping pad to eliminate surface tension

3.04 REPAIR

- A. Materials and Surfaces Not Scheduled to Be Coated: Repair or replace damaged materials and surfaces not scheduled to be coated.
- B. Damaged Coatings: Touch-up or repair damaged coatings. Touch-up of minor damage shall be acceptable where result is not visibly different from adjacent surfaces. Recoat entire surface where touch-up result is visibly different, either in sheen, texture, or color.

- C. Coating Defects: Repair in accordance with manufacturer's instructions coatings that exhibit film characteristics or defects that would adversely affect performance or appearance of coating systems.

3.05 FIELD QUALITY CONTROL

- A. Manufacturer's Field Services: Manufacturer's representative shall provide technical assistance and guidance for surface preparation and application of coating systems.

3.06 CLEANING

- A. Remove temporary coverings and protection of surrounding areas and surfaces.

3.07 PROTECTION

- A. Protect surfaces of coating systems from damage during construction.

END OF SECTION

This page intentionally left blank

SECTION 09 68 13

TILE CARPETING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:

- 1. Modular carpet tile.

- B. Related Requirements:

- 1. Section 024119 "Selective Demolition" for removing existing floor coverings.
- 2. [Section 096513 "Resilient Base and Accessories"] [Section 096519 "Resilient Tile Flooring"] for resilient wall base and accessories installed with carpet tile.
- 3. Section 096816 "Sheet Carpeting" for carpet roll goods.

1.03 PRE-INSTALLATION MEETINGS

- A. Pre-installation Conference: Conduct conference at **[Project site] <Insert location>**.

- 1. Review methods and procedures related to carpet tile installation including, but not limited to, the following:
 - a. Review delivery, storage, and handling procedures.
 - b. Review ambient conditions and ventilation procedures.
 - c. Review subfloor preparation procedures.
 - d. Review layout and orientation.
 - e. <Insert agenda items>.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
- 2. Include manufacturer's written installation recommendations for each type of substrate.

- B. Shop Drawings: For carpet tile installation, plans showing the following:

- 1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.

2. Carpet tile type, color, and dye lot.
 3. Type of subfloor.
 4. Type of installation.
 5. Pattern of installation.
 6. Pattern type, location, and direction.
 7. Pile direction.
 8. Type, color, and location of insets and borders.
 9. Type, color, and location of edge, transition, and other accessory strips.
 10. Transition details to other flooring materials.
- C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
1. Carpet Tile: Full-size Sample.
 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- long Samples.
- D. Samples for Initial Selection: For each type of carpet tile.
1. Include Samples of exposed edge, transition, and other accessory stripping involving color or finish selection.
- E. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
1. Carpet Tile: Full-size Sample.
 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- long Samples.
- F. Product Schedule: For carpet tile. Use same designations indicated on Drawings.
- G. Sustainable Product Certification: Provide ANSI/NSF 140 certification for carpet products.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.
 - C. Sample Warranty: For special warranty.
- 1.06 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Carpet Tile: Full-size units equal to **[5] <Insert number>** percent of amount installed for each type indicated, but not less than 10 sq. yd..

1.08 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the **[Commercial II] [Master II] <Insert description>** certification level.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups at locations and in sizes shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Comply with the Carpet and Rug Institute's CRI 104.

1.10 FIELD CONDITIONS

- A. Comply with the Carpet and Rug Institute's CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.
- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.
- D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.11 WARRANTY

- A. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
 - 1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
 - 2. Failures include, but are not limited to, the following:
 - a. More than 10 percent edge raveling, snags, and runs.
 - b. Dimensional instability.

- c. Excess static discharge.
 - d. Loss of tuft-bind strength.
 - e. Loss of face fiber.
 - f. Delamination.
 - g. <Insert failure characteristic>.
3. Warranty Period: Lifetime limited from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

1. See current Campus Standards for acceptable Tile Carpeting Manufacturers.

2.02 CARPET TILE <Insert drawing designation>

- A. Color: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color>.
- B. Pattern: [Match Architect's samples] <Insert pattern>.
- C. Fiber Content: [100 percent nylon 6, 6] [100 percent nylon 6] [100 percent polypropylene] [100 percent wool] [80 percent wool; 20 percent nylon 6, 6] [80 percent wool; 20 percent nylon 6] <Insert percentage>.
- D. Fiber Type: <Insert proprietary fiber type>.
- E. Pile Characteristic: [Level-loop] [Cut] [Cut-and-loop] <Insert construction> pile.
- F. Yarn Twist: <Insert TPI>.
- G. Yarn Count: <Insert count>.
- H. Density: <Insert oz./cu. yd. >.
- I. Pile Thickness: <Insert inches> for finished carpet tile [according to ASTM D6859].
- J. Stitches: <Insert stitches per inch>.
- K. Gage: <Insert ends per inch>.
- L. Surface Pile Weight: <Insert oz./sq. yd. >.
- M. Total Weight: <Insert oz./sq. yd. > for finished carpet tile.
- N. Primary Backing/Backcoating: [Manufacturer's standard composite materials] [PVC] [Fiberglass-reinforced PVC] [Fiberglass-reinforced amorphous resin] [Reinforced polyurethane composite cushion] [Reinforced polyurethane composite] [Reinforced thermoplastic copolymer] <Insert specific primary backing materials; consult manufacturers>.

- O. Secondary Backing: **[Manufacturer's standard material]** <Insert specific secondary backing material>.
- P. Backing System: <Insert proprietary name>.
- Q. Size: **[18 by 18 inches]** **[24 by 24 inches]** **[18 by 36 inches]** **[36 by 36 inches]** <Insert dimensions>.
- R. Applied Treatments:
1. Soil-Resistance Treatment: **[Manufacturer's standard treatment]** <Insert treatment>.
 2. Antimicrobial Treatment: **[Manufacturer's standard treatment]** <Insert treatment> that protects carpet tiles as follows:
 - a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
- S. Sustainable Design Requirements:
1. Sustainable Product Certification: **[Silver]** **[Gold]** **[Platinum]** level certification according to ANSI/NSF 140.
- T. Performance Characteristics:
1. Appearance Retention Rating: Heavy traffic, 3.0 minimum according to ASTM D7330.
 2. Critical Radiant Flux Classification: Not less than **[0.45 W/sq. cm]** **[0.22 W/sq. cm]** according to NFPA 253.
 3. Dry Breaking Strength: Not less than 100 lbf according to ASTM D2646.
 4. Tuft Bind: Not less than **[3 lbf]** **[5 lbf]** **[6.2 lbf]** **[8 lbf]** **[10 lbf]** <Insert value> according to ASTM D1335.
 5. Delamination: Not less than **[3.5 lbf/in.]** **[4 lbf/in.]** <Insert value> according to ASTM D3936.
 6. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
 7. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
 8. Noise Reduction Coefficient (NRC): <Insert NRC> according to ASTM C423.
 9. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
 10. Colorfastness to Light: Not less than 4 after **[40]** **[60]** <Insert number> AFU (AATCC fading units) according to AATCC 16, Option E.
 11. Electrostatic Propensity: Less than **[3.5]** **[2]** <Insert number> kV according to AATCC 134.

2.03 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.
- C. Metal Edge/Transition Strips: Extruded aluminum with **[mill]** **<Insert finish>** finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance.
- B. Examine carpet tile for type, color, pattern, and potential defects.
- C. Concrete Slabs: Verify that finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
 - 1. Moisture Testing: Perform tests so that each test area does not exceed **[200 sq. ft.] [1000 sq. ft.] <Insert area>**, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[3 lb of water/1000 sq. ft.] <Insert emission>** in 24 hours.
 - b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum **[75] <Insert number>** percent relative humidity level measurement.
 - c. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
- D. Wood Subfloors: Verify the following:
 - 1. Underlayment over subfloor complies with requirements specified in Section 061600 "Sheathing."
 - 2. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- E. Metal Subfloors: Verify the following:
 - 1. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- F. Painted Subfloors: Perform bond test recommended in writing by adhesive manufacturer.
 - 1. Access Flooring Systems: Verify the following:

2. Access floor substrate is compatible with carpet tile and adhesive if any.
 3. Underlayment surface is flat, smooth, evenly planed, tightly jointed, and free of irregularities, gaps greater than **[1/8 inch <Insert dimension>**, protrusions more than 1/32 inch, and substances that may interfere with adhesive bond or show through surface.
- G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. General: Comply with the Carpet and Rug Institute's CRI 104 and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider, and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.
- D. Metal Substrates: Clean grease, oil, soil and rust, and prime if recommended in writing by adhesive manufacturer. Rough sand painted metal surfaces and remove loose paint. Sand aluminum surfaces, to remove metal oxides, immediately before applying adhesive.
- E. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.03 INSTALLATION

- A. General: Comply with the Carpet and Rug Institute's CRI 104, Section 10, "Carpet Tile," and with carpet tile manufacturer's written installation instructions.
- B. Installation Method: **[As recommended in writing by carpet tile manufacturer] [Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive] [Partial glue down; install periodic tiles with releasable, pressure-sensitive adhesive] [Free lay; install carpet tiles without adhesive].**
- C. Maintain dye-lot integrity. Do not mix dye lots in same area.
- D. Maintain pile-direction patterns **[indicated on Drawings] [recommended in writing by carpet tile manufacturer].**
- E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.
- H. Install pattern parallel to walls and borders.
- I. Access Flooring: Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

3.04 CLEANING AND PROTECTION

- A. Perform the following operations immediately after installing carpet tile:
 - 1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
 - 2. Remove yarns that protrude from carpet tile surface.
 - 3. Vacuum carpet tile using commercial machine with face-beater element.
- B. Protect installed carpet tile to comply with the Carpet and Rug Institute's CRI 104, Section 13.7.
- C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 09 69 00
ACCESS FLOORING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
1. Cementitious-core steel panel access flooring.
 2. Wood-core steel panel access flooring.
 3. Unfilled steel panel access flooring.
 4. Aluminum panel access flooring.

1.02 ALLOWANCES

- A. Allowances for access flooring are specified in Section 01 21 00 "Allowances."
1. Cutouts in floor panels are part of **<Insert name of allowance>**.
 2. Service outlets are part of **<Insert name of allowance>**.

1.03 UNIT PRICES

- A. Work of this Section is affected by unit prices specified in Section 01 22 00 "Unit Prices."
1. Unit prices apply to authorized work covered by **[quantity allowances] [estimated quantities]**.
 2. Unit prices apply to additions to and deletions from Work as authorized by Change Orders.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.
1. Review connections between access flooring and mechanical and electrical systems.
 2. Review requirements related to sealing the plenum.
 3. Review procedures for keeping underfloor space clean.

1.05 ACTION SUBMITTALS

- A. Product Data:
1. Cementitious-core steel panel access flooring.
 2. Wood-core steel panel access flooring.
 3. Unfilled steel panel access flooring.
 4. Aluminum panel access flooring.
- B. Product Data Submittals: For each product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for access flooring.
 2. Include loading capacities.
- C. Shop Drawings: For access flooring:
1. Include layout of access flooring and relationship to adjoining Work based on field-verified dimensions.
 2. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructures.
- D. Samples: For the following products:
1. Floor Coverings: Full-size units for each color and texture specified.
 2. Exposed Metal Accessories: Approximately 10 inches in length.
 3. One full-size floor panel, pedestal, and understructure unit for each type of access flooring required.
- E. Samples for Initial Selection: For each type of exposed finish.
- F. Samples for Verification: For the following products:
1. Floor Coverings: Full-size units.
 2. Exposed Metal Accessories: Approximately 10 inches in length.
 3. One full-size floor panel, pedestal, and understructure unit for each type of access flooring required.
- G. Delegated Design Submittals: For seismic design of access flooring.
- 1.06 INFORMATIONAL SUBMITTALS
- A. Coordination Drawings:
1. Coordinate mechanical and electrical work in underfloor cavity to prevent interference with access flooring.
 2. Mark pedestal locations on subfloor to enable mechanical and electrical work to proceed without interfering with access-flooring pedestals installed after mechanical and electrical work.
- B. Qualification Data: For **[Installer] [and] [testing agency]**.
- C. Product Certificates: For each type of access flooring.
- D. Product Test Reports: For each type of access-flooring material and floor covering, performed by a qualified testing agency.
- E. Seismic Design Calculations: For seismic design of access flooring, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- F. Preconstruction Test Reports: For preconstruction adhesive field test.
- 1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Panels: <Insert number>.
 - 2. Gratings: <Insert number>.
 - 3. Pedestals: <Insert number>.
 - 4. Stringers: <Insert number>.

1.08 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockup of typical access flooring, as shown on Drawings. Size to be an area no fewer than **[five]** <Insert number> floor panels in length by **[five]** <Insert number> floor panels in width.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage]** **[Engage]** a qualified testing agency to perform preconstruction testing on field mockups.
 - 1. <Insert sizes and configurations of assemblies>.
 - 2. Use personnel, materials, and methods of construction that will be used at Project site.
 - 3. Notify Architect **[seven]** <Insert number> days in advance of the dates and times when laboratory mockups will be tested.
- B. Preconstruction Adhesive Field Test: Before installing pedestals, field test their adhesion to subfloor surfaces by doing the following:
 - 1. In areas representative of each subfloor surface, set typical pedestal assemblies in same adhesive, and use methods required for the completed Work.
 - 2. Allow test installation to cure for manufacturer's recommended cure time, with a pressure of 25 lbf applied vertically to pedestals during this period.
 - 3. After curing, apply lateral load against a straight steel bar inserted 2 inches into pedestal stems. Measure the force needed to cause adhesive failure of pedestal base.
 - 4. Remove and discard failed pedestals, and clean pedestals of adhered residue.
 - 5. Proceed with installation only after tests show compliance with performance requirement specified for pedestals' capability to resist overturning moment.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not install access flooring until spaces are enclosed, [**subfloor has been sealed,**] ambient temperature is between 50 and 90 deg F, and relative humidity is not less than 20 and not more than 70 percent.

PART 2 PRODUCTS

2.01 MANUFACTURERS

1. See current Campus Standards for acceptable Access Flooring Manufacturers.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design access flooring for seismic performance, including loads imposed on the access flooring by items and equipment installed on the access flooring.
- B. Seismic Performance: Access flooring to withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] <Insert requirement> [, **including loads imposed on the access flooring by items and equipment installed on the access flooring**].
- C. Structural Performance: Provide access flooring capable of complying with the following performance requirements according to testing procedures in CISCA's "Recommended Test Procedures for Access Floors":
1. Concentrated Loads: [**900 lbf**] [**1000 lbf**] [**1250 lbf**] [**1500 lbf**] [**2000 lbf**] <Insert value> with the following deflection and permanent set:
 - a. Top-Surface Deflection: [**0.10 inch**] <Insert dimension>.
 - b. Permanent Set: [**0.010 inch**] <Insert dimension>.
 2. Ultimate Loads: [**1800 lbf**] [**2000 lbf**] [**2500 lbf**] [**3000 lbf**] [**4000 lbf**] <Insert value>.
 3. Rolling Loads: With local or overall deformation not to exceed 0.040 inch.
 - a. CISCA Wheel 1: 10 passes at [**400 lbf**] [**500 lbf**] [**600 lbf**] [**800 lbf**] [**1000 lbf**] [**1200 lbf**] [**1250 lbf**] [**2000 lbf**] <Insert value>.
 - b. CISCA Wheel 2: 10,000 passes at [**400 lbf**] [**500 lbf**] [**600 lbf**] [**800 lbf**] [**1000 lbf**] [**1250 lbf**] [**1750 lbf**] [**2000 lbf**] <Insert value>.
 4. Stringer Load Test: [**75 lbf**] [**225 lbf**] [**350 lbf**] [**450 lbf**] <Insert value> at center of span with a permanent set not to exceed 0.010 inch.
 5. Pedestal Axial Load Test: [**5000 lbf**] [**6000 lbf**] <Insert value>.
 6. Pedestal-Overturning-Moment Test: [**1000 lbf x inches**] <Insert values>.
 7. Uniform Load Test: [**200 lbf/sq. ft.**] [**250 lbf/sq. ft.**] [**300 lbf/sq. ft.**] [**400 lbf/sq. ft.**] [**500 lbf/sq. ft.**] <Insert value> with a maximum top-surface deflection not to exceed 0.040 inch and a permanent set not to exceed 0.010 inch.
 8. Drop Impact Load Test: [**75 lb**] [**100 lb**] [**125 lb**] [**150 lb**] [**175 lb**] <Insert value>.
- D. Fire Performance:
1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: [**25**] <Insert value> or less.

- b. Smoke-Developed Index: **[50] [450] <Insert value>** or less.

2.03 CEMENTITIOUS-CORE STEEL PANEL ACCESS FLOORING

- A. Cementitious-Core Steel Panel Access Flooring **<Insert drawing designation>**: Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion using manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.
1. Configuration: Provide modular panels with nominal size of **[24 by 24 inches] <Insert dimensions>**, interchangeable with other field panels without disturbing adjacent panels or understructure.
 2. Tile Carpeting System: Fabricate panels with alignment pins to accept field-installed carpet tile with receptors designed to engage pins.
 3. Attachment to Understructure: **[Bolted] [By gravity]**.
- B. Perforated Panels: Perforated top surface with **[holes] [slots]** of number, spacing, and size standard with manufacturer to produce a nominal open area of **[23] [24] [25] <Insert number>** percent. **[Provide mechanical dampers with each panel unit.]**
1. Quantity: **[As shown on Drawings] <Insert number>**.
 2. Finish: **[Manufacturer's standard] [To match solid panels] <Insert finish>**.
- C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of **[45] [50] [56] <Insert number>** percent. **[Provide mechanical dampers with each panel unit.]**
1. Quantity: **[As shown on Drawings] <Insert number>**.
 2. Finish: **[Manufacturer's standard] [To match solid panels] <Insert finish>**.
- D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
1. Base: Square or circular base with not less than **[16 sq. in.] <Insert dimension>** of bearing area.
 2. Column: Of height required to bring finished floor to elevations indicated. Weld column to base plate.
 3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than **[2 inches] <Insert dimension>** and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
 4. Head: Designed to support the floor panel indicated.
 - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
 - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- E. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.

1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.
- F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with **[integral trim]** **[applied perimeter plastic]** edging.
1. High-Pressure Plastic Laminate: ISO 4586-5, Abrasion **[Class AC3]** **[Class AC4]** **[Class AC5]**.
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
 - b. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
 2. Static-Dissipative Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
 3. Conductive Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
- 2.04 WOOD-CORE STEEL PANEL ACCESS FLOORING
- A. Wood-Core Steel Panel Access Flooring <Insert drawing designation>: Fabricate panels with 1-inch-thick particleboard core laminated to top and bottom steel face sheets, and with a flame-spread index of 25 or less according to ASTM E84. Provide core edges enclosed with upturned, die-formed, bottom-sheet edge or with perimeter steel channel welded to top sheet and welded or bonded to bottom sheet. Protect metal surfaces against corrosion by manufacturer's standard factory-applied finish.
1. Configuration: Provide modular panels with nominal size of **[24 by 24 inches]** <Insert dimensions>, interchangeable with other field panels without disturbing adjacent panels or understructure.
 2. Tile Carpeting System: Fabricate panels with alignment pins to accept field-installed carpet tile with receptors designed to engage pins.
 3. Attachment to Understructure: **[Bolted]** **[By gravity]**.
- B. Perforated Panels: Perforated top surface with **[holes]** **[slots]** of number, spacing, and size standard with manufacturer to produce a nominal open area of **[23]** **[24]** **[25]** <Insert number> percent. **[Provide mechanical dampers with each panel unit.]**

1. Quantity: [As shown on Drawings] <Insert number>.
 2. Finish: [Manufacturer's standard] [To match solid panels] <Insert finish>.
- C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of **[45] [50] [56]** <Insert number> percent. **[Provide mechanical dampers with each panel unit.]**
1. Quantity: [As shown on Drawings] <Insert number>.
 2. Finish: [Manufacturer's standard] [To match solid panels] <Insert finish>.
- D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
1. Base: Square or circular base with not less than **[16 sq. in.]** <Insert dimension> of bearing area.
 2. Column: Of height required to bring finished floor to elevations indicated. Weld to base plate.
 3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than **[2 inches]** <Insert dimension> and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
 4. Head: Designed to support the floor panel indicated.
 - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
 - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- E. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.
1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.
- F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with **[integral trim] [applied perimeter plastic]** edging.
1. High-Pressure Plastic Laminate for Wood-Core Steel Panel Access Flooring: ISO 4586-5, Abrasion **[Class AC3] [Class AC4] [Class AC5]**.
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
 - b. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] **[Match Architect's samples] [As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
 2. Static-Dissipative Vinyl Tile for Wood-Core Steel Panel Access Flooring: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.

- b. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert colors, textures, and patterns>.
- 3. Conductive Vinyl Tile for Wood-Core Steel Panel Access Flooring: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert colors, textures, and patterns>.

2.05 UNFILLED STEEL PANEL ACCESS FLOORING

- A. Unfilled Steel Panel Access Flooring <Insert drawing designation>: Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion by manufacturer's standard factory-applied finish.
 - 1. Configuration: Provide modular panels with nominal size of **[24 by 24 inches]** <Insert dimensions>, interchangeable with other field panels without disturbing adjacent panels or understructure.
 - 2. Tile Carpeting System: Fabricate panels with alignment pins to accept field-installed carpet tile with receptors designed to engage pins.
 - 3. Attachment to Understructure: **[Bolted]** **[By gravity]**.
- B. Perforated Panels: Perforated top surface with **[holes]** **[slots]** of number, spacing, and size standard with manufacturer to produce a nominal open area of **[23]** **[24]** **[25]** <Insert number> percent. **[Provide mechanical dampers with each panel unit.]**
 - 1. Quantity: [As shown on Drawings] <Insert number>.
 - 2. Finish: [Manufacturer's standard] [To match solid panels] <Insert finish>.
- C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of **[45]** **[50]** **[56]** <Insert number> percent. **[Provide mechanical dampers with each panel unit.]**
 - 1. Quantity: [As shown on Drawings] <Insert number>.
 - 2. Finish: [Manufacturer's standard] [To match solid panels] <Insert finish>.
- D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
 - 1. Base: Square or circular base with not less than **[16 sq. in.]** <Insert dimension> of bearing area.
 - 2. Column: Of height required to bring finished floor to elevations indicated. Weld to base plate.
 - 3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than **[2 inches]** <Insert dimension> and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.

4. Head: Designed to support the floor panel indicated.
 - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
 - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
 - E. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.
 1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.
 - F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with **[integral trim]** **[applied perimeter plastic]** edging.
 1. High-Pressure Plastic Laminate for Unfilled Steel Panel Access Flooring: ISO 4586-5, Abrasion **[Class AC3]** **[Class AC4]** **[Class AC5]**.
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
 - b. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
 2. Static-Dissipative Vinyl Tile for Unfilled Steel Panel Access Flooring: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
 3. Conductive Vinyl Tile for Unfilled Steel Panel Access Flooring: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** <Insert colors, textures, and patterns>.
- 2.06 ALUMINUM PANEL ACCESS FLOORING
- A. Aluminum Panel Access Flooring <**Insert drawing designation**>: Fabricate panels from manufacturer's standard aluminum alloy with equivalent strength and corrosion resistance to Alloy UNS No. A03830 or UNS No. A03840 according to ASTM B85/B85M. Provide flat, solid surface on top and symmetrical crossing ribs on bottom; edge machined after casting to specified tolerances.

1. Configuration: Provide modular panels with nominal size of **[24 by 24 inches]** <Insert dimensions>, interchangeable with other field panels without disturbing adjacent panels or understructure.
 2. Attachment to Understructure: **[Bolted]** **[By gravity]**.
 3. Epoxy Finish: **[Conductive]** epoxy powder coating with a minimum average thickness of 2.5 mils and in color selected from manufacturer's full range.
 4. Plated Finish: Nickel-chrome electrodeposited plating, 0.000005-inch chrome over 0.0008-inch nickel, without copper or brass strike, to produce complete coverage over significant surfaces with a matte metallic appearance.
- B. Perforated Panels: Perforated top surface with **[holes]** **[slots]** of number, spacing, and size standard with manufacturer to produce a nominal open area of **[16.5]** <Insert number> percent. **[Provide mechanical dampers with each panel unit.]**
1. Quantity: **[As shown on Drawings]** <Insert number>.
 2. Finish: **[Manufacturer's standard]** **[To match solid panels]** <Insert finish>.
- C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of **[55]** <Insert number> percent. **[Provide mechanical dampers with each panel unit.]**
1. Quantity: **[As shown on Drawings]** <Insert number>.
 2. Finish: **[Manufacturer's standard]** **[To match solid panels]** <Insert finish>.
- D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of aluminum.
1. Base: Square or circular base with not less than **[16 sq. in.]** <Insert dimension> of bearing area.
 2. Column: Of height required to bring finished floor to elevations indicated. Weld to base plate.
 3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than **[2 inches]** <Insert dimension> and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
 4. Head: Designed to support the floor panel indicated.
 - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
 - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- E. Stringer System Understructure: Modular aluminum stringer systems designed to bolt to pedestal heads and form a grid pattern.
1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.
- F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with **[integral trim]** **[applied perimeter plastic]** edging.
1. High-Pressure Plastic Laminate for Aluminum Panel Access Flooring: ISO 4586-5, Abrasion **[Class AC3]** **[Class AC4]** **[Class AC5]**.

- a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
 - b. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert colors, textures, and patterns>.
2. Static-Dissipative Vinyl Tile for Aluminum Panel Access Flooring: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert colors, textures, and patterns>.
 3. Conductive Vinyl Tile for Aluminum Panel Access Flooring: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
 - a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
 - b. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert colors, textures, and patterns>.

2.07 FABRICATION

A. Fabrication Tolerances:

1. Size: Plus or minus 0.020 inch of required size.
2. Squareness: Plus or minus 0.015 inch between diagonal measurements across top of panel.
3. Flatness: Plus or minus 0.035 inch, measured on a diagonal on top of panel.

B. Panel Markings: Clearly and permanently mark floor panels on their underside with panel type and concentrated-load rating.

C. Bolted Panels: Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.

1. Captive Fasteners: Provide fasteners held captive to panels.

D. Cutouts: Fabricate cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with structural performance requirements.

1. Number, Size, Shape, and Location: [As indicated.] [As specified in Section 01 21 00 "Allowances" and Section 01 22 00 "Unit Prices."]
2. Grommets: Where indicated, fit cutouts with manufacturer's standard grommets; or, if size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding with tapered top flange. **[Furnish removable covers for grommets.]**
3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.

2.08 ACCESSORIES

- A. Adhesives: Manufacturer's standard adhesive for bonding pedestal bases to subfloor.
- B. Post-Installed Anchors: For anchoring pedestal bases to subfloor, provide **[two] [four]** post-installed **[expansion anchors] [threaded concrete screws]** made from carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5 (5 microns) for Class SC 1 (Mild), with the capability to sustain, without failure, a load equal to **[1.5] <Insert number>** times the loads imposed by pedestal-overturning moment on fasteners, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
- C. Service Outlets: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:
1. Structural Performance: Cover capable of supporting a **[300-lbf] [800-lbf] [1000-lbf]** concentrated load.
 2. Cover and Box Type: **[Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles] [Grommet with twist-close cover and including steel junction box for electrical receptacle with provision for telephone connectors and signal cables] <Insert type>**.
 3. Location: In center of panel quadrant unless otherwise indicated.
 4. Receptacles and Wiring:
 - a. Electrical receptacles and wiring for service outlets are specified elsewhere.
 - b. Equip each service outlet with power receptacles to comply with the following requirements:
 - 1) Type of Receptacle: Heavy-duty duplex, two-pole, three-wire grounding, 20 A, 125 V, NEMA WD 6, Configuration 5-20R unless otherwise indicated.
 - 2) Number of Receptacles for Outlet: **[One] [Two] [Four] <Insert number>**.
 - 3) Factory Wired: For field hardwiring with armored cable, containing three insulated No. 12 AWG solid-copper conductors, terminated with a **[6-inch-] <Insert dimension>** long pigtail.
 - 4) Power-in Connectors: Built into outlet housing, of type to fit power-in and power-out connectors of branch-circuit cables supplied with building electrical system.
- D. Occupant Adjustable Diffusers: Manufacturer's standard round diffusers, **[4 inches] [8 inches] <Insert dimension>** in diameter, formed from **[aluminum] [polycarbonate plastic]** to produce a removable one-piece unit complete with diffuser, manually adjustable flow regulator, dirt and dust receptacle, trim ring, and underfloor compression mounting ring; precisely fitted in factory-prepared openings of standard field panels and complying with the following requirements:
1. Air-Distribution Characteristics: **[100 cfm] <Insert value>** at **[0.096-inch] <Insert value>** static pressure and a maximum noise criterion rating of **[15] <Insert number>**.
 2. Structural Performance: Capable of supporting a **[600-lbf] <Insert value>** concentrated load.
 3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.

- E. Floor Grilles: Standard load-bearing grilles formed from **[aluminum] [polycarbonate plastic]** to produce removable one-piece unit precisely fitted in factory-prepared openings of standard field panels, **[with adjustable/removable] [without]** dampers and complying with the following requirements:
1. Air-Distribution Characteristics: 468 cfm at 0.10-inch wg static pressure.
 2. Structural Performance: Capable of supporting a 1000-lbf concentrated load.
 3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.
- F. Plenum-Wall Brush Grommets: Self-sealing cable brush grommet with **[4-by-13-inch rectangular] [3-inch round] [5-inch round]** <Insert dimension(s)> usable area for passage of power and signal cables through plenum walls. Provide **[ABS plastic] [Aluminum]** frame with passageway of interwoven nylon filaments and intermediate layer of EPDM. **[Provide units with plastic cable tray for support of cables and protection of wallboard.]**
- G. Cavity Dividers: Provide manufacturer's standard metal dividers located where indicated to divide underfloor cavities.
- H. Fascia Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal closure plates with **[manufacturer's standard finish]** <Insert finish>.
- I. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, with raised-disc or textured rubber or vinyl-tile floor coverings, and of same materials, performance, and construction requirements as access flooring.
- J. Steps: Provide steps of size and arrangement indicated with floor coverings to match access flooring. Apply nonslip aluminum nosings to treads unless otherwise indicated.
- K. Railings: Standard extruded-aluminum railings at ramps and open-sided perimeter of access flooring where indicated. Include handrail, intermediate rails, posts, brackets, end caps, wall returns, wall and floor flanges, plates, and anchorages where required.
1. Provide railings that comply with structural performance requirements specified in **[Section 05 52 13 "Pipe and Tube Railings."]** **[Section 05 73 00 "Decorative Metal Railings."]**
- L. Panel Lifting Device: Panel manufacturer's standard portable lifting device for each type of panel required **[for each computer room].**
- M. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer and manufacturer's authorized representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of conditions and deleterious substances that might interfere with attachment of pedestals.
2. Verify that concrete floor sealer and finish have been applied and cured.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches.
- B. Locate each pedestal, complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

3.03 INSTALLATION

- A. Install access flooring and accessories under supervision of access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.
- B. Adhesive Attachment of Pedestals: Set pedestals in adhesive, according to access-flooring manufacturer's written instructions, to provide full bearing of pedestal base on subfloor **[; and as required to meet seismic design requirements]**.
- C. Mechanical Attachment of Pedestals: Attach pedestals to subfloor with post-installed mechanical anchors **[as required to meet seismic design requirements]**.
- D. Adjust pedestals so installed panels are flat, level, and at the proper height.
- E. Stringer Systems: Secure stringers to pedestal heads according to access-flooring manufacturer's written instructions.
- F. Install flooring panels securely in place, leaving them properly seated with panel edges flush. Do not force panels into place.
- G. Scribe perimeter panels to provide a close fit, with adjoining construction having no voids greater than 1/8 inch where panels abut vertical surfaces.
 1. To prevent dusting, seal cut edges of steel-encapsulated, wood-core panels with sealer recommended in writing by panel manufacturer.
- H. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under installed access flooring.
- I. Grounded Access Flooring: Ground access flooring as recommended by manufacturer and as needed to comply with performance requirements for electrical resistance of floor coverings.
 1. Panel-to-Understructure Resistance: Not more than 10 ohms as measured without floor coverings.
- J. Underfloor Dividers: Scribe and install underfloor-cavity dividers to closely fit against subfloor surfaces, and seal with mastic.
- K. Closures: Scribe closures to closely fit against subfloor and adjacent finished-floor surfaces. Set in mastic and seal to maintain plenum effect within underfloor cavity.

- L. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area as installation of floor panels proceeds.
- M. Seal underfloor air cavities at construction seams, penetrations, and perimeter to control air leakage, according to manufacturer's written instructions.
- N. Install access flooring without change in elevation between adjacent panels and within the following tolerances:
 - 1. Plus or minus **[1/16 inch] [1/8 inch] <Insert dimension>** in any 10-foot distance.
 - 2. Plus or minus **[1/8 inch] [1/4 inch] <Insert dimension>** from a level plane over entire access flooring area.

3.04 PROTECTION

- A. Prohibit traffic on access flooring for 24 hours and removal of floor panels for **[72] <Insert number>** hours after installation, to allow pedestal adhesive to set.
- B. Replace access-flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.

SECTION 09 81 00

ACOUSTIC INSULATION AND SEALANTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes: The requirements below apply to all rooms and spaces where partitions are indicated to be filled with acoustical insulation and where acoustical insulation is indicated over suspended ceilings. Section includes.
 - 1. Acoustic insulation.
 - 2. Acoustic sealants and related materials.
 - 3. Acoustic pads, tape and gaskets.
- B. Related requirements: Division 07, 22 and 23 for thermal insulation, including pipe and duct insulation.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and sequencing:
- B. Pre-installation meeting:

1.03 SUBMITTALS

- A. Manufacturer Product Data for materials specified below.

1.04 QUALITY ASSURANCE

- A. Glass-Fiber Blanket Insulation, Unfaced: ASTM C665, Type I; passing ASTM E136 for combustion characteristics.
- B. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
- C. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.
- D. Mineral-Wool Blanket Insulation, Unfaced: ASTM C665, Type I (blankets without membrane facing); consisting of fibers; passing ASTM E136 for combustion characteristics.
 - 1. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 - 2. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.

1.05 HANDLING

- A. Store materials under cover, protected from moisture and off the ground or floor.
- B. Remove insulation that becomes wet or damp immediately from the job site.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Acoustic sealant and pads shall prevent transmission of airborne sound through cracks in the construction.

2.02 MANUFACTURERS / PRODUCTS

A. Batt insulation:

1. Low-density glass fiber insulation: Use for packing and filling small joints and openings behind sealants.
2. Long-strand glass fiber insulation of one to 2 pcf density, without covering, thickness as required.
 - a. 700 Series Insulation by Owens-Corning Fiberglas.
 - b. Microlite by Johns Manville.
 - c. Toughgard Fiber Glass Duct Liner Insulation by CertainTeed.

B. High-density ceramic or mineral fiber safig:

1. For packing and filling large and/or critical openings, usually behind a sealant or putty.
2. Long-strand ceramic or mineral fiber insulation of minimum 6 pcf density, without covering, thickness as required. Mineral (glass and rock wool) fiber, flame spread and smoke developed in conformance with IBC requirements and other authorities having jurisdiction. Non combustible having a minimum density of 1.1 pcf and minimum Noise Reduction Coefficient of 1.10 at 1/3 Octave Center Frequency (Hz).
 - a. "QuietZone Accoustical Batts" by Owens Corning.
 - b. "Rockwool AFB - Acoustical Fire Batts" by Rockwooll Group.
 - c. "Fibrex Sound Attenuation Batt (SAFB) Insulation" by Fibrex Insulations Inc.
 - d. "Thermafiber" by Owens Corning.
3. Thickness; 2-1/2 inches, except as otherwise indicated.

C. Insulation in stud cavity:

1. Formaldehyde-free, unfaced fiber glass blankets, "Sound-Shield" by Johns Manville, "Greenguard" by Knauf, or equal complying with ASTM C 665, Type 1, unfaced.

Unless other indicated, provide insulation of same thickness as the stud depth. Select batt widths to match stud spacing and to be self supporting between the studs.

- D. For application above ceilings, select batt widths to be supported on ceiling construction over the entire ceiling area.

2.03 BOARD INSULATION

- A. Akousti-Liner R by Manson, or equal complying with ASTM C 1071 and the following, 2-inch thick, black insulation in rolls as long as available, meeting ASTM C 1071, with the following characteristics:

1. Fire hazard: ASTM E 84, flame spread 25 or less; smoke development 50 or less.
2. Smoke opacity: ASTM E 662.
3. ATM E 162: Exceeds requirements for surface flammability.

B. Accessories:

1. Impaling pins and clips: Cemco 1500 Series, Tactoo Insul-Hangers Series T by AGM Industries, Inc. or equal by Eckel Industries, Inc., of appropriate length required for insulation thickness used.
2. Adhesive for impaling pins: Made, or approved by the clip manufacturer. Do not use "peel and press" hangers with self-adhesive back.
3. Caps: Spun aluminum caps fitting pin size used.
4. Woven wire mesh: One-inch, 20-gage "Stucco Netting" 1-1/2-inch by 17-gage, zinc-coated hexagonal woven wire netting consisting of woven wire 1/18-inch diameter, by Davis Wire, "Keymesh Stucco Netting" by Keystone Steel & Wire Co., "SF Netting" by K-Lath, or equal complying with ASTM A 641 and C 1032. Paint black before installation, and touchup damaged paint when installed.]

2.04 ACOUSTIC SEALANTS & TAPE

A. Bulk sealant for closing small openings and joints up to a maximum of one-inch wide. Sealant backed with glass fiber packing, compressible joint filler or resilient backer rod. Do not use acetoxysilicone sealant where it might contact copper pipes.

1. Products:
 - a. Pecora Corp.: AC-20.
 - b. US Gypsum Co.: Sheetrock Acoustical Sealant.
 - c. Tremco, Inc.: Acoustical Sealant.
 - d. OSI Sealants: Henkel Corporation: OSI Pro-Series SC-175 Acoustical Sound Sealant.

B. Fire-barrier (acoustical) putty:

1. For closing large openings and joints typically over one inch wide. Applied full depth or backed with a dense safin, as detailed.
2. Non-shrinking, highly-adhesive, minimum 40-pcf density fire-barrier putty.
3. Products:
 - a. Series SSP Firestop Putty and Putty Pads by Specified Technologies Inc.
 - b. Nelson FSP Firestop Intumescent Putty by Chargar Corp.
 - c. Fiberfrax Fyre Putty by Unifrax.
 - d. Hilti CP 617 and CP 617L, intumescent moldable firestop putty for electrical outlet boxes.

C. Foamed-in-place silicone sealant:

1. For closing electrical ducts and cable trays where they penetrate constructions. Apply full depth of construction between permanent or temporary dams.
2. Fire-resistant, minimum 17-pcf density, foamed-in-place silicone sealant.
3. Products: Fire Barrier 2001 Silicone RTV Foam by 3M Fire Barrier Products Division.

D. Fire-resistive acoustic foam tape: "Norseal V740FR" compressible, closed cell polyvinyl chloride foam tape with pressure sensitive adhesive by Saint Gobain, or equal.

1. Provide one-inch wide by not less than 1/4-inch thick, self-extinguishing, 6 pcf density UL-listed acoustical foam tape.
2. Furnish tape in rolls with protective release liner on non-adhesive face.

2.05 ACOUSTIC PADS

- A. Use: For sealing the backs and sides of standard electrical back boxes. Select size to completely cover the box and overlap wall facing material at least one-inch.
1. Fire-rated assemblies:
 - a. Flamesafe FSP 1077 Putty Pads by WR Grace & Co.
 - b. Putty Pads by Specified Technologies Inc.
 - c. Hilti CP617 Putty Pads by Hilti.
 - d. 3M Fire Barrier Moldable Putty Pads by RectorSeal.
 - e. Putty Pads by International Protective Coatings.
 2. Elsewhere:
 - a. Type FSP Firestop Putty Pads by Nelson Electric.
 - b. Lowry's Outlet Box Pads by Harry A. Lowry & Associates.
 - c. Sound Pad #68 by L.H. Dottie Co.
- B. Self-adhesive sponge neoprene pads:
1. For providing a compressible filler and acoustical seal in the gaps of slip joints. Set in place with 10 to 15 percent compression. Airtight splices work in length-wise direction.
 2. Closed-cell sponge or foam neoprene of 8- to 12-pcf density, self-adhesive on one side, thicknesses and widths as required.
 3. Products:
 - a. Type V760 Norseal Foam Sealants by American Saint-Gobain.
 - b. DS Brown Co.
- C. Felt-lined metal sleeves:
1. For sealing around pipe, hanger rod or other round element penetrating a construction. Inside sleeve diameter to equal outside diameter of penetrating element. Exposed end of sleeve closed with acoustical sealant.
 2. Products:
 - a. Pipe Isolator by Eleen.
 - b. P-R Isolator by Potter-Roemer.
 - c. Trisolator by Stoneman Engineering.
- D. Self-adhesive bubble gaskets:
1. To seal around the edge of an operating access panels. Typically set on jamb or head frame or stop to act as a compression seal.
 2. Nominal 1/4-inch by 1/2-inch compressible bulb of silicone rubber or polyprene with self-adhesive on one side.
 3. Products:

- a. 5050 Self-Adhesive Gasket by National Guard Products.
- b. S88D or S88W Siliconeal by Pemko.
- c. 797 or 797W by Reese Enterprises.

PART 3 EXECUTION

3.01 EXAMINATION/PREPARATION

- A. Examine conditions and measurements affecting the work of this Section at site.
- B. Before installing insulation in stud walls, thoroughly clean space of debris.
- C. Correct detrimental conditions before proceeding with installation.

3.02 ACOUSTIC PADS

- A. Install acoustic pads behind all recessed boxes in walls that have acoustical insulation in their stud cavities.
- B. Clean the contact area of loose and foreign material in accordance with the pad manufacturer's instructions.
- C. Verify that all unused knockouts are plugged before installing the pad.
- D. Center the pad and cover the back and sides of all electrical, telephone and CATV boxes in sound-insulated walls with the acoustical pad.
- E. Mold around conduits and cables entering the box.
- F. Mold pads tightly to the boxes and to the adjacent surfaces.

3.03 BATT INSULATION

- A. Cut to fit irregular spaces, butt edges into firm contact with each other and adjoining surfaces.
- B. Hand pack around pipes, ducts, conduits, electrical boxes, etc., as required to thoroughly fill all voids and spaces between framing members and to form a continuous acoustical barrier.
- C. Comply with the California Electrical Code (CEC) for installation in proximity to light fixtures. Do not install insulation closer than recommended by CEC.
- D. Where in-wall electrical conduit is parallel to the wall, slit the insulation halfway to bury the conduit in it. Where the conduit is perpendicular to the wall (penetration), do not oversize the penetration; tape the conduit to prevent sound leakage.
- E. For application above ceilings, select batt width to be supported on ceiling construction over entire ceiling.

3.04 BOARD INSULATION

- A. Attach insulation to solid surfaces as follows:
 1. Where indicated, provide 2 layers of insulation; stagger joints between layers.

2. Provide insulation fasteners at typical spacing specified, or equivalent area for panels of a different size and for any cut panel sizes, except not less than 2 fasteners for any single piece.
 3. Lay out insulation without single piece less than 24 inches wide or less than 48 inches long, unless otherwise limited by available space.
 4. Offset intermediate end joints in adjacent panels and between insulation layers not less than 12 inches.
 5. For 48-inch wide units follow insulation manufacturer's instructions. Provide a minimum of 8 fasteners. Space edge fasteners no more than 3-inch from edges.
 6. For 24-inch wide units, comply with the above, except use no less than 6 fasteners.
 7. Secure each metal clip base in full bed of adhesive as recommended by their manufacturer.
 8. Do not install panels until clip adhesive is fully set.
 9. Cut panels in straight lines using sharp knives to prevent fraying. If necessary, neatly and carefully precut small slots through panels to facilitate placing insulation over fasteners.
 10. Install panels fully bearing against substrates, and neatly and tightly fitted at joints and around surfaces of penetrations.
 11. Install fastener caps firmly against panel faces and without compressing insulation.
- B. Cover insulation with woven wire mesh from wood base to height indicated; keep top of mesh level throughout the room. Staple at 6 inches o.c to supports.
- 3.05 ACOUSTIC SEALANT
- A. Comply with ASTM C 919 and the following.
 - B. Clean space to be calked of debris, dust and powdered materials which would prevent the sealant from adhering properly.
 - C. Seal openings between gypsum board and the perimeter of items penetrating gypsum board, such as electrical boxes, continuously using sealant specified.
 - D. Seal openings between the gypsum board and floors and ceilings along sound-insulated walls continuously, and along those intersecting walls for a minimum distance of 3-foot from insulated walls. When multiple layers occur, seal the perimeter of each layer continuously.
 - E. Seal gypsum board edges in contact with door frames continuously.
- 3.06 FIELD QUALITY CONTROL
- A. Prior to closing-in of insulated assemblies, or prior to Substantial Completion for insulation that will remain exposed in the building, refit, reinstall and/or replace wet, damaged and displaced insulation.

END OF SECTION

SECTION 09 90 00

PAINTING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Primers.
2. Finish coatings.
3. Floor sealers and paints.

B. Following items shall not be painted:

1. Brass valves, chromium or nickel-plated piping and fittings.
2. Fabric connections to fans.
3. Flexible conduit connections to equipment, miscellaneous name plates, stamping and instruction labels and manufacturer's data.
4. Mechanical and electrical utility lines, piping and heating and ventilation ductwork in tunnels, underfloor excavated areas or crawl spaces, attic spaces and enclosed utility spaces.
5. Products and equipment having a complete factory finish.
6. Brass, bronze, aluminum, lead, stainless steel, and chrome or nickel-plated surfaces.

C. Related Requirements:

1. [Section 05 12 00 "Structural Steel Framing"] [Section 05 12 13 "Architecturally Exposed Structural Steel Framing"] for shop priming of metal substrates.
2. Section 05 50 00 "Metal Fabrications" for shop priming metal fabrications.
3. Section 05 51 13 "Metal Pan Stairs" for shop priming metal floor plate stairs.
4. Section 05 51 19 "Metal Grating Stairs" for shop priming metal grating stairs.
5. Section 05 52 13 "Pipe and Tube Railings" for shop **[priming]** **[painting]** pipe and tube railings.
6. Section 09 96 00 "High-Performance Coatings" for Interior and Exterior substrates, and tilelike coatings.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include preparation requirements and application instructions.
2. Indicate VOC content.

B. Samples: For each type of topcoat product.

C. Samples for Initial Selection: For each type of topcoat product.

- D. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
 - 1. Submit Samples on rigid backing, 8 inches square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- E. Product Schedule: Use same designations indicated on Drawings and in the Exterior Painting Schedule to cross-reference paint systems specified in this Section. Include color designations.

1.03 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint Products: **[5]** <Insert number> percent, but not less than **[1 gal.]** <Insert value> of each material and color applied.

1.04 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
 - b. Other Items: Architect will designate items or areas required.
 - 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - a. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.06 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain each paint product from single source from single manufacturer.

B. PAINT

1. See current Campus Standards for acceptable Painting Manufacturers.

C. GRAFFITI-RESISTANT COATING

1. Permashield Premium
2. PROSOCO
3. Rainguard International

2.02 PAINT PRODUCTS, GENERAL

A. Material Compatibility:

1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by topcoat manufacturer for use in paint system and on substrate indicated.

B. Colors: [As selected by Architect from manufacturer's full range] [Match Architect's samples] [As indicated in a color schedule] <Insert requirements>.

1. **[10] [20] [30]** <Insert number> percent of surface area will be painted with deep tones.
2. LACC
 - a. Navajo White formula should be Vista formula. Swiss coffee eggshell preferred on all common walls for ease of maintenance. Use stock colors if possible on select areas for ease of maintenance. SCHOOL COLORS: Hyper Blue, Molasses, Crimson Red.
3. LAPC
 - a. Interior walls in classrooms, hallways, bathrooms and doors shall be Dunn Edwards suprema semigloss or similar. Ultra low voc or zero voc. Off white color shall be swiss coffee.
 - b. Exterior: dunn edwards evershield or similar. All trim (wood and metal) shall use semi-gloss paint.

C. Gloss degree standards shall be as follows:

- | | | | |
|---------------|--------------|----------|----------|
| 1. HIGH-GLOSS | 70 and above | EGGSHELL | 30 to 47 |
| 2. SEMI-GLOSS | 48 to 69 | FLAT | 15 to 29 |

2.03 PRIMERS

A. Exterior, Alkali-Resistant, Water-Based Primer: Pigmented, water-based primer formulated for use on alkaline surfaces, such as exterior plaster, vertical concrete, and masonry.

B. Exterior Wood Preservative: Solvent-based, zinc or copper naphthenate, penetrating antifungal treatment for exterior wood.

- C. Exterior, Latex Wood Primer: White, waterborne-emulsion primer formulated for resistance to extractive bleeding, mold, and microbials; for hiding stains; and for use on exterior wood subject to extractive bleeding.
- D. Exterior, Alkyd/Oil Wood Primer: Alkyd/oil-based primer that is resistant to extractive bleeding when applied to wood substrates with less than 15 percent moisture content; formulated for sag, mold, and microbial resistance; for hiding stains; and for use on exterior wood subject to extractive bleeding.
- E. Exterior, Latex Block Filler: Water-based, pigmented, high-solids, emulsion coating formulated to bridge and fill porous surfaces of exterior concrete masonry units in preparation for specified subsequent coatings.
 - 1. Minimum Solids Content: [Manufacturer's standard percentage] [50 percent] <Insert requirements> solids by volume.
- F. Water-Based Bonding Primer: Pigmented, water-based-emulsion primer formulated for exterior use and to promote adhesion of subsequent specified coatings.
- G. Solvent-Based Bonding Primer: Pigmented, solvent-based primer formulated for exterior use and to seal substrates and promote adhesion of specified subsequent coatings.
- H. Water-Based, Rust-Inhibitive Primer: Corrosion-resistant, water-based-emulsion primer formulated for resistance to flash rusting when applied to cleaned, exterior ferrous metals subject to mildly corrosive environments.
- I. Zinc-Rich, Inorganic Primer: Corrosion-resistant, inorganic-based, zinc-rich primer formulated for use on prepared steel subject to severe industrial or marine environments.
- J. Surface-Tolerant Metal Primer: Corrosion-resistant, solvent-based metal primer formulated for use on structural steel and metal fabrications that have been minimally prepared.
- K. Quick-Drying, Alkyd Metal Primer: Corrosion-resistant, solvent-based, modified-alkyd primer; lead and chromate free; formulated for quick-drying capabilities and for use on cleaned, exterior steel surfaces.
- L. Alkyd Metal Primer: Corrosion-resistant, solvent-based, alkyd primer formulated for use on prepared ferrous metals subject to industrial and light marine environments.
- M. Water-Based, Galvanized-Metal Primer: Corrosion-resistant, pigmented, acrylic primer; formulated for use on cleaned/etched, exterior, galvanized metal to prepare it for subsequent water-based coatings.
- N. Epoxy Metal Primer: Corrosion-resistant, solvent-based, two-component epoxy primer formulated for use on prepared, exterior ferrous- and galvanized-metal surfaces.
- O. Vinyl Wash Primer: Two-component, vinyl butyral/phosphoric acid, wash primer formulated for use over cleaned metal surfaces and zinc-rich primers as a tie coat for subsequent corrosion-resistant primers or finish coatings.
- P. Quick-Drying Aluminum Primer: Corrosion-resistant, solvent-based, alkyd or modified-alkyd primer formulated for quick-drying capabilities and for use on prepared exterior aluminum.

2.04 FINISH COATINGS

- A. Exterior Latex Paint, Flat: Water-based, pigmented coating; formulated for alkali, mold, microbial, and water resistance and for use on exterior surfaces, such as portland cement plaster, concrete, and primed wood.
- B. Exterior Latex Paint, Low Sheen: Water-based, pigmented coating; formulated for alkali, mold, microbial, and water resistance and for use on exterior surfaces, such as portland cement plaster, concrete, and primed wood.
- C. Exterior Latex Paint, Semigloss: Water-based, pigmented emulsion coating formulated for alkali, mold, microbial, and water resistance and for use on exterior surfaces, such as masonry, portland cement plaster, and primed wood and metal.
 - 1. Gloss Level: [Manufacturer's standard semigloss finish] [Gloss of 35 to 70 units at 60 degrees when tested in accordance with ASTM D523] <Insert requirements>.
- D. Exterior Latex Paint, Gloss: Water-based, pigmented, acrylic-copolymer-emulsion coating formulated for alkali, mold, microbial, scrub, blocking (sticking of two painted surfaces), and water resistance and for use on exterior, primed, wood and metal trim, sashes, frames, and doors.
 - 1. Gloss Level: [Manufacturer's standard gloss finish] [Gloss of 70 to 85 units at 60 degrees when tested in accordance with ASTM D523] <Insert requirements>.
- E. Exterior, High-Build Latex Paint: Water-based, high-build, pigmented, emulsion coating; high-solids content improves filling, uniformity, and film build on concrete masonry surfaces. Formulated for abrasion, mold, microbial, and wind-driven rain resistance and for use on exterior masonry, concrete masonry unit, and concrete surfaces.
 - 1. Minimum Solids Content: [Manufacturer's standard percentage] [47 percent] <Insert requirements> solids by volume.
- F. Textured Latex Coating, Flat: Water-based, pigmented coating that contains sand or other hard aggregate and is formulated for use on exterior masonry, concrete masonry unit, and concrete surfaces.
 - 1. Aggregate Size: [Manufacturer's standard] [Fine] [Medium] [Coarse] <Insert requirements>.
- G. Textured Latex Coating, Low Sheen: Water-based, pigmented coating that contains sand or other hard aggregate and is formulated for use on exterior masonry, concrete masonry unit, and concrete surfaces.
 - 1. Aggregate Size: [Manufacturer's standard] [Fine] [Medium] [Coarse] <Insert requirements>.
- H. Exterior Alkyd Enamel, Flat: Solvent-based, pigmented, alkyd enamel formulated for mold, microbial, and water resistance and for use on exterior, primed, wood and metal surfaces.
- I. Exterior Alkyd Enamel, Semigloss: Solvent-based, pigmented, alkyd enamel formulated for mold, microbial, and water resistance and for use on exterior, primed, wood and metal surfaces.
 - 1. Gloss Level: [Manufacturer's standard semigloss finish] [Gloss of 35 to 70 units at 60 degrees when tested in accordance with ASTM D523] <Insert requirements>.
- J. Exterior Alkyd Enamel, Gloss: Solvent-based, pigmented, alkyd enamel formulated for mold, microbial, and water resistance and for use on exterior, primed, wood and metal surfaces.
 - 1. Gloss Level: [Manufacturer's standard gloss finish] [Gloss of 70 to 85 units at 60 degrees when tested in accordance with ASTM D523] <Insert requirements>.

2. Fineness of Grind: **[Manufacturer's standard]** **[Maximum fineness of pigment dispersion of 6 units when tested in accordance with ASTM D1210]** **<Insert requirements>**.
- K. Quick-Drying Alkyd Enamel, Semigloss: Solvent-based, alkyd or modified-alkyd enamel formulated for quick-drying capabilities and for use on exterior, primed, metal and dimensionally stable wood surfaces.
1. Gloss Level: **[Manufacturer's standard semigloss finish]** **[Gloss of 35 to 70 units at 60 degrees when tested in accordance with ASTM D523]** **<Insert requirements>**.
- L. Quick-Drying Alkyd Enamel, Gloss: Solvent-based, alkyd or modified-alkyd enamel formulated for quick-drying capabilities and for use on exterior, primed, metal and dimensionally stable wood surfaces.
1. Gloss Level: **[Manufacturer's standard gloss finish]** **[Minimum gloss of 85 units at 60 degrees when tested in accordance with ASTM D523]** **<Insert requirements>**.
- M. Aluminum Paint: Aliphatic, solvent-based coating consisting of varnish or alkyd binder combined with aluminum pigment that is formulated for use as a stain-blocking coating and sealer on exterior wood, metal, bituminous-coated, and prepared masonry surfaces and to be able to be recoated with conventional alkyd and latex paints.
- N. High-Build Epoxy Paint, Low Gloss: High-solids, two-component epoxy; formulated for use on exterior concrete, masonry, and primed-metal surfaces.
- O. Exterior, Water-Based, Light Industrial Coating, Low Sheen: Corrosion-resistant, water-based, pigmented, emulsion coating formulated for resistance to blocking (sticking of two painted surfaces), water, alkalis, moderate abrasion, and mild chemical exposure and for use on exterior, primed, wood and metal surfaces.
- P. Exterior, Water-Based, Light Industrial Coating, Semigloss: Corrosion-resistant, water-based, pigmented, emulsion coating formulated for resistance to blocking (sticking of two painted surfaces), water, alkalis, moderate abrasion, and mild chemical exposure and for use on exterior, primed, wood and metal surfaces.
1. Gloss Level: **[Manufacturer's standard semigloss finish]** **[Gloss of 35 to 70 units at 60 degrees when tested in accordance with ASTM D523]** **<Insert requirements>**.
- Q. Exterior, Water-Based, Light Industrial Coating, Gloss: Corrosion-resistant, water-based, pigmented, emulsion coating formulated for resistance to blocking (sticking of two painted surfaces), water, alkalis, moderate abrasion, and mild chemical exposure and for use on exterior, primed, wood and metal surfaces.
1. Gloss Level: **[Manufacturer's standard gloss finish]** **[Gloss of 70 to 85 units at 60 degrees when tested in accordance with ASTM D523]** **<Insert requirements>**.
- 2.05 FLOOR SEALERS AND PAINTS
- A. Latex Floor Paint, Low Gloss: Water-based, pigmented coating formulated to hide stains, for alkali and incidental water resistance, and for use on exterior, concrete and primed-wood surfaces subject to low to medium foot traffic.
1. Gloss and Sheen Level: **[Manufacturer's standard low-gloss finish]** **[Maximum gloss of 25 units at 60 degrees and sheen of 10 to 35 units at 85 degrees when tested in accordance with ASTM D523]** **<Insert requirements>**.
 2. Slip-Resistant Aggregate: **[Manufacturer's standard additive]** **<Insert requirements>**.

- B. Latex Deck Coating: Water-based, high-solids, acrylic-emulsion coating; formulated for use on exterior, concrete and wood-board traffic surfaces.
 - 1. Gloss Level: **[Manufacturer's standard]** <Insert requirements>.
 - 2. Minimum Solids Content: **[Manufacturer's standard percentage]** **[25 percent]** <Insert requirements> solids by volume.
 - 3. Surface Texture: **[Smooth]** **[Slip resistant]**.
- C. Alkyd Floor Enamel, Gloss: Solvent-based, alkyd enamel; self-priming where applied to bare wood; formulated to hide stains, for durability, for microbial and abrasion resistance, and for use on exterior, wood-board, traffic surfaces.
 - 1. Gloss Level: **[Manufacturer's standard gloss finish]** **[Gloss of 70 to 85 units at 60 degrees when tested in accordance with ASTM D523]** <Insert requirements>.
 - 2. Slip-Resistant Aggregate: **[Manufacturer's standard additive]** <Insert requirements>.
- D. Water-Based, Concrete-Floor Sealer: Clear, water-based, acrylic-copolymer-emulsion sealer formulated for oil, gasoline, alkali, and water resistance and for use on exterior, concrete traffic surfaces.
- E. Solvent-Based, Concrete-Floor Sealer: Clear, acrylic, solvent-based sealer formulated for oil, gasoline, alkali, and water resistance and for use on exterior, concrete traffic surfaces.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Concrete: 12 percent.
 - 2. Fiber-Cement Board: 12 percent.
 - 3. Masonry (Clay and Concrete Masonry Units): 12 percent.
 - 4. Wood: 15 percent.
 - 5. Portland Cement Plaster: 12 percent.
 - 6. Gypsum Board: 12 percent.
- C. Portland Cement Plaster Substrates: Verify that plaster is fully cured.
- D. Exterior Gypsum Board Substrates: Verify that finishing compound is dry and sanded smooth.
- E. Verify suitability of substrates, including surface conditions and compatibility, with finishes and primers.
- F. Proceed with coating application only after unsatisfactory conditions have been corrected.
- G. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Comply with manufacturer's written instructions applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems specified in this Section.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer **[.] [but not less than the following:]**
1. SSPC-SP 2.
 2. SSPC-SP 3.
 3. SSPC-SP 7/NACE No. 4.
 4. SSPC-SP 11.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
1. Scrape and clean knots. Before applying primer, apply coat of knot sealer recommended in writing by topcoat manufacturer for exterior use in paint system indicated.
 2. Sand surfaces that will be exposed to view, and remove sanding dust.
 3. Prime edges, ends, faces, undersides, and backsides of wood.
 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- K. Plastic Trim Fabrication Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.03 INSTALLATION

- A. Apply paints in accordance with manufacturer's written instructions.
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
 - 3. Paint **[both sides] [exterior side]** and edges of exterior doors and entire exposed surface of exterior door frames.
 - 4. Paint entire exposed surface of window frames and sashes.
 - 5. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 6. Primers specified in the Exterior Painting Schedule may be omitted on items that are factory primed or factory finished if compatible with intermediate and topcoat coatings and acceptable to intermediate and topcoat paint manufacturers.
- B. Tint undercoats same color as topcoat, but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
 - 1. Paint the following work where exposed to view:
 - a. Equipment, including panelboards **[and switch gear]**.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Tanks that do not have factory-applied final finishes.
 - h. <Insert requirements>.

3.04 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written instructions, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written instructions.

3.05 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
 - 1. Do not clean equipment with free-draining water and prevent solvents, thinners, cleaners, and other contaminants from entering into waterways, sanitary and storm drain systems, and ground.
 - 2. Dispose of contaminants in accordance with requirements of authorities having jurisdiction.
 - 3. Allow empty paint cans to dry before disposal.
 - 4. Collect waste paint by type and deliver to recycling or collection facility.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.06 EXTERIOR PAINTING SCHEDULE

- A. Wood: 100 percent Acrylic Flat
 - 1. Primer (1 coat):
 - a. 4200 Terminator II by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 2000 Duratone by Vista Paint.
 - b. EVSH10 Evershield by Dunn-Edwards.
 - c. Duration Flat K32 Series by Sherwin-Williams.
- B. Wood: 100 percent Semi-Gloss Acrylic
 - 1. Primer (1 coat):
 - a. 4200 Terminator II by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. EVSH50-0 Evershield SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- C. Wood: 100 percent Gloss Acrylic

1. Primer (1 coat):
 - a. 4200 Terminator II by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60-0 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
- D. Wood: Semi-Transparent Stain
1. 2 Coats:
 - a. Olympic Maximum Semi-Transparent Stain by Vista Paint.
 - b. Okon WPT-3 Semi-Transparent Stain by Dunn-Edwards.
 - c. SuperDeck Exterior Waterborne Semi-Transparent Stain, SD3T00015 by Sherwin-Williams.
- E. Concrete and Brick: 100 percent Acrylic Flat
1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. Loxon Concrete & Masonry Primer/Sealer, A24W8300 by Sherwin-Williams.
 2. Finish Coat (2 coats):
 - a. 2000 Duratone by Vista Paint.
 - b. EVSH10 Evershield by Dunn-Edwards.
 - c. Duration Flat K32 Series by Sherwin-Williams.
- F. Portland Cement Plaster: 100 percent Acrylic Flat
1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. Loxon Concrete & Masonry Primer/Sealer, A24W8300 by Sherwin-Williams.
 2. Finish Coat (2 coats):
 - a. 2000 Duratone by Vista Paint.
 - b. EVSH10 Evershield by Dunn-Edwards.
 - c. Duration Flat K32 Series by Sherwin-Williams.
- G. CMU: 100 percent Acrylic Flat
1. Primer (1 coat):
 - a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.

- c. Loxon Block Surfacers, A24W200 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 2000 Duratone by Vista Paint.
 - b. EVSH10 Evershield by Dunn-Edwards.
 - c. Duration Flat K32 Series by Sherwin-Williams.
- H. CMU: 100 percent Acrylic Elastomeric
 - 1. Primer (1 coat):
 - a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.
 - c. Loxon Block Surfacers, A24W200 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 1900 Weather Master at 8 to 10 MILS per coat DFT by Vista Paint.
 - b. DE Enduralastic, 10 EDLX10-0 Elastomeric at 11 to 13 MILS per coat DFT by Dunn-Edwards.
 - c. Loxon XP, A24W1451 at 8 to 10 MILS per coat DFT by Sherwin-Williams.
- I. CMU, Concrete, Brick: Graffiti-Resistant Coating (Permanent Matte Flat)
 - 1. Graffiti resistant coating shall be a clear, non-sacrificial graffiti resistant coating which provides protection for exterior vertical surfaces from permanent graffiti staining and damage caused by spray paint and marking pens. Coating shall be suitable for application to painted and unpainted surfaces including masonry, concrete, metals, and EIFS. Product shall be of type such that recoating with the underlying paint is possible without removal of the graffiti resistant coating. Product shall be a coating that dries clear, non-yellowing, with a low luster.
 - a. Equivalent by PROSOCO.
 - b. Painted Surfaces
 - 1) Finish Coat – Opaque (2 coats):
 - (a) Monochem 6100 Clear or 6150 Pigmented TDFT Base at 4-6 MILS by Vista Paint.
 - (b) Monochem 6100 Clear or 6150 Pigmented TDFT Base at 4-6 MILS by Dunn-Edwards.
 - (c) Monochem 6100 Clear or 6150 Pigmented TDFT Base at 4-6 MILS by Sherwin-Williams.
 - 2) Finish Coat – Clear (2 coats):
 - (a) Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Vista Paint.
 - (b) Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Dunn-Edwards.
 - (c) Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Sherwin-Williams.
 - (d) VandIGuard IsoFree Aliphatic 2K Non-Sacrificial Graffiti Coating (1 Coat at 3-4 wet mils) by RainGuard International.

- c. Graffiti Remover: VandIClean Super graffiti remover by Rainguard International.
- J. Iron and Steel: 100 percent Gloss Acrylic
- 1. Primer (1 coat):
 - a. 9600 Protec Primer by Vista Paint.
 - b. BRPR00 Block Rust by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60-0 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
- K. Iron and Steel: 100 percent Semi-Gloss Acrylic
- 1. Primer (1 coat):
 - a. 9600 Protec Primer by Vista Paint.
 - b. BRPR00 Block Rust by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. EVSH50-0 Evershield GL by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- L. Aluminum and Galvanized Steel: 100 percent Gloss Acrylic
- 1. Pretreat:
 - a. Jasco Prep N Prime by Vista Paint.
 - b. SCME-01 Supreme Etch by Dunn-Edwards.
 - c. Great Lakes Clean & Etch by Sherwin-Williams.
 - 2. Primer (1 coat):
 - a. 4800 Metal Pro Primer by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. Pro Industrial DTM Acrylic Primer/Finish, B66W11 by Sherwin-Williams.
 - 3. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60-0 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
- M. Aluminum and Galvanized Steel: 100 percent Semi-Gloss Acrylic
- 1. Pretreat:
 - a. Krud Kutter by Vista Paint.
 - b. SCME-01 Supreme Etch by Dunn-Edwards.

- c. Great Lakes Clean & Etch by Sherwin-Williams.
 - 2. Primer (1 coat):
 - a. 4800 Metal Pro Primer by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. Pro Industrial DTM Acrylic Primer/Finish, B66W11 by Sherwin-Williams.
 - 3. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. EVSH50-0 Evershield SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- N. Fiber Cement Board: 100 percent Acrylic Flat
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. Loxon Concrete & Masonry Primer/Sealer, A24W8300 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 2000 Duratone by Vista Paint.
 - b. EVSH10 Evershield by Dunn-Edwards.
 - c. Duration Flat K32 Series by Sherwin-Williams.
- O. Zinc Alloy: 100 percent Semi-Gloss Acrylic
- Pretreat:
- a. Krud Kutter by Vista Paint.
 - b. SCME-01 Supreme Etch by Dunn-Edwards.
 - c. Great Lakes Clean & Etch by Sherwin-Williams.
- 2. Primer (1 coat):
 - a. 4800 Metal Pro Primer by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. Pro Industrial DTM Acrylic Primer/Finish, B66W11 by Sherwin-Williams.
 - 3. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. EVSH50-0 Evershield SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- P. Ferrous Metal: Heavy Duty
- 1. Primer (1 coat):
 - a. Carboline Carboguard 890 VOC at 5 MILS DFT by Vista Paint.
 - b. Carboline Carboguard 890 VOC at 5 MILS DFT by Dunn-Edwards.
 - c. Macropoxy 646-100 Fast Cure Epoxy, B58W620 at 5 MILS DFT by Sherwin-Williams.

2. Primer (1 coat):
 - a. Carboline Carbothane 133MC at 5 MILS DFT by Vista Paint.
 - b. Carboline Carbothane 133MC at 5 MILS DFT by Dunn-Edwards.
 - c. Hi-Solids Polyurethane 100, B65-600 Series at 4 MILS DFT by Sherwin-Williams.

Q. Gypsum Soffit Board: 100 percent Acrylic Flat

1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
2. Finish Coat (2 coats):
 - a. 2000 Duratone by Vista Paint.
 - b. EVSH10 Evershield or Enduralastic 10 by Dunn-Edwards.
 - c. Duration Flat K32 Series or A80-1100 Series by Sherwin-Williams.

3.07 INTERIOR PAINT SCHEDULE

A. Wood: Low Sheen 100 percent Acrylic

1. Primer (1 coat):
 - a. 4200 Terminator II by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
2. Finish Coat (2 coats):
 - a. 8200 Carefree by Vista Paint.
 - b. SPMA20 Suprema Velvet Sheen by Dunn-Edwards.
 - c. Duration Matte A96 Series by Sherwin-Williams.

B. Wood: Semi-Gloss 100 percent Acrylic

1. Primer (1 coat):
 - a. 4200 Terminator II by Vista Paint.
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
2. Finish Coat (2 coats):
 - a. 8400 Carefree Semi-Gloss by Vista Paint.
 - b. SPMA50 Suprema Semi-Gloss by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

C. Wood: ST Stain & Clear Lacquer Finish (275 g/liter VOC)

1. Stain (1 coat):
 - a. VWS0250 Series ST Stain by Vista Paint.

- b. Old Masters Water-bases Stain by Dunn-Edwards.
- c. Minwax Water-based Wood Stain by Sherwin-Williams.
- 2. Sanding Sealer (1 coat):
 - a. NRS 1620 [? ? ?] by Vista Paint.
 - b. Contractor's Edge Sanding Sealer by Dunn-Edwards.
 - c. Sher-Wood NC Lacquer Sealer, T65FV14 Sanding Sealer by Sherwin-Williams.
- 3. Finish (1 coat):
 - a. NRF 1626 Satin Lacquer by Vista Paint.
 - b. Contractor's Edge Sanding Sealer by Dunn-Edwards.
 - c. Sher-Wood 275 Lacquer, T75FH100 Series by Sherwin-Williams.
 - d. Wood: Stained, Water White Finish (for light colored stains) (275 g/liter VOC)
- 4. Stain (1 coat):
 - a. VW0250 Series ST Stain by Vista Paint.
 - b. Gemini 240 Wiping Stain 2400 by Dunn-Edwards.
 - c. Minwax Water-based Wood Stain by Sherwin-Williams.
- 5. Sealer (1 coat):
 - a. NAF 1420 Satin Sealer by Vista Paint.
 - b. Gemini Lacquer Sealer 700-1200 by Dunn-Edwards.
 - c. Sher-Wood NC Lacquer by Sherwin-Williams.
- 6. Finish (1 coat):
 - a. NAF 1426 Satin Lacquer by Vista Paint.
 - b. Gemini Clear Lacquer 500-0282 by Dunn-Edwards.
 - c. Sher-Wood 275 Lacquer, T75FH100 Series by Sherwin-Williams.
- D. Wood: Varnish Flat Clear
 - 1. Finish Coat (2 coats):
 - a. McCloskey's 6701 Flat by Vista Paint.
 - b. Old Masters Waterborne Wood Stain by Dunn-Edwards.
 - c. Minwax Water based Wood Stain by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. Varnish Satin Clear McCloskey's 6702 Satin by Vista Paint.
 - b. Old Masters Waterborne Polyurethane Satin by Dunn-Edwards.
 - c. Wood Classics Waterborne Polyurethane Varnish Satin by Sherwin-Williams.
 - 3. Finish Coat (2 coats):
 - a. Varnish Gloss Clear McCloskey's 6703 Gloss by Vista Paint.
 - b. Old Masters Waterborne Polyurethane Gloss by Dunn-Edwards.
 - c. Wood Classics Waterborne Polyurethane Varnish Gloss by Sherwin-Williams.
 - d. Wood: Varnish Flat Clear

4. Finish Coat (2 coats):
 - a. DF 12 Dryfall Flat by Vista Paint.
 - b. AQUA10 Aquafall Dry Fall by Dunn-Edwards.
 - c. Waterborne Acrylic Dryfall Flat, B42W1 by Sherwin-Williams.
 - d. Rough Sawn Wood: Stain, Semi-Transparent
 5. Finish Coat (2 coats):
 - a. Olympic Semi-Transparent Stain by Vista Paint.
 - b. Okon WPT-3 Semi-Transparent Stain by Dunn-Edwards.
 - c. Transparent Stain Waterborne Semi-Transparent Stain, SD3T00015 by Sherwin-Williams.
- E. Concrete, Plaster, CMU: Flat Acrylic
1. Concrete Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 2. Plaster Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 3. CMU Primer (1 coat):
 - a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.
 - c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.
 4. Finish Coat (2 coats):
 - a. 8100 Carefree Flat by Vista Paint.
 - b. SPMA10 Suprema Flat by Dunn-Edwards.
 - c. Duration Flat A95 Series by Sherwin-Williams.
- F. CMU, Concrete, Plaster: Eggshell Acrylic
1. Concrete Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 2. Plaster Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 3. CMU Primer (1 coat):

- a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.
 - c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.
4. Finish Coat (2 coats):
- a. 8200 Carefree VS by Vista Paint.
 - b. SPMA30 Suprema EG by Dunn-Edwards.
 - c. Duration Matte A96 Series by Sherwin-Williams.
- G. CMU, Concrete, Plaster: Semi-Gloss Acrylic
1. Concrete Primer (1 coat):
- a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
2. Plaster Primer (1 coat):
- a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
3. CMU Primer (1 coat):
- a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.
 - c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.
4. Finish Coat (2 coats):
- a. 8400 Carefree SG by Vista Paint.
 - b. SPMA50 Suprema SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- H. CMU, Concrete, Plaster: 100 percent Acrylic
1. Concrete Primer (1 coat):
- a. 065 Acry-Prime by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
2. Plaster Primer (1 coat):
- a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
3. CMU Primer (1 coat):
- a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.

- c. Loxon Block Surfacers, A24W200 by Sherwin-Williams.
 - 4. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
- I. Masonry: Gloss Acrylic Epoxy
 - 1. Concrete Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Loc or Carboline 120 Primer with Carboline Sanitile 555 by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Plaster Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Super-Loc by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 3. CMU Primer (1 coat):
 - a. 018 Acrylic Block Filler by Vista Paint.
 - b. SBPR00 Blocfil by Dunn-Edwards.
 - c. Loxon Block Surfacers, A24W200 by Sherwin-Williams.
 - 4. Finish Coat (2 coats):
 - a. S60 WB Gloss Epoxy at 2 to 3 MILS DFT by Vista Paint.
 - b. S60 WB Gloss Epoxy at 2 to 3 MILS DFT or Carboline Sanitile 555 by Dunn-Edwards.
 - c. Pro Industrial Water Based Catalyzed Epoxy Gloss, B73-300/B73V300 at 2 to 4 MILS DFT by Sherwin-Williams.
- J. Gypsum Board: Flat
 - 1. Finish Coat (2 coats):
 - a. 8100 Carefree Flat by Vista Paint.
 - b. SPMA10 Suprema Flat by Dunn-Edwards.
 - c. Duration Flat A95 Series by Sherwin-Williams.
- K. Gypsum Board: Eggshell
 - 1. Primer (1 coat):
 - a. 1100 Hi-Build PVA Primer by Vista Paint.
 - b. VNPR00 Vinylastic Primer by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8200 Carefree Velva Sheen by Vista Paint.
 - b. SPMA30 Suprema EG by Dunn-Edwards.

- c. Duration Matte A96 Series by Sherwin-Williams.
- L. Gypsum Board: Low Sheen 100 percent Acrylic
 - 1. Primer (1 coat):
 - a. 1100 Hi-Build PVA Primer by Vista Paint.
 - b. VNPR00 Vinylastic Primer by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8300 Carefree Eggshell by Vista Paint.
 - b. SPMA40 Suprema Low Sheen by Dunn-Edwards.
 - c. Duration Satin A97 Series by Sherwin-Williams.
- M. Gypsum Board: Semi-Gloss Acrylic
 - 1. Primer (1 coat):
 - a. 1100 Hi-Build PVA Primer by Vista Paint.
 - b. VNPR00 Vinylastic Primer by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree Semi-Gloss by Vista Paint.
 - b. SPMA50 Suprema Semi-Gloss by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- N. Gypsum Board: 100 percent Gloss Acrylic
 - 1. Primer (1 coat):
 - a. 1100 Hi-Build PVA Primer by Vista Paint.
 - b. VNPR00 Vinylastic Primer by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60 Evershield Gloss by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
- O. Gypsum Board: Gloss Acrylic Epoxy
 - 1. Primer (1 coat):
 - a. 1100 Hi-Build PVA Primer by Vista Paint.
 - b. VNPR00 Vinylastic Primer by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. Carboline Sanitile 255 at 2 to 3 MILS DFT by Vista Paint.
 - b. Carboline Sanitile 255 at 2 to 3 MILS DFT by Dunn-Edwards.

- c. Pro Industrial Water Based Catalyzed Epoxy Gloss, B73-300/B73V300 at 2 to 4 MILS DFT by Sherwin-Williams.
- P. Plaster: Gypsum, Portland Cement, Flat
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8100 Carefree Flat by Vista Paint.
 - b. SPMA10 Suprema Flat by Dunn-Edwards.
 - c. Duration Flat, A95 Series by Sherwin-Williams.
- Q. Plaster: Gypsum, Portland Cement, Eggshell
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8200 Carefree Velva Sheen by Vista Paint.
 - b. SPMA30 Suprema EG by Dunn-Edwards.
 - c. Duration Matte A96 Series by Sherwin-Williams.
- R. Plaster: Gypsum, Portland Cement, Semi-Gloss Acrylic
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. SPMA50 Suprema SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- S. Plaster: Gypsum, Portland Cement, Gloss 100 percent Acrylic
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.

- b. EVSH00 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss A38 Series by Sherwin-Williams.
- T. Particleboard, Hardboard: Flat
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8100 Carefree Flat by Vista Paint.
 - b. SPMA10 Suprema Flat by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Flat, B30-2600 by Sherwin-Williams.
- U. Particleboard, Hardboard: Semi-Gloss Acrylic
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. SPMA50 Suprema SG by Dunn-Edwards.
 - c. ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 by Sherwin-Williams.
- V. Particleboard, Hardboard: Gloss 100 percent Acrylic
- 1. Primer (1 coat):
 - a. 4600 Uniprime II by Vista Paint.
 - b. ESPR00 Eff-Stop by Dunn-Edwards.
 - c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss A38 Series by Sherwin-Williams.
- W. Ferrous Metal: Semi-Gloss 100 percent Acrylic
- 1. Primer (1 coat):
 - a. 9600 Protec Primer by Vista Paint
 - b. ENPR00 Enduraprime by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.

- b. SPMA50 Suprema SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- X. Ferrous Metal: Gloss 100 percent Acrylic
- 1. Primer (1 coat):
 - a. 9600 Protec Primer by Vista Paint
 - b. BRPR00 Block-Rust by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH00 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss A38 Series by Sherwin-Williams.
- Y. Ferrous Metal: Heavy Duty
- 1. Primer (1 coat):
 - a. Carboline Carboguard 890 VOC at 5 MILS DFT by Vista Paint.
 - b. Carboline Carboguard 890 VOC at 5 MILS DFT by Dunn-Edwards.
 - c. Macropoxy 646-100 Fast Cure Epoxy, B58W620 at 5 MILS DFT by Sherwin-Williams.
 - 2. Primer (1 coat):
 - a. Carboline Carbothane 133MC at 5 MILS DFT by Vista Paint.
 - b. Carboline Carbothane 133MC at 5 MILS DFT by Dunn-Edwards.
 - c. Hi-Solids Polyurethane 100, B65-600 Series at 4 MILS DFT by Sherwin-Williams.
- Z. Aluminum: Semi-Gloss 100 percent Acrylic
- 1. Primer (1 coat):
 - a. 9600 Protec Primer by Vista Paint
 - b. ULGM00 Ultrashield by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8400 Carefree SG by Vista Paint.
 - b. SPMA50 Suprema SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- AA. Aluminum: Gloss 100 percent Acrylic
- 1. Primer (1 coat):
 - a. 4800 Metal Pro Primer by Vista Paint
 - b. ULGM00 Ultrashield by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
 - 2. Finish Coat (2 coats):
 - a. 8500 Carefree Gloss by Vista Paint.

- b. EVSH60 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
 - d. Stainless Steel, Copper, Brass: Semi-Gloss 100 percent Acrylic
3. Primer (1 coat):
- a. 4800 Metal Pro Primer by Vista Paint
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
4. Finish Coat (2 coats):
- a. 8400 Carefree SG by Vista Paint.
 - b. SPMA50 Suprema SG by Dunn-Edwards.
 - c. Duration Semi-Gloss A98 Series by Sherwin-Williams.
- BB. Stainless Steel, Copper, Brass: Gloss 100 percent Acrylic
1. Primer (1 coat):
- a. 4800 Metal Pro Primer by Vista Paint
 - b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
 - c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.
2. Finish Coat (2 coats):
- a. 8500 Carefree Gloss by Vista Paint.
 - b. EVSH60 Evershield GL by Dunn-Edwards.
 - c. Duration Gloss K38 Series by Sherwin-Williams.
- CC. Fiberglass or Glass: (All Finishes)
1. Primer (1 coat):
- a. XIM Clear Primer by Vista Paint
 - b. XIM Clear Primer by Dunn-Edwards.
 - c. Extreme Bond Bonding Primer, B51W150 by Sherwin-Williams.
2. Finish Coat (2 coats):
- a. Finish as specified by Vista Paint.
 - b. Finish as specified by Dunn-Edwards.
 - c. Finish as specified by Sherwin-Williams.
- DD. Acoustical Tile: Flat
1. Primer (1 coat):
- a. 013 Acoustic Kote by Vista Paint
 - b. CEIL10 Ceiling Paint by Dunn-Edwards.
2. Finish Coat (2 coats):
- a. 013 Acoustic Kote by Vista Paint.
 - b. CEIL10 Ceiling Paint by Dunn-Edwards.

SECTION 09 96 00

HIGH-PERFORMANCE COATINGS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes surface preparation and the application of high-performance coating systems **[.] [on the following substrates:]**

- 1. Exterior Substrates:

- a. Concrete, **[vertical] [and] [horizontal]** surfaces.
- b. Fiber-cement board.
- c. Clay masonry.
- d. Concrete masonry units (CMUs).
- e. Steel.
- f. Galvanized metal.
- g. Aluminum (not anodized or otherwise coated).
- h. Copper.
- i. Stainless steel.
- j. Wood.
- k. Fiberglass.
- l. Portland cement plaster (stucco).

- 2. Interior Substrates:

- a. Concrete, **[vertical] [and] [horizontal]** surfaces.
- b. Cement board.
- c. Clay masonry.
- d. Concrete masonry units (CMUs).
- e. Steel.
- f. Galvanized metal.
- g. Aluminum (not anodized or otherwise coated).
- h. Wood.
- i. Fiberglass.
- j. Gypsum board.
- k. Plaster.

B. Related Requirements:

1. [Section 05 12 00 "Structural Steel Framing"] [Section 05 12 13 "Architecturally Exposed Structural Steel Framing"] for shop priming of structural steel with primers specified in this Section.
2. Section 05 52 13 "Pipe and Tube Railings" for shop **[priming] [painting]** pipe and tube railings with coatings specified in this Section.
3. Section 09 91 13 "Exterior Painting" for general field painting.
4. Section 09 91 23 "Interior Painting" for general field painting.

1.03 DEFINITIONS

- A. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.
- B. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.
- C. MPI Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 2. Indicate VOC content.
- B. Samples for Initial Selection: For each type of topcoat product indicated.
- C. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.
 1. Submit Samples on rigid backing, 8 inches square.
 2. Apply coats on Samples in steps to show each coat required for system.
 3. Label each coat of each Sample.
 4. Label each Sample for location and application area.
- D. Product List: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.05 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials **[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Coatings: **[5] <Insert number>** percent, but not less than **[1 gal.] <Insert number>** of each material and color applied.

1.06 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each coating system.
 - a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft..
 - b. Other Items: Architect will designate items or areas required.
2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
 1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.08 FIELD CONDITIONS

- A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
- C. Do not apply exterior coatings in snow, rain, fog, or mist.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Products: Subject to compliance with requirements, see Campus Standards for acceptable Paint Manufacturers listed in the Exterior High-Performance Coating Schedule or Interior High-Performance Coating Schedule for the coating category indicated.

2.02 HIGH-PERFORMANCE COATINGS, GENERAL

- A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."
- B. Material Compatibility:
 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

3. Products shall be of same manufacturer for each coat in a coating system.

C. Colors: [As selected by Architect from manufacturer's full range] [Match Architect's samples] [As indicated in color schedule] <Insert requirements>.

2.03 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:

1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 1. Concrete: 12 percent.
 2. Fiber-Cement Board: 12 percent.
 3. Masonry (Clay and CMUs): 12 percent.
 4. Wood: 15 percent.
 5. Gypsum Board: 12 percent.
 6. Plaster: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Plaster Substrates: Verify that plaster is fully cured.
- E. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- F. Proceed with coating application only after unsatisfactory conditions have been corrected.
 1. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
 - 1. Clean surfaces with pressurized water. Use pressure range of **[1500 to 4000 psi] [000 to 10,000 psi]** at 6 to 12 inches.
 - 2. Abrasive blast clean surfaces to comply with SSPC-SP 7/NACE No. 4.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not coat surfaces if moisture content, alkalinity of surfaces, or alkalinity of mortar joints exceeds that permitted in manufacturer's written instructions.
 - 1. Clean surfaces with pressurized water. Use pressure range of **[100 to 600 psi] [1500 to 4000 psi]** at 6 to 12 inches.
- F. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer **[.] [but not less than the following:]**
 - 1. SSPC-SP 7/NACE No. 4.
 - 2. SSPC-SP 11.
 - 3. SSPC-SP 6/NACE No. 3.
 - 4. SSPC-SP 10/NACE No. 2.
 - 5. SSPC-SP 5/NACE No. 1.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
 - 1. Scrape and clean knots. Before applying primer, apply coat of knot sealer that is recommended in writing by topcoat manufacturer for coating system indicated.

2. Sand surfaces that will be exposed to view and dust off.
3. Prime edges, ends, faces, undersides, and backsides of wood.
4. After priming, fill holes and imperfections in the finish surfaces with filler that is recommended in writing by topcoat manufacturer for coating system indicated. Sand smooth when dried.

3.03 APPLICATION

- A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
 1. Use applicators and techniques suited for coating and substrate indicated.
 2. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
 3. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
- D. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

3.04 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.
 1. Contractor shall touch up and restore coated surfaces damaged by testing.
 2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

3.05 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Architect, and leave in an undamaged condition.

- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.06 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System **[MPI EXT 3.1D]**:
 - a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
2. Epoxy-Modified Latex System **[MPI EXT 3.1E]**:
 - a. Prime Coat: Epoxy-modified latex, matching topcoat.
 - b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [, **MPI #215**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [, **MPI #115**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
3. Pigmented Polyurethane over Epoxy System **[MPI EXT 3.1M]**:
 - a. Prime Coat: Epoxy, matching intermediate coat.
 - b. Intermediate Coat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.

B. Concrete Substrates, Horizontal Surfaces:

1. Epoxy Non-Slip Deck Coating System **[MPI EXT 3.2C]**:
 - a. Prime Coat: As recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
 - c. Topcoat: Epoxy deck coating (slip resistant) [, **MPI #82**].
 - 1) **<Insert manufacturer's name; product name or designation>**.

C. Cement Board Substrates:

1. Epoxy System **[MPI EXT 3.3E]**:
 - a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].

- 1) <Insert manufacturer's name; product name or designation>.
 2. Epoxy-Modified Latex System **[MPI EXT 3.3D]**
 - a. Prime Coat: Epoxy-modified latex, matching topcoat.
 - b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) **[, MPI #215]**.
 - 1) <Insert manufacturer's name; product name or designation>.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) **[, MPI #115]**.
 - 1) <Insert manufacturer's name; product name or designation>.
 3. Pigmented Polyurethane over Epoxy System **[MPI EXT 3.3F]**:
 - a. Prime Coat: Epoxy, gloss **[, MPI #77]**.
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, matching prime coat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) <Insert manufacturer's name; product name or designation>.
- D. Clay Masonry Substrates:
1. Epoxy System **[MPI EXT 4.1D]**:
 - a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss **[, MPI #77]**.
 - 1) <Insert manufacturer's name; product name or designation>.
 2. Pigmented Polyurethane over Epoxy System **[MPI EXT 4.1J]**:
 - a. Prime Coat: Epoxy, matching intermediate coat.
 - b. Intermediate Coat: Epoxy, gloss **[, MPI #77]**.
 - 1) <Insert manufacturer's name; product name or designation>.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) <Insert manufacturer's name; product name or designation>.
- E. CMU Substrates:
1. Epoxy System **[MPI EXT 4.2E]**:
 - a. Block Filler: Block filler, epoxy **[, MPI #116]**.
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss **[, MPI #77]**.

- 1) **<Insert manufacturer's name; product name or designation>.**
2. Pigmented Polyurethane over High-Build Epoxy System **[MPI EXT 4.2G]:**
 - a. Block Filler: Block filler, epoxy **[, MPI #116]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, high build, low gloss **[, MPI #108]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
- F. Steel Substrates:
 1. Epoxy System **[MPI EXT 5.1F]:**
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, high build, low gloss **[, MPI #108]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - c. Topcoat: Epoxy, gloss **[, MPI #77]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 2. Epoxy over Self-Priming Epoxy System **[MPI EXT 5.1S]:**
 - a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss **[, MPI #77]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 3. Epoxy Deck Coating over Epoxy Primer and High-Build Epoxy System **[MPI EXT 5.1V]:**
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, high build, low gloss **[, MPI #108]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - c. Topcoat: Epoxy deck coating **[, MPI #82]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**
 4. Epoxy Deck Coating over Self-Priming Epoxy System **[MPI EXT 5.1X]:**
 - a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
 - 1) **<Insert manufacturer's name; product name or designation>.**

- b. Topcoat: Epoxy deck coating [, MPI #82].
 - 1) <Insert manufacturer's name; product name or designation>.
- 5. Pigmented Polyurethane over Epoxy System [MPI EXT 5.1H]:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [, MPI #101].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, gloss [, MPI #77].
 - 1) <Insert manufacturer's name; product name or designation>.
 - c. [First and Second]Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.
- 6. Pigmented Polyurethane over High-Build Epoxy System [MPI EXT 5.1J]:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [, MPI #101].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, high build, low gloss [, MPI #108].
 - 1) <Insert manufacturer's name; product name or designation>.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.
- 7. Pigmented Polyurethane over Self-Priming Epoxy System [MPI EXT 5.1T]:
 - a. Prime Coat: Epoxy, high build, self-priming [, MPI #120].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.
- 8. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System [MPI EXT 5.1P]:
 - a. Prime Coat: Primer, zinc rich, epoxy [, MPI #20].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, gloss [, MPI #77].
 - 1) <Insert manufacturer's name; product name or designation>.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.

9. Pigmented Polyurethane over Epoxy Zinc-Rich Primer and High-Build Epoxy System **[MPI EXT 5.1G]:**
 - a. Prime Coat: Primer, zinc rich, epoxy [, **MPI #20**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, high build, low gloss [, **MPI #108**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. **[First and Second]**Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 10. Pigmented Polyurethane over Inorganic Zinc-Rich Primer and High-Build Epoxy System **[MPI EXT 5.1L]:**
 - a. Prime Coat: Primer, zinc rich, inorganic [, **MPI #19**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, high build, low gloss [, **MPI #108**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- G. Galvanized-Metal Substrates:
1. Epoxy System **[MPI EXT 5.3C]:**
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [, **MPI #101**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 2. Pigmented Polyurethane over Epoxy Primer System **[MPI EXT 5.3L]:**
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [, **MPI #101**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, gloss matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 3. Pigmented Polyurethane over Vinyl Wash Primer and Epoxy Primer System **[MPI EXT 5.3D]:**
 - a. Prime Coat: Primer, vinyl wash [, **MPI #80**].

- 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal [, MPI #101].
 - 1) <Insert manufacturer's name; product name or designation>.
 - c. **[First and Second]**Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.
- H. Aluminum (Not Anodized or Otherwise Coated) Substrates:
1. Epoxy System **[MPI EXT 5.4E]**:
 - a. Prime Coat: Primer, vinyl wash [, MPI #80].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, MPI #77].
 - 1) <Insert manufacturer's name; product name or designation>.
 2. Pigmented Polyurethane over Epoxy System **[MPI EXT 5.4B]**:
 - a. Prime Coat: Primer, vinyl wash [, MPI #80].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal [, MPI #101].
 - c. **[First and Second]**Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.
- I. Copper Substrates:
1. Epoxy System **[MPI EXT 5.5E]**:
 - a. Prime Coat: Primer, vinyl wash [, MPI #80].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, MPI #77].
 - 1) <Insert manufacturer's name; product name or designation>.
 2. Pigmented Polyurethane over Epoxy System **[MPI EXT 5.5B]**:
 - a. Prime Coat: Primer, vinyl wash [, MPI #80].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal [, MPI #101].
 - c. **[First and Second]**Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, MPI #72].
 - 1) <Insert manufacturer's name; product name or designation>.

- J. Stainless-Steel Substrates:
1. Epoxy System **[MPI EXT 5.6D]**:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss **[, MPI #77]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 2. Pigmented Polyurethane System **[MPI EXT 5.6B]**:
 - a. Prime Coat: Primer, vinyl wash **[, MPI #80]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - c. **[First and Second]**Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
- K. Wood Substrates: Glued-laminated construction.
1. Pigmented Polyurethane System **[MPI EXT 6.1J]**:
 - a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
- L. Wood Substrates: Exposed framing.
1. Pigmented Polyurethane System **[MPI EXT 6.2J]**:
 - a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
- M. Wood Substrates: **[Wood trim] [Architectural woodwork] [Doors] [Windows] [Wood board siding] [and] [wood fences]**
1. Pigmented Polyurethane System **[MPI EXT 6.3H]**:
 - a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.

- c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [**MPI #72**].

- 1) **<Insert manufacturer's name; product name or designation>**.

N. Fiberglass Substrates:

1. Epoxy System [**MPI EXT 6.7F**]:

- a. Prime Coat: Epoxy, matching topcoat.
- b. Intermediate Coat: Epoxy, matching topcoat.
- c. Topcoat: Epoxy, gloss [**MPI #77**].

- 1) **<Insert manufacturer's name; product name or designation>**.

2. Epoxy-Modified Latex System [**MPI EXT 6.7E**]

- a. Prime Coat: Epoxy-modified latex, matching topcoat.
- b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
- c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [**MPI #215**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [**MPI #115**].

- 1) **<Insert manufacturer's name; product name or designation>**.

3. Pigmented Polyurethane over Epoxy System [**MPI EXT 6.7D**]:

- a. Prime Coat: Epoxy, matching intermediate coat.
- b. Intermediate Coat: Epoxy, gloss [**MPI #77**].
- c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [**MPI #72**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- 1) **<Insert manufacturer's name; product name or designation>**.

O. Portland Cement Plaster Substrates:

1. Epoxy System [**MPI EXT 9.1D**]:

- a. Prime Coat: Epoxy, matching topcoat.
- b. Intermediate Coat: Epoxy, matching topcoat.
- c. Topcoat: Epoxy, gloss [**MPI #77**].

- 1) **<Insert manufacturer's name; product name or designation>**.

3.07 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System [**MPI INT 3.1F**]:

- a. Prime Coat: Epoxy, matching topcoat.
- b. Intermediate Coat: Epoxy, matching topcoat.

- c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - 2. Epoxy, High-Build System [**MPI INT 3.1P**]:
 - a. Prime Coat: High-build epoxy, matching topcoat (reduced).
 - b. Intermediate Coat: High-build epoxy, matching topcoat.
 - c. Topcoat: High-build epoxy, low gloss [, **MPI #108**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: High-build epoxy, gloss [, **MPI #98**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - 3. Epoxy-Modified Latex System [**MPI INT 3.1G**]:
 - a. Prime Coat: Epoxy-modified latex, matching topcoat.
 - b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [, **MPI #215**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [, **MPI #115**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- B. Concrete Substrates, Horizontal Surfaces.
- 1. Epoxy System [**MPI INT 3.2C**]:
 - a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - 2. Epoxy, High-Build System [**MPI INT 3.2L**]:
 - a. Prime Coat: High-build epoxy, matching topcoat (reduced).
 - b. Intermediate Coat: High-build epoxy, matching topcoat.
 - c. Topcoat: High-build epoxy, low gloss [, **MPI #108**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: High-build epoxy, gloss [, **MPI #98**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - 3. Pigmented Polyurethane System [**MPI INT 3.2D**]:
 - a. Prime Coat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.

- c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [**MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- 4. Clear (Two-Component) Polyurethane System [**MPI INT 3.2K**]:
 - a. Prime Coat: Two-component polyurethane matching topcoat.
 - b. Intermediate Coat: Two-component polyurethane, matching topcoat.
 - c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7) [**MPI #78**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- C. Cement Board Substrates:
 - 1. Epoxy System [**MPI INT 3.3E**]:
 - a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [**MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - 2. Epoxy-Modified Latex System [**MPI INT 3.3D**]:
 - a. Prime Coat: Epoxy-modified latex, matching topcoat.
 - b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [**MPI #215**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [**MPI #115**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- D. Clay Masonry Substrates:
 - 1. Epoxy System [**MPI INT 4.1F**]:
 - a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [**MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - 2. Epoxy-Modified Latex System [**MPI INT 4.1G**]:
 - a. Prime Coat: Epoxy-modified latex, matching topcoat.
 - b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [**MPI #215**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [**MPI #115**].

- 1) **<Insert manufacturer's name; product name or designation>.**
3. Clear (Two-Component) Polyurethane System **[MPI INT 4.1K]:**
 - a. Prime Coat: Two-component polyurethane, matching topcoat.
 - b. Intermediate Coat: Two-component polyurethane, matching topcoat.
 - c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7) [, **MPI #78**].

1) **<Insert manufacturer's name; product name or designation>.**

E. CMU Substrates:

1. Epoxy System **[MPI INT 4.2F] [MPI INT 4.2G]:**
 - a. Block Filler: Block filler, latex, interior/exterior [, **MPI #4**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Block Filler: Block filler, epoxy [, **MPI #116**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - c. Intermediate Coat: Epoxy, matching topcoat.
 - d. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
2. Epoxy, High-Build System **[MPI INT 4.2R]:**
 - a. Prime Coat: Epoxy block filler [, **MPI #116**].
 - b. Intermediate Coat: High-build epoxy, matching topcoat.
 - c. Topcoat: High-build epoxy, low gloss [, **MPI #108**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - d. Topcoat: High-build epoxy, gloss [, **MPI #98**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
3. Epoxy-Modified Latex System **[MPI INT 4.2J]:**
 - a. Block Filler: Block filler, latex, interior/exterior [, **MPI #4**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [, **MPI #215**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [, **MPI #115**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
4. Clear (Two-Component) Polyurethane System **[MPI INT 4.2Q]:**
 - a. Prime Coat: Two-component polyurethane, matching topcoat.
 - b. Intermediate Coat: Two-component polyurethane, matching topcoat.

- c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7) [, **MPI #78**].

- 1) **<Insert manufacturer's name; product name or designation>**.

F. Steel Substrates:

1. Epoxy System [**MPI INT 5.1L**]:

- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [, **MPI #101**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- b. Intermediate Coat: Epoxy, matching topcoat.

- c. Topcoat: Epoxy, gloss [, **MPI #77**].

- 1) **<Insert manufacturer's name; product name or designation>**.

2. High-Build Epoxy over Epoxy Zinc-Rich Primer System [**MPI INT 5.1P**]:

- a. Prime Coat: Primer, zinc-rich, epoxy [, **MPI #20**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- b. Intermediate Coat: Epoxy, high build, low gloss [, **MPI #108**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- c. Topcoat: Epoxy, gloss [, **MPI #77**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- d. Topcoat: Epoxy, high-build, low gloss [, **MPI #108**].

- 1) **<Insert manufacturer's name; product name or designation>**.

3. Epoxy over Self-Priming Epoxy System [**MPI INT 5.1V**]:

- a. Prime Coat: Epoxy, high build, self-priming [, **MPI #120**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- b. Intermediate Coat: Epoxy, matching topcoat.

- c. Topcoat: Epoxy, gloss [, **MPI #77**].

- 1) **<Insert manufacturer's name; product name or designation>**.

4. Epoxy, High-Build System [**MPI INT 5.1Y**]:

- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [, **MPI #101**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- b. Intermediate Coat: High-build epoxy, matching topcoat.

- c. Topcoat: High-build epoxy, low gloss [, **MPI #108**].

- 1) **<Insert manufacturer's name; product name or designation>**.

- d. Topcoat: High-build epoxy, gloss [, **MPI #98**].

- 1) **<Insert manufacturer's name; product name or designation>**.

5. Epoxy Deck Coating System **[MPI INT 5.1LL]**:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, gloss **[, MPI #77]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Epoxy deck coating (slip resistant) **[, MPI #82]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
6. Epoxy-Modified Latex System **[MPI INT 5.1K]**:
 - a. Prime Coat: Primer, rust inhibitive, water based **[, MPI #107]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) **[, MPI #215]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) **[, MPI #115]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
7. Pigmented Polyurethane over Epoxy Primer System **[MPI INT 5.1F]**:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
8. Pigmented Polyurethane over High-Build Epoxy System **[MPI INT 5.1G]**:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal **[, MPI #101]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, high build **[, MPI #108]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) **[, MPI #72]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.
9. Pigmented Polyurethane over Self-Priming Epoxy System **[MPI INT 5.1U]**:
 - a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
 - 1) **<Insert manufacturer's name; product name or designation>**.

- b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [**MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
10. Pigmented Polyurethane over Inorganic Zinc and Epoxy System [**MPI INT 5.1H**]:
- a. Prime Coat: Primer, zinc rich, inorganic [**MPI #19**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, gloss [**MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [**MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
11. Pigmented Polyurethane over Epoxy Zinc-Rich and Epoxy System [**MPI INT 5.1J**]:
- a. Prime Coat: Primer, zinc rich, epoxy [**MPI #20**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, gloss [**MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [**MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- G. Galvanized-Metal Substrates:
1. Epoxy over Epoxy Primer System [**MPI INT 5.3D**]:
- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal [**MPI #101**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [**MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
2. Epoxy over Vinyl Wash Primer and Epoxy Primer System [**MPI INT 5.3E**]:
- a. Prime Coat: Primer, vinyl wash [**MPI #80**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal [**MPI #101**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - c. Topcoat: Epoxy, gloss [**MPI #77**].

- 1) **<Insert manufacturer's name; product name or designation>.**
- H. Aluminum (Not Anodized or Otherwise Coated) Substrates:
1. Epoxy System **[MPI INT 5.4B]:**
 - a. Prime Coat: Primer, vinyl wash [, **MPI #80**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 2. Pigmented Polyurethane System **[MPI INT 5.4C]:**
 - a. Prime Coat: Primer, vinyl wash [, **MPI #80**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
- I. Copper Substrates:
1. Epoxy System **[MPI INT 5.5B]:**
 - a. Prime Coat: Primer, vinyl wash [, **MPI #80**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 2. Pigmented Polyurethane System **[MPI INT 5.5C]:**
 - a. Prime Coat: Primer, vinyl wash [, **MPI #80**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - b. Intermediate Coat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>.**
- J. Stainless-Steel Substrates:
1. Epoxy System **[MPI INT 5.6C]:**

- a. Prime Coat: Primer, vinyl wash [, **MPI #80**].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) <Insert manufacturer's name; product name or designation>.
2. Pigmented Polyurethane System [**MPI INT 5.6D**]:
- a. Prime Coat: Primer, vinyl wash [, **MPI #80**].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy, gloss [, **MPI #77**].
 - 1) <Insert manufacturer's name; product name or designation>.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) <Insert manufacturer's name; product name or designation>.
- K. Wood Substrates: Glued-laminated construction.
1. Epoxy System [**MPI INT 6.1L**]:
- a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) <Insert manufacturer's name; product name or designation>.
2. Pigmented Polyurethane System [**MPI INT 6.1E**]:
- a. Prime Coat: Polyurethane, two component, pigmented, matching topcoat.
 - b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) <Insert manufacturer's name; product name or designation>.
- L. Wood Substrates: [Wood trim] [Architectural woodwork] [Doors] [Windows] [and] [wood board paneling].
1. Epoxy System [**MPI INT 6.3L**]:
- a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) <Insert manufacturer's name; product name or designation>.
- M. Fiberglass Substrates:
1. Epoxy System [**MPI INT 6.7D**]:

- a. Prime Coat: Epoxy, matching topcoat.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
2. Pigmented Polyurethane System [**MPI INT 6.7E**]:
 - a. Prime Coat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, matching prime coat.
 - c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6) [, **MPI #72**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 3. Epoxy-Modified Latex System [**MPI INT 6.7F**]:
 - a. Block Filler: Block filler, latex, interior/exterior [, **MPI #4**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [, **MPI #215**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [, **MPI #115**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
- N. [**Gypsum Board**] [**Plaster**] Substrates:
1. Epoxy System [**MPI INT 9.2E**]:
 - a. Prime Coat: Primer sealer, latex, interior [, **MPI #50**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: Epoxy, matching topcoat.
 - c. Topcoat: Epoxy, gloss [, **MPI #77**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 2. Epoxy, High-Build System [**MPI INT 9.2N**]:
 - a. Prime Coat: Primer sealer, latex, interior [, **MPI #50**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - b. Intermediate Coat: High-build epoxy, matching topcoat.
 - c. Topcoat: High-build epoxy, low gloss [, **MPI #108**].
 - 1) **<Insert manufacturer's name; product name or designation>**.
 - d. Topcoat: High-build epoxy, gloss [, **MPI #98**].

- 1) <Insert manufacturer's name; product name or designation>.
3. Epoxy-Modified Latex System **[MPI INT 9.2F]**:
 - a. Prime Coat: Primer sealer, latex, interior [, **MPI #50**].
 - 1) <Insert manufacturer's name; product name or designation>.
 - b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
 - c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5) [, **MPI #215**].
 - 1) <Insert manufacturer's name; product name or designation>.
 - d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6) [, **MPI #115**].
 - 1) <Insert manufacturer's name; product name or designation>.

SECTION 10 11 00
VISUAL DISPLAY UNITS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Visual display board assemblies.
2. Floor-to-ceiling visual display assemblies.
3. Rail support system for visual display board assemblies.
4. Modular support system for visual display board assemblies.
5. Sliding visual display units.
6. Visual display conference units.
7. Glass markerboards.
8. Display rails.
9. Natural-slate chalkboards.

B. Related Requirements:

1. Section 09 77 23 "Fabric-Wrapped Panels" for tackable, fabric-covered panels mounted on walls.
2. Section 10 11 46 "Visual Display Fabrics" for visual display wall coverings intended for use with dry-erase markers.
3. Section 10 12 00 "Display Cases" for [individually framed and enclosed, wall-mounted bulletin boards] [and for] [tackboards within display cases].

1.02 PRE-INSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Visual display board assemblies.
2. Floor-to-ceiling visual display assemblies.
3. Rail support system for visual display board assemblies.
4. Modular support system for visual display board assemblies.
5. Sliding visual display units.
6. Visual display conference units.
7. Glass markerboards.
8. Display rails.
9. Natural-slate chalkboards.

- B. Product Data Submittals: For each product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.
 - 2. Include electrical characteristics for motorized units.
 - C. Shop Drawings: For visual display units.
 - 1. Include plans, elevations, sections, details, and attachment to other work.
 - 2. Show locations of panel joints. [Show locations of field-assembled joints for factory-fabricated units too large to ship in one piece.]
 - 3. Show locations and layout of special-purpose graphics.
 - 4. Include sections of typical trim members.
 - 5. Include wiring diagrams for power and control wiring.
 - D. Samples for Initial Selection: For each type of visual display unit indicated, for units with factory-applied color finishes, and as follows:
 - 1. Samples of facings for each visual display panel type, indicating color and texture.
 - 2. Fabric swatches of fabric facings for tackboards.
 - 3. Actual factory-finish color samples, applied to **[aluminum]** **[wood]** substrate.
 - 4. Include accessory Samples to verify color selected.
 - E. Samples for Verification: For each type of visual display unit indicated.
 - 1. Visual Display Panel: Not less than 8-1/2 by 11 inches, with facing, core, and backing indicated for final Work. Include one panel for each type, color, and texture required.
 - 2. Trim: 6-inch-long sections of each trim profile.
 - 3. Display Rail: 6-inch-long section of each type.
 - 4. **[Rail]** **[Modular]** Support System: 6-inch-long sections.
 - 5. Accessories: Full-size Sample of each type of accessory.
 - F. Product Schedule: For visual display units. **[Use same designations indicated on Drawings.]**
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Product Test Reports: For each visual display unit, for tests performed by **[manufacturer and witnessed by a qualified testing agency]** **[a qualified testing agency]**.
 - C. Sample Warranties: For manufacturer's special warranties.
- 1.05 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For visual display units **[and motorized units]** to include in maintenance manuals.
- 1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical [wall area] [visual display unit] [floor-to-ceiling visual display assembly] <Insert description> as shown on Drawings. Include accessories.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.09 WARRANTY

- A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Surfaces lose original writing and erasing qualities.
 - b. Surfaces exhibit crazing, cracking, or flaking.
 - 2. Warranty Period:
 - a. **[50]** <Insert number> years from date of Substantial Completion.
 - b. Life of the building.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. See current Campus Standards for acceptable Visual Display Units Manufacturers.

2.02 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: **[25]** <Insert value> or less.
 2. Smoke-Developed Index: **[50]** **[450]** <Insert value> or less.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 2.03 VISUAL DISPLAY BOARD ASSEMBLIES
- A. Visual Display Board Assemblies: <Insert drawing designation>.
- B. Visual Display Board Assembly: **[Field]** **[or]** **[factory]** fabricated.
1. Assembly: **[Chalkboard]** **[markerboard]** **[and]** **[tackboard]**.
 2. Corners: **[Square]** **[Rounded]**.
 3. Width: **[As indicated on Drawings]** <Insert dimension>.
 4. Height: **[As indicated on Drawings]** <Insert dimension>.
 5. Mounting Method: **[Direct to wall]** **[Rail support system]** **[Modular support system]**.
- C. Chalkboard Panel: **[Porcelain-enamel]** **[High-pressure chalkboard laminate]** **[Melamine]** **[Painted-finish]**-faced chalkboard panel on core indicated.
1. Color: **[Green]** **[Blue]** **[Brown]** **[Black]** **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]** <Insert color>.
- D. Markerboard Panel: **[Porcelain-enamel-faced]** **[High-pressure markerboard laminate-faced]** **[Melamine-faced]** <Insert facing> markerboard panel on core indicated.
1. Color: **[White]** **[Beige]** **[Tan]** **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]** <Insert color>.
- E. Tackboard Panel: **[Natural-cork]** **[Plastic-impregnated-cork]** **[Vinyl-fabric-faced]** **[Polyester-fabric-faced]** tackboard panel on core indicated.
1. Fabric Wrapped Edge: Wrap edge of tackboard panel with fabric facing.
 2. Color and Pattern: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
- F. Aluminum Frames and Trim: Fabricated from not less than 0.062-inch-thick, extruded aluminum; **[standard size and shape]** **[slim size and standard shape]** **[of size and shape indicated on Drawings]** <Insert size and shape>.
1. Field-Applied Trim: Manufacturer's standard, **[snap-on trim with no visible screws or exposed joints]** **[slip-on trim]** **[screw-on trim with Phillips flat-head screws]**.
 2. Aluminum Finish: **[Clear anodic]** **[Color anodic]** **[Manufacturer's standard baked-enamel or powder-coat]** finish.
 - a. Color: **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors and color densities]** <Insert color>.

- G. Factory-Applied Wood Trim: **[Red oak] [Walnut] [Manufacturer's standard species]** <Insert species>, not less than 1/2 inch thick; **[standard size and shape] [of size and shape indicated on Drawings]** <Insert size and shape> with **[opaque] [transparent]** finish.
- H. Field-Applied Wood Trim: Comply with requirements specified in **[Section 06 20 23 "Interior Finish Carpentry."]** **[Section 06 40 23 "Interior Architectural Woodwork."]**
- I. Vinyl Trim: **[Dark brown] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]**.
- J. Joints: Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, **[balanced around center of board, as acceptable to Architect] [as indicated on approved Shop Drawings]**.
- K. Combination Assemblies: Provide **[manufacturer's standard exposed trim] [H-trim] [hidden spline]** between abutting sections of visual display panels.
- L. Chalktray: Manufacturer's standard; continuous.
1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
 2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.
- M. Display Rail: Manufacturer's standard, extruded-aluminum display rail with **[plastic-impregnated-cork]** <Insert material> insert, end stops, **[and continuous paper holder,]** designed to hold accessories.
1. Size: **[1 inch] [2 inches] [3 inches]** high by **[full length of visual display unit] [length indicated on Drawings]**.
 2. Map Hooks: **[Two]** <Insert number> map hooks for every **[48 inches]** <Insert dimension> of display rail or fraction thereof.
 3. Map Hooks and Clips: **[Two]** <Insert number> map hooks with flexible metal clips for every **[48 inches]** <Insert dimension> of display rail or fraction thereof.
 4. Flag Holder: **[One]** <Insert number> for each room.
 5. Tackboard Insert Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]** <Insert color>.
 6. Aluminum Color: Match finish of visual display assembly trim.
- N. Paper Holder Display Rail: Extruded aluminum; designed to hold paper by clamping action.
- O. Special-Purpose Graphics: Fuse or paint **[semivisible writing guidelines] [penmanship lines] [music staff lines] [grid, 1 inch square] [rectangular graph coordinates] [polar graph coordinates] [horizontal lines, 2 inches o.c.] [USA map] [world map] [soccer field] [football field] [basketball court]** <Insert description of special-purpose graphics> graphic onto surface of visual display unit **[, in locations indicated]**.
- 2.04 FLOOR-TO-CEILING VISUAL DISPLAY ASSEMBLIES
- A. Floor-to-Ceiling Markerboard Panel Assemblies: Consisting of markerboard panels with **[porcelain-enamel] [high-pressure markerboard laminate]** facing on core indicated; fabricated for floor-to-ceiling assemblies.

1. Color: [White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors] <Insert color>.
- B. Floor-to-Ceiling Tackboard Panel Assemblies: Consisting of tackboard panels with **[natural-cork]** **[plastic-impregnated-cork]** **[vinyl-fabric]** **[polyester-fabric]** facing on core indicated; fabricated for floor-to-ceiling assemblies.
1. Edge Treatments:
 - a. Panel-Joint Edges: **[Wrapped with fabric]** **[Concealed by fabric-covered trim]**.
 - b. Top-of-Wall Edges: **[Wrapped with fabric]** **[Concealed by fabric-covered trim]**.
 - c. Bottom-of-Wall Edges: **[Wrapped with fabric]** **[Concealed by fabric-covered trim]**.
 - d. Corners: **[Wrapped with fabric]** **[Concealed by fabric-covered trim]**.
 2. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors] <Insert color>.
- C. Width: **[Full width of wall]** **[As indicated on Drawings]** <Insert dimension>.
- D. Height: **[Full height of wall]** **[Full height of wall above base]** **[As indicated on Drawings]** <Insert dimension>.
- E. Joint Accessories: Manufacturer's standard, **[exposed color-matched trim]** **[fabric-covered trim]** **[concealed aluminum or steel spline]** at butt joints.
- 2.05 RAIL SUPPORT SYSTEM FOR VISUAL DISPLAY BOARD ASSEMBLIES
- A. Support Rails: Horizontal, wall-mounted, extruded-aluminum rails designed to receive hanger clip and to support visual display boards **;** **and capable of gripping and suspending paper directly from rail**.
1. Finish: [Clear anodic] [Color anodic] [Manufacturer's standard baked enamel or powder coat].
 2. Color and Gloss: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- B. Hanger Clips: Extruded aluminum with finish to match rails; designed to support independent visual display board assemblies by engaging support rail and top trim of board.
- C. Visual Display Board Assemblies: Fabricated from not less than 3/8-inch-thick, kraft-paper honeycomb core; designed to be rigid and to resist warpage, and with aluminum trim designed to engage hanger clips.
- 2.06 MODULAR SUPPORT SYSTEM FOR VISUAL DISPLAY BOARD ASSEMBLIES
- A. Standards: 72-inch-long, extruded-aluminum slotted standards designed for supporting visual display boards on panel clips. Space slots at not less than **[4 inches]** <Insert dimension> o.c.
1. Finish: [Clear anodic] [Color anodic] [Manufacturer's standard baked enamel or powder coat].

2. Color and Gloss: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.

B. Panel Clips: Extruded aluminum or steel with finish to match standards.

2.07 SLIDING VISUAL DISPLAY UNITS

A. Horizontal-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, aluminum-framed horizontal-sliding visual display panels, and extruded-aluminum fascia that conceals overhead sliding track; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.

1. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall length of unit.
2. Three-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide three sliding panels, each equal to not less than **[one-third]** **[one-half]** of overall length of unit.
3. Four-Track Units: Fabricate unit with fixed rear panel centered in and covering not less than one-half of rear surface, and fixed front panel on each side of unit equal to not less than one-quarter of overall length of unit. Provide four sliding panels, each equal to not less than one-quarter of overall length of unit.
 - a. Swinging Doors: Fabricated from same construction as sliding panels and supported on full-height continuous hinges. Provide visual display panel on both faces of each door.
4. Hardware: Manufacturer's standard, extruded-aluminum overhead track and channel-shaped bottom guides; with two nylon ball-bearing carriers and two nylon rollers for each sliding panel.
5. Overall Width: [As indicated on Drawings] <Insert dimension>.
6. Overall Height: [As indicated on Drawings] <Insert dimension>.

B. Vertical-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, and aluminum-framed vertical-sliding panels; **[motor operated;]** designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.

1. Type: Tubular frame on **[four sides]** **[top and two sides, with sides extending to floor; with kick panel to conceal sliding panels]**. Design unit to support panels independently of wall.
2. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall height of unit.
3. Three-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide three sliding panels, each equal to not less than one-half of overall height of unit.
4. Four-Track Units: Fabricate unit with fixed rear panel centered in and covering not less than one-half of rear surface. Provide four sliding panels, each equal to not less than one-half of overall height of unit.

5. Hardware: Manufacturer's standard, neoprene ball-bearing end rollers, four on each side of each sliding panel. Counterbalance each sliding panel with counterweights supported by steel aircraft cable over ball-bearing sheaves; with removable cover plate for access to counterweights. Provide rubber bumpers at top and bottom for each sliding panel.
6. Motorized Operation: Provide not less than one motor with gearhead reducers for each sliding panel, mounted above visual display unit and connected to sliding panels with steel aircraft cable. Provide removable cover plate for access to motor. Equip motors with limit switches to automatically stop motor at each end of travel.
 - a. Electric Motors: UL approved or recognized, totally enclosed, complying with NEMA MG 1, with thermal-overload protection; 1/15 hp, single phase, **[110]** **[220]** V, 60 Hz.
 - b. Control Station: Three-position, **[maintained]** **[momentary]** contact, switch-operated control station with open, close, and off functions; with NEMA ICS 6, Type 1 enclosure. Provide **[one]** **<Insert number>** control station(s) for each sliding panel unit.
 - c. Key Switch: Provide supplementary key switch for each control station. Furnish two keys for each control station, keyed alike.
7. Overall Width: **[As indicated on Drawings]** **<Insert dimension>**.
8. Overall Height: **[As indicated on Drawings]** **<Insert dimension>**.

C. Panels and Accessories:

1. Sliding Chalkboard Panel: **[Porcelain-enamel]** **[High-pressure chalkboard laminate]**-faced chalkboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than **[3/8 inch]** **<Insert dimension>** thick.
 - a. Color: **[Green]** **[Blue]** **[Brown]** **[Black]** **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]** **<Insert color>**.
2. Sliding Markerboard Panel: **[Porcelain-enamel]** **[High-pressure markerboard laminate]**-faced markerboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than **[3/8 inch]** **<Insert dimension>** thick.
 - a. Color: **[White]** **[Beige]** **[Tan]** **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]** **<Insert color>**.
3. Sliding Tackboard Panel: **[Natural-cork]** **[Plastic-impregnated-cork]** **[Vinyl-fabric-faced]** **[Polyester-fabric-faced]** tackboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than **[3/8 inch]** **<Insert dimension>** thick.
 - a. Color and Pattern: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
4. Fixed Rear Chalkboard Panel: **[Porcelain-enamel]** **[High-pressure chalkboard laminate]**-faced chalkboard panel on core indicated.
 - a. Color: **[Green]** **[Blue]** **[Brown]** **[Black]** **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]** **<Insert color>**.

5. Fixed Rear Markerboard Panel: **[Porcelain-enamel] [High-pressure markerboard laminate]**-faced markerboard panel on core indicated.
 - a. Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]** <Insert color>.
6. Fixed Rear Tackboard Panel: **[Natural-cork] [Plastic-impregnated-cork] [Vinyl-fabric-faced] [Polyester-fabric-faced]** tackboard panel on core indicated.
 - a. Color and Pattern: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]**.
7. Kick Panel: Manufacturer's standard **[fabric-covered cork] [low-pressure laminate]**.
 - a. Color and Pattern: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]**.
8. Accessories: **[Chalktray] [locks] [and] [easel pad clamps]**.
9. Display Rail: Manufacturer's standard, extruded-aluminum display rail with **[plastic-impregnated-cork]** <Insert material> insert, end stops, **[and continuous paper holder,]** designed to hold accessories.
 - a. Size: **[1 inch] [2 inches] [3 inches]** high by full length of visual display unit.
 - b. Map Hooks: **[Two]** <Insert number> map hooks for every **[48 inches]** <Insert dimension> of display rail or fraction thereof.
 - c. Flag Holder: **[One]** <Insert number> for each sliding visual display unit.
 - d. Tackboard Insert Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]** <Insert color>.
10. Aluminum Trim: **[Factory applied] [Field applied]**; in **[manufacturer's standard]** <Insert description> size and profile; with **[clear anodic]** <Insert description> finish.

2.08 VISUAL DISPLAY CONFERENCE UNITS

- A. Visual Display Conference Units: Factory-fabricated units consisting of hinged-door wood cabinet with perimeter face frame, sides, and back; not less than 3-inch interior depth and designed for surface wall mounting. Fabricate inside of cabinet and cabinet doors with fixed visual display units.
 1. Wood Cabinets: Fabricated from solid wood with integral, solid-wood marker tray. Fabricate hinged door panels with solid-wood frame and wood-veneer exterior surface.
 - a. Species and Finish: **[Red oak] [Walnut] [Mahogany]** <Insert species> with **[natural lacquered] [oiled] [stained]** finish.
 2. Plastic-Laminate Cabinets: Cabinet and hinged door panels fabricated from manufacturer's standard wood panels finished with high-pressure decorative laminate; with integral marker tray.
 - a. Color: **[Match Architect's sample] [As indicated by referencing manufacturer's designations] [As selected by Architect from full range of industry colors]** <Insert color>.

3. Cabinet Corners: **[Square] [Rounded]**.
4. Hardware: Manufacturer's standard, full-height continuous hinges **[, wire door pulls,]** and door bumpers.
5. Fixed Rear Panel: Manufacturer's standard **[porcelain-enamel] [high-pressure markerboard laminate] [glass]** markerboard panel.
 - a. Color: **[White] [Beige] [Tan] [Match Architect's sample] [As indicated by referencing manufacturer's designations] [As selected by Architect from full range of industry colors]** <Insert color>.
6. Inside Surface of Doors:
 - a. Same as fixed rear panel.
 - b. Tackboard panel consisting of **[natural-cork] [plastic-impregnated-cork] [vinyl-fabric] [polyester-fabric]** facing on manufacturer's standard core.
 - c. Color: **[Match Architect's sample] [As indicated by referencing manufacturer's designations] [As selected by Architect from full range of industry colors]** <Insert color>.
7. Projection Screen: Manufacturer's standard, pull-down, matte, white projection screen, not less than 8 inches smaller in each direction than overall cabinet size, and mounted above rear visual display panel.
8. Fluorescent Light: Manufacturer's standard, not less than 24 inches long, and mounted above rear visual display panel.
9. Width: **[48 inches]** [As indicated on Drawings] <Insert dimension>.
10. Height: **[36 inches] [48 inches] [72 inches]** [As indicated on Drawings] <Insert dimension>.
11. Accessories: **[Cylinder lock] [and] [flip-chart pad clamp]**.

2.09 GLASS MARKERBOARDS

- A. Glass Markerboards: Fabricated of **[6-mm tempered] [or] [6-mm tempered-laminated] [low-iron] [ultra-thin]** glass with steel backing for use with magnets.
 1. Edge Treatment: Smooth polished edge with **[rounded] [eased]** corners.
 2. Frame: Aluminum trim in profile indicated.
 3. Surface: **[Glossy] [Matte]**.
 4. Color: White
- B. Mounting:
 1. Round, stainless steel standoffs, holding glass approximately **[1 inch]** <Insert dimension> from wall surface; mounted **[through holes in] [in notches in standoffs at top and bottom edges of]** markerboard.
 2. Concealed, Z-shaped brackets.
 3. Manufacturer's standard adhesive or adhesive-foam tape mounting.
- C. Graphics: Provide screen-printed graphics as indicated.
- D. Marker Tray: **[Glass] [Aluminum]**, attached with **[stainless steel clips] [magnet]**.

- E. Size: **[18 by 24 inches] [24 by 36 inches] [36 by 48 inches] [48 by 96 inches]** <Insert dimensions>.

2.10 DISPLAY RAILS

- A. Aluminum Display Rail: Manufacturer's standard, extruded-aluminum display rail with **[plastic-impregnated-cork]** <Insert material> tackable insert, **[and continuous paper holder,]** designed to hold accessories.
- B. Paper Holder Display Rail: Extruded aluminum; designed to hold paper by clamping action.
 - 1. Aluminum Finish: **[Clear anodic]** <Insert description> finish.
- C. Wood Display Rail: Manufacturer's standard wood display rail with **[plastic-impregnated-cork]** <Insert material> insert.
 - 1. Finish: **[Natural oak]** <Insert finish>.
- D. Tackable Insert Color: **[Tan] [Gray] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors]** <Insert color>.
- E. Size: **[1 inch] [2 inches] [3 inches]** high by length indicated on Drawings.
- F. End Stops: **[Aluminum] [Not required]**.
- G. Accessories:
 - 1. **[Metal] [Plastic] Map Hooks:** Include **[two]** <Insert number> map hooks per **[room] [20 feet]** <Insert dimension> [of installed display rail].
 - 2. **Roller Brackets:** Include **[two]** <Insert number> roller brackets per **[room] [20 feet]** <Insert dimension> [of installed display rail].
 - 3. **Flag Holders:** Include **[one]** <Insert number> flag holder per **[room] [20 feet]** <Insert dimension> [of installed display rail].

2.11 NATURAL-SLATE CHALKBOARDS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. <Insert, in separate subparagraphs, manufacturer's name>.
- B. Natural Slate: Select grade, resurfaced, natural slate; free from ribbons and other natural marks that impair their functional use and durability as a writing surface.
 - 1. Thickness: Not less than 1/4 inch or more than 3/8 inch thick with maximum deviation of 1/16 inch when an average thickness of at least 1/4 inch is maintained.
- C. Surface slate panels to a natural plane. Grind and hone to smooth, uniform finish equivalent to that obtained by minimum 180 grit and maximum 220 grit.
 - 1. Cut joints straight and true. Space joints symmetrically. Fit and match panels before shipment to provide continuous, uniform writing surface.

2. Provide writing surface free of tooling marks, pits, chipping, scratches, and surface spalls in excess of those that can be easily corrected; and free of surface-applied stain, dye, or other artificial coloring.
 3. Length: Furnish panels approximately equal in length with permissible variation not more than 3 inches in either direction of equal spacing. Allow 1/4-inch clearance at trim in length and width for fitting. Provide lengths of panels in each space as follows:
 - a. Up to 5 feet; one panel.
 - b. More than 5 feet but less than 9 feet; two panels.
 - c. More than 9 feet but less than 13.5 feet; three panels.
 - d. More than 13.5 feet but less than 18 feet; four panels.
 - e. More than 18 feet but less than 22.5 feet; five panels.
 - f. More than 22.5 feet but less than 27 feet; six panels.
- D. Aluminum: Fabricated from not less than 0.062-inch-thick, extruded aluminum; **[of size and shape indicated on Drawings] <Insert size and shape>; [snap-on type with no visible screws or exposed joints] [screw-on type with Phillips flat-head screws].**
- E. Wood Trim: Comply with requirements specified in **[Section 06 20 23 "Interior Finish Carpentry."]** **[Section 06 40 23 "Interior Architectural Woodwork."]**

2.12 CHALKBOARD PANELS

- A. Porcelain-Enamel Chalkboard Panels: High-pressure factory-laminated chalkboard panels of balanced three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with matte finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.
1. Face Sheet Thickness: **[0.021 inch] [0.013 inch]** uncoated base metal thickness.
 2. Manufacturer's Standard Core: Minimum 1/4 inch thick, with manufacturer's standard moisture-barrier backing.
 3. Hardboard Core: 1/4 inch thick; with **[0.005-inch-thick, aluminum foil] [0.015-inch-thick, aluminum sheet] [0.0129-inch-thick, galvanized-steel sheet]** backing.
 4. Particleboard Core: 3/8 inch thick; with **[0.005-inch-thick, aluminum foil] [0.015-inch-thick, aluminum sheet] [0.0129-inch-thick, galvanized-steel sheet]** backing.
 5. Fiberboard Core: **[3/8 inch] [1/2 inch]** thick; with **[0.001-inch-thick, aluminum foil] [0.015-inch-thick, aluminum sheet] [0.0129-inch-thick, galvanized-steel sheet]** backing.
 6. MDF Core: 7/16 inch thick; with manufacturer's standard moisture-barrier backing.
 7. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.
- B. High-Pressure Chalkboard Laminate Panels: Factory-laminated chalkboard panels of balanced three-ply construction, consisting of backing, fiberboard core material, and high-pressure chalkboard laminate writing surface.
- C. Melamine Chalkboard Panels: Fabricated from 1/4-inch-thick, sealed and primed hardboard core permanently bonded with thermally fused, melamine-impregnated decorative paper writing surface complying.

- D. Painted-Finish Chalkboard Panels: Fabricated from **[two plies of]** 1/4-inch-thick, treated, tempered hardboard core permanently surfaced with manufacturer's standard, heat-cured organic coating formulated for chalk-receptive matte finish.

2.13 MARKERBOARD PANELS

- A. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with **[high] [low]**-gloss finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.
1. Face Sheet Thickness: **[0.021 inch] [0.013 inch]** uncoated base metal thickness.
 2. Manufacturer's Standard Core: Minimum 1/4 inch thick, with manufacturer's standard moisture-barrier backing.
 3. Hardboard Core: 1/4 inch thick; with **[0.005-inch-thick, aluminum foil] [0.015-inch-thick, aluminum sheet] [0.013-inch-thick, galvanized-steel sheet]** backing.
 4. Particleboard Core: **[3/8 inch] [1/2 inch]** thick; with **[0.005-inch-thick, aluminum foil] [0.015-inch-thick, aluminum sheet] [0.013-inch-thick, galvanized-steel sheet]** backing.
 5. Fiberboard Core: **[3/8 inch] [1/2 inch]** thick; with **[0.001-inch-thick, aluminum foil] [0.015-inch-thick, aluminum sheet] [0.013-inch-thick, galvanized-steel sheet]** backing.
 6. MDF Core: 7/16 inch thick; with manufacturer's standard moisture-barrier backing.
 7. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.
- B. High-Pressure Markerboard Laminate Panels: Factory-laminated markerboard panel of three-ply construction, consisting of backing, fiberboard core material, and high-pressure markerboard laminate writing surface.
- C. Melamine Markerboard Panels: Fabricated from 1/4-inch-thick, sealed and primed hardboard panels permanently bonded with thermally fused, melamine-impregnated decorative paper writing surface.

2.14 TACKBOARD PANELS

- A. Tackboard Panels:
1. Facing:
 - a. **[1/16-inch-thick,] [1/8-inch-thick,] [1/4-inch-thick,] [natural cork] [plastic-impregnated cork].**
 - b. **[Vinyl] [Polyester]** fabric.
 - c. **[Vinyl] [Polyester]** fabric factory laminated to **[1/16-inch-] [1/8-inch-] [1/4-inch-]** thick, cork sheet.
 - d. Recycled rubber, 0.44 inch thick; with **[tan] [red] [green] [grey] [blue]** color flecks.
 2. Core:
 - a. Manufacturer's standard.
 - b. **[3/8-inch-] [7/16-inch-]** thick fiberboard.
 - c. 1/4-inch-thick **[hardboard] [or] [particleboard].**

2.15 MATERIALS

- A. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer's standard two- or three-coat process.
- B. High-Pressure Decorative Laminate: ISO 4586-3.
- C. High-Pressure Markerboard Laminate: Complying with physical testing requirements of ISO 4586-3.
- D. High-Pressure Chalkboard Laminate: Complying with physical testing requirements of ISO 4586-3.
- E. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish **[; with surface-burning characteristics indicated]**.
- F. Plastic-Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout **[; with surface-burning characteristics indicated]**.
- G. Vinyl Fabric: Mildew resistant, washable, complying with ASTM F793/F793M, Type II, **[burlap weave]** **<Insert texture or pattern>**; weighing not less than 13 oz./sq. yd.; with surface-burning characteristics indicated.
- H. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than 15 oz./sq. yd. (508 g/sq. m); with surface-burning characteristics indicated.
- I. Hardboard: ANSI A135.4, tempered.
- J. Particleboard: ANSI A208.1, Grade M-1.
- K. MDF: ANSI A208.2, Grade 130.
- L. Fiberboard: ASTM C208 cellulosic fiber insulating board.
- M. Clear Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.
- N. Extruded Aluminum: ASTM B221, Alloy 6063.
- O. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by visual display unit manufacturer.
- P. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in **[Section 09 91 23 "Interior Painting"]** **<Insert Section number and title>** and recommended in writing by visual display unit manufacturer for intended substrate.

2.16 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA AMP 500 for recommendations for applying and designating finishes.

- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.17 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603, except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical power systems to verify actual locations of connections before installation of motorized, sliding visual display units.
- C. Examine walls and partitions for proper preparation and backing for visual display units.
- D. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.
- C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display units and wall surfaces.
- D. Prime wall surfaces indicated to receive **[visual display units] [direct-applied, floor-to-ceiling visual display assemblies]** and as recommended in writing by primer/sealer manufacturer and visual display unit manufacturer.
- E. Prepare recesses for sliding visual display units as required by type and size of unit.

3.03 INSTALLATION

- A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
- B. Field-Assembled Visual Display Board Assemblies: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.
1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, **[balanced around center of board, as acceptable to Architect] [as indicated on approved Shop Drawings]**.
 2. Where size of visual display board assemblies or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.
- C. Factory-Fabricated Visual Display Board Assemblies:
1. Adhere to wall surfaces with **[egg-size] <Insert coverage>** adhesive gobs at 16 inches o.c., horizontally and vertically.
 2. Attach concealed clips, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 16 inches o.c. Secure tops and bottoms of boards to walls.
- D. Natural-Slate Chalkboards: Align and level joints between adjoining panels, and apply manufacturer's recommended joint-filler compound. Hone and finish joints to continuous even plane.
- E. Visual Display Board Assembly Mounting Heights: Install visual display units at mounting heights indicated on Drawings, or if not indicated, at heights indicated below.
1. Mounting Height **[for Grades K through 3] <Insert description>**: **[24 inches] <Insert dimension>** above finished floor to top of chalktray.
 2. Mounting Height **[for Grades 4 through 6] <Insert description>**: **[28 inches] <Insert dimension>** above finished floor to top of chalktray.
 3. Mounting Height **[for Grades 7 and Higher] <Insert description>**: **[36 inches] <Insert dimension>** above finished floor to top of chalktray.
- F. Display Rails: Install rails at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface with fasteners at not more than 16 inches o.c.
1. Mounting Height: **[48 inches] [60 inches] [72 inches] <Insert dimension>** above finished floor to top of rail.
- G. Floor-to-Ceiling Markerboard Panels: Attach panels to wall surface with **[egg-size] <Insert coverage>** adhesive gobs at 16 inches o.c., horizontally and vertically.
1. Join adjacent panels with concealed steel splines for smooth alignment.
 2. Join adjacent panels with exposed, H-shaped aluminum trim painted to match wall panel.
- H. Floor-to-Ceiling Tackboard Panels: Attach panels to wall surface with **[egg-size] <Insert coverage>** adhesive gobs at 16 inches o.c., horizontally and vertically.
1. Install wrapped-edge panels with butt joints between adjacent wall panels.

2. Join adjacent panels with exposed, H-shaped aluminum trim covered with same fabric as wall panels.
- I. Rail Support System: Install horizontal support rail at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall with fasteners at 12 inches o.c.
 1. Mounting Height: **[72 inches]** <Insert dimension> above finished floor to top of rail.
 2. Hang visual display units on rail support system.
 - J. Modular Support System: Install adjustable standards at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Install standards at 48 inches o.c., vertically aligned and plumb, and attached to wall with fasteners at 12 inches o.c.
 1. Mounting Height: **[12 inches]** <Insert dimension> above finished floor to bottom of standard.
 2. Install single-slotted standard at each end of each run of standards and double-slotted standards at intermediate locations.
 3. Provide locking screw at top corner of visual display board at each standard.
 4. Hang visual display units on modular support system.
 - K. Sliding Visual Display Units: Install units at mounting heights indicated. Attach to wall framing with fasteners at not more than 16 inches o.c.
 1. Adjust panels to operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.
 - L. Visual Display Conference Units: Install units at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface with **[fasteners through back of cabinet] [concealed brackets screwed to wall] [concealed wood cleats screwed to wall]**.
 1. Mounting Height: **[72 inches]** <Insert dimension> above finished floor to top of cabinet.
- 3.04 CLEANING AND PROTECTION
- A. Clean visual display units in accordance with manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.
 - B. Touch up factory-applied finishes to restore damaged or soiled areas.
 - C. Cover and protect visual display units after installation and cleaning.
- 3.05 DEMONSTRATION
- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain motorized, sliding visual display units.

SECTION 10 14 00

SIGNAGE

PART 1 GENERAL

1.01 SUMMARY OF WORK INCLUDED

- A. CONTRACTOR shall be responsible for securing all sign permits, including payment of fees, required by City & County of Los Angeles and all other agencies. for the installation of all exterior and interior signage for the Project.
- B. Sign Fabrication: Types of signs, messages, and graphics are indicated on the drawings and herein, and require various materials, finishes, illumination and fabrication and installation techniques.
- C. Shop drawings, layouts, samples, and mock-ups for LACCD approval.
- D. Installation of all fabricated signs, including all fasteners and fastenings and related electrical and data connections.
- E. Coordination with all trades of this Contract required for the fabrication and installation of the signage, including the approvals by the LACCD required in this Section. Fabrication and installation of the Work in accordance with National Electrical Code (NEC); latest edition, Underwriters Laboratory UL); latest edition, National Fire Protection Agency (NFPA); latest edition and National Electrical Manufacturers Association Standards,
- F. Coordination and verification of all messages with LACCD. LACCD to provide complete set of sign location plans with sample numbering system and electronic message schedule template for fabricator to complete sign message schedule for submission and approval by the LACCD.
- G. Verification of all conditions and sign dimensions in the field. Sign Fabricator to coordinate all signage requirements with the architectural, structural, lighting, electrical, and telecommunications drawings to ensure that all proposed signs can be installed, with power and required data connections and structurally supported. Verification of conditions and sign dimensions to be completed prior to sign fabrication and approval of all required submittals.
- H. Sign Types and Quantities
- I. The Sign Fabricator is responsible for verifying quantities with the LACCD and DESIGNER.

1.02 DESIGN CRITERIA

- A. SHOP DRAWINGS
- B. The Drawings presented for pricing are not fabrication drawings. The Signage Contractor is expected to provide all details necessary to effectively explain and specify the fabrication process and the expected performance of the installed product. The Signage Contractor must demonstrate through details and specifications their complete understanding of the desired final product and the method/process by which they are producing said product. The Signage Contractor is responsible to field measure prior to submitting Shop Drawings. Repackaging the supplied Drawings with new title blocks and delivering them as submittals will not be accepted. Although art may be supplied electronically, Signage Contractors must be prepared to create all graphic content from scratch – per instance as requested - to demonstrate and verify the quality and accuracy of the delivered product.

- C. The Architectural Graphics Drawings represent the design intent for the signs required for the Project. The Sign Fabricator is responsible for the proper engineering of all elements of the Work and where applicable. The internal structure, dimensions, and specifications for all items shall be indicated in the shop drawings.
- D. Provide shop drawings for all items including, but not limited to the following:
 - 1. Complete fabrication and installation drawings for each sign type. Indicate dimensions, materials, finishes, fastening, anchorage, joining, sealing, backing, utility requirements, rough-in, and adjacent related site conditions.
 - 2. Each sign type with all graphic elements.
 - 3. Evacuation Map final graphics. The project signage design intent documentation will provide a template to be used for developing specific area plans and routes as coordinated with the LACCD representative and Emergency Egress plans.
 - 4. All letter styles shall be accurately reproduced.
 - 5. Connections and routing for all power and data cabling.
 - 6. Braille message coordinated with corresponding raised characters.

1.03 SUBMITTALS

- A. Procedure: Prepare submittals in accordance with any LACCD Design Guideline requirements and to include the following:
 - 1. Notes on Drawings shall clearly define any actions requiring review by the LACCD.
 - 2. First article of production-run items, both large and small, will be reviewed by the LACCD before production run is commenced.
 - 3. It shall be the responsibility of the Contractor to schedule all review meetings with the LACCD.
- B. Submit physical samples of sufficient size and quantity to illustrate materials, finishes, equipment, or workmanship, and to establish standards by which completed work will be judged. Samples must represent the functional characteristics of the product or material, with integrally related parts and attachment devices, colors, and finishes.
- C. All samples to have a place for stamp approval.
- D. Required samples for review:
 - 1. Full 6" x 6" set of all specified paint colors and finishes.
 - 2. Complete, scaled, message layout for each sign face, to demonstrate proper spacing and content (black text on white background: outline not accepted).
 - 3. Sample of each type of fastener to be used.
 - 4. Each type of exposed metal used for major elements of work with respective finish.
 - 5. Each type of adhesive vinyl film, including computer-cut designs, shown full-size on each of the specified ground colors.
 - 6. Mock-ups as scheduled in this section. Mock-ups shall become the property of LACCD and are not to be part of the completed work.
 - 7. Unless otherwise noted, one full size, complete, item must be prepared and installed by the fabricator as "first article" for each sign type. Upon inspection and approval by the LACCD, the fabrication of subsequent articles may continue.
 - 8. Other items as may be required by LACCD, or as noted on the Drawings or herein.

- E. Extra Materials / Spares: Deliver to the appropriate LACCD's Representative contact person, in manufacturer's original packaging and store at the Project where directed.
 - 1. Furnish (1) gallon of each finish paint color for touch-up purposes.
 - 2. Furnish (6) lamps of each type and size used in the signage (as applicable).
 - 3. Furnish spare keys to master keyed locks on directory or Kiosk signage.
- F. Supplementary Product Literature: Submit for information. Furnish within seven (7) days of request, manufacturer's literature describing the general properties of each product to be used in the work.

1.04 PERMITS BY SIGNAGE CONTRACTOR

- A. Signage Contractor shall make all submittals for each permit via the LACCD's Representative. Signage Contractor shall be responsible for paying all fees, making adjustments as required, or any task necessary for obtaining local building and installation Sign permits for the proper execution of the Work.

1.05 QUALITY ASSURANCE

- A. Mock-ups and Prototypes:
 - 1. Provide a mock-up of each sign type on-site for review.
 - 2. Utilize the same materials and installation methods in the mock-up as intended for the final Work. Schedule the installation so that the mock-up may be examined, and any necessary adjustments made, prior to commencing fabrication of the final Work. Replace unsatisfactory items as directed.
 - 3. When accepted, mock-up shall serve as the standard for materials, workmanship, and appearance for the Work throughout the project.
- B. Work-In-Progress Approvals:
 - 1. Provide work-in-progress sign elements reviews. Scheduled or unscheduled viewings at the Fabrication Facility may be initiated by the LACCD's Representative as deemed necessary to ensure continued quality control and make any adjustments required during fabrication. Unsatisfactory items are to be corrected by the Signage Contractor as directed by the LACCD.
- C. Regulatory Requirements:
 - 1. Comply with applicable requirements of the Applicable Laws and Authorities. Obtain necessary approvals and permits from all such Authorities as required.
- D. Markings and Labels:
 - 1. Locate markings, labels, manufacturer names and other identifications so as to be concealed from public view and as acceptable by the LACCD's Representative.
 - 2. No trade name or other identification shall appear on any item where it will be seen by the public, except as specifically approved by the LACCD's Representative in advance.
- E. Final Location of Signs:
 - 1. The location of signs as shown on the Location Plans is for general reference only and in some cases is not representative of the exact final location. Final locations of Signs shall be field located in coordination with the LACCD's Representative.
 - 2. Signage Contractor shall arrange for meetings at the Project to accommodate direction of final locations according to Project Construction Schedule.

F. Lettering:

1. The Signage Contractor shall be responsible for the quality control of all lettering. All letterforms shall be crisp, sharp yet edges must not be abrasive, free of nicks, ragged edges, and discontinuous curves. All lettering shall conform to approved typeface, weight and letter spacing. No substitutions of typeface foundry, brand or version or implementation technique will be accepted without prior approval.
2. Vinyl Die Cut Graphics: All camera-ready artwork shall be anagraph scanned for cutting on a Gerber Sign Maker II or approved equal.
3. All cutting and routing shall be executed in such a manner that all edges and corners of finished letterforms are true and clean. Letterforms with rounded positive or negative corners, nicked, cut, or ragged edges, etc., will not be accepted. All letterforms shall be so aligned as to maintain a baseline parallel to the sign format. Margins must be maintained as specified in drawings.
4. All Work under the Agreement shall be performed by skilled craftsmen under supervision of trained foremen, experienced in the trade of craft required to accomplish the Work and produce a product of high quality.
5. Character spacings in words must be kerned.

G. Tactile sign messages:

1. All tactile sign messages must comply with CBC/LABC Sections 11B-703.2 through 11B-703.4
2. Character spacing shall be measured between the two closest points of adjacent raised characters within a message, excluding word spaces. Where characters have rectangular cross sections, spacing between individual raised characters shall be 1/8-inch (3.2 mm) minimum and 4 times the raised character stroke width maximum. Where characters have other cross sections, spacing between individual raised characters shall be 1/16 inch (1.6 mm) minimum and 4 times the raised character stroke width maximum at the base of the cross sections, and 1/8 inch (3.2 mm) minimum and 4 times the raised character stroke width maximum at the top of the cross sections. Characters shall be separated from raised borders and decorative elements 3/8-inch (9.5 mm) minimum.
3. Braille shall be contracted Braille (Grade 2), domed compliant with CBC/LABC Table 11B-703.3.1, and maintain a minimum 3/8 inch clear-space from other tactile elements.
4. Proof-reading of Braille messages is to be performed by the sign fabricator prior to fabrication.

H. High quality of workmanship:

1. The Signage Contractor shall be responsible for the high quality of all materials and workmanship required for the execution of the Agreement including materials and workmanship of any firm or individual who act as Signage Contractor's Sub-Contractor.
2. Signage Contractor shall be responsible for providing up-to-date drawings, specifications, graphic schedule, etc., to all sub-contractors.

I. Dimensions:

1. Written dimensions on drawings shall have precedence over scaled dimensions.
2. Signage Contractor shall verify and be responsible for all dimensions and conditions shown by these drawings. Shop details must be approved by the LACCD's Representative prior to fabrication.

J. Discrepancies

1. Signage Contractor shall notify the LACCD's Representative of any discrepancies in the Drawings, Sign Location Plan or Sign Message Schedule, in field dimensions or conditions and/or changes required in construction details.

K. Regulatory Requirements:

1. Comply with applicable portions in 2010 ADA Standards, current version of CBC, and current version of LABC.
2. References
 - a. California Building Code – California Fire Code – Title 24
 - b. California Public Safety Codes – Title 19
 - c. California Environmental Protection – Title 27
 - d. National Association of Architectural Metal Manufacturers (NAAMM) “Metal Finishes Manual.”
 - e. American Welding Society (AWS) – AWS D1.1 “Structural Welding Code, Steel,” and AWS D1.2 “Structural Welding Code, Aluminum.”
 - f. Underwriters Laboratories Inc. (UL) – Standards for Safety, UL Publication 48 “Electric Signs.”

1.06 GRAPHICS/ARTWORK

- A. LACCD to provide artwork via electronic file transfer; Adobe Illustrator, Acrobat PDF, MAC Format for graphic layouts included in the Drawings.

1.07 WARRANTY

A. Signage Warranty

1. Submit to the LACCD's Representative a 5-year written warranty (effective the date of final acceptance) covering all Signs, notarized by the Signage Contractor and Installer (if Sub-Contractor is used), agreeing to repair or replace the Defective Signs. Upon notification of such Defective Signs within the warranty period, make necessary repairs or replacement at the convenience of the LACCD's Representative.

B. Linear Polyurethane Paint Factory Finish Warranty

1. Submit to the LACCD's Representative a 5-year written warranty, warranting that the factory-applied linear polyurethane finishes will not develop excessive fading or excessive non uniformity of color or shade, and will not crack, peel, pit, corrode or otherwise fail as a result of Defects in materials or workmanship within the following defined limits. Upon notification of such Defects within the Warranty Period, make necessary repairs or replacement at the convenience of the LACCD's Representative.

C. “Excessive Fading”

1. A change in appearance that is perceptible and objectionable as determined when visually compared with the original color range standards.

D. “Excessive Non-Uniformity”

1. Non-uniform fading to the extent that adjacent panels have a color difference greater than the original acceptable range of color.

E. “Will Not Pit or Otherwise Corrode”

1. No pitting or other type of corrosion, discernible from a distance of 10' (3 m), resulting from the natural elements in the atmosphere at the project site.

1.08 MAINTENANCE

A. Maintenance and Operating Manuals

1. Submit four (4) copies of the Maintenance and Operating Manuals to the LACCD's Representative and 1 copy to the Executive Architect.
2. Furnish complete manuals describing the materials, devices, and procedures to be followed in operating, cleaning, and maintaining the Work. Include manufacturers' brochures and parts lists describing the actual materials used in the Work, including metal alloys, finishes, electrical components, and other major components.
3. Assemble manuals for component parts into single binders identified for each system.

B. Instruction

1. Prior to acceptance, establish with LACCD's Representative an instruction and training program for LACCD's Representative's personnel.
2. Notify the LACCD's Representative in writing at least 7 days prior to commencement of the program providing an outline of topics indexed to the Maintenance and Operating Manual.
3. Provide a trained instructor. Provide three (3) consecutive 4-hour periods of training scheduled during the normal 8-hour working day. Instruction and training shall include, but shall not be limited to, procedures to be followed in the normal day-to-day maintenance and operation of the Work.

PART 2 PRODUCTS

2.01 FABRICATION

- A. Signage shall be complete for proper installation as described in the Drawings.
- B. Finish work shall be firm, well anchored, in true alignment, properly squared, with smooth clean uniform appearance, without holes, cracks, discoloration, distortion, stains, or marks.
- C. Construct all work to eliminate burrs, dents, cutting edges, and sharp corners.
- D. Finish welds on exposed surfaces to be imperceptible in the finished work.
- E. Except as indicated or directed otherwise, finish all surfaces smoothly.
- F. Surfaces, that are intended to be flat, shall be without dents, bulges, oil canning, gaps, or other physical deformities.
- G. Surfaces, that are intended to be curved, shall be smoothly free-flowing to the required shapes.
- H. Except where approved otherwise by LACCD, conceal all fasteners.
- I. Make access panels tight-fitting, light-proof, and flush with adjacent surfaces.
- J. Conceal all identification labels and Underwriters Limited labels to conform to Underwriters Limited Codes.

- K. Carefully follow the manufacturer's recommended fabricating procedures regarding expansion or contraction, fastening, and restraining of acrylic plastic.
- L. Exercise care to ensure that painted, polished, and plated surfaces are unblemished in the finished work.
- M. Isolate dissimilar materials. Exercise particular care to isolate nonferrous metals from ferrous metals.
- N. All illumination shall be even and without hot spots.
- O. Ease all exposed metal edges.
- P. Provide miscellaneous metal items required for completion of the work even though not shown or specified.
- Q. Refer to Drawings for sign color specifications.
- R. Paint finishes shall be Matthews Acrylic Polyurethane with Matthews Primers and Metal Pre-Treatments or LACCD approved equal.
- S. Shop painting to be uniform on and around all sign elements to ensure sign elements will withstand all weather conditions.
- T. Mounting: Mounting plates shall be in conformance with the manufacturer's written recommendations.

2.02 MATERIALS

- A. All Specified Metals
 - 1. Aluminum
 - a. Aluminum shall be suitable for ornamental, architectural work. The surface finish shall be smooth, and free of extrusion marks or imperfections. Alloy shall be selected to meet the structural requirements of the specific application.
 - 2. Stainless Steel
 - a. Stainless steel shall be suitable for ornamental and architectural work. The surface finish shall be smooth, and free of all extrusion marks or imperfections. Alloy shall be selected to meet the structural requirements of specific applications. Structural metal for concealed framing shall be of galvanized rolled steel or equal as required to satisfy structural requirements.
- B. Aluminum exterior cabinets, spacers, backplates and frames shall be constructed from 0.25 inch aluminum, #4 horizontal brushed and clear anodized finish, unless otherwise specified on Drawings.
- C. Aluminum interior plaques shall be constructed from 0.125 inch aluminum, #4 horizontal brushed finish with semi-gloss linear polyurethane clear coat, unless otherwise specified on Drawings.
- D. Aluminum interior fabricated components shall be constructed from 0.125 inch thickness aluminum sheet.

- E. Adhesive used for installing Signs shall be manufactured by Dow Corning or equal. "VHB" tape such as Polyfoam or "Isotac" contact adhesive tape manufactured by 3M shall be used in conjunction with silicone adhesives for installation of wall signs, in minimum thicknesses available.
- F. Extruded aluminum shapes utilizing 6063-T6 aluminum alloys, unless otherwise specified on Drawings.
- G. Concrete Installation of anchoring devices into concrete slab shall be adjusted to avoid penetrating existing reinforcing conduit, etc. contained in the concrete slab. Coordinate with the Architect and Structural Engineer.
- H. Stainless steel exterior cabinets, spacers, backplates and frames shall be constructed from 0.125 inch stainless steel, #4 horizontal brushed and clear anodized finish, unless otherwise specified on Drawings.
- I. Stainless steel interior plaques shall be constructed from 0.125 inch thickness stainless steel sheet, #4 horizontal brushed finish with semi-gloss linear polyurethane clear coat, unless otherwise specified on Drawings.
- J. Stainless steel interior fabricated components shall be constructed from 0.0625 inch stainless steel, unless otherwise specified on Drawings.
- K. Stainless steel shall be suitable for ornamental and architectural work. Surface finish shall be smooth, free of all extrusion marks or imperfections. Alloy shall be selected to meet the structural requirements of specific application. Structural metal for concealed framing shall be of galvanized rolled steel or equal as required to satisfy structural requirements.
- L. Acrylic intended for non-illuminated use shall be 0.25 inch cast acrylic sheet with non-glare finish, unless otherwise specified on Drawings. Acrylic intended for edge-illuminated use shall be 10mm extruded acrylic sheet with embedded diffuser particles designed specifically for edge-lighting, unless otherwise specified on Drawings.
- M. Use Plexiglas II as manufactured by Rohm and Haas Co., or equal quality. Thickness shall be as indicated on Drawings or not less than 1/8" thick. Signage Contractor shall provide color and finish samples of all plastics for approval before fabrication; no substitution in color, thickness, or finish of plastics will be accepted without written approval from the LACCD's Representative. All plastics shall be of uniform color, translucence and illumination, as supplied by manufacturer. Any exposed edges of acrylic shall be finished so as no saw marks are visible.
- N. Decal or Transfer: Provide special printed paper or vinyl suitable for reproducing the design onto material indicated, as required. Submit sample to the LACCD's Representative for approval.
- O. Aluminum posts shall be constructed from 2-inch square T52 tubes, 0.1875 wall thickness and #4 brushed and clear anodized finish with capped ends, unless otherwise specified on Drawings.
- P. Hardware / Hinges: Provide and install all incidental hardware necessary for the proper functioning of the Signs, including, but not restricted to, materials and products covered in this section. Provide stainless steel hinges for all hinged access panels. Provide pin tumbler locks for all access panels requiring locks. Provide stainless steel fasteners for assembling ferrous and non-ferrous metals.

- Q. Bolts, nuts, screws, washers, anchors and other devices required to complete the Work. Signage Contractor shall use the same basic metal or alloy as the metal fastened, and finish to match in color and texture. Use stainless steel 300 series alloy where used to join dissimilar materials.
- R. All exposed fasteners to be 0.125 inch flathead stainless steel screws painted to match adjoining surfaces unless otherwise specified on drawings.
- S. Pin-mount supports shall be 3/16" to 1" diameter painted threaded rods as appropriate.
- T. Insulation /Material Isolation: Separate all ferrous and non-ferrous metals with non-conductive gaskets to prevent electrolysis. In addition to gaskets, provide stainless steel fasteners for some cases as required.
- U. Welding Electrodes and Filler Metal
 - 1. Provide the alloy and type of welding electrodes and filler metal required for strength, workability, compatibility and color match after grinding smooth and finishing the fabricated product.
- V. Applied interior vinyl graphics to be High Performance Cast Vinyl Sheeting, unless otherwise specified on Drawings. Applied exterior vinyl graphics to be High Performance Reflective Vinyl Sheeting, unless otherwise specified on Drawings.
- W. Additional Material/Processes: For materials or processes described in the preceding list, the material and/or process as detailed in the design documents shall be used as the meet or exceed equivalent.

2.03 ELECTRICAL COMPONENTS

- A. Electrical components must conform to applicable electrical codes and the following:
 - 1. All materials must be approved and listed by Underwriters Laboratories, Inc.
 - 2. Light Emitting Diode (LED) general lighting requirements:
 - a. Provide sufficient LED wattage, quantities and spacing to ensure continuous, maximum illumination.
 - b. Provide LED lighting prototypes to verify brightness and uniformity of lighting with designer.
 - 3. LED lighting component, color, and power requirements:
 - a. Edge lighting – fabricated linear white LED's 24 VAC
 - b. Back lighting – fabricated matrix white LED's 24 VAC
 - 4. Heavy duty, non-keyed, flush mounted, fused, or un-fused disconnects. Provide NEMA 1 for dry locations and proper enclosure for others.
- B. Electrical Wiring and Equipment: Provide and install electrical materials such as ballasts, transformers, lamps, sockets, neon units, connectors, and all other equipment which shall be new and shall be approved by Underwriters Laboratories, Inc. The assembly of all components within the illuminated signs shall conform to all standards of Underwriters Laboratories, Inc. as published in the latest edition of "Standards for Sign Safety" and all illuminated signs shall bear the U.L. label. All wiring and equipment shall be concealed within the Sign structure.
- C. Conduit and Devices: Provide rigid steel conduit, junction boxes and associated devices in accordance with applicable codes as required.

- D. Wiring: Minimum #12 AWG copper shall be used. High tension wiring shall not be less than GTO 15 wire as manufactured by Carol Cable Company or approved equal. All wiring shall be AWM 90 0 centigrade 1000 volt TW/MTW U.L. file no. 18971. Wiring connectors for wire splicing shall be U.L. approved 1000 volt capacity and shall be Scotch Lock type Y or R or equal. All splices should be easily accessible for inspection and should be shown on Shop Drawings.
- E. Disconnect Switch: All Signs or Sign components with electrical service shall be equipped with an approved external disconnect switch, flush mounted on the cabinet / Sign, with circuits and capacity to control all primary wiring within the Sign. Location of switch must be shown on Shop Drawings and is subject to approval.
- F. Illumination: All signs with LED fixtures shall provide even, diffused, illumination without light leaks or hotspots. Signage Contractor shall provide any specification information required to verify performance. All fixtures shall be provided by the Signage Contractor. Signage Contractor shall provide waterproof flush access panel(s), which shall be concealed wherever possible. Conduit wiring and electrical equipment from the field electrical connection to any part of the sign and within the sign shall be provided by the Signage Contractor.
- G. Ventilation: While maintaining a proper weather seal, Signage Contractor shall provide for sufficient ventilation of Sign components to prevent overheating or warping; allowing for color of sign, mounting surface, climate conditions, etc. In providing for ventilation, Signage Contractor shall protect sign from elements (rain, wind, debris, etc.) that might cause operational or cleaning problems. Signs / cabinets with light leaks will not be accepted. Signage Contractor shall utilize stainless steel bug mesh screen for integration with weep holes or vent / louvers on the Signs to prevent insect migration into illuminated Signs.

2.04 FINISHING MATERIALS

- A. Linear Polyurethane Coatings: Provide the following, or other products as acceptable.
 - 1. Acrylic Linear Polyurethane enamel: Two components, acrylic aliphatic isocyanate / acrylic polyurethane having ultraviolet (UV) inhibitors and engineered for exterior application by Matthews Paint Company or approved equal.
 - 2. Primer for Aluminum: Two-part component primer: One-coat Matthews 74-734 and 74-735 Metal Pretreat at .25 mils dry film thickness or one-coat Matthews 74-793 Spray Bond at .15 to .25 mils dry film thickness or Wyandotte / AKZO Grip-Guard Wash Primer (2Afy-31284) with Grip-Guard Wash Primer Hardener (10AFK-31285) combined and applied per manufacturer's specifications or approved equal (primer) for the application of the pre-approved and pre-formulated paint system.
 - 3. Primer for Steel: Two-part component primer: One-coat Matthews 74-734 and 74-735 Metal Pretreat at .25 mils dry film thickness or Wyandotte / AKZO Grip-Guard Wash Primer (2Afy-31284) with Grip-Guard Wash Primer Hardener (10AFK-31285) combined and applied per manufacturer's specifications or approved equal (primer) for the application of the pre- approved and pre-formulated paint system.
 - 4. Clear Sealers: Crystal clear matte polyurethane sealers By Matthews Paint Co. or approved equal. Sealers are to resist rust and corrosion associated with exposure to salt air. As required and of highest quality available, applied per manufacturer's specifications.
- B. Anodized Aluminum Components / Panels: If required, Signage Contractor shall provide anodized (application of aluminum oxide film coating in clear or colored dye finish) aluminum panels or parts to match Executive Architect's color, grain, finish, and specifications.

- C. Silk Screening Materials: Provide photo processed screening, arranged to furnish sharp and solid images without edge build up or bleeding of the coating. Pattern-cut screens may be used for non-repeat copy, provided that final image copy is equal to photoscreen quality. Provide only weather-resistant coating materials, compatible with the intended substrates. All silk-screened graphics are to be done with the finest screen size feasible for sharp, even reproduction.
- D. Vinyl Die-Cut and Pattern Cut-out Graphics: Use Scotchcal Opaque and Translucent film and Scotchcal Diamond Grade VIP Reflective film manufactured by 3M where specified. Use pressure-sensitive, non-yellowing, non-peeling and weather resistant vinyl as specified. Use approved fonts and equipment as specified.

2.05 FABRICATION OF SIGNS AND SUPPORTS

- A. General: Provide custom manufactured Sign assemblies, components completely fabricated and finished at factory before delivery to Project. Construct to accurate detail and dimensions as shown and as review on approved Shop Drawings. Fit and assemble the Work at the shop and mark the components as required to facilitate assembly during installation. Exposed fasteners on finished faces will not be allowed, unless specifically indicated. Waviness and oil canning of surfaces is not acceptable. Minimum material thickness is to be 0.090 inches. Conceal wiring, conduct and other electrical items within sign enclosures.
- B. Lettering: Cut and rout in a manner to produce true and clean edges and corners of finished letterforms. Letterforms having rounded positive or negative corners, nicked, cut, or ragged edges are not acceptable. Align letter forms to maintain a baseline parallel to the sign format. Maintain margins as indicated on the Drawings.
- C. Seams and Joints: The Signage Contractor shall cut walls and floors carefully and neatly repair them in an acceptable manner. Signage Contractor shall consult the Architect of Record in cases where cutting into a structural portion of the building is required so that satisfactory reinforcement may be provided. Added joints shall be ground filled and finished flush and smooth with adjacent work. Such seams shall be invisible after final finish has been applied. Spot welded joints shall not be visible on exterior of signs after final finish has been applied. No gaps, light leaks, waves, or oil canning will be permitted in Work. If any of these are evident, the Signage Contractor will be required to correct its Work or construct a new Sign at its own expense.
- D. Metal Signs and Supports: Fabricate exposed surfaces uniformly flat and smooth, without distortion, pitting, or other blemishes. Form exposed metal edges to a smooth radius. Permanently bond the laminated metal components and honeycomb core with adhesive or sealant in accordance with product manufacturer's recommendations. Grind exposed welds and rough areas to make flush with adjacent smooth surfaces.
- E. Welding: Make welds continuous. Comply with American Welding Society, Aluminum Association, and Copper Development Association standards for the type of metal used.
- F. Fasteners: Use exposed fasteners only if shown on the Construction Documents. Perform drilling and tapping at shop.
- G. Dissimilar Materials: Where metal surfaces will be in contact with dissimilar materials, coat the surfaces with epoxy paint or plate with zinc chromate, or provide other means of dielectric separation as recommended by manufacturer to prevent galvanic corrosion (i.e. Neoprene gasket as an isolation membrane)
- H. Castings: Exposed surfaces shall be uniformly free from porosity and roughness. Edges shall be filled and ground smooth. Faces shall be chemically etched and mechanically polished for specified finish.

- I. Galvanizing: Provide for steel components in exterior construction, and where noted in Drawings shall be galvanized. Complete the shop fabrication prior to application of the zinc coating. Remove mill scale and rust, clean and pickle the units as required for proper pretreatment of the surfaces.
- J. Hardware: Provide all incidental hardware necessary for the proper functioning of signs. External hardware shall conform to the external appearance of the Sign.
- K. Supports and Backing in Walls: Signage Contractor shall provide engineered Sign supports anchored to building structure where required and to meet requirements of applicable building codes. Support or backing requiring installation within the building wall construction shall be immediately relayed to the Architect of Record and LACCD's Representative for field coordination. Signage Contractor shall meet with the Contractor to review all requirements.
- L. Access Doors and Frames: Access doors and frames shall be flush with the material in which they occur, unless otherwise specified. Access doors and frames shall be provided upon prior written approval of the Architect. Each trade providing access doors and frames shall verify the need for fire rated doors on the Construction Drawings. Access doors in walls, partitions or ceilings shall bear UL fire rated labels of same fire rating. If access doors and frames are required to be exposed to view, they shall be chrome, brass, stainless steel, or other finish to match other finishes in the spaces in which they are to be installed, unless otherwise specified. Obtain LACCD's Representative's approval for location of each access door prior to placement.

2.06 SHOP APPLICATION OF SIGN FINISHES

- A. Sign Graphics: Provide the letters, numerals, symbols, and other graphics markings, using the finish materials shown. Apply the graphics neatly, uniformly proportioned and spaced, and accurate within the dimensions indicated. Prepare the substrate surfaces and apply finish materials in accordance with manufacturers' instructions.
- B. Metal Finishes: Remove scratches, abrasions, dents, and other blemishes before applying finish. Apply the following to the fabricated Work, with texture and reflectivity as required to match the Architect's sample.
- C. Linear Polyurethane Finishes: Clean the surfaces as required for proper adhesion of coatings. Use 3M Co. "Scotch Brite" pads with cleanser and water, and/or chemically treat as recommended by paint manufacturer to remove deleterious film or residue.
- D. Linear Polyurethane Paint: Provide pretreatment and primer in accordance with manufacturer's recommendation. Add ultraviolet inhibitors to paint subject to sunlight exposure.
- E. Clear Linear Polyurethane Finish: Provide pretreatment, primer, and matte or semi-gloss finish coatings in accordance with manufacturer's recommendations. Apply 1.5 to 2.0 mils (0.0375 to 0.050 mm) dry film thickness.

2.07 GRAPHIC APPLICATION

- A. Preparation: Surfaces to receive the graphic markings shall be clean, dry, and otherwise made ready for application of the materials. Accurately measure and lay out the required marking configurations as indicated on drawings.
- B. Vinyl Die-cut and Pattern-cut Graphics: Use pressure sensitive, non-yellowing, non-peeling and weather resistant vinyl adhesive letters or images, custom flood coated as required, die cut from ScotchCal or ScotchLite as manufactured by 3M Company. Apply in strict accordance with manufacturer's instructions. Make uniformly smooth and free from bubbles, wrinkles, stretching and blemishes.

- C. Painted or Silk-screened Graphics: All graphics shall be applied using photo processed screens from camera ready art, arranged to furnish sharp and solid images without build-up or bleeding of the coating. Comply with coating manufacturer's application instructions. Provide proper type of primer to suit each substrate and obtain a permanent bond. Verify compatibility of each substrate with the coatings to be used in the Work. Apply the markings with neat edges, minimum 3 mils (0.075 mm) dry film thickness and as required to obtain solid markings without voids.
- D. Acid-Etched Graphics and Typography: Acid-etched typography and graphic imagery must be an average of 1/16" deep, with clean, crisp, sharp edges; ragged or soft (polished out) edges will be rejected. Acid baths used for etching should be fresh and used in an environment and temperature that will provide the highest quality etched images. Color fill as indicated by the S/P color and finish schedule, keeping inks and fills true to the edges of letterforms / graphics.

PART 3 EXECUTION

3.01 VERIFICATION OF CONDITIONS

- A. Inspect all surfaces to receive signage and report all defects that would interfere with signage installation.
- B. Starting Work implies acceptance of surfaces as satisfactory.
- C. Verify all conditions and sign dimensions in field. Contractor to review and study architectural, landscape, lighting, electrical and related plans to ensure that all proposed signs can be installed and supported. Verification of conditions and sign dimensions to be completed prior to sign fabrication and reviewed with the architect.

3.02 DEMOLITION

- A. Existing signage to be removed and responsibly junked.
- B. Installation of new signage to be installed immediately after any demolition.
- C. Temporary signage, if necessary, is to conform with LACCD Graphic Standards for Temporary Signage
- D. Unused data and/or electrical feeds to be coordinated with LACCD for proper terminations.
- E. Any surfaces damaged should be repaired and painted/patched to match adjacent surface.
- F. Concrete and floor surfaces to be repaired in coordination with the LACCD.

3.03 INSTALLATION

- A. Install signage upon acceptance by the LACCD of material and substantial completion of job site area to receive such materials.
- B. Special Precautions: Guard against damaging existing pavements and planting where signage is to be installed.
- C. Footings beneath topping surface shall be installed and located prior to top surface installation.
- D. Prior to installation, check all components, nuts, bolts, and other connections for proper alignment, fit and any damage. Replace damaged or defective components.

- E. Prior to installation, confirm all electrical locations and requirements with the LACCD.

3.04 CLEAN UP

- A. Keep areas of work clean, neat, and orderly at all times. Clean surfaces, inside and out. Use approved cleaners, if necessary, to remove dirt.
- B. Protective coverings and strippable films shall be removed at a time that will afford the greatest protection of the furniture. Surfaces shall be cleaned to remove excess glazing and sealant compounds, dirt, and other substances.
- C. Upon completion of work and before final acceptance, remove tools, surplus materials, apparatus, and debris from the site. Leave the site in a neat, clean condition, acceptable to the Engineer. Wash, clean, and leave paved areas without stains.

3.05 FINAL INSPECTION AND ACCEPTANCE

- A. Upon completion of work, the LACCD will perform a final inspection for acceptance.
- B. All unused mock-ups and unused submittals shall be removed from site prior to final acceptance.
- C. Submit operation manuals, tools, and keys as specified in this Section.

END OF SECTION

SECTION 10 21 13

PHENOLIC-CORE TOILET COMPARTMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Phenolic-core toilet compartments.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for supports that attach [ceiling-hung compartments] [floor-and-ceiling-anchored compartments] [and] [post-to-ceiling screens] to overhead structural system.
2. Section 06 10 00 "Rough Carpentry" for [blocking] [overhead support of floor-and-ceiling-anchored compartments] [and] [overhead support of post-to-ceiling screens].
3. Section 09 22 16 "Non-Structural Metal Framing" for blocking.
4. Section 10 28 00 "Toilet, Bath, and Laundry Accessories" for accessories mounted on toilet compartments.

1.02 COORDINATION

- A. Coordinate requirements for [overhead supports,]blocking, reinforcing, and other supports concealed within wall[and ceiling] to ensure that toilet compartments can be supported and installed as indicated.

1.03 ACTION SUBMITTALS

A. Product Data.

1. Phenolic-core toilet compartments.
 - a. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for toilet compartments.

B. Shop Drawings:

1. Include plans, elevations, sections, details, and attachment details.
2. Show locations of cutouts for compartment-mounted toilet accessories.
3. Show locations of centerlines of toilet fixtures.
4. Show locations of floor drains.
5. Show [ceiling grid, ceiling-mounted items, and] overhead support or bracing locations.
6. <Insert requirements>.

- C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of toilet compartment.

1. Include Samples of hardware and accessories involving material and color selection.

- D. Samples for Verification: Actual sample of finished products for each type of toilet compartment, hardware, and accessory.
 - 1. Size: [Manufacturers' standard size] <Insert size>.
- E. Product Schedule: For toilet compartments, prepared by or under the supervision of supplier, detailing location and selected colors for toilet compartment material.
- F. Delegated Design Submittals: For grab bars mounted on toilet compartment panels, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Include structural design calculations indicating compliance with specified structural-performance requirements.

1.04 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For toilet compartments.

1.05 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Materials: Furnish extra materials to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Door Hinges: [One] <Insert number> hinge(s) with associated fasteners.
 - 2. Latch and Keeper: [One] <Insert number> latch(es) and keeper(s) with associated fasteners.
 - 3. Door Bumper: [One] <Insert number> door bumper(s) with associated fasteners.
 - 4. Door Pull: [One] <Insert number> door pull(s) with associated fasteners.
 - 5. Fasteners: [10] <Insert number> fasteners of each size and type.

1.06 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements, and coordinate before fabrication.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain phenolic-core toilet compartments from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: [25] [75] [200] or less.
 - 2. Smoke-Developed Index: 450 or less.
- B. Structural Performance: Where grab bars are mounted on toilet compartments, design panels to comply with the following requirements:

1. Panels are able to withstand a concentrated load on grab bar of at least 250 lbf (1112 N) applied at any direction and at any point, without deformation of panel.
 - C. Regulatory Requirements: Comply with applicable provisions in [the USDOJ's "2010 ADA Standards for Accessible Design"] [and] [ICC A117.1] <Insert accessibility regulation> for toilet compartments designated as accessible.
- 2.03 PHENOLIC-CORE TOILET COMPARTMENTS <INSERT DRAWING DESIGNATION>
- A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 - B. Toilet-Enclosure Style: [Overhead braced] [Floor anchored] [Ceiling hung] [Floor-and-ceiling anchored][, privacy type].
 - C. Entrance-Screen Style: [Overhead braced] [Floor anchored] [Ceiling hung] [Floor-and-ceiling anchored].
 - D. Urinal-Screen Style: [Wall hung] [Floor anchored] [Overhead braced] [Post to ceiling].
 - E. Door, Panel, and Pilaster Construction: Solid phenolic-core material with melamine facing on both sides fused to substrate during manufacture (not separately laminated), and with eased and polished edges. Provide minimum 3/4-inch- (19-mm-) thick doors and pilasters and minimum 1/2-inch- (13-mm-) thick panels.[Provide with no-sightline system consisting of door and pilaster lapped edges on strike side of door and door and pilaster lapped edges on hinge side of door (unless continuous hinge is used).]
 - F. Entrance-Screen Construction: Matching panel construction.
 - G. Urinal-Screen Construction: Matching panel construction.
 - H. Pilaster Shoes: Formed from stainless steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.
 - I. Pilaster Sleeves (Caps): Formed from stainless steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.
 - J. Urinal-Screen Post: Manufacturer's standard post design of [monolithic phenolic-core urinal screen cutout at bottom to form a post] [material matching the thickness and construction of pilasters] [or] [1-3/4-inch- (44-mm-) square, aluminum tube with satin finish] <Insert requirement>; with shoe [and sleeve (cap)] matching that on the pilaster.
 - K. Brackets (Fittings):
 1. Stirrup Type: Ear or U-brackets, stainless steel.
 2. Full-Height (Continuous) Type: Manufacturer's standard design, stainless steel.
 - L. Phenolic Compartment Finish: [One color] [Two colors] in each room.
 1. Dark-Core Phenolic: Manufacturer's standard dark color core and edge.
 - a. Facing Sheet Color: [As indicated by manufacturer's designations] [As selected by Architect from manufacturer's full range] <Insert color>.
 2. Through-Color Phenolic: Manufacturer's standard solid through-color.
 - a. Color: [As indicated by manufacturer's designations] [As selected by Architect from manufacturer's full range] <Insert color>.

2.04 HARDWARE AND ACCESSORIES

- A. Door Hardware and Accessories: Manufacturer's operating hardware and accessories.[Mount with through bolts.]
1. Hinges: [Manufacturer's stainless steel, surface-mounted, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees] [Manufacturer's stainless steel continuous, cam type that swings to a closed or partially open position] [Manufacturer's stainless steel continuous, spring-loaded type] [Manufacturer's standard] <Insert requirement>, allowing emergency access by lifting door.
 2. Latch and Keeper: Manufacturer's standard stainless steel, surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at toilet enclosures designated as accessible.
 3. Coat Hook: Manufacturer's standard stainless steel combination hook and rubber-tipped bumper, sized to prevent inswinging door from hitting compartment-mounted accessories.
 4. Door Bumper: Manufacturer's standard stainless steel, rubber-tipped bumper at outswinging doors.
 5. Door Pull: Manufacturer's standard stainless steel pull at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at toilet enclosures designated as accessible.
- B. Door Hardware and Accessories, Heavy Duty: Manufacturer's heavy-duty institutional operating hardware and accessories.
1. Hinges: Manufacturer's minimum 0.062-inch- (1.59-mm-) thick, stainless steel [surface-mounted, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees] [continuous, cam type that swings to a closed or partially open position] [continuous, spring-loaded type] [vault type] <Insert requirement>, allowing emergency access by lifting door. Mount with through bolts.
 2. Latch and Keeper: Manufacturer's heavy-duty, surface-mounted, cast stainless steel latch unit designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at toilet enclosures designated as accessible. Mount with through bolts.
 3. Coat Hook: Manufacturer's heavy-duty, combination cast stainless steel hook and rubber-tipped bumper, sized to prevent inswinging door from hitting compartment-mounted accessories. Mount with through bolts.
 4. Door Bumper: Manufacturer's heavy-duty, rubber-tipped, cast stainless steel bumper at outswinging doors. Mount with through bolts.
 5. Door Pull: Manufacturer's heavy-duty, cast stainless steel pull at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at toilet enclosures designated as accessible. Mount with through bolts.
- C. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
- D. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.05 MATERIALS

- A. Aluminum Castings: ASTM B26/B26M.
- B. Aluminum Extrusions: ASTM B221 (ASTM B221M).
- C. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, stretcher-leveled standard of flatness.
- D. Stainless Steel Castings: ASTM A743/A743M.

2.06 FABRICATION

- A. Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.
- B. Overhead-Braced Units: Manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Floor-Anchored Units: Manufacturer's standard corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.
- D. Ceiling-Hung Units: Manufacturer's standard corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment nuts at pilasters for connection to structural support above finished ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.
- E. Floor-and-Ceiling-Anchored Units: Manufacturer's standard corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment nuts at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.
- F. Urinal-Screen Posts: Manufacturer's standard corrosion-resistant anchoring assemblies at posts and walls, with leveling adjustment nuts at [tops and] bottoms of posts. Provide shoes [and sleeves (caps)] at posts to conceal anchorage.
- G. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, inswinging doors for standard toilet enclosures and 36-inch- (914-mm-) wide, outswinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for toilet enclosures designated as accessible.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
 - 1. Confirm location and adequacy of blocking and supports required for installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
1. Maximum Clearances:
 - a. Pilasters and Panels or Screens: 1/2 inch.
 - b. Panels or Screens and Walls: 1 inch.
 2. Stirrup Brackets: Secure panels or screens to walls and to pilasters with no fewer than [two brackets attached] [three brackets attached at midpoint and] near top and bottom of panel.
 - a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
 3. Full-Height (Continuous) Brackets: Secure panels or screens to walls and to pilasters with full-height brackets.
 - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
- B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches (44 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Floor-Anchored Units: Set pilasters with anchors penetrating not less than 2 inches (51 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Level, plumb, and tighten pilasters. Hang doors and adjust so tops of doors are level with tops of pilasters when doors are in closed position.
- D. Ceiling-Hung Units: Secure pilasters to supporting structure and level, plumb, and tighten. Hang doors and adjust so bottoms of doors are level with bottoms of pilasters when doors are in closed position.
- E. Floor-and-Ceiling-Anchored Units: Secure pilasters to supporting construction and level, plumb, and tighten. Hang doors and adjust so doors are level and aligned with panels when doors are in closed position.
- F. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.03 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware in accordance with hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION

SECTION 10 22 39
FOLDING PANEL PARTITIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Operable acoustical panel partitions.
2. Operable fire-rated panel partitions.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.
2. Section 09 29 00 "Gypsum Board" for fire-rated assemblies and sound barrier construction above the ceiling at track.
3. Section 10 22 26.13 "Accordion Folding Partitions" for accordion-type folding partitions having a pantograph mechanism and outer flexible covering, or narrow, vertically hinged segments.
4. Section 10 22 39.13 "Folding Glass-Panel Partitions" for operable panel partitions made of glass panels.
5. Electrical and communications Sections for electrical service and connections for motor operators, controls, and limit switches and for system disconnect switches.

1.02 DEFINITIONS

- A. NIC: Noise Isolation Class.
- B. NRC: Noise Reduction Coefficient.
- C. STC: Sound Transmission Class.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Operable acoustical panel partitions.
2. Operable fire-rated panel partitions.

B. Shop Drawings: For operable panel partitions.

1. Include plans, elevations, sections, attachment details **[, and numbered panel installation sequence]**.

2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
 3. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of exposed material, finish, covering, or facing.
1. Include Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed material, finish, covering, or facing, prepared on Samples of size indicated below:
1. Textile Facing Material: Full width by not less than 36-inch-long section of **[fabric]** **[carpet]** from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat.
 2. Panel Facing Material: Manufacturer's standard-size unit, not less than 3 inches square.
 3. Panel Edge Material: Not less than 3 inches long.
 4. Chair Rail: Manufacturer's standard-size unit, 6 inches long.
 5. Glass: Units 12 inches square.
 6. Hardware: One of each exposed door-operating device.
- E. Delegated Design Submittals: For operable panel partitions.
1. Include design calculations for seismic restraints that brace tracks to structure above.

1.05 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Partition track, track supports and bracing, switches, turning space, and storage layout.
 2. Suspended ceiling components.
 3. Structural members to which suspension systems will be attached.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. HVAC ductwork, outlets, and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Smoke detectors.
 - f. Access panels.
 - g. <Insert item>.
 6. Plenum [fire] [smoke] [and] [acoustical] barriers.
- B. Setting Drawings: For embedded items and cutouts required in other work **[, including support-beam, mounting-hole template]**.
- C. Qualification Data: For [Installer] [testing agency].

- D. Seismic Qualification Certificates: For operable panel partitions, tracks, accessories, and components, from manufacturer. Include seismic capacity of partition assemblies to remain in vertical position during a seismic event and the following:
 - 1. Basis for Certification: Indicate whether certification is based on analysis, testing, or experience data, in accordance with ASCE/SEI 7.
 - 2. Detailed description of partition anchorage devices on which the certification is based and their installation requirements.
- E. Product Certificates: For each type of operable panel partition.
 - 1. Include approval letter signed by manufacturer acknowledging Owner-furnished panel facing material complies with requirements.
- F. Product Test Reports: For each operable panel partition, for tests performed by a qualified testing agency.
- G. Field quality-control reports.
- H. Sample Warranty: For manufacturer's special warranty.

1.06 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For operable panel partitions to include in maintenance manuals.
 - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
 - a. Panel finish facings and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
 - b. Seals, hardware, track, track switches, carriers, and other operating components.
 - c. Electric operator and controls.

1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same production run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Panel Finish-Facing Material: Furnish full width in quantity to cover both sides of two panels when installed.

1.08 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of operable panel partitions that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Faulty operation of operable panel partitions.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
 2. Warranty Period: **[Two] [Five] [10] <Insert number>** years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design seismic bracing of tracks to structure above.
- B. Seismic Performance: Operable panel partitions are to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7] <Insert requirement>**.
1. The term "withstand" means "the partition panels will remain in place without separation of any parts when subjected to the seismic forces specified."
- C. Acoustical Performance: Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties in accordance with test methods indicated:
1. Sound-Transmission Requirements: Operable panel partition assembly tested for laboratory sound-transmission loss performance in accordance with ASTM E90, determined by ASTM E413, and rated for not less than the STC indicated.
 2. Noise-Reduction Requirements: Operable panel partition assembly, identical to partition tested for STC, tested for sound-absorption performance in accordance with ASTM C423, and rated for not less than the NRC indicated.
 3. Noise-Isolation Requirements: Installed operable panel partition assembly, identical to partition tested for STC, tested for NIC in accordance with ASTM E336, determined by ASTM E413, and rated for **[10 dB less than STC value indicated] <Insert value>**.
- D. Fire-Test-Response Characteristics: Provide panels with finishes complying with one of the following as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25] <Insert value>** or less.
 - b. Smoke-Developed Index: **[450] <Insert value>** or less.
 2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested in accordance with **[NFPA 265 Method B Protocol] [or] [NFPA 286]**.

- E. Fire Resistance: Provide fire-rated operable panel partition assemblies **[including pass doors]** complying with NFPA 80, based on testing in accordance with UL 10B for fire-rated door assemblies.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 - 2. Pass doors in fire-rated operable panel partition assemblies are to meet positive-pressure requirements.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.02 OPERABLE ACOUSTICAL PANEL PARTITIONS

- A. Operable Acoustical Panel Partitions **<Insert drawing designation>**: Partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
- B. Panel Operation: **[Manually operated, individual] [Manually operated, paired] [Manually operated, continuously hinged] [Electrically operated, continuously hinged]** panels.
- C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- D. Dimensions: Fabricate operable acoustical panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
 - 1. Panel Width: **[Standard widths] [Equal widths] [As indicated]**.
- E. STC: Not less than **[38] [41] [45] [47] [50] [52] [54] [56]** **<Insert number>**.
- F. NRC: Not less than **[0.50] [0.60] [0.65] [0.90]** **<Insert number>**.
- G. Panel Weight: **[8 lb/sq. ft.] [10 lb/sq. ft.] [12 lb/sq. ft.]** **<Insert value>** maximum.
- H. Panel Thickness: **[Maximum] [Minimum] [Nominal]** dimension of **[3 inches] [3-1/2 inches] [4 inches]** **<Insert dimension>**.
- I. Panel Materials:
 - 1. Steel Frame: Steel sheet, [manufacturer's standard] **[0.0508-inch] [0.0641-inch] [0.0747-inch]** **<Insert dimension>** nominal minimum thickness for uncoated steel.
 - 2. Steel Face/Liner Sheets: Tension-leveled steel sheet, [manufacturer's standard] **[0.0299-inch] [0.0359-inch] [0.0478-inch] [0.0598-inch] [0.0747-inch]** **<Insert dimension>** minimum nominal thickness for uncoated steel.

3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; ASTM B221 for extrusions; manufacturer's standard strengths and thicknesses for type of use.
 - a. Frame Reinforcement: Manufacturer's standard steel or aluminum.
4. Gypsum Board: ASTM C1396/C1396M.
5. Cement Board: ASTM C1288.
6. Particleboard: ANSI A208.1.
7. Medium-Density Fiberboard: ANSI A208.2.
8. Plywood: DOC PS 1.

J. Panel Closure: Manufacturer's standard unless otherwise indicated.

1. Initial Closure: [Resilient, bulb-shaped acoustical seal] [Fixed jamb] [As indicated] <Insert description>.
2. Final Closure: [Constant-force, lever-operated mechanical closure expanding from panel edge to create a constant-pressure acoustical seal] [Hinged jamb closure] [Hinged communicating panel] [Fixed jamb] [Angle jamb] [Resilient, bulb-shaped acoustical seal] <Insert description>.

K. Hardware: Manufacturer's standard as required to operate operable panel partition and accessories; with decorative, protective finish.

1. Hinges: [Manufacturer's standard] [Concealed (invisible)] <Insert type>.
2. <Insert hardware requirement>.

L. Finish Facing: [Owner furnished] [Vinyl-coated fabric wall covering] [Carpet wall covering] [Fabric wall covering] [High-pressure decorative laminate] [Wood veneer] [Paint] <Insert finish>.

2.03 OPERABLE FIRE-RATED PANEL PARTITIONS

- A. Operable Fire-Rated Panel Partitions <Insert drawing designation>: Fire-rated, acoustical panel partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
- B. Panel Operation: Manually operated, [individual] [paired] panels.
- C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- D. Dimensions: Fabricate operable fire-rated panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
 1. Panel Width: [Standard widths] [Equal widths] [As indicated].
- E. Fire Rating: [1] <Insert number> hour(s).

- F. STC: Not less than [38] [41] [45] [47] [50] [52] [54] <Insert number>.
- G. NRC: Not less than [0.50] [0.60] [0.65] [0.90] <Insert number>.
- H. Panel Weight: [**8.5 lb/sq. ft.**] [**10 lb/sq. ft.**] [**12 lb/sq. ft.**] <Insert value> maximum.
- I. Panel Thickness: [Maximum] [Minimum] [Nominal] dimension of [**3 inches**] [**3-1/2 inches**] [**4 inches**] <Insert dimension>.
- J. Panel Materials:
1. Steel Frame: Steel sheet, [manufacturer's standard] [**0.0508-inch**] [**0.0641-inch**] [**0.0747-inch**] <Insert dimension> nominal minimum thickness for uncoated steel.
 2. Steel Face/Liner Sheets: Tension-leveled steel sheet, [manufacturer's standard] [**0.0299-inch**] [**0.0359-inch**] [**0.0478-inch**] [**0.0598-inch**] [**0.0747-inch**] <Insert dimension> minimum nominal thickness for uncoated steel.
- K. Panel Closure: Manufacturer's standard fire-rated closure unless otherwise indicated.
1. Initial Closure: [Resilient, bulb-shaped acoustical seal] [Fixed jamb] [As indicated] <Insert description>.
 2. Final Closure: Fire-rated, [constant-force, lever-operated mechanical closure expanding from panel edge to create a constant-pressure acoustical seal] [hinged jamb closure] [hinged communicating panel] [fixed jamb] [angle jamb] [resilient, bulb-shaped acoustical seal] <Insert description>.
- L. Hardware: Manufacturer's standard as required to operate fire-rated operable panel partition and accessories; with decorative, protective finish.
1. Hinges: [Manufacturer's standard] <Insert type>.
 2. <Insert hardware requirement>.
- M. Finish Facing: [Owner furnished] [Vinyl-coated fabric wall covering] [Carpet wall covering] [Fabric wall covering] [High-pressure decorative laminate] [Wood veneer] [Paint] <Insert finish>.

2.04 SEALS

- A. Description: Seals that produce operable panel partitions complying with performance requirements and the following:
1. Manufacturer's standard seals unless otherwise indicated.
 2. Seals made from materials and in profiles that minimize sound leakage.
 3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended and closed.
- B. Vertical Seals: Deep-nesting, interlocking [**steel**] astragals mounted on each edge of panel, with continuous, resilient acoustical seal.

- C. Horizontal Top Seals: [Continuous-contact, resilient seal exerting uniform constant pressure on track] [or] [resilient, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on track when extended].
- D. Horizontal Bottom Seals:
1. Manufacturer's standard continuous-contact seal exerting uniform constant pressure on floor.
 2. Resilient, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.
 - a. Mechanically Operated for Acoustical Panels: Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than **[1-1/2 inches] [2 inches] [4 inches] [6 inches]** between retracted seal and floor finish.
 - b. Mechanically Operated for Fire-Rated Panels: Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than **[1-1/2 inches] [2 inches] [4 inches]** between retracted seal and floor finish.
 - c. Automatically Operated for Acoustical Panels: Extension and retraction of bottom seal automatically operated by movement of partition, with operating range not less than **[1 inch] [1-1/2 inches] [2 inches]** between retracted seal and floor finish.

2.05 PANEL FINISH FACINGS

- A. Description: Finish facings for panels that comply with indicated fire-test-response characteristics and that are factory applied to operable panel partitions with appropriate backing, using mildew-resistant nonstaining adhesive as recommended by facing manufacturer's written instructions.
1. Apply [one-piece, seamless] facings free of air bubbles, wrinkles, blisters, and other defects, [with edges tightly butted, and] [with invisible seams complying with Shop Drawings for location, and] with no gaps or overlaps. Horizontal [butted edges] [seams] are not permitted. Tightly secure and conceal raw and selvage edges of facing for finished appearance.
 2. Where facings with [directional or repeating patterns or directional weave] [directional, repeating, or matching grain] are indicated, mark facing top and attach facing in same direction.
 3. Match facing pattern 72 inches above finished floor.
- B. Owner-Furnished Facing Material: <Insert requirements>.
- C. Vinyl-Coated Fabric Wall Covering: Manufacturer's standard, mildew-resistant, washable, vinyl-coated fabric wall covering; complying with WA-101, **[Type I-Light Duty] [Type II-Medium Duty] [Type III-Heavy Duty]**; Class A.
1. Total Weight: <Insert value>.
 2. Antimicrobial Treatment: Additives capable of inhibiting growth of bacteria, fungi, and yeasts.

3. Color/Pattern: [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color/pattern>.
- D. Carpet Wall Covering: Manufacturer's standard [**nonwoven, needle-punched carpet with fibers fused to backing**], from same dye lot, treated to resist stains.
 1. Color/Pattern: [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color/pattern>.
- E. Fabric Wall Covering: [Manufacturer's standard fabric] [100 percent polyolefin woven fabric] <Insert fabric description>, from same dye lot, treated to resist stains.
 1. Color/Pattern: [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color/pattern>.
- F. High-Pressure Decorative Laminate: ISO 4586-3, Horizontal grade.
 1. Color/Pattern: [Match Architect's samples] [As selected by Architect from manufacturer's full range] <Insert color/pattern>.
- G. Wood Veneer: Laminated to [**noncombustible**] [**fire-retardant-treated wood**] core with moisture-resistant adhesive.
 1. Species and Cut: [Maple, plain sliced] [Poplar, plain sliced] [White oak, rift cut] [White ash, plain sliced] [As indicated] [As selected by Architect from manufacturer's full range] <Insert species and cut>.
 2. Matching of Adjacent Veneer Leaves: [**Book**] [**Slip**] [**Random**] match.
 3. Veneer Matching within Panel Face: [**Running**] [**Balance**] [**Center-balance**] match.
 4. Panel-Matching Method: [No matching between panels is required. Select and arrange panels for similarity of grain pattern and color between adjacent panels] <Insert requirement>.
 5. Vertical Panel-Matching Method: [Continuous match; veneer leaves of upper panels are continuations of veneer leaves of lower panels] [Vertical book match; veneer leaves are individually book matched from lower panels to upper panels] [Vertical slip match; veneer leaves are individually slip matched from lower panels to upper panels] [Panel vertical book match; panels are book matched from lower panels to upper panels] [Panel vertical slip match; panels are slip matched from lower panels to upper panels].
 6. Wood-Veneer Finish:
 - a. [As specified in Section 09 93 00 "Staining and Transparent Finishing."] <Insert description.>
 - b. [Match Architect's sample] [As selected by Architect from manufacturer's full range], as follows:
 - 1) Type: [Transparent finish] [Transparent finish over stain] <Insert finish> over wood variety indicated.
- H. Paint: Manufacturer's standard [**factory-**] [**field-**] painted finish.
 1. Color: [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
- I. Cap-Trimmed Edges: Protective perimeter-edge trim with tight hairline joints concealing edges of panel and finish facing, finished as follows:

1. Steel, Painted: Finished with manufacturer's [standard neutral color] [color matching Architect's sample] [color as selected by Architect from manufacturer's full range].
 2. Aluminum: Finished with manufacturer's standard [mill] [clear anodic] [color anodic] finish.
- J. Trimless Edges: Fabricate exposed panel edges so finish facing wraps uninterrupted around panel, covering edge and resulting in an installed partition with facing visible on vertical panel edges, without trim, for minimal sightlines at panel-to-panel joints.

2.06 SUSPENSION SYSTEMS

- A. Tracks: Steel or aluminum **[mounted directly to overhead structural support,] [with adjustable steel hanger rods for overhead support,]** designed for operation, size, and weight of operable panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
1. Panel Guide: Aluminum guide on both sides of the track to facilitate straightening of the panels; finished with factory-applied, decorative, protective finish.
 2. Head Closure Trim: As required for acoustical performance; [with factory-applied, decorative, protective finish] [primed for field finish].
- B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
1. Multidirectional Carriers: Capable of negotiating intersections without track switches.
- C. Track Intersections, Switches, and Accessories: As required for operation, storage, track configuration, and layout indicated for operable panel partitions, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.
1. Curve-and-Diverter Switches: Allow radius turns to divert panels to an auxiliary track.
 2. L Intersections: Allow panels to change 90 degrees in direction of travel.
 3. T Intersections: Allow panels to pass through or change 90 degrees to another direction of travel.
 4. X Intersections: Allow panels to pass through or change travel direction full circle in 90-degree increments, and allow one partition to cross track of another.
 5. Multidirectional Switches: Adjustable switch configuring track into L, T, or X intersections and allowing panels to be moved in all pass-through, 90-degree change, and cross-over travel direction combinations.
 6. Center carrier stop.
- D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- E. Steel Finish: Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

2.07 ELECTRIC OPERATORS

- A. Factory-assembled electric operation system of size and capacity recommended and provided by operable panel partition manufacturer for partition specified; with electric motor and factory-prewired motor controls, speed reducer, chain drive, control stations, control devices, and accessories required for operation. Include wiring from control stations to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
- B. Comply with NFPA 70.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.
- D. Motor Electrical Characteristics:
 - 1. Horsepower: [Manufacturer's standard] <Insert value>.
 - 2. Volts: [115] [208] [230] [460] <Insert value>.
 - 3. Phase: [Single phase] [Polyphase].
 - 4. Hertz: 60.
- E. Control Stations: Two single-key-operated, constant-pressure control stations located remotely from each other on opposite sides and opposite ends of partition run. Wire in series to require simultaneous activation of both key stations to operate partition. Each three-position control station labeled "Open," "Close," and " **[Off] [Stop]**." Furnish two keys per station.
- F. Obstruction-Detection Devices: Equip each motorized operable panel partition with indicated automatic safety sensor that causes operator to immediately **[shut off motor] [stop and reverse direction]**.
 - 1. Sensor Edge: Contact-pressure-sensitive safety edge along partition's leading edge.
 - 2. Sensor Mat: Electrically operated, contact-weight-sensitive safety mat in storage pocket area.
 - 3. Infrared Sensor System: Designed to detect an obstruction in partition's path and sound an audible alarm, without obstruction contacting partition.
- G. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop operable panel partition at fully extended and fully stacked positions.
- H. Emergency Release Mechanism: Quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.
- I. Electric Interlock: Equip each motorized operable panel partition with electric interlocks at locations indicated, to prevent operation of operable panel partition under the following conditions:
 - 1. On storage pocket door, to prevent operation if door is not in fully open position.
 - 2. On partitions at location of convergence by another partition, to prevent operation if merging partitions are in place.

2.08 ACCESSORIES

- A. Pass Doors: Swinging door built into and matching panel **[materials,] [construction,] [acoustical qualities,] [fire rating,]** finish and thickness, complete with frames and operating hardware. Hinges finished to match other exposed hardware.
1. Accessibility Standard: Fabricate doors to comply with applicable provisions in **[the USDOJ's "2010 ADA Standards for Accessible Design"] [the ABA standards of the Federal agency having jurisdiction] [and] [ICC A117.1] <Insert requirement>**.
 2. Single Pass Door: **[36 by 80 inches] [36 by 84 inches]** <Insert dimensions>.
 3. Double Pass Door: **[72 by 80 inches] [72 by 84 inches]** <Insert dimensions>.
 4. Pass-Door Hardware: Equip pass door with the following:
 - a. Door Seals: **[Mechanically operated floor seal on panels containing pass doors] [Sweep floor seals]**.
 - b. **[Panic] [Fire exit]** hardware.
 - c. Concealed door closer.
 - d. Door Viewer: Installed with view in direction of swing.
 - e. Exit Sign: Recessed, self-illuminated.
 - f. Latchset: Passage set.
 - g. Lock, Key Operated: Key-operated lock with cylinder **[, keyed to master key system,]** operable from both sides of door. Include two keys per lock.
 - h. Lock, Deadlock: Deadlock to receive cylinder, operable from both sides of door. See **[Section 08 71 00 "Door Hardware"] [Section 08 71 11 "Door Hardware (Descriptive Specification)"]** for lock cylinder and keying requirements.
- B. Storage Pocket Door: Full height at end of partition runs to conceal stacked partition; of same materials, finish, construction, thickness, and acoustical qualities as panels; complete with operating hardware **[and acoustical seals at soffit, floor, and jambs]**. Hinges in finish to match other exposed hardware.
1. Manufacturer's standard method to secure storage pocket door in closed position.
 2. Rim Lock, Key Operated: Key-operated lock cylinder **[, keyed to master key system,]** to secure storage pocket door in closed position. Include two keys per lock.
 3. Rim Lock, Deadlock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See **[Section 08 71 00 "Door Hardware"] [Section 08 71 11 "Door Hardware (Descriptive Specification)"]** for lock cylinder and keying requirements.
- C. Windows: **[Manufacturer's standard] [As indicated]** <Insert requirement>.
1. Glass: Safety glass **[matching Architect's sample] [as selected by Architect from manufacturer's full range]** <Insert requirement>.
 2. Safety Glass Standard for Partition Panels: Glass products complying with testing requirements in 16 CFR 1201, Category II, or in ANSI Z97.1, Class A.
 3. Safety Glass Standard for Pass Doors: Glass products complying with testing requirements in 16 CFR 1201, Category II.
- D. Work Surfaces: Quantities, placement, and size indicated.

1. Surface: [Porcelain steel marker/projection surface] [Self-healing, tackable, vinyl-coated fabric wall covering, complying with WA-101, Type II-Medium Duty; Class A; laminated to natural cork tackboard] <Insert description>.
 2. Surface Color: [Matching Architect's sample] [As selected by Architect from manufacturer's full range] <Insert manufacturer's designation for color>.
 3. Size: [Full width and height of panel] [Full width of panel by **48 inches**] [**48 by 48 inches**] [As indicated on Drawings] <Insert dimensions>.
 4. Trim: [Aluminum slip-on or snap-on trim with no visible screws or exposed joints and with corners mitered to a neat, hairline joint] <Insert description>.
- E. Chalk Tray and Eraser Pocket: Aluminum with [mill] [clear anodic] [color anodic] finish.
- F. Chair Rails: <Insert material, finish, dimensions, and other characteristics not indicated on Drawings>. [Recessed] [Surface mounted] in locations indicated on Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine flooring, floor levelness, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable panel partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF OPERABLE PANEL PARTITIONS

- A. Install operable panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.
- B. Install panels in numbered sequence indicated on Shop Drawings.
- C. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.
- D. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.
- E. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals. [**Perform test and make adjustments before NIC testing.**]

3.03 FIELD QUALITY CONTROL

- A. NIC Testing: [Owner will engage] [Engage] a qualified testing agency to perform tests and inspections.
 1. Testing Extent: Testing agency is to randomly select [one] <Insert number> operable panel partition installation(s) for testing.

2. Testing Methodology: Perform testing of installed operable panel partition for noise isolation in accordance with ASTM E336, determined by ASTM E413, and rated for not less than NIC indicated. Adjust and fit partitions to comply with NIC test method requirements.

B. An operable panel partition installation will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.04 ADJUSTING

A. Adjust operable panel partitions, hardware, and other moving parts to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust **[pass doors]** **[and]** **[storage pocket doors]** to operate smoothly and easily, without binding or warping.

C. Verify that safety devices are properly functioning.

3.05 MAINTENANCE SERVICE

A. Maintenance Service: Beginning at Substantial Completion, maintenance service is to include **[three]** **[six]** **[nine]** **[12]** months' full maintenance by manufacturer's authorized service representative. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operable-partition operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable panel partitions.

END OF SECTION

SECTION 10 26 00

WALL AND DOOR PROTECTION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Wall guards.
2. Impact-resistant handrails.
3. Bed locators.
4. Corner guards.
5. End-wall guards.
6. Abuse-resistant wall coverings.
7. Door-edge protection.
8. Door-frame protection.
9. Door-hardware protection.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for [steel angle corner guards] [pipe guards] [and] [wheel guards].
2. Section 05 73 00 "Decorative Metal Railings" for metal handrails without plastic bumpers.
3. Section 06 40 23 "Interior Architectural Woodwork for solid-wood handrails, bumper rails, chair rails, or corner moldings without plastic bumpers.
4. **[Section 08 71 00 "Door Hardware"]** for metal **[and plastic]** protective trim units, according to BHMA A156.6, used for armor, kick, mop, and push plates.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes.
2. Include fire ratings of units recessed in fire-rated walls and listings for door-protection items attached to fire-rated doors.

B. Shop Drawings: For each type of wall and door protection showing locations and extent.

1. Include plans, elevations, sections, and attachment details. **[Show handrail design and support spacing required to withstand structural loads.]**

- C. Samples for Initial Selection: For each type of impact-resistant wall-protection unit indicated, in each color and texture specified.
 - 1. Include Samples of accent strips and accessories to verify color selection.
- D. Samples for Verification: For each type of exposed finish on the following products, prepared on Samples of size indicated below:
 - 1. Wall Guards: 12 inches long. Include examples of joinery, corners, **[end caps,] [top caps,]** and field splices.
 - 2. Handrails: 12 inches long. Include examples of joinery, corners, and field splices.
 - 3. Bed Locators: 12 inches long. Include example of end caps.
 - 4. **[Corner] [and] [End-Wall]** Guards: 12 inches long. Include example top caps.
 - 5. Abuse-Resistant Wall Covering: 6 by 6 inches square.
 - 6. Door-Surface Protection: 6 by 6 inches square.
 - 7. Door **[-Edge] [and] [-Frame]** Protectors: 12 inches long.
 - 8. Door-Knob and -Lever Protectors: Full-size unit of each type.

1.04 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of handrail.
- B. Material Certificates: For each type of exposed plastic material.
- C. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of wall and door protection product to include in maintenance manuals.
 - 1. Include recommended methods and frequency of maintenance for maintaining best condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to finishes and performance.

1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials **[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. **[Wall-Guard] [and] [Handrail]** Covers: Full-size plastic covers of maximum length equal to **[2] <Insert number>** percent of each type, color, and texture of cover installed, but no fewer than **[two, 96-inch-] <Insert number and size>** long units.
 - 2. Bed-Locator Covers: Full-size plastic covers equal to **[2] <Insert number>** percent of each type, color, and texture of cover installed, but no fewer than **[two] <Insert number>** units.
 - 3. Corner-Guard Covers: Full-size plastic covers of maximum length equal to **[2] <Insert number>** percent of each type, color, and texture of cover installed, but no fewer than **[two, 48-inch-] <Insert number and size>** long units.

4. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.

1.07 QUALITY ASSURANCE

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Store wall and door protection in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
 1. Maintain room temperature within storage area at not less than 70 deg F during the period plastic materials are stored.
 2. Keep plastic materials out of direct sunlight.
 3. Store plastic wall- and door-protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F.
 - a. Store corner-guard covers in a vertical position.
 - b. Store [wall-guard] [bed-locator] [and] [handrail] covers in a horizontal position.

1.09 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of wall- and door-protection units that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including detachment of components from each other or from the substrates, delamination, and permanent deformation beyond normal use.
 - b. Deterioration of metals, metal finishes, plastics, and other materials beyond normal use.
 2. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain wall- and door-protection products **[of each type]** from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Flame-Spread Index: 25 or less.
 2. Smoke-Developed Index: 450 or less.
- B. Regulatory Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities]** **[and]** **[ICC A117.1]** <Insert requirement>.

2.03 WALL GUARDS

- A. Crash Rail <Insert drawing designation>: Heavy-duty [, **PVC-free**] assembly consisting of continuous snap-on plastic cover installed over concealed retainer; designed to withstand impacts.
1. Cover: Extruded rigid plastic, minimum 0.100-inch wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: **[Flat] [Convex]** <Insert description>.
 - 1) Dimensions: Nominal **[6 inches high by 1 inch deep] [8 inches high by 1 inch deep]** <Insert dimensions>.
 - 2) Surface: **[Uniform] [Uniform with coextruded accent inlay strip in contrasting color] [Grooved]** <Insert description>.
 - (a) Accent Inlay Strip: Nominal **[2 inches]** <Insert dimension> high by length of rail.
 - b. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 2. Continuous Retainer: Minimum 0.080-inch-thick, one-piece, extruded aluminum.
 3. Retainer Clips: Manufacturer's standard impact-absorbing clips designed for heavy-duty performance.
 4. Bumper: Continuous, resilient bumper cushion(s).
 5. End Caps and Corners: Prefabricated, injection-molded plastic; **[matching color] [contrasting with color]** <Insert color> cover; field adjustable for close alignment with snap-on cover.
 6. Accessories: Concealed splices and mounting hardware.
 7. Mounting: **[Surface mounted directly to wall] [Reveal mounted on bumper cushion(s)] [Extended mounting on injection-molded plastic mounting brackets].**
- B. Bumper Rail <Insert drawing designation>: Standard-duty [, **PVC-free**] assembly consisting of continuous snap-on plastic cover installed over concealed retainer; designed to withstand impacts.
1. Cover: Extruded rigid plastic, minimum 0.078-inch wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: **[Half-round profile, nominal 1 inch high by 1 inch deep] [Rounded bullnose profile, nominal 4 inches high by 2 inches deep] [Angled profile with rounded bullnose front edge, nominal 4 inches high by 2 inches deep] [Flat profile, nominal 4 inches high by 1 inch deep]** <Insert profile and dimensions>.
 - b. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 2. Continuous Retainer: Minimum 0.080-inch-thick, one-piece, extruded aluminum.
 3. Retainer Clips: Manufacturer's standard impact-absorbing clips.
 4. Bumper: Continuous, resilient bumper cushion(s).
 5. End Caps and Corners: Prefabricated, injection-molded plastic; **[matching color] [contrasting with color]** <Insert color> cover; field adjustable for close alignment with snap-on cover.

6. Accessories: Concealed splices and mounting hardware.
 7. Mounting: [Surface mounted directly to wall] [Reveal mounted on bumper cushions] [Extended mounting on injection-molded plastic mounting brackets].
- C. Rub Rail **<Insert drawing designation>**: Standard-duty [, **PVC-free**] assembly consisting of continuous snap-on cover installed over concealed, continuous retainer.
1. Cover: Extruded plastic, minimum 0.078-inch wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Profile: [Half-round profile, nominal **1-1/8 inches high by 1-1/8 inches deep**] [Rounded bullnose profile, nominal **2 inches high by 1 inch deep**] <Insert profile and dimensions>.
 - b. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 2. Retainer: Minimum 0.0625-inch-thick, one-piece, extruded aluminum.
 3. End Caps and Corners: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
 4. Accessories: Concealed splices and mounting hardware.
 5. Mounting: [Surface mounted directly to wall] [Reveal mounted on bumper cushions].
- D. Wood Chair Rail with Bumper **<Insert drawing designation>**: Standard-duty [, **PVC-free**] assembly consisting of continuous sculpted, solid-wood rail, with continuous bumper insert installed in continuous recessed retainer.
1. Wood Rail: [**3-1/2 inches high by 7/8 inch deep**] [**5-1/2 inches high by 1-1/2 inches deep**] [Size and profile indicated on Drawings] <Insert dimensions>.
 - a. Wood Species: [Red oak] [Maple] [Ash] [Beech] <Insert species>.
 - b. Finish: [Clear] [Stained].
 - c. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 2. Bumper: Extruded plastic, minimum 0.078-inch wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Profile: [Half-round profile, nominal **2 inches high by 1 inch deep**] [Small rounded profile, nominal **1-1/8 inches high by 1-1/8 inches deep**] <Insert profile and dimensions>.
 - b. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 - c. End Caps and Corners: Prefabricated, injection-molded plastic; color matching bumper; field adjustable for close alignment with snap-on bumper.
 3. Retainer: Minimum 0.0625-inch-thick, one-piece, extruded aluminum.
 - a. Finish: [Mill] [Brass colored].
 4. Accessories: Concealed splices and mounting hardware.
 5. Mounting: Surface mounted directly to wall.

- E. Opaque-Plastic Chair Rail <Insert drawing designation>: Standard-duty [, **PVC-free**] assembly consisting of continuous snap-on cover installed over continuous retainer.
- Cover: Extruded rigid plastic, minimum 0.070-inch wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - Profile: **[Rounded bullnose profile, nominal 2 inches high by 1 inch deep] [Half-round profile, nominal 1-1/8 inches high by 1-1/8 inches deep]** <Insert profile and dimensions>.
 - Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 - Retainer: Minimum 0.060-inch-thick, one-piece, extruded aluminum.
 - Bumper: Continuous, resilient bumper cushion(s).
 - End Caps and Corners: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
 - Accessories: Concealed splices and mounting hardware.
 - Mounting: **[Surface mounted directly to wall] [Reveal mounted on bumper cushions].**
- F. Transparent-Plastic Chair Rail <Insert drawing designation>: Consisting of clear polycarbonate plastic sheet.
- Height: **[3 inches nominal] [4 inches nominal]** [As indicated on Drawings] <Insert dimension>.
 - Mounting: Surface mounted using flat-head countersunk screws through factory-drilled mounting holes.
- G. Rub Strip <Insert drawing designation>: Continuous [, **PVC-free**] strip, consisting of minimum **[0.040-inch-] [0.060-inch-]** <Insert dimension> thick, semirigid, plastic sheet wall-covering material.
- Height: **[8 inches nominal]** <Insert dimension>.
 - Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 - Mounting: Surface mounted with adhesive.

2.04 IMPACT-RESISTANT HANDRAILS

- A. Structural Performance: Handrails, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
- Uniform load of 50 lbf/ft. <Insert requirement> applied in any direction.
 - Concentrated load of 200 lbf applied in any direction.
 - Uniform and concentrated loads need not be assumed to act concurrently.
- B. Plastic, Impact-Resistant Handrails <Insert drawing designation>: Manufacturer's standard **[, PVC-free]** assembly consisting of snap-on plastic cover installed over continuous retainer.
- Cover: Minimum **[0.078-inch-] [0.100-inch-]** <Insert dimension> thick, extruded rigid plastic; **[as follows:] [in dimensions and profiles indicated on Drawings.]**

- a. Single Handrail: Cylindrical tube profile cover with continuous retainer; with mounting brackets supporting bottom of rail.
 - 1) Tube Diameter: **<Insert dimension>**.
 - b. Bumper Rail: Cover with **[flat]** **[sculpted with contoured thumb recess on]** **<Insert description>** front side; with 1-1/2-inch-diameter gripping surface and finger recess on back side; supported by concealed, continuous retainer and extended mounting brackets.
 - 1) Bumper-Rail Dimensions: Nominal **[5-1/2 inches high by 1-1/2 inches deep]** **[5-1/2 inches high by 2 inches deep]** **<Insert dimensions>**.
 - 2) Bumper Surface: **[Smooth]** **[Smooth with coextruded accent inlay strip in contrasting color]** **[Smooth with coextruded accent inlay strips in contrasting color]** **[Grooved]** **<Insert description>**.
 - 3) Accent Inlay Strip(s): **[One strip]** **[Two strips]**, nominal **[2 inches]** **<Insert dimension>** high by length of rail.
 - c. Double Handrail with Bumper-Rail Profile: Two tubes mounted above and below nominal, flat-faced bumper rail; each tube with 1-1/2-inch-diameter gripping surface and finger recess on back side; supported by concealed, continuous retainer and extended mounting brackets.
 - 1) Bumper-Rail Dimensions: Nominal **[4 inches high by 1-1/2 inches deep]** **<Insert dimensions>**.
 - 2) Bumper Surface: **[Smooth]** **[Smooth with coextruded accent inlay strip in contrasting color]** **[Smooth with coextruded accent inlay strips in contrasting color]** **[Grooved]** **<Insert description>**.
 - 3) Accent Inlay Strip(s): **[One strip]** **[Two strips]**, nominal **[2 inches]** **<Insert dimension>** high by length of rail.
 - d. Color and Texture: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **<Insert color and texture>**.
2. Retainer: Minimum 0.080-inch-thick, one-piece, extruded aluminum.
 3. Mounting Bracket: Extended mounting on **[injection-molded plastic]** **[anodized-aluminum]** **<Insert description>** mounting brackets.
 4. End Caps and Corners: Prefabricated, injection-molded plastic; **[matching color]** **[contrasting with color]** **<Insert color>** cover; field adjustable for close alignment with snap-on cover.
 5. Accessories: Concealed splices, cushions, and mounting hardware.
- C. Combination Wood-Plastic Bumper Handrail **<Insert drawing designation>**: Manufacturer's standard **[, PVC-free]** assembly consisting of solid-wood handrail mounted above plastic bumper rail, both mounted on continuous retainer; with reveal between handrail and bumper serving as thumb recess on front side; with 1-1/2-inch-diameter gripping surface and finger recess on back side.
1. Wood Handrail: 1-1/2 inches in diameter; with matching end caps and corners.
 - a. Wood Species: **[Red oak]** **[Maple]** **[Ash]** **[Beech]** **<Insert species>**.
 - b. Finish: **[Clear]** **[Stained]**.
 - c. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **<Insert color>**.

2. Bumper: Extruded rigid plastic, minimum **[0.078-inch-] [0.100-inch-]** wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Profile: [Flat] [Convex] <Insert profile> profile, nominal **[4 inches high by 1 inch deep]** <Insert profile and dimensions>.
 - b. Accent Inlay Strip: Nominal **[2 inches]** <Insert dimension> high by length of rail.
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 - d. End Caps and Corners: Prefabricated, injection-molded plastic; color matching bumper; field adjustable for close alignment with snap-on bumper.
 3. Retainer: Minimum 0.0625-inch-thick, one-piece, extruded aluminum.
 4. Reveal: Extruded rigid plastic over aluminum retainer.
 - a. Color: [Brass] [Chrome] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 5. Accessories: Concealed splices, cushion(s), and mounting hardware.
- D. Wood Handrail with Bumper <Insert drawing designation>: Manufacturer's standard [, **PVC-free**] assembly consisting of continuous sculpted, solid-wood handrail, with bumper insert installed in continuous retainer recessed into the face of the wood.
1. Wood Handrail: **[As indicated on Drawings]** <Insert dimensions> with 1-1/2-inch-diameter gripping surface.
 - a. End Caps, Returns, Corners, and Mounting Brackets: Solid wood that matches rail.
 - b. Wood Species: [Red oak] [Maple] [Ash] [Beech] [Bamboo] <Insert species>.
 - c. Finish: [Clear] [Stained].
 - d. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
 2. Bumper: Extruded plastic, minimum 0.078-inch wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings].
 - a. Profile: **[Half-round profile, nominal 2 inches high by 1 inch deep]** [Small rounded profile, nominal **1-1/8 inches high by 1-1/8 inches deep]** <Insert profile and dimensions>.
 - b. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 - c. End Caps and Corners: Prefabricated, injection-molded plastic; color matching bumper; field adjustable for close alignment with snap-on bumper.
 3. Retainer: Minimum 0.0625-inch-thick, one-piece, extruded aluminum.
 - a. Finish: [Mill] [Brass colored].
 4. Accessories: Concealed splices and mounting hardware.

2.05 BED LOCATORS

- A. Bed Locators <Insert drawing designation>: Manufacturer's standard [, **PVC-free**] assembly consisting of continuous snap-on plastic cover installed over continuous retainer; with two bed-locator end caps and mounting hardware; cover designed to spring back when hit.
1. Cover: Extruded rigid plastic, minimum **[0.078-inch]** <Insert dimension> wall thickness.
 - a. Profile: Large, rounded **[angled]** **[bullnose]** profile, nominal 4 inches high by 2 inches deep.
 - b. Color and Texture: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 2. Retainer: Minimum 0.080-inch-thick, one-piece, extruded aluminum.
 3. Bed-Locator End Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
 4. Mounting Type: **[Surface mounted on 1/2-inch-thick cushion spacers]** **[Extended mounting on injection-molded plastic mounting brackets]** **[Extended mounting on aluminum mounting brackets]**.

2.06 CORNER GUARDS

- A. Surface-Mounted, Plastic-Cover Corner Guards <Insert drawing designation>: Manufacturer's standard [, **PVC-free**] assembly consisting of snap-on, resilient plastic cover installed over retainer; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition.
1. Cover: Extruded rigid plastic, minimum **[0.078-inch]** **[0.100-inch]** <Insert dimension> wall thickness; **[as follows:]** **[in dimensions and profiles indicated on Drawings.]**
 - a. Profile: Nominal **[2-inch-long leg and 1/4-inch corner radius]** **[3-inch-long leg and 1/4-inch corner radius]** **[3-inch-long leg and 1-1/4-inch corner radius]** <Insert dimensions>.
 - b. Height: **[4 feet]** **[8 feet]** <Insert dimension>.
 - c. Color and Texture: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 2. Continuous Retainer: **[Minimum 0.060-inch-thick, one-piece, extruded aluminum]** **[One-piece extruded plastic]**.
 3. Retainer Clips: Manufacturer's standard impact-absorbing clips.
 4. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
- B. Flush-Mounted, Plastic-Cover Corner Guards <Insert drawing designation>: Manufacturer's standard [, **PVC-free**] assembly consisting of snap-on, resilient plastic cover that is flush with adjacent wall surface, installed over retainer; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition; full wall height.
1. Cover: Extruded rigid plastic, minimum **[0.078-inch]** **[0.100-inch]** <Insert dimension> wall thickness; **[as follows:]** **[in dimensions and profiles indicated on Drawings.]**
 - a. Profile: Nominal **[2-inch-long leg and 1/4-inch corner radius]** **[3-inch-long leg and 1/4-inch corner radius]** **[3-inch-long leg and 1-1/4-inch corner radius]** <Insert dimensions>.

- b. Height: **[4 feet] [8 feet]** <Insert dimension>.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
2. Continuous Retainer: Minimum 0.060-inch-thick, one-piece, extruded aluminum.
 3. Retainer Clips: Manufacturer's standard impact-absorbing clips.
 4. Aluminum Cove Base: Nominal **[4 inches] [6 inches]** <Insert dimension> high.
- C. Fire-Rated, Flush-Mounted, Plastic-Cover Corner Guards <Insert drawing designation>: Manufacturer's standard **[, PVC-free]** assembly consisting of snap-on, resilient plastic cover that is flush with adjacent wall surface, installed over continuous retainer and intumescent fire barrier; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition; full wall height.
1. Fire Rating: **[1 hour] [2 hours]** [Same rating as wall in which corner guard is installed]; UL listed and labeled according to ASTM E1966 or UL 2079.
 - a. L-Rating at Smoke Barriers: Not exceeding 5.0 cfm/ft. of joint at 0.30 inch wg at both ambient and elevated temperatures according to UL 2079.
 2. Cover: Extruded rigid plastic, minimum **[0.078-inch] [0.100-inch]** <Insert dimension> wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Leg: Nominal **[2 inches] [3 inches]**.
 - b. Corner Radius: **[1/4 inch] [1-1/4 inches]**.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 3. Retainer: Minimum 0.070-inch-thick, one-piece, extruded aluminum.
 4. Aluminum Cove Base: Nominal **[4 inches] [6 inches]** <Insert dimension> high.
- D. Surface-Mounted, Opaque-Plastic Corner Guards <Insert drawing designation>: Fabricated as one piece from **[PVC plastic] [PVC-free plastic] [acrylic-modified vinyl sheet] [or] [opaque polycarbonate sheet]**; with formed edges; fabricated with 90- or 135-degree turn to match wall condition.
1. Wing Size: Nominal **[3/4 by 3/4 inch] [1-1/8 by 1-1/8 inches] [2-1/2 by 2-1/2 inches]** <Insert dimensions>.
 2. Mounting: **[Countersunk screws through factory-drilled mounting holes] [Adhesive]**.
 3. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
- E. Surface-Mounted, Transparent-Plastic Corner Guards <Insert drawing designation>: Fabricated as one piece from clear polycarbonate plastic sheet; with formed edges; fabricated with 90- or 135-degree turn to match wall condition.
1. Wing Size: Nominal **[3/4 by 3/4 inch] [1-1/8 by 1-1/8 inches] [2-1/2 by 2-1/2 inches]** <Insert dimensions>.
 2. Thickness: Minimum **[0.050 inch] [0.075 inch] [0.100 inch]** <Insert dimension>.
 3. Mounting: **[Countersunk screws through factory-drilled mounting holes] [Corner clips]**.

- F. Surface-Mounted, Metal Corner Guards <Insert drawing designation>: Fabricated as one piece from formed or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
1. Material: Stainless-steel sheet, [Type 304] [Type 430].
 - a. Thickness: Minimum [0.0500 inch] [0.0625 inch] [0.0781 inch] <Insert dimension>.
 - b. Finish: [Directional satin, No. 4] [Bright annealed].
 2. Material: Extruded aluminum, minimum 0.0625 inch thick, with clear anodic finish.
 3. Material: Brass sheet, minimum 0.0500 inch thick, with [buffed, smooth specular] [fine satin] finish.
 4. Wing Size: Nominal [1-1/2 by 1-1/2 inches] [2-1/2 by 2-1/2 inches] [3-1/2 by 3-1/2 inches] <Insert dimensions>.
 5. Corner Radius: [1/8 inch] [3/4 inch] <Insert dimension>.
 6. Mounting: [Flat-head, countersunk screws through factory-drilled mounting holes] [Oval head, countersunk screws through factory-drilled mounting holes] [Adhesive].

2.07 END-WALL GUARDS

- A. Surface-Mounted, Plastic-Cover, End-Wall Guard <Insert drawing designation>: Manufacturer's standard [, PVC-free] assembly consisting of snap-on, resilient plastic cover installed over [continuous retainer] [continuous retainer at each corner, with end of wall covered by semirigid, abuse-resistant wall covering]; including mounting hardware.
1. Cover: Extruded rigid plastic, minimum [0.078-inch] [0.100-inch] wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Profile: Nominal [2-inch-long leg and 1/4-inch corner radius] [3-inch-long leg and 1/4-inch corner radius] [3-inch-long leg and 1-1/4-inch corner radius] <Insert dimensions>.
 - b. Height: [4 feet] [8 feet] <Insert dimension>.
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Match corner guards] <Insert color and texture>.
 2. Retainer: Minimum 0.060-inch-thick, one-piece, extruded aluminum.
 3. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
- B. Flush-Mounted, Plastic-Cover, End-Wall Guard <Insert drawing designation>: Manufacturer's standard [, PVC-free] assembly consisting of snap-on, resilient plastic cover that is flush with adjacent wall surface and that covers entire end of wall, installed over [continuous retainer] [continuous retainer at each corner, with end of wall covered by semirigid, abuse-resistant wall covering]; including mounting hardware.
1. Cover: Extruded rigid plastic, minimum [0.078-inch] [0.100-inch] <Insert dimension> wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Profile: Nominal [2-inch-long leg and 1/4-inch corner radius] [3-inch-long leg and 1/4-inch corner radius] [3-inch-long leg and 1-1/4-inch corner radius] <Insert dimensions>.
 - b. Height: [4 feet] [8 feet] <Insert dimension>.

- c. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Match corner guards] <Insert color and texture>.
 2. Retainer: Minimum 0.060-inch-thick, one-piece, extruded aluminum.
 3. Aluminum Cove Base: Nominal **[4 inches] [6 inches]** <Insert dimension> high.
- C. Fire-Rated, Flush-Mounted, Plastic-Cover, End-Wall Guard <Insert drawing designation>: Manufacturer's standard [, **PVC-free**] assembly consisting of snap-on, resilient plastic cover that is flush with adjacent wall surface and that covers entire end of wall, installed over continuous retainer and intumescent fire barrier; including mounting hardware; full wall height.
1. Fire Rating: [1 hour] [2 hours] [Same rating as wall in which end guard is installed]; UL listed and labeled according to UL 2079.
 2. Cover: Extruded rigid plastic, minimum **[0.078-inch] [0.100-inch]** <Insert dimension> wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Leg: Nominal **[2 inches] [3 inches]** <Insert dimension>.
 - b. Corner Radius: **[1/4 inch] [1-1/4 inches]** <Insert dimension>.
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] [Match corner guards] <Insert color and texture>.
 3. Retainer: Minimum 0.070-inch-thick, one-piece, extruded aluminum.
 4. Aluminum Cove Base: Nominal **[4 inches] [6 inches]** <Insert dimension> high.
- D. Surface-Mounted, Metal, End-Wall Guards <Insert drawing designation>: Fabricated from one-piece, formed or extruded metal that covers entire end of wall; with formed edges.
1. Material: Stainless-steel sheet, **[Type 304] [Type 430]**.
 - a. Thickness: Minimum **[0.0500 inch] [0.0625 inch] [0.0781 inch]** <Insert dimension>.
 - b. Finish: [Directional satin, No. 4] [Bright annealed].
 2. Material: Extruded aluminum, minimum 0.0625 inch thick, with clear anodic finish.
 3. Material: Brass sheet, minimum 0.0500 inch thick, with **[buffed, smooth specular] [fine satin]** finish.
 4. Wing Size: Nominal **[1-1/2 by 1-1/2 inches] [2-1/2 by 2-1/2 inches] [3-1/2 by 3-1/2 inches]** <Insert dimensions>.
 5. Corner Radius: **[1/8 inch] [3/4 inch]** <Insert dimension>.
 6. Mounting: [Flat-head, countersunk screws through factory-drilled mounting holes] [Oval head, countersunk screws through factory-drilled mounting holes] [Adhesive].
- 2.08 ABUSE-RESISTANT WALL COVERINGS
- A. Abuse-Resistant Sheet Wall Covering <Insert drawing designation>: Fabricated from semirigid, plastic sheet wall-covering material.
1. Size: **[48 by 96 inches]** for sheet] **[48 by 120 inches]** for roll] [As indicated] <Insert dimensions>.
 2. Sheet Thickness: **[0.022 inch] [0.028 inch] [0.040 inch] [0.060 inch] [0.080 inch] [0.093 inch] [0.125 inch]** <Insert dimension>.

3. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 4. Height: [Full wall] [Wainscot] [As indicated] <Insert dimension>.
 5. Trim and Joint Moldings: Extruded rigid plastic that matches wall-covering color.
 6. Mounting: Adhesive.
- B. Laminated, Impact-Resistant Wall Panels <Insert drawing designation>: Rigid wall panels consisting of semirigid, plastic sheet wall covering material factory laminated to high-impact-resistant core, with moisture-resistant vapor barrier factory laminated to reverse side of panel for stability.
1. Composition: [0.028-inch-thick plastic sheet laminated to 3/8-inch-thick particleboard or medium-density fiberboard core] [0.04-inch-thick plastic sheet laminated to 3/8-inch-thick particleboard or medium-density fiberboard core] <Insert description>.
 2. Sheet Size: [48 by 96 inches] [48 by 108 inches] [48 by 120 inches] [As indicated] <Insert dimensions>.
 3. Height: [Full wall] [Wainscot] [As indicated] <Insert dimension>.
 4. Sheet Edge: [Square] [Beveled].
 5. Trim and Joint Moldings: Extruded rigid plastic that matches wall-covering color.
 6. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 7. Mounting: Adhesive.
- 2.09 PLASTIC DOOR-PROTECTION PLATES
- A. General: Manufacturer's standard plastic products of thicknesses and sizes indicated.
1. Fire-Rated Doors: Where the tops of door-protection plates indicated for field installation on fire-rated doors are more than 16 inches above the door bottoms, provide door-protection plates complying with NFPA 80 that are listed and labeled by a qualified testing and inspection agency acceptable to authorities having jurisdiction.
- B. Full-Height Door-Surface Protection <Insert drawing designation>: Minimum [0.040-inch] [0.060-inch] [0.080-inch] <Insert dimension> wall thickness; with 90-degree bend for edge return to protect door edge.
1. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 2. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].
- C. Armor Plates <Insert drawing designation>: Minimum [0.040-inch] [0.060-inch] [0.080-inch] <Insert dimension> wall thickness; beveled four sides.
1. Size: [32 inches] [36 inches] [40 inches] [42 inches] <Insert dimension> high by door width, with allowance for frame stops.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.

3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].
- D. Kick Plates <Insert drawing designation>: Minimum **[0.040-inch] [0.060-inch] [0.080-inch]** <Insert dimension> wall thickness; beveled four sides.
1. Size: **[8 inches] [10 inches] [12 inches]** <Insert dimension> high by door width, with allowance for frame stops.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].
- E. Mop Plates <Insert drawing designation>: Minimum **[0.040-inch] [0.060-inch] [0.080-inch]** <Insert dimension> wall thickness; beveled four sides.
1. Size: **[4 inches] [6 inches]** <Insert dimension> high by 1 inch less than door width.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].
- F. Stretcher Plates <Insert drawing designation>: Minimum **[0.040-inch] [0.060-inch] [0.080-inch]** <Insert dimension> wall thickness; beveled four sides.
1. Size: **[6 inches] [8 inches]** <Insert dimension> high by door width, with allowance for frame stops.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].
- G. Push Plates <Insert drawing designation>: Minimum **[0.040-inch] [0.060-inch] [0.080-inch]** <Insert dimension> wall thickness; beveled four sides.
1. Size: **[12 inches high by 4 inches wide] [16 inches high by 4 inches wide]** <Insert dimensions>.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].
- 2.10 DOOR-EDGE PROTECTION
- A. Door Edging <Insert drawing designation>: Fabricated from extruded rigid plastic, minimum **[0.040-inch] [0.060-inch]** <Insert dimension> wall thickness; formed to fit over door edge without mortising.
1. Shape: **[L] [U]**.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes].

2.11 DOOR-FRAME PROTECTION

- A. Door-Frame Protector <Insert drawing designation>: One piece fabricated from extruded rigid plastic, minimum **[0.040-inch] [0.050-inch] [0.060-inch]** <Insert dimension> wall thickness; formed to fit entire door-frame profile.
1. Height: **[36 inches] [48 inches]** <Insert dimension>.
 2. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 3. Mounting: **[Adhesive] [Countersunk screws through factory-drilled mounting holes]**.
- B. Door-Frame Protector Assembly <Insert drawing designation>: Assembly consisting of snap-on plastic cover installed over continuous retainer; formed to fit half of door frame on opposite side of door swing.
1. Cover: Extruded rigid plastic, minimum 0.080-inch wall thickness; in dimensions and profiles indicated.
 - a. Height: **[36 inches] [48 inches]** <Insert dimension>.
 - b. Corner Radius: **[1/4 inch] [1-1/4 inches]**.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 2. Retainer: Minimum 0.080-inch-thick, one-piece, extruded aluminum.

2.12 DOOR-HARDWARE PROTECTION

- A. Door **[-Knob] [and] [-Lever]** Protector <Insert drawing designation>: Fabricated from injection-molded plastic, minimum 0.060-inch wall thickness.
1. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and texture>.
 2. Mounting: Countersunk screws through factory-drilled mounting holes.

2.13 MATERIALS

- A. Plastic Materials: Chemical- and stain-resistant, high-impact-resistant plastic with integral color throughout; extruded and sheet material as required, thickness as indicated.
- B. Polycarbonate Plastic Sheet: ASTM D6098, S-PC01, Class 1 or Class 2, abrasion resistant; with a minimum impact-resistance rating of 15 ft.-lbf/in. of notch when tested according to ASTM D256, Test Method A.
- C. Solid Wood: Clear hardwood lumber of species indicated, free of appearance defects, and selected for compatible grain and color.
- D. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.
- E. Adhesive: As recommended by protection product manufacturer.

2.14 FABRICATION

- A. Fabricate wall and door protection according to requirements indicated for design, performance, dimensions, and member sizes, including thicknesses of components.
- B. Curved Panels: Preform curved semirigid, abuse-resistant sheet wall covering in factory for radius and sheet thickness as follows:
 - 1. Sheet Thickness of 0.040 Inch: 24-inch radius.
 - 2. Sheet Thickness of 0.060 Inch: 36-inch radius.
 - 3. <Insert thickness and radius>.
- C. Factory Assembly: Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.
- D. Quality: Fabricate components with uniformly tight seams and joints and with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.
- E. Wood Handrails: Miter corners and ends of wood handrails for returns.

2.15 FINISHES

- A. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances [**fire rating,**] and other conditions affecting performance of the Work.
- B. Examine walls to which wall and door protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
 - 1. For wall and door protection attached with adhesive, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Complete finishing operations, including painting, before installing wall and door protection.
- B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.03 INSTALLATION

- A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
 - B. Mounting Heights: Install wall and door protection in locations and at mounting heights indicated on Drawings. **[If not indicated on Drawings, install at heights indicated below:]**
 - 1. Crash Rails: <Insert dimension> above finished floor.
 - 2. Bumper Rails: <Insert dimension> above finished floor.
 - 3. Rub Rails: <Insert dimension> above finished floor.
 - 4. Chair Rails: <Insert dimension> above finished floor.
 - 5. Handrails: <Insert dimension> above finished floor.
 - 6. Bed Locators: <Insert dimension> above finished floor.
 - C. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.
 - 1. Provide anchoring devices and suitable locations to withstand imposed loads.
 - 2. Where splices occur in horizontal runs of more than 20 feet, splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches apart.
 - 3. Adjust **[end] [and] [top]** caps as required to ensure tight seams.
 - D. Abuse-Resistant Wall Covering: Install top and edge moldings, corners, and divider bars as required for a complete installation.
 - E. Door-Frame Protectors: Install on both door jams.
 - F. Fire Doors: Install protection according to the listing of each item.
- 3.04 CLEANING
- A. Immediately after completion of installation, clean plastic covers and accessories using a standard ammonia-based household cleaning agent.
 - B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION

This page intentionally left blank

SECTION 10 28 13
TOILET ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Public-use washroom accessories.
2. Toilet-compartment occupancy-indicator system.
3. Public-use shower room accessories.
4. Staff bathroom accessories.
5. Healthcare accessories.
6. Childcare accessories.
7. Underlatory guards.
8. Custodial accessories.
9. Hand-sanitizer dispensers.

B. Related Requirements:

1. Section 08 83 00 "Mirrors" for frameless mirrors.
2. Section 09 30 13 "Ceramic Tiling" for ceramic toilet and bath accessories.
3. Section 10 28 13.63 "Detention toilet Accessories" for accessories designed for installation in detention facilities.

1.02 ALLOWANCES

- A. See Section 01 21 00 "Allowances" for description of allowances affecting items specified in this Section.

1.03 UNIT PRICES

- A. See Section 01 22 00 "Unit Prices" for description of unit prices affecting items specified in this Section.

1.04 ALTERNATES

- A. See Section 01 23 00 "Alternates" for description of alternates affecting items specified in this Section.

1.05 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.06 ACTION SUBMITTALS

- A. Product Data:
 - 1. Public-use washroom accessories.
 - 2. toilet-compartment occupancy-indicator system.
 - 3. Public-use shower room accessories.
 - 4. Private-use bathroom accessories.
 - 5. Healthcare accessories.
 - 6. Childcare accessories.
 - 7. Underlavatory guards.
 - 8. Custodial accessories.
 - 9. Hand-sanitizer dispensers.
- B. Product Data Submittals: for each product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 - 3. Include electrical characteristics.
- C. Samples: for each exposed product and for each finish specified, full size.
 - 1. Approved full-size Samples will be returned and may be used in the Work.
- D. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
 - 1. Identify locations using room designations indicated.
 - 2. Identify accessories using designations indicated.
- E. Delegated Design Submittals: for **[grab bars] [and] [shower seats]**.

1. Include structural design calculations indicating compliance with specified structural-performance requirements.

1.07 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: for manufacturer's special warranties.

1.08 CLOSEOUT SUBMITTALS

- A. Maintenance Data: for accessories to include in maintenance manuals.

1.09 WARRANTY

- A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, visible silver spoilage defects.
2. Warranty Period: **[10] [15]** <Insert number> years from date of Substantial Completion.

- B. Manufacturer's Special Warranty for toilet-Compartment Occupancy-Indicator Systems: Manufacturer agrees to repair or replace toilet-compartment occupancy-indicator systems that fail in materials or workmanship within specified warranty period.

1. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.

- C. Manufacturer's Special Warranty for Hand Dryers: Manufacturer agrees to repair or replace hand dryers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: **[Two] [Five] [10]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 OWNER-FURNISHED MATERIALS

- A. Owner-Furnished Materials: <Insert products>.

2.01 MANUFACTURERS

- A. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Structural Performance: Design accessories and fasteners to comply with the following requirements:

1. Grab Bars: Installed units are able to resist 250 lbf concentrated load applied in any direction and at any point.

2. Shower Seats: Installed units are able to resist **[250 lbf]** **[360 lbf]** **<Insert load>** concentrated load applied in any direction and at any point.

2.03 PUBLIC-USE WASHROOM ACCESSORIES

- A. Source Limitations: Obtain **[public-use washroom accessories]** **[each type of public-use washroom accessory]** from single source from single manufacturer.

- B. Toilet Tissue (Roll) Dispenser **<Insert drawing designation>**:

1. Description: **[Roll-in-reserve dispenser with hinged front secured with tumbler lockset]** **[Single-roll dispenser]** **[Double-roll dispenser]** **[Double-roll dispenser with shelf]** **<Insert description>**.
2. Mounting: **[Recessed]** **[Partition mounted, serving two adjacent toilet compartments]** **[Surface mounted]**.
3. Operation: **[Noncontrol delivery with standard spindle]** **[Noncontrol delivery with theft-resistant spindle]** **[Spindleless with tension-spring controlled delivery]** **[Spindleless with tension-spring controlled delivery and self-locking device extending through core that prevents core removal until roll is empty]** **[Eccentric-shaped, molded-plastic spindle revolves one-half revolution per dispensing operation for controlled delivery; core cannot be removed until roll is empty]** **<Insert description>**.
4. Capacity: Designed for 4-1/2 diameter tissue rolls.
5. Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** **[Chrome-plated zinc alloy (zamac) or steel]** **[Satin-finish aluminum bracket with plastic spindle]** **<Insert material and finish>**.

- C. Combination toilet Tissue Dispenser **<Insert drawing designation>**:

1. Description: Combination unit with double-roll toilet tissue dispenser and the following:
 - a. Removable sanitary-napkin waste receptacle with self-closing, disposal-opening cover.
 - b. Seat-cover dispenser with minimum capacity of **[500]** **[1000]** **<Insert number>** single or half-fold seat covers.
 - c. Multiple roll dispenser must be vertical stacked.
2. Mounting: **[Recessed]** **[Surface mounted]** **[Partition mounted, dual access with two tissue rolls per compartment]** **[Partition mounted, dual access with two tissue rolls per compartment and with one side that mounts flush with partition of accessible compartment]**.
3. Toilet Tissue Dispenser Capacity: 4-1/2 diameter tissue rolls.
 - a. Do not use Jumbo-roll at accessible stalls or single user toilets.
4. Toilet Tissue Dispenser Operation: **[Noncontrol delivery with theft-resistant spindles]** **<Insert description>**.
5. Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** **<Insert material and finish>**.

6. Lockset: Tumbler type.
- D. toilet Tissue (Jumbo-Roll) Dispenser <Insert drawing designation>:
1. Description: [One-roll unit] [Two-roll unit with sliding panel to expose other roll].
 2. Mounting: Surface mounted.
 3. Capacity: [9- or 10-inch-] <Insert dimension> diameter rolls.
 4. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [ABS plastic, gray, with translucent front cover] <Insert material and finish>.
 5. Lockset: Tumbler type.
 6. Refill Indicator: Pierced slots at front.
- E. Paper towel (Folded) Dispenser <Insert drawing designation>:
1. Mounting: [Recessed] [Semi-recessed] [Deck mounted, recessed] [Surface mounted].
 2. Minimum Capacity: [400 C-fold or 525 multifold towels] [600 C-fold or 800 multifold towels] [400 single-fold towels] <Insert capacity>.
 3. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>.
 4. Lockset: Tumbler type.
 5. Refill Indicator: Pierced slots at sides or front.
- F. Paper towel (Roll) Dispenser <Insert drawing designation>:
1. Description: [Lever-actuated] [Pull-towel single hand operation] mechanism that permits controlled delivery of paper rolls in preset lengths.
 2. Mounting: [Recessed] [Semi-recessed] [Surface mounted].
 3. Minimum Capacity: [8-inch- wide, 800-foot- long roll] <Insert capacity>.
 4. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [ABS plastic, gray, with translucent front cover] <Insert material and finish>.
 5. Lockset: Tumbler type.
- G. Automatic Paper towel (Roll) Dispenser <Insert drawing designation>:
1. Description: Automatic motion-sensing mechanism with user-adjustable delay and paper towel length; [electrically operated, with adapter for 110 to 240 V ac power supply] [battery powered] <Insert description>.
 2. Mounting: [Recessed] [Semi-recessed] [Surface mounted].
 3. Minimum Capacity: [8-inch- wide, 800-foot- long roll] <Insert capacity>.

4. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>.
 5. Lockset: Tumbler type.
- H. Waste Receptacle <Insert drawing designation>:
1. Mounting: [Open top, recessed] [Self-closing disposal-opening cover, recessed] [Semi-recessed] [Surface mounted] [Wall mounted for corner installation] [Freestanding] [Undercounter] <Insert description>.
 2. Minimum Capacity: <Insert value>.
 3. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] <Insert material and finish>.
 4. Liner: [Reusable vinyl liner] <Insert liner description>.
 5. Lockset: Tumbler type for waste receptacle.
- I. Countertop-Mounted Circular Waste Chute <Insert drawing designation>:
1. OD: [6 inches] [7 inches] [9 inches] <Insert dimension>.
 2. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
 3. Waste Chute must not block required knee and toe space under sinks.
- J. Combination towel (Folded) Dispenser/Waste Receptacle <Insert drawing designation>:
1. Description: Combination unit for dispensing C-fold or multifold towels, with removable waste receptacle.
 2. Mounting: [Surface mounted] [Surface mounted with stainless steel collar] [Recessed] [Recessed with projecting receptacle] [Semi-recessed] [Under vanity] <Insert mounting>.
 - a. Designed for nominal [4-inch] [6-inch] wall depth.
 3. Minimum towel-Dispenser Capacity: [600 C-fold or 800 multifold paper towels] <Insert capacity>.
 4. Minimum Waste-Receptacle Capacity: [4 gal.] [12 gal.] <Insert value>.
 5. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] <Insert material and finish>.
 6. Liner: [Reusable, vinyl waste-receptacle liner] <Insert liner description>.
 7. Lockset: Tumbler type for towel-dispenser compartment [and waste receptacle].
- K. Combination towel (Roll) Dispenser/Waste Receptacle <Insert drawing designation>:

1. Description: Combination unit for dispensing preset length of roll paper towels, with removable waste receptacle.
 2. Towel Mechanism: [Lever] [Pull towel] [Automatic, electric sensor; with adapter for 110 to 240 V ac power supply] [Automatic, battery-operated sensor] <Insert description>.
 3. Mounting: [Recessed] [Semi-recessed] [Surface mounted].
 4. Minimum towel-Dispenser Capacity: [8-inch- wide, 800-foot- long roll] <Insert capacity>.
 5. Minimum Waste Receptacle Capacity: [8 gal.] [12 gal.] [15 gal.] <Insert value>.
 6. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] <Insert material and finish>.
 7. Liner: [Reusable, vinyl waste-receptacle liner] <Insert liner description>.
 8. Lockset: Tumbler type for towel dispenser compartment [and waste receptacle].
- L. Multipurpose Soap/towel Dispenser Unit <Insert drawing designation>:
1. Description: Combination unit for dispensing soap in [liquid or lotion] [lather] form and folded towels.
 2. Mounting: [Recessed, designed for nominal 4-inch wall depth] [Surface mounted with stainless steel collar and mirror] <Insert mounting>.
 3. Minimum Soap-Dispenser Capacity: [80 oz.] <Insert value>.
 4. Minimum towel-Dispenser Capacity: [600 C-fold or 800 multifold towels] [1000 single-fold towels] <Insert capacity>.
 5. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] <Insert material and finish> for unit body and soap valve.
 6. Lockset: Tumbler type.
- M. Warm-Air Hand Dryer <Insert drawing designation>:
1. Description: Standard-speed, warm-air hand dryer.
 2. Mounting: [Recessed] [Semi-recessed] [Surface mounted].
 - a. Protrusion Limit: Installed unit protrudes maximum 4 inches from wall surface.
 3. Operation: [touch-button] [Infrared-sensor] activated with timed power cutoff switch.
 - a. Automatic Shutoff: at [40] [80] [120] <Insert number> seconds.
 4. Maximum Sound Level: [63] [67] [87] <Insert number> dB.
 5. Cover Material and Finish: [Steel, with white enamel finish] [Cast iron, with enamel finish in color selected by Architect] [Chrome-plated steel] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Molded plastic, gray] [Molded plastic, white] <Insert material and finish>.

6. Electrical Requirements: [115 V, 13 A, 1500 W] [115 V, 15 A, 1725 W] [115 V, 20 A, 2300 W] [208 to 240 V, 9 to 10 A, 1900 to 2300 W] <Insert requirements>.

N. High-Speed Air Hand Dryer <Insert drawing designation>:

1. Description: High-speed, [warm] [unheated]-air hand dryer for rapid hand drying.
2. Mounting: [Recessed] [Semi-recessed] [Surface mounted].
 - a. Protrusion Limit: Installed unit protrudes maximum 4 inches from wall surface.
3. Operation: Infrared-sensor activated with timed power cutoff switch.
 - a. Average Dry Time: [12] <Insert number> seconds.
 - b. Automatic Shutoff: at [60] <Insert number> seconds.
4. Maximum Sound Level: [69] [75] <Insert number> dB.
5. Cover Material and Finish: [Steel, with white enamel finish] [Cast iron, with enamel finish in color selected by Architect] [Chrome-plated steel] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Molded plastic, gray] [Molded plastic, white] <Insert material and finish>.
6. Electrical Requirements: [115 V, 13 A, 1500 W] [115 V, 15 A, 1725 W] [115 V, 20 A, 2300 W] [208 to 240 V, 9 to 10 A, 1900 to 2300 W] <Insert requirements>.

O. Multiple-Airflow Hand Dryer <Insert drawing designation>:

1. Description: Multiple-airflow hand dryer, using two or more airstreams for rapid hand drying [with heating unit on-off control].
2. Mounting: [Surface mounted] <Insert requirements>.
3. Operation: Electronic-sensor activated with timed power cutoff switch.
 - a. Average Dry Time: [12] <Insert number> seconds.
 - b. Automatic Shutoff: at [60] <Insert number> seconds.
4. Maximum Sound Level: [56] [75] <Insert number> dB.
5. Water Collection: Removable reservoir.
6. Filter: HEPA, replaceable.
7. Cover Material and Finish: [Steel, with white enamel finish] [Cast iron, with enamel finish in color selected by Architect] [Chrome-plated steel] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Molded plastic, gray] [Molded plastic, white] <Insert material and finish>.
8. Electrical Requirements: [115 V, 13 A, 1500 W] [115 V, 15 A, 1725 W] [115 V, 20 A, 2300 W] [208 to 240 V, 9 to 10 A, 1900 to 2300 W] <Insert requirements>.

P. Soap Dispenser <Insert drawing designation>:

1. Description: Designed for manual operation and dispensing soap in **[liquid or lotion]** **[lather]** form.
 2. Mounting: **[Horizontally oriented, recessed]** **[Horizontally oriented, surface mounted]** <Insert mounting>.
 3. Manual deck mounted pumps are not compliant, Do not use.
 4. Capacity: <Insert value>.
 5. Materials: <Insert requirements>.
 6. Lockset: Tumbler type.
 7. Refill Indicator: Window type.
- Q. Automatic Soap Dispenser <Insert drawing designation>:
1. Description: Automatic dispenser with infrared sensor to detect presence of hands; **[electrically operated, with adapter for 110 to 240 V ac power supply]** **[battery powered]**; designed for dispensing soap in **[liquid or lotion]** **[lather]** form.
 2. Mounting: **[Deck mounted on vanity]** **[Deck mounted on lavatory]** **[Surface mounted]**.
 3. Capacity: <Insert value>.
 4. Materials: <Insert requirements>.
 5. Refill Indicator: LED indicator.
 6. Low-Battery Indicator: LED indicator.
- R. Grab Bar <Insert drawing designation>:
1. Mounting: Flanges with **[concealed]** **[exposed]** fasteners.
 2. Material: Stainless steel, 0.05 inch thick.
 - a. Finish: Smooth, ASTM A480/A480M No. 4 finish (satin).
 3. OD: **[1-1/4 inches]** **[1-1/2 inches]**.
 4. Configuration and Length: **[As indicated on Drawings]** **[Straight, 36 inches long]** <Insert configuration and length>.
- S. Sanitary-Napkin and Tampon Vendor <Insert drawing designation>:
1. Mounting: **[Fully recessed, designed for 4-inch wall depth]** **[Semi-recessed]**.
 2. Capacity: <Insert description>.
 3. Operation: **[No coin (free)]** **[Single coin (25 cents)]** **[Two coins (50 cents)]** <Insert description>.

4. Exposed Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** <Insert material and finish>.
 5. Lockset: Tumbler type with separate lock and key for coin box.
- T. Sanitary-Napkin Disposal Unit <Insert drawing designation>:
1. Mounting: **[Recessed]** **[Partition mounted, dual access]**.
 2. Door or Cover: Self-closing, disposal-opening cover **[and hinged face panel with tumbler lockset]**.
 3. Receptacle: Removable.
 4. Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** **[ABS plastic, gray]** <Insert material and finish>.
- U. Seat-Cover Dispenser <Insert drawing designation>:
1. Mounting: **[Surface mounted]** **[Recessed]** **[Partition mounted, dual access]**.
 2. Minimum Capacity: **[250]** **[500]** <Insert number> seat covers.
 3. Exposed Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** **[ABS plastic, gray]** <Insert material and finish>.
 4. Lockset: Tumbler type.
- V. Purse Shelf <Insert drawing designation>:
1. Description: **[Hinged unit with spring-loaded shelf that automatically returns to vertical position]** <Insert description>.
 2. Nominal Size: **[15 inches long by 5-1/2 inches wide]** <Insert dimensions>.
 3. Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** **[Chrome-plated, cast-zinc alloy (zamac) with stippled finish on tray and bright chrome finish on edges]** <Insert material and finish>.
- W. Mirror Unit <Insert drawing designation>:
1. Frame: **[Stainless steel angle, 0.05 inch thick]** **[Stainless steel channel]** **[Stainless steel, fixed tilt]** **[Stainless steel, adjustable tilt]**.
 - a. Corners: **[Manufacturer's standard]** **[Mitered and mechanically interlocked]** **[Welded and ground smooth]**.
 2. Size: **[As indicated on Drawings]** <Insert dimensions>.
 3. Shelf:
 - a. Type: **[Integral, welded]** **[Concealed mounting]** **[Exposed mounting]**.
 - b. Depth: **[5 inches]** <Insert dimension>.

4. Hangers: [Manufacturer's standard rigid, tamper and theft resistant] <Insert requirements>.
- X. Hook <Insert drawing designation>:
1. Description: [Double-prong unit] [Single-prong unit] [Combination hat and coat hook] [Combination door bumper and coat hook] <Insert description>.
 2. Mounting: [Concealed] [Exposed].
 3. Material and Finish: [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
- Y. Fixed-Height Adult Changing Station <Insert drawing designation>:
1. Description: Horizontal unit that opens by folding down from stored position and with adjustable strap.
 - a. Engineered to support minimum of **[400 lb]** <Insert value> static load when opened.
 2. Mounting: [Surface mounted, with unit projecting not more than **4 inches** from wall when closed] [Semi-recessed, with unit projecting not more than **1 inch** from wall when closed].
 3. Operation: By pneumatic shock-absorbing mechanism.
 4. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners] <Insert requirements>.
 5. Liner Dispenser: Provide **[built-in] [separate, locking]** dispenser for disposable sanitary liners.
- Z. Adjustable-Height Adult Changing Station <Insert drawing designation>:
1. Description: Height-adjustable horizontal unit that is electrically operated with wired hand control and with safety rail **[and receiver tray] [and receiver tray with integrated drain outlet]**.
 - a. Engineered to support minimum of **[300 lb] [350 lb] [400 lb]** <Insert value> static load when opened.
 2. Mounting: Surface mounted, foldable by pneumatic shock-absorbing mechanism.
 3. Electrical Characteristics: Manufacturer's standard actuator and control system, with integrated 24 V dc transformer, powered by single 120 V electrical receptacle.
 4. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin), with PVC mattress] <Insert requirements>.
- 2.04 TOILET-COMPARTMENT OCCUPANCY-INDICATOR SYSTEM
- A. Toilet-Compartment Occupancy-Indicator System <Insert drawing designation>:

1. Description: Battery-powered latch and electrically powered indicator-light system. Latches communicate wirelessly with separate, overhead indicator lights.
2. Latch: Slide operation.
 - a. Compatibility: Provide latch compatible with compartment doors indicated for Project.
 - b. Power Source: Two AA batteries.
 - 1) Low-Battery Warning: Indicator light pulses when associated batteries of corresponding latch require replacement.
 - c. Patch Kit: Stainless steel in manufacturer's standard finish, adhesively applied to interior and exterior of compartment door to cover existing hardware locations.
 - d. Latch Material and Finish: Matte chrome-plated, die-cast zinc alloy (zamac); installed with stainless steel fasteners.
3. Indicator Light: Full-color, low-voltage, LED indicator that displays red when compartment door is latched, green when standard compartment door is unlatched, and blue when accessible compartment door is unlatched.
 - a. Traffic-Management-System Operation: Indicator lights also controlled by traffic management system for remote **[override of indicator light color] [and] [data collection from indicator lights]**.
 - b. Mounting: **[Ceiling, surface] [Ceiling, semi-recessed] [Ceiling, pendant] [Wall] mounted**.
 - c. Body Material and Finish: Satin white finish ABS plastic; installed with stainless steel fasteners.
 - d. Lens Material and Finish: **[Clear] [Frosted]** acrylic.
 - e. Electrical Requirements: Provide indicator lights with dc adapters and that allow up to 30 lights to be powered by single 115 V, 20 A, electrical receptacle.

2.05 PUBLIC-USE SHOWER ROOM ACCESSORIES

- A. Source Limitations: Obtain **[public-use shower room accessories] [each type of public-use shower room accessory]** from single source from single manufacturer.
- B. Shower Curtain Rod <Insert drawing designation>:
 1. Description: **[1-inch-] [1-1/4-inch-]** OD, straight rod.
 2. Configuration: **[As indicated on Drawings] <Insert description>**.
 3. Mounting Flanges: **[Exposed] [Concealed] <Insert requirements> fasteners; in [manufacturer's standard material and finish] [material and finish matching rod] <Insert requirements>**.
 4. Rod Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Polished chrome-plated brass] <Insert material and finish>**.
- C. Shower Curtain <Insert drawing designation>:
 1. Size: Minimum **[6 inches] [12 inches]** wider than opening by 72 inches high.

2. Material: [Vinyl, minimum **0.006 inch** thick, opaque, matte] [Duck, minimum **8 oz.**, white, 100 percent cotton] [Nylon-reinforced vinyl, minimum **9 oz.** or **0.008-inch-** thick vinyl, with integral antibacterial and flame-retardant agents] <Insert material>.
3. Color: [White] [Beige] [Green] [As selected from manufacturer's full range] <Insert color>.
4. Grommets: Corrosion resistant at minimum 6 inches o.c. through top hem.
5. Shower Curtain Hooks: [**Chrome-plated or stainless steel, spring wire curtain hooks with snap fasteners**] <Insert description>, sized to accommodate specified curtain rod. Provide one hook per curtain grommet.

D. Folding Shower Seat <Insert drawing designation>:

1. Configuration: [L-shaped seat, designed for wheelchair access] [Rectangular seat] [Triangular, corner-type seat] [Stainless steel seat designed to fold into recessed-mounted, stainless steel wall box] <Insert description>.
2. Seat: [Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect] [White vinyl padded seat] [Stainless steel, ASTM A480/A480M No. 4 finish (satin); **0.05-inch-** minimum nominal thickness; with single-piece, pan-type construction and edge seams welded and ground smooth] <Insert description>.
3. Mounting Mechanism: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] <Insert description>.
4. Dimensions: <Insert dimensions>.

E. Soap Dish <Insert drawing designation>:

1. Description: [**Recessed**] [**Surface**] mounted, with the following features:
 - a. Washcloth bar.
 - b. <Insert requirements>.
2. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] <Insert material and finish>.

F. Robe Hook <Insert drawing designation>:

1. Description: [**Double**] [**Single**]-prong unit.
2. Material and Finish: [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.

2.06 STAFF BATHROOM ACCESSORIES

- A. Source Limitations: Obtain [**staff bathroom accessories**] [**each type of staff bathroom accessory**] from single source from single manufacturer.
- B. Staff Toilet Tissue Dispenser <Insert drawing designation>:

1. Description: **[Single] [Double]**-roll dispenser with the following features:
 - a. Hood.
 - b. Multiple roll dispenser must be vertical stacked.
 - c. Do not use Jumbo-roll at accessible stalls or single user toilets.
 2. Mounting: **[Recessed] [Surface mounted]**.
 3. Capacity: Designed for 4-1/2 diameter tissue rolls.
 4. Material and Finish: **[Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)]** <Insert material and finish>.
- C. Staff Shower Curtain Rod **<Insert drawing designation>**:
1. Description: **[1-inch-] [1-1/4-inch-]** OD, **[straight] [curved]** rod.
 2. Configuration: **[As indicated on Drawings]** <Insert description>.
 3. Mounting Flanges: **[Exposed] [Concealed]** <Insert requirements> fasteners; in **[manufacturer's standard material and finish] [material and finish matching rod]** <Insert requirements>.
 4. Rod Material and Finish: **[Solid brass, polished] [Polished chrome-plated brass] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)]** <Insert material and finish>.
 5. Features: Integral chrome-plated brass glide hooks.
- D. Staff Folding Shower Seat **<Insert drawing designation>**:
1. Configuration: **[L-shaped seat, designed for wheelchair access] [Rectangular seat] [Triangular, corner-type seat] [Stainless steel seat designed to fold into recessed-mounted, stainless steel wall box]** <Insert description>.
 2. Seat: **[Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect] [White vinyl padded seat] [Stainless steel, ASTM A480/A480M No. 4 finish (satin); 0.05-inch- minimum nominal thickness; with single-piece, pan-type construction and edge seams welded and ground smooth]** <Insert description>.
 3. Mounting Mechanism: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** <Insert description>.
 4. Dimensions: <Insert dimensions>.
- E. Staff Soap Dish **<Insert drawing designation>**:
1. Description: <Insert description>.
 2. Mounting: **[Recessed] [Surface mounted]**.

3. Material and Finish: [Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.

F. Staff Medicine Cabinet <Insert drawing designation>:

1. Mounting: [Recessed, for nominal **4-inch** wall depth] [Surface mounted].
2. Size: [**18 by 24 inches**] <Insert dimensions>.
3. Door: [Framed mirror door concealing storage cabinet equipped with continuous hinge and spring-buffered, rod-type stop and magnetic door catch] <Insert description>.
4. Shelves: [Three, adjustable] <Insert requirements>.
5. Material and Finish:
 - a. Cabinet: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Steel with corrosion-resistant finish].
 - b. Mirror Frame: <Insert material and finish>.
 - c. Door: <Insert material and finish>.
 - d. Hinge: <Insert material and finish>.
 - e. Shelves: <Insert material and finish>.

G. Staff Facial Tissue Dispenser <Insert drawing designation>:

1. Mounting: [Recessed] [Surface mounted] <Insert requirements>.
2. Depth: [**2-5/8 inches**] [**4 inches**] <Insert dimension>.
3. Material and Finish:
 - a. Dispenser Face: [Polished chrome-plated brass] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated steel] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
 - b. Cabinet: [Steel with corrosion-resistant finish] <Insert material and finish>.

H. Staff Robe Hook <Insert drawing designation>:

1. Description: [**Double**] [**Single**]-prong unit.
2. Material and Finish: [Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.

I. Staff Toothbrush and Tumbler Holder <Insert drawing designation>:

1. Description: <Insert description>.

2. Material and Finish: [Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
- J. Staff Towel Bar <Insert drawing designation>:
1. Description: [**3/4-inch-** square tube with rectangular end brackets] [**3/4-inch-** round tube with circular end brackets] <Insert description>.
 2. Mounting: Flanges with [**concealed**] [**exposed**] fasteners.
 3. Length: [**18 inches**] [**24 inches**] [**30 inches**] <Insert dimension>.
 4. Material and Finish: [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] [Polished aluminum] <Insert material and finish>.
- K. Staff Towel Pin <Insert drawing designation>:
1. Description: Projecting minimum of [**3 inches**] [**5 inches**] <Insert dimension> from wall surface.
 2. Material and Finish: [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
- L. Staff Towel Ring <Insert drawing designation>:
1. Description: Pin projecting approximately [**2-1/2 inches**] <Insert dimension> from wall with [square] [circular] [oval] [trapezoidal] <Insert requirements> ring.
 2. Pin Material and Finish: [Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, ASTM A480/A480M No. 4 finish (satin)] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
 3. Ring Material and Finish: [Matching pin] [Clear plastic] <Insert requirements>.
- M. Staff Towel Shelf <Insert drawing designation>:
1. Description: Surface-mounted, guest-towel shelf with [**four**] <Insert number> stainless steel tubes, [**3/8 inch in diameter**] [**5/16 inch square**] <Insert requirements>, mounted in support arms.
 - a. towel Bar: [**1/4-inch- diameter**] [**5/16-inch- square**] stainless steel towel bar below shelf.
 2. Length: [**18 inches**] [**24 inches**] <Insert dimension>.
 3. Material and Finish: [Polished brass-plated, stainless steel] [Polished chrome-plated, stainless steel] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
- N. Staff Towel Rack <Insert drawing designation>:

1. Description: [Surface-mounted, guest-towel unit with approximately **1/4-inch-** diameter wire rings welded to upright wire bracket] <Insert description>.
 2. Capacity: [**Two**] [**Three**] [**Four**] <Insert number> sets of bath towels, hand towels, and washcloths.
 3. Nominal Height: [**11 inches**] [**17 inches**] [**21 inches**] <Insert dimension>.
 4. Material and Finish: [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated zinc alloy (zamac)] <Insert material and finish>.
- O. Staff Retractable Clothesline <Insert drawing designation>:
1. Description: Surface-mounted [**rectangular**] [**circular**] housing with minimum 72-inch-long, retractable, spring-actuated, synthetic clothesline and remote retention bracket.
 2. Material and Finish [Chrome-plated brass] [Stainless steel, ASTM A480/A480M No. 7 finish (polished)] <Insert material and finish>.
- 2.07 HEALTHCARE ACCESSORIES
- A. Source Limitations: Obtain [**healthcare accessories**] [**each type of healthcare accessory**] from single source from single manufacturer.
- B. Specimen Pass-Through Cabinet with u shaped pull. <Insert drawing designation>:
1. Description: [Two-sided type, with self-closing, interlocking doors on both sides, that prevent both from being open at same time, and removable stainless steel tray] [Turntable type, with minimum **12-inch-** diameter removable cylinder that revolves on stainless steel, self-lubricating, ball-bearing plates; with over-rotation prevention mechanism] <Insert description>.
 2. Nominal Wall Opening: [**12 by 11-1/4 inches**] [**13-1/4 by 14 inches**] <Insert dimensions>, width by height.
 3. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
 4. Lockset: Tumbler type.
- C. Bedpan and Urinal Cabinet <Insert drawing designation>:
1. Description: [for storing one conventional-size bedpan and one urinal bottle; with door that produces **1/2-inch** opening at top and bottom of cabinet to allow air circulation] <Insert requirements>.
 2. Mounting: Recessed.
 3. Nominal Wall Opening: [**13-1/2 by 26-1/2 by 5 inches**] <Insert dimensions>, width by height by depth.
 4. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
- D. Bedpan Rack <Insert drawing designation>:

1. Description: for storing [one conventional-size bedpan] [two conventional-size bedpans].
2. Mounting: Surface mounted.
3. Size: [12 by 11 inches] [12 by 27 inches] <Insert dimensions>, width by height.
4. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

E. Bedpan and Urinal Rack <Insert drawing designation>:

1. Description: for storing one conventional-size bedpan and one urinal bottle.
2. Mounting: Surface mounted.
3. Size: [12 by 27 inches] <Insert dimensions>, width by height.
4. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

2.08 CHILDCARE ACCESSORIES

A. Source Limitations: Obtain [childcare accessories] [each type of childcare accessory] from single source from single manufacturer.

B. Diaper-Changing Station <Insert drawing designation>:

1. Description: [Horizontal] [Vertical] unit that opens by folding down from stored position and with child-protection strap.
 - a. Engineered to support minimum of [250 lb] <Insert value> static load when opened.
2. Mounting: [Surface mounted, with unit projecting not more than 4 inches from wall when closed] [Semi-recessed, with unit projecting not more than 1 inch from wall when closed].
3. Operation: By pneumatic shock-absorbing mechanism.
4. Material and Finish: [HDPE in manufacturer's standard color] [HDPE with plastic-laminate insert in color selected by Architect] [Stainless steel, ASTM A480/A480M No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners] [Stainless steel, ASTM A480/A480M No. 4 finish (satin), exterior shell with rounded plastic corners; HDPE interior in manufacturer's standard color] <Insert requirements>.
5. Liner Dispenser: Provide [built-in] [separate, locking] dispenser for disposable sanitary liners.

C. Diaper-Changing Station Liner Dispenser <Insert drawing designation>:

1. Mounting: Recessed.
2. Minimum Capacity: [100] <Insert number> liners.

3. Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** <Insert material and finish>.
4. Lockset: Tumbler type.
5. Accessible lever or push controls.

D. Diaper-Pack Vendor <Insert drawing designation>:

1. Mounting: **[Surface mounted] [Recessed]**.
2. Minimum Capacity: **[24]** <Insert number> diaper packs.
3. Coin Operation: Coin slot preset for **[one U.S. dollar, adjustable up in 25-cent increments]** <Insert requirements>.
4. Material and Finish: **[Stainless steel, ASTM A480/A480M No. 4 finish (satin)]** <Insert material and finish>.
5. Accessible lever or push controls.

E. Child-Protection Seat <Insert drawing designation>:

1. Description: Unit that opens by folding down from stored position and with child-protection strap.
 - a. Engineered to support minimum of **[80 lb] [150 lb]** <Insert value> static load when opened.
2. Mounting: Surface mounted, with unit projecting not more than **[4-1/2 inches] [6 inches]** from wall when closed.
3. Material and Finish: **[HDPE in manufacturer's standard color]** <Insert requirements>.

2.09 UNDERLAVATORY GUARDS

A. Underlavatory Guard <Insert drawing designation>:

1. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
2. Material and Finish: Antimicrobial, molded plastic, white.

2.10 CUSTODIAL ACCESSORIES

A. Source Limitations: Obtain **[custodial accessories] [each type of custodial accessory]** from single source from single manufacturer.

B. Custodial Utility Shelf <Insert drawing designation>:

1. Description: with exposed edges turned down not less than 1/2 inch and supported by two triangular brackets welded to shelf underside.
2. Size: **[16 inches long by 6 inches deep]** <Insert dimensions>.

3. Material and Finish: Not less than nominal 0.05-inch- thick stainless steel, ASTM A480/A480M No. 4 finish (satin).

C. Custodial Mop and Broom Holder <Insert drawing designation>:

1. Description: [Unit with shelf, hooks, holders, and rod suspended beneath shelf] <Insert description>.
2. Length: [36 inches] <Insert dimension>.
3. Hooks: [Four] <Insert number>.
4. Mop/Broom Holders: [Three] <Insert number>, spring-loaded, rubber hat, cam type.
5. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
 - a. Shelf: Not less than nominal 0.05-inch- thick stainless steel.
 - b. Rod: Approximately 1/4-inch- diameter stainless steel.

2.11 HAND-SANITIZER DISPENSERS

- A. Source Limitations: Obtain [hand-sanitizer dispensers] [each type of hand-sanitizer dispenser] from single source from single manufacturer.

B. Hand-Sanitizer Dispenser <Insert drawing designation>:

1. Description: Manually operated dispenser [with drip tray,] designed for dispensing alcohol-based hand rub in [gel] [foam] form. Designed to not release contents unless manually activated and to not dispense more hand rub than the amount required for hand hygiene consistent with label instructions.
2. Mounting: Wall mounted.
 - a. Protrusion Limit: Installed unit protrudes maximum 4 inches from wall surface.
3. Capacity: [24 oz.] [34 oz.] [41 oz.] [68 oz.] <Insert value> maximum.
4. Materials: [ABS plastic, white] [ABS plastic, black] [ABS plastic, dark gray] <Insert requirements>.
5. Lockset: Tumbler type.
6. Refill Indicator: [Window type] [Translucent top] [Translucent bottom].

C. Automatic Hand-Sanitizer Dispenser <Insert drawing designation>:

1. Description: Automatic, battery powered dispenser with [drip tray, and] infrared sensor designed to detect presence of hands and dispense alcohol-based hand rub in [gel] [foam] form. Designed to not release contents unless activated and to not dispense more hand rub than the amount required for hand hygiene consistent with label instructions. Designed for activation to only occur when an object is placed within 4 inches of sensing device and so that an object placed and left within the activation zone will not cause more than one activation.
2. Mounting: [Wall mounted] [Floor stand].

- a. Protrusion Limit: Installed unit protrudes maximum 4 inches from wall surface.
3. Capacity: **[34 oz.] [41 oz.]** <Insert value> maximum.
4. Materials: **[ABS plastic, white] [ABS plastic, black] [ABS plastic, dark gray]** <Insert requirements>.
5. Refill Indicator: **[LED indicator] [Window type] [Translucent top] [Translucent bottom]**.
6. Low-Battery Indicator: LED indicator.

2.12 MATERIALS

- A. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.031-inch- minimum nominal thickness unless otherwise indicated.
- B. Brass: ASTM B19, flat products; ASTM B16/B16M, rods, shapes, forgings, and flat products with finished edges; or ASTM B30, castings.
- C. Steel Sheet: ASTM A1008/A1008M, Designation CS (cold rolled, commercial steel), 0.036-inch- minimum nominal thickness.
- D. Galvanized-Steel Sheet: ASTM A653/A653M, with G60 hot-dip zinc coating.
- E. Galvanized-Steel Mounting Devices: ASTM A153/A153M, hot-dip galvanized after fabrication.
- F. Fasteners: Screws, bolts, and other devices of same material as accessory unit, unless otherwise recommended by manufacturer or specified in this Section, and tamper and theft resistant where exposed, and of stainless or galvanized steel where concealed.
- G. Chrome Plating: ASTM B456, Service Condition Number SC 2 (moderate service).
- H. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.13 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of **[six] <Insert number>** keys to Owner's representative.

PART 3 EXECUTION

3.01 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work

3.02 INSTALLATION

- A. Install accessories in accordance with manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
 - 1. Remove temporary labels and protective coatings.
- B. Grab Bars: Install to withstand a downward load of at least 250 lbf (1112 N), when tested according to ASTM F446.
- C. Shower Seats: Install to comply with specified structural-performance requirements.

3.03 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Clean and polish exposed surfaces in accordance with manufacturer's written instructions.

END OF SECTION

SECTION 10 41 16

EMERGENCY ACCESS KEY BOXES

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes Fire department emergency access key boxes.

1.02 SUBMITTALS

- A. Manufacturer Product Data for the key vaults.
- B. Closeout: A minimum of 4 tagged keys the Owner.

1.03 QUALITY ASSURANCE

- A. Manufacturer: Companies specializing in manufacturing emergency access key boxes with minimum 20 years documented experience.
- B. Installer: Company specializing in installation of emergency access key boxes with minimum 3 documented experience.

1.04 REGULATORY REQUIREMENTS

- A. Comply with requirements of CFC Section 506.

PART 2 PRODUCTS

2.01 EMERGENCY ACCESS KEY BOXES

- A. 3200 Series, keyed lock, complying with UL 1037 and UL listed by Knox Co., or equal.
 - 1. Configurations: Recess mounted.
 - 2. Capacity: Up to 10 keys, access cards and other small items necessary for emergency access.
 - 3. Box sizes: To be verified with the Fire Marshall.
 - 4. Components:
 - a. 1/4-inch solid steel housing, 100 percent welded, colors as indicated on the Drawings.
 - b. 1/2-inch solid plate steel door with gasket and stainless steel door hinge.
 - c. 1/8-inch thick stainless steel lock cover.
 - d. Lock: double-action rotating tumblers and hardened steel pins accessed by biased cut key.
 - e. Finish: Manufacturer's proprietary finishing process; "Dark Bronze" color.
 - 1) Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.

- 2) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- 3) Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions and measurements affecting the work of this Section at site.
- B. Correct detrimental conditions before proceeding with installation.

3.02 INSTALLATION

- A. Install emergency access key box in accordance with Fire Department requirements and with manufacturer's instructions and recommendations.
- B. Isolate surfaces that will be in contact with plaster with foam tape.
- C. Install vaults in compliance with their manufacturer's instructions and recommendations plumb, level and secure to their supports.
- D. Emergency Access Key Boxes: Install emergency access key boxes with centerline not more than 48 inches above finished floor.

3.03 FIELD QUALITY CONTROL

- A. Examine and test emergency access key boxes.

3.04 ADJUSTING AND CLEANING

- A. Remove protective cover, where applicable, and clean.
- B. Verify proper operation of locks and hinges.
- C. Touchup damaged finishes, where the results are acceptable to the Architect, otherwise replace with new components.
- D. On completion of emergency access key boxes installation, clean interior and exterior surfaces as recommended by manufacturer.

END OF SECTION

SECTION 10 43 21

ACCESSIBILITY EVACUATION CHAIRS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes providing accessibility evacuation chairs.

1.02 SUBMITTALS

- A. Product data, for the chair.
- B. Provide training video for future use instruction.

1.03 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.04 WARRANTY

- A. The manufacturer shall warrant the chair against defects and material failure for 15 years after Certificate of Occupancy is issued.

PART 2 PRODUCTS

2.01 ACCESSIBILITY EVACUATION CHAIR

- A. Manufacturers:
 - 1. Basis of Design: Evacu-Track Emergency Evacuation Chair by Garaventa Lift.
 - 2. Or equal.
- B. Capacity: 400 lbs.
- C. Decent Speed: 3.6 feet/second with hydraulic speed governor.
- D. Weight of chair: 48 lbs.
- E. Chair to have the following characteristics:
 - 1. Auxiliary wheels for movement on flat surfaces.
 - 2. Head restraint system.
 - 3. Adjustable velcro straps to secure the individual in the chair.
 - 4. Failsafe braking system that allows unit to stop and hold a fully loaded chair on the stair.
 - 5. Fold compact when not in use.

2.02 ACCESSORIES

- A. Provide sheet metal storage cabinet for each chair.
 - 1. Include graphic to clearly identify contents.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine adjacent construction and supports.
- B. Verify that openings are properly framed, within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
- C. Correct detrimental conditions proceeding with installation.

3.02 INSTALLATION

- A. Install cabinet plumb, level, and square with adjacent construction.
- B. Attach securely to substrate.

3.03 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chair.

END OF SECTION

SECTION 10 44 16
FIRE EXTINGUISHERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes portable, **[hand-carried]** **[wheeled]** fire extinguishers **[and mounting brackets for fire extinguishers]**.
- B. Owner-Furnished Material: **[Hand-carried]** **[Wheeled]** fire extinguishers.
- C. Related Requirements:
 - 1. Section 104413 "Fire Protection Cabinets."
 - 2. Section 233813 "Commercial-Kitchen Hoods" for fire-extinguishing systems provided as part of commercial-kitchen exhaust hoods.

1.02 ALLOWANCES

- A. Fire Extinguishers are part of **<Insert name of allowance>**.

1.03 UNIT PRICES

- A. Work of this Section is affected by **<Insert name of unit price>**.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** **<Insert location>**.
 - 1. Review methods and procedures related to fire extinguishers including, but not limited to, the following:
 - a. Schedules and coordination requirements.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher **[and mounting brackets]**.
- B. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function. **[Use same designations indicated on Drawings.]**

1.06 INFORMATIONAL SUBMITTALS

- A. Warranty: Sample of special warranty.

1.07 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.08 COORDINATION

- A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.09 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10 when testing interval required by NFPA 10 is within the warranty period.
 - b. Faulty operation of valves or release levers.
 - 2. Warranty Period: **[Six]** <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 - 1. Provide fire extinguishers approved, listed, and labeled by FM Global.

2.02 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each **[fire-protection cabinet]** **[and]** **[mounting bracket]** indicated.
 - 1. Source Limitations: Obtain fire extinguishers, fire-protection cabinets, and accessories, from single source from single manufacturer.
 - 2. Valves: **[Manufacturer's standard]** **[Nickel-plated, polished-brass body]**.
 - 3. Handles and Levers: **[Manufacturer's standard]** **[Stainless steel]**.
 - 4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B **[**, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging**]**.
- B. Stored-Pressure Water Type <Insert drawing designation>: UL-rated 2-A, 2.5-gal. nominal capacity, with water in stainless steel container; with pressure-indicating gage.
- C. Stored-Pressure Antifreeze Water Type <Insert drawing designation>: UL-rated 2-A, 2.5-gal. nominal capacity, with water and approved antifreeze solution mixed for temperatures as low as minus 40 deg F in stainless steel container; with pressure-indicating gage.
- D. Stored-Pressure Water-Mist Type <Insert drawing designation>: UL-rated 2-A:C, 2.5-gal. nominal capacity, with water in enameled-steel container; with pressure-indicating gage.

- E. Pressurized, AFFF-Foam Type <Insert drawing designation>: UL-rated **[2-A:10-B, 1.6-gal.] [3-A:20-B, 2.5-gal.]** nominal capacity, with AFFF foam in stainless steel container; with pressure-indicating gage.
- F. Pressurized, FFFP-Foam Type <Insert drawing designation>: UL-rated 3-A:20-B, 2.5-gal. nominal capacity, with FFFP foam in stainless steel container; with pressure-indicating gage.
- G. Wet-Chemical Type <Insert drawing designation>: UL-rated 2-A:1-B:C:K, **[1.6-gal.] [2.5-gal.]** nominal capacity, with potassium **[acetate] [citrate] [carbonate]**-based chemical in stainless steel container; with pressure-indicating gage.
- H. Regular Dry-Chemical Type <Insert drawing designation>: UL-rated <Insert capacity> nominal capacity, with sodium bicarbonate-based dry chemical in manufacturer's standard enameled container.
- I. Regular Dry-Chemical Type in Steel Container <Insert drawing designation>: UL-rated **[2-B:C, 1-lb] [10-B:C, 2.5-lb] [10-B:C, 5-lb] [40-B:C, 5.5-lb] [40-B:C, 6-lb] [60-B:C, 10-lb] [120-B:C, 20-lb]** nominal capacity, with sodium bicarbonate-based dry chemical in enameled-steel container.
- J. Regular Dry-Chemical Type in Aluminum Container <Insert drawing designation>: UL-rated **[2-B:C, 1-lb] [10-B:C, 2.5-lb] [10-B:C, 5-lb] [40-B:C, 5.5-lb] [60-B:C, 10-lb] [120-B:C, 20-lb]** nominal capacity, with sodium bicarbonate-based dry chemical in enameled-aluminum container.
- K. Regular Dry-Chemical Type in Brass Container <Insert drawing designation>: UL-rated **[40-B:C, 6-lb] [60-B:C, 10-lb] [120-B:C, 20-lb]** nominal capacity, with sodium bicarbonate-based dry chemical in chrome-plated-brass container.
- L. Multipurpose Dry-Chemical Type <Insert drawing designation>: UL-rated <Insert capacity> nominal capacity, with monoammonium phosphate-based dry chemical in manufacturer's standard enameled container.
- M. Multipurpose Dry-Chemical Type in Steel Container <Insert drawing designation>: UL-rated **[1-A:10-B:C, 2.5-lb] [2-A:10-B:C, 5-lb] [3-A:40-B:C, 5-lb] [3-A:40-B:C, 6-lb] [4-A:60-B:C, 10-lb] [10-A:120-B:C, 20-lb]** nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.
- N. Multipurpose Dry-Chemical Type in Aluminum Container <Insert drawing designation>: UL-rated **[1-A:10-B:C, 2.5-lb] [2-A:10-B:C, 5-lb] [3-A:40-B:C, 5-lb] [3-A:40-B:C, 6-lb] [4-A:60-B:C, 10-lb] [10-A:120-B:C, 20-lb]** nominal capacity, with monoammonium phosphate-based dry chemical in enameled-aluminum container.
- O. Multipurpose Dry-Chemical Type in Brass Container <Insert drawing designation>: UL-rated **[2-A:10-B:C, 5-lb] [3-A:40-B:C, 6-lb] [4-A:60-B:C, 10-lb] [4-A:80-B:C, 10-lb] [10-A:120-B:C, 20-lb]** nominal capacity, with monoammonium phosphate-based dry chemical in chrome-plated-brass container.
- P. Purple-K Dry-Chemical Type in Aluminum Container <Insert drawing designation>: UL-rated **[10-B:C, 2.5-lb] [30-B:C, 5-lb] [120-B:C, 20-lb]** nominal capacity, with potassium bicarbonate-based dry chemical in enameled-aluminum container.
- Q. Purple-K Dry-Chemical Type in Brass Container <Insert drawing designation>: UL-rated **[80-B:C, 10-lb] [120-B:C, 20-lb]** nominal capacity, with potassium bicarbonate-based dry chemical in chrome-plated-brass container.

- R. Carbon Dioxide Type <Insert drawing designation>: UL-rated **[5-B:C, 5-lb]** **[10-B:C, 10-lb]** **[10-B:C, 15-lb]** **[10-B:C, 20-lb]** nominal capacity, with carbon dioxide in **[manufacturer's standard enameled-metal]** **[enameled-steel]** **[enameled-aluminum]** container.
- S. Dry-Powder Type <Insert drawing designation>: **[FM approved,]**UL-rated Class D, 30-lb nominal capacity, with **[sodium chloride]** **[copper]**-based powder in enameled-steel container; with pressure-indicating gage.
- T. Halon Type <Insert drawing designation>: **[5-B:C, 2.5-lb]** **[10-B:C, 5-lb]** nominal capacity, in enameled-steel container; with pressure-indicating gage.
1. UL-rated.
- U. Clean-Agent Type in Aluminum Container <Insert drawing designation>: UL-rated **[1-B:C, 1.4-lb]** **[2-B:C, 2.5-lb]** **[5-B:C, 5-lb]** nominal capacity, with HCFC Blend B agent and inert material in enameled-aluminum container; with pressure-indicating gage.
- V. Clean-Agent Type in Brass Container <Insert drawing designation>: UL-rated **[1-A:10-B:C, 11-lb]** **[2-A:10-B:C, 15.5-lb]** nominal capacity, with HCFC Blend B agent and inert material in chrome-plated-brass container; with pressure-indicating gage.
- W. Clean-Agent Type in Steel Container <Insert drawing designation>: UL-rated **[5-B:C, 4.75-lb]** **[1-A:10-B:C, 10-lb]** **[2-A:10-B:C, 14-lb]** nominal capacity, with HFC blend agent and inert material in enameled-steel container; with pressure-indicating gage.
- 2.03 MOUNTING BRACKETS <Insert drawing designation>
- A. Mounting Brackets: Manufacturer's standard **[galvanized]** steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or **[red]** **[black]** baked-enamel finish.
1. Source Limitations: Obtain mounting brackets and fire extinguishers from single source from single manufacturer.
- B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.
 - a. Orientation: Horizontal.
- 2.04 WHEELED FIRE EXTINGUISHERS <Insert drawing designation>
- A. Wheeled Fire Extinguishers: Type, size, and capacity for locations indicated, complete with carriage.
- B. Source Limitations: Obtain wheeled fire extinguishers and fire extinguishers from single source from single manufacturer.
1. Carriage: Fabricated from enameled-steel pipe, complete with hanger assembly, long-range nozzle, hose, and **[semipneumatic solid-rubber tires]** **[wide-rim wheels]**.
 - a. Hose: **[15 feet]** **[50 feet]** **[100 feet]**.
- C. Pressurized, FFFP-Foam Type: UL-rated 20-A:160-B, 33-gal. nominal capacity, with FFFP foam in stainless steel container.

- D. Regular Dry-Chemical Type: UL-rated **[160-B:C, 50-lb]** **[240-B:C, 150-lb]** **[160-B:C, 250-lb]** nominal capacity, with sodium bicarbonate-based dry chemical in **[regulated]** **[stored]** **[direct]**-pressure, enameled-steel container.
- E. Multipurpose Dry-Chemical Type: UL-rated **[20-A:160-B:C, 30-lb]** **[30-A:160-B:C, 50-lb]** **[40-A:240-B:C, 125-lb]** **[40-A:160-B:C, 250-lb]** nominal capacity, with monoammonium phosphate-based dry chemical in **[regulated]** **[stored]** **[direct]**-pressure, enameled- **[steel]** **[aluminum]** **[steel or -aluminum]** container.
- F. Purple-K Dry-Chemical Type: UL-rated **[160-B:C, 50-lb]** **[320-B:C, 125-lb]** **[160-B:C, 250-lb]** nominal capacity, with potassium bicarbonate-based dry chemical in **[regulated]** **[stored]** **[direct]**-pressure, enameled-steel container.
- G. Carbon Dioxide Type: UL-rated **[20-B:C, 50-lb]** **[20-B:C, 100-lb]** nominal capacity, with carbon dioxide in **[manufacturer's standard enameled-metal]** **[enameled-steel]** **[enameled-aluminum]** container.
- H. Dry-Powder Type: **[FM approved,]**UL-rated Class D, **[sodium chloride-based powder, 150-lb]** **[copper-based powder, 250-lb]** nominal capacity, in regulated-pressure, enameled-steel container; with pressure-indicating gage.
- I. Clean-Agent Type: UL-rated **[4-A:40-B:C, 65-lb]** **[10-A:80-B:C, 150-lb]** nominal capacity, with HCFC Blend B agent and inert material in stored-pressure, enameled-steel container; with pressure-indicating gage.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine fire extinguishers for proper charging and tagging.
 - 1. Remove and replace damaged, defective, or undercharged fire extinguishers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install fire extinguishers **[and mounting brackets]** in locations indicated and in compliance with requirements of authorities having jurisdiction.
- B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.
 - 1. Mounting Height: Top of fire extinguisher to be at **[42 inches]** **<Insert dimension>** above finished floor.

SECTION 10 51 13

METAL LOCKERS, BENCHES AND CUBBIES

PART 1 - GENERAL

1.01 SUMMARY

A. Principal work in this Section:

1. Single or [] tier welded corridor metal lockers with sloped tops.
2. Locker benches.
3. Metal cubbies.
4. Supplementary parts and components, such as inserts, clips, fasteners, anchors, closure pieces, and other miscellaneous supports and accessories required for a complete installation.
5. Obtain locker size, number of tiers, features and design from College Building User Group (BUG) and sign of by the Department Chair or his/her representative.

1.02 DEFINITIONS

- A. Cubbies are defined as welded, open-front lockers, fabricated similar to welded corridor metal lockers.

1.03 SUBMITTALS

- A. Data: Submit copies of manufacturer specifications giving sizes, materials, finishes, roughing-in diagrams and installation instructions.
- B. Shop drawings:
1. Submit dimensioned shop drawings show locker layout at each location.
 2. Elevation of each locker bank and benches.
 3. Drawings of benches including attachment details.
 4. Show attachment and anchoring details with size of anchors to be used.
- C. Samples: Submit locker manufacturer's color chips.

1.04 QUALITY ASSURANCE

- A. Provide all lockers, benches and cubbies for the Project made by the same manufacturer.

1.05 HANDLING

- A. Procedure: In accordance with the manufacturer's recommendations.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers and cubbies that fail in materials or workmanship, excluding finish, within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of latches and other door hardware.
 - 2. Damage from deliberate destruction and vandalism is excluded.
- B. Warranty Period for welded metal lockers and cubbies: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain metal lockers [, locker benches,] [, cubbies] and accessories from single source from single locker manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: For lockers [, cubbies] [and locker benches] indicated to be accessible, comply with applicable provisions in [the DOJ's "2010 ADA Standards for Accessible Design"] [the ABA standards of the Federal agency having jurisdiction] [and] [ICC A117.1] <Insert requirement>.

2.03 MANUFACTURER

- A. Manufacturer: One of the following.
 - 1. Vanguard Lockers by Penco.
 - 2. Standard Corridor Lockers by Republic Storage Products.
 - 3. Emperor Lockers by Hadrian Inc.
 - 4. Standard School Lockers by Lyon.
 - 5. Or equal.
- B. MATERIALS AND COMPONENTS
 - 1. Type: Manufacturer's standard and ADA compliant, single tier clothes lockers sized
 - 2. _____wide x ___tall x ___deep. Provide latch and locking hardware that does not require twisting, pinching or grasping to operate. Provide shelf and pole placed a few inches below the ADA maximum so that the items on the shelf can be reached.
 - 3. Material: Mild, cold-rolled, stretcher-leveled furniture steel free of surface imperfections and capable of taking a high grade baked enamel finish.
 - 4. Body: Manufacturer's standard construction, as follow.
 - a. 24 gage back, top and bottom.
 - b. Tops, bottoms shall be flanged on all sides; backs flanged on 2 sides.
 - c. Upright shall be offset at the front and flanged at the rear to provide a double lapped rear corner.
 - d. Bolts and nuts shall be zinc plated.

- C. Doors:
1. 18 gage steel (minimum) flanged on all sides for stiffness and reinforced as required to prevent racking and deformation.
 2. Provide stamped louvers at the top and bottom of each door.
- D. Hinges:
1. 2 in. high, 5-knuckle, full loop type, welded, or attached with tamper-proof fasteners, to both locker frame and door.
 2. Provide 2 hinges for each door.
 3. Hinge doors in the direction shown on the Drawings.
- E. Lock: Positive automatic pre-locking type, so that the locker may be locked while door is open, then closed without unlocking and without damaging locking mechanism. Lock shall not require twisting, pinching or grasping to operate.
- F. Latching:
1. Provide latch hardware that does not require twisting, pinching, or grasping to operate.
 2. One-piece, pre-lubricated, self-contained spring steel latch, completely contained within the lock bar under tension to provide rattle-free operation and latching at 2 points in the frame.
 3. The lock bar shall be of pre-painted, double-channel steel construction held laterally in the door channel by non-removable self-formed retainers, pierced from the door.
 4. Provide provision for padlocking.
- G. Locker Benches:
1. Provide bench units with overall assembly height of [17-1/2 inches (445 mm)] <Insert dimension>.
 2. Bench Tops: Manufacturer's standard one-piece units, with rounded corners and edges.
 - a. Size: Minimum 9-1/2 inches wide by 1-1/4 inches thick (241 mm wide by 32 mm thick) [except provide 20- to 24-inch- (508- to 610-mm-) wide tops where accessible benches are indicated].
 - b. Laminated clear hardwood with one coat of clear sealer on all surfaces and one coat of clear lacquer on top and sides.
 - c. Extruded aluminum with clear anodic finish.
 3. Fixed-Bench Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top and anchoring to floor, complete with fasteners and anchors.
 4. Movable-Bench Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top, complete with fasteners.
- H. Handle: Sturdy zinc die cast material.
1. Attached fixed case to the door with screws or bolts and a shock absorbing stud.
 2. The case must fully shield the lifting trigger from below.
 3. The lifting trigger shall have 2 right angle lugs that insert into the lock bar.
 4. Equip lifting trigger shall with rubber silencers at top and bottom to prevent metal- to-metal contact.

5. Make Padlock attachment through 3/8 in. diameter hole position.

I. Number Plate:

1. Polished aluminum plate with black numerals not less than ½ in. high.
2. Number as directed by the District.
3. Attach plates to exterior of doors with pop rivets.

2.04 FABRICATION

- A. Fabricate components straight, clean cut and free from dents, scratches, oil-canning, pitting, seam marks, roller marks, trade names and roughness and other defects.
- B. Remove blemishes by grinding before cleaning, treating and applying specified finishes.
- C. Provide necessary cut-outs and reinforcement for hardware.
- D. Welded Construction: Factory preassemble metal lockers and cubbies by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.
- E. Accessible Lockers and cubbies: Fabricate as follows:
1. Locate bottom shelf no lower than 15 inches above the floor.
 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.
- F. Finishing:
1. Hardware: Heavy chrome-plating with a mirror finish (US 26), and polished aluminum for number plates.
 2. All other Ferrous Surfaces: Clean, phosphatize and seal, apply enamel finish coat and bake under controlled conditions. Color shall be one of the manufacturer's standards with a 55 to 60 sheen, as selected by the Architect.

PART 3 - EXECUTION

A. INSTALLATION

1. Install lockers and cubbies plumb, level and secure in compliance with their manufacturer's recommendations and Building Code seismic regulations. Conceal fasteners wherever possible.
2. Welded Lockers and cubbies: Connect groups together with manufacturer's standard fasteners, with no exposed fasteners on face frames.
3. Install trim to provide flush, hairline joints against adjacent construction. Adjust doors and hardware to operate freely without binding.
4. Touch-up minor damage or replace damaged parts. Replace lockers and cubbies damaged beyond satisfactory field repair, as determined by the Architect, at no cost to the District.

5. Fixed Benches: Provide no fewer than two pedestals for each bench, uniformly spaced not more than 72 inches (1830 mm) apart. Securely fasten tops of pedestals to undersides of bench tops, and anchor bases to floor.
6. Movable Benches: Place benches in locations indicated on Drawings.

B. ADJUSTING

1. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. [Verify that integral locking devices operate properly.]

SECTION 10 56 13
METAL STORAGE SHELVING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Case-type metal storage shelving.
2. Four-post metal storage shelving.
3. Post-and-beam metal storage shelving.

B. Related Requirements:

1. Section 11 40 00 "Foodservice Equipment" for metal shelving in kitchen, pantry, and refrigerated spaces.
2. Section 11 51 23 "Library Stack Systems" for library shelving systems including cantilever-bracket shelving supported by wall-mounted standards.
3. Section 12 35 53.13 "Metal Laboratory Casework" for metal shelving in laboratories.
4. Section 12 35 70 "Healthcare Casework" for metal shelving in central sterile supply rooms, clean utility rooms, and similar spaces for the storage of medical instruments and supplies.

1.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design metal storage shelving, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance for **[Case-Type]** [and] **[Four-Post]** Metal Storage Shelving: Capable of withstanding the loads indicated according to MH 28.1.
- C. Structural Performance for Post-and-Beam Metal Storage Shelving: Capable of withstanding the loads indicated according to MH 28.2.
- D. Seismic Performance: Metal storage shelving shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]** <Insert requirement>.
 1. Seismic Component Importance Factor: **[1.5]** **[1.0]**.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, construction details, material descriptions, dimensions of individual components and profiles, and finishes for metal storage shelving.
- B. Shop Drawings: For customized metal storage shelving. Include plans, elevations, sections, details, and attachments to other work. Include installation details of connectors, lateral bracing, and special bracing.

- C. Samples for Initial Selection: For units with factory-applied color finishes. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For the following components, of size indicated below:
 - 1. Vertical **[End Panels] [Posts]**: 12 inches tall.
 - 2. Shelves: Full size, but not more than 24 inches wide by 12 inches deep.
 - 3. Connectors for **[Shelf to End Panel] [Shelf to Post] [Beam to Post]**: Full size.
 - 4. Shelf-Label Holders: Full size.
- E. Product Schedule: For metal storage shelving. **[Use same designations indicated on Drawings.]**
- F. Delegated-Design Submittal: For metal storage shelving indicated to comply with performance requirements, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate requirements for seismic restraints.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified **[Installer] [professional engineer]**.
- B. Seismic Qualification Certificates: For metal storage shelving, accessories, and components, from manufacturer.
- C. Product Certificates: For each type of metal storage shelving from manufacturer.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal storage shelving to include in maintenance manuals.

1.06 MATERIALS MAINTENANCE SUBMITTALS

- A. Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Shelves: Full-size units equal to **[5] <Insert number>** percent of amount installed for each type indicated, but no fewer than **[five] <Insert number>** shelves.
 - 2. Shelf-to-Post Connectors: Full-size units equal to **[5] <Insert number>** percent of amount installed for each type indicated, but no fewer than **[10] <Insert number>** connectors.
 - 3. Shelf-Label Holders: Full-size units equal to **[5] <Insert number>** percent of amount installed for each type indicated, but no fewer than **[10] <Insert number>** holders.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Source Limitations: Obtain metal storage shelving from single source from single manufacturer.
- C. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

1.08 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install metal storage shelving until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.09 COORDINATION

- A. Coordinate sizes and locations of blocking and backing required for installation of metal storage shelving attached to wall and ceiling assemblies.
- B. Coordinate locations and installation of metal storage shelving that may interfere with ceiling systems including lighting, HVAC, speakers, sprinklers, access panels, electrical switches or outlets, and floor drains.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
- C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with G60zinc (galvanized) or A60zinc-iron-alloy (galvannealed) coating.
- D. Steel Tubing: ASTM A 513, Type 2.
- E. Stainless-Steel Tubing: ASTM A 554, Grade MT-304.
- F. Steel Wire: ASTM A 899.
- G. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304.
- H. Particleboard: ANSI A208.1 [, made with binder containing no urea formaldehyde].
- I. Hardboard: ANSI A135.4.
- J. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- K. Floor Anchors: Galvanized-steel, **[post-installed expansion anchors]**, **[power-actuated fasteners]**, **[or] [threaded concrete screws]**. Provide number per unit recommended by manufacturer unless additional anchors are indicated in calculations.
- L. Wall Anchors: Manufacturer's standard, galvanized-steel anchors designed to secure metal storage shelving to adjacent wall. Provide **[one] <Insert number>** per shelving unit for each shelving unit adjacent to a wall unless additional anchors are indicated in calculations.

2.02 CASE-TYPE METAL STORAGE SHELVING <Insert drawing designation>

- A. General: Factory-formed, field-assembled, freestanding, case-type metal storage shelving system, designed for shelves to span between and be supported by sheet metal end panels (without posts), with shelves adjustable over the height of shelving unit. Fabricate shelf units with end panel at each end so each unit is independent. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.
1. Manufacturers: Subject to compliance with requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 2. Basis-of-Design Product: Subject to compliance with requirements, provide Metal Shelving Storage by UNICOR or approved Equal product.
- B. Load-Carrying Capacity per Shelf: **[200 lb]** [As indicated on Drawings] <Insert load>.
- C. End Panels: Fabricated from cold-rolled steel sheet, with concealed perforations at front and back edges at **[manufacturer's standard spacing] [1 inch o.c.]** for receiving adjustable shelf clips.
1. Steel-Sheet Thickness, Nominal: **[0.036 inch]** [As required for load-carrying capacity per shelf and number of shelves] <Insert thickness>.
 2. Adjustable Shelf Clips: Fabricated from **[0.036-inch-]** <Insert thickness> nominal thickness, cold-rolled steel; with projections designed to engage at least two perforations in end panels.
- D. End Panels: Fabricated from cold-rolled steel sheet; with horizontal slots spaced at **[manufacturer's standard spacing] [1 inch o.c.] [1-1/2 inches o.c.]** for supporting shelves.
1. Steel-Sheet Thickness, Nominal: **[0.036 inch]** [As required for load-carrying capacity per shelf and number of shelves] <Insert thickness>.
- E. Back Panel: One piece, fabricated from cold-rolled steel sheet.
1. Steel-Sheet Thickness, Nominal: **[0.036 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
- F. Shelves: Fabricated from cold-rolled steel sheet **[, with slots or holes at 2 inches o.c. for shelf dividers]**. Fabricate shelves with vertical front that is flanged and returned.
1. Steel-Sheet Thickness, Nominal: **[0.048 inch]** [As required for load-carrying capacity per shelf and number of shelves] <Insert thickness>.
- G. Shelf Quantity: **[Three] [Four] [Five] [Six]** <Insert number> shelves per shelving unit in addition to top and bottom shelf.
- H. Base: Closed front, with base strips fabricated from same material and with same finish as end panels.
- I. Overall Unit Width: **[30 inches] [36 inches] [42 inches] [48 inches]** <Insert dimension>.
- J. Overall Unit Depth: **[12 inches] [18 inches] [24 inches]** <Insert dimension>.
- K. Overall Unit Height: **[72 inches] [84 inches] [96 inches]** <Insert dimension>.
- L. Accessories:

1. Finished End Panels: Fabricated as **[solid] [perforated]** <Insert description> full-height panels from same material and with same finish as end panels, with trim for a finished appearance along edges abutting end panels and top shelf.
2. Shelf Dividers: Fabricated from same material and with same finish as shelves; **[full-height] [angle] [tapered] [sliding]** <Insert description> type.
3. Bins: Fabricated from same material and with same finish as shelves; **[size as indicated on Drawings]** <Insert dimensions>.
4. Shelf-Label Holders: **[Clear] [Colored]** plastic, designed to clip onto front edge of shelf.

M. Finish: **[Baked enamel] [or] [powder coat]**.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color and gloss>.

2.03 FOUR-POST METAL STORAGE SHELVING

A. **[Open] [Closed]** Four-Post Metal Storage Shelving <Insert drawing designation>: Factory-formed, field-assembled, freestanding system, designed for shelves to span between and be supported by corner posts, with shelves adjustable over the height of shelving unit. Fabricate initial shelving unit with a post at each corner. Fabricate additional shelving units **[similarly, so each unit is independent] [as add-on units, designed to share two corner posts with initial shelving unit]**. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.

1. Manufacturers: Subject to compliance with requirements, **[provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
2. Basis-of-Design Product: Subject to compliance with requirements, provide Four-Post Metal Shelving by UNICOR or approved Equal product.
3. Load-Carrying Capacity per Shelf: **[350 lbs.] [700 lbs.] [1500 lbs.]** [As indicated on Drawings] <Insert load>.
4. Posts: Fabricated from hot-rolled steel; in **[angle] [offset angle] [beaded] [T-] [tubular T-] [V-] [box] [manufacturer's standard]** shape; with perforations at 1-1/2 inches o.c. to receive shelf-to-post connectors.
 - a. Steel Thickness, Nominal: **[0.075 inch]** [As required for load-carrying capacity per shelf and number of shelves] <Insert thickness>.
 - b. Add-On Shelf Posts: Fabricated from hot-rolled steel, **[T-] [manufacturer's standard]** <Insert shape> shape; perforated to match main posts and of same thickness.
 - c. Post Base: **[Bolt leveler] [Adjustable steel floor plate, drilled for floor anchors]**.
5. Bracing: Manufacturer's standard, **[single] [or] [double]** diagonal cross bracing at **[back] [and] [ends]**; as required for stability, load-carrying capacity of shelves, and number of shelves.
6. Back Panel: **[One piece] [Two half panels]** fabricated from cold-rolled steel sheet.
 - a. Steel-Sheet Thickness, Nominal: **[0.024 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
7. End Panels: Fabricated from cold-rolled steel sheet.

- a. Steel-Sheet Thickness, Nominal: **[0.024 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
8. Solid-Type Shelves: Fabricated from steel sheet as follows:
 - a. Steel-Sheet Thickness, Nominal: **[0.030 inch]** **[0.036 inch]** **[0.048 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
 - b. Metallic-Coated Steel-Sheet Thickness, Nominal: **[0.034 inch]** **[0.040 inch]** **[0.052 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
 - c. Slots or Holes for Shelf Dividers: **[2 inches]** **[3 inches]** <Insert dimension> o.c.
 - d. Fabricate fronts and backs of shelves with box-formed edges, with corners lapped and welded.
 - e. Fabricate fronts and backs of shelves with vertical edges that are flanged and returned, with edges reinforced with steel **[bars]**, **[angles]**, [or] **[channels]**.
9. Framed-Type Wire Shelves: **[Steel]** **[Metallic-coated-steel]** wire; with shelf frame fabricated from same material and with same finish as posts.
10. Truss-Type Wire Shelves: **[Steel]** **[Metallic-coated-steel]** **[Stainless-steel]** **[Manufacturer's standard, chrome-plated]** wire-over-wire construction, with downturned wire truss edges.
11. Shelf Quantity: **[Three]** **[Four]** **[Five]** **[Six]** <Insert number> shelves per shelving unit in addition to top and bottom shelf.
12. Shelf-to-Post Connectors: **[Mechanical fasteners (nuts and bolts)]** **[Compression clips]** **[Support clips]** **[Containment clips]** **[Horizontal supports with rivet connectors to post]** **[Manufacturer's standard connectors]** <Insert type>.
13. Base: **[Open, with exposed post legs]** **[Closed, with base strips fabricated from same material and with same finish as shelving]**.
14. Overall Unit Width: **[30 inches]** **[36 inches]** **[42 inches]** **[48 inches]** <Insert dimension>.
15. Overall Unit Depth: **[12 inches]** **[18 inches]** **[24 inches]** <Insert dimension>.
16. Overall Unit Height: **[72 inches]** **[84 inches]** **[96 inches]** <Insert dimension>.
17. Accessories:
 - a. Finished End Panels: Fabricated as **[solid]** **[perforated]** <Insert description> full-height panels from manufacturer's standard thickness cold-rolled steel sheet and with same finish as posts, with trim for a finished appearance along edges abutting posts and top shelf.
 - b. Shelf Dividers: Fabricated from same material and with same finish as shelves; **[full-height]** **[angle]** **[tapered]** **[sliding]** <Insert description> type.
 - c. Bins: Fabricated from same material and with same finish as shelves; **[size as indicated on Drawings]** <Insert dimensions>.
 - d. Shelf-Label Holders: **[Clear]** **[Colored]** plastic, designed to clip onto front edge of shelf.
18. Finish: **[Baked enamel]** [or] **[powder coat]**.
 - a. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.

- B. Wire-Type, Four-Post Metal Storage Shelving <Insert drawing designation>: Factory-formed, field-assembled, freestanding system without back or end panels, designed for shelves to span between and be supported by corner posts, with shelves adjustable over the entire height of shelving unit. Fabricate initial shelving unit with a post at each corner. Fabricate additional shelving units **[similarly, so each unit is independent] [as add-on units, designed to share two corner posts with initial shelving unit]**. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.
1. Manufacturers: Subject to compliance with requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 2. Basis-of-Design Product: Subject to compliance with requirements, provide Wire-Type, Four-Post Metal Shelving by UNICOR or approved Equal product.
 3. Load-Carrying Capacity per Shelf: **[200 lb] [600 lb] [1200 lb]** [As indicated on Drawings] <Insert load>.
 4. Posts: Fabricated from 1-inch-OD, **[square] [round]** tubing of indicated material; with grooves or notches at 1 inch o.c. to receive shelf-to-post connectors. Label posts with numbers at not less than 2 inches o.c. for determining shelf height.
 - a. Post Material: **[Steel] [Stainless steel]**.
 - b. Post Base: **[Bolt leveler] [Adjustable steel floor plate, drilled for floor anchors]**.
 - c. Post Cap: Nylon or plastic.
 5. Framed-Type Wire Shelves: **[Steel] [Metallic-coated-steel] [Stainless-steel]** wire-over-wire construction, with shelf frame fabricated from same material and with same finish as posts; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
 6. Truss-Type Wire Shelves: **[Steel] [Metallic-coated-steel] [Stainless-steel] [Manufacturer's standard, chrome-plated]** wire-over-wire construction, with downturned wire truss edges; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
 7. Waterfall-Type Wire Shelves: **[Steel] [Metallic-coated-steel] [Stainless-steel]** wire-over-wire waterfall construction; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
 8. Solid-Type Shelves: Fabricated from 0.050-inch-thick, stainless-steel sheet metal of indicated material and thickness.
 9. Shelf Quantity: **[Three] [Four] [Five] [Six]** <Insert number> shelves per shelving unit in addition to top and bottom shelf.
 10. Shelf-to-Post Connectors: Manufacturer's standard one-piece collet (wedge), designed to engage post collar attached to shelves.
 11. Bracing: Manufacturer's standard diagonal cross bracing, as required for stability, load-carrying capacity of shelves, and number of shelves.
 12. Overall Unit Width: **[24 inches] [36 inches] [48 inches] [60 inches]** <Insert dimension>.
 13. Overall Unit Depth: **[12 inches] [18 inches] [24 inches]** <Insert dimension>.
 14. Overall Unit Height: **[60 inches] [72 inches] [84 inches]** <Insert dimension>.
 15. Accessories:

- a. Shelf Dividers: Fabricated from same material and with same finish as shelves; **[full-height] [angle] [tapered] [sliding]** <Insert description> type.
 - b. Shelf Inlay: Manufacturer's standard **[clear plastic] [static-dissipative plastic] [hardboard]** <Insert material> mat.
 - c. Storage Basket: Edge-of-shelf-mounted wire basket, <Insert dimensions>; fabricated from same material and with same finish as shelves.
 - d. Back Ledges: **[1 inch] [4 inches]** <Insert dimension> high, fabricated from same material and with same finish as shelves.
 - e. Side Ledges: **[1 inch] [4 inches]** <Insert dimension> high, fabricated from same material and with same finish as shelves.
 - f. Garment Hanger Tube: Width of **[21 inches] [shelves]** <Insert dimension>; with mounting brackets.
 - g. Shelf-Label Holders: **[Clear plastic] [Colored plastic] [Cold-rolled steel sheet]**, designed to clip onto front edge of shelf.
16. Steel Finish: **[Baked enamel], [powder coat], [or] [Manufacturer's standard chrome plated]**.
- a. Color and Gloss: **[As indicated by manufacturer's designations] [Match University Representative's sample] [As selected by University Representative from manufacturer's full range]** <Insert color and gloss>.
17. Stainless-Steel Finish: **[No. 4 directional-satin finish] [Manufacturer's standard non-directional-polish finish]**.

2.04 POST-AND-BEAM METAL STORAGE SHELVING <Insert drawing designation>

- A. General: Factory-formed, field-assembled, freestanding, post-and-beam metal storage shelving system, designed for shelves to be supported by beams that span between and are supported by corner posts, with beams adjustable over the entire height of shelving unit. Fabricate initial shelving unit with a post at each corner. Fabricate additional shelving units **[similarly, so each unit is independent] [as add-on units, designed to share two corner posts with initial shelving unit]**. Provide fixed top and bottom beams, adjustable intermediate beams, and accessories indicated.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 2. Basis-of-Design Product: Subject to compliance with requirements, Provide Post -And-Beam Metal Shelving by UNICOR or approved Equal product.
- B. Load-Carrying Capacity per Shelf: **[400 lbs.] [1000 lbs.] [2000 lbs.]** [As indicated on Drawings] <Insert load>.
- C. Posts: Fabricated from cold-rolled steel; in **[manufacturer's standard] [manufacturer's standard angle or open-box] [1-1/2-by-1-1/2-inch angle] [open-box]** shape; with perforations at 1-1/2 inches o.c. to receive beam-to-post connectors.
- 1. Steel Thickness, Nominal: **[0.075 inch]** [As required for load-carrying capacity per shelf and number of shelves] <Insert thickness>.
 - 2. Add-On Shelf Posts: Fabricated from hot-rolled steel, T-shape; perforated to match main posts and of same thickness.
 - 3. Post Base: Cold-rolled steel floor plate, drilled for floor anchors.

- D. Beams: Fabricated from cold-rolled steel; in **[channel] [flanged] [channel or flanged] [manufacturer's standard]** shape; with projecting **[rivet] [tab] [manufacturer's standard]** beam-to-post connectors at each end designed to engage posts. Provide beam at each side of each shelf, with center supports as required for load-carrying capacity of shelf.
1. Steel Thickness, Nominal: **[0.075 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
 2. Provide top, bottom, and intermediate shelf beams with **[single] [double]** beam-to-post connectors.
 3. Provide top and bottom shelf beams with double beam-to-post connectors and intermediate shelf beams with single beam-to-post connectors.
 4. Provide beams for the number of shelves required.
 5. Provide beams for <Insert number> shelves per shelving unit in addition to top and bottom shelf beams.
- E. Particleboard Shelves: 5/8 inch thick; **[factory] [or] [field]** cut.
- F. Flat Metal Shelves: Fabricated from steel sheet as follows:
1. Steel-Sheet Thickness, Nominal: **[0.030 inch] [0.036 inch] [0.048 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
 2. Metallic-Coated Steel-Sheet Thickness, Nominal: **[0.034 inch] [0.040 inch] [0.052 inch]** [As required for load-carrying capacity per shelf] <Insert thickness>.
 3. Fabricate **[fronts and backs] [fronts, backs, and sides]** of shelves with box-formed edges, with corners lapped and welded.
- G. Ribbed-Metal-Decking Shelves: Fabricated from **[0.036-inch-] <Insert thickness>** nominal thickness steel sheet.
- H. Wire Shelves: Welded steel wire; with **[2-by-4-inch]** [Manufacturer's standard] <Insert dimensions> openings.
- I. Shelf Quantity: **[Three] [Four] [Five] [Six]** <Insert number> shelves per shelving unit in addition to top and bottom shelf.
- J. Overall Unit Width: **[36 inches] [48 inches] [60 inches] [69 inches] [72 inches] [96 inches]** <Insert dimension>.
- K. Overall Unit Depth: **[18 inches] [24 inches] [30 inches] [36 inches] [48 inches]** <Insert dimension>.
- L. Overall Unit Height: **[60 inches] [72 inches] [84 inches] [96 inches]** <Insert dimension>.
- M. Accessories:
1. Tie Plates: Cold-rolled steel, finished to match posts; designed for joining posts of adjacent shelving units.
 2. Supports: **[Back-to-wall]** [and] **[back-to-back]** type that bolt to posts; as required for shelving unit stability.
 3. Record Boxes: Knocked-down, corrugated fiberboard with white finish and contrasting contents legend; with pre-punched handles and matching separate lid.

- a. Letter/Legal-Size Boxes: 12-1/2 inches wide by 16 inches deep by 10-1/2 inches high for letter-size material stored left to right and legal-size material stored front to back.
 - 1) Quantity: <Insert number>.
 - b. Letter-Size Boxes: 12-1/2 inches wide by 24 inches deep by 10-1/2 inches high for letter-size material stored left to right.
 - 1) Quantity: <Insert number>.
4. Record Box Support Rails: 1-1/2-by-1-1/2-inch metal angle, with length to match depth of shelving unit; fabricated from same material and with same finish as beams.
- N. Finish: [Baked enamel] [or] [powder coat].
1. Color and Gloss: [As indicated by manufacturer's designations] [Match University Representative's sample] [As selected by University Representative from manufacturer's full range] <Insert color and gloss>.

2.05 FABRICATION

- A. Shop Fabrication: Prefabricate shelving components in shop to greatest extent possible to minimize field fabrication; temporarily preassemble shelving components where necessary to ensure that field-assembled components fit together properly. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Fabricate metal storage shelving square and rigid, with posts plumb and true and shelves flat and free of dents or distortion. Fabricate connections to form a rigid structure, free of buckling and warping.
1. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.
 2. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Locate joints where least conspicuous.
 3. Build in straps, plates, brackets, and other reinforcements as needed to support shelf loading.
 4. Cut, reinforce, drill, and tap metal fabrications to receive hardware, fasteners, and similar items.
- C. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work. **[Form backs of shelving units up to 48 inches wide from one piece.]**
- D. Form edges and corners free of sharp edges or rough areas. Fold back and crimp exposed edges of unsupported sheet metal to form a 1/2-inch-wide hem on the concealed side; ease edges of metal plate to radius of approximately 1/32 inch. Shear and punch metals cleanly and accurately. Remove burrs.
- E. Weld corners and seams continuously to develop strength, minimize distortion, and maintain the corrosion resistance of base metals. At exposed locations, finish welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface. Weld before finishing components to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces before finishing.

2.06 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.07 METALLIC-COATED STEEL-SHEET FINISHES

- A. Surface Preparation: Clean surfaces with non-petroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A 780.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry thickness.

2.08 STEEL FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" or SSPC-SP 8, "Pickling."
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry thickness.

2.09 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine floors for suitable conditions where metal storage shelving will be installed.
- C. Examine **[walls]** **[and]** **[ceilings]** to which metal storage shelving will be attached for properly located blocking, grounds, or other solid backing for attachment of support fasteners.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Vacuum finished floor **[and wet mop resilient flooring]** over which metal storage shelving is to be installed.

3.03 INSTALLATION

- A. Install metal storage shelving level, plumb, square, rigid, true, and with shelves flat and free of dents or distortion. Make connections to form a rigid structure, free of buckling and warping.
1. Install exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
 2. Install braces, straps, plates, brackets, and other reinforcements as needed to support shelf loading and as required for stability.
 3. Adjust post-base bolt leveler to achieve level and plumb installation.
 4. Anchor shelving units to floor with floor anchors through floor plate. Shim floor plate to achieve level and plumb installation.
 5. Install seismic restraints.
 6. Connect **[side-to-side]** **[and]** **[back-to-back]** shelving units together.
 7. Install shelves in each shelving unit at spacing indicated on Drawings or, if not indicated, at equal spacing.
 - a. Case-Type Metal Storage Shelving: Install adjustable shelf clips at front and back of each shelf.
 - b. Four-Post Metal Storage Shelving: Install four clips, one at each post, for support of each shelf; with clips fully engaged in post perforations.
 - c. Post-and-Beam Metal Storage Shelving: Install beams with beam-to-post connectors fully engaged in post perforations.
- B. Accessories:
1. Install finished end panels and trim at exposed ends of shelving units.
 2. Shelf Dividers: Install <Insert number> **[full-height dividers per shelf]** **[angle dividers per shelf]** **[tapered dividers per shelf]** **[sliding dividers per shelf]** **[dividers of types and locations indicated on Drawings]**.
 3. Bins: Install **[<Insert number> per shelf]** **[at locations indicated on Drawings]**.
 4. Shelf-Label Holders: Install **[one]** **<Insert number>** on each shelf, **[centered]** **[vertically aligned]** **[at locations indicated on Drawings]** within each shelving unit.
 5. Record Box Support Rails: Provide two for each record storage box.
 6. Shelf Inlays: Install **[one per shelf]** **[at locations indicated on Drawings]**.
 7. Storage Baskets: Install **[<Insert number> per shelf]** **[at locations indicated on Drawings]**.
 8. Back Ledges: Install **[one per shelf]** **[at locations indicated on Drawings]**.
 9. Side Ledges: Install **[on each side of each shelf]** **[at locations indicated on Drawings]**.
 10. Garment Hanger Tubes: Install **[one per shelving unit]** **[<Insert number> where directed]** **[at locations indicated on Drawings]**.

3.04 ERECTION TOLERANCES

- A. Erect **[case-type]** [and] **[four-post]** metal storage shelving to a maximum tolerance from vertical of 1/2 inch in up to 10 feet of height, not exceeding 1 inch for heights taller than 10 feet.
- B. Erect post-and-beam metal storage shelving to a maximum tolerance from vertical of 1/4 inch in 84 inches of height.

3.05 ADJUSTING

- A. Adjust metal storage shelving so that connectors and other components engage accurately and securely.
- B. Adjust and lubricate operable components to operate smoothly and easily, without binding or warping. Check and readjust operating hardware.
- C. Touch up marred finishes or replace metal storage shelving that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal storage shelving manufacturer.
- D. Replace metal storage shelving that has been damaged or has deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 10 73 33

MARQUEES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Field-lettered signs painted directly on substrates in good condition.
 - 2. Wall-identification signs for fire and smoke assemblies.
- B. Related Requirements:
 - 1. Section 10 14 00 for signage and wayfinding.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.

1.03 SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Show sign locations and mounting heights.
 - 2. Show message list, typestyles, graphic elements, and layout for each sign at least [half size] <Insert scale>.
- C. Samples: For each type of paint, paint system, color, and gloss; [minimum 4 inches (100 mm) long in least dimension] <Insert dimensions>; on hardboard.
 - 1. Label each Sample for location and application.
 - 2. Program Requirements

PART 2 PRODUCTS

2.01 PRODUCT REQUIREMENTS

- A. Image Specifications:
 - 1. If within 50' of closest viewers (e.g. by sidewalk):
 - a. 8mm Pixel pitch (spacing)
 - b. 8500NIT SMD/8mm pixel pitch (distance between pixels)
 - 2. If beyond 50' Distant from all viewers (e.g. LASC field from highway):
 - a. 10,000NIT discrete LED/10mm pixel pitch
 - 3. 160 degree horizontal/70 degree vertical image viewing

4. One controller per screen so that two sided screens can show different images (e.g. "Turn left at____, on one side, "Turn Right at____" on the other). Each display to be able to show a unique image
 5. Automatic brightness control with hundreds of variations and auto-night dimming
 6. 20-bit color, capable of producing Quintillian + color variations
 7. Refresh rate capable of at least 8000Hz, and adjustable downward to 3840Hz
 8. Automatic image scaling if various sizes of Marquees are on system so that image looks best for each Marquee
 9. Still and motion capability 60FPS minimum
 10. 208V preferred, 120V acceptable so long as manufacturer agrees it is suitable for the model offered
- B. Software:
1. Cloud software to upload by web login.
 2. Dual authentication required.
 3. 24x7x365 login.
- C. Component Requirements:
1. IP67/IP65 LED/SMD module front/back water rating.
 2. IP54 cabinet back water rating.
 3. 100,000 hour expected life of LEDs/SMDs.
 4. Fan-less power supplies with $\geq 400,000$ hour expected life.
 5. Highly weather-resistant finishes.
- D. Service:
1. 5 year extended on-site warranty (if manufacturer warranty does not already include this or more).
 2. All warranty service on-site.
 3. Resolution within 3 days for most issues.
 4. Factory service personnel if possible.
 5. Easy-to-replace components: Front-service modules.
 6. Remote diagnostics with service alerts received by Campus and Manufacturer covering Tile, power, data, media player and providing automatic email alerts for automatic warranty action.
 7. Response pro-actively triggered when alerts merit.
 8. Parts availability guarantee 10 years.
 9. Manufacturer to include listing of components by manufacturer and part number with ordering information.
 10. Manufacturer to include service manual detailing how to check and change components.
 11. Manufacturer to provide support for software platform changes and connectivity changes (e.g. cellular to fiber decision or change from proprietary software provided to future digital signage software standard of LACCD)

- E. Media delivery:
 - 1. Option 1: Cellular pre-paid by manufacturer for full term of warranty (advantage: no traffic on, or access to, Campus network).
 - 2. Option 2: Direct SM fiber.
 - 3. Regardless of option, manufacturer is to include fiber adapter and agree to support transition to/from one option to the other during the full warranty period.
- F. Contract terms:
 - 1. Lifetime software upgrades and support of college change in software (e.g. due to digital signage/emergency systems).
 - 2. Manufacturer supports (billable, but supported) future changes:
 - a. Conversion to premise media delivery via fiber if College elects.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for conditions affecting performance. Comply with paint manufacturer's written instructions for inspection.
- B. If existing surfaces cannot be prepared to an acceptable condition for proper painting, notify Architect in writing.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and surface is dry.
- D. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

3.02 INSTALLATION

- A. General: Install signs using installation methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Install signs so they do not protrude or obstruct according to the accessibility standard.
 - 3. Before installation, verify that sign components are clean and free of materials or debris that would impair installation.
 - 4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.03 ADJUSTING AND CLEANING

- 1. Remove and reapply damaged or deformed signs and signs that do not comply with specified requirements. Reapply signs with damaged or deteriorated finishes that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- 2. After completing sign application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

3. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
4. Remove temporary protective coverings and strippable films as signs are installed.
5. Insert a sign schedule here or on Drawings to list each sign type by drawing designation, text, and quantity, coordinated with Drawings. Also include sign size, font, colors, and locations to the extent that these items are not shown on Drawings. See Evaluations for an example of a sign schedule.

END OF SECTION

SECTION 10 75 16
GROUND-SET FLAGPOLES

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes ground-set flagpoles made from **[aluminum] [copper alloy (bronze)] [stainless steel] [steel] [and] [fiberglass]**.
- B. Owner-Furnished Material: Flags.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.
- B. Shop Drawings: For each flagpole.
 - 1. Include the following
 - a. Plans, elevations, and attachment details. Show general arrangement, jointing, fittings, accessories, grounding, anchoring, and support.
 - b. Section, and details of foundation system.
- C. Samples for Verification: For each type of exposed finish, in manufacturer's standard sizes.
- D. Delegated Design Submittals: For flagpoles.

1.03 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design flagpole assemblies.
- B. Seismic Performance: Flagpole assemblies to withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]** <Insert requirement>.
- C. Structural Performance: Flagpole assemblies, including anchorages and supports, to withstand design loads indicated within limits and under conditions indicated.
 - 1. Wind Loads: Determine according to NAAMM FP 1001. Basic wind speed for Project location is <Insert wind speed>.
 - 2. Base flagpole design on **[polyester]** **[nylon or cotton]** flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.

2.03 ALUMINUM FLAGPOLES

- A. Aluminum Flagpoles: **[Cone]** **[Entasis]**-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B241/B241M, Alloy 6063, with a minimum wall thickness of 3/16 inch.
- B. Exposed Height: **[20 feet]** **[25 feet]** **[30 feet]** **[35 feet]** **[40 feet]** **[45 feet]** **[50 feet]** **[60 feet]** **[70 feet]** **[80 feet]** <Insert dimension>.
- C. Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:
 - 1. Fabricate shop and field joints without using fasteners, screw collars, or lead caulking.
 - 2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.
- D. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, 0.060-inch wall thickness with 3/16-inch steel bottom plate and support plate; 3/4-inch-diameter, steel ground spike; and steel centering wedges welded together. Galvanize foundation tube after assembly. Furnish loose hardwood wedges at top of foundation tube for plumbing pole.
 - 1. Flashing Collar: Same material and finish as flagpole.
- E. Sleeve for Aluminum Flagpole: **[Fiberglass]** **[or]** **[PVC pipe]** foundation sleeve, made to fit flagpole, for casting into concrete foundation.
 - 1. Flashing Collar: Same material and finish as flagpole.
- F. Cast-Metal Shoe Base: Made from aluminum **[with same finish and color as flagpoles]** <Insert finish and color> for anchor-bolt mounting; furnish with anchor bolts.
 - 1. Furnish ground spike.
- G. Hinged Baseplate: Cast-metal tilting hinged base and anchor plate joined by permanently secured pivot rod. Furnish with stainless steel screws for securing tilting base to anchor plate when not tilted; furnish with anchor bolts.
 - 1. Finish: Same as flagpole.
 - 2. Furnish aluminum base or aluminum flashing collar finished to match flagpole.
 - 3. Furnish ground spike.

- H. Pivoting Tilt Base: Steel baseplate with channel or rectangular tube uprights, pivot bolt, and locking device for tilting flagpole. Furnish tilting flagpole with steel counterweight box and weights, or furnish with internal counterweight. Furnish base with anchor bolts.
1. Finish: Same as flagpole.
 2. Furnish ground spike.

2.04 COPPER-ALLOY (BRONZE) FLAGPOLES

- A. Copper-Alloy (Bronze) Flagpoles: **[Cone] [Entasis]**-tapered flagpoles fabricated from seamless pipe or tube complying with ASTM B43 or ASTM B135, Alloy UNS C23000 (red brass, 85 percent copper).
- B. Exposed Height: **[20 feet] [25 feet] [30 feet] [35 feet] [40 feet] [45 feet] [50 feet] [60 feet] [70 feet] [80 feet]** <Insert dimension>.
- C. Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:
1. Fabricate shop and field joints without using fasteners, screw collars, or lead caulking.
 2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.
- D. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, 0.060-inch wall thickness with 3/16-inch steel bottom plate and support plate; 3/4-inch-diameter, steel ground spike; and steel centering wedges welded together. Galvanize foundation tube after assembly. Furnish loose hardwood wedges at top of foundation tube for plumbing pole.
1. Flashing Collar: Same material and finish as flagpole.
- E. Cast-Metal Shoe Base: Made from steel **[with finish matching flagpole]** <Insert finish and color> for anchor-bolt mounting; furnish with anchor bolts.
1. Furnish ground spike.

2.05 STAINLESS STEEL FLAGPOLES

- A. Stainless Steel Flagpoles: **[Cone] [Entasis]**-tapered flagpoles fabricated from pipe, tube, or plate complying with ASTM A312/A312M, ASTM A269, or ASTM A666, **[Type 304] [Type 316L]**.
- B. Exposed Height: **[20 feet] [25 feet] [30 feet] [35 feet] [40 feet] [45 feet] [50 feet] [60 feet] [70 feet] [80 feet]** <Insert dimension>.
- C. Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:
1. Fabricate shop and field joints without using fasteners, screw collars, or lead caulking.
 2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.
- D. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, 0.060-inch wall thickness with 3/16-inch steel bottom plate and support plate; 3/4-inch-diameter, steel ground spike; and steel centering wedges welded together. Galvanize foundation tube after assembly. Furnish loose hardwood wedges at top of foundation tube for plumbing pole.
1. Flashing Collar: Same material and finish as flagpole.

- E. Cast-Metal Shoe Base: Made from steel **[with finish matching flagpole]** <Insert finish and color> for anchor-bolt mounting; furnish with anchor bolts.

1. Furnish ground spike.

2.06 STEEL FLAGPOLES

- A. Steel Flagpoles: **[Cone-tapered]** **[Stepped-sectional]** flagpoles fabricated from standard-weight, seamless steel pipe complying with ASTM A53/A53M, Type S, Grade B, or steel tube complying with ASTM A513.

- B. Exposed Height: **[20 feet]** **[25 feet]** **[30 feet]** **[35 feet]** **[40 feet]** **[45 feet]** **[50 feet]** **[60 feet]** **[70 feet]** **[80 feet]** <Insert dimension>.

- C. Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

1. Fabricate shop and field joints without using fasteners, screw collars, or lead caulking.

2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

3. Provide self-aligning, snug-fitting joints.

- D. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, 0.060-inch wall thickness with 3/16-inch steel bottom plate and support plate; 3/4-inch-diameter, steel ground spike; and steel centering wedges welded together. Galvanize foundation tube after assembly. Furnish loose hardwood wedges at top of foundation tube for plumbing pole.

1. Flashing Collar: Same material and finish as flagpole.

2. Furnish steel ground protectors extending 12 inches aboveground and 6 inches belowground for steel flagpoles where flashing collars are not provided.

- E. Cast-Metal Shoe Base: Made from steel **[with finish matching flagpole]** <Insert finish and color> for anchor-bolt mounting; furnish with anchor bolts.

1. Furnish ground spike.

2.07 FIBERGLASS FLAGPOLES

- A. Fiberglass Flagpoles: **[Cone]** **[Entasis]**-tapered flagpoles fabricated from polyester resin reinforced with woven glass-fiber roving with 75 percent of glass fibers parallel to length of flagpole.

- B. Exposed Height: **[20 feet]** **[25 feet]** **[30 feet]** **[35 feet]** **[40 feet]** **[45 feet]** **[50 feet]** **[60 feet]** **[70 feet]** **[80 feet]** <Insert dimension>.

- C. Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

1. Fabricate shop and field joints without using fasteners, screw collars, or lead caulking.

2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

- D. Sleeve for Fiberglass Flagpole: **[Fiberglass]** **[or]** **[PVC pipe]** foundation sleeve, made to fit flagpole, for casting into concrete foundation.

1. Flashing Collar: Same material and finish as flagpole.

- E. Cast-Metal Shoe Base: Made from aluminum **[with finish matching flagpole]** <Insert finish and color> for anchor-bolt mounting; furnish with anchor bolts.
 - 1. Furnish ground spike.
- F. Hinged Baseplate: Cast-metal tilting hinged base and anchor plate joined by permanently secured pivot rod. Furnish with stainless steel screws for securing tilting base to anchor plate when not tilted; furnish with anchor bolts.
 - 1. Finish: Same as flagpole.
 - 2. Furnish aluminum base or aluminum flashing collar finished to match flagpole.
 - 3. Furnish ground spike.

2.08 FITTINGS

- A. Finial Ball: Flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.
 - 1. 0.063-inch spun aluminum [, finished to match flagpole] [with gold anodic finish].
 - 2. 20-oz. copper with 23-karat, gold-leaf finish.
 - 3. Spun stainless steel, finished to match flagpole.
 - 4. Spun copper alloy, finished to match flagpole.
- B. Finial Eagle: Sized [as indicated] [as standard with manufacturer for flagpole size indicated] <Insert size>.
 - 1. Cast aluminum [, finished to match flagpole] [with gold anodic finish].
 - 2. 20-oz. copper with 23-karat, gold-leaf finish.
- C. Internal Halyard, Winch System: Manually operated winch with control stop device and removable handle, stainless steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.
 - 1. Halyard Flag Snaps: [Chromium-plated bronze] [Stainless steel] [Bronze] [Nylon] swivel snap hooks [with neoprene or vinyl covers]. Furnish two per halyard.
 - 2. Plastic Halyard Flag Clips for Internal Halyard, Winch System: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Furnish two per halyard.
- D. Internal Halyard, Cam Cleat System: **[5/16-inch-diameter, braided polypropylene]** <Insert type> halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.
 - 1. Halyard Flag Snaps: [Chromium-plated bronze] [Stainless steel] [Bronze] [Nylon] swivel snap hooks [with neoprene or vinyl covers]. Furnish two per halyard.
 - 2. Plastic Halyard Flag Clips for Internal Halyard, Cam Cleat System: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Furnish two per halyard.

- E. External Halyard: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous **[5/16-inch-diameter, braided polypropylene halyard]** <Insert type> and 9-inch cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.
1. Halyards and Cleats: **[One]** **[Two]** at each flagpole.
 2. Cleat Covers: Cast metal, finished to match flagpole, secured with cylinder locks.
 3. Halyard Covers: 2-inch channel, 60 inches long, finished to match flagpole.
 4. Halyard Flag Snaps: **[Chromium-plated bronze]** **[Stainless steel]** **[Bronze]** **[Nylon]** swivel snap hooks **[with neoprene or vinyl covers]**. Furnish two per halyard.
 5. Plastic Halyard Flag Clips for External Halyard, Ball-Bearing System: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Furnish two per halyard.

2.09 MISCELLANEOUS MATERIALS

- A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M.
- B. Drainage Material: Crushed stone, or crushed or uncrushed gravel; coarse aggregate.
- C. Sand: ASTM C33/C33M, fine aggregate.
- D. Elastomeric Joint Sealant: **[Multicomponent nonsag urethane]** **[Single-component nonsag urethane]** **[Single-component neutral-curing silicone]** joint sealant complying with requirements in Section 07 92 00 "Joint Sealants."
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.010 ALUMINUM FINISHES

- A. Natural Satin Finish: AA-M32, fine, directional, medium satin polish; buff complying with AA-M20; seal aluminum surfaces with clear, hard-coat wax.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41]** **[AA-M12C22A31]**.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44]** **[AA-M12C22A32/A34]**.
1. Color: **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[As indicated by manufacturer's designation]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
 2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Gold Anodic Finish: AAMA 611, AA-M32C22A43; gold color.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color and gloss>.

- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604]** **[AAMA 2605]** and containing not less than **[50]** **[70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **[Insert color and gloss]**.

2.011 COPPER-ALLOY FINISHES

- A. Hand-Rubbed Finish, Lacquered: Directionally textured, fine satin, mechanical finish coated with lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil.
- B. Statuary Conversion Coating over Satin Finish: Directionally textured, fine satin, mechanical finish with sulfide conversion coating.
1. Color: Match Architect's sample.
 2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.012 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 2. Directional Satin Finish: No. 4.

2.013 STEEL FINISHES

- A. Flagpole Interior Finish: Apply one coat of bituminous paint on interior of flagpole.
- B. Galvanized Finish: Hot-dip galvanize after fabrication to comply with ASTM A123/A123M.
- C. Polyurethane Enamel Finish: Remove mill scale and rust, if present, from uncoated steel, complying with **[SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning"]** **[or]** **[SSPC-SP 8, "Pickling"]** **[Insert surface preparation method]**. After cleaning, apply manufacturer's standard primer and two-coat, high-gloss, high-build, polyurethane-enamel finish.
1. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **[Insert color]**.
- D. Baked-Enamel or Powder-Coat Finish: Remove mill scale and rust, if present, from uncoated steel, complying with **[SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning"]** **[or]** **[SSPC-SP 8, "Pickling"]** **[Insert surface preparation method]**. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **[Insert color and gloss]**.

2.014 FIBERGLASS FINISHES

- A. Fiberglass: UV-light stable, hard, high-gloss gel coat or high-gloss, high-build polyurethane or polyester coating.
 - 1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.

PART 3 EXECUTION

3.01 PREPARATION

- A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.
- B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete. Place and compact drainage material at excavation bottom.
- C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms to prevent displacement during concreting.
- D. Foundation Tube: Place foundation tube, center, and brace to prevent displacement during concreting. Place concrete. Plumb and level foundation tube and allow concrete to cure.
- E. Sleeves: Locate and secure sleeves in forms by bracing to reinforcement and forms.
- F. Anchor Bolts: Locate and secure anchor bolts in forms with templates and by tying to reinforcement.
- G. Place concrete, as specified in Section 03 30 00 "Cast-in-Place Concrete." Compact concrete in place by using vibrators. Moist-cure exposed concrete for no fewer than seven days or use nonstaining curing compound.
- H. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.02 FLAGPOLE INSTALLATION

- A. General: Install flagpoles where indicated and according to [**Shop Drawings and**] manufacturer's written instructions.
- B. Foundation Tube: Place flagpole in tube, seated on bottom plate between steel centering wedges, and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch layer of elastomeric joint sealant and cover with flashing collar.
- C. Baseplate: Cast anchor bolts in concrete foundation. Install baseplate on washers placed over leveling nuts on anchor bolts and adjust until flagpole is plumb. After flagpole is plumb, tighten retaining nuts and fill space under baseplate solidly with nonshrink, nonmetallic grout. Finish exposed grout surfaces smooth and slope 45 degrees away from edges of baseplate.

END OF SECTION

SECTION 10 81 13
BIRD CONTROL DEVICES

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Bird control system.

1.02 PRE-INSTALLATION MEETING

- A. Preinstallation Conference: Conduct conference at Project site.

1.03 SUBMITTALS

- A. Data: Manufacturer's data for bird control system, including standard details
- B. Shop Drawings: Provide shop drawing showing proposed custom installation details, and layout plans.
- C. Sample: 24-inch piece of the base/rod strip specified.

1.04 HANDLING

- A. Procedure: In accordance with Division One.

1.05 WARRANTY

- A. Warrant bird control system against defective materials and workmanship for 5 years following Substantial Completion.

PART 2 PRODUCT

2.01 MANUFACTURER

- A. Birdwire by Bird Barrier Co. (310.793.1733.)
- B. Bird Be Gone
- C. Or equal, with snap-off sections.

2.02 MATERIALS

- A. Birdwire posts, springs, brackets, clamps
- B. Material: 316 Stainless Steel
- C. Height: Rods available 3.5", 4.5", 5.5", 6.5" and 8"
- D. Birdwire: 325 ft, 975 ft, 1625 ft.

PART 3 EXECUTION

3.01 EXAMINATION/COORDINATION

- A. Verify conditions and measurements affecting the work of this Section at site.
- B. Correct detrimental conditions before proceeding with installation.
- C. Coordinate installation of the bird control system with the work of related trades.

3.02 INSTALLATION

- A. Attach the system where indicated, straight, securely attached to supports, all in accordance with its manufacturer's recommendations.

3.03 FIELD QUALITY CONTROL

- A. Visually inspect installed bird barrier system for loose wires, fasteners and cracked or broken base sections.
- B. Replace damaged components to the satisfaction of the Architect.

END OF SECTION

DIVISION 11

EQUIPMENT

This page intentionally left blank

SECTION 11 12 00
PARKING CONTROL EQUIPMENT

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Automatic barrier gates.
2. Vehicle detectors.
3. Traffic controllers.
4. Entry terminals.
5. Exit terminals.
6. Pay stations.
7. Fee computers.
8. Miscellaneous parking control equipment.
9. Parking facility management software.
10. Access control units.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for pipe bollards to protect parking control equipment.
2. Section 13 34 23.16 "Fabricated Control Booths" for cashiers'/parking attendants' booths.
3. Section 28 13 00 "Access Control Software and Database Management" for integrating parking control equipment with building access control.
4. Section 28 15 00 "Access Control Hardware Devices" for parking control equipment access devices.
5. Section 28 31 00 "Intrusion Detection" for integrating parking control equipment with the building intrusion detection system.

6. Section 28 31 21 "Area and Perimeter Intrusion Detection" for integrating parking control equipment with the site security control system.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.
 1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
 2. Verify that equipment operation is consistent with system description.
 3. Review sequence of operation for each type of parking control equipment.
 4. Review coordination of interlocked equipment specified in this Section and elsewhere.
 5. Review required testing, inspecting, and certifying procedures.
 6. <Insert requirement>.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for parking control equipment.
 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties.
- B. Shop Drawings: For parking control equipment.
 1. Include plans, elevations, sections and attachment details.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
 4. Vehicle Detectors: Layout and method of placement of vehicle loop detector system.
- C. Samples: For each exposed product and for each color and texture specified, 6 inches square in size.
- D. Samples for Initial Selection: For units with factory-applied finishes.
- E. Samples for Verification: For each type of exposed finish 6 inches square in size.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Field quality-control reports.

1.06 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For parking control equipment to include in emergency, operation, and maintenance manuals.
- B. Software and Firmware Operational Documentation:
 - 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On [USB media] [and] [approved online or cloud solution].
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.

1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Gate Arms: **[Two]** <Insert number> breakaway gate arms for each gate installed, complete with accessory components.

1.08 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 PRODUCTS

2.01 SYSTEM DESCRIPTION

- A. Parking Control System: For the following types of parking management:
 - 1. Transient Parking: Hourly rated parking, with fee paid while **[entering]** **[exiting]**.
 - 2. Monthly Parking: Monthly rated parking, with fee paid by the month and access gained by access control card.
 - 3. Flat-Rate Parking: Unlimited-duration parking, with free gate entry and fixed-fee amount paid while exiting.
 - 4. Flat-Rate or Hourly Parking: Fee paid at central pay station after parking.
 - 5. Special-Event Parking: Duration-of-event parking, with fee paid while entering with gates up or down.
 - 6. Limited Date and Time Parking: Limited-duration parking, with predetermined fee access control card.
 - 7. Merchant Validated Parking: Fee set, reduced, or waived by merchant validation, with free gate entry and fee paid while exiting.

8. Valet Parking: Assisted parking, with fee paid while entering or exiting.
 9. Hotel Guest Parking: Unlimited access for duration of stay, with access gained by access control card.
- B. Electrical Components and Devices: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.02 SOURCE LIMITATIONS

- A. Obtain **[parking control equipment]** <Insert equipment> from single source from single manufacturer.

2.03 AUTOMATIC BARRIER GATES <Insert drawing designation>

- A. General: Provide parking control device consisting of operator and controller housed in a weathertight, tamper-resistant cabinet enclosure with gate arm. Device shall be activated by a signal from access or revenue control device. Fabricate unit with gate-arm height in down position of not more than 35 inches above pavement.

1. Standards: Barrier gate operators that are listed and labeled according to UL 325 by a qualified testing agency.

- B. Controller: Factory-sealed, solid-state, plug-in type, with galvanized-steel box for wiring connections. **[Noncommunicating]** **[Communicating]** type.

1. Noncommunicating Type:

- a. Capable of logic for one- and two-way lanes.
- b. Separate momentary contacts for transient patrons, monthly patrons, vehicle entries, and vehicle exits.

2. Communicating Type:

- a. Real-time communication of lane counts, status messages, and execute commands.
- b. Monitor illegal entries and exits, tailgates, tickets, monthlies, and backouts.
- c. Status messages for gate up too long, backouts, ticket in chute, and gate-arm rebound.
- d. Communication commands for resetting loops, turning "Full" signs on/off, raising and lowering gate arm, and disabling **[ticket dispensers]** **[card readers]** **[barcode imagers]** **[license plate recognition]** **[automatic vehicle identification]**.

3. Physical Characteristics:

- a. On-off power supply switch.
- b. Automatic-manual switch.
- c. Differential counter.
- d. Communication port.

- e. Internal **[resettable]** **[non-resettable]** counters.
 - f. Thermal-overload protection with manual reset.
 - g. Plug-in connectors for **[two]** **[three]** vehicle loop detectors.
 - h. Thermostatically controlled heater with on/off/auto switch.
 - i. Thermostatically controlled fan with on/off/auto switch.
 - j. Switch to test motor and limit switches.
 - k. Emergency manual disconnect.
 - l. Battery backup.
 - m. **[Single]** **[Two]** **[Four]**, 115-V ac grounded power receptacle.
4. Operational Characteristics:
- a. Able to store successive inputs and sequentially processing each one.
 - b. Automatic instant-reversing obstacle detector mechanism that stops downward motion of gate arm if arm contacts or nears an object and that immediately returns arm to upward position. Include a zero- to 60-second, variable-time reset device.
 - c. Directional arming logic.
 - d. Broken gate-arm monitoring.
 - e. Programmable **[automatic]** timer.
 - f. Diagnostic mode for on-site testing **[, with LEDs for inputs and outputs]**.
 - g. Automatic and continuous testing of inputs and outputs.
 - h. Reversible arm capability for right- or left-handed operation.
- C. Cabinets: Fabricated from sheet metal with seams welded and ground smooth; approximately 15 inches square by 40 inches tall. Provide single, gasketed access door for each cabinet with flush-mounted locks. Furnish **[two]** **<Insert number>** keys for each lock **[, all locks keyed alike]**. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet.
- 1. Steel Sheet: Not less than 0.097-inch-thick **[, galvanized-]** steel sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard **[white]** **[yellow]** **<Insert color>** baked-enamel or powder-coat finish.
 - 2. Aluminum Sheet: Not less than 0.125-inch-thick, aluminum sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard **[white]** **[yellow]** **<Insert color>** baked-enamel or powder-coat finish.
 - 3. Stainless-Steel Sheet: Not less than 0.109-inch-thick, stainless-steel sheet.
 - a. Finish cabinet exterior with No. 4 finish.
- D. Straight Gate Arm: **[1-by-4-inch nominal-size pine or redwood]** **[0.097-inch-thick steel]** **[Fiberglass, PVC, or polycarbonate]** **[Aluminum]**.

1. Traffic-Side Face: [Reflective painted finish and black diagonal stripes] [Reflective painted finish and red diagonal stripes] [Reflective painted finish and black and yellow diagonal stripes] [Manufacturer's standard finish and striping].
 2. Length: [10 feet] [12 feet] [As indicated on Drawings] <Insert length>.
 3. Mounting Flange: Provide with breakaway feature to ensure a clean break if arm is struck by vehicle.
- E. Folding Gate Arm: Two pieces of 1-by-4-inch nominal-size pine or redwood joined together with metal side brackets.
1. Traffic-Side Face: [Reflective painted finish and black diagonal stripes] [Reflective painted finish and red diagonal stripes] [Reflective painted finish and black and yellow diagonal stripes] [Manufacturer's standard finish and striping].
 2. Length: [10 feet] [12 feet] [As indicated on Drawings] <Insert length>.
 3. Mounting Flange: Provide with breakaway feature to ensure a clean break if arm is struck by vehicle.
- F. Straight Gate Arm with Counterbalance: 1-by-6-inch nominal-size pine or redwood with steel counterweights.
1. Traffic-Side Face: [Reflective painted finish and black diagonal stripes] [Reflective painted finish and red diagonal stripes] [Reflective painted finish and black and yellow diagonal stripes] [Manufacturer's standard finish and striping].
 2. Length: [16 feet] [As indicated on Drawings] <Insert length>.
 3. Mounting Flange: Provide with breakaway feature to ensure a clean break if arm is struck by vehicle.
- G. Wishbone-Style Gate Arm: [1-by-4-inch nominal-size pine or redwood] [0.097-inch-thick steel] formed into wishbone configuration, with steel counterweights.
1. Traffic-Side Face: [Reflective painted finish and black diagonal stripes] [Reflective painted finish and red diagonal stripes] [Reflective painted finish and black and yellow diagonal stripes] [Manufacturer's standard finish and striping].
 2. Length: [14 feet] [As indicated on Drawings] <Insert length>.
 3. Mounting Flange: Provide with breakaway feature to ensure a clean break if arm is struck by vehicle.
- H. Operator: UL labeled and listed, [Class I] [Class II] [Class III] [Class IV]. [1/3] [1/2] hp; <Insert number>-V, 60-Hz, single-phase, instant-reversing, continuous-duty motor for operating gate arm. Transmit power to gate-arm drive shaft through the speed reducer to harmonic-acting crank and connecting rod. Fabricate crank, rod, and drive shaft of galvanized solid bar steel. Provide an operable cam for adjusting arm travel.
1. Opening Time: [Three] [Six] <Insert number> seconds.
 2. Inherently adjustable, torque limiting clutch for safety.

I. Characteristics:

1. Audible alarm that activates as part of a safety device system.
2. Additional obstruction detector; noncontact **[infrared] [photoelectric] [radio-frequency barrier]**.
3. Gate-arm warning safety signs on both sides of unit to limit traffic to vehicular traffic.
4. Low-voltage **[yellow] [red]** warning lights that illuminate when gate is in down position.
5. Low-voltage light on cabinet top that flashes or changes from red to green when barrier gate is operating.
6. LED integrated into gate-arm for increased visibility.
7. Manually operated crank for emergency operation.
8. Authorities having jurisdiction's emergency access by **<Insert type>**.
9. Gate-arm tip support **[with electromagnetic lock]**.
10. Gate-arm skirt bottom **[and top]**.

2.04 VEHICLE DETECTORS <Insert drawing designation>

- A. General: Provide detection devices that sense presence or transit of vehicles and emit signals activating gate-arm operators.
- B. Vehicle Loop Detector System: Self-tuning electronic presence detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light. Include automatic closing timer with adjustable time delay before closing **[, timer cut-off switch,]** designed to hold gate arm open until traffic clears. Provide number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement at location indicated on Drawings, as recommended in writing by detection system manufacturer for **[pave-over] [saw-cut]** installation.
 1. Field-Assembled Loop: Wire, in size indicated for field assembly.
 2. Factory-Formed Loop: Wire, preformed in size indicated.
 3. Operation:
 - a. Recognize vehicles within 6 inches of each other on standard-sized loop.
 - b. Recognize vehicle direction by detecting vehicle moving from one loop to another.
 - c. Generate reverse count if vehicle backs up after generating directional count in forward direction.
 - d. Continuous diagnostic monitoring **[and memory]**for intermittently operating and failed loops.
 - e. Crosstalk test between adjacent loops.

- C. Active Infrared Vehicle Detector: **[Retroreflective] [Emitter/receiver]**-type presence detector with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of vehicle in gate-arm pathway by interrupting infrared beam in zone pattern and to emit signal activating gate-arm operator. Include automatic closing timer with adjustable time delay before closing **[, timer cut-off switch,]** and vehicle presence detector designed to hold gate arm open until traffic clears.

2.05 TRAFFIC CONTROLLERS <Insert drawing designation>

- A. General: Provide directional enforcement system that allows passage of vehicle in only one direction.
- B. Penetrating Type: System consisting of multiple raised teeth that allow vehicular traffic in one direction and that puncture tires of vehicular traffic in the other direction. Fabricate system from steel plate contained in welded steel frame.
1. Mounting: **[Surface] [Recessed]**.
 2. Operation: **[Manual, with each tooth controlled by torsion spring] [Electromechanical] [Hydraulic]**.
 3. Latch Down: Allow disarming for two-way traffic flow. Furnish **[one] <Insert number>** tool(s) for latch-down operation.
 4. Illuminated Warning Signs: **[Single] [Double]**-faced warning signs consisting of LED lamps **[with photo cell control]** and keyed on/off override switches, contained in welded steel bodies with baked-enamel or powder-coat finish and fiberglass sign faces **[, with flood lamp]**.
 - a. Post Mounting: Provide **[in-ground] [surface-mounted]** base sleeves and posts.
 - b. Sign Copy: **["Wrong Way, Stop, Severe Tire Damage."] ["Warning, Do Not Back Up, Tire Damage."]** <Insert message.>
 5. Speed Bumps: **[Composite plastic] [Compression molded rubber compound]** for speed reduction to 5 mph or less.
- C. Nonpenetrating Type: System consisting of steel curb that allows traffic in only one direction. Fabricate system from steel plate contained in welded steel frame.

1. Mounting: **[Surface] [Recessed]**.
2. Operation: **[Manual] [Electromechanical] [Hydraulic]**.

2.06 ENTRY TERMINALS <Insert drawing designation>

- A. General: Provide entry terminals with mechanisms, components, and controllers housed in cabinet enclosures.
- B. Physical Characteristics:
1. Digital display, touchscreen, or LCD.

2. Time and date display.
3. Time Indicator: 24-hour cycle with **[A.M. and P.M.] [military-time]** clock mechanism.
4. Voice annunciation.
5. Tickets: **[Standard paper] [Magnetic stripe] [Barcode]**.
6. Removable ticket tray with capacity of **[5000] <Insert number>** fan-folded tickets.
7. Battery backup for clock and RAM memory.
8. Communication port.
9. Thermostatically controlled heater with on/off/auto switch.
10. Thermostatically controlled fan with on/off/auto switch.
11. Ticket printing and dispensing mechanism.
12. Credit card activation slot, credit card reader **[with smart card reader]**, and "Insert Ticket/Card" message.
13. Access card reader.
14. Multiple ticket option for valet parking.
15. Intercom.
16. Pinhole camera.
17. Barcode imager scanner.
18. Proximity access reader.
19. Automatic vehicle identification reader.
20. License plate recognition.

C. Operational Characteristics:

1. Operation: **[Standalone] [Online communication to remote computer]**.
2. Activation by **[button with "Push for Ticket" message] [vehicle detector] [credit card in/out] [license plate recognition] [automatic vehicle identification] [proximity] [scanned electronic or hardcopy media] [access card] <Insert device>**.
 - a. On activation by button, unit automatically records entry time **[, license plate,]** and date on ticket, **[sounds buzzer,]** dispenses ticket, and raises barrier gate.
 - b. On activation by means other than button, credentials are recorded and signal is automatically sent to raise barrier gate.
3. Credit card pay on entry.

4. Automatic ticket validation.
 5. Programmable ticket numbering.
 6. Programmable facility code.
 7. Programmable display.
 8. Programmable timer for closing barrier gate.
 9. Built-in-service diagnostics.
 10. Low-ticket alarm.
 11. Out-of-ticket alarm.
 12. Ticket jam detection.
 13. Test ticket printing.
 14. Back-out ticket function.
 15. Cancel transaction function.
- D. Cabinets: Fabricated from sheet metal with seams welded and ground smooth, approximately 15 inches square by 40 inches tall; consisting of base and top components. Provide single, gasketed access door for each base component with flush-mounted locks. Furnish **[two]** **<Insert number>** keys for each lock **[, all locks keyed alike]**. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet. Fabricate top component so it can be unlocked and opened for ticket loading and maintenance. Include flush-mounted lock in rear of top, keyed the same as base component lock.
1. Steel Sheet: Not less than 0.097-inch-thick **[, galvanized-]** steel sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard **[white]** **[yellow]** **<Insert color>** baked-enamel or powder-coat finish.
 2. Aluminum Sheet: Not less than 0.125-inch-thick, aluminum sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard **[white]** **[yellow]** **<Insert color>** baked-enamel or powder-coat finish.
 3. Stainless-Steel Sheet: Not less than 0.109-inch-thick, stainless-steel sheet.
 - a. Finish cabinet exterior with No. 4 finish.
- E. Ticket-Dispensing Mechanisms: Removable assembly, with **[self-sharpening ticket cutter]** **[or]** **[ticket burster]** and plug-in controller.
- 2.07 EXIT TERMINALS **<Insert drawing designation>**
- A. General: Provide exit terminals with controllers and components housed in cabinet enclosures.
 - B. Physical Characteristics:

1. Digital display, touchscreen, or LCD.
2. Time and date display.
3. Voice annunciation.
4. Battery backup for clock and RAM memory.
5. Communication port.
6. Thermostatically controlled heater with on/off/auto switch.
7. Thermostatically controlled fan with on/off/auto switch.
8. Credit card activation slot, credit card reader [**with smart card reader**], and "Insert Ticket/Card" message.
9. Access card reader.
10. Ticket reader.
11. Receipt printer.
12. Intercom.
13. Pinhole camera.
14. Barcode imager scanner.
15. Proximity access reader.
16. Automatic vehicle identification reader.
17. License plate recognition.

C. Operational Characteristics:

1. [Standalone] [Online communication to remote computer].
2. Activation by [ticket insertion] [vehicle detector] [credit card in/out] [license plate recognition] [automatic vehicle identification] [proximity] [scanned electronic or hardcopy media] [access card] <Insert device>.
3. Activation results in the following:
 - a. Valid Prepaid Exit: Signal is automatically sent to raise barrier gate.
 - b. Pay at Exit: Parking fee is calculated and displayed for payment.
 - c. Invalid Exit: Activation is rejected and "Pay Cashier First" or "Return to Cashier" message is displayed.
4. Programmable lost ticket function.
5. Display fee.

6. Accept payment by [credit card] [debit card] [smart card] [prepaid value card] [scanned media] [and] [merchant ticket].
 7. Accept discounted coupons.
 8. Print receipts on demand.
 9. Programmable facility code.
 10. Programmable grace period.
 11. Programmable display.
 12. Programmable timer for closing barrier gate.
 13. Reports for events and exception events.
 14. Programmable merchant validations.
 15. Built-in service diagnostics.
 16. Cancel transaction function.
- D. Cabinets: Fabricated from sheet metal with seams welded and ground smooth; approximately 15 inches square by 40 inches tall. Provide single, gasketed access door for each cabinet with flush-mounted locks. Furnish **[two]** <Insert number> keys for each lock **[, all locks keyed alike]**. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet.
1. Steel Sheet: Not less than 0.097-inch-thick **[, galvanized-]** steel sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard **[white]** **[yellow]** <Insert color> baked-enamel or powder-coat finish.
 2. Aluminum Sheet: Not less than 0.125-inch-thick, aluminum sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard **[white]** **[yellow]** <Insert color> baked-enamel or powder-coat finish.
 3. Stainless-Steel Sheet: Not less than 0.109-inch-thick, stainless-steel sheet.
 - a. Finish cabinet exterior with No. 4 finish.
- 2.08 PAY STATIONS <Insert drawing designation>
- A. General: Provide self-contained, cashiering **[central]** **[entry]** **[exit]** pay stations designed for self-service operation; with mechanisms, components, **[controllers,]** and fee computers housed in a combined enclosure.
 - B. Physical Characteristics:
 1. Digital display, touchscreen, or LCD.
 2. Time and date display.

3. Voice annunciation.
4. Battery backup for clock and RAM memory.
5. Thermostatically controlled heater with on/off/auto switch.
6. Thermostatically controlled fan with on/off/auto switch.
7. Ticket printing and dispensing mechanism.
8. Credit card activation slot, credit card reader [**with smart card reader**], and "Insert Ticket/Card" message.
9. Bill acceptor.
10. Access card reader.
11. Ticket reader.
12. Printer.
13. Intercom.
14. Pinhole camera.
15. Barcode imager scanner.
16. Proximity access reader.
17. Automatic vehicle identification reader.
18. License plate recognition.

C. Operational Characteristics:

1. [Standalone] [Online communication to remote computer].
2. Activation by [ticket insertion] [vehicle detector] [credit card in/out] [license plate recognition] [automatic vehicle identification] [proximity] [scanned electronic or hardcopy media] [access card] <Insert device>.
3. Activation results in the following:
 - a. Valid Prepayment: Signal is automatically sent to raise barrier gate.
 - b. Payment Prompt: Parking fee is calculated and displayed for payment.
4. Compute multiple parking fees based on recorded entry times.
5. Compute multiple taxes by percentage and fixed amount.
6. Programmable lost ticket function.
7. Display fee.

8. Accept payment by cash and [credit card] [debit card] [scanned media] [smart card] [prepaid value card] [and] [merchant ticket].
 9. Accept discounted coupons.
 10. Compute change.
 11. Print receipts on demand.
 12. Print validation on ticket.
 13. Print audit trail.
 14. Programmable for up to [six] <Insert number> fee structures.
 15. Test mode to verify accuracy of fee structure program.
 16. Programmable time.
 17. Programmable facility code.
 18. Programmable grace period.
 19. Programmable display.
 20. Programmable timer for closing barrier gate.
 21. Programmable merchant validations.
 22. Built-in service diagnostics.
 23. Print cash audit, revenue, operational, and statistical reports on demand.
 24. Duress alarm output for emergencies.
 25. Cancel transaction function.
- D. Cabinets: Fabricated from cold-rolled steel sheet with seams welded and ground smooth, approximately 36 inches wide by 18 inches deep by 60 inches tall. Provide single, gasketed access door with flush-mounted locks. Furnish [two] <Insert number> keys for each lock [, all locks keyed alike]. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet.
1. Finish cabinet, interior and exterior, with manufacturer's standard [white] [yellow] <Insert color> baked-enamel or powder-coat finish.
- 2.09 FEE COMPUTERS <Insert drawing designation>
- A. General: Provide modular [PC-based] system. Register permanent record of each transaction in computer's memory.
 - B. Physical Characteristics:
 1. Touchscreen display.

2. Battery backup for clock and RAM memory.
3. Communication port.
4. [Cash drawer] [Two cash drawers].
5. Standard ticket reader.
6. Magnetic stripe ticket reader.
7. Barcode ticket reader.
8. Credit card reader [with smart card reader].
9. Access card reader.
10. Proximity access reader.
11. Automatic Vehicle Identification reader.
12. License plate recognition.
13. [Keyed] [Keyless-membrane] keypad.
14. Detachable printer.

C. Operational Characteristics:

1. Compute multiple parking fees based on entry times on ticket from ticket dispenser.
2. Compute multiple taxes by percentage and fixed amount.
3. Programmable lost ticket function.
4. Display fee on remote fee display device.
5. Credit card in/out.
6. Accept payment by cash and [credit card] [debit card] [smart card] [prepaid value card] [and] [merchant ticket].
7. Accept discounted coupons.
8. Control independent cash drawer.
9. Compute change.
10. Print receipts.
11. Print validation on ticket.
12. Print audit trail.
13. Reload value cards.

14. Interface to automatic barrier gate.
 15. Programmable with up to **[six]** <Insert number> fee structures.
 16. Programmable time.
 17. Programmable keys.
 18. Programmable for special events validations.
 19. Programmable for automatic activation for limited date and time validations.
 20. Programmable merchant validations.
 21. Programmable valet parking.
 22. Programmable hotel guest parking.
 23. Three levels of security including cashier, supervisor, and master.
 24. Recall last transaction.
 25. Test mode to verify accuracy of fee structure program.
 26. Built-in service diagnostics.
 27. View cash audit, revenue, operational, and statistical reports on screen or print on demand.
 28. Duress alarm output for emergencies.
- D. Cash Drawer: Fabricated with a removable tray and drawer, with five compartments for paper currency and five compartments for coins.
- E. Remote Fee Display: Single-faced signs designed for use with fee computer, consisting of 1-inch-tall, digital displays or LCDs contained in welded steel bodies with baked-enamel or powder-coat finish.
1. Messages: Amount due, "Thank You," "Closed," and time in A.M./P.M. format.
 2. Mounting: **[Front of cashier's booth]** **[42-inch-high pedestal]**.
- 2.010 MISCELLANEOUS PARKING CONTROL EQUIPMENT
- A. "Lot Full" Signs <Insert drawing designation>: Single-faced signs consisting of illumination source contained in welded steel bodies with extended hood and baked-enamel finish. Sign copy shall be **[4]** <Insert dimension> inches tall.
1. Type: **[Flashing]** **[Nonflashing]**.
 2. Operation: **[Manual by push button]** **[Automatic by barrier gate controller]**.
 3. Illumination: **[Traffic signal lamps and colored]** **[LED bulb and clear]** acrylic sign face.

4. Mounting: [Top of barrier gate cabinet] [42-inch-high pedestal].

2.011 PARKING FACILITY MANAGEMENT SOFTWARE

- A. General: Manufacturer's standard software that is compatible with security-access control system and that provides automatic facility monitoring, supervision, and remote control of parking control equipment from one or more locations.
- B. Operation:
 1. Collect data for revenue and activity reporting.
 2. Collect data for access and space control.
 3. Notification services.
 4. On-line prepaid parking.
 5. Event management.
 6. Validation solutions.
 7. License plate recognition systems.
 8. Pay-by-phone.
 9. Loyalty programs.
 10. Track tickets.
 11. Programmable parking control equipment.

2.012 ACCESS CONTROL UNITS <Insert drawing designation>

- A. General: Provide access control unit that activates barrier gates.
- B. Unit Housing: Fabricate from [welded cold-rolled steel or aluminum sheet] [plastic] with weatherproof front access panel equipped with flush-mounted lock and [two] <Insert number> keys. Provide face-lighted unit fully visible at night.
 1. Steel Finish: Manufacturer's standard baked-enamel or powder-coat finish system.
- C. Card Reader Controlled Unit: Functions only when authorized card is presented.
 1. System: [Magnetically coded, single-code system activated by coded card] [Programmable, multiple-code capability permitting validation or voiding of individual cards].
 - a. Permit four different access time periods.
 2. Reader Type: [Swipe] [Insertion] [Proximity].
 - a. Swipe reader for [magnetic-stripe] [barcode] [Wiegand] cards.

- b. Insertion reader for **[magnetic-stripe] [barcode] [Wiegand]** cards.
 - c. Proximity reader for proximity cards.
3. Operation: **[Standalone] [Online communication to remote parking control system computer] [Online communication to remote security-access control system computer]**.
 4. Characteristics: **[Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing barrier gate activity] [Digital display or LCD] [Programmable by PDA (personal digital assistant) by infrared interface] <Insert feature>**.
 5. Mounting: **[With pedestal] [Wall] [In enclosed cabinet] [As indicated on Drawings] <Insert mounting>**.
 6. Cards: Provide **<Insert number>**.
 - a. Imprint cards with **<Insert special printing requirements such as company logo or emblem>**.
- D. Digital Keypad Controlled Unit: Functions only when authorized code is entered on **[keyed] [keyless-membrane]** keypad.
1. System: **[Multiple-code capability] [Programmable, multiple-code capability]**.
 - a. Multiple-code capability of no fewer than **[five] [100] [500] <Insert number>** possible individual codes.
 - b. Programmable, multiple-code capability permitting validation or voiding of no fewer than **[100] [2500] [10,000] <Insert number>** possible individual codes, consisting of **[one to six] <Insert number>** digits **[, and permitting four different access time periods]**.
 2. Operation: **[Standalone] [Online communication to remote parking control system computer] [Online communication to remote security-access control system computer]**.
 3. Characteristics: **[Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing barrier gate activity] <Insert feature>**.
 4. Mounting: **[With pedestal] [Wall] [As indicated on Drawings] <Insert mounting>**.
- E. Radio-Controlled System: Digital access control system consisting of code-compatible universal coaxial receiver **[, one per barrier gate] [, where indicated on Drawings]**, remote antenna with coaxial cable and mounting brackets, and **[one permanently mounted] [four portable] <Insert number and use condition>** transmitter(s) per receiver designed to operate barrier gates. Provide programmable transmitter with multiple-code capability permitting validation or voiding of no fewer than **[1000] [10,000] <Insert number>** codes per channel configured for the following functions:
1. Transmitters: **[Single-button] [Triple-button]** operated.
 - a. Single-button operated with **[open] [open and close]** functions.
 - b. Triple-button operated with open, close, and stop functions.

- 1) Provide transmitters featuring **[two] [three] [four] <Insert number>** independent channel settings controlling separate receivers for operating more than one barrier gate from each transmitter.

2.013 ANCHORAGES

- A. Anchor Bolts: **[Galvanized] [Stainless steel]**.
 1. Hot-dip galvanized according to ASTM A153/A153M and ASTM F2329/F2329M.
 2. Stainless steel, **[Type 304] [Type 316] [Type 304 or 316 as indicated] <Insert type>**.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, including equipment bases; accurate placement, pattern, and orientation of anchor bolts; critical dimensions; and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical and communication systems to verify actual locations of connections before parking control equipment installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Excavation for Traffic Controllers: Saw cut existing pavement for recessed traffic controllers and hand-excavate recesses to dimensions and depths and at locations as required by traffic controller manufacturer's written instructions and as indicated on Drawings.

3.03 INSTALLATION, GENERAL

- A. Install parking control equipment as required for complete and integrated installation.
 1. Rough-in electrical connections.

3.04 INSTALLATION OF AUTOMATIC BARRIER GATES

- A. Anchor cabinets to concrete bases with anchor bolts or expansion anchors, and mount barrier gate arms.
 1. Install barrier gates according to UL 325.

3.05 INSTALLATION OF VEHICLE DETECTORS

- A. **[Cut grooves in pavement and bury] [Bury]** and seal wire loop at locations indicated on Drawings according to manufacturer's written instructions. Connect to parking control equipment operated by detector.

3.06 INSTALLATION OF TRAFFIC CONTROLLERS

- A. Anchor controllers to **[recessed concrete bases] [driveway surfaces]** with anchor bolts or expansion anchors.

3.07 INSTALLATION OF ENTRY TERMINALS

- A. Attach cabinets to concrete bases with anchor bolts or expansion anchors.
 - 1. Connect equipment to remote computer.
 - 2. Load ticket dispenser with supply of tickets.

3.08 INSTALLATION OF EXIT TERMINALS

- A. Attach cabinets to concrete bases with anchor bolts or expansion anchors.
 - 1. Connect equipment to remote computer.
 - 2. Load ticket dispenser with supply of tickets.

3.09 INSTALLATION OF PAY STATIONS

- A. Attach cabinets to concrete bases with anchor bolts or expansion anchors.
 - 1. Connect equipment to remote computer.
 - 2. Load ticket dispenser with supply of tickets.

3.010 INSTALLATION OF FEE COMPUTERS

- A. Install computers at locations indicated, including connecting to peripheral equipment **[and remote computers]**.

3.011 INSTALLATION OF CARD READER PEDESTALS

- A. **[Pad] [In-ground]** mount with mounting bolts.

3.012 INSTALLATION OF ELECTRICAL

- A. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

3.013 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

- C. Perform the following tests and inspections [with the assistance of a factory-authorized service representative]:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Parking control equipment will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.014 ADJUSTING

- A. Adjust parking control equipment to function smoothly, and lubricate as recommended by manufacturer.
- B. Confirm that locks engage accurately and securely without forcing or binding.
- C. After completing installation of exposed, factory-finished parking control equipment, inspect exposed finishes and repair damaged finishes.

3.015 PROTECTION

- A. Remove barrier gate arms during the construction period to prevent damage, and install them immediately before Substantial Completion.

3.016 MAINTENANCE SERVICE

- A. Maintenance Service Description: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of parking control equipment installer] [manufacturer's authorized service representative]**. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper parking control equipment operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.017 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for **[two] <Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least **[30] <Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.018 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain parking control equipment.

3.019 PARKING CONTROL EQUIPMENT SCHEDULE

- A. Provide parking control equipment for each lane as follows:
 - 1. Lane <Insert designation>: <Insert list of equipment>.

END OF SECTION

SECTION 11 30 13
RESIDENTIAL APPLIANCES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Cooking appliances.
2. Kitchen exhaust ventilation.
3. Refrigeration appliances.
4. Cleaning appliances.
5. Trash compactors.

B. Related Requirements:

1. Section 22 41 00 "Residential Plumbing Fixtures" for kitchen sinks, dishwasher air-gap fittings, waste (garbage) disposers, and instant hot-water dispensers.

1.02 ALLOWANCES

- A. Furnish residential appliances as part of residential appliance allowance.
- B. Furnish <Insert item and drawing designation> as part of [residential appliance] <Insert allowance designation> allowance.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] <Insert location>.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Cooking appliances.
2. Kitchen exhaust ventilation.
3. Refrigeration appliances.
4. Cleaning appliances.
5. Trash compactors.

B. Product Data Submittals: For each product.

1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

- C. Samples: For each exposed product and for each color and texture specified, in **[manufacturer's standard]** <Insert dimensions> size.
- D. Product Schedule: For appliances.[Use same designations indicated on Drawings.]

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer.
- B. Product Certificates: For each type of appliance.
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturers' special warranties.

1.06 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.07 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintains, within <Insert miles> of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
- B. Gas-Fuel Conversion: Provide gas-fueled appliances with manufacturer's **[high-altitude]** **[and]** **[propane]** conversion kit installed by a qualified service agency according to manufacturer's written instructions for Project location and type of fuel.

1.08 WARRANTY

- A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period[.][**except as qualified below:**]
 - 1. Warranty Period: **[Two]** **[Five]** <Insert number> years from date of Substantial Completion.
- B. Electric Cooktop and Range: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] <Insert description> for on-site service on surface-burner elements.
 - 1. Warranty Period: **[Two]** **[Five]** <Insert number> years from date of Substantial Completion.
- C. Microwave Oven: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] for on-site service [on the magnetron tube] <Insert requirement>.
 - 1. Warranty Period: **[Two]** **[Five]** <Insert number> years from date of Substantial Completion.

- D. Refrigerator/Freezer, Freezer, and Icemaker, Sealed System: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] for on-site service on the product.
1. Warranty Period for [**Sealed Refrigeration System**] <Insert item>: [**Two**] [**Five**] <Insert number> years from date of Substantial Completion.
 2. Warranty Period [**for Other Components**] <Insert requirement>: [**Two**] <Insert number> years from date of Substantial Completion.
- E. Dishwasher: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] for on-site service on the product.
1. Warranty Period for [**Deterioration of Tub and Metal Door Liner**] <Insert requirement>: [**Three**] [**Five**] [**10**] <Insert number> years from date of Substantial Completion.
 2. Warranty Period [**for Other Components**] <Insert requirement>: [**Two**] <Insert number> years from date of Substantial Completion.
- F. Clothes Washer: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] <Insert description> for on-site service on the product.
1. Warranty Period: [**Two**] [**Three**] <Insert number> years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. See current college Campus Specification Matrix for preferred manufacturers.

2.02 SOURCE LIMITATIONS

- A. Obtain [residential appliances from single source] [and] [each type of residential appliance from single manufacturer].
- B. All appliances must be consistent in finish.

2.03 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Gas-Fueled Appliances: Certified by a qualified testing agency for each type of gas-fueled appliance according to ANSI Z21 Series standards.
- C. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in [**the DOJ's 2010 ADA Standards for Accessible Design**] [**the ABA standards of the Federal agency having jurisdiction**] [and] [**ICC A117.1**] <Insert requirement>.

2.04 COOKING APPLIANCES

- A. Electric Cooktop <Insert drawing designation>:
1. Width: [**12 inches**] [**30 inches**] [**36 inches**] <Insert dimension>.
 2. Electric Burner Elements: [**Two**] [**Four**] [**Six**] <Insert number>.
 - a. Coil Type: [Manufacturer's standard] [Two 1200 W and two 2200 W] [One 1200 W, one 2200-W dual element, and two 2200 W] <Insert burner combination and power ratings>.
 - b. Radiant Type: [Two 1500 W and two 2000 W] [One 1200-W element, dual 1500-W/1500-W bridge element, and one 1200-W/2500-W expandable element] <Insert burner combination and power ratings>.
 - c. Induction Type: [Manufacturer's standard] [Two 1200 W and two 1800 W] [One 1200 W, one 1800 W, one 2700 W, and one 3300 W] <Insert burner combination and power ratings>.
 3. Controls: Digital panel controls, located [**on front**] [**on left side**] [**on right side**] [**remotely, where indicated**].
 4. Downdraft Ventilation: [**Manufacturer's standard**] [**550 cfm**] <Insert capacity> built-in downdraft ventilation, with [**remote**] blower and exterior weatherproof wall cap.
 5. Other Features: [**Grill**] [**deep fryer**] [**wok burner**] [**and**] [**wok ring**] <Insert feature>.
 6. Electric Power Supply: [**240 V, 60 Hz, 1 phase, 30 A**] [**As indicated on Drawings**] <Insert requirement>.
 7. Top Material: [**Manufacturer's standard**] [**Ceramic glass**] [**Porcelain-enameled steel**] [**Stainless steel**] <Insert material>.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.
- B. Gas Cooktop <Insert drawing designation>:
1. Width: [**12 inches**] [**30 inches**] [**36 inches**] <Insert dimension>.
 2. Gas Burners: [**Two**] [**Four**] [**Six**] <Insert number>.
 - a. Power Ratings: [Manufacturer's standard] [One **5000 Btu/h**, two **9100 Btu/h**, and one **12,000 Btu/h**] <Insert burner combination and power ratings>.
 - b. Grates: [Individual] [Continuous] <Insert description>.
 3. Controls: [**Digital panel**] [**Manual-dial**] controls, located on [**front**] [**left side**] [**right side**].
 4. Downdraft Ventilation: [**Manufacturer's standard**] [**550 cfm**] <Insert capacity> built-in downdraft ventilation, with [**remote**] blower and exterior weatherproof wall cap.
 5. Other Features: [**Sealed burners**] [**auto-reigniting burners**] [**grill**] [**deep fryer**] [**wok burner**] [**and**] [**wok ring**] <Insert feature>.
 6. Electric Power Supply: [**120 V, 60 Hz, 1 phase, 30 A**] [**As indicated on Drawings**] <Insert requirement>.
 7. Top Material: [**Manufacturer's standard**] [**Ceramic glass**] [**Porcelain-enameled steel**] [**Stainless steel**] <Insert material>.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.

- C. Electric Range <Insert drawing designation>: [**Freestanding**] [**Slide-in**] [**Drop-in**] range with [**one**] [**two**] oven(s) and complying with AHAM ER-1.
1. Width: [**30 inches**] [**36 inches**] <Insert dimension>.
 2. Electric Burner Elements: [**Four**] [**Six**] <Insert number>.
 - a. Coil Type: [Manufacturer's standard] [Two 1200 W and two 2200 W] [One 1200 W, one 2200-W dual element, and two 2200 W] <Insert burner combination and power ratings>.
 - b. Radiant Type: [Two 1500 W and two 2000 W] [One 1200-W element, dual 1500-W/1500-W bridge element, and one 1200-W/2500-W expandable element] <Insert burner combination and power ratings>.
 - c. Induction Type: [Manufacturer's standard] [Two 1200 W and two 1800 W] [One 1200 W, one 1800 W, one 2700 W, and one 3300 W] <Insert burner combination and power ratings>.
 - d. Controls: Digital panel controls, located on [**front**] [**left side**] [**right side**] [**splash panel at rear of rangetop**].
 - e. <Insert feature>.
 3. Oven Features:
 - a. Capacity: [**3.3 cu. ft.**] [and] <Insert capacity for each oven>.
 - b. Operation: [Baking] [convection] [and] [pyrolytic self-cleaning or catalytic continuous cleaning] <Insert requirement>.
 - c. Broiler: Located in [top of oven] [separate roll-out drawer on bottom].
 - d. Oven Door(s): Counterbalanced, removable, with [**observation window**] [and] [**full-width**] <Insert type of handle> handle.
 - e. Electric Power Rating:
 - 1) Oven(s): [Manufacturer's standard] [2400 W] [and] <Insert power rating for each oven>.
 - 2) Broiler: [Manufacturer's standard] [3500 W] <Insert power rating>.
 - f. Controls: Digital panel controls and timer display, located on [**front**] [**left side**] [**right side**] [**splash panel at rear of rangetop**].
 - g. <Insert feature>.
 4. Anti-Tip Device: Manufacturer's standard.
 5. Electric Power Supply: [**240 V, 60 Hz, 1 phase, 30 A**] [**As indicated on Drawings**] <Insert requirement>.
 6. Material: [**Porcelain-enameled**] [**Stainless**] steel with [manufacturer's standard] [**ceramic-glass**] <Insert material> cooktop.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.

- D. Gas Range <Insert drawing designation>: [Freestanding] [Slide-in] range with [one] [two] oven(s).
1. Width: [**30 inches**] [**36 inches**] <Insert dimension>.
 2. Gas Burners: [**Four**] [**Six**] <Insert number>.
 - a. Power Ratings: [Manufacturer's standard] [One **5000 Btu/h**, two **9100 Btu/h**, and one **12,000 Btu/h**] <Insert burner combination and power ratings>.
 - b. Controls: [Digital panel] [Manual-dial] controls, located on [front] [left side] [right side] [splash panel at rear of rangetop].
 - c. Grates: [Individual] [Continuous] <Insert description>.
 - d. Other Feature(s): [Sealed burners] [auto-reigniting burners] [and] [grill] <Insert feature>.
 3. Oven Features:
 - a. Capacity: [**3.3 cu. ft.**] [and] <Insert capacity for each oven>.
 - b. Operation: [Baking] [convection] [and] [pyrolytic self-cleaning or catalytic continuous cleaning] <Insert requirement>.
 - c. Broiler: Located in [top of oven] [separate roll-out drawer on bottom].
 - d. Oven Door(s): Counterbalanced, removable, with [**observation window**] [and] [**full-width**] <Insert type of handle> handle.
 - e. Gas Power Ratings:
 - 1) Oven(s): [Manufacturer's standard] [**9100 Btu/h**] [and] <Insert power rating for each oven>.
 - 2) Broiler: [Manufacturer's standard] [**14,500 Btu/h**] <Insert power rating>.
 - f. Controls: [Digital panel] [Manual-dial] controls and timer display, located on [front] [left side] [right side] [splash panel at rear of rangetop].
 - g. <Insert feature>.
 4. Anti-Tip Device: Manufacturer's standard.
 5. Electric Power Supply: [**120 V, 60 Hz, 1 phase, 15 A**] [**As indicated on Drawings**] <Insert requirement>.
 6. Material: [**Porcelain-enameled**] [**Stainless**] steel with [manufacturer's standard] [**ceramic-glass**] <Insert material> cooktop.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.
- E. Dual Fuel Range <Insert drawing designation>: [**Freestanding**] [**Slide-in**] range with gas burners and [**one**] [**two**] electric oven(s).
1. Width: [**30 inches**] [**36 inches**] <Insert dimension>.
 2. Gas Burners: [**Four**] [**Six**] <Insert number>.

- a. Power Ratings: [Manufacturer's standard] [One **5000 Btu/h**, two **9100 Btu/h**, and one **12,000 Btu/h**] <Insert burner combination and power ratings>.
 - b. Controls: [Digital panel] [Manual-dial] controls, located on [front] [left side] [right side] [splash panel at rear of rangetop].
 - c. Grates: [Individual] [Continuous] <Insert description>.
 - d. <Insert feature>.
3. Oven Features:
- a. Capacity: [**3.3 cu. ft.**] [and] <Insert capacity for each oven>.
 - b. Operation: [Baking] [convection] [and] [pyrolytic self-cleaning or catalytic continuous cleaning] <Insert requirement>.
 - c. Broiler: Located in [top of oven] [separate roll-out drawer on bottom].
 - d. Oven Door(s): Counterbalanced, removable, with [**observation window**] [and] [**full-width**] <Insert type of handle> handle.
 - e. Electric Power Rating:
 - 1) Oven(s): [Manufacturer's standard] [2400 W] [and] <Insert power rating for each oven>.
 - 2) Broiler: [Manufacturer's standard] [3500 W] <Insert power rating>.
 - f. Controls: [Digital panel] [Manual-dial] controls and timer display, located on [front] [left side] [right side] [splash panel at rear of rangetop].
 - g. <Insert feature>.
4. Anti-Tip Device: Manufacturer's standard.
5. Electric Power Supply: [**240 V, 60 Hz, 1 phase, 30 A**] [As indicated on Drawings] <Insert requirement>.
6. Material: [**Porcelain-enameled**] [**Stainless**] steel with [manufacturer's standard] [**ceramic-glass**] <Insert material> cooktop.
- a. Color/Finish: [White] [Black] <Insert color or finish>.
- F. Electric Wall Oven <Insert drawing designation>: [**One**] [**Two**]-oven unit.
1. Mounting: Built-in [**wall**] [**undercounter**] <Insert requirement>.
 2. Capacity: [**3.3 cu. ft.**] [and] <Insert capacity for each oven>.
 3. Operation: [**Baking**] [convection] [and] [**pyrolytic self-cleaning or catalytic continuous cleaning**] <Insert requirement>.
 4. Broiler: Located in [**top of oven**] [**separate roll-out drawer on bottom**] <Insert requirement>.

5. Oven Door(s): Counterbalanced, removable, with **[observation window] [and] [full-width] <Insert type of handle>** handle.
 6. Electric Power Rating:
 - a. Oven(s): [Manufacturer's standard] [2400 W] [and] <Insert power rating for each oven>.
 - b. Broiler: [Manufacturer's standard] [3500 W] <Insert power rating>.
 7. Electric Power Supply: **[240 V, 60 Hz, 1 phase, 30 A] [As indicated on Drawings] <Insert requirement>**.
 8. Controls: **[Digital panel] [Manual-dial]** controls and timer display.
 9. **<Insert feature>**.
 10. Material: **[Porcelain-enameled steel] [Stainless steel] [Manufacturer's standard] <Insert material>**.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.
- G. Gas Wall Oven **<Insert drawing designation>**: **[One] [Two]**-oven unit.
 1. Mounting: Built-in **[wall] [undercounter] <Insert requirement>**.
 2. Capacity: **[3.3 cu. ft.] [and] <Insert capacity for each oven>**.
 3. Operation: **[Baking] [convection] [and] [pyrolytic self-cleaning or catalytic continuous cleaning] <Insert requirement>**.
 4. Broiler: Located in **[top of oven] [separate roll-out drawer on bottom] <Insert requirement>**.
 5. Oven Door(s): Counterbalanced, removable, with **[observation window] [and] [full-width] <Insert type of handle>** handle.
 6. Gas Power Ratings:
 - a. Oven(s): [Manufacturer's standard] **[9100 Btu/h]** [and] <Insert power rating for each oven>.
 - b. Broiler: [Manufacturer's standard] **[14,500 Btu/h]** <Insert power rating>.
 7. Electric Power Supply: **[120 V, 60 Hz, 1 phase, 30 A] [As indicated on Drawings] <Insert requirement>**.
 8. Controls: **[Digital panel] [Manual-dial]** controls and timer display
 9. **<Insert feature>**.
 10. Material: **[Porcelain-enameled steel] [Stainless steel] [Manufacturer's standard] <Insert material>**.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.

H. Microwave Oven **<Insert drawing designation>**:

 1. Mounting: **[Undercabinet] [Wall cabinet] <Insert requirement>**.
 2. Type: **[Conventional] [Convection] <Insert type>**.
 3. Dimensions:

- a. Width: **[24 inches]** **[30 inches]** [As indicated on Drawings] <Insert dimension>.
 - b. Depth: **[19-1/2 inches]** [As indicated on Drawings] <Insert dimension>.
 - c. Height: **[14 inches]** **[18 inches]** [As indicated on Drawings] <Insert dimension>.
4. Capacity: **[1.5 cu. ft.]** **[2.0 cu. ft.]** <Insert capacity>.
 5. Oven Door: Door with observation window **[and pull handle]** **[and pushbutton latch release]** <Insert requirement>.
 6. Exhaust Fan: **[Variable]** **[Two]** **[Four]**-speed fan, **[vented to outside]** **[nonvented, recirculating type with charcoal filter]** and with **[manufacturer's standard]** **[300 cfm]** <Insert value> capacity.
 7. Microwave Power Rating: **[Manufacturer's standard]** **[1000 W]** <Insert power rating>.
 - a. Convection Element Power Rating: [Manufacturer's standard] [1450 W] <Insert power rating>.
 8. Electric Power Supply: **[120 V, 60 Hz, 1 phase, 15 A]** **[As indicated on Drawings]** <Insert requirement>.
 9. Controls: Digital panel controls and timer display.
 10. Other Features: **[Turntable]** **[temperature probe]** **[and]** **[lock-out feature]** <Insert feature>.
 11. Material: **[Porcelain-enameled steel]** **[Stainless steel]** **[Manufacturer's standard]** <Insert material>.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.

2.05 KITCHEN EXHAUST VENTILATION

- A. Overhead Exhaust Hood <Insert drawing designation>:
 1. Type: **[Wall-mounted,]** **[Suspended-island-canopy,]** <Insert requirement> exhaust-hood system.
 2. Dimensions:
 - a. Width: **[30 inches]** **[36 inches]** **[48 inches]** [As indicated on Drawings] <Insert dimension>.
 - b. Depth: **[30 inches]** **[36 inches]** **[48 inches]** [As indicated on Drawings] <Insert dimension>.
 3. Exhaust Fan: **[Variable]** **[Two]** **[Three]**-speed fan **[built into hood]** **[remotely located, with separate housing]** and with **[manufacturer's standard]** **[500 cfm]** **[900 cfm]** <Insert value> capacity.
 - a. Venting: [Vented to outside through roof with weatherproof roof cap, backdraft damper, and rodent-proof screening] [Vented to outside through wall with weatherproof wall cap, backdraft damper, and rodent-proof screening] [Nonvented, recirculating type with charcoal filter] [As indicated on Drawings] <Insert requirement>.

- b. Fan Control: [**Hood**] [**Wall**]-mounted[**touch-pad to control**] fan switch, with separate hood-light control switch.
- 4. Duct Type: [**Manufacturer's standard**] [**7-inch-diameter round**] [**3-1/4 by 10 inches rectangular**] [**As indicated on Drawings**] <Insert requirement>.
- 5. Finish: [**Baked enamel**] [**Stainless steel**] <Insert finish>.
 - a. Color: [White] <Insert color>.
- 6. Features:
 - a. Permanent, washable [aluminum-mesh] [stainless steel-mesh] [baffle-type] filter(s).
 - b. Built-in [halogen] [incandescent] [fluorescent] lighting.
 - c. Warming lamp socket(s).
 - d. <Insert feature>.

B. Downdraft Exhaust <Insert drawing designation>:

- 1. Type: [**Retractable-downdraft**] <Insert requirement> exhaust system.
- 2. Width: [**30 inches**] [**36 inches**] [**As indicated on Drawings**] <Insert dimension>.
- 3. Exhaust Fan: [**Variable**] [**Two**] [**Three**]-speed fan [**built into cabinet below countertop**] [**remotely located, with separate housing**] and with [**manufacturer's standard**] [**500 cfm**] [**900 cfm**] <Insert value> capacity.
 - a. Venting: [Vented to outside through roof with weatherproof roof cap, backdraft damper, and rodent-proof screening] [Vented to outside through wall with weatherproof wall cap, backdraft damper, and rodent-proof screening] [Nonvented, recirculating type with charcoal filter] [**As indicated on Drawings**] <Insert requirement>.
 - b. Fan Control: [Countertop] <Insert location>-mounted[touch-pad to control] fan switch.
- 4. Duct Type: [**Manufacturer's standard**] [**7-inch-diameter round**] [**3-1/4 by 10 inches rectangular**] <Insert requirement>.
- 5. Finish: [**Baked enamel**] [**Stainless steel**] <Insert finish>.
 - a. Color: [White] <Insert color>.
- 6. Features:
 - a. Permanent, washable [aluminum-mesh] [stainless steel-mesh] [baffle-type] filter(s).
 - b. <Insert feature>.

2.06 REFRIGERATION APPLIANCES

- A. Refrigerator/Freezer <Insert drawing designation>: [One-door refrigerator with freezer compartment inside] [Two-door, side-by-side refrigerator/freezer] [Two-door refrigerator/freezer with freezer on top] [Two-door refrigerator/freezer with freezer on bottom] <Insert description> and complying with AHAM HRF-1.

1. Type: [**Freestanding**] [**Built in**] [**Undercounter**].
2. Dimensions:
 - a. Width: [**16 inches**] [**24 inches**] [**27 inches**] [**30 inches**] [**36 inches**] [**42 inches**] [**48 inches**] [As indicated on Drawings] <Insert dimension>.
 - b. Depth: [**24 inches**] [**27 inches**] [**33-1/4 inches**] [As indicated on Drawings] <Insert dimension>.
 - c. Height: [**34-1/2 inches**] [**70 inches**] [**73 inches**] [**84 inches**] [As indicated on Drawings] <Insert dimension>.
3. Storage Capacity:
 - a. Refrigeration Compartment Volume: [**15.6 cu. ft.**] <Insert volume>.
 - b. Freezer Volume: [**5.13 cu. ft.**] <Insert volume>.
 - c. Shelf Area: [**Three**] <Insert number> adjustable [**wire**] [**glass**] shelves, [**26 sq. ft.**] <Insert area>.
 - d. <Insert storage requirement>.
4. General Features:
 - a. Door Configuration: [**Framed**] [**Overlay**].
 - b. Dispenser in door for [ice] [and] [cold water] [with dispenser lock].
 - c. Built-in water-filtration system.
 - d. Dual refrigeration systems.
 - e. Separate[**touch-pad**] temperature controls for each compartment.
 - f. <Insert feature>.
5. Refrigerator Features:
 - a. Interior light in refrigeration compartment.
 - b. Compartment Storage: [Wine racks] [vegetable crisper] [and] [meat compartment] <Insert requirement>.
 - c. Door Storage: [Glazed door without storage] [Modular compartments] [**1 gal.** milk-container storage] <Insert requirement>.
 - d. Temperature-controlled meat/deli bin.
 - e. <Insert feature>.
6. Freezer Features: [**One**] [**Two**] <Insert number> freezer compartment(s) [**with door(s)**] [**configured as pull-out drawer(s)**].

- a. [Automatic] [Manual] defrost.
 - b. Interior light in freezer compartment.
 - c. Automatic icemaker and storage bin.
 - d. <Insert feature>.
7. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
8. Front Panel(s): **[Manufacturer's standard] [Wood panel(s) to match kitchen cabinets] [Porcelain enamel] [Stainless steel] [Wood-panel insert(s) specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets] [Wood-panel insert(s) specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets] [Reversible panel(s) with choice of colors] <Insert description>.**
- a. Panel Color: [White] [Black] <Insert color(s)>.
9. Appliance Color/Finish: **[White] [Black] [Stainless steel] <Insert color or finish>.**
- B. Freezer <Insert drawing designation>: [One] [Two] <Insert number> freezer compartment(s) [with door(s)] [configured as pull-out drawer(s)] <Insert description> and complying with AHAM HRF-1.
1. Type: **[Freestanding] [Built in] [Undercounter].**
 2. Dimensions:
 - a. Width: **[27 inches] [30 inches] [36 inches]** [As indicated on Drawings] <Insert dimension>.
 - b. Depth: **[24 inches] [27 inches]** [As indicated on Drawings] <Insert dimension>.
 - c. Height: **[34-1/2 inches] [70 inches] [73 inches] [84 inches]** [As indicated on Drawings] <Insert dimension>.
 3. Storage Capacity:
 - a. Volume: **[5.13 cu. ft.] [15.0 cu. ft.]** <Insert volume>.
 - b. Shelf Area: **[Three]** <Insert number> adjustable **[wire] [glass]** shelves, **[26 sq. ft.] <Insert area>.**
 4. Features:
 - a. Door Configuration: **[Framed] [Overlay].**
 - b. [Automatic] [Manual] defrost.
 - c. Interior light in compartment.
 - d. Automatic icemaker and storage bin.
 - e. Temperature **[touch-pad]** controls for **[each]** compartment.

- f. Defrost drain.
 - g. Lock with key.
 - h. <Insert feature>.
5. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
6. Front Panel(s): **[Manufacturer's standard] [Wood panel(s) to match kitchen cabinets] [Porcelain enamel] [Stainless steel] [Wood-panel insert(s) specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets] [Wood-panel insert(s) specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets]** <Insert description>.
- a. Panel Color: [White] [Black] <Insert color(s)>.
7. Appliance Color/Finish: **[White] [Black] [Stainless steel]** <Insert color or finish>.
- C. Icemaker <Insert drawing designation>:
- 1. Type: **[Undercounter]** <Insert requirement>.
 - 2. Dimensions:
 - a. Width: **[14-3/4 inches] [15-1/4 inches]** [As indicated on Drawings] <Insert dimension>.
 - b. Depth: **[24 inches] [25-1/4 inches]** [As indicated on Drawings] <Insert dimension>.
 - c. Height: **[33-5/8 inches] [34-1/2 inches]** [As indicated on Drawings] <Insert dimension>.
 - 3. Ice Capacity:
 - a. Production: **[30 lb] [50 lb]** <Insert value> per day.
 - b. Storage: **[25 lb] [35 lb]** <Insert value>.
 - 4. Features:
 - a. Door Configuration: **[Framed] [Overlay]**.
 - b. [Automatic defrost] <Insert requirement>.
 - c. Automatic shutoff.
 - d. Defrost drain[**with pump**].
 - e. <Insert feature>.
 - 5. Front Panel: **[Manufacturer's standard] [Wood panel to match kitchen cabinets] [Porcelain enamel] [Stainless steel] [Wood-panel insert specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets] [Wood-panel insert specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets]** <Insert description>.

- a. Panel Color: [White] [Black] <Insert color(s)>.
6. Appliance Color/Finish: [**White**] [**Black**] [**Stainless steel**] <Insert color or finish>.

2.07 CLEANING APPLIANCES

- A. Dishwasher <Insert drawing designation>: Complying with AHAM DW-1.
 1. Type: [**Built-in undercounter**] [**Built-in under sink**] [**Portable**] <Insert type>.
 2. Dimensions:
 - a. Width: [**18 inches**] [**24 inches**] [As indicated on Drawings] <Insert dimension>.
 - b. Depth: [**23 inches**] [**25-3/4 inches**] [As indicated on Drawings] <Insert dimension>.
 - c. Height: [**34-1/2 inches**] [As indicated on Drawings] <Insert dimension>.
 3. Capacity:
 - a. International Place Settings of China: [**Eight**] [**12**] [**14**] <Insert number>.
 - b. Water Consumption for Full Load: [**3.2 gal.**] <Insert value> per cycle.
 4. Sound Level: Maximum [**42**] [**48**] <Insert number> dB.
 5. Tub and Door Liner: [**Manufacturer's standard**] [**Porcelain-enameled steel**] [**Stainless steel**] [**Porcelain-enameled steel tub and molded-plastic door liner**] <Insert requirement> with sealed detergent and automatic rinsing-aid dispensers.
 6. Rack System: [**Nylon**] [**PVC**]-coated sliding dish racks, with [**removable cutlery basket**] [**top cutlery tray**] <Insert feature>.
 7. Controls: [**Touch-pad**] [**Rotary-dial**] <Insert description> controls with [**four**] <Insert number> wash cycles and hot-air and heat-off drying cycle options.
 8. Features:
 - a. Waste food disposer.
 - b. Self-cleaning food-filter system.
 - c. Hot-water booster heater for [**140 deg F**] [**160 deg F**] wash water with incoming water at 100 deg F.
 - d. Lock-out feature.
 - e. Half-load option.
 - f. Delay-wash option.
 - g. Digital display panel.
 - h. Water softener.
 - i. Soil-sensing water use control system.

- j. <Insert feature>.
 - 9. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
 - 10. Front Panel: [**Manufacturer's standard**] [**Wood panel to match kitchen cabinets**] [**Porcelain enamel**] [**Stainless steel**] [**Wood-panel insert specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets**] [**Wood-panel insert specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets**] [**Reversible panel with choice of colors**] <Insert description>.
 - a. Panel Color: [White] [Black] <Insert color(s)>.
 - 11. Appliance Color/Finish: [**White**] [**Black**] [**Stainless steel**] <Insert color or finish>.
- B. Clothes Washer <Insert drawing designation>: Complying with AHAM HLW-1.
- 1. Type: [**Freestanding**] [**Stacking**] [**Undercounter**], [**top**] [**front**]-loading unit.
 - 2. Dimensions:
 - a. Width: [**23-1/2 inches**] [**27 inches**] [**30 inches**] [As indicated on Drawings] <Insert dimension>.
 - b. Depth: [**24 inches**] [**29 inches**] [**31 inches**] [As indicated on Drawings] <Insert dimension>.
 - c. Height: [**34-1/2 inches**] [**38 inches**] [**45 inches**] [As indicated on Drawings] <Insert dimension>.
 - 3. Drum: [**Manufacturer's standard**] [**Perforated porcelain-enameled steel**] [**Perforated stainless steel**] <Insert material>.
 - a. Capacity: [**2.7 cu. ft.**] [**3.2 cu. ft.**] [**3.8 cu. ft.**] <Insert volume>.
 - 4. Controls: [**Touch-pad**] [**Rotary-dial**] controls for water-fill levels, wash/rinse water temperatures, <Insert function,> and variable-speed and fabric selectors.
 - a. Wash Cycles: [**Four**] [**Six**] [**10**] <Insert number> wash cycles, including regular, delicate, and permanent press.
 - b. Wash Temperatures: [**Three**] <Insert number> settings.
 - c. Speed Combinations: [**Two**] [**Four**] [**Five**].
 - 5. Electrical Power: [**120 V, 60 Hz, 1 phase, 15 A**] [As indicated on Drawings] <Insert requirement>.
 - 6. Motor: Manufacturer's standard with built-in overload protector.
 - 7. Features:
 - a. Agitator: [Center spindle] [Impeller (without spindle)].
 - b. Self-cleaning lint filter.
 - c. Unbalanced-load compensator.

- d. Inlet Hoses: Minimum length 60 inches.
 - e. Drain Hoses: Minimum length 48 inches.
 - f. Self-leveling legs.
 - g. Automatic dispenser for [**bleach**] [**fabric softener**] [**and**] [**detergent**].
 - h. Spin-cycle safety switch.
 - i. End-of-cycle signal.
 - j. Extra-rinse option.
 - k. Delay-wash option.
 - l. Electronic temperature control.
 - m. Water levels automatically set.
 - n. Pedestal: [**8-inch-high**] [**15-inch-high**] [**Manufacturer's standard height**] <Insert **dimension**> laundry pedestal with storage drawer, matching appliance finish.
 - o. <Insert feature>.
8. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
9. Water-Efficient Clothes Washer: Provide clothes washer with modified energy factor greater than or equal to 2.0 and water factor less than 5.5.
10. Appliance Finish: [**Enamel**] [**Stainless steel**] <Insert **finish**>.
- a. Color: [White] [Almond] <Insert color>.
11. Front-Panel Finish: [**Manufacturer's standard**] [**Wood panel to match kitchen cabinets**] [**Porcelain enamel**] [**Stainless steel**] [**Wood-panel insert specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets**] [**Wood-panel insert specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets**] <Insert **description**>.
- a. Panel Color: [White] [Black] <Insert color(s)>.
- C. Clothes Dryer <Insert **drawing designation**>: Complying with AHAM HLD-1.
- 1. Type: [**Freestanding**] [**Stacking**] [**Undercounter**], frontloading, [**gas**] [**electric**] [**electric, ventless**] unit.
 - 2. Dimensions:
 - a. Width: [**23-1/2 inches**] [**27 inches**] [As indicated on Drawings] <Insert dimension>.
 - b. Depth: [**24 inches**] [**31 inches**] [As indicated on Drawings] <Insert dimension>.
 - c. Height: [**34-1/2 inches**] [**36 inches**] [As indicated on Drawings] <Insert dimension>.

3. Drum: **[Manufacturer's standard] [Perforated porcelain-enameled steel] [Perforated stainless steel]** <Insert material>.
 - a. Capacity: **[5.7 cu. ft.] [7.0 cu. ft.]** <Insert volume>.
 4. Controls: **[Touch-pad] [Rotary-dial]** controls for drying cycle, temperatures, <Insert function,> and fabric selectors.
 5. Electric-Dryer Power: **[240 V, 60 Hz, 1 phase, 30 A] [As indicated on Drawings]** <Insert requirement>.
 6. Gas-Dryer Power: **[120 V, 60 Hz, 1 phase, 15 A electric; 22,000-Btu/h gas]** [As indicated on Drawings] <Insert requirement>.
 7. Features:
 - a. Removable lint filter.
 - b. Electronic temperature and moisture-level-sensor controls.
 - c. End-of-cycle signal.
 - d. Interior drum light.
 - e. Self-leveling legs.
 - f. Antibacterial cycle.
 - g. Auxiliary drying rack.
 - h. Built-in electrical power fuse.
 - i. Stacking kit to stack dryer over washer.
 - j. Pedestal: **[8-inch-high] [15-inch-high] [Manufacturer's standard height]** <Insert dimension> laundry pedestal with storage drawer, matching appliance finish.
 - k. <Insert feature>.
 8. Appliance Finish: **[Enamel] [Stainless steel]** <Insert finish>.
 - a. Color: [White] [Almond] <Insert color>.
 9. Front-Panel Finish: **[Manufacturer's standard] [Wood panel to match kitchen cabinets] [Porcelain enamel] [Stainless steel] [Wood-panel insert specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets] [Wood-panel insert specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets]** <Insert description>.
 - a. Panel Color: [White] [Black] <Insert color(s)>.
- D. Clothes Washer/Dryer Combination <Insert drawing designation>: Complying with AHAM HLW-1.
1. Type: Freestanding washer/dryer unit with **[dual-drum design and electric dryer] [dual-drum design and gas dryer] [all-in-one, single-drum design]**; washer is **[top] [front]** loading.

2. Dimensions:
 - a. Width: **[23-1/2 inches]** **[27 inches]** [As indicated on Drawings] <Insert dimension>.
 - b. Depth: **[25 inches]** **[32 inches]** [As indicated on Drawings] <Insert dimension>.
 - c. Height: **[34-1/2 inches]** **[71-1/2 inches]** [As indicated on Drawings] <Insert dimension>.
3. Washer and Dryer Drums: **[Manufacturer's standard]** **[Perforated porcelain-enameled steel]** **[Perforated stainless steel]** <Insert material>.
 - a. Washer-Drum Capacity: **[1.5 cu. ft.]** **[2.0 cu. ft.]** **[2.6 cu. ft.]** <Insert volume>.
 - b. Dryer-Drum Capacity: **[2.0 cu. ft.]** **[3.4 cu. ft.]** **[5.9 cu. ft.]** <Insert volume>.
4. Washer/Dryer Drum: **[Manufacturer's standard]** **[Perforated stainless steel]** <Insert material>.
 - a. Drum Capacity: **[2.3 cu. ft.]** **[3.6 cu. ft.]** <Insert volume>.
5. Washer Controls: **[Touch-pad]** **[Rotary-dial]** controls for water-fill levels, wash/rinse water temperatures, <Insert function,> and variable-speed and fabric selectors.
6. Dryer Controls: **[Touch-pad]** **[Rotary-dial]** controls for drying cycle, temperatures, <Insert function,> and fabric selectors.
 - a. Wash Cycles: **[Three]** <Insert number> wash cycles, including regular, delicate, and permanent press.
 - b. Wash Temperatures: **[Three]** <Insert number> settings.
 - c. Speed Combinations: **[Two]** <Insert number>.
7. Electric Washer/Dryer Power: **[240 V, 60 Hz, 1 phase, 30 A]** **[120 V, 60 Hz, 1 phase, 12 A]** **[As indicated on Drawings]** <Insert requirement>.
8. Gas Washer/Dryer Power: **[120 V, 60 Hz, 1 phase, 15 A electric; 22,000 Btu/h gas]** **[As indicated on Drawings]** <Insert requirement>.
9. Motor: Manufacturer's standard with built-in overload protector.
10. Washing Features:
 - a. Self-cleaning lint filter.
 - b. Unbalanced-load compensator.
 - c. Inlet Hoses: Minimum length 60 inches.
 - d. Drain Hoses: Minimum length 48 inches.
 - e. Self-leveling legs.
 - f. Automatic dispenser for **[bleach]** **[fabric softener]** **[and]** **[detergent]**.

- g. Spin-cycle safety switch.
 - h. <Insert feature>.
11. Drying Features:
- a. Removable lint filter.
 - b. Electronic temperature and moisture-level-sensor controls.
 - c. End-of-cycle signal.
 - d. Interior drum light.
 - e. <Insert feature>.
12. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
13. Water-Efficient Clothes Washer: Provide clothes washer with modified energy factor greater than or equal to 2.0 and water factor less than 5.5.
14. Appliance Finish: [**Enamel**] [**Stainless steel**] <Insert finish>.
- a. Color: [White] [Almond] <Insert color>.

2.08 TRASH COMPACTORS

- A. Trash Compactor <Insert drawing designation>: Complying with AHAM TC-1.
- 1. Type: [**Built in**] [**Convertible**].
 - 2. Width: [**15 inches**] [**18 inches**].
 - 3. Capacity: [**1.4 cu. ft.**] [**1.7 cu. ft.**] <Insert volume>.
 - 4. Features:
 - a. Key-operated starting switch.
 - b. Rear wheels.
 - c. Removable bag carrier.
 - d. Retainer for disposable bags.
 - e. Odor-control mechanism.
 - f. Foot-operated drawer operator.
 - g. <Insert feature>.
 - 5. Front Panel: [**Manufacturer's standard**] [**Wood panel to match kitchen cabinets**] [**Enameled steel**] [**Stainless steel**] [**Wood-panel insert specified in Section 06 41 13 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets**] [**Wood-panel insert specified in Section 12 35 30 "Residential Casework" to match kitchen cabinets**] <Insert description>.

- a. Panel Color: [White] [Black] <Insert color(s)>.

2.09 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Examine walls, ceilings, and roofs for suitable conditions where [**overhead exhaust hoods**] [**downdraft exhaust**] [**and**] [**microwave ovens with vented exhaust fans**] will be installed.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.
- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- D. Range Anti-Tip Device: Install at each range according to manufacturer's written instructions.

3.03 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections[with the assistance of a factory-authorized service representative]:
 - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
 - 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.

3. Operational Test: After installation, start units to confirm proper operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.

B. An appliance will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.04 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION

This page intentionally left blank

SECTION 11 52 13
PROJECTION SCREENS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Manually operated, front-projection screens.
2. Electrically operated, front-projection screens.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for metal support framing for front-projection screens.
2. Section 06 10 00 "Rough Carpentry" for wood backing for screen installation.
3. Section 06 40 23 "Interior Architectural Woodwork" for **[wood trim] [wood trim and wood ceiling closure panel]** for recessed screen installation.
4. Section 11 52 13.19 "Rear Projection Screens."

1.02 DEFINITIONS

- A. ALR: Ambient-light rejection; for specular reflective viewing surfaces, measured as the percentage of ambient light striking the viewing surface that has equal angles of incidence and reflection.
- B. Gain: Ratio of light reflected from viewing-surface material to that reflected perpendicularly from a magnesium carbonate surface as determined in accordance with SMPTE RP 94.
- C. Half-Gain Angle: The angle, measured from the axis of the viewing surface to the most central position on a perpendicular plane through the horizontal centerline of the viewing surface, where the gain is half of the peak gain.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show layouts and types of front-projection screens. Include the following:
 1. Drop heights.
 2. Location of seams in viewing surfaces.
 3. For end-mounted motors, location of screen centerline relative to ends of screen case.
 4. Anchorage details, including connection to supporting structure for suspended units.
 5. Details of juncture of screen case or trim with adjacent finishes.
 6. For electrically operated units, wiring diagrams and location of wiring connections.
 7. Accessories.

- C. Samples: For each type of exposed finish and for each color and finish specified, in manufacturer's standard sizes.
- D. Samples for Initial Selection: For each type of exposed finish.
- E. Samples for Verification: For each type of exposed finish, in manufacturer's standard sizes.
- F. Product Schedule: For front-projection screens. [Use same designations indicated on Drawings.]

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For front-projection screens to include in maintenance manuals.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Environmental Limitations: Do not deliver front-projection screens until spaces are enclosed and weathertight, wet-work in installation spaces is complete and dry, and temporary or permanent HVAC system is operating and maintaining ambient temperature and humidity conditions planned for building occupants during the remainder of the construction period.
- B. Store front-projection screens in manufacturer's protective packaging and according to manufacturer's written instructions.

1.06 COORDINATION

- A. Coordinate layout and installation of front-projection screens with adjacent construction, including ceiling suspension systems, light fixtures, HVAC system components, **[fire-suppression system,]** and partitions.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Source Limitations for Projection Screens: Obtain **[front-projection screens]** **[each type of front-projection screen]** from single manufacturer. Obtain viewing surfaces and accessories, including mounting hardware, from screen manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Viewing-Surface and Masking Materials:
 1. Mildew-Resistance Rating: Zero or 1 when tested in accordance with ASTM G21.
 2. Flame Resistance: Passes NFPA 701.
 3. Flame-Spread Index: Not greater than 75 when tested in accordance with ASTM E84.

2.03 MANUALLY OPERATED, FRONT-PROJECTION SCREENS

- A. General Requirements: Manufacturer's standard spring-roller-operated units, consisting of case, flexible screen, mounting accessories, and other components necessary for a complete installation.

1. Screen Mounting: Top edge securely anchored to a rigid steel roller; bottom edge formed into a pocket holding a tubular metal slat, with ends of slat protected by plastic caps, and with a saddle and pull attached to slat by screws.
- B. Metal-Encased, Manually Operated Screen <Insert drawing designation>: Unit with free-hanging screen; with screen case fabricated from formed-steel sheet or aluminum extrusions with manufacturer's standard finish and matching end caps.
1. Surface-Mounting Configuration: [Mounted using manufacturer's standard projecting wall brackets] [Mounted directly to wall or ceiling, as indicated on Drawings, with concealed mounting] [Recessed in ceiling trough indicated on Drawings, with concealed mounting] <Insert requirements>.
 2. Screen Case Color: [As selected by Architect from manufacturer's standard options] [White] [Black] <Insert requirements>.
 3. Matte Viewing Surface: [White, 1.0 minimum peak gain and 60-degree minimum half-gain angle] [White, 1.0 minimum peak gain and material does not reach half gain] [Gray, 0.8 minimum peak gain and material does not reach half gain] <Insert requirements>.
 4. Viewing Surface: <Insert requirements>.
 5. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at [top] [bottom] [location indicated on Drawings] <Insert requirements> of viewing surface.
 6. Edge Treatment: [Black] [Without black] masking borders.
 7. Size of Viewing Surface: [As indicated in schedule on Drawings] [40 by 64 inches] [50 by 80 inches] [40-1/2 by 72 inches] [57-1/2 by 92 inches] [45 by 80 inches] [52 by 92 inches] <Insert dimensions>.
 8. Extra Drop Height: [As indicated in schedule on Drawings] [As needed at top of screen for bottom of screen to be 36 inches above floor] [36 inches at bottom of screen] <Insert requirements>.
 - a. Color: [Same as viewing surface] [Black].
- C. Wood-Finished, Manually Operated Screen <Insert drawing designation>: Unit with free-hanging screen; with screen case with flat back, hardwood finish, and concealed mounting brackets for surface mounting on wall or ceiling, as indicated on Drawings.
1. Screen Case Hardwood: [Oak] [Walnut] [Mahogany] [Cherry] [As selected by Architect from manufacturer's full range of species] <Insert species>.
 - a. Corners: [Radiused] [Rectilinear] [Traditional crown trim at top, rectilinear at sides and bottom] [Beveled at top, eased at sides and bottom] <Insert requirements>.
 - b. Finish: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert requirements>.
 2. Matte Viewing Surface: [White, 1.0] [Gray, 0.8] <Insert requirements> minimum peak gain; material does not reach half-gain.
 3. Viewing Surface: <Insert requirements>.
 4. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at [top] [bottom] [location indicated on Drawings] <Insert requirements> of viewing surface.
 5. Edge Treatment: [Black] [Without black] masking borders.

6. Size of Viewing Surface: [As indicated in schedule on Drawings] **[50 by 80 inches]** **[57-1/2 by 92 inches]** **[45 by 80 inches]** **[52 by 92 inches]** <Insert dimensions>.
7. Extra Drop Height: [As indicated in schedule on Drawings] [As needed at top of screen for bottom of screen to be **36 inches** above floor] **[36 inches]** at bottom of screen <Insert requirements>.
 - a. Color: [Same as viewing surface] **[Black]**.

2.04 ELECTRICALLY OPERATED, FRONT-PROJECTION SCREENS

- A. General Requirements: Manufacturer's standard units, consisting of case, screen, motor, controls, mounting accessories, and other components necessary for a complete installation. **[Provide units that are listed and labeled as an assembly by Underwriters Laboratories Inc. (UL) or another testing and inspecting agency acceptable to authorities having jurisdiction.]**
 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Screen Mounting: Top edge securely anchored to rigid metal roller and bottom edge formed into a pocket holding a metal rod, with ends of rod protected by plastic caps.
- B. Surface-Mounted, Metal-Encased, Electrically Operated Screen **<Insert drawing designation>**: Motor-in-roller unit with screen case fabricated from formed-steel sheet or from aluminum extrusions with manufacturer's standard finish and matching end caps.
 1. Motor in Roller: Instant-reversing motor of size and capacity recommended in writing by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Mount motor inside roller with vibration isolators to reduce noise transmission.
 2. Controls: Remote, **[key-operated,]** three-position control switch installed in recessed device box with flush cover plate **[matching other electrical device cover plates in room where switch is installed].**
 - a. Provide with **[one control switch]** **[two control switches]** **[number of control switches indicated on Drawings]** <Insert requirements>.
 - b. Provide power supply for low-voltage systems if required.
 - c. Provide locking cover plates for switches.
 - d. Provide key-operated, power-supply switch.
 - e. Provide **[infrared]** **[radio-frequency]** remote control, consisting of battery-powered transmitter and receiver.
 - f. Provide video interface control for connecting to projector. Projector provides signal to raise or lower screen.
 3. Surface-Mounting Configuration: **[Mounted using manufacturer's standard projecting wall brackets]** **[Mounted directly to wall or ceiling, as indicated on Drawings, with concealed mounting]** **[Recessed in ceiling trough indicated on Drawings, with concealed mounting]** <Insert requirements>.
 4. Screen-Case Color: [As selected by Architect from manufacturer's standard options] **[White]** **[Black]** <Insert requirements>.

5. Free-Hanging, Matte Viewing Surface: [White, 1.0 minimum peak gain and 60-degree minimum half-gain angle] [White, 1.0 minimum peak gain and material does not reach half gain] [Gray, 0.8 minimum peak gain and material does not reach half gain] <Insert requirements>.
 - a. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at **[top] [bottom] [location indicated on Drawings]** <Insert requirements> of viewing surface.
 - b. Edge Treatment: [Manufacturer's standard] [Black] [Without black] masking borders.
 6. Tab-Tensioned, High-Contrast-Gray Viewing Surface: Minimum peak gain of **[0.6 and 60-degree] [0.8 and 45-degree]** <Insert requirements> minimum half-gain angle **[, with black backing]**.
 - a. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
 - b. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at **[top] [bottom] [location indicated on Drawings]** <Insert requirements> of viewing surface.
 7. Tab-Tensioned, Gain-White Viewing Surface: Minimum peak gain of **[1.3 and 75-degree] [1.5 and 60-degree] [1.7 and 40-degree]** <Insert requirements> minimum half-gain angle. Provide viewing surface with black backing and without seams.
 - a. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
 8. Tab-Tensioned, ALR Viewing Surface: Minimum peak gain of [0.8, 57 percent ALR, and 50-degree] [1.0, 73 percent ALR, and 35-degree] [1.0, 82 percent ALR, and 18-degree] <Insert requirements> minimum half-gain angle. Provide viewing surface without seams.
 - a. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
 9. Size of Viewing Surface: [As indicated in schedule on Drawings] **[50 by 80 inches] [57-1/2 by 92 inches] [87-1/2 by 140 inches] [45 by 80 inches] [52 by 92 inches] [79 by 140 inches]** <Insert dimensions>.
 10. Extra Drop Height: [As indicated in schedule on Drawings] [As needed at top of screen for bottom of screen to be **36 inches** above floor] **[36 inches** at bottom of screen] <Insert description>.
 - a. Color: [Same as viewing surface] [Black].
- C. Surface-Mounted, Wood-Finished, Electrically Operated Screen <Insert drawing designation>: Motor-in-roller unit with tab-tensioned screen; with screen case with flat back, hardwood finish, and concealed mounting brackets for surface mounting on wall or ceiling, as indicated on Drawings.
1. Motor in Roller: Instant-reversing motor of size and capacity recommended in writing by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Mount motor inside roller with vibration isolators to reduce noise transmission.

2. Controls: Remote, [**key-operated,**] three-position control switch installed in recessed device box with flush cover plate [**matching other electrical device cover plates in room where switch is installed**].
 - a. Provide with [one control switch] [two control switches] [number of control switches indicated on Drawings] <Insert requirements>.
 - b. Provide power supply for low-voltage systems if required.
 - c. Provide locking cover plates for switches.
 - d. Provide key-operated, power-supply switch.
 - e. Provide [infrared] [radio-frequency] remote control, consisting of battery-powered transmitter and receiver.
 - f. Provide video interface control for connecting to projector. Projector provides signal to raise or lower screen.
3. Screen-Case Hardwood: [Oak] [Walnut] [Mahogany] [Cherry] [As selected by Architect from manufacturer's full range of species] <Insert species>.
 - a. Corners: [Radiused] [Rectilinear] [Traditional crown trim at top, rectilinear at sides and bottom] [Beveled at top, eased at sides and bottom] <Insert requirements>.
 - b. Finish: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert requirements>.
4. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
5. Matte-White Viewing Surface: [1.0 minimum peak gain; material does not reach half-gain] <Insert requirements>. Provide viewing surface [with] [without] black backing.
 - a. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at [top] [bottom] [location indicated on Drawings] <Insert requirements> of viewing surface.
6. High-Contrast-Gray Viewing Surface: [0.6 minimum peak gain; material does not reach half gain] <Insert requirements>. Provide viewing surface [with] [without] black backing.
 - a. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at [top] [bottom] [location indicated on Drawings] <Insert requirements> of viewing surface.
7. Gain-White Viewing Surface: Minimum peak gain of [1.3] [1.6] [1.8] <Insert value>; material does not reach half gain. Provide viewing surface without seams and with black backing.
8. ALR Viewing Surface: Minimum peak gain of [0.8, 57 percent ALR, and 50-degree] [0.1, 73 percent ALR, and 35-degree] [0.1, 82 percent ALR, and 18-degree] <Insert requirements> minimum half-gain angle. Provide viewing surface without seams.
9. Size of Viewing Surface: [As indicated in schedule on Drawings] [50 by 80 inches] [57-1/2 by 92 inches] [45 by 80 inches] [52 by 92 inches] <Insert dimensions>.
10. Extra Drop Height: [As indicated in schedule on Drawings] [As needed at top of screen for bottom of screen to be 36 inches above floor] [36 inches at bottom of screen] <Insert requirements>.
 - a. Color: [Same as viewing surface] [Black].

- D. Suspended, Electrically Operated Screen **<Insert drawing designation>**: Unit designed and fabricated for suspended mounting.
1. Motor in Roller: Instant-reversing motor of size and capacity recommended in writing by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Mount motor inside roller with vibration isolators to reduce noise transmission.
 2. End-Mounted Motor: Instant-reversing, gear-drive motor of size and capacity recommended in writing by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Locate motor in its own compartment **[on right end of screen] [on left end of screen] [on end of screen indicated on Drawings]**. Support roller with self-aligning bearings in brackets.
 3. Wiring Compartment: Metal or metal lined.
 4. Controls: Remote, **[key-operated,]** three-position control switch installed in recessed device box with flush cover plate **[matching other electrical device cover plates in room where switch is installed]**.
 - a. Provide with **[one control switch] [two control switches] [number of control switches indicated on Drawings] <Insert requirements>**.
 - b. Provide power supply for low-voltage systems if required.
 - c. Provide locking cover plates for switches.
 - d. Provide key-operated, power-supply switch.
 - e. Provide **[infrared] [radio-frequency]** remote control, consisting of battery-powered transmitter and receiver.
 - f. Provide video interface control for connecting to projector. Projector provides signal to raise or lower screen.
 5. Screen Case: **[Metal] [Metal and fire-retardant materials] [Metal, wood, wood products, and fire-retardant materials]**.
 - a. Ceiling Aperture: **[Open under screen compartment] [With closure, hinged to automatically open when screen is lowered and automatically close when screen is fully raised]**.
 - 1) Provide screen case **[with trim flange to receive ceiling finish] [constructed to be installed with underside flush with ceiling] [constructed to be installed with ceiling finish applied to underside]**.
 - b. Finish on Exposed Surfaces: **[Manufacturer's standard] [Prime painted] [Vinyl covering or baked enamel] <Insert requirements>**.
 6. Free-Hanging, Matte Viewing Surface: **[White, 1.0 minimum peak gain and 60-degree minimum half-gain angle] [White, 1.0 minimum peak gain and material does not reach half gain] [Gray, 0.8 minimum peak gain and material does not reach half gain] <Insert requirements>**.
 - a. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at **[top] [bottom] [location indicated on Drawings] <Insert requirements>** of viewing surface.
 - b. Edge Treatment: **[Manufacturer's standard] [Black] [Without black] masking borders**.

7. Tab-Tensioned, High-Contrast-Gray Viewing Surface: Minimum peak gain of **[0.6 and 60-degree]** **[0.8 and 45-degree]** <Insert requirements> minimum half-gain angle **[, with black backing]**.
 - a. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
 - b. Seams: Where height of viewing surface exceeds maximum height without seams, locate horizontal seam with full-width material at **[top]** **[bottom]** **[location indicated on Drawings]** <Insert requirements> of viewing surface.
8. Tab-Tensioned, Gain-White Viewing Surface: Minimum peak gain of **[1.3 and 75-degree]** **[1.5 and 60-degree]** **[1.7 and 40-degree]** <Insert requirements> minimum half-gain angle. Provide viewing surface with black backing and without seams.
 - a. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
9. Tab-Tensioned, ALR Viewing Surface: Minimum peak gain of [0.8, 57 percent ALR, and 50-degree] [1.0, 73 percent ALR, and 35-degree] [1.0, 82 percent ALR, and 18-degree] <Insert requirements> minimum half-gain angle. Provide viewing surface without seams.
 - a. Tab Tensioning: Durable low-stretch cord, such as braided polyester, on each side of screen that is connected to edge of entire height of screen by tabs, to pull viewing surface flat horizontally.
10. Size of Viewing Surface: [As indicated in schedule on Drawings] **[50 by 80 inches]** **[57-1/2 by 92 inches]** **[87-1/2 by 140 inches]** **[45 by 80 inches]** **[52 by 92 inches]** **[79 by 140 inches]** <Insert dimensions>.
11. Extra Drop Height: [As indicated in schedule on Drawings] [As needed at top of screen for bottom of screen to be **36 inches** above floor] **[36 inches** at bottom of screen] <Insert description>.
 - a. Color: **[Same as viewing surface]** **[Black]**.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Install front-projection screens at locations indicated on Drawings to comply with screen manufacturer's written instructions.
- B. Install front-projection screens with screen cases in position and in relation to adjoining construction indicated. Securely anchor them to supporting substrate in a manner that produces a smoothly operating screen that, when lowered, has flat viewing surface and plumb vertical edges.
 1. Install low-voltage controls in accordance with NFPA 70 and complying with manufacturer's written instructions.
 - a. Wiring Method: Install wiring in raceway, except in accessible ceiling spaces and in gypsum board partitions, where unenclosed wiring method may be used. Use UL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables, except in unfinished spaces.

2. Test electrically operated units to verify that screen controls, limit switches, closures, and other operating components are in optimum functioning condition.
3. Test manually operated units to verify that screen-operating components are in optimum functioning condition.

END OF SECTION

SECTION 11 81 29

FACILITY FALL PROTECTION DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES:

- A. Roof safety and tieback anchors.
- B. Supplementary components and accessories necessary for a complete installation.

1.02 DELEGATED DESIGN REQUIREMENTS:

- A. Engineer, fabricate, assemble and install roof safety and tieback anchors in order to meet or exceed the performance criteria specified in Section; to conform to the profiles and spacing indicated and to other requirements of the Contract Documents; to satisfy the requirements of the authorities having jurisdiction; and to provide watertight and structurally sound assemblies capable of withstanding minimum specified performance requirements without failure.
- B. Coordinate design with University's requirements, and with the requirements and recommendations of University's consultant's, if any, prior to submitting shop drawings of final design.

1.03 REFERENCE STANDARDS

- A. ASME A120.1 - Safety Requirements for Powered Platforms and Traveling Ladders and Gantries for Building Maintenance 2021.
- B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.
- C. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes 2017.
- D. ASTM A492 - Standard Specification for Stainless Steel Rope Wire 1995 (Reapproved 2019).

1.04 QUALITY ASSURANCE

- A. Source limitations: Obtain each type of tieback anchor used for Project through one source from the same manufacturer.
- B. Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
- C. Manufacturer Qualifications: Manufacturer capable of providing field service representation during construction and approving application method.
- D. Regulatory Requirements.
 - 1. Comply with OSHA regulations as follows:
 - a. 1910, Subpart D, Walking and Working Surfaces.
 - b. Appendix C to 1910 Subpart F, Personal Fall Arrest Systems.

- c. OSHA Ruling on Window Cleaning by Bosun's Chair.
- d. 1910.66, Subpart F, Powered Platforms.
- 2. Comply with California State regulations as follows:
 - a. Code of Regulations, Title 8 - Industrial Relations, Article 5 (Window Cleaning), Article 6 (Powered Platforms for Exterior Building Maintenance), and Appendix C to Article 6 (Personal Fall Arrest System).

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in manufacturer's original packaging with identification labels intact and in sizes to suit project
- B. Do not store fall restraint system in contact with other materials that might cause staining, denting, or other surface damage. Store fall restraint system away from uncured concrete and masonry.
- C. Store manufactured units off the ground or floor on pallets, and protected from precipitation or other forms of moisture with breathing-type covers. Un-vented polyethylene tarpaulins are not permitted.
- D. Provide spacers to separate stored items and to provide air circulation around all surfaces.
- E. Protect stored items to prevent contact with wet or damp surfaces, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
- F. Store manufactured units in a manner to prevent bending, warping, twisting or other physical damage.
- G. At no cost to the University, remove and replace corroded, deteriorated, stained, or damaged units from the Project site.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Design fall restraint system to suit project requirements to AISC S342L and as indicated.
- B. Locate anchorages to suit suspension equipment specified.
- C. Design anchor components for cleaning and suspended maintenance equipment to ASME A120.1.
 - 1. Ensure compatibility with industry standard equipment.
 - 2. Anchorage and anchor components: Designed by Engineer qualified in design of window cleaning and suspended maintenance equipment and licensed in state where project is located.
- D. Design system fall arrest safety anchors and equipment supports to AISC S342L (including supplement No.1) and ANSI/IWCA I-14.1, and as follows:
 - 1. Comply with OSHA 1910, Subpart F, Appendix C.
 - 2. Fall Arrest Safety Anchors:
 - a. Fall arresting force safety factor of 2 to 1 without permanent deformation: 1,800 lbs minimum.

- E. Fall arrest force against fracture or detachment: 5,000 lbs minimum.

2.02 ANCHORS

- A. Roof Anchor: Galvanized steel post with eye hook and 1/2 inch thick galvanized steel base plate.
- B. Roof Anchor: 1/2 inch thick galvanized steel base plate.with eye hook.
- C. Safety Anchor Eye Plate: Mild steel, Type 300W with 44 ksi minimum yield strength, hot-dip galvanized to ASTM A123/A123M.
 - 1. Plate: 7/8 inch diameter material with 2 inch eye opening.
- D. Hollow Steel Section (HSS) Piers: Mild steel, Type 300W with 50 ksi minimum yield strength, hot dipped galvanized to ASTM A123/A123M.
 - 1. Wall thickness to suit application.
- E. Plate and other Sections: Mild steel, Type 300W with 44 ksi minimum yield strength, hot dipped galvanized to ASTM A123/A123M or manufacturer's polyurethane/polyurea coating system.
 - 1. Wall thickness to suit application.
- F. Miscellaneous Bolts, Nuts and Washers: Stainless steel to ASTM A276, Type 304 with 35 Ksi (240 MPa) minimum yield strength.

2.03 HORIZONTAL CABLE TIE-OFF SYSTEM

- A. Stainless steel to ASTM A492, Type 316, 5/16 inch minimum diameter cable, 9127 lbs (40 kN) minimum breaking strength with permanently swedged cable ends.
- B. Data plate: Ensure non-corrosive data plate stating Maximum Service Capacity of cable, Manufacturer's Name, Serial No., Manufacturing Date, rated load and other pertinent information is prominently displayed at cable system entry points.
- C. Tensioner: Stainless steel turnbuckle to ASTM A167, Type 316.

2.04 ACCESSORIES

- A. Pier/base plate assembly: Steel tube continuously welded to steel base plate and galvanized after fabrication.
- B. Safety Anchor Eye Plate: Mild steel, Type 300W with 44 Ksi minimum yield strength, hot-dip galvanized to ASTM A123/A123M.
 - 1. Plate: 0.875 inches diameter material with 2 inches eye opening.
- C. Hollow Steel Section (HSS) Piers: Mild steel, Type 300W with 50 Ksi minimum yield strength, hot dipped galvanized to ASTM A123/A123M.
 - 1. Wall thickness to suit application.
- D. Plate and other sections: Mild steel, Type 300W with 44 Ksi minimum yield strength, hot dipped galvanized to ASTM A123/A123M.
 - 1. Wall thickness to suit application.
- E. Miscellaneous Bolts, Nuts and Washers: Mild steel, Type 300W with 44 Ksi minimum yield strength, hot-dip galvanized to ASTM A123/A123M minimum yield strength.

- F. Other Accessories: Install or apply other accessories and similar secondary items supplied, required, recommended, approved, or accepted by the expansion joint assembly manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine adjacent construction and supports.
- B. Verify that substrate conditions which have been previously installed under other sections or contracts, are acceptable for product installation in accordance with manufacturer's instructions prior to installation of roof tie back equipment.
- C. Inform Design Build Architect of unacceptable conditions immediately upon discovery.
- D. Correct conditions detrimental to the proper and timely completion of the Work before proceeding with installation.

3.02 INSTALLATION

- A. Install fall protection equipment in compliance with manufacturer's instructions.
- B. Fasten anchors in accordance with manufacturer's recommendations
- C. Accurately fit and align, securely fasten and install free from distortion or defects
- D. Deform threads of tail end of anchor studs after nuts have been tightened to prevent accidental removal or vandalism.
- E. Securely fasten roof accessories in place, using fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation.
- F. Seal joints with elastomeric sealant as recommended or approved by roof safety and tieback anchors and roofing membrane manufacturers.
- G. At no cost to the University, either correct deficiencies that do not comply with specified requirements, as determined by the manufacturer and Design Build Architect, or remove, repair substrates and reinstall roof safety and tieback anchors that cannot be satisfactorily repaired, as determined and directed by the manufacturer's field representative and the Design Build Architect.

3.03 FIELD QUALITY CONTROL

- A. Request site attendance of manufacturer technical representative at the beginning of installation operations.
- B. Have manufacturer's technical representative schedule site visits to review work as follows:
 - 1. When preparatory work for which work of this Section depends is complete, but before installation begins.
 - 2. 2 times during progress of work at 25% and 60% of completion.
 - 3. Upon completion of work, after cleaning is carried out.
- C. Testing: Test on site 100% of anchors relying upon chemical adhesive fasteners using load cell test apparatus in accordance with manufacturer's written recommendations.

3.04 PROTECTION

- A. Protect units in place during the construction period against corrosion, deterioration, staining or other damage until acceptance by the University.

SECTION 12 24 13
ROLLER WINDOW SHADES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Motor-operated, single-roller shades.
2. Motor-operated, double-roller shades.
3. Motor-operated, skylight roller shades.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood blocking and grounds for mounting roller shades and accessories.
2. Section 079200 "Joint Sealants" for sealing the perimeters of installation accessories for light-blocking shades with a sealant.

1.02 ALLOWANCES

- A. Roller shades are part of [Window-Covering Allowance] <Insert name of allowance>.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, features, finishes, and operating instructions for roller shades.

B. Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations.

1. Motor-Operated Shades: Include details of installation and diagrams for power, signal, and control wiring.
2. Concealed recessed pocket.
3. Black out shades.

C. Samples: For each exposed product and for each color and texture specified, 10 inches long.

D. Samples for Initial Selection: For each type and color of shadeband material.

1. Include Samples of accessories involving color selection.

E. Samples for Verification: For each type of roller shade.

1. Shadeband Material: Not less than **[10 inches] [3 inches]** square. Mark interior face of material if applicable.
2. Roller Shade: Full-size operating unit, not less than 16 inches wide by 36 inches long for each type of roller shade indicated.

3. Installation Accessories: Full-size unit, not less than 10 inches long.

F. Product Schedule: For roller shades. [Use same designations indicated on Drawings.]

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of shadeband material.

C. Product Test Reports: For each type of shadeband material, for tests performed by [manufacturer and witnessed by a qualified testing agency] [a qualified testing agency].

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roller shades to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Roller Shades: Full-size units equal to 5 percent of quantity installed for each size, color, and shadeband material indicated, but no fewer than **[two]** <Insert number> units.

1.07 QUALITY ASSURANCE

A. Roller Window Shades intended for occupant use must have accessible controls.

B. Installer Qualifications: Fabricator of products.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver roller shades in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.09 FIELD CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

- B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain roller shades from single source from single manufacturer.

2.02 MANUFACTURERS

- A. Products: See current Campus Specification Matrix for Preferred Manufacturers.

2.03 MOTOR-OPERATED, SINGLE-ROLLER SHADES

- A. Motorized Operating System: Provide factory-assembled, shade-operator system of size and capacity and with features, characteristics, and accessories suitable for conditions indicated, complete with electric motor and factory-prewired motor controls, power disconnect switch, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
 - 1. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Electric Motor: **[Manufacturer's standard]** <Insert description> tubular, enclosed in roller.
 - a. Electrical Characteristics: **[110-V ac]** **[220-V ac]** **[24-V dc]** **[12-V dc]** **[Solar-powered dc]** <Insert requirements>.
 - b. Maximum Total Shade Width: **[As required to operate roller shades indicated]** <Insert requirements>.
 - c. Maximum Shade Drop: **[As required to operate roller shades indicated]** <Insert requirements>.
 - d. Maximum Weight Capacity: **[As required to operate roller shades indicated]** <Insert requirements>.
 - 3. Remote Control: Electric controls with NEMA ICS 6, Type 1 enclosure for **[surface]** **[recessed or flush]** <Insert type> mounting. Provide the following for remote-control activation of shades:
 - a. Keyed Control Station: Keyed, **[maintained]** **[momentary]**-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 - b. Individual Switch Control Station: **[Maintained]** **[Momentary]**-contact, wall-switch-operated control station with open, close, and center off functions.
 - 1) Switch Positions: **[Three]** **[Five]**.
 - 2) Switch Style: **[Toggle]** **[Rocker]**.

- c. Group Control Station: **[Maintained] [Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for single-switch group control.
 - d. Individual/Group Control Station: **[Maintained] [Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
 - e. Sun Sensor Control: Adjustable system consisting of digital displays detecting sun intensity and responding by automatically adjusting shades.
 - f. Infrared Control: System consisting of concealed receiver complete with external eye and connecting modular cable and **[two] <Insert number>** portable, multiple-channel transmitters with separate buttons to open and close individual or groups of shades, to open and close shades simultaneously, and to stop shade movement.
 - 1) Capacity: Up to **[12] <Insert number>** individual or groups of shades.
 - g. Timer Control: Clock timer, **[24-hour] [seven-day] <Insert period>** programmable for regular events.
 - h. Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features; isolated from voltage spikes and surges.
 - i. Color: **[As selected by Architect from manufacturer's full range] <Insert color>**.
 - 4. Crank-Operator Override: Crank and gearbox operate shades in event of power outage or motor failure.
 - 5. Limit Switches: Adjustable switches interlocked with motor controls and set to stop shades automatically at fully raised and fully lowered positions.
 - 6. Operating Features:
 - a. Group switching with integrated switch control; single faceplate for multiple switch cutouts.
 - b. Capable of interface with **[audiovisual] [multiroom] <Insert description>** control system.
 - c. Capable of accepting input from building automation control system.
 - d. Override switch.
 - 7. Accessories:
 - a. **<Insert accessory>**.
- B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
- 1. Roller Drive-End Location: **[Right side of interior face of shade] [Left side of interior face of shade] [As indicated on Drawings] <Insert requirements>**.
 - 2. Direction of Shadeband Roll: **[Regular, from back (exterior face) of roller] [Reverse, from front (interior face) of roller]**.
 - 3. Shadeband-to-Roller Attachment: **[Manufacturer's standard method] [Adhesive strip] [Removable spline fitting into integral channel in tube] <Insert description>**.

- C. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.
- D. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers that are operated by one roller drive-end assembly.
- E. Shadebands:
1. Shadeband Material: [Light-filtering fabric] [Light-blocking fabric] <Insert requirements>.
 2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
 - a. Type: [Enclosed in sealed pocket of shadeband material] [Exposed with endcaps] [Exposed with endcaps and integral light seal at bottom where it meets the sill] <Insert description>.
 - b. Color and Finish: [As selected by Architect from manufacturer's full range] <Insert color and finish>.
- F. Installation Accessories:
1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.
 - a. Shape: [L-shaped] [Curved] <Insert requirements>.
 - b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than **[4 inches] [3 inches] <Insert dimension>**.
 2. Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.
 - a. Height: Manufacturer's standard in height required to enclose roller and shadeband assembly when shade is fully open, but not less than **[4 inches] [3 inches] [as indicated on Drawings] <Insert dimension>**.
 3. Endcap Covers: To cover exposed endcaps.
 4. Recessed Shade Pocket: Rectangular, extruded-aluminum enclosure designed for recessed ceiling installation; with front, top, and back formed as one piece, end plates, and removable bottom closure panel.
 - a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than **[6 inches] [5 inches] [4 inches] [height indicated on Drawings] <Insert dimension>**.
 - b. Provide pocket with lip at lower edge to support acoustical ceiling panel.
 5. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recess or pocket and for snap-in attachment to wall clip without fasteners.
 - a. Closure-Panel Width: [As indicated on Drawings] **[2 inches] <Insert dimension>**.
 6. Side Channels: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.
 7. Bottom (Sill) Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.

8. Installation Accessories Color and Finish: [As selected from manufacturer's full range] <Insert color and finish>.

2.04 MOTOR-OPERATED, DOUBLE-ROLLER SHADES

A. Motorized Operating Systems: Provide factory-assembled, shade-operator systems of size and capacity and with features, characteristics, and accessories suitable for conditions indicated, complete with electric motor and factory-prewired motor controls, power disconnect switch, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.

1. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Electric Motor: **[Manufacturer's standard]** <Insert description> tubular, enclosed in rollers.
 - a. Electrical Characteristics: [110-V ac] [220-V ac] [24-V dc] [12-V dc] [Solar-powered dc] <Insert requirements>.
 - b. Maximum Total Shade Width: [As required to operate roller shades indicated] <Insert requirements>.
 - c. Maximum Shade Drop: [As required to operate roller shades indicated] <Insert requirements>.
 - d. Maximum Weight Capacity: [As required to operate roller shades indicated] <Insert requirements>.
3. Remote Control: Electric controls with NEMA ICS 6, Type 1 enclosure for **[surface]** **[recessed or flush]** <Insert type> mounting. Provide the following for remote-control activation of shades:
 - a. Keyed Control Station: Keyed, **[maintained]** **[momentary]**-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 - b. Individual Switch Control Station: **[Maintained]** **[Momentary]**-contact, wall-switch-operated control station with open, close, and center off functions.
 - 1) Switch Positions: **[Three]** **[Five]**.
 - 2) Switch Style: **[Toggle]** **[Rocker]**.
 - c. Group Control Station: **[Maintained]** **[Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for single-switch group control.
 - d. Individual/Group Control Station: **[Maintained]** **[Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
 - e. Sun Sensor Control: Adjustable system consisting of digital displays detecting sun intensity and responding by automatically adjusting shades.
 - f. Infrared Control: System consisting of concealed receiver complete with external eye and connecting modular cable and **[two]** <Insert number> portable, multiple-channel transmitters with separate buttons to open and close individual or groups of shades, to open and close shades simultaneously, and to stop shade movement.
 - 1) Capacity: Up to **[12]** <Insert number> individual or groups of shades.

- g. Timer Control: Clock timer, **[24-hour] [seven-day] <Insert period>** programmable for regular events.
 - h. Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features; isolated from voltage spikes and surges.
 - i. Color: **[As selected by Architect from manufacturer's full range] <Insert color>**.
 - 4. Crank-Operator Override: Crank and gearbox operate shades in event of power outage or motor failure.
 - 5. Limit Switches: Adjustable switches, interlocked with motor controls and set to stop shade movement automatically at fully raised and fully lowered positions.
 - 6. Operating Features:
 - a. Group switching with integrated switch control; single faceplate for multiple switch cutouts.
 - b. Capable of interface with **[audiovisual] [multiroom] <Insert description>** control system.
 - c. Capable of accepting input from building automation control system.
 - d. Override switch.
 - 7. Accessories:
 - a. **<Insert accessory>**.
- B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shades for service.
 - 1. Double-Roller Mounting Configuration: **[Side by side] [Offset, outside shade over and inside shade under] <Insert requirements>**.
 - 2. Inside Roller:
 - a. Drive-End Location: **[Right side of interior face of shade] [Left side of interior face of shade] [As indicated on Drawings] <Insert requirements>**.
 - b. Direction of Shadeband Roll: **[Regular, from back (exterior face) of roller] [Reverse, from front (interior face) of roller]**.
 - 3. Outside Roller:
 - a. Drive-End Location: **[Right side of interior face of shade] [Left side of interior face of shade] [As indicated on Drawings] <Insert requirements>**.
 - b. Direction of Shadeband Roll: **[Regular, from back (exterior face) of roller] [Reverse, from front (interior face) of roller]**.
 - 4. Shadeband-to-Roller Attachment: **[Manufacturer's standard method] [Adhesive strip] [Removable spline fitting into integral channel in tube] <Insert description>**.
- C. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller mounting configuration, roller assemblies, operating mechanisms, installation accessories, and installation locations and conditions indicated.
- D. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.
- E. Inside Shadebands:

1. Shadeband Material: [Light-filtering fabric] <Insert requirements>.
 2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
 - a. Type: [Enclosed in sealed pocket of shadeband material] [Exposed with endcaps] <Insert description>.
 - b. Color and Finish: [As selected by Architect from manufacturer's full range] <Insert color and finish>.
- F. Outside Shadebands:
1. Shadeband Material: [Light-blocking fabric] <Insert requirements>.
 2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
 - a. Type: [Enclosed in sealed pocket of shadeband material] [Exposed with endcaps] [Exposed with endcaps and integral light seal where bottom (sill) channels are indicated] <Insert description>.
 - b. Color and Finish: [As selected by Architect from manufacturer's full range] <Insert color and finish>.
- G. Installation Accessories:
1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.
 - a. Shape: [L-shaped] [Curved] <Insert requirements>.
 - b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than **[4 inches] [3 inches] <Insert dimension>**.
 2. Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.
 - a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than **[4 inches] [3 inches] [as indicated on Drawings] <Insert dimension>**.
 3. Endcap Covers: To cover exposed endcaps.
 4. Recessed Shade Pocket: Rectangular, extruded-aluminum enclosure designed for recessed ceiling installation; with front, top, and back formed as one piece, end plates, and removable bottom closure panel.
 - a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than **[6 inches] [5 inches] [4 inches] [height indicated on Drawings] <Insert dimension>**.
 - b. Provide pocket with lip at lower edge to support acoustical ceiling panel.
 5. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recesses or pockets and for snap-in attachment to wall clip without fasteners.
 - a. Closure-Panel Width: [As indicated on Drawings] **[2 inches] <Insert dimension>**.
 6. Side Channels: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.
 7. Bottom (Sill) Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.

8. Installation Accessories Color and Finish: [As selected from manufacturer's full range] <Insert color and finish>.

2.05 MOTOR-OPERATED, SKYLIGHT ROLLER SHADES

- A. Motorized Operating System: Provide factory-assembled, shade-operator system of size and capacity and with features, characteristics, and accessories suitable for conditions indicated, complete with electric motor and factory-prewired motor controls, power disconnect switch, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
 1. System Type: [Double-roller, two-motor system, one for shadeband roll-up, one for cable take-up] [Single-motor, double-roller system, with motor in drive roller and spring in take-up roller] [Single motor and roller, gravity drop] <Insert description>.
 2. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 3. Electric Motor: **[Manufacturer's standard]** <Insert description> tubular, enclosed in roller.
 - a. Electrical Characteristics: [110-V ac] [220-V ac] [24-V dc] [12-V dc] [Solar-powered dc] <Insert requirements>.
 - b. Maximum Total Shade Width: [As required to operate roller shades indicated] <Insert requirements>.
 - c. Maximum Shade Length: [As required to operate roller shades indicated] <Insert requirements>.
 - d. Maximum Weight Capacity: [As required to operate roller shades indicated] <Insert requirements>.
 4. Remote Control: Electric controls with NEMA ICS 6, Type 1 enclosure for **[surface]** **[recessed or flush]** <Insert type> mounting. Provide the following for remote-control activation of shades:
 - a. Keyed Control Station: Keyed, **[maintained]** **[momentary]**-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 - b. Individual Switch Control Station: **[Maintained]** **[Momentary]**-contact, wall-switch-operated control station with open, close, and center off functions.
 - 1) Switch Positions: **[Three]** **[Five]**.
 - 2) Switch Style: **[Toggle]** **[Rocker]**.
 - c. Group Control Station: **[Maintained]** **[Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for single-switch group control.
 - d. Individual/Group Control Station: **[Maintained]** **[Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
 - e. Sun Sensor Control: Adjustable system consisting of digital displays detecting sun intensity and responding by automatically adjusting shades.

- f. Infrared Control: System consisting of concealed receiver complete with external eye and connecting modular cable and **[two] <Insert number>** portable, multiple-channel transmitters with separate buttons to open and close individual or groups of shades, to open and close shades simultaneously, and to stop shade movement.
 - 1) Capacity: Up to **[12] <Insert number>** individual or groups of shades.
- g. Timer Control: Clock timer, **[24-hour] [seven-day] <Insert period>** programmable for regular events.
- h. Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features; isolated from voltage spikes and surges.
- i. Color: **[As selected by Architect from manufacturer's full range] <Insert color>**.
5. Crank-Operator Override: Crank and gearbox operate shades in event of power outage or motor failure.
6. Limit Switches: Adjustable switches, interlocked with motor controls and set to stop shade movement automatically at fully raised and fully lowered positions.
7. Operating Features:
 - a. Group switching with integrated switch control; single faceplate for multiple switch cutouts.
 - b. Capable of interface with **[audiovisual] [multiroom] <Insert description>** control system.
 - c. Capable of accepting input from building automation control system.
 - d. Override switch.
8. Accessories:
 - a. **<Insert accessory>**.
- B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
 1. Drive-End Location: **[Right side of interior face of shade] [Left side of interior face of shade] [As indicated on Drawings] <Insert requirements>**.
 2. Direction of Shadeband Roll: **[Regular, from back (exterior face) of roller] [Reverse, from front (interior face) of roller]**.
 3. Shadeband-to-Roller Attachment: **[Manufacturer's standard method] [Adhesive strip] <Insert description>**.
- C. Shadeband Retention System: Manufacturer's standard system for guiding shadeband through range of travel and holding shadeband taut with edges of shadeband supported by side channels or angles.
- D. Mounting Hardware: Corrosion resistant and compatible with operating mechanism, installation accessories, and mounting location and conditions indicated.
- E. Shadebands:
 1. Shadeband Material: **[Light-filtering fabric] [Light-blocking fabric] <Insert requirements>**.

2. Shadeband Bottom (Hem) Bar: Manufacturer's standard for operating mechanism indicated.
 - a. Color and Finish of Exposed Bottom Bar: [As selected by Architect from manufacturer's full range] <Insert color and finish>.

F. Installation Accessories:

1. Exposed Headboxes and Bottom Boxes: Rectangular, extruded-aluminum enclosure including front fasciae, top and back covers, endcaps, and removable closures.
 - a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than **[height indicated on Drawings]** <Insert dimension>.
2. Channels or Angles: Manufacturer's standard design for operating mechanism indicated and shadeband take-up and support.
3. Installation Accessories Color and Finish: [As selected from manufacturer's full range] <Insert color and finish>.

2.06 SHADEBAND MATERIALS

- A. Shadeband Material Flame-Resistance Rating: Comply with **[NFPA 701]** <Insert requirement>. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- B. Light-Filtering Fabric: Woven fabric, stain and fade resistant.
 1. Source: [Roller shade manufacturer] <Insert source for custom fabrics>.
 2. Type: [PVC-coated fiberglass] [PVC-coated polyester] [Woven PVC-coated fiberglass and PVC-coated polyester] [Woven polyester and PVC-coated polyester] [Acrylic-coated fiberglass] [PVC-coated fiberglass with silver backing] <Insert description>.
 3. Weave: [Mesh] [Basketweave] <Insert description>.
 4. Thickness: <Insert thickness>.
 5. Weight: <Insert oz./sq. yd. >.
 6. Roll Width: **[36 inches]** **[48 inches]** **[60 inches]** **[72 inches]** **[84 inches]** <Insert dimension>.
 7. Orientation on Shadeband: [Up the bolt] [Railroaded] [As indicated on Drawings] <Insert requirements>.
 8. Openness Factor: **[1]** **[3]** **[5]** **[10]** **[11]** **[22]** <Insert number> percent.
 9. Color: [As indicated on Drawings] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
- C. Light-Blocking Fabric: Opaque fabric, stain and fade resistant.
 1. Source: [Roller shade manufacturer] <Insert source for custom fabrics>.
 2. Type: [Fiberglass textile with PVC film bonded to both sides] [Fiberglass with acrylic backing] [Acrylic-coated fiberglass] [Polyester-cotton blend] [Polyester with foamed-acrylic backing] [PVC-coated fiberglass with bonded PVC film] <Insert description>.
 3. Thickness: <Insert thickness>.
 4. Weight: <Insert oz./sq. yd. >.

5. Roll Width: **[36 inches] [48 inches] [60 inches] [72 inches] [84 inches]** <Insert dimension>.
6. Orientation on Shadeband: **[Up the bolt] [Railroaded] [As indicated on Drawings]** <Insert requirements>.
7. Features: **[Washable] [Antistatic treatment]** <Insert requirements>.
8. Color: **[As indicated on Drawings] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert color>.

2.07 ROLLER SHADE FABRICATION

- A. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.
- B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F:
 1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch per side or 1/2-inch total, plus or minus 1/8 inch. Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch, plus or minus 1/8 inch.
 2. Outside of Jamb Installation: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- C. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible, except as follows:
 1. Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than **[1:4] <Insert ratio>**, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material.
 2. Skylight Shades: Provide battens and seams at uniform spacings along shadeband as required to ensure shadeband tracking and alignment through its full range of movement without distortion or sag of material.
 3. Railroaded Materials: Railroad material where material roll width is less than the required width of shadeband and where indicated. Provide battens and seams as required by railroaded material to produce shadebands with full roll-width panel(s) plus, if required, one partial roll-width panel located at top of shadeband.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, **[locations of connections to building electrical system,]** and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ROLLER SHADE INSTALLATION

- A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions.
 - 1. Opaque Shadebands: Located so shadeband is not closer than **[2 inches] <Insert dimension>** to interior face of glass. Allow clearances for window operation hardware.
- B. Electrical Connections: Connect motor-operated roller shades to building electrical system.
- C. Roller Shade Locations: **[At exterior windows] [As indicated in window-covering schedule] [As indicated on Drawings] <Insert requirements>**.

3.03 ADJUSTING

- A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.04 CLEANING AND PROTECTION

- A. Clean roller shade surfaces, after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.05 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain motor-operated roller shades.

END OF SECTION

This page intentionally left blank

SECTION 12 36 00

COUNTERTOPS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Countertops for architectural cabinet work.
- B. Wall-hung counters and vanity tops.

1.02 REFERENCE STANDARDS

- A. ANSI A208.2 - Medium Density Fiberboard (MDF) for Interior Applications 2022.
- B. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.
- C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2022.
- D. NAAWS - North American Architectural Woodwork Standards 2021, with Errata.
- E. ISFA 2-01 - Classification and Standards for Solid Surfacing Material 2013.
- F. NAAWS (CCP) - Certified Compliance Program (CCP) Current Edition.
- G. NAAWS (CSIP) - Certified Seismic Installation Program (CSIP) Current Edition.

1.03 ACTION SUBMITTALS

- A. Product Data: For countertop materials [and sinks].
- B. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
 - 1. Show locations and details of joints.
 - 2. Show direction of directional pattern, if any.
- C. Samples for Initial Selection: For each type of material exposed to view.
- D. Samples for Verification: For the following products:
 - 1. Countertop material, 6 inches square.
 - 2. Wood trim, 8 inches long.
 - 3. One full-size solid surface material countertop, with front edge [and backsplash], 8 by 10 inches, of construction and in configuration specified.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: To include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than three years of documented experience.
- B. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a licensee of NAAWS 's Certified Compliance Program.
 - 1. Quality Certification: Comply with NAAWS (QCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section.
 - 2. Comply with NAAWS (QCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section: www.awiqcp.org.
 - 3. Comply with NAAWS (MCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section: www.woodworkinstitute.com.
 - 4. Provide labels or certificates indicating that the installed work complies with NAAWS requirements for grade or grades specified.
 - 5. Provide designated labels on shop drawings as required by certification program.
 - 6. Provide designated labels on installed products as required by certification program.
 - 7. Replace, repair, or rework all work for which certification is refused.
- C. Fabrication and Installation Standards: Fabricate and install in accordance with North American Architectural Woodwork Standards – 3.0 as listed below.
 - 1. Countertops: Section 11.
- D. North American Architectural Woodwork Standards (NAAWS) Certification:
 - 1. Millwork, casework and cabinetwork shall be manufactured in accordance with standards established in the NAAWS, Latest Edition, in grade or grades herein specified or as shown on Drawings.
 - 2. Before delivery to jobsite, woodwork supplier shall submit NAAWS Certified Compliance Certificate indicating millwork products being supplied and certifying that products fully meet the requirements of Grade or Grades specified.
 - 3. At completion of installation, woodwork installer shall provide NAAWS Certified Compliance Certificate indicating the products installed, and certifying that the installation of these products fully meets the requirements of the Grade or Grades specified.
 - 4. All fees charged by the NAAWS for their Certified Compliance program are responsibility of millwork manufacturer and/or installer and shall be included in their bid.
 - 5. The foregoing shall not be construed to limit power and authority of University to reject any millwork which does not in University's opinion meet with any one or more of the specifications of this Contract.

1.07 MOCK-UPS

- A. Mock-ups: Build mock-ups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mock-ups of typical countertops as indicated on Drawings.
 - 2. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.09 FIELD CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.
- B. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 deg F and 90 degrees F and relative humidity between 25 and 55 percent during the remainder of the construction period.
- C. During and after installation of custom cabinets, maintain temperature and humidity conditions in building spaces at same levels planned for occupancy.
- D. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed, and indicate measurements on Shop Drawings.

1.10 COORDINATION

- A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Provide products by one of the following:
 - 1. Arizona Tile
 - 2. Caesarstone.
 - 3. Formica.
 - 4. Wilsonart.
 - 5. Lapitec, silica free product.
- B. See current Campus Specification Matrix for Preferred Manufacturers.

2.02 COUNTERTOPS

- A. Quality Standard: Premium Grade, in accordance with NAAWS, unless noted otherwise.
- B. Solid Surfacing Countertops: Solid surfacing sheet or plastic resin casting over continuous substrate.
 - 1. Flat Sheet Thickness: 1/2 inch, minimum.
 - 2. Solid Surfacing Sheet and Plastic Resin Castings: Complying with ISFA 2-01 and NEMA LD 3; acrylic or polyester resin, mineral filler, and pigments; homogenous, non-porous and capable of being worked and repaired using standard woodworking tools; no surface coating; color and pattern consistent throughout thickness.
 - a. Surface Burning Characteristics: Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
 - b. NSF approved for food contact.
 - 3. Exposed Edge Treatment: Built up to minimum 1-1/4 inch thick; square edge; use marine edge at sinks.
 - 4. Exposed Edge Treatment: As indicated on Drawings.
 - 5. Back Splashes: Same sheet material, square top; minimum 4 inches high.
 - 6. Fabricate in accordance with NAAWS, Section 11 - Countertops, Premium Grade.
 - 7. Silica free products are preferred.
- C. Quartz Agglomerate: Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with the "Physical Characteristics of Materials" Article of ANSI SS1.
 - 1. Configuration: Provide countertops with the following front and backsplash style:
 - a. Front: Straight, slightly eased at top.
 - b. Backsplash: Straight, slightly eased at corner.
 - c. Countertops: 1/2 inch thick, quartz agglomerate with front edge built up with same material.
 - 2. Backsplashes: 1/2 inch thick, quartz agglomerate.
 - 3. Fabrication: Fabricate tops in one piece with shop-applied edges unless otherwise indicated. Comply with quartz agglomerate manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - a. Fabricate with loose backsplashes for field assembly.

2.03 ACCESSORY MATERIALS

- A. Wood-Based Components:
 - 1. Wood fabricated from old growth timber is not permitted.
- B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.

1. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
 2. Medium-Density Fiberboard: ANSI A208.2, Grade 130.
 3. Softwood Plywood: DOC PS 1.
- C. Composite wood products within the weatherproofing membrane must be documented to have low formaldehyde emissions that meet the California Air Resources Board ATCM for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins or no added formaldehyde resins (NAUF).
- D. Documentation: manufacturer documentation which confirms low formaldehyde emissions that meet the California Air Resources Board Composite Wood Products Airborne Toxic Control Measures (ATCM) for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins or no added formaldehyde resins (NAUF).
- E. Adhesives: Chemical resistant waterproof adhesive as recommended by manufacturer of materials being joined.
1. Adhesives shall have a VOC content of 70 g/L or less
 2. Adhesives shall meet VOC and chemical component limits of South Coast Air Quality Management District SCAQMD 1168 and CAL-Green Table 5.504.4.1 Adhesive VOC Limit requirements.
- F. Joint Sealant: As specified in Section 07 92 00 - Joint Sealants.
- G. Grommets for Cable Passage: Standard plastic or painted metal, 2 inch OD, molded-plastic grommets and matching plastic caps with slot for wire passage.
1. Color: Black.
- H. Counter Support Brackets.

2.04 FABRICATION

- A. Fabricate tops and splashes in the largest sections practicable, with top surface of joints flush.
1. Join lengths of tops using best method recommended by manufacturer.
 2. Fabricate to overhang fronts and ends of cabinets 1 inch except where top butts against cabinet or wall.
 3. Prepare all cutouts accurately to size; replace tops having improperly dimensioned or unnecessary cutouts or fixture holes.
- B. Provide back splash wherever counter edge abuts vertical surface unless otherwise indicated.
1. Secure to countertop with concealed fasteners and with contact surfaces set in waterproof glue.
 2. Height and Location: As indicated on Drawings.
- C. Solid Surfacing: Fabricate tops up to 144 inches long in one piece; join pieces with adhesive sealant in accordance with manufacturer's recommendations and instructions.

- D. Quartz Agglomerate: Fabricate tops up to 144 inches long in one piece; join pieces with adhesive sealant in accordance with manufacturer's recommendations and instructions.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Design Build Architect of unsatisfactory preparation before proceeding.
- C. Verify that wall surfaces have been finished and mechanical and electrical services and outlets are installed in proper locations.

3.02 INSTALLATION

- A. Securely attach countertops to cabinets using concealed fasteners. Make flat surfaces level; shim where required.
- B. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Pre-drill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
 - 1. Install backsplashes to comply with manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 2. Seal edges of cutouts in particleboard subtops by saturating with varnish.
- C. Attach plastic laminate countertops using screws with minimum penetration into substrate board of 5/8 inch.
- D. Attach stainless steel countertops using stainless steel fasteners and clips.
- E. Seal joint between back/end splashes and vertical surfaces.

3.03 TOLERANCES

- A. Variation From Horizontal: 1/8 inch in 10 feet, maximum.
- B. Offset From Wall, Countertops: 1/8 inch maximum; 1/16 inch minimum.
- C. Field Joints: 1/8 inch wide, maximum.

3.04 CLEANING

- A. Clean countertops surfaces thoroughly.

3.05 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 12 48 13

ENTRANCE FLOOR MATS AND FRAMES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Roll-up rail mats.
2. Resilient entrance mats.
3. Resilient-tile entrance mats.
4. **[Recessed] [Surface-mounted] frames.**

B. Related Requirements:

1. Section 12 48 16 "Entrance Floor Grilles" for rigid floor grilles and frames.

1.03 COORDINATION

- A. Coordinate size and location of recesses in concrete to receive floor mats and frames.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for floor mats and frames.

B. Shop Drawings:

1. Items penetrating floor mats and frames, including door control devices.
2. Divisions between mat sections.
3. Perimeter floor **[moldings] [frames]**.
4. Custom Graphics: Scale drawing indicating colors.

C. Samples: For the following products, in manufacturer's standard sizes:

1. Floor Mat: Assembled sections of floor mat.
2. Tread Rail: Sample of each type and color.
3. Frame Members: Sample of each type and color.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For floor mats and frames to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Resilient-Tile Entrance Mats: Full-size tile units equal to **[2]** <Insert number> percent of amount installed, but no fewer than **[10]** <Insert number> units.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Tandus, or Equal.
- B. See current Campus Standards for Preferred Manufacturers.

2.02 ENTRANCE FLOOR MATS AND FRAMES, GENERAL

- A. Structural Performance: Provide roll-up rail mats and frames capable of withstanding the following loads and stresses within limits and under conditions indicated:
1. Uniform floor load of **[300 lbf/sq. ft.]** <Insert value>.
 2. Wheel load of **[350 lb]** <Insert value> per wheel.
- B. Accessibility Standard: Comply with applicable provisions in **[the DOJ's "2010 ADA Standards for Accessible Design"]** **[and]** **[ICC A117.1]** <Insert regulation>.

2.03 ROLL-UP RAIL MATS

- A. Roll-up, Aluminum-Rail Hinged Mats: Extruded-aluminum tread rails **[1-1/2 inches]** **[2 inches]** <Insert dimension> wide by 3/8 inch thick, sitting on continuous vinyl cushions.
1. Tread Inserts: **[Plain serrated aluminum treads]** **[Textured-surface, resilient vinyl]** **[Ribbed-design-surface, resilient vinyl]** **[Mineral abrasive particles bonded to or embedded in vinyl]** **[Aluminum-oxide or silicon-carbide grit in epoxy matrix]** **[1/4-inch-high, 28-oz./sq. yd. weight, level-cut, nylon-pile, fusion-bonded carpet]** <Insert tread inserts>.
 2. Colors, Textures, and Patterns of Inserts: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
 3. Rail Color: **[Mill finish]** **[Clear]** **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors and color densities]**.
 4. Hinges: **[Plastic]** **[Aluminum]**.
 5. Mat Size: **[As indicated]** <Insert size>.
- B. Roll-up, Vinyl-Rail Hinged Mats: Vinyl-acrylic tread rails **[1-1/2 inches]** **[2 inches]** <Insert dimension> wide by 3/8 inch thick, with slotted or perforated hinges.
1. Tread Inserts: **[Textured-surface, resilient vinyl]** **[Ribbed-design-surface, resilient vinyl]** **[Mineral abrasive particles bonded to or embedded in vinyl]** **[Aluminum-oxide or silicon-carbide grit in epoxy matrix]** **[1/4-inch-high, 28-oz./sq. yd. weight, level-cut, nylon-pile, fusion-bonded carpet]** <Insert tread inserts>.

2. Colors, Textures, and Patterns of Inserts: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors].
3. Rail Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors].
4. Hinges: [Vinyl] [Aluminum].
5. Mat Size: [As indicated] <Insert size>.

2.04 RESILIENT ENTRANCE MATS

- A. Resilient Link Mats: Reversible [vinyl] [rubber] [rubber-tire] link mats, [3/8 inch] [or] [7/16 inch] thick, with [galvanized-spring] [stainless]-steel wire link rods, vulcanized edge-nosing trim, steel-reinforced end trim, and links consisting of rectangular units or continuous strips in a [heel-proof, solid-weave pattern with no openings between links] [heel-proof, close-weave pattern with openings between links not exceeding 1/8 inch wide by 1 inch long] [open-weave pattern].
 1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors].
 2. Mat Size: [As indicated] <Insert size>.
- B. [Rubber] [or] [Vinyl] Mats: [1/4-inch-] [3/8-inch-] [7/16-inch-] [1/2-inch-] <Insert dimension> thick mats; with [square edges for recessed installations] [beveled edges for surface applications] and with [solid-sheet (no perforations) style] [perforated style, 1/4-inch diameter on standard spacing] [perforated style, 3/16 by 3/4 inch on standard spacing], [standard pyramid design] [standard wide-wale corrugated] [hi-rib, narrow-wale corrugated] top profile, and [low-rib, narrow-wale corrugated] [standard knob-base] [flat-base] bottom surface.
 1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors].
 2. Mat Size: [As indicated] <Insert size>.
- C. Cocoa Mats: Constructed from cocoa fiber yarn permanently bonded to PVC backing for dimensional stability and resistance to shedding; [5/8- to 3/4-inch overall thickness; 1.5-lb/sq. ft.] [1-inch overall thickness; 2.0-lb/sq. ft.] [1-1/4-inch overall thickness; 2.5-lb/sq. ft.] weight.
 1. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors].
 2. Mat Size: [As indicated] <Insert size>.
- D. Rubber-Tire Mats: Units of edge-grain-laminated and chenille-buffed, rubber-tire wall cuts; bonded to sheet rubber or other durable flexible backing sheet to form 3/8- to 7/16-inch-thick, 12-inch-wide, continuous linear strip up to 25 feet long.
 1. Mat Size: [As indicated] <Insert size>.
- E. Carpet-Type Mats: [Nylon] [Polypropylene] [Olefin] [Polyester] carpet bonded to 1/8- to 1/4-inch-thick, flexible vinyl backing to form mats 3/8 or 7/16 inch thick with nonraveling edges.
 1. Colors, Textures, and Patterns: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from full range of industry colors].
 2. Mat Size: [As indicated] <Insert size>.

- F. Loop Filament Mats: Loop filament vinyl material **[3/8 inch]** **[1/2 inch]** thick, with **[solid vinyl]** **[foam]** sheet backing and with built-in chemical agents to reduce fungus and mildew.
 - 1. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
 - 2. Mat Size: **[As indicated]** <Insert size>.
- G. Graphics: Custom inlaid or woven-in graphic **[design,]** **[logo,]** **[emblem,]** **[characters,]** as indicated.

2.05 RESILIENT-TILE ENTRANCE MATS

- A. Rubber-Tire Tiles: Units of edge-grain-laminated and chenille-buffed, rubber-tire wall cuts; bonded to sheet rubber or other durable flexible backing sheet to form 3/8- to 7/16-inch-thick, square tile.
 - 1. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
 - 2. Tile Size: **[12 inches]** **[As indicated]** <Insert size>.
- B. **[Rubber]** **[or]** **[Vinyl]** Tiles: **[5/8-inch-]** **[7/16-inch-]** thick, **[solid]** **[open-grid]** **[rubber]** **[or]** **[vinyl]** compound molded tiles with **[concealed interlocking joint tabs]** **[1/4-inch-deep]**, serpentine-grooved top face and knob-base back face on solid tile.
 - 1. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
 - 2. Tile Size: **[As indicated]** <Insert size>.
- C. Carpet-Type Tiles: **[Nylon]** **[Polypropylene]** **[Olefin]** **[Polyester]** carpet bonded to 1/8- to 1/4-inch-thick, flexible vinyl backing to form mats 3/8 or 7/16 inch thick with nonraveling edges.
 - 1. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.
 - 2. Tile Size: **[As indicated]** <Insert size>.

2.06 FRAMES

- A. Recessed Frames: Manufacturer's standard extrusion.
 - 1. Extruded Aluminum: ASTM B221, Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
 - a. Color: **[Mill finish]** **[Clear]** **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors and color densities]**.
 - 2. Architectural Bronze: ASTM B455, Alloy UNS No. C38500.
- B. Surface-Mounted Frames:
 - 1. Tapered Frames: Tapered **[flexible vinyl edge-]** **[aluminum]** frame members, not less than **[2 inches]** **[1-1/2 inches]** wide **[, attached to mat at all four edges,]** with welded mitered corners.
 - a. Vinyl Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from full range of industry colors]**.

- b. Aluminum Color: [Mill finish] [Clear] [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities].

2.07 CONCRETE FILL AND GROUT MATERIALS

- A. Provide concrete fill and grout equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

2.08 FABRICATION

- A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.
- B. Recessed Frames: As indicated, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.
 - 1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.
- C. Surface-Mounted Frames: As indicated for permanent surface-mounted installation, complete with corner connectors, splice plates or connecting pins, and postinstalled expansion anchors.
- D. Coat concealed surfaces of aluminum frames that contact cementitious material with manufacturer's standard protective coating.

2.09 ALUMINUM FINISHES

- A. Mill finish.
- B. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
- C. Color Anodic Finish: AAMA 611, [AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm] or thicker.

2.10 COPPER-ALLOY (BRONZE) FINISHES

- A. Finish designations prefixed by CDA comply with the system established by the Copper Development Association for designating copper-alloy finishes, as defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
 - 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
- B. CDA Mechanical Finish Designation: [M11, specular, as fabricated] [M32, directionally textured, medium satin].

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and floor conditions for compliance with requirements for location, sizes, **[minimum recess depth,]**and other conditions affecting installation of floor mats and frames.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install recessed mat frames and mats to comply with manufacturer's written instructions so that tops of mats will be flush with adjoining finished flooring. Set mats with tops at height recommended by manufacturer for most effective cleaning action; coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.
 - 1. For installation in terrazzo flooring areas, allow for grinding and polishing of terrazzo without grinding surface of recessed frames. Coordinate with other trades as required.
 - 2. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.
 - 3. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.
 - 4. Delay setting mats until construction traffic has ended.
- B. Install surface-type units to comply with manufacturer's written instructions; coordinate with entrance locations and traffic patterns.
 - 1. Anchor fixed surface-type frame members to floor with devices spaced as recommended by manufacturer.

3.03 PROTECTION

- A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION

SECTION 12 65 00
MULTI-USE FIXED SEATING

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Fixed, upholstered theater chairs.
- B. Support standards.
- C. Chair accessories.

1.02 QUALITY ASSURANCE

- A. Fire Retardance of Upholstered Seating: Self-extinguishing when mock-up is exposed to smoldering cigarettes in accordance with ASTM E1352 or NFPA 261.
- B. Fire Retardance of Fixed Theater Seating: Maximum instantaneous net peak rate of heat release of 250 kW or less, and total energy released during first 5 minutes of 40 MJ or less, when tested in accordance with ASTM E1537.

1.03 DELIVERY, STORAGE, AND HANDLING

- A. Deliver seats to project site in unopened containers clearly labeled with manufacturer's name and identification of contents.
- B. Store seating units in dry and clean location until needed for installation. During installation, handle in a manner that will prevent marring and soiling of finished surfaces.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Sheet Steel: ASTM A879/A879M, Commercial Steel (CS) or Drawing Steel (DS) electrogalvanized sheet, 04Z (12G) coating class on both surfaces; chemically treated for baked enamel finish.
- B. Exposed Hardwood: Solid lumber selected for absence of visible defects; birch, northern hard maple, white oak, or species standard with manufacturer.
- C. Hardwood Plywood: HPVA HP-1; face veneers for exposed surfaces Grade A birch, hard maple, walnut, or as standard with manufacturer, with no visible defects; concealed surface veneers of sound grade hardwood.
- D. Laminated Plastic: NEMA LD 3, Type 1, Grade GP 50, nominal thickness 0.050 in; colors and patterns as selected from manufacturer's standards.
- E. Fiberglass: Molded plastic material with not less than 30 percent glass fiber reinforcement and integral color pigments.

- F. Polyurethane Foam: Density not less than 1.8 lb/cu ft, fire retardant, non-hardening and non-oxidizing, with high resistance to alkalis, oils, moisture, and mildew.
- G. Upholstery Fabric: ASTM D3597 heavy-duty plain woven nylon fabric, treated to resist cigarette ignition and staining; color and pattern as selected from manufacturer's standards.

2.02 UPHOLSTERED CHAIRS

- A. Fixed seating system designed to permit radial installation using common middle support standards in each row and aisle standards aligned as indicated on Drawings. Width of seats not less than 22 inches, except exit seat locations may be reduced to 20 inches to complete specific row dimensions.
- B. Backs: Fixed type; two-panel construction with fabric covering over padding and protective back panel, with installed height not less than 32 inches above finished floor.
 - 1. Rear Panel: One-piece molded plywood, not less than 1/4 in thick, with exposed back surface of plastic laminate.
- C. Seats: Hinged type, constructed to permit reupholstering without removing seat from chair.
 - 1. Steel Seat Construction: One-piece sheet steel pan construction, reinforced at stress points and designed to completely enclose hinges and self-rising seat mechanism; supporting not fewer than 16 coil springs or five non-sag serpentine springs. Separate padding from springs with burlap sheeting cemented to polyurethane foam padding formed with minimum thickness of 1-3/4 in. Upholster with fabric sewn into box construction without welts and securely fastened to supporting frame to provide smooth, wrinkle-free surface.

For serpentine spring construction, provide not less than 3 in thick foam padding at front edge of seat.

- D. Arm Rests: Locate at aisles and between chairs; mount to support standard with concealed fasteners; exposed surfaces of solid hardwood lumber with smoothed edges.
- E. End Panels: One piece panels fastened securely to aisle standards with concealed fasteners, configured as follows:
 - 1. Shape: Rectangular.
 - 2. Finish: Plastic laminate.

2.03 STANDARDS

- A. Support Standards: Tubular steel with welded mounting points for backs, seats, and arm rests, and welded floor anchor plates.

2.04 ACCESSORIES

- A. Folding Tablet Arms: At standard to right side of each seat, provide manufacturer's standard fold-away tablet arm assembly, with hinge and swivel mechanism securely fastened to underside of writing surface and designed to provide solid support in the open position and semi-automatic return to stowed position beneath right arm rest and parallel to right standard.
- B. At least five percent of aisle seats (but not less than one) are required to either have no armrest on the aisle side or to have a removable or folding armrest on the aisle side. These seats shall be the aisle seats located closest to accessible routes and shall be identified by a sign or marker with the International Symbol of Accessibility.

2.05 FINISHES

- A. Ferrous Metals: Manufacturer's standard two-coat baked enamel finish, applied over conversion coating appropriate to base metal.
- B. Hardwood: Manufacturer's standard clear low-gloss finish.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Comply with manufacturer's installation instructions and approved shop drawings.
- B. Anchor support standards securely to substrate with at least two anchoring devices recommended by manufacturer.
 - 1. Place standards in each row laterally so the standards at the aisle will be in alignment. Vary width of seats and backs as required to optimize sightlines, and comply with the ADA Standards for Accessible Design requirements for row and aisle widths.

END OF SECTION

DIVISION 14

CONVEYING EQUIPMENT

This page intentionally left blank

SECTION 14 21 23

MACHINE ROOM ELECTRIC TRACTION ELEVATORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Electric traction elevators.
- B. Related Requirements:
 - a. Attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills.
- 2. Section 05 50 00 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills.
 - e. Pit ladders.

1.02 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.
- B. Service Elevator: A passenger elevator that is also used to carry freight.

1.03 ACTION SUBMITTALS

- A. Product Data:
 - 1. Electric traction elevators.
- B. Product Data Submittals: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include Product Data for car enclosures, hoistway entrances, and operation, control, and signal systems.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing, coordination with building structure, relationships with other construction, and locations of equipment.
 - 2. Include large-scale layout of car-control station [**and standby power operation control panel**].

3. Indicate maximum dynamic and static loads imposed on building structure at points of support, and maximum and average power demands.
- D. Samples for Initial Selection: For finishes involving color selection.
 - E. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes; 3-inch-square Samples of sheet materials; and 4-inch lengths of running trim members.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Seismic Qualification Data: Certificates, for elevator equipment, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - C. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and machine room layout and dimensions, as indicated on Drawings, and electrical service **[including standby power generator]**, as shown and specified, are adequate for elevator system being provided.
 - D. Sample Warranty: For special warranty.
- 1.05 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
 1. Submit manufacturer's or Installer's standard operation and maintenance manual, according to ASME A17.1/CSA B44 **[including diagnostic and repair information available to manufacturer's and Installer's maintenance personnel]**.
 - B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
 - C. Continuing Maintenance Proposal:
 1. Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard one-year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.
- 1.06 QUALITY ASSURANCE
- A. Installer Qualifications: Elevator manufacturer **[or an authorized representative who is trained and approved by manufacturer]**.
- 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.08 COORDINATION

- A. Coordinate installation of inserts, sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, inserts, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Coordinate locations and dimensions of work specified in other Sections that relates to electric traction elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.09 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: three (3) year from date of Substantial Completion.
 - 3. Response time for repairs shall be within 24 hours.
 - 4. Emergencies response time shall be less than 3 hours at no additional cost to the College.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain electric traction elevators [, including freight and hydraulic elevators specified in other Sections,] from single manufacturer.
 - 1. Major elevator components, including driving machines, controllers, signal fixtures, door operators, car frames, cars, and entrances, to be manufactured by single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Accessibility Requirements: Comply with requirements for accessible elevators in the United States Access Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Seismic Performance: Elevator system to withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>** and to comply with elevator seismic requirements in ASME A17.1/CSA B44.
 - 1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified **[and the system will be fully operational after the seismic event].**"

2. Project Seismic Design Category: **[C] [D] [E] [F]**.
3. Elevator Component Importance Factor: **[1.5] [1.0]**.
4. Design earthquake spectral response acceleration short period (Sds) for Project is **<Insert value>**.
5. Provide earthquake equipment required by ASME A17.1/CSA B44.
6. Provide seismic switch required by ASCE/SEI 7.

2.03 ELECTRIC TRACTION ELEVATORS

- A. See specific College Facility Design Standards for acceptable elevator manufacturers and controllers.
- B. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturer's standard components to be used, as included in standard elevator systems and as required for complete system.
- C. Existing elevators in buildings to be modernized shall be modernized without changing the type of conveyance. The amount of change to an existing system shall be determined by the college (Director of College Facilities), the design professional, and the selected elevator consultant (i.e. lift and control cables, cylinders, inside and outside control panels, doors, etc.).
- D. Elevators shall have an elevator machine control room for equipment. The rooms shall be temperature controlled to limit heat to conform to the manufacturers operating instructions.
- E. Elevators and installations shall be of a make and design that they are maintainable by a third party.
- F. Elevator shall be designed so that during a power outage, the elevator will automatically return to the ground floor and the doors will open.
- G. Finishes inside the cab and elevator doors shall be stainless steel or vandal resistant material. Final approval of cab and door finishes shall be approved in writing (signed off) by the college.
- H. Elevator cabs and electrical lighting fixtures installed with the elevator shall be LED lighting.
- I. Elevator controls shall be of a generic type that can be maintained and replaced by a third party.
- J. Failure to comply
- K. Elevator Description:
 1. Machine Type: **[Geared] [Gearless]** traction.
 2. Rated Load: **[3500 lb] [4000 lb] [4500 lb] [5000 lb]** <Insert value>.
 3. Freight Loading Class for Service Elevator(s): Class A.
 4. Rated Speed: **[350 fpm] [400 fpm] [450 fpm] [500 fpm] [700 fpm] [800 fpm] [1000 fpm] [1200 fpm] [1400 fpm]** <Insert value>.
 5. Operation System: **[Selective-collective automatic operation] [Group automatic operation] [Group automatic operation with demand-based dispatching] [Destination-based group automatic operation]**.
 6. Auxiliary Operations:

- a. Standby power operation.
 - b. Standby-powered lowering.
 - c. Battery-powered automatic evacuation.
 - d. Automatic dispatching of loaded car.
 - e. Nuisance-call cancel.
 - f. Loaded-car bypass.
 - g. Distributed parking.
 - h. Off-peak operation.
 - i. Automatic operation of lights and ventilation fans.
 - j. [Emergency hospital] [Priority] service at [all] <Insert floor designations> floors.
 - k. Independent service for [service elevator] [one car in group] [all cars in group].
7. Security Features: [Card-reader operation] [Keyswitch operation] [Keypad operation] [Car-to-lobby feature].
8. Dual Car-Control Stations: Provide two car-control stations [in each elevator]; equip only one with required keyswitches if any.
9. Car Enclosures:
- a. Inside Width: [Not less than] [64 inches] [66 inches] [68 inches] [70 inches] [80 inches] [89-1/2 inches] [92 inches] <Insert dimension> from side wall to side wall.
 - b. Inside Depth: [Not less than] [51 inches] [53 inches] [56-1/2 inches] [60 inches] [64-1/2 inches] [66 inches] [68 inches] [88 inches] [89 inches] [90-1/2 inches] [93-1/2 inches] [95 inches] [96-1/2 inches] [101 inches] [102 inches] [104 inches] [108 inches] <Insert dimension> from back wall to front wall (return panels).
 - c. Inside Height: Not less than [93 inches] <Insert dimension> to underside of ceiling.
 - d. Front Walls (Return Panels): [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - e. Car Fixtures: [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - f. Side and Rear Wall Panels: [Enameled or powder-coated steel] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Textured stainless steel] [Satin bronze, lacquered].
 - g. Reveals: [Black] [Enameled or powder-coated steel] [Anodized aluminum] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - h. Door Sills: [Aluminum] [Bronze] [Nickel silver].

- i. Ceiling: [Luminous ceiling] [Enameled or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Reflective metallic-finish, plastic-laminate, stainless steel] [Reflective metallic-finish, plastic-laminate, bronze].
 - j. Handrails: [**1-1/2 inches** round] [**1/2 by 2 inches** rectangular] <Insert dimension> [anodized aluminum] [mirror-polished stainless steel] [satin stainless steel] [mirror-polished bronze, lacquered] [satin bronze, lacquered], at [sides] [and] [rear] of car.
 - k. Floor: Manufacturer's standard carpet.
 - l. Floor prepared to receive carpet (specified in Section 09 68 16 "Sheet Carpeting").
 - m. Floor prepared to receive resilient flooring (specified in Section 09 65 16 "Resilient Sheet Flooring").
 - n. Floor recessed and prepared to receive [dimension stone tile (specified in Section 09 30 33 "Stone Tiling")] [ceramic tile (specified in Section 09 30 13 "Ceramic Tiling")].
 - o. Floor Thickness, Including Setting Materials: <Insert thickness> above plywood subfloor.
10. Hoistway Entrances:
- a. Width: [**36 inches**] [**42 inches**] [**48 inches**] [**54 inches**] <Insert dimension>.
 - b. Height: [**84 inches**] <Insert dimension>.
 - c. Type: [Single-speed side sliding] [Two-speed side sliding] [Single-speed center opening] [Two-speed center opening].
 - d. Frames: [At first floor.] [At basement floor.] [Enameled or powder-coated steel] [Primed or powder-coated steel] [Primed or powder-coated steel to receive stone] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Steel subframes to receive stone].
 - e. Frames at Other Floors: [Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - f. Doors and Transoms: [At first floor.] [At basement floor.] [Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - g. Doors and Transoms at Other Floors: [Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - h. Sills: [At first floor.] [At basement floor.] [Aluminum] [Bronze] [Nickel silver].
 - i. Sills at Other Floors: [**Aluminum**] [**Bronze**] [**Nickel silver**].
11. Hall Fixtures: [At first floor.] [At basement floor.] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces].

12. Hall Fixtures at Other Floors: [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces].
13. Additional Requirements:
 - a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from [polished stainless steel, ASTM A480/A480M, No. 8 finish] [satin stainless steel, ASTM A480/A480M, No. 4 finish] [polished bronze, lacquered] [satin bronze, lacquered].
 - b. Provide hooks for protective pads in **[service car] [all cars]** and **[one] [two]** <Insert number> complete set(s) of full-height protective pads.

2.04 TRACTION SYSTEMS

- A. Elevator Machines: Variable-voltage, variable-frequency, ac-type hoisting machines **[or variable-voltage dc-type hoisting machines]** and solid-state power converters.
 1. Provide [regenerative] [or] [nonregenerative] system.
 2. Provide regenerative system that complies with the IgCC.
 3. Limit total harmonic distortion of regenerated power to 5 percent per IEEE 519.
 4. Provide means for absorbing regenerated power when elevator system is operating on standby power.
 5. Provide line filters or chokes to prevent electrical peaks or spikes from feeding back into building power system.
- B. Fluid for Hydraulic Buffers: Fire-resistant fluid.
- C. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- D. Machine Beams: Provide steel framing to support elevator hoisting machine and deflector sheaves from the building structure. Comply with Section 05 50 00 "Metal Fabrications" for materials and fabrication.
- E. Car Frame and Platform: Bolted- or welded-steel units.
- F. Guides: **[Roller guides] [or] [polymer-coated, nonlubricated sliding guides]**. Provide guides at top and bottom of car and counterweight frames.

2.05 OPERATION SYSTEMS

- A. Provide manufacturer's standard microprocessor operation systems as required to provide type of operation indicated.
- B. Group Automatic Operation with Demand-Based Dispatching: Provide **[reprogrammable]** group automatic system that assigns cars to hall calls based on a dispatching program designed to minimize passenger **[wait time] [time to destination]**. System automatically adjusts to demand changes for different traffic conditions including heavy incoming, heavy two-way, heavy outgoing, and light off-hours as variations of normal two-way traffic.

- C. Destination-Based Group Automatic Operation: Provide reprogrammable group automatic system that assigns elevators leaving the main lobby in the up direction to a selected group of floors and directs passengers to an elevator serving their destination floor. System dispatches cars in a regulated sequence for optimum system efficiency; dispatch is based on origin and destination of calls. System automatically adjusts to changes in demand for different traffic conditions including heavy incoming, heavy two-way, heavy outgoing, and light off-hours as variations of normal two-way traffic.
- D. Auxiliary Operations:
1. Single-Car Standby Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby] [fire-command station] <Insert location>**. Manual operation causes automatic operation to cease.
 2. Single-Car Standby-Powered Lowering: On activation of standby power, if car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to the next floor below, opens its doors, and shuts down.
 3. Single-Car Battery-Powered Automatic Evacuation: If power fails and car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it moves to the next floor above or below, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
 4. Group Standby Power Operation:
 - a. On activation of standby power, cars are returned to a designated floor and parked with doors open. One car is returned at a time, with priority given to loaded cars. If a car cannot be returned after two attempts, it is removed from the system. When all cars have been returned or removed from the system, one car is automatically placed in service. If car selected for service cannot operate within 60 seconds, the system removes car from service and places another car in service. Cars can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby] [fire-command station] <Insert location>**. Manual operation causes automatic operation to cease.
 - b. On activation of standby power, cars are returned, one at a time, to a designated floor and parked with doors open. If a car cannot be returned, it is removed from the system. When all cars have been returned or removed from the system, one car can be put in service on standby power by a selector switch in control panel located at **[main lobby] [fire-command station] <Insert location>**.
 5. Group Battery-Powered Automatic Evacuation: If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are moved one at a time to the next floor above or below, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 6. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors begin closing.
 7. Nuisance-Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls **[and predetermined weight]** can be adjusted.
 8. Loaded-Car Bypass: When car load exceeds 80 percent of rated capacity, car responds only to car calls, not to hall calls.

9. Distributed Parking: When cars are not required for response to calls, they are parked with doors closed and distributed in predetermined zones throughout the building. One zone to include the main floor and adjacent floors; remaining floors to be divided into approximately equal zones.
10. Off-Peak Operation: During periods of low traffic, half of the elevators in a group to be taken out of service and switched to low power mode.
11. Independent Service: Keyswitch in car-control station removes car from group operation and allows it to respond only to car calls. Key cannot be removed from keyswitch when car is in independent service. When in independent service, doors close only in response to door close button.
12. Priority Service: Service is initiated by a **[keyswitch] [card reader] [remote switch]** at designated floors. One elevator is removed from group operation and directed to the floor where service was initiated. On arriving at the floor, elevator opens its doors and parks **[and a lighted sign directs passengers to exit elevator]**. Car is placed in operation by selecting a floor and pressing door close button or by operating keyswitch to put car in independent service. After responding to floor selected or being removed from independent service, car is returned to group operation. If car is not placed in operation within a preset time after being called, it is returned to group operation.
13. Automatic Operation of Lights and Fan: When elevator is stopped and unoccupied with doors closed, lighting, ventilation fan, and cab displays are de-energized after five minutes and are re-energized before car doors open.

E. Security features are not to not affect emergency firefighters' service.

1. Card-Reader Operation: System uses card readers at **[car-control stations] [and] [hall push-button stations]** to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. **[Allow space for card reader in car] [Provide stripe-swipe card reader integral with each car-control station]**.
 - a. Security access system equipment is **[specified in Section 28 15 00 "Access Control Hardware Devices."]** **[not in the Contract.]**
2. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at **[car-control stations] [and] [hall push-button stations]**. Key is removable **[only in deactivated] [in either]** position.
3. Keypad Operation: Allows each landing to be restricted or unrestricted. When a restricted landing button is pressed, a "Restricted Floor" lamp lights and remains lit until landing access code has been entered into a keypad or predetermined time has elapsed. Car calls for restricted landings do not register until landing access code is entered into keypad within predetermined time after landing button is pressed.
 - a. Access codes are programmed at each car operating panel using a security keyswitch. Keypad operation can be activated and deactivated by security keyswitch at main landing.
4. Car-to-Lobby Feature: Feature, activated by keyswitch at main lobby, that causes **[car] [all cars in a group]** to return immediately to lobby and open doors for inspection. On deactivation by keyswitch, calls registered before keyswitch activation are completed and normal operation is resumed.

2.06 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams causes doors to stop and reopen.
- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door reopening device, a loud buzzer sounds and doors begin to close at reduced kinetic energy.

2.07 CAR ENCLOSURES

- A. Provide [enameled or powder-coated steel car enclosures to receive removable] [steel-framed car enclosures with nonremovable] wall panels, with [removable] car roof, access doors, power door operators, and ventilation.
 - 1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
 - 2. See "Allowances" Paragraph in "Summary" Article for items to be provided under the Elevator Car Allowance. Provide items not included in the Elevator Car Allowance as needed for finished car [**including materials and finishes specified below**].
- B. Materials and Finishes: Manufacturer's standards, but not less than the following:
 - 1. Subfloor:
 - a. Exterior, underlayment grade plywood, not less than 5/8-inch nominal thickness.
 - b. Exterior, C-C Plugged grade plywood, not less than 7/8-inch nominal thickness.
 - 2. Floor Finish:
 - a. Specified in Section <Insert Section number> "<Insert Section title>."
 - b. Elevator manufacturer's standard level-loop nylon carpet; color as selected by Architect from full range of industry colors.
 - 3. Enameled or Powder-Coated Steel Wall Panels: Flush, formed-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied 3-coats of enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
 - 4. Stainless Steel Wall Panels: Flush, formed-metal construction; fabricated from stainless steel sheet.
 - 5. Bronze Wall Panels: Flush, formed-metal construction; fabricated from bronze sheet.
 - 6. Fabricate car with recesses and cutouts for signal equipment.
 - 7. Fabricate car door frame integrally with front wall of car.
 - 8. Enameled or Powder-Coated Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
 - 9. Primed or Powder-Coated Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied, rust-resistant primer or powder-coating for field painting.
 - 10. Stainless Steel Doors: Flush, hollow-metal construction; fabricated [from stainless steel sheet] [or] [by laminating stainless steel sheet to exposed faces and edges of enameled or powder-coated steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning].

11. Bronze Doors: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled or powder-coated steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
12. Unfinished-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel or powder-coating.
13. Sight Guards: Provide sight guards on car doors.
14. Sills: Extruded or machined metal, with grooved surface, 1/4 inch thick.
15. Luminous Ceiling: Fluorescent light fixtures and ceiling panels of translucent acrylic or other permanent rigid plastic.
16. Ceiling: [Metal] [Metallic-finish, plastic-laminate] flush panels, with [incandescent downlights in the center of] [four low-voltage downlights in] each panel. [Align ceiling panel joints with joints between wall panels.]
17. Light Fixture Efficiency: Not less than 35 lumens/W.
18. Ventilation Fan Efficiency: Not less than 3.0 cfm/W.

2.08 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile to accommodate hoistway wall construction.
 1. Where gypsum board wall construction is indicated, frames to be self-supporting with reinforced head sections.
- B. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies to comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, based on testing at as close-to-neutral pressure as possible according to **[NFPA 252] [or] [UL 10B]**.
 1. Fire-Protection Rating: [1 hour] [1-1/2 hours] <Insert rating> [with 30-minute temperature rise of **450 deg F**].
- C. Materials and Fabrication: Manufacturer's standards, but not less than the following:
 1. Enameled or Powder-Coated Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
 2. Primed or Powder-Coated Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied, rust-resistant primer or powder-coating for field painting.
 3. Steel Subframes: Formed from cold- or hot-rolled steel sheet, with factory-applied enamel or powder-coat finish or rust-resistant primer. Fabricate to receive applied finish as indicated.
 4. Stainless Steel Frames: Formed from stainless steel sheet.
 5. Bronze Frames: Formed from cold- or hot-rolled steel sheet, with enamel or powder-coat finish, and with formed-bronze sheet laminated to steel frames using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
 6. Star of Life Symbol: Identify emergency elevators with star of life symbol, not less than 3 inches high, on both jambs of hoistway door frames.

7. Enameled or Powder-Coated Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
8. Primed or Powder-Coated Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied, rust-resistant primer or powder-coating for field painting.
9. Stainless Steel Doors and Transoms: Flush, hollow-metal construction; fabricated [from stainless steel sheet] [or] [by laminating stainless steel sheet to exposed faces and edges of enameled or powder-coated steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning].
10. Bronze Doors and Transoms: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled or powder-coated steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
11. Unfinished-Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel or powder-coating.
12. Sight Guards: Provide sight guards on doors matching door edges.
13. Sills: Extruded or machined metal, with grooved surface, 1/4 inch thick.
14. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M.

2.09 SIGNAL EQUIPMENT

- A. Provide [hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled] [signal equipment designed for destination-based system]. Provide [vandal-resistant] buttons and lighted elements illuminated with LEDs.
- B. Car-Control Stations: Provide manufacturer's standard [recessed] [or] [semirecessed] car-control stations. Mount in return panel adjacent to car door unless otherwise indicated.
 1. Mark buttons and switches for required use or function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- C. Swing-Return Car-Control Stations: Provide car-control stations mounted on rear of hinged return panel adjacent to car door and with buttons, switches, controls, and indicator lights projecting through return panel but substantially flush with face of return panel.
 1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- D. Emergency Communication System: Two-way voice communication system, with visible signal, which dials preprogrammed number of monitoring station and does not require handset use. System is contained in flush-mounted cabinet, with identification, instructions for use, and battery backup power supply.

- E. Firefighters' Two-Way Telephone Communication Service: Provide **[flush-mounted cabinet]** **[telephone jack]** in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in **[Section 28 46 21.11 "Addressable Fire-Alarm Systems."]** **[Section 28 46 21.13 "Conventional Fire-Alarm Systems."]**
- F. Car Position Indicator: Provide **[illuminated,]**digital-type car position indicator, located above car door or above car-control station. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.
- G. Hall Push-Button Stations: **[Provide one hall push-button station at each landing]** **[Provide one hall push-button station at each landing for each single elevator or group of elevators, but not less than one station for each four elevators in a group]** **[Provide hall push-button stations at each landing as indicated].**
1. Provide **[manufacturer's standard wall-mounted units]** **[units with flat faceplate for mounting with body of unit recessed in wall].**
 2. Equip units with buttons for calling elevator and for indicating desired direction of travel.
 3. Equip units with **[buttons]** **[or]** **[touch screen]** for calling elevator and for indicating direction of travel or destination as required by system. Provide a signaling system to verify floor selection, where destination registration is required, and to direct passengers to appropriate car.
 - a. Provide a means for passengers to indicate that they have disabilities so control system can allow extra room in assigned car.
 - b. Provide for connecting units that require destination registration to building security access system so a card reader can be used to register calls.
 4. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in **[Section 28 46 21.11 "Addressable Fire-Alarm Systems."]** **[Section 28 46 21.13 "Conventional Fire-Alarm Systems."]**
- H. Hall Lanterns: Units with illuminated arrows; but provide single arrow at terminal landings. Provide **[one of]** the following:
1. Manufacturer's standard wall-mounted units, for mounting above entrance frames.
 2. Units with flat faceplate for mounting with body of unit recessed in wall and with illuminated elements projecting from faceplate for ease of angular viewing.
 3. Units mounted in both jambs of entrance frame **[for each elevator].**
 4. Units mounted in both car door jambs **[; may be used only for single elevators or for two-car groups].**
- I. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.
1. At manufacturer's option, audible signals may be placed on cars.
- J. Hall Position Indicators: Provide **[illuminated,]**digital-display-type position indicators, located above **[each]** hoistway entrance at ground floor. Provide units with flat faceplate and with body of unit recessed in wall.
1. Integrate ground-floor hall lanterns with hall position indicators.

- K. Standby Power Elevator Selector Switches: Provide switches, as required by ASME A17.1/CSA B44, where indicated. Adjacent to switches, provide illuminated signal that indicates when normal power supply has failed. **[For each elevator, provide illuminated signals that indicate when they are operational and when they are at the designated emergency return level with doors open.]**
 - L. Fire-Command-Center Annunciator Panel: Provide panel containing illuminated position indicators for each elevator, clearly labeled with elevator designation; include illuminated signal that indicates when elevator is operational and when it is at the designated emergency return level with doors open. Provide standby power elevator selector switch(es), as required by ASME A17.1/CSA B44, adjacent to position indicators. Provide illuminated signal that indicates when normal power supply has failed.
 - M. Emergency Pictorial Signs: Fabricate from materials matching hall push-button stations, with text and graphics as required by authorities having jurisdiction, indicating that in case of fire, elevators are out of service and exits should be used instead. Provide one sign at each hall push-button station unless otherwise indicated.
 - N. <Insert requirements>.
- 2.10 FINISH MATERIALS
- A. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, commercial steel, Type B, exposed, matte finish.
 - B. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, commercial steel, Type B, pickled.
 - C. Stainless Steel Sheet: ASTM A240/A240M, Type 304.
 - D. Textured Stainless Steel Sheet: ASTM A240/A240M, Type 304 with embossed texture rolled into exposed surface.
 - 1. Product: Subject to compliance with requirements, provide "<Insert product name or designation>" by <Insert manufacturer's name>.
 - 2. Metal surface is [satin polished] [satin relieved] [titanium nitride colored] [oxide colored] [satin polished and titanium nitride colored] [satin relieved and titanium nitride colored] [satin polished and oxide colored] [satin relieved and oxide colored] [color coated and satin relieved] [color coated and bright relieved] after texturing.
 - E. Stainless Steel Bars: ASTM A276/A276M, Type 304.
 - F. Stainless Steel Tubing: ASTM A554, Grade MT 304.
 - G. Bronze Plate and Sheet: ASTM B36/B36M, Alloy UNS No. C28000 (muntz metal).
 - H. Bronze Extrusions: ASTM B455/B455M, Alloy UNS No. C38500 (architectural bronze).
 - I. Bronze Tubing: ASTM B135/B135M, Alloy UNS No. C23000 (red brass, 85 percent copper).
 - J. Aluminum Extrusions: ASTM B221, Alloy 6063.
 - K. Nickel Silver Extrusions: ASTM B151/B151M, Alloy UNS No. C74500 or UNS No. C77600.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Examine hoistways, hoistway openings, pits, and machine rooms as constructed; verify critical dimensions; and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF ELECTRIC TRACTION ELEVATORS

- A. Comply with manufacturer's written instructions.
- B. When replacing or eliminating hydraulic cylinders, the disposal of all related fluids shall comply with all federal, state and local regulations and guidelines. When removing in- ground cylinders, the remaining cavity shall be properly backfilled with concrete or other material approved by the college (Director of College Facilities).
- C. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding operators.
- D. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- E. Lubricate operating parts of systems, including ropes, as recommended by manufacturers.
- F. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
- G. Leveling Tolerance: 1/8 inch, up or down, regardless of load and travel direction.
- H. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.
- I. Locate hall signal equipment for elevators as follows unless otherwise indicated:
 - 1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
 - 2. Place hall lanterns either above or beside each hoistway entrance.
 - 3. Mount hall lanterns at a minimum of 72 inches above finished floor.

3.03 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Upon completion of work and prior to acceptance by the college, the fire alarm and communication systems must be tested and proven to be operational.
- C. Operating Test: Load **[elevator] [each elevator] [one elevator of each type, capacity, speed, and travel distance]** to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.
- D. Advise College, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.

3.04 PROTECTION

- A. Temporary Use: **[Limit temporary use for construction purposes to one elevator.]** Comply with the following requirements for **[each]** elevator used for construction purposes:
 - 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 - 2. Provide strippable protective film on entrance and car doors and frames.
 - 3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
 - 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - 5. Do not load elevators beyond their rated weight capacity.
 - 6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
 - 7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.05 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service to include **<Insert number>** months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Parts and supplies to be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance during normal working hours.
 - 2. Perform emergency callback service during normal working hours with response time of **[two] <Insert number>** hours or less.

3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of **[two]** <Insert number> hours or less.

3.06 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate **[, adjust, and maintain]** elevator(s).
- B. Check operation of **[each]** elevator with Owner's personnel present before date of Substantial Completion **[and again not more than one month before end of warranty period]**. Determine that operation systems and devices are functioning properly.

END OF SECTION

This page intentionally left blank

SECTION 14 24 00
HYDRAULIC ELEVATORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes: Hydraulic elevators.
- B. Related Requirements:
 - 1. Section 05 12 00 "Structural Steel Framing" for the following:
 - a. Divider beams.
 - b. Hoist beams.
 - c. Structural-steel shapes for subsills that are part of steel frame.
 - 2. Section 05 50 00 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams are required if a shaft contains more than one elevator.
 - c. Divider beams.
 - d. Hoist beams.
 - e. Structural-steel shapes for subsills.
 - f. Pit ladders.
 - g. Cants made from steel sheet in hoistways.

1.02 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.
- B. Service Elevator: A passenger elevator that is also used to carry freight.

1.03 ACTION SUBMITTALS

- A. Product Data: Hydraulic elevators.
- B. Product Data Submittals: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures; hoistway entrances; and operation, control, and signal systems.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing; machine room layout; coordination with building structure; relationships with other construction; and locations of equipment.
 - 2. Include large-scale layout of car-control station [**and standby-power operation control panel**].

3. Indicate maximum dynamic and static loads imposed on building structure at points of support as well as maximum and average power demands.
- D. Samples for Initial Selection: For finishes involving color selection.
 - E. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes, 3-inch-square Samples of sheet materials and 4-inch lengths of running trim members.
- 1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - C. Manufacturer Certificates: Signed by elevator manufacturer, certifying that hoistway, pit, and machine room layout and dimensions, as indicated on Drawings, and electrical service **[including standby-power generator]**, as indicated and specified, are adequate for elevator system being provided.
 - D. Sample Warranty: For special warranty.
- 1.05 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
 1. Submit manufacturer's/installer's standard operation and maintenance manual, in accordance with ASME A17.1/CSA B44 **[including diagnostic and repair information available to manufacturer's and Installer's maintenance personnel]**.
 - B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
 - C. Continuing Maintenance Proposal:
 1. Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard one-year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.
 2. Submit a continuing maintenance proposal from Installer to Owner with terms, conditions, and obligations as set forth in, and in same form as, "Draft of Elevator Maintenance Agreement" at end of this Section, starting on date initial maintenance service is concluded.
- 1.06 QUALITY ASSURANCE

- A. Installer Qualifications: Elevator manufacturer [or an authorized representative who is trained and approved by manufacturer].

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.08 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Furnish well casing and coordinate delivery with related excavation work.
- C. Coordinate locations and dimensions of other work specified in other Sections that relates to hydraulic elevators, including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.09 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: three (3) years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 HYDRAULIC ELEVATORS

- A. See specific College Facility Design Standards for acceptable elevator manufacturers and controllers.
- B. Source Limitations: Obtain elevators [, including freight and electric traction passenger elevators specified in other Sections,] from single manufacturer.
 - 1. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, are manufactured by single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.

- B. Existing elevators in buildings to be modernized shall be modernized without changing the type of conveyance. The amount of change to an existing system shall be determined by the college (Director of College Facilities), the design professional, and the selected elevator consultant (i.e. lift and control cables, cylinders, inside and outside control panels, doors, etc.).
- C. Elevators shall have an elevator machine control room for equipment. The rooms shall be temperature controlled to limit heat to conform to the manufacturers operating instructions.
- D. Elevators and installations shall be of a make and design that they are maintainable by a third party.
- E. Elevator shall be designed so that during a power outage, the elevator will automatically return to the ground floor and the doors will open.
- F. Finishes inside the cab and elevator doors shall be stainless steel or vandal resistant material. Final approval of cab and door finishes shall be approved in writing (signed off) by the college.
- G. Elevator cabs and electrical lighting fixtures installed with the elevator shall be LED lighting.
- H. Elevator controls shall be of a generic type that can be maintained and replaced by a third party.
- I. Accessibility Standard: Comply with applicable provisions in [the United States Access Board's ADA-ABA Accessibility Guidelines] [and] [ICC A117.1].
- J. Seismic Performance: Elevator system withstands the effects of earthquake motions determined according to **[ASCE/SEI 7]** <Insert requirement> and complies with elevator seismic requirements in ASME A17.1/CSA B44.
 - 1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified [**and the system will be fully operational after the seismic event**]."
 - 2. Project Seismic Design Category: **[C] [D] [E] [F]**.
 - 3. Elevator Component Importance Factor: **[1.5] [1.0]**.
 - 4. Design earthquake spectral response acceleration short period (Sds) for Project is <Insert value>.
 - 5. Provide earthquake equipment required by ASME A17.1/CSA B44.
 - 6. Provide seismic switch required by ASCE/SEI 7.

2.03 ELEVATORS

- A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturers' standard components are used, as included in standard elevator systems and as required for complete system.
- B. Elevator Description:
 - 1. Group Number: <Insert a different number for each group of elevators that share a group operation system>.

2. Elevator Number(s): <Insert elevator number(s) as indicated on Drawings>.
3. Emergency Elevator Number(s): <Insert elevator number(s) as indicated on Drawings>.
4. Service Elevator Number(s): <Insert elevator number(s) as indicated on Drawings>.
5. Type:
 - a. Under-the-car single cylinder.
 - b. Holeless, beside-the-car, single-acting, **[single] [dual]** cylinder.
 - c. Holeless, beside-the-car, telescoping, **[single] [dual]** cylinder.
 - d. Holeless, beside-the-car, roped hydraulic, **[single] [dual]** cylinder.
6. Rated Load: **[3500 lb] [4000 lb] [4500 lb] [5000 lb]** <Insert value>.
7. Freight Loading Class for Service Elevators: Class A.
8. Rated Speed: **[125 fpm] [150 fpm] [175 fpm] [200 fpm]** <Insert value>.
9. Operation System: **[Single automatic operation] [Selective-collective automatic operation] [Group automatic operation]**.
10. Auxiliary Operations:
 - a. Standby-powered lowering.
 - b. Battery-powered lowering.
 - c. Nuisance call cancel.
 - d. Automatic operation in first subparagraph below is required by IgCC.
 - e. Automatic operation of lights and ventilation fans.
 - f. **[Emergency hospital] [Priority]** service at **[all]** <Insert floor designations> floors.
 - g. Always retain first subparagraph below if group includes a service elevator.
 - h. Independent service for **[service elevator] [one car in group] [all cars in group]**.
11. Security Features: **[Card-reader operation] [Keyswitch operation] [Keypad operation] [Car-to-lobby feature]**.
12. Dual Car-Control Stations: Provide two car-control stations **[in each elevator]**; equip only one with required keyswitches if any.
13. Car Enclosures:
 - a. If standard cars are unacceptable, detail cars on Drawings or use an allowance and retain only those subparagraphs below specifying car dimensions and describing items not included in allowance.
 - b. Before retaining options in "Inside Width" and "Inside Depth" subparagraphs below, verify that selected configuration complies with requirements for providing accessibility to people with disabilities and to emergency stretchers if required. Revise descriptions of width and depth if car has more than one entrance.
 - c. Inside Width: **[Not less than] [64 inches] [66 inches] [68 inches] [70 inches] [80 inches] [89-1/2 inches] [92 inches]** <Insert dimension> from side wall to side wall.
 - d. Inside Depth: **[Not less than] [51 inches] [53 inches] [56-1/2 inches] [60 inches] [64-1/2 inches] [66 inches] [68 inches] [88 inches] [89 inches] [90-1/2 inches] [93-1/2 inches] [95 inches] [96-1/2 inches] [101 inches] [102 inches] [104 inches] [108 inches]** <Insert dimension> from back wall to front wall (return panels).

- e. Inside Height: Not less than **[93 inches]** <Insert dimension> to underside of ceiling.
- f. Front Walls (Return Panels): **[Polished stainless steel, ASTM A480/A480M, No. 8 finish]** **[Satin stainless steel, ASTM A480/A480M, No. 4 finish]** **[Polished bronze, lacquered]** **[Satin bronze, lacquered]** with integral car door frames.
- g. Delete "Car Fixtures" Subparagraph below if retaining "Swing-Return Car-Control Stations" Paragraph in "Signal Equipment" Article.
- h. Car Fixtures: **[Polished stainless steel, ASTM A480/A480M, No. 8 finish]** **[Satin stainless steel, ASTM A480/A480M, No. 4 finish]** **[Polished bronze, lacquered]** **[Satin bronze, lacquered]**.
- i. Side and Rear Wall Panels: **[Enameled or powder-coated steel]** **[Satin stainless steel, ASTM A480/A480M, No. 4 finish]** **[Textured stainless steel]** **[Satin bronze, lacquered]**.
- j. Reveals: **[Black]** **[Enameled or powder-coated steel]** **[Polished stainless steel, ASTM A480/A480M, No. 8 finish]** **[Satin stainless steel, ASTM A480/A480M, No. 4 finish]** **[Polished bronze, lacquered]** **[Satin bronze, lacquered]**.
- k. Plastic-laminate doors are about as expensive as stainless steel doors but are not as durable.
- l. Door Faces (Interior): **[Enameled or powder-coated steel]** **[Primed or powder-coated steel]** **[Polished stainless steel, ASTM A480/A480M, No. 8 finish]** **[Satin stainless steel, ASTM A480/A480M, No. 4 finish]** **[Textured stainless steel]** **[Polished bronze, lacquered]** **[Satin bronze, lacquered]**.
- m. Nickel silver and bronze door sills are more durable than aluminum door sills but are more expensive.
- n. Door Sills: **[Aluminum]** **[Bronze]** **[Nickel silver]**.
- o. Ceiling: **[Luminous ceiling]** **[Enameled or powder-coated steel]** **[Polished stainless steel, ASTM A480/A480M, No. 8 finish]** **[Satin stainless steel, ASTM A480/A480M, No. 4 finish]** **[Polished bronze, lacquered]** **[Reflective metallic-finished plastic laminate, resembling stainless steel]** **[Reflective metallic-finished plastic laminate, resembling bronze]**.
- p. Handrails: **[1-1/2 inches round]** **[1/2 by 2 inches rectangular]** <Insert dimension(s)> **[anodized aluminum]** **[mirror-polished stainless steel]** **[satin stainless steel]** **[mirror-polished bronze, lacquered]** **[satin bronze, lacquered]**, at **[sides]** **[and]** **[rear]** of car.
- q. Floor: Manufacturer's standard carpet.
- r. Floor prepared to receive carpet (specified in Section 09 68 16 "Sheet Carpeting").
- s. Floor prepared to receive resilient flooring (specified in Section 09 65 00 "Resilient Flooring").
- t. If retaining first subparagraph below, coordinate with tile-setting method. Both Sections referenced in options below contain provisions for floor tile installation over wood using water-cleanable, tile-setting epoxy or thinset mortar on cementitious backer units (included in tile Sections). ASME A17.1/CSA B44 requires that elevator floors and floor members be designed to limit deflection to L/960, which should be stiff enough to eliminate tile cracking.
- u. Floor recessed and prepared to receive **[dimension stone tile (specified in Section 09 30 33 "Stone Tiling")]** **[ceramic tile (specified in Section 09 30 13 "Ceramic Tiling")]**.

- v. Retain first subparagraph below for floors thicker than the typical 1/4 to 5/8 inch (6 to 16 mm) to let the manufacturer know how much to raise the car door sill and doors above the car subfloor.
 - w. Floor Thickness, Including Setting Materials: <Insert thickness> above plywood subfloor.
14. Hoistway Entrances:
- a. Width: **[36 inches] [42 inches] [48 inches] [54 inches]** <Insert dimension>.
 - b. Height: **[84 inches]** <Insert dimension>.
 - c. Type: **[Single-speed side sliding] [Two-speed side sliding] [Single-speed center opening] [Two-speed center opening]**.
 - d. If frames are same at all floors, delete first two options in first subparagraph below and delete second subparagraph below.
 - e. Frames: **[At first floor.] [At basement floors.] [Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - f. Frames at Other Floors: **[Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - g. Plastic-laminate doors are about as expensive as stainless steel doors but are not as durable. If doors are same at all floors, delete first two options in first subparagraph below and delete second subparagraph below.
 - h. Doors and Transoms: **[At first floor.] [At basement floors.] [Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - i. Doors and Transoms at Other Floors: **[Enameled or powder-coated steel] [Primed or powder-coated steel] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - j. Nickel silver and bronze sills are more durable than aluminum sills but are more expensive. If sills are same at all floors, delete first two options in first subparagraph below and delete second subparagraph below.
 - k. Sills: **[At first floor.] [At basement floors.] [Aluminum] [Bronze] [Nickel silver]**.
 - l. Sills at Other Floors: **[Aluminum] [Bronze] [Nickel silver]**.
15. Hall Fixtures: **[At first floor.] [At basement floors.] [Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces]**.
16. Hall Fixtures at Other Floors: **[Polished stainless steel, ASTM A480/A480M, No. 8 finish] [Satin stainless steel, ASTM A480/A480M, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces]**.
17. Additional Requirements:

- a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from [polished stainless steel, ASTM A480/A480M, No. 8 finish] [satin stainless steel, ASTM A480/A480M, No. 4 finish] [polished bronze, lacquered] [satin bronze, lacquered].
- b. Provide hooks for protective pads in [service car] [all cars] and [one] [two] <Insert number> complete set(s) of full-height protective pads.

2.04 SYSTEMS AND COMPONENTS

- A. Pump Units: Positive-displacement type with a maximum of 10 percent variation between no load and full load and with minimum pulsations.
 1. Pump is [submersible type with submersible squirrel-cage induction motor, and suspended inside oil tank from vibration isolation mounts] [or] [is tank-top-mounted type with fan-cooled, squirrel-cage induction motor, and is mounted on oil tank with vibration isolation mounts and enclosed in prime-painted steel enclosure lined with 1-inch-thick, glass-fiber insulation board].
 2. Motor has [wye-delta] [or] [solid-state] starting.
 3. Motor has variable-voltage, variable-frequency control.
- B. Hydraulic Silencers: System has hydraulic silencer containing pulsation-absorbing material in blowout-proof housing at pump unit.
- C. Piping: Size, type, and weight of piping as recommended by elevator manufacturer, with flexible connectors to minimize sound and vibration transmissions from power unit.
 1. Cylinder units are connected with dielectric couplings.
 2. Casing for Underground Piping: Schedule 40 PVC pipe complying with ASTM D1785, joined with PVC fittings complying with ASTM D2466 and solvent cement complying with ASTM D2564.
- D. Hydraulic Fluid:
 1. Hydraulic Fluid, Manufacturer's Standard: Elevator manufacturer's standard [fire-resistant] fluid with additives as needed to prevent oxidation of fluid, corrosion of cylinder and other components, and other adverse effects.
 2. Hydraulic Fluid, Nontoxic and Biodegradable: Nontoxic, biodegradable [, fire-resistant] fluid, made from vegetable oil with antioxidant, anticorrosive, antifoaming, and metal-passivating additives, that is approved by elevator manufacturer for use with elevator equipment.
- E. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- F. Protective Cylinder Casing: PVC or HDPE pipe casing complying with ASME A17.1/CSA B44, of sufficient size to provide not less than 1-inch clearance from cylinder and extending above pit floor. Casing has means of monitoring effectiveness to comply with ASME A17.1/CSA B44.
- G. Corrosion-Protective Filler: A nontoxic, petroleum-based gel formulated for filling the space between hydraulic cylinder and protective casing. Filler is electrically nonconductive, displaces or absorbs water, and gels or solidifies at temperatures below 60 deg F.
- H. Car Frame and Platform: Welded [or bolted] steel units.

- I. Guides: **[Roller guides]** **[Polymer-coated, nonlubricated sliding guides]** **[or]** **[sliding guides with guide-rail lubricators]**. Provide guides at top and bottom of car frame.

2.05 OPERATION SYSTEMS

- A. Provide manufacturer's standard microprocessor operation system as required to provide type of operation indicated.

- B. Auxiliary Operations:

1. Single-Car Standby-Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby]** **[fire command station]** **<Insert location>**. Manual operation causes automatic operation to cease.
2. Single-Car Standby-Powered Lowering:
 - a. On activation of standby power, if car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to a preselected floor, opens its doors, and shuts down. If car is below the preselected floor, it is lowered to the next lower floor, opens its doors, and shuts down.
 - b. On activation of standby power, car is lowered to the lowest floor, opens its doors, and shuts down.
3. Single-Car Battery-Powered Lowering:
 - a. If power fails and car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to a preselected floor, opens its doors, and shuts down. If car is below the preselected floor, it is lowered to the next lower floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
 - b. When power fails, car is lowered to the lowest floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
4. Group Standby-Power Operation:
 - c. On activation of standby power, cars are returned to a designated floor and parked with doors open. Only one car is moved upward at a time, with priority given to loaded cars. If a car cannot be returned after two attempts, it is removed from the system. When all cars have been returned or removed from the system, one car is automatically placed in service. If car selected for service cannot operate within 60 seconds, the system removes car from service and places another car in service. Cars can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby]** **[fire command station]** **<Insert location>**. Manual operation causes automatic operation to cease.
 - d. On activation of standby power, cars are returned to lowest floor and parked with doors open. If a car cannot be returned, it is removed from the system. One car is selected for service on standby power by a switch located at **[main lobby]** **[fire command station]** **<Insert location>**.
5. Group Standby-Powered Lowering:
 - e. On activation of standby power, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down.

- f. On activation of standby power, cars are lowered to the lowest floor, open their doors, and shut down.
 6. Group Battery-Powered Lowering:
 - g. If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 - h. When power fails, cars are lowered to the lowest floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 7. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors start closing.
 8. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls [**and predetermined weight**] can be adjusted.
 9. Loaded-Car Bypass: When car load exceeds 80 percent of rated capacity, car responds only to car calls, not to hall calls.
 10. Off-Peak Operation: During periods of low traffic, half of the elevators in a group are taken out of service and switched to low-power mode.
 11. Independent Service: Keyswitch in car-control station removes car from group operation and allows it to respond only to car calls. Key cannot be removed from keyswitch when car is in independent service. When in independent service, doors close only in response to door close button.
 12. Priority Service: Service is initiated by a [**keyswitch**] [**card reader**] [**remote switch**] at designated floors. One elevator is removed from group operation and directed to the floor where service was initiated. On arriving at the floor, elevator opens its doors and parks [, **and a lighted sign directs passengers to exit elevator**]. Car is placed in operation by selecting a floor and pressing door close button or by operating keyswitch to put car in independent service. After responding to floor selected or being removed from independent service, car returns to group operation. If car is not placed in operation within a preset time after being called, it is returned to group operation.
 13. Automatic Operation of Lights and Fan: When elevator is stopped and unoccupied with doors closed, lighting, ventilation fan, and cab displays are de-energized after 5 minutes and are re-energized before car doors open.
- C. Security Features: Security features do not affect emergency firefighters' service.
1. Card-Reader Operation: System uses card readers at [**car-control stations**] [**and**] [**hall push-button stations**] to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. [**Allow space for card reader in car**] [**Provide stripe-swipe card reader integral with each car-control station**].
 - i. Security access system equipment is [specified in Section 28 15 00 "Access Control Hardware Devices."] [not in the Contract.]
 2. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at [**car-control stations**] [**and**] [**hall push-button stations**]. Key is removable [**only in deactivated position**] [**in either position**].

3. Keypad Operation: Allows each landing to be restricted or unrestricted. When a restricted landing button is pressed, a "Restricted Floor" lamp lights and remains lit until landing access code has been entered into a keypad or predetermined time period has elapsed. Car calls for restricted landings do not register until landing access code is entered into keypad within predetermined time period after landing button is pressed.
 - j. Access codes are programmed at each car operating panel using a security keyswitch. Keypad operation can be activated and deactivated by security keyswitch at main landing.
4. Car-to-Lobby Feature: Feature, activated by keyswitch at main lobby, that causes **[car]** **[all cars in a group]** to return immediately to lobby and open doors for inspection. On deactivation by keyswitch, calls registered before keyswitch activation are completed and normal operation is resumed.

2.06 DOOR-REOPENING DEVICES

- A. Infrared Array: Provide door-reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams causes doors to stop and reopen.
- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door-reopening device, a loud buzzer sounds and doors begin to close at reduced kinetic energy.

2.07 CAR ENCLOSURES

- A. Provide **[enameled- or powder-coated-steel car enclosures to receive removable]** **[steel-framed car enclosures with nonremovable]** wall panels, with **[removable]**car roof, access doors, power door operators, and ventilation.
 1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
 2. See "Allowances" Article for items to be provided under the Elevator Car Allowance. Provide items not included in the Elevator Car Allowance as needed for finished car **[, including materials and finishes specified below]**.
- B. Materials and Finishes: Manufacturer's standards, but not less than the following:
 1. Subfloor:
 - a. Retain one of first two subparagraphs below. First is typical subfloor for carpet or resilient flooring; second provides a stiffer subfloor for ceramic tile or dimension stone.
 - b. Exterior, underlayment-grade plywood, not less than 5/8-inch nominal thickness.
 - c. Exterior, C-C Plugged grade plywood, not less than 7/8-inch nominal thickness.
 2. Floor Finish:
 - a. Retain one of first two subparagraphs below.
 - b. Specified in <Insert Section number> "<Insert Section title>."
 - c. Elevator manufacturer's standard level-loop nylon carpet; color as selected by Architect from manufacturer's full range.
 3. Enameled- or Powder-Coated-Steel Wall Panels: Flush, formed-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.

4. Stainless Steel Wall Panels: Flush, formed-metal construction; fabricated from stainless steel sheet.
5. Bronze Wall Panels: Flush, formed-metal construction; fabricated from bronze sheet.
6. Fabricate car with recesses and cutouts for signal equipment.
7. Fabricate car door frame integrally with front wall of car.
8. Enameled- or Powder-Coated-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
9. Primed or Powder-Coated-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied, rust-resistant primer or powder coating for field painting.
10. Stainless Steel Doors: Flush, hollow-metal construction; fabricated [from stainless steel sheet] [or] [by laminating stainless steel sheet to exposed faces and edges of enameled- or powder-coated-steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning].
11. Bronze Doors: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled- or powder-coated-steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
12. Unfinished-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel or powder coating.
13. Sight Guards: Provide sight guards on car doors.
14. Sills: Extruded or machined metal, with grooved surface, 1/4 inch thick.
15. Luminous Ceiling: Fluorescent light fixtures and ceiling panels of translucent acrylic or other permanent rigid plastic.
16. Ceiling: [Metal] [Metallic-finish, plastic-laminate] flush panels, with [incandescent downlights in the center of] [four low-voltage downlights in] each panel. [Align ceiling panel joints with joints between wall panels.]
17. Light Fixture Efficiency: Not less than 35 lumens/W.
18. Ventilation Fan Efficiency: Not less than 3.0 cfm/W.

2.08 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile accommodate hoistway wall construction.
 1. Where gypsum board wall construction is indicated, frames are self-supporting with reinforced head sections.
- B. Fire-Rated Hoistway Entrance Assemblies: Door-and-frame assemblies comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction based on testing at as close-to-neutral pressure as possible according to [NFPA 252] [or] [UL 10B].
 1. Fire-Protection Rating: [1 hour] [1-1/2 hours] <Insert rating> [with 30-minute temperature rise of 450 deg F].
- C. Materials and Fabrication: Manufacturer's standards, but not less than the following:

1. Enameled- or Powder-Coated-Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
2. Primed or Powder-Coated-Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied, rust-resistant primer or coating for field painting. Provide with factory-applied 3-coats of enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range
3. Steel Subframes: Formed from cold- or hot-rolled steel sheet, with factory-applied enamel or powder-coat finish or rust-resistant primer. Fabricate to receive applied finish as indicated.
4. Stainless Steel Frames: Formed from stainless steel sheet.
5. Bronze Frames: Formed from cold- or hot-rolled steel sheet, with enamel or powder-coat finish, and with formed-bronze sheet laminated to steel frames using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
6. Star of Life Symbol: Identify emergency elevators with star of life symbol, not less than 3 inches high, on both jambs of hoistway door frames.
7. Enameled- or Powder-Coated-Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel or powder-coat finish; colors as selected by Architect from manufacturer's full range.
8. Primed or Powder-Coated-Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied, rust-resistant primer or powder-coating for field painting.
9. Stainless Steel Doors and Transoms: Flush, hollow-metal construction; fabricated **[from stainless steel sheet] [or] [by laminating stainless steel sheet to exposed faces and edges of enameled- or powder-coated-steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning]**.
10. Bronze Doors and Transoms: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled- or powder-coated-steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
11. Unfinished-Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel or powder-coating.
12. Sight Guards: Provide sight guards on doors matching door edges.
13. Sills: Extruded or machined metal, with grooved surface, 1/4 inch thick.
14. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M.

2.09 SIGNAL EQUIPMENT

- A. Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Provide **[vandal-resistant]** buttons and lighted elements illuminated with LEDs.
- B. Car-Control Stations: Provide manufacturer's standard **[recessed] [or] [semirecessed]** car-control stations. Mount in return panel adjacent to car door unless otherwise indicated.
 1. Mark buttons and switches for required use or function. Use both tactile symbols and Braille.

2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- C. Swing-Return Car-Control Stations: Provide car-control stations mounted on rear of hinged return panel adjacent to car door and with buttons, switches, controls, and indicator lights projecting through return panel but substantially flush with face of return panel.
1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- D. Emergency Communication System: Two-way voice communication system, with visible signal, which dials preprogrammed number of monitoring station and does not require handset use. System is contained in flush-mounted cabinet, with identification, instructions for use, and battery backup power supply.
- E. Firefighters' Two-Way Telephone Communication Service: Provide **[flush-mounted cabinet] [telephone jack]** in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in **[Section 28 46 21.11 "Addressable Fire-Alarm Systems."]** **[Section 28 46 21.13 "Conventional Fire-Alarm Systems."]**
- F. Car Position Indicator: Provide **[illuminated,]**digital-type car position indicator, located above car door or above car-control station. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.
- G. Hall Push-Button Stations: **[Provide one hall push-button station at each landing]** **[Provide one hall push-button station at each landing for each single elevator or group of elevators, but not less than one station for each four elevators in a group]** **[Provide hall push-button station at each landing as indicated]**.
1. Provide **[manufacturer's standard wall-mounted units]** **[units with flat faceplate for mounting with body of unit recessed in wall]** **[jamb-mounted units]**.
 2. Equip units with buttons for calling elevator and for indicating applicable direction of travel.
 3. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in **[Section 28 46 21.11 "Addressable Fire-Alarm Systems."]** **[Section 28 46 21.13 "Conventional Fire-Alarm Systems."]**
- H. Hall Lanterns: Units with illuminated arrows; however, provide single arrow at terminal landings. Provide **[one of]** the following:
1. Manufacturer's standard wall-mounted units, for mounting above entrance frames.
 2. Units with flat faceplate for mounting with body of unit recessed in wall and with illuminated elements projecting from faceplate for ease of angular viewing.
 3. Units mounted in both jambs of entrance frame **[for each elevator]**.
 4. Units mounted in both car door jambs **[; may be used only for single elevators or for two-car groups]**.
- I. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.

1. At manufacturer's option, audible signals may be placed on cars.
- J. Hall Position Indicators: Provide **[illuminated,]**digital-display-type position indicators, located above **[each]** hoistway entrance at ground floor.
1. Provide units **[with flat faceplate for mounting and with body of unit recessed in wall]** **[integral with entrance head jamb]**.
 2. Integrate ground-floor hall lanterns with hall position indicators.
- K. Standby-Power Elevator Selector Switches: Provide switches, as required by ASME A17.1/CSA B44, where indicated. Adjacent to switches, provide illuminated signal that indicates when normal power supply has failed. **[For each elevator, provide illuminated signals that indicate when they are operational and when they are at the designated emergency return level with doors open.]**
- L. Fire-Command-Center Annunciator Panel: Provide panel containing illuminated position indicators for each elevator, clearly labeled with elevator designation; include illuminated signal that indicates when elevator is operational and when it is at the designated emergency return level with doors open. Provide standby-power elevator selector switch(es), as required by ASME A17.1/CSA B44, adjacent to position indicators. Provide illuminated signal that indicates when normal power supply has failed.
- M. Emergency Pictorial Signs: Fabricate from materials matching hall push-button stations, with text and graphics as required by authorities having jurisdiction, indicating that in case of fire, elevators are out of service and exits should be used instead. Provide one sign at each hall push-button station unless otherwise indicated.
- N. <Insert requirements>.
- 2.10 FINISH MATERIALS
- A. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, commercial steel, Type B, exposed, matte finish.
- B. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, commercial steel, Type B, pickled.
- C. Stainless Steel Sheet: ASTM A240/A240M, Type 304.
- D. Textured Stainless Steel Sheet: ASTM A240/A240M, Type 304, with embossed texture rolled into exposed surface.
1. Product: Subject to compliance with requirements, provide "<Insert product name>" by **<Insert manufacturer's name>**.
 2. Metal surface is **[satin polished]** **[satin relieved]** **[titanium nitride colored]** **[oxide colored]** **[satin polished and titanium nitride colored]** **[satin relieved and titanium nitride colored]** **[satin polished and oxide colored]** **[satin relieved and oxide colored]** **[color coated and satin relieved]** **[color coated and bright relieved]** after texturing.
- E. Stainless Steel Bars: ASTM A276/A276M, Type 304.
- F. Stainless Steel Tubing: ASTM A554, Grade MT 304.
- G. Bronze Plate and Sheet: ASTM B36/B36M, Alloy UNS No. C28000 (muntz metal).
- H. Bronze Extrusions: ASTM B455/B455M, Alloy UNS No. C38500 (architectural bronze).

- I. Bronze Tubing: ASTM B135/B135M, Alloy UNS No. C23000 (red brass, 85 percent copper).
- J. Aluminum Extrusions: ASTM B221, Alloy 6063.
- K. Nickel Silver Extrusions: ASTM B151/B151M, Alloy UNS No. C74500 or No. C77600.

PART 3 EXECUTION

2.11 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

2.12 INSTALLATION OF HYDRAULIC ELEVATORS

- A. Excavation for Cylinder: Drill well hole in [**each**] elevator pit to accommodate installation of cylinder; comply with applicable requirements in Section 31 20 00 "Earth Moving."
- B. Provide [**waterproof**] well casing [**as necessary**] to retain well-hole walls.
- C. Install cylinder in protective casing within well hole. Before installing protective casing, remove water and debris from well hole [**and provide permanent waterproof seal at bottom of well casing**].
 - 1. Fill void space between protective casing and cylinder with corrosion-protective filler.
 - 2. Align cylinder and fill space around protective casing with fine sand.
- D. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor. Seal between [**well**] [**protective**] casing and pit floor with 4 inches of nonshrink, nonmetallic grout.
- E. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.
- F. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS workmanship and welding operator qualification standards.
- G. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- H. Install piping above the floor, where possible. Install underground piping in casing.

1. Excavate for piping and backfill encased piping according to applicable requirements in Section 31 20 00 "Earth Moving."
 - I. Lubricate operating parts of systems as recommended by manufacturers.
 - J. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
 - K. Leveling Tolerance: 1/4 inch, up or down, regardless of load and travel direction.
 - L. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.
 - M. Locate hall signal equipment for elevators as follows unless otherwise indicated:
 1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
 2. Place hall lanterns either above or beside each hoistway entrance.
 3. Mount hall lanterns at a minimum of 72 inches above finished floor.
- 2.13 FIELD QUALITY CONTROL
- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
 - B. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.
- 2.14 PROTECTION
- A. Temporary Use: **[Limit temporary use for construction purposes to one elevator.]** Comply with the following requirements for **[each]** elevator used for construction purposes:
 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 2. Provide strippable protective film on entrance and car doors and frames.
 3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 5. Do not load elevators beyond their rated weight capacity.
 6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

2.15 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate **[, adjust, and maintain]** elevator(s).
- B. Check operation of **[each]** elevator with Owner's personnel present before date of Substantial Completion **[and again not more than one month before end of warranty period]**. Determine that operation systems and devices are functioning properly.

2.16 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service includes **<Insert number>** months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies are manufacturer's authorized replacement parts and supplies.
 1. Perform maintenance during normal working hours.
 2. Perform emergency callback service during normal working hours with response time of **[two] <Insert number>** hours or less.
 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of **[two] <Insert number>** hours or less.
- B. **<Insert elevator maintenance agreement>**.

END OF SECTION

SECTION 14 42 00

WHEELCHAIR LIFT

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Wheelchair lift.
 - 2. Supplementary parts and components such as inserts, clips, fasteners, anchors, bracing, and other miscellaneous supports and accessories required for a complete installation.
 - 3. Inclined stairway chairlifts are not to be used at LACCD projects
- B. Related work:
 - 1. Division 16 for electrical power to lift motor.

1.02 SUBMITTALS

- A. Data: Manufacturer's data sheets, including equipment characteristics, and sequence of operations.
- B. Diagrams: Wiring diagram with connected loads.
- C. Shop drawings: Shop drawings: Identify travel, gates and all materials. Detail fabrication and assembly, weight, inserts, finishes, clearances, attachments, and other pertinent data.
- D. Closeout: With closeout submittals, provide the Owner a bound manual for the equipment. Include the following:
 - 1. Minimum of 5 keys.
 - 2. Include operating and maintenance instructions, parts listing with sources indicated, recommended parts inventory listing, emergency instructions, and similar information.
 - 3. Special tools required to operate and/or adjust the lift.
 - 4. Straight line wiring diagram of as-installed circuits with index of location and function of all components.
 - 5. List name, address and telephone number of local (within a 50-mile radius of Project site) qualified service representative.
 - 6. Parts listing with sources indicated, recommended parts inventory listing.
 - 7. Emergency operating instructions, lubricating instructions, including recommended lubricant grade, and step-by-step adjusting procedures as used by the manufacturer/installer's field adjustor.

1.03 QUALITY ASSURANCE

- A. Installer's qualifications: Firm approved by the lift manufacturer and who has completed installations similar in material, design, and extent to that indicated for Project which have resulted in installations with a record of successful in-service performance.

- A. Regulatory requirements:
 - 1. In addition to local governing regulations, equipment shall comply with ASME/ANSI A17.1, "Safety Code for Elevators and Escalators" Parts XX and XXI.
 - 2. Elevator Code, CCR, Title 8, Section 3142.1, which provides safety regulations for lifts. This section incorporates ASME A18.1-2003, sections 2 and 5 by reference, and requires compliance with CCR, Title 8, Sections 3094.2(d), 3094.2(e), 2094.2(g), and 3094.2(p)..
- B. Manufacturer's inspections:
 - 1. Request the manufacturer's presence before start of this work to examine design and structural requirements, and as required thereafter to review installation procedures and completed work.
 - 2. Unsatisfactory conditions disclosed by the manufacturer's visits to the site shall be promptly and satisfactorily repaired and the areas reinspected by the manufacturer before work starts or resumes in affected areas.
- C. Pre-installation meeting:
 - 1. Prior to start of installation, arrange a pre-installation meeting between the manufacturer of the lift and the trade responsible for the installation.
 - 2. If more than one trade will be responsible for the work of this Section, these trades shall attend the meeting.
- D. Signage: Sign complying with visual sign requirements of ADA and CBC is required as follows:
 - 1. Lift capacity, and
 - 2. "No Freight" prohibiting the transport of materials or equipment Sign to be posted in a conspicuous place at each landing and within the platform enclosure and include the International Symbol of Accessibility.

1.04 HANDLING

- A. Procedure: In accordance with Division One.

PART 2 PRODUCTS

2.01 MANUFACTURER / MODEL

- A. Basis of design is wheelchair lift model < Insert Model > by The National Wheel-O-Vator Co., Inc., or equal by Cheney Wheelchair Lift, Inclinator Co. of America and Access Industries.
 - 1. Mitsubishi, Garaventa, Thyssen Krupp, TL Shield, or Equal.

2.02 DESCRIPTION

- A. Capacity:
 - 1. 500 lb.
 - 2. Static load rating of 2,500 lb.
 - 3. Safety factor of 5:1.
- B. Lift height: As indicated.

- C. Number of stops: As indicated.
- D. Motor: UL listed, 1/3 HP, 1750 rpm, single-phase, 115 AC, and 60 HZ, instant reversing.
- E. Drive: ACME Screw and ACME nut. ACME screw stops shall have a positive action with less than 1/4-inch of coasting once control button is released.
- F. Platform: Solid slip-resistant steel, 36 inches by 48 inches
- G. Vertical lift shall have a mini-pit for flush transition.
- H. Control switches: 24 V, constant pressure, key-operated switch mounted on the platform and at the top and bottom landings.
- I. Safety device: Provide a safety feature to lock the platform securely in place when the lift mechanism fails.
- J. Manual operation: Provide a device to operate the lift when the power to the unit fails or the unit stops for any reason.
- K. Guard rails: Solid metal, 42 inches high.
- L. Safety gate:
 - 1. Provide the manufacturer's standard gate, with all required hardware and appropriate interlocks to prevent opening of the gate unless the lift is at the stage level.
 - 2. Gate shall be of substantial construction with expanded metal lath in a welded tubular frame.
- M. Finish: Clean steel parts of foreign matters and rust to bright metal, then degrease and prime with a rust-inhibitive primer followed by 2 coats of enamel of the color selected by the Architect.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine adjacent construction and supports.
- B. Correct conditions detrimental to the proper and timely execution of this work before proceeding with installation.

3.02 INSTALLATION

- A. Install the lift in compliance with ICC/A117.1, NEC and ASME A18.1 Guidelines, its manufacturer's instructions with minimum clearances to adjacent construction, and the following:
 - 1. Provide anchorage devices and fasteners where necessary for securing lift components to in-place construction; include threaded fasteners for concrete and masonry inserts, through-bolts, and other connectors as required.
 - 2. Perform cutting, drilling, and fitting required for installation of lift.
 - a. Set lift components accurately in location, alignment, and elevation, with edges and surfaces level, plumb, true, and free of rack as measured from established lines and levels.

3. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations.
 4. Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of welds made, methods used in correcting welding work, and the following:
 - a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - b. Obtain fusion without undercut or overlap.
 - c. Remove welding flux immediately.
 - d. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.
- B. Final connections to the electrical system will be done as a part of Division 16.

3.03 FIELD QUALITY CONTROL

- A. Test lift for proper operation and adjust as required.
- B. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material used for shop painting. Apply to provide a smooth, minimum dry film thickness of 2 mils invisible after touchup from undamaged factory-finished surfaces.
- C. Clean exposed surfaces.

3.04 INSTRUCTIONS

- A. Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.
- D. Review data in maintenance manuals.
- E. Review data in maintenance manuals.
- F. Schedule training with Owner with at least 7 days' advance notice.

SECTION 21 13 00

FIRE PROTECTION SPRINKLER SYSTEMS

PART 1 GENERAL

1.01 REFERENCES

- A. ANSI/ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings, Class 25, 125, 250, and 800.
- B. ANSI/ASME B16.3 - Malleable Iron Threaded Fittings, Class 150 and 300.
- C. ANSI/ASME B16.4 - Cast Iron Threaded Fittings, Class 125 and 250.
- D. ANSI/ASME B16.5 - Pipe Flanges and Flanged Fittings.
- E. ANSI/ASME B16.11 - Forged Steel Fittings, Socket-Welding and Threaded.
- F. ANSI/ASTM A135 - Electric-Resistance-Welded Steel Pipe.
- G. ASTM A53 - Pipe, Steel, Black and Hot-Dipped, Zinc-coated Welded and Seamless.
- H. FM - FM Global Approval Guide.
- I. NFPA -National Fire Protection Association.
- J. UL - Underwriter's Laboratory Fire Protection Equipment Directory.
- K. NFPA 13 – Standard for the Installation of Sprinkler Systems.
- L. NFPA 14 – Standard for the Installation of Standpipe and Hose Systems.

PART 2 PRODUCTS

2.01 ACCEPTABLE PRODUCTS

- A. Materials and equipment provided under this Section to make a complete installation shall be UL Listed and/or FM Approved and in compliance with NFPA Standards.
- B. Products proposed as “or equal” shall be provided for review by the district with all of the necessary information required to make such a determination. Clarifications of proposed “or equal” products shall be submitted along with an itemized cost analysis for consideration by the district.

2.02 PIPE AND FITTINGS - WET PIPE SPRINKLER SYSTEMS

- A. General
 - 1. Piping shall meet applicable ANSI or ASTM standards requirements and shall have the manufacturer's name and standard marked on each length. Joints shall meet applicable ANSI and ASTM standards requirements.
- B. Piping – Above Ground 2” and Under:
 - 1. Design Pressure: 175 psig

2. Pipe: Schedule 40, black steel, ANSI/ASTM A53, ASTM A795, UL/FM. Inner wall shall be coated with an anti-MIC (microbiologically influenced corrosion) coating. Exposed pipe to weather shall be galvanized.
 3. Joints: Threaded.
 4. Fittings:
 - a. Threaded:
 - 1) Cast iron, Class 125, black, UL/FM, ANSI/ASME B16.4.
 - 2) Malleable iron, Class 150, black, UL/FM, ANSI/ASME B16.3.
 - 3) Steel, Class 150, black, UL/FM, ASME B16.11.
- C. Piping – Above Ground 2-1/2” and Above:
1. Design Pressure: 175 psig
 2. Pipe: Schedule 10, black steel, ASTM A135, ASTM A795, UL/FM. Inner wall shall be coated with an anti-MIC (microbiologically influenced corrosion) coating. Exposed pipe to weather shall be galvanized.
 - a. Joints: Roll grooved or flanged.
 - b. Fittings:
 - 1) Grooved:
 - a) Ductile iron housing ASTM A-536, Grade 65-45-12, UL/FM, enamel coating, Grade E (Type A) EPDM molded pressure-responsive gaskets suited for 40°F to 150°F. Carbon steel bolts and nuts. Acceptable Manufacturers: Victaulic, Gruvlok or Central.
 - 2) Flanged:
 - a) Cast iron, Class 125, black, UL/FM, ANSI/ASME B16.1.
- D. Standpipe System
1. Piping 2 1/2” and larger may be Schedule 10 black steel conforming to ASTM 135. Exposed pipe to weather shall be galvanized.
 2. Piping 2” and smaller shall be Schedule 40 black steel conforming to ASTM A53. Exposed pipe to weather shall be galvanized.
- 2.03 VALVES
- A. General Requirements:
1. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig.
- B. Ball Valves:
1. Valves 1-1/2” and Smaller: Bronze body with threaded ends.
 2. Valves 2” and 2-1/2”: Bronze body with threaded ends or ductile-iron body with grooved ends.
 3. Valves 3”: Ductile-iron body with grooved ends.

C. Check Valves:

1. 2 inches and smaller, 200 psi WOG, swing type, Bronze body, bronze disc, conforming to MSS-SP-80-97, threaded ends. Acceptable Manufacturers: Crane, Nibco, or Stockham or Equal as determined by LACCD.
2. 2-1/2" inches or larger, 250 psig, Swing check Cast iron body, grooved or flanged ends. Acceptable Manufacturers: Stockham, Kennedy, or Tyco or Equal as determined by LACCD.

D. Bronze OS&Y Gate Valves:

1. 2 inches and smaller, class 175, bronze body, solid bronze wedge disc, OS&Y, copper silicon alloy stem, UL/FM listed, threaded ends. Acceptable Manufacturers: Stockham, Crane, or Nibco or Equal as determined by LACCD.

E. Iron OS&Y Gate Valves:

1. 2 1/2-inch and larger, class 175, Cast or ductile iron body, solid wedge disc, OS&Y, Teflon-impregnated packing, UL/FM listed, flanged or grooved ends. Acceptable Manufacturers: Stockham, Crane, Kennedy, Mueller or Equal as determined by LACCD.

F. Indicating-Type Butterfly Valves:

1. 300 psi, UL/FM listed, with weatherproof gearbox and double pole/double throw monitor switch, double seal design for bubble tight shut off at 175 psi, grooved or flanged ends. Acceptable Manufacturers: Kennedy, Nibco, Victaulic or Tyco or Equal as determined by LACCD.
2. Valve Operation: Integral electrical, 115-V ac, prewired, two-circuit, supervisory switch visual indicating device.

2.04 TRIM AND DRAIN VALVES

A. General Requirements:

1. Pressure Rating: 175 psig minimum.

B. Provide Angle Valves, Ball Valves, Globe Valves, Plug Valves

2.05 SPECIALTY VALVES

A. General Requirements:

1. Pressure Rating:
 - a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
 - b. High-Pressure Piping Specialty Valves: 250 psig minimum.
2. Body Material: Cast or ductile iron, Size: Same as connected piping, End Connections: Flanged or grooved.

B. Alarm Valves:

1. Design: For horizontal or vertical installation, include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding chamber, and fill-line attachment with strainer, Drip Cup Assembly: Pipe drain with check valve to main drain piping. Acceptable Manufacturers: Victaulic, Viking or Reliable or Equal as determined by LACCD..

C. Post Indicator Valves:

1. 4" and larger, ductile iron, fusion bonded epoxy coated resilient wedge, class 175 lb, non-rising stem, mounting plate for indicator post, UL/FM listed, flanged or mechanical ends (in accordance with NSF 61). Acceptable Manufacturers: Stockham, Kennedy, Clow, Mueller or Victaulic or Equal as determined by LACCD.

2.06 FIRE-DEPARTMENT CONNECTIONS

A. Exposed-Type, Fire-Department Connection:

1. Type: Exposed, projecting, for wall mounting.
2. Pressure Rating: 175 psig minimum.
3. Body Material: Corrosion-resistant metal.
4. Inlets: Brass with threads according to local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
5. Caps: Brass, lugged type, with gasket and chain.
6. Escutcheon Plate: Round, brass, wall type.
7. Escutcheon Plate Marking: Similar to "[AUTO SPKR & STANDPIPE] or [AUTO SPKR]."
8. Outlet: Back, with pipe threads.
9. Number of Inlets: [Two] [Three] [Four] [Six].
10. UL/FM listed.
11. Finish: [Polished chrome plated] [Rough brass or bronze] [Rough chrome plated].
12. Outlet Size: [4"] [5"] [6"].
13. Acceptable Manufacturers: Potter Roemer, Tyco or Powhatten or equal as approved by the District.

B. Flush-Type, Fire-Department Connection:

1. Type: Flush, for wall mounting.
2. Pressure Rating: 175 psig minimum.
3. Body Material: Corrosion-resistant metal.
4. Inlets: Brass with threads according to local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.

5. Caps: Brass, lugged type, with gasket and chain.
 6. Escutcheon Plate: Rectangular, brass, wall type.
 7. Escutcheon Plate Marking: Similar to “ [AUTO SPKR & STANDPIPE] [AUTO SPKR].”
 8. Outlet: Back with pipe threads.
 9. Body Style: [Horizontal] [Square] [Vertical].
 10. Number of Inlets: [Two] [Three] [Four] [Six].
 11. Outlet Location: [Back] [Bottom] [Left side] [Right side] [Top].
 12. Finish: [Polished chrome plated] [Rough brass or bronze] [Rough chrome plated].
 13. Outlet Size: [4”] [5”] [6”] [8”].
 14. Acceptable Manufacturers: Potter Roemer, Tyco or Powhatan.
- C. Yard-Type, Fire-Department Connection:
1. Type: Exposed, freestanding.
 2. Pressure Rating: 175 psig minimum.
 3. Body Material: Corrosion-resistant metal.
 4. Inlets: Brass with threads according to local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
 5. Caps: Brass, lugged type, with gasket and chain.
 6. Escutcheon Plate: Round, brass, floor type.
 7. Escutcheon Plate Marking: Similar to “ [AUTO SPKR & STANDPIPE] [AUTO SPKR].”
 8. Outlet: Bottom, with pipe threads.
 9. Number of Inlets: [Two] [Three] [Four] [Six]..
 10. Sleeve: [Brass] [Not required].
 11. Sleeve Height: 18 inches.
 12. Finish [Including Sleeve]: [Polished chrome plated] [Rough brass or bronze] [Rough chrome plated].
 13. Outlet Size: [4”] [5”] [6”].
 14. Acceptable Manufacturers: Potter Roemer, Tyco or Powhatan.

2.07 SPRINKLER SPECIALTY PIPE FITTINGS

A. Flow Detection and Test Assemblies:

1. Pressure Rating: 175 psig minimum, Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve, Size: Same as connected piping.
2. Inlet and Outlet: Threaded.
3. Acceptable Manufacturers: AGF Manufacturing.

B. Seismic Swing Joints:

1. UL/FM Approved flexible seismic connector or fittings with grooved, or threaded ends for seismic separation requirements. Acceptable Manufacturers: Metraflex, Victaulic.

2.08 SPRINKLERS

A. General Requirements:

1. Pressure Rating for Automatic Sprinklers: 175 psig minimum, Pressure Rating for High-Pressure Automatic Sprinklers: 250 psig minimum, Sprinklers with O-rings are not permitted. Acceptable Manufacturers: Victaulic, Tyco, Viking or Reliable or equal as determined by the District.

B. Automatic Sprinklers with Heat-Responsive Element:

1. Early-Suppression, Fast-Response Applications: Characteristics: Nominal ½-inch orifice with Discharge Coefficient K of 5.6, and 8.0 for "Ordinary" temperature classification rating unless otherwise indicated by this specification or required by application, Provide ½ inch thread for K5.6 and ¾ inch thread for K8.0. Acceptable Manufacturers: Victaulic, Tyco, Viking or Reliable or equal as determined by the District.

C. Sprinkler Finishes:

1. Chrome plated. To be provided in spaces with finished ceilings, drop ceilings or public spaces with exposed ceilings
2. Bronze. To be provided in back of house spaces with exposed ceilings
3. Painted. To be provided in spaces with finished ceilings as determined by project architect.

D. Special Coatings:

1. Dry-Type to be used in areas subject to freezing
2. Corrosion resistant coating in corrosive environments only

E. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: [Chrome-plated steel, one piece, flat] [Chrome-plated steel, two piece, with 1-inch vertical adjustment].
2. Sidewall Mounting: [Chrome-plated steel] , one piece, flat.

3. Acceptable Manufacturers: FPPI, Tyco or Reliable or equal as determined by the District.

F. Sprinkler Guards:

1. Guards shall be UL/FM listed, supplied and approved for use with the sprinkler by the sprinkler manufacturer. Sprinkler head guards shall securely fasten with bolt-on feature to the base of the sprinkler or be a factory installed guard. Approved Manufacturers: Reliable, Viking, Tyco or Victaulic.

G. Flexible piping systems shall be UL Listed and FM Approved and suitable for their intended use. All flexible piping connections shall include a fully welded, braided, leak-tested sprinkler drop with a minimum internal corrugated hose diameter of 1"; and a one-piece multi-port ceiling bracket with removable attachments hub and self-securing integrated snap-on clip ends for attachment to the ceiling grid without the need for a screw fastener. Acceptable Manufacturers: Flexhead Industries, Victaulic VicFlex, or Sprinkflex or equal as determined by the District.

2.09 ALARM DEVICES

A. Water-Flow Indicators:

1. UL/FM Listed, electrically supervised, Components: Two double-throw circuit switches for isolated alarm and auxiliary contacts, complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed, Type: Paddle operated with screw terminals, Pressure Rating: 250 psig, Design Installation: Horizontal or vertical, Time Delay Feature: from 0 to [30] [45] seconds. Acceptable Manufacturers: Potter Roemer or Notifier.

B. Valve Supervisory Switches:

1. UL/FM Listed, electrically supervised with screw terminals, Components: Double- pole, double-throw switch with normally closed contacts, Design: Signals that control valve is in other than fully open position. Acceptable Manufacturers: Potter Roemer or Notifier.

C. Indicator-Post Supervisory Switches:

1. UL/FM Listed, electrically supervised with screw terminals, Components: Double- throw switch with normally closed contacts, Design: Signals that controlled indicator-post valve is in other than fully open position. Acceptable Manufacturers: Potter Roemer or Notifier.

2.10 PRESSURE GAGES

A. Liquid filled, Dial Size: 4-1/2-inch diameter, Pressure Gage Range: 0 to 250 psig minimum, Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.

2.11 PIPE ESCUTCHEONS

A. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.

B. One-Piece, Cast-Brass Escutcheons: [Polished chrome-plated] [or] [rough-brass] finish with set-screws.

C. One-Piece, Deep-Pattern Escutcheons: Deep-drawn, box-shaped brass with chrome- plated finish.

D. One-Piece, Stamped-Steel Escutcheons: Chrome-plated finish with [set-screw] [or] [spring clips].

- E. Split-Casting, Cast-Brass Escutcheons: [Polished chrome-plated] [or] [rough-brass] finish with concealed hinge and set-screw.
- F. Split-Plate, Stamped-Steel Escutcheons: Chrome-plated finish with [concealed] [exposed- rivet] hinge, [set-screw] [or] [spring clips].
- G. One-Piece Floor Plates: Cast-iron flange [with holes for fasteners].
- H. Split-Casting Floor Plates: Cast brass with concealed hinge.

2.12 SLEEVES

- A. Steel-Pipe Sleeves: ASTM A53/A53M, Type E, standard weight, plain ends.

2.13 HANGERS

- A. Materials available by product type. Provide materials to comply with location and application requirements unless noted otherwise on drawings and schedules.
 - 1. Pipe rings - Malleable iron, carbon steel.
 - 2. Clevis - Carbon steel.
 - 3. Steel pipe clamps - Carbon steel, alloy, stainless steel.
 - 4. Socket clamps - Carbon steel.
 - 5. Beam clamps - Malleable/ductile iron, hardened steel, carbon steel, forged steel.
 - 6. Structural attachments - Carbon steel, malleable iron.
 - 7. Ceiling plates/ceiling flanges - Plastic, cast iron, malleable iron.
 - 8. Concrete inserts and attachments – Malleable iron, carbon steel; stainless steel body, fiberglass bars, polypropylene disc (iron cross design).
 - 9. Rod attachments - Carbon steel, malleable iron, forged steel.
 - 10. Pipe supports - Carbon steel, cast iron.
 - 11. Pipe shields and saddles - Carbon steel, alloy steel, stainless steel.
 - 12. Pipe rolls - Cast iron, carbon steel.
 - 13. Guides - Carbon steel; slides, carbon steel with PTFE slide plates.
 - 14. Engineered hangers - Carbon steel, stainless steel, chrome molybdenum steel.
 - 15. Powder driven studs – Not permitted
- B. Finishes: Provide finishes to comply with location and application requirements unless noted otherwise on drawings and schedules.
 - 1. Electro-plating galvanizing process per ASTM B633.
 - 2. Hot Dipped galvanizing process per ASTM A153.

3. Epoxy paint.
4. Zinc-rich paint.
5. Copper
6. Standard primer shall meet Fed Spec TT-P-636.

2.14 SIGNAGE

- A. Provide [plastic], [steel] or [aluminum] signs for each valve and to identify hydraulic design. Signs shall have white lettering on a red background with holes for easy attachment. Enter pertinent data for each system on the hydraulic placard.

2.15 SPRINKLER CABINET

- A. Provide metal cabinet(s) as required containing a stock of spare sprinkler heads of all types and ratings installed as well as any special tools required for removal or replacement of the heads. The number of spare sprinklers shall conform to NFPA 13. The cabinet shall be located, in an area where the temperature will not exceed 100 degrees F (38 degrees C) and approved by the DSA Regional Fire Protection Engineer. Acceptable Manufacturer: Potter Roemer or Guardian.

SECTION 21 13 13
WET-PIPE SPRINKLER SYSTEMS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Cover system for sprinkler piping.
3. Specialty valves.
4. Sprinklers.
5. Alarm devices.
6. Manual control stations.
7. Control panels.
8. Pressure gages.

B. Related Requirements:

1. Section 211119 "Fire Department Connections" for exposed-, flush-, and yard-type fire department connections.
2. Section 230523 "General-Duty Valves for Water-Based Fire-Suppression Piping" for ball, butterfly, check, gate, post-indicator, and trim and drain valves.

1.03 DEFINITIONS

- A. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175-psig maximum.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For wet-pipe sprinkler systems.
1. Include plans, elevations, sections, riser diagrams and attachment details and all applicable documentation required by NFPA 13 for working drawings.
- 1.05 INFORMATIONAL SUBMITTALS
- A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from design engineer, sub-contractors and installers of the items involved:
1. Domestic water piping.
 2. Compressed air piping.
 3. HVAC hydronic piping.
 4. Structural Members.
 5. Items penetrating finished ceiling include the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
- B. Qualification Data: For qualified Installer, NICET Level IV Designer and professional engineer.
- C. Design Data:
1. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
- D. Welding certificates.
- E. Field Test Reports:
1. Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
 2. Fire-hydrant flow test report.
- F. Field quality-control reports.
- 1.06 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For wet-pipe sprinkler systems and specialties to include in emergency, operation, and maintenance manuals.
- 1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.

1.08 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
- B. Welding Qualifications: Qualify procedures and operators according to 2010 ASME Boiler and Pressure Vessel Code.

1.09 FIELD CONDITIONS

- A. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:
 - 1. Notify Architect and Owner/District no fewer than three days in advance of proposed interruption of sprinkler service.
 - 2. Do not proceed with interruption of sprinkler service without Architect's and Owner's written permission.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
 - 1. NFPA 13.
 - 2. California DSA.
- B. Standard-Pressure Piping System Component: Listed for 175-psig minimum working pressure.
- C. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design wet-pipe sprinkler systems.
 - 1. Available fire-hydrant flow test records indicate the following conditions:
 - a. Date: 6/30/2021.
 - b. Time: 8:30 a.m

- c. Performed by:.
 - d. Static Pressure at Residual Fire Hydrant XXXX: psig.
 - e. Measured Flow at Flow Fire Hydrant Y: gpm.
 - f. Residual Pressure at Residual Fire Hydrant X: psig.
2. Sprinkler system design shall be approved by authorities having jurisdiction.
 - a. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
 - b. Sprinkler Occupancy Hazard Classifications:
 - 1) Building Service Areas: Ordinary Hazard, Group 1
 - 2) Electrical Equipment Rooms: Ordinary Hazard, Group 1
 - 3) General Storage Areas: Ordinary Hazard, Group 1
 - 4) Mechanical Equipment Rooms: Ordinary Hazard, Group 1
 - 5) Office and Public Areas: Light Hazard
 - 6) Libraries and Classrooms: Light Hazard
 - 7) Laboratories and Vocational Spaces: Ordinary Hazard, Group 2
 - 8) High Piled Storage Locations: As Determined by CFC and NFPA 13
 - 9) Hazardous Materials and Flammable Liquids Storage Areas: Ordinary Hazard Group 2
 3. Minimum Density for Automatic-Sprinkler Piping Design:
 - a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. (4.1 mm/min. over 139-sq. m) area.
 - b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. (6.1 mm/min. over 139-sq. m) area.
 - c. Ordinary-Hazard, Group 2 Occupancy: 0.2 gpm over 2000 sq ft or as specified in NFPA 13 based on specific hazard
 4. Maximum Protection Area per Sprinkler: According to UL listing.
 5. Maximum Protection Area per Sprinkler:
 - a. Office Spaces: 225 sq. ft. (20.9 sq. m)
 - b. Storage Areas: 130 sq. ft. (12.1 sq. m)
 - c. Mechanical Equipment Rooms: 130 sq. ft. (12.1 sq. m)
 - d. Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m)
 - e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.
- D. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and California DSA.

2.02 STEEL PIPE AND FITTINGS

- A. Standard-Weight, Black-Steel Pipe: ASTM A 53/A 53M, Type E, Grade B . Pipe ends may be factory or field formed to match joining method.
- B. Schedule 10, Black-Steel Pipe: ASTM A 135/A 135M or ASTM A 795/A 795M, Schedule 10 in NPS 5 (DN 125) and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10 (DN 150 to DN 250), plain end.
- C. Black-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.
- D. Malleable- or Ductile-Iron Unions: UL 860.
- E. Cast-Iron Flanges: ASME 16.1, Class 125.
- F. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
 - 1. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Grooved-Joint, Steel-Pipe Appurtenances:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.
 - b. Corcoran Piping System Co.
 - c. National Fittings, Inc.
 - d. Shurjoint Piping Products USA Inc.
 - e. Smith-Cooper International.
 - f. Tyco Fire Products LP.
 - g. Victaulic Company.
 - 2. Pressure Rating: 175-psig (1200-kPa) minimum.
 - 3. Galvanized, Painted, and Uncoated Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting, with dimensions matching steel pipe.
 - 4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213 rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.03 SPECIALTY VALVES

- A. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
- B. Pressure Rating:
 - 1. Standard-Pressure Piping Specialty Valves: 175-psig (1200-kPa) minimum.
- C. Body Material: Cast or ductile iron.

- D. Size: Same as connected piping.
- E. End Connections: Flanged or grooved.

2.04 SPRINKLER PIPING SPECIALTIES

A. Branch Outlet Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.
 - b. National Fittings, Inc.
 - c. Shurjoint Piping Products USA Inc.
 - d. Tyco Fire Products LP.
 - e. Victaulic Company.
2. Standard: UL 213.
3. Pressure Rating: 175-psig (1200-kPa)
4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
5. Type: Mechanical-tee and -cross fittings.
6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
8. Branch Outlets: Grooved, plain-end pipe, or threaded.

B. Adjustable Drop Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aegis Technologies, Inc.
 - b. CECA, LLC.
 - c. Corcoran Piping System Co.
 - d. Merit Manufacturing.
 - e. <Insert manufacturer's name>.
2. Standard: UL 1474.
3. Pressure Rating: [250-psig (1725-kPa) minimum] [300 psig (2070 kPa)].
4. Body Material: Steel pipe with EPDM-rubber O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.

7. Inlet and Outlet: Threaded.

2.05 SPRINKLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Globe Fire Sprinkler Corporation.
 2. Reliable Automatic Sprinkler Co., Inc. (The).
 3. Tyco Fire Products LP.
 4. Victaulic Company.
 5. Viking Corporation.
- B. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
- C. Pressure Rating for Residential Sprinklers: 175-psig (1200-kPa) maximum.
- D. Pressure Rating for Automatic Sprinklers: 175-psig (1200-kPa) minimum.
- E. Automatic Sprinklers with Heat-Responsive Element:
 1. Early-Suppression, Fast-Response Applications: [UL 1767]
 2. Nonresidential Applications: [UL 199]
 3. Residential Applications: [UL 1626]
 4. Characteristics: Nominal 1/2-inch (12.7-mm) orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
- F. Sprinkler Finishes: Chrome plated and bronze.
- G. Special Coatings: corrosion-resistant paint.
- H. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
 1. Ceiling Mounting: Chrome-plated steel, one piece, flat Chrome-plated steel, two piece, with 1-inch (25-mm) vertical adjustment.
- I. Sprinkler Guards:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc. (The).
 - b. Tyco Fire Products LP.
 - c. Victaulic Company.

- d. Viking Corporation.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

PART 3 EXECUTION

3.01 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.

3.02 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated on approved working plans.
 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
 2. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.
- B. Piping Standard: Comply with NFPA 13 requirements for installation of sprinkler piping.
- C. Install seismic restraints on piping. Comply with NFPA 13 requirements for seismic-restraint device materials and installation.
- D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
- H. Install sprinkler piping with drains for complete system drainage.
- I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- J. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.
- K. Install alarm devices in piping systems.

- L. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13. In seismic-rated areas, refer to Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
- M. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they are not subject to freezing.
- N. Fill sprinkler system piping with water.
- O. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- P. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- Q. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

3.03 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
- I. Steel-Piping, Pressure-Sealed Joints: Join lightwall steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.

- J. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
 - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
- K. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- L. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

3.04 INSTALLATION OF COVER SYSTEM FOR SPRINKLER PIPING

- A. Install cover system, brackets, and cover components for sprinkler piping according to manufacturer's "Installation Manual" and NFPA 13 or NFPA 13R for supports.

3.05 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Specialty Valves:
 - 1. Install valves in vertical position for proper direction of flow, in main supply to system.
 - 2. Install alarm valves with bypass check valve and retarding chamber drain-line connection.
 - 3. Install deluge valves in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.

3.06 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels.
- B. Align sprinklers in coordination with light fixtures and other ceiling mounted objects in accordance with the design plans and in coordination with the Architect. Architect shall approve deviations from design plan.

3.07 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.08 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
 4. Energize circuits to electrical equipment and devices.
 5. Coordinate with fire-alarm tests. Operate as required.
 6. Verify that equipment hose threads are same as local fire department equipment.
- B. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.09 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.

3.10 PIPING SCHEDULE

- A. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with [threaded ends, cast-iron threaded fittings, and threaded] [grooved ends, grooved-end fittings, grooved-end-pipe couplings, and grooved] joints.
- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. Standard-pressure, wet-pipe sprinkler system, NPS 2 (DN 50) and smaller, shall be the following:
 1. Standard-weight black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
 2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
 3. Standard-weight, black-steel pipe with plain ends; uncoated, plain-end-pipe fittings; and twist-locked joints.

4. Standard-weight, galvanized-steel pipe with plain ends; galvanized, plain-end-pipe fittings; and twist-locked joints.
 5. Standard-weight, black-steel pipe with cut or roll grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 6. Standard-weight, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 7. Standard-weight, black-steel pipe with plain ends; steel welding fittings; and welded joints.
- D. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 (DN 65) and larger, shall be of the following:
1. Standard-weight, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
 2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
 3. Standard-weight, black-steel pipe with [cut-] [or] [roll-]grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 4. Standard-weight, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 5. Standard-weight, black-steel pipe with plain ends; steel welding fittings; and welded joints.
 6. Schedule 10 black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 7. Schedule 10 black-steel pipe with plain ends; welding fittings; and welded joints.

3.11 SPRINKLER SCHEDULE

- A. Use sprinkler types in 28 13 00 based on area of use and finish expectations. Final direction on sprinkler type to be coordinated with AOR and the District.

END OF SECTION

SECTION 21 13 16

PRE-ACTION SPRINKLER SYSTEMS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Pipes, fittings, and specialties.
 - 2. Cover system for sprinkler piping.
 - 3. Specialty valves.
 - 4. Sprinklers.
 - 5. Alarm devices.
 - 6. Manual control stations.
 - 7. Control panels.
 - 8. Pressure gages.
- B. Related Requirements:
 - 1. Section 211300
 - 2. Section 211313
 - 3. Section 283101

1.03 DEFINITIONS

- A. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175-psig (1200-kPa) maximum.

1.04 System Description

- A. Supply and install a fail-safe double interlocked pre-action system/riser/cabinet containing all hydraulic and electrical components required for the control of a fail- safe pre-action system.
- B. Pressure gauges to indicate water supply, priming water and air pressures of the system. Each pressure gauge must be provided with its own shut-off valve and shall be clearly identified on the outside of the cabinet front door.
- C. Schedule 40 galvanized steel release trim with solenoid valves and every supervisory and alarm device required.
- D. Schedule 40 steel pipe header painted fire red, with grooved ends to be connected to supply water from either side.

- E. Schedule 40 steel pipe drain manifold of 2" diameter painted fire red, with grooved ends for drain connections from either side.
- F. Properly identified contractor test ports factory mounted into the trim piping to facilitate system testing and commissioning.

1.05 System Operation

- A. Contractor should make sure the remote release control panel sequence of operation is programmed to perform the following:
 - 1. The activation of both the detection condition AND the opening of an automatic sprinkler are necessary to cause the water discharge.
 - 2. The activation of an electrical detector alone will sound an alarm and activate alarm contacts for auxiliary functions but will not cause the system to fill with water.
 - 3. The opening of an automatic sprinkler OR damage to system piping without the detection condition satisfied will activate the very low air pressure switch zone, sound an alarm, and activate alarm contacts for auxiliary functions but will not cause the system to fill with water.
 - 4. Activation of BOTH the detection condition AND the opening of an automatic sprinkler will activate the solenoid valves, open the deluge valve, and cause water to discharge. This will sound an alarm and activate alarm and water flow contacts for auxiliary functions.
 - 5. Operation of the emergency manual release will depressurize the priming chamber of the deluge valve, causing the system to fill the piping network with water, and activate alarm and water flow contacts for auxiliary functions.
 - 6. If the AC Power fails and the battery backup power expires before an alarm is detected, the pre-action system should "fail-safe" and function as a dry pipe system. The opening of an automatic sprinkler OR damage to system piping will cause the system to fill and flow water until it is manually shut-off.

1.06 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For pre-action sprinkler systems.
 - 1. Include plans, elevations, sections, riser diagrams and attachment details and all applicable documentation required by NFPA 13 and NFPA 72 for working drawings.

1.07 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from design engineer, sub-contractors and installers of the items involved:
 - 1. Domestic water piping.
 - 2. Compressed air piping.
 - 3. HVAC hydronic piping.
 - 4. Structural Members.

5. Items penetrating finished ceiling include the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - B. Qualification Data: For qualified Installer, NICET Level IV Designer and professional engineer.
 - C. Design Data:
 1. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
 - D. Welding certificates.
 - E. Field Test Reports:
 1. Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
 2. Fire-hydrant flow test report.
 - F. Field quality-control reports.
- 1.08 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For pre-action sprinkler systems and specialties to include in emergency, operation, and maintenance manuals.
- 1.09 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.
- 1.10 QUALITY ASSURANCE
- A. Installer Qualifications:
 1. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
 - B. Welding Qualifications: Qualify procedures and operators according to 2010 ASME Boiler and Pressure Vessel Code.
- 1.11 FIELD CONDITIONS

- A. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:
1. Notify Architect and Owner/District no fewer than three days in advance of proposed interruption of sprinkler service.
 2. Do not proceed with interruption of sprinkler service without Architect's and Owner's written permission.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
1. NFPA 13.
 2. California DSA.

2.02 Supply to release control panel

- A. Supply and install a second branch circuit, 110VAC, 60Hz for each of air compressor provided inside the pre-action cabinet by the factory.
- B. Standard-Pressure Piping System Component: Listed for 175-psig (1200-kPa) minimum working pressure.
- C. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design wet-pipe sprinkler systems.
1. Available fire-hydrant flow test records indicate the following conditions:
 - a. Date: 6/30/2021.
 - b. Time: 8:30 a.m
 - c. Performed by:.
 - d. Static Pressure at Residual Fire Hydrant XXXX: psig.
 - e. Measured Flow at Flow Fire Hydrant Y: gpm.
 - f. Residual Pressure at Residual Fire Hydrant X: psig.
 2. Sprinkler system design shall be approved by authorities having jurisdiction.
 - a. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
 - b. Sprinkler Occupancy Hazard Classifications:
 - 1) IT/MPOE/MDF/BDF: Light Hazard
 3. Minimum Density for Automatic-Sprinkler Piping Design:
 - a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. (4.1 mm/min. over 139-sq. m) area.

4. Maximum Protection Area per Sprinkler: According to UL listing.
5. Maximum Protection Area per Sprinkler:
 - a. Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m)
- D. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and California DSA.

2.03 STEEL PIPE AND FITTINGS

- A. Standard-Weight, Black-Steel Pipe: ASTM A 53/A 53M, Type E, Grade B . Pipe ends may be factory or field formed to match joining method.
- B. Schedule 10, Black-Steel Pipe: ASTM A 135/A 135M or ASTM A 795/A 795M, Schedule 10 in NPS 5 (DN 125) and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10 (DN 150 to DN 250), plain end.
- C. Black-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.
- D. Cast-Iron Flanges: ASME 16.1, Class 125.
- E. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
 1. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- F. Grooved-Joint, Steel-Pipe Appurtenances:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.
 - b. Corcoran Piping System Co.
 - c. National Fittings, Inc.
 - d. Shurjoint Piping Products USA Inc.
 - e. Smith-Cooper International.
 - f. Tyco Fire Products LP.
 - g. Victaulic Company.
 2. Pressure Rating: 175-psig (1200-kPa) minimum.
 3. Galvanized, Painted, and Uncoated Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting, with dimensions matching steel pipe.
 4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213 rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.04 SPECIALTY VALVES

- A. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."

- B. Pressure Rating:
 - 1. Standard-Pressure Piping Specialty Valves: 175-psig (1200-kPa) minimum.
- C. Body Material: Cast or ductile iron.
- D. Size: Same as connected piping.
- E. End Connections: Flanged or grooved.
- F. Deluge Valves
 - 1. Deluge Valve complete with releasing trim rated at 250 psi and all the necessary accessories. Trim shall include a mechanical latching device to prevent system from resetting in case of loss of power to the release solenoids. Systems provided with solenoids only, without this mechanical latching device, shall not be accepted. Every valve shall be clearly identified as to its operation with arrows indicating all positions to facilitate system operation.
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. Viking Corporation or equivalent
 - b. Standard: UL 260.
 - c. Design: Electrically operated, differential-area type.
 - d. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gauges, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
 - e. Fail-safe self-contained double interlocked pre-action cabinet containing all hydraulic and electrical components required for the control of a fail-safe pre-action system. Air compressor and supervisory trim (Air Supply Style "A") shall be provided inside the cabinet and its pressure factory adjusted for the selected configuration.
 - 3. Air Compressor:
 - a. The automatic sprinkler piping is supervised by compressed air from a source installed to serve the system.
 - b. The air supply must be regulated and of the proper size in order to be able to restore normal system air pressure within 30 minutes.
 - c. Manufacturers: Subject to district approval,

2.05 SPRINKLER PIPING SPECIALTIES

- A. Branch Outlet Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.
 - b. National Fittings, Inc.
 - c. Shurjoint Piping Products USA Inc.

- d. Tyco Fire Products LP.
- e. Victaulic Company.
2. Standard: UL 213.
3. Pressure Rating: 175-psig (1200-kPa)
4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
5. Type: Mechanical-tee and -cross fittings.
6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
8. Branch Outlets: Grooved, plain-end pipe, or threaded.

B. Adjustable Drop Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aegis Technologies, Inc.
 - b. CECA, LLC.
 - c. Corcoran Piping System Co.
 - d. Merit Manufacturing.
 - e. <Insert manufacturer's name>.
2. Standard: UL 1474.
3. Pressure Rating: [250-psig (1725-kPa) minimum] [300 psig (2070 kPa)].
4. Body Material: Steel pipe with EPDM-rubber O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.
7. Inlet and Outlet: Threaded.

2.06 SPRINKLERS

A.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Globe Fire Sprinkler Corporation.
2. Reliable Automatic Sprinkler Co., Inc. (The).
3. Tyco Fire Products LP.
4. Victaulic Company.
5. Viking Corporation.

C. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."

D. Pressure Rating for Residential Sprinklers: 175-psig (1200-kPa) maximum.

E. Pressure Rating for Automatic Sprinklers: 175-psig (1200-kPa) minimum.

- F. Automatic Sprinklers with Heat-Responsive Element:
1. Early-Suppression, Fast-Response Applications: [UL 1767]
 2. Nonresidential Applications: [UL 199]
 3. Residential Applications: [UL 1626]
 4. Characteristics: Nominal 1/2-inch (12.7-mm) orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
- G. Sprinkler Finishes: Chrome plated and bronze.
- H. Special Coatings: corrosion-resistant paint.
- I. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
1. Ceiling Mounting: Chrome-plated steel, one piece, flat Chrome-plated steel, two piece, with 1-inch (25-mm) vertical adjustment.
- J. Sprinkler Guards:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc. (The).
 - b. Tyco Fire Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
 2. Standard: UL 199.
 3. Type: Wire cage with fastening device for attaching to sprinkler.
- K. Pressure Switches:
- Manufacturers: Subject to compliance with requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
1. Potter Electric Signal Company.
 2. Viking Corporation.
 3. Or Equal
 - a. Standard: UL 346.
 - b. Type: Electrically supervised water-flow switch with retard feature.
 - c. Components: Single-pole, double-throw switch with normally closed contacts.
 - d. Design Operation: Rising pressure signals water flow.
- L. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements,
 - a. Potter Electric Signal Company.
 - b. Viking
 - c. Standard: UL 346.
 - d. Type: Electrically supervised.
 - e. Components: Single-pole, double-throw switch with normally closed contacts.
 - f. Design: Signals that controlled valve is in other than fully open position.

2.10 CONTROL PANELS

- A. Description: Single-area single-s-zoned type control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.

1. Panels: UL listed and FM Global approved

- a. The control panel shall be FM Approved and c-UL-us Listed to the new UL 864-9 standard. Panel shall include four programmable Class B, Style B initiating zones, two class B supervisory zones, and four programmable output circuits. Onboard, menu-driven programming with twelve pre-installed programs for ease of set-up must also be provided. The panel must be compatible with many different initiating devices including linear heat detection, smoke and heat detectors, water flow indicators, low air pressure switches, and manual pull stations.
 - b. The control panel should include both an LCD Annunciator describing all system conditions (16 characters on 2 lines) and a set of red & yellow LED lamps identifying each separate alarm and trouble conditions. Easy to operate control buttons shall also be included for the operation of the panel various functions.
 - c. A set of emergency batteries should be provided with the control panel. Batteries should be calculated to provide emergency power for a specific duration after which they shall be able to provide 5 minutes of alarm and activation of the solenoid valve(s). 10 minutes of alarm after 90 hours stand-by (FM).
 - f. Supply and install one dedicated 110VAC, 60Hz branch circuit to power each release control panel.
 - g. Supply and install a second branch circuit, 110VAC, 60Hz for each air compressor provided inside the pre-action cabinet by the factory.
 - h. The (two) independent circuit(s) for each pre-action systems shall be well identified and their circuit breaker locked.
2. Supply and install a partial electrical detection system programmed for addressing multiple detection zones including:
 - a. system tubing, wiring, smoke detectors, signaling devices and connections to auxiliary functions.
 - b. Smoke detectors shall be provided and wired to the Notifier NFS 320 remote release control panel by others. Spacing and type of detectors shall meet the requirements of the applicable standards and the manufacturer's recommendations for the application protected.
 - c. Detection and alarm indicating devices (24 Vdc bell, horn or strobe) must be compatible with the remote release control panel. In addition, contractor

PART 3 EXECUTION

3.01 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.

3.02 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated on approved working plans.
 - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
 - 2. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.
- B. Piping Standard: Comply with NFPA 13 requirements for installation of sprinkler piping.
- C. Install seismic restraints on piping. Comply with NFPA 13 requirements for seismic-restraint device materials and installation.
- D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
- H. Install sprinkler piping with drains for complete system drainage.
- I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- J. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.
- K. Install alarm devices in piping systems.
- L. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13. In seismic-rated areas, refer to Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
- M. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they are not subject to freezing.

- N. Fill sprinkler system piping with water.
- O. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- P. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- Q. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

3.03 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
- I. Steel-Piping, Pressure-Sealed Joints: Join lightwall steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.
- J. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
 - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
- K. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

- L. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

3.04 INSTALLATION OF COVER SYSTEM FOR SPRINKLER PIPING

- A. Install cover system, brackets, and cover components for sprinkler piping according to manufacturer's "Installation Manual" and NFPA 13 or NFPA 13R for supports.

3.05 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Specialty Valves:
 - 1. Install valves in vertical position for proper direction of flow, in main supply to system.
 - 2. Install alarm valves with bypass check valve and retarding chamber drain-line connection.
 - 3. Install deluge valves in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.

3.06 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels.
- B. Align sprinklers in coordination with light fixtures and other ceiling mounted objects in accordance with the design plans and in coordination with the Architect. Architect shall approve deviations from design plan.

3.07 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.08 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
 4. Energize circuits to electrical equipment and devices.
 5. Coordinate with fire-alarm tests. Operate as required.
 6. Verify that equipment hose threads are same as local fire department equipment.
- B. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.
- 3.09 CLEANING
- A. Clean dirt and debris from sprinklers.
 - B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.
- 3.10 PIPING SCHEDULE
- A. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with [threaded ends, cast-iron threaded fittings, and threaded] [grooved ends, grooved-end fittings, grooved-end-pipe couplings, and grooved] joints.
 - B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
 - C. Standard-pressure, wet-pipe sprinkler system, NPS 2 (DN 50) and smaller, shall be the following:
 1. Standard-weight black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
 2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
 3. Standard-weight, black-steel pipe with plain ends; uncoated, plain-end-pipe fittings; and twist-locked joints.
 4. Standard-weight, galvanized-steel pipe with plain ends; galvanized, plain-end-pipe fittings; and twist-locked joints.
 5. Standard-weight, black-steel pipe with cut or roll grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 6. Standard-weight, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
 7. Standard-weight, black-steel pipe with plain ends; steel welding fittings; and welded joints.
 - D. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 (DN 65) and larger, shall be of the following:
 1. Standard-weight, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
 2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

3. Standard-weight, black-steel pipe with [cut-] [or] [roll-]grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
4. Standard-weight, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
5. Standard-weight, black-steel pipe with plain ends; steel welding fittings; and welded joints.
6. Schedule 10 black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
7. Schedule 10 black-steel pipe with plain ends; welding fittings; and welded joints.

3.11 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers in- stead of check valves in potable-water-supply sources.
- D. Specialty Valves:
 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
 2. **Dry-Pipe** Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gauges, priming chamber attachment, and fill-line attachment.
 3. Install air compressor and compressed-air supply piping.

Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with adjustable range; and maximum inlet pressure.

4. Install compressed-air

3.12 SPRINKLER SCHEDULE

- A. Use sprinkler types in 28 13 00 based on area of use and finish expectations. Final direction on sprinkler type to be coordinated with AOR and the District.

END OF SECTION

SECTION 21 22 00

CLEAN AGENT FIRE SUPPRESSION SYSTEMS

PART 1 GENERAL

1.01 DESCRIPTION

- A. Each room to be protected shall be considered a single zone for fire suppression protection.
- B. The quantity of the agent shall be that necessary to maintain a concentration capable of extinguishment/fire suppression for at least ten minutes. Such factors as unclosable openings (if any), "rundown" time for fans, time required for dampers to close, and all other features of the facility that could affect concentration shall be considered.
- C. Design and operation of the system shall comply at a minimum with the appropriate requirements of NFPA 2001 and the requirements of the nationally recognized testing authorities for which listings or approvals have been obtained.
- D. Fire Protection System: Total flooding of hazard area with fire extinguishing agent, to extinguishing fire.
- E. Locate extinguishing agent supply and back-up supply in a 1-hour rated room adjacent to each hazard area or within the hazard area.
- F. System shall be fixed installation with equipment designed and installed to provide fire-extinguishing capability for the area as indicated.

1.02 REFERENCES

- A. California State Fire Marshal (CSFM):

- B. National Fire Protection Association
 - 1. NFPA 70
 - 2. NFPA 72
 - 3. NFPA 75
 - 4. NFPA 2001

1.03 SUBMITTALS

- A. Refer to applicable General Sections of this specification, submittal procedures, shop drawings, project data and samples for submittal requirements.
- B. Shop Drawings and Data
 - 1. All drawings and calculations shall be prepared in accordance with NFPA 2001. Refer to Article entitled "Quality Assurance" herein for requirement that drawings and calculations be signed and stamped by professional engineer.

2. Drawings shall bear stamp of approval of authority having jurisdiction and shall indicate locations, installation details, and operation details of all equipment and piping, control diagram, wiring diagram and sequence of operation associated with the fire suppression system.
3. Piping plan view and detail drawings shall be drawn to scale and isometrics dimensioned to show the entire storage and distribution system, the nozzle and detector location, and layout of annunciator final graphics. The detector and nozzle locations shall be coordinated with lighting fixtures, diffusers, ductwork, and other equipment installed in the protected room. Indicate manual pull station, control panel, and accessory locations and details.
4. Electrical drawings shall indicate the complete sequence of operations of the system, termination diagrams and locations of interfaces with other systems.
5. Calculations shall be submitted demonstrating that the proposed system can provide the design concentration within the design discharge time. Submit design calculations bearing stamp of approval of authority having jurisdiction.
6. Calculations shall be submitted showing required battery capacity, verify system pressure, nozzle flow rate, orifice code numbers, piping pressure losses, component flow data and pipe sizes.
7. Indicate any required construction phasing.
8. DSA: Shop Drawings of the clean agent fire suppression system shall be submitted to the Engineer for submission to the Division of the State Architect for approval. Include State Fire Marshal listing numbers, as listed in the State Fire Marshal's Building Materials Listing Program, for all components. Shop Drawings require approval of the DSA before any installation work may begin.
9. Certificates of Compliance: Submit certified test reports for materials and equipment to demonstrate compliance with specification requirements
10. Product Data: Material and equipment information shall include manufacturer's catalog cuts and technical data for each of the following components or devices used in the system and shall bear stamp of authority having jurisdiction
 - a. Smoke detection;
 - b. Manual discharge switches (pull stations);
 - c. Control panel;
 - d. Release devices;
 - e. Alarm devices;
 - f. Storage containers;
 - g. Mounting brackets;
 - h. Nozzles;
 - i. Abort stations; and
 - j. Contact monitor modules.
11. Operation and Maintenance Data: Submit operation and maintenance data for the equipment and system provided in accordance with Section 01 78 23, Operation and Maintenance Data. Include recommended spare parts list.
12. Certified Test Reports: Submit certified test reports that indicate successful completion of all tests performed as required by Article 3.04 herein.
13. Manufacturer: Certify that system meets or exceeds specified requirements and NFPA 2001.

1.04 QUALITY ASSURANCE

A. Qualifications of the System Designer and Installer

1. The system installer or sub-contractor for this work shall possess a valid C-16 California Contractors license. The fire suppression systems must be installed by an experienced and qualified individual or firm regularly engaged in clean agent fire suppression system design and installation. Drawings and calculations must be signed and sealed by a registered California Profession Fire Protection Engineer.
2. The installer shall maintain a 24-hour, seven-day-a-week telephone number for emergencies. Factory-trained personnel shall be kept on call for emergency service at all times.
3. Identification of Materials and Equipment: Materials and equipment shall be clearly marked or stamped with the manufacturer's name, nameplate data or stamp, rating, and conformance with corresponding standard number, as applicable.
4. Perform work in accordance with NFPA 70 and NFPA 72, applicable UL standards and requirements of applicable codes and ordinance.
5. Indicate manufacturer's name and pressure rating on valve body. Indicate manufacturer, type and size, part number, orifice code or orifice diameter on discharge nozzles. Markings shall be standard and visible after installation.
6. Certified Tests and Listings: Fire protection material and equipment shall be approved or listed by a nationally recognized testing laboratory of fire protection equipment for this application.
7. Equipment and devices of the system shall be of identical type, model and manufacturer as submitted and shall be approved by the California State Fire Marshal.

1.05 DESIGN REQUIREMENTS

A. Provide sufficient amount of fire extinguishing agent liquid to convert into fire extinguishing agent vapor. Consider the following when computing volume:

1. Volume of hazard area.
2. Specific volume of fire extinguishing agent vapor.
3. Additional quantities of fire extinguishing agent required to compensate for openings, pipe losses, and nitrogen dilution.
4. Forced ventilation, fan coast-down time, and damper actuation time.
5. Mechanical smoke control system.
6. Other special conditions affecting extinguishing efficiency.
7. Interface system with building fire alarm system.
8. Manufacturer Qualification: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

B. Design system under direct supervision of a California licensed professional engineer experienced in design of this work.

1.06 REGULATORY REQUIREMENTS

A. Conform to applicable code for system design, fabrication, and installation.

B. Conform to NFPA 70 and NFPA 72 code for electrical wiring and wiring devices.

- C. Provide certification of inspection approval of fire protection system by authority having jurisdiction.
- D. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., and acceptable to the authority having jurisdiction as suitable for the purpose specified and indicated.

1.07 DELIVERY, STORAGE, AND PROTECTION

- A. Refer to Section 01 60 00, Product Requirements, for requirements. Transport, handle, store, and protect products.
- B. Accept materials and components on site in shipping containers. Inspect for damage.
- C. Delivery and store equipment in shipping containers with labeling in place. Deliver fire-extinguishing agent in approved containers.
- D. MAINTENANCE SERVICE
- E. Refer to Section 01 77 00, Closeout Procedures, for requirements.
- F. Conduct inspections 6 months and 12 months from date of Substantial Completion to verify proper operation of system and to check agent container weight and pressure. Include a thorough check of controls, detection and alarm systems.
- G. Submit documents, certifying satisfactory system conditions. Include manufacturer's certificate of acceptance of Inspector's qualifications.

1.08 SITE CONDITIONS

- A. Inspect surfaces and structures where the system components will be anchored or fastened before the work of this Section begins. Determine that surfaces and structures are capable of supporting the system components and their weight.
- B. Coordinate the installation of the system with the station alarm and detection system and other systems and components, pipes, and conduits, so as to avoid conflicts of space and installation.

PART 2 - PRODUCTS

2.01 ALARM OPERATION DESCRIPTION

- A. Alarm Phase I: One hundred percent smoke density at any sensor shall trigger or activate equipment functions as follows:
 1. Annunciate the device status and its location at the system control panel;
 2. Cause a pre-alarm audio-visual (horn) to slow modulate within the protected zone;
 3. Send an alarm signal via dry contact closure to the station fire alarm control panel provided under Section 28 31 00, Fire Detection and Alarm System; and
 4. Record the event in the system control panel's nonvolatile RAM memory buffer for post event recall and analysis.
 5. Shut down air conditioning system and close dampers.

- B. Alarm Phase II: One hundred percent smoke density at any second sensor within the same protected area shall trigger or activate equipment functions as follows:
1. Annunciate the device status and its location at the system control panel;
 2. Cause a pre-discharge audio and visual alarm (horn) to fast modulate within the protected zone;
 3. Send a pre-discharge signal via dry contact closure to the station fire alarm control panel provided under Section 28 31 00, Fire Detection and Alarm System;
 4. Record the event in the system control panel's nonvolatile RAM memory buffer for post event recall and analysis; and
 5. Activate a thirty-second time delay.
- C. Alarm Phase III: Agent Discharge:
1. After the 30-second time delay has expired the initiator shall be activated to release the fire-extinguishing agent.
 2. Upon discharge, warning horn and lights shall activate continuously at all entrances to the protected area.
 3. Record the event in the system control panel's nonvolatile RAM memory buffer for post event recall and analysis.
- D. Manual Station Operation:
1. Requirements: The system shall be capable of being actuated by manual discharge switches for the protected area. Operation of a manual discharge.
 2. switch shall cause alarm devices and shutdown functions to operate immediately. Manual stations used to release agents shall require two separate and distinct operations. The manual discharge switch shall override the time delay and abort capabilities of the system. Manual discharge switches shall be provided in the protected area at all of the exits. Each manual station shall be addressable and activation of these devices shall provide custom information at the station fire alarm control panel.
 3. Pull Stations: Surface housing fitted with double action control fitted with "push- in" tab and "pull-down" lever that locks in position after releasing spring-loaded contact, for mounting on electrical outlet box.
- E. Labeling: Locate engraved label adjacent to each manual pull station indicating area protected, and that actuation will cause discharge of fire extinguishing agent.
- F. TROUBLE OPERATION DESCRIPTION
1. Trouble Conditions: The fire detection system shall provide the following sequence of operation for any trouble condition:
 2. Display a custom message identifying the device in trouble.
 3. Record the event in the system control panel's nonvolatile RAM memory buffer for post event recall and analysis.
 4. Send a trouble signal via dry contact closure to the station fire alarm control panel provided in accordance with Section 28 31 00, Fire Detection and Alarm System.

2.02 MATERIALS AND EQUIPMENT

- A. General Requirements:

1. Equipment and accessories furnished hereunder shall be standard components of a specified manufacturer. Catalog numbers and model designations shall indicate design, quality, and type of material as well as required operating characteristics.
 2. Field fabricated equipment not supplied by the manufacturer will not be accepted unless approved by the Engineer.
 3. Locks for cabinets shall be keyed alike.
- B. Control and Supervisory Systems:
1. System Control Panel: (Red in color)
 - a. The system control panel shall be red in color, and shall process all input signals, sequence the levels of alarms, and provide outputs to the extinguishing agent storage containers.
 - b. Auxiliary outputs and dry contacts shall be available to shut down fans, activate dampers, contact other agencies, or annunciate to remote devices. The system shall have standby batteries and charger for continuous operation of detection, alarm, actuation, and supervision function to provide a minimum of 24 hours of emergency power. The system control panel shall provide for either a Style "D" or a Style "B" (allowing T-Tapping) as defined in NFPA 72, type wiring and shall utilize initiating devices connected in parallel to provide automatic battery switch- over upon failure of primary power supply.
 - c. The system control panel shall utilize parallel agent release modules as a method of discharging the agent. The operation of a discharge signal shall immediately cause the appropriate agent release modules to activate and release agent. The initiator circuit shall be a parallel Style "D" circuit. Any system utilizing series initiators, series solenoids or mechanically activated solenoids is unacceptable. All initiator wiring shall be fully supervised.
 2. Central Control Module (CCM): This module shall control, supervise, and continuously monitor the entire system through the use of an industrial grade 32-bit micro controller. This module shall include a backlit liquid crystal display
 - a. (LCD) with minimum 200 alphanumeric characters that provide individual custom messages associated with every addressable device in the system. The CCM shall include touch membrane switches for each of the following:
 - b. Location: Display a 100-character custom message associated with the individually addressable devices reporting to the CCM or a manufacturer- specified message for devices (i.e. door holders, air conditioning units) supervised and controlled by the CCM.
 - c. Next Trouble: Displays the chronological sequence of individual addressable devices in trouble reporting to the CCM or a manufacturer-specified message for devices supervised and controlled by the CCM.
 - d. Next Alarm: Displays the chronological sequence of individual addressable devices in alarm reporting to the CCM.
 - e. History Buffer: The CCM shall contain a 256-event nonvolatile history buffer. This history shall be retrieved by downloading the information through an internal RS232 port, and USB port to a personal computer and printer without having to purchase additional software.
 - f. Field Programming: This system shall be fully field programmable and shall not require factory assistance for reconfiguration of any kind.
 - g. Expansion Capability: To allow for future expansions, the central control module shall be capable of connecting a minimum of 1,016 individual addresses.

- h. Approved as alarm and releasing device, with solid-state internal circuitry enclosed in NEMA ICS 6, Type 1 cabinet.
 - i. Provide supervision to NFPA 72, Class A of the following circuits for wire break or ground faults:
 - 1) Zone detection loops.
 - 2) Remote manual discharge stations.
 - j. Suppression system solenoid valves.
 - k. Power supply and circuit wiring and fuse.
 - l. Battery interconnecting wires and fuse.
 - m. Alarm in abort mode.
 - n. Equip panel with following standard features:
 - o. Visual and audible annunciation of trouble or alarm signals.
 - p. Panel reset switch.
 - q. Trouble alarm silence switch with ring back feature.
 - r. Single Zone Detection: Cross zone (optional).
 - s. Battery test meter and switch.
 - t. Manual discharge switch.
 - u. Deadman abort switch.
 - v. Programmable timers for pre-discharge and discharge, 0-60 second cycle.
 - w. Isolated relay contactors for external alarm or equipment and ventilation shutdown.
 - x. Relay contactors for general trouble signal.
 - y. Relay contactor activated by detector zone board in alarm or trouble mode.
3. Operating Sequence:
- a. Actuation of one detector in either zone circuit:
 - 1) Illuminate zone indicator.
 - 2) Energize alarm bell.
 - 3) Shut down air-conditioning system and close dampers.
 - 4) Close doors to area.
 - 5) Signal building fire alarm system via dry contact.
 - b. Actuation of second detector on second zone circuit:
 - 1) Illuminate zone indicator.
 - 2) Energize alarm horn.
 - 3) Shut down power to protected equipment
 - 4) Actuate time delay for up to (30) (60) seconds.
 - 5) Release extinguishing agent into protected area.
 - 6) If abort switch is engaged, delay release.
 - 7) Upon abort switch disengagement release extinguishing agent unless system cleared and reset.

- 8) Signal building fire alarm system via dry contact closure.
 - c. Discharge of Extinguishing Agent:
 - 1) Sounds alarm bells and horns.
 - 2) Operates strobes.
 - d. Temperature Detection:
 - 1) Lower Temperature: Illuminate indicator and energize (bell) (horn).
 - 2) Higher Temperature: Shut down power to protected equipment.
 - e. Manual Discharge Station: Manual discharge stations shall have a dual action release configuration to prevent accidental system discharge. The legend on the front of the station shall read "Agent-Release". These stations shall be located at emergency fire exits. A contact monitor module will be included with each station to give it a specific address (location) through the CCM.
 - f. System Abort Switch: The switch shall be a momentary deadman-type, that when depressed, interrupts the automatic sequence of the control system and prevents agent discharge. Each switch shall be permanently labeled "System Abort". These stations shall be located at emergency fire exits. A contact monitor module shall be included with each switch to give it a specific address (location) through the CCM.
4. Verified Detection Sensors:
 - a. The photoelectric sensors shall be spaced and located, in accordance with the manufacturer's specifications and with the guidelines of NFPA 72. Detector coverage shall not be greater than 250 square feet per detector.
 - b. The system control panel shall provide the command and interrogation signals that confirm an alarm by comparing (with consecutive multiple passes of the "interrogation window") sensor information with stored data on fire conditions. The analog or addressable photoelectric sensor shall provide true linear analog data to the CCM in order for the CCM to differentiate between higher and lower values of smoke density and to establish a working range of sensitivity levels unique to the particular environment. Adjustments needed for sensor sensitivity to meet ambient conditions shall have a minimum of 12^olevels of adjustment.
 - c. The system shall have the capacity to automatically conduct a weekly functional test of each sensor, that is accomplished by means of a test LED fitted within each sensor. When automatically activated by the control panel this test LED shall produce an infrared signal level directly equivalent to that reflected by a given percentage of smoke entering the chamber. Any sensor not responding to its preset limits shall be automatically readjusted to a programmed level of sensitivity.
 5. Alarm Signal Outputs:
 - a. Outputs shall be provided from the system control panel for interface with station fire alarm control panel.
 - b. Audible and visual alarm horn and strobes: The alarms shall operate on 24-volt polarized DC power and allow for supervision. The alarm unit shall have a minimum sound level of 97 decibels at 10 feet. All strobes including both in the protected room and outside room, shall be capable of
 - 1) 100 candelas.
 6. Fire Suppression Agent:

- a. The agent shall be fluoroketone, such as 3m Novec 1230 or equal, or heptafluoropropane, HFC-227ea. The physical and chemical properties shall conform with the requirements of NFPA 2001.
 - b. The agent shall be stored in containers, super-pressurized with nitrogen to a maximum total pressure level at 70 degrees Fahrenheit of 360 psig.
 - c. Higher-pressure agents will not be accepted. Agents stored at pressure higher than 360 psig shall be contained in a safe manner and approved by the Engineer.
 - d. The agent shall have the following characteristics:
 - 1) Ozone depletion potential of zero;
 - 2) Atmospheric lifetime less than 50 years; and c. 4-hour LC50 > 788,696 ppm
7. Agent Storage and Distribution Components:
- a. Agent Storage Containers:
 - 1) Standard model and size for ease of replacement and addition. Design, fabricate, certify, and stamp cylinders in accordance with ASME Section VIII.
 - 2) The supply area of agent shall be central storage by design. The storage vessels shall be capable of being refilled in the field and checked for liquid level without the aid of scales or other special tools.
 - 3) The supply shall be located as indicated, so that proper hydraulic agent distribution is achieved. Agent storage containers shall be floor mounted and shall include bracket assemblies designed to withstand 1000 pounds thrust for 10 seconds. Floor space is limited, therefore, alternatives requiring more floor space will not be considered.
 - 4) The storage containers shall be actuated by means of an electronic initiator. Each container shall be actuated individually. Master and slave solenoid configurations will not be considered.
 - b. Identification: Permanent plate, specifying agent, tare and gross weight, pound of fire extinguishing agent, and pressurization level, installed so that plate is visible and readable.
 - c. Cylinder valves: Heavy duty forged brass, incorporating safety release pressure operated manual control, solenoid discharge valve, and pressure gage. Provide solenoid pilot valves for each cylinder or bank of cylinders.
 - d. Manifold: Provide for systems with more than one cylinder with rack to secure each cylinder and check valves between each cylinder discharge and manifold.
 - e. The container and valve shall be capable of releasing the agent as fast as possible and shall not exceed 10 seconds.
 - f. A nameplate indicating the manufacturer's name and part number, agent fill weight, and total charged weight shall be permanently bonded to each container.
8. Safety Release: Equip cylinder with frangible disk safety device.
- a. The release valve shall accommodate a "straight through" vertical discharge with no directional changes for maximum discharge efficiency and safety. The releasing valve shall contain a "fast-acting" scored, non-fragmenting rupture membrane, which will burst when the pyrotechnic initiator is activated via an electric signal from the control panel.
 - b. Actuator: Release of the agent shall be accomplished by an electrical signal from the system control panel in conjunction with a specifically designed agent release module. Systems that employ more than one cylinder shall have all electric initiators connected in parallel.

9. Low Pressure Switch:
 - a. The agent storage container shall be equipped with a low-pressure switch to indicate a loss of container pressure. A decrease in pressure from 360 psi to 275/272 psi will cause the normally closed contact to open, thereby indicating a trouble condition.
 - b. Low pressure switch shall be monitored by the system control panel and shall provide a specific indication of cylinder low pressure.
 - c. Liquid Level Indicator: Tanks holding in excess of 60 pounds of agent shall contain a liquid level indicator to monitor vessel contents, in addition to the low-pressure switch.
10. Discharge Nozzles:
 - a. Nozzles shall distribute the agent throughout the protected area. Single nozzle shall not discharge more than 250 pounds of agent.
 - b. The nozzles shall utilize a 180 or 360-degree pattern and shall be designed to direct the discharge of agent parallel to the ceiling, thus minimizing the possibility of disturbance to objects within the room.
 - c. Construction: One-piece brass or aluminum nozzle with textured finish with female pipe thread integral on body. Direct discharge parallel to ceiling.
 - d. Identification: Permanently mark nozzles to show equivalent single orifices diameter.
11. Signs and Identification
 - a. Provide signs and identification as specified in Section 20 40 13, Identification for Facility Services, and in conformance with NFPA 2001
 - b. Provide signs and identification to each valve required to be identified.
 - c. Provide engraved nameplates for all manual discharge stations and abort switch locations to indicate their function. All alarm devices shall have similar identification plates.
 - d. Each entrance door shall include a caution placard indicating that the area is being protected by a clean agent fire suppression system. Where placards and signs are located outdoors, they shall be weather and UV resistant.
12. Wire and Conduit:
 - a. Wire: No. 14 awg copper wire conforming with the requirements of Section
 - b. 26 05 24, Low and Medium Voltage Wires and Cables, with insulation rating of 300 volts and temperature rating of 105 degrees Celsius. Provide power limited fire protective signaling cables conforming with the California Electrical Code, Articles 725 and 760, Type FPLR.
 - c.
 - a. Unavoidable splices shall be crimp-connected. Wire nuts will not be accepted.
 - d. Conduit: Galvanized rigid steel conduit, fittings, and accessories conforming to the requirements of Section 20 50 13, Raceways for Facility Services

PART 3 EXECUTION

3.01 INSTALLATION

- A. Installation Standards: Comply with applicable requirements of the NFPA 2001 and the California Electrical Code.

- B. System Installation Requirements: The fire suppression system shall be installed by the manufacturer or its authorized representative as indicated and in accordance with the approved Shop Drawings and the manufacturer's installation instructions and recommendations.
- C. Wiring shall be installed in galvanized rigid steel conduit, except that galvanized steel flexible conduit may be used for short runs where necessary for movement of devices.
- D. Wiring shall be installed to conform with the requirements of the California Electrical Code, Article 725B for Class 1 Signal Systems, except as otherwise permitted for limited energy circuits, as specified in NFPA 72.
- E. Securely support piping (in accordance with ASME B31.1) with allowance for fire- extinguishing agent thrust forces; thermal expansion and contraction; and longitudinal and lateral movement.
- F. Use grooved mechanical couplings and fasteners only in accessible locations. Roll groove piping only.
- G. Install unions downstream of valves and at equipment or apparatus connections.
- H. Prepare pipe, fittings, supports, and accessories for finish painting, in accordance with Section 09 91 00, Painting.
- I. Identify in accordance with NFPA 2001 requirements. Refer to Section 20 40 13, Identification for Facility Services. Place directional arrows and system labels wherever piping changes direction and minimum 20 feet (6 m) on straight runs.
- J. Secure cylinders as indicated on Drawings. (Where manifolded, mount and support by rack as indicated. For each system provide same size cylinders containing equal amounts of liquid).
- K. In rooms with suspended ceiling tiles, clip or retain tiles within 4-foot (1.2 m) radius of the nozzles to prevent lifting during discharge.
- L. Install wiring in accordance with Section 26 05 24, Low and Medium Voltage Wire and Cables, requirements.
- M. Make final connections between equipment and system wiring under direct supervision of factory trained representative of manufacturer.
- N. Install engraved plastic instruction plate or permanently bonded label, detailing emergency procedures, at control panel and at each manual discharge and abort switch location. At control panel identify control logic units, contacts, and major circuits with permanent nameplates.
- O. At hazard area walls pack space between pipe, pipe sleeve or surface penetration with mineral fiber with elastomer caulk to depth 1/2 inch (13 mm). Provide escutcheons where exposed piping passes through walls, floors, and ceilings. Seal pipe penetrations of fire separations. Refer to Section 07 90 00, Joint Protection.
- P. Locate discharge nozzle approximately 6 inches (150 mm) above or below wall header or ceiling level and 6 inches (150 mm) below raised floors. Avoid interference with other piping and equipment.
- Q. Locate remote manual releases at one or more doors to protect area where indicated. Locate deadman abort switch.
- R. Locate strobe units at all points of entrance to protected area.

- S. Locate abort station at all points of exit from protected area.
- T. Ream pipe and tube ends. Remove burrs. (Bevel plain end ferrous pipe.) Remove scale and dirt on inside and outside before assembly. Blow out pipe before nozzles or discharge devices are installed.
- U. Route piping in orderly manner, concealed, plumb and parallel to building structure, and maintain gradient. Install piping to conserve building space, and not interfere with use of space and other work.

3.02 TESTS

- A. System Tests: Tests shall demonstrate that the operation and installation requirements of this specification have been met. Submit certified copies of tests as specified in Article 1.06.G herein.
- B. Functional Tests: Tests shall demonstrate that the entire control system functions as designed. All circuits shall be tested including automatic discharge, manual discharge, and equipment shutdown and alarm devices. In addition, supervision of each circuit shall be tested.
- C. Design Review Test: Take field measurements of the room, and field calculate the amount of clean agent required to reach the design criteria, and match against the contents of the clean agent storage containers.
- D. Pressurization Test: Conduct a door fan test to determine the overall containment capacity of the clean agent protected area, and equivalent leakage area of the room. The calibrated fan unit shall be used to pressurize or depressurize the area with all air conditioning shutdown and dampers closed, and monitor airflow versus pressure data. The results shall be used to calculate a pass or non-pass conclusion. A manufacturer-approved testing unit and program shall be used for this test.
- E. Piping Test Review: Make a field verification of the piping network and match against the drawing flow calculations. All significant variations will require recalculation of the piping system.
- F. A distribution piping and valve, prior to nozzle installation pressurization test shall be conducted that requires 150 psi to be held for 10 minutes with no more than 10 percent pressure drop. Inspect joints using soap water solution or halide torch or lamp, replace and retest.
- G. A "puff" test using dry nitrogen shall be conducted. Caps shall be placed over all discharge nozzles and adequate pressure shall be supplied to demonstrate that all of the caps will blow off indicating that the pipes are free of obstructions.
- H. Upon completion of installation provide final checkout inspection by factory-trained representative of manufacturer to ascertain proper system
- I. operation. Leave system in a fully commissioned and automatic readiness state with circuitry energized and supervised.
- J. Submit original copies of tests, indicating that factory trained technical representatives of the manufacturer have inspected and tested systems and are satisfied with methods of installation, connections and operations.
- K. After successful testing, de-pressurize the system and remove nozzle caps without moving pipes, and install discharge nozzles without moving pipe assembly.

3.03 TRAINING AND INSPECTIONS

- A. Training Requirements: Provide complete system operation training of at least four hours for six of the District's maintenance personnel in accordance with
 - 1. Section 01 79 00, Demonstration and Training.
- B. Fire Suppression System Inspections:
- C. Provide two inspections of the system during the one-year warranty period. The first inspection shall be six months after system acceptance and the second after 12 months. Inspections shall include the determination of agent container weight and pressure and that the mechanical systems are in proper working order.
- D. Inspections shall also include a complete checkout of the control and alarm system and test, if possible that all interlocking systems are functioning properly.
- E. Documents certifying satisfactory system conditions shall be submitted upon completion of each inspection.

PART 2 PRODUCTS

2.01 VERTICAL IN-LINE PUMPS

- A. Type: UL 448 and UL 778, vertical, single stage, close coupled, radially or horizontally split casing, for in-line mounting, for 250 psi. Fire pump shall be capable of furnishing not less than 150 percent of rated capacity at not less than 65 percent of total rated head and with shutoff head limited to 140 percent of total rated head. Factory assembled and tested to comply with NFPA 20.
- B. Casing: Cast or ductile iron, with suction and discharge gauge ports, casing wear ring, seal flush connection, drain plug, flanged suction and discharge.

- C. Impeller: Bronze, fully enclosed, statically and dynamically balanced, keyed directly to motor shaft.
- D. Shaft: Solid alloy steel with bronze sleeve.
- E. Seal: Packing gland with minimum four rings graphite impregnated packing and lantern rings, 230°F maximum continuous operating temperature.
- F. Wear Rings: Replaceable, bronze.
- G. Finish: Manufacturer's standard red paint.
- H. Provide nameplate complete with rated capacities and pump characteristics.
- I. Performance: Refer to Schedule on drawings. Acceptable Manufacturers: Aurora Pumps, Fairbanks Morse, Peerless Pump, A-C Pump; ITT Industries, Patterson Pump.
- J. Controllers: Acceptable Manufacturers: Aquarius, Firetrol, Masters, Cutler-Hammer

2.02 HORIZONTAL BASE MOUNTED PUMPS

- A. Type: UL 448 and UL 778, horizontal shaft, single stage, double suction, direct connected, horizontally split casing, for 250 psi maximum working pressure. Fire pump shall be capable of furnishing not less than 150 percent of rated capacity at not less than 65 percent of total rated head and with shutoff head limited to 140 percent of total rated head. Factory assembled and tested to comply with NFPA 20.
- B. Casing: Cast iron, with suction and discharge gauge ports, renewable bronze casing wear rings, seal flush connection, drain plug, flanged suction and discharge.
- C. Impeller: Bronze, double suction, fully enclosed, balanced and keyed to shaft.
- D. Bearings: Grease lubricated ball bearings in cast iron housing.
- E. Shaft and Sleeve: Alloy steel with replaceable bronze shaft sleeve.
- F. Seal: Packing gland with minimum four rings graphite impregnated packing and lantern rings, 230°F maximum continuous operating temperature.
- G. Drive: Flexible coupling with coupling guard.
- H. Baseplate: Cast iron or fabricated steel with integral drain rim.
- I. Finish: Manufacturer's standard red paint.
- J. Provide nameplate complete with rated capacities and pump characteristics.
- K. Performance: Refer to Schedule on drawings. Acceptable Manufacturers: Aurora Pumps, Fairbanks Morse, Peerless Pump, A-C Pump; ITT Industries, Patterson Pump.
- L. Controllers: Acceptable Manufacturers: Aquarius, Firetrol, Masters, Cutler-Hammer

2.03 ELECTRIC MOTOR DRIVE

- A. Motor: UL listed, squirrel cage induction type; in open drip-proof NEMA MG1 enclosure, 1750 3550 RPM complying with NFPA 20 and NFPA 70.
- B. Controller: UL 218 and NFPA 20, full-service type with solid state reduced voltage starter across the line starter VFD and electrical characteristics as scheduled on the drawings, in NEMA 3R enclosure, combined automatic and manual operation, factory assembled and wired, and factory tested for capacities and electrical characteristics, including the following:
1. Disconnect Means: Externally operable, quick-break type.
 2. Circuit Breaker: Continuous current rating not less than 115% of the rated full load current of the motor. Overcurrent sensing elements of the non-thermal type. Instantaneous short circuit current rating for 100,000 amperes interrupting capacity and service entrance rated.
 3. Locked Rotor Protection: Calibrated and set at a minimum of 300% of full load current.
 4. Motor Starter: Energized automatically by pressure switch or manually by externally operable handle.
 5. Pressure Switch: Water pressure actuated switch with independent high and low calibrated adjustments responsive to water pressure in fire suppression piping. This Contractor is responsible for determining and setting start and stop pressures based on hydraulic calculations, available water pressure, required system pressure, controller manufacturer's recommendations, and NFPA requirements. If the fire pump is serving a sprinkler system, the activation of one sprinkler shall be sufficient to bring on the fire pump.
 6. Running Timer: Keeps motor operating when started automatically, for at least ten minutes.
 7. Pilot Lamp: Indicates circuit breaker closed and power available.
 8. Ammeter and voltmeter built into enclosure.
 9. Built-in Alarm: Energizes alarm to indicate circuit breaker open or power failure.
 10. Remote start switch relay.
 11. Contacts for monitoring PHASE LOSS, PHASE REVERSAL, PUMP RUNNING, and ALTERNATE SOURCE.
 12. Controller Sensing Pipes: Fabricate pipe and fittings according to NFPA 20 with nonferrous metal sensing piping, NPS 1/2, with globe valves for testing controller mechanism from system to pump controller as indicated. Include bronze check valve with 3/32 inch orifice in clapper or ground face union with non-corrosive diaphragm having 3/32 inch orifice.
 13. Automatic Transfer Switch connected to primary and alternate power source: UL 218 and UL 1008 and requirements for and attached to fire pump controllers. Include enclosure complying with UL 50, Type 2, with automatic transfer switch with rating at least equal to fire pump driver motor horsepower. Include ampere rating not less than 115 percent of motor full load current and suitable for switching motor locked rotor current. Instantaneous short circuit current rating for 100,000 amperes interrupting capacity and service entrance rated.
 14. Surge Protection: Provide a factory-installed listed surge protection device with the fire pump controller.

15. System Pressure Recorder: Digital type with memory.
16. Finish: Manufacturer's standard red paint.

2.04 DIESEL ENGINE DRIVE

- A. Diesel Engine: Conform to NFPA 1247, arranged for automatic operation, include overspeed/overcrank switch and drive, two contactor switches, low oil pressure and high- water temperature warning switches, and fuel shutoff solenoid with wiring terminating in junction box.
- B. Include the following engine accessories:
 1. Stub shaft.
 2. Oil bath air cleaner.
 3. Water cooled exhaust manifold.
 4. Heat exchanger.
 5. Mechanical speed governor.
 6. Fuel filter.
 7. Lube oil filter and bypass valve.
 8. Lube oil cooler and relief valve.
 9. Fuel pump.
 10. Instrument panel with tachometer, hour meter, oil pressure gauge, water temperature gauge, ammeter, hand speed control and start switch.
 11. Starting system including generator/alternator, starting motor and voltage regulator.
- C. Cooling Water System: Closed system with cooling water supply to heat exchanger from fire pump discharge. Include four shutoff valves (including bypass line), two strainers, pressure regulating valve, automatic solenoid valve and pressure gauge.
- D. Storage Batteries: Dual lead acid batteries with 100 percent standby reserve capacity. Provide all necessary cables and battery racks.
- E. Fuel System: 250 gallons , but not less than required by NFPA 20, above ground storage tank, fill pipe and cap, manual shutoff valve, flame arrestor, oil level gauge, braided bronze flexible connectors, seamless Type L copper tubing with flared joints. Provide secondary containment tank with capacity equal to fuel storage tank.
- F. Automatic Diesel Engine Controller: Enclosed in floor mounted 14-gauge steel housing, UL and NFPA 20 listed and labeled.
 1. Controller automatically starts fire pump from water pressure control switch or test switch.
 2. Stopping push button shall manually stop engine.

3. Under automatic conditions, controller alternates batteries automatically on each 15 second cranking cycle. Alarm sounds if engine is not started after six attempts.
 4. Dual built-in battery charger, UL 1236 listed, recharges both batteries within 24 hours. Chargers shall have automatic overload protection (current limiting). Provide individual voltmeters and ammeters for each battery.
 5. Include individual pilot lights and common alarm bell for:
 - a. Low engine oil pressure.
 - b. High engine jacket water temperature.
 - c. Failure to start automatically.
 - d. Charger failure.
 - e. Battery 1 failure.
 - f. Battery 2 failure.
 - g. Overspeed shutdown.
 6. Controller Sensing Pipes: Fabricate pipe and fittings according to NFPA 20 with nonferrous metal sensing piping, NPS 1/2, with globe valves for testing controller mechanism from system to pump controller as indicated. Include bronze check valve with 3/32 inch orifice in clapper or ground face union with non-corrosive diaphragm having 3/32 inch orifice.
- G. Remote Alarm and Signal Panel: Provide wall mounted panel in NEMA 3R Type 1 enclosure with:
1. Engine running light.
 2. Common engine failure light for:
 - a. Low engine oil pressure.
 - b. High engine jacket water temperature.
 - c. Failure to start automatically.
 - d. Charger failure.
 - e. Battery 1 failure.
 - f. Battery 2 failure.
 - g. Overspeed shutdown.
 3. Power on light.
 4. Switch off light indicating position of main control switch (off or manual).
- H. Exhaust System: ASTM A53/A53M, Type E or S, Schedule 40, black steel pipe; ASME B16.9, weld type pipe fittings; ASME B16.5, steel flanges; and ASME B16.21, nonmetallic gaskets. Fabricate double-wall, ventilated thimble from steel pipe. Provisions shall be made for manually draining condensate from the silencer and exhaust piping.
1. Exhaust Connector: Flexible type.
 2. Exhaust Silencer: Residential type.
- I. Finish: Manufacturer's standard red paint.

2.05 PRESSURE MAINTENANCE (JOCKEY) PUMP

- A. Pressure Maintenance Pumps: Factory assembled and tested pumps with electric motor driver, controller, and accessories and specialties. Include cast iron or stainless-steel casing and bronze or stainless-steel impellers, mechanical seals, and suction and discharge flanges machined to ASME B16.1, Class 125 dimensions unless Class 250 flanges are indicated and except that connections may be threaded in sizes where flanges are not available.
- B. Electrically operated, horizontal turbine type with NEMA MG1, open drip-proof squirrel cage induction motor complying with NFPA 20 and NFPA 70. Include wiring compatible with controller used.
- C. Provide suction and discharge pressure gauges.
- D. Provide with pressure relief valve and pipe to outdoors sump.
- E. Control by automatic jockey pump controller to start pump on pressure drop in system. Fire pump starts automatically on further pressure drop or on jockey pump failure.
- F. Controllers: UL 508, factory assembled, wired, and tested across the line type for combined automatic and manual operation.
 - 1. Enclosure: UL 508 and NEMA 250, Type 2, wall mounting type for field electrical wiring.
 - 2. Controller Sensing Pipes: Fabricate pipe and fittings according to NFPA 20 with nonferrous metal sensing piping, NPS 1/2, with globe valves for testing controller mechanism from system to pump controller as indicated. Include bronze check valve with 3/32 inch orifice in clapper or ground face union with non-corrosive diaphragm having 3/32 inch orifice.
 - 3. Rate controller for scheduled horsepower, and include the following:
 - a. Fusible disconnect switch.
 - b. Pressure switch.
 - c. Hand-off-auto selector switch.
 - d. Pilot light.
 - e. Running period timer.
 - 4. Finish: Manufacturer's standard color paint applied to factory assembled and tested unit before shipping.
- G. Performance: Refer to schedule on drawings.

DIVISION 22

PLUMBING

This page intentionally left blank

SECTION 22 05 00

PLUMBING SYSTEM DESIGN CRITERIA

PART 1 GENERAL

1.01 DESIGN CRITERIA

A. General

1. The interface points between the Civil Design and the Plumbing Design will be at 5 feet outside the building wall.
2. All utilities shall enter each building above ground.
3. Each building shall have an isolation valve in the firewater and domestic line servicing each building.
4. The mains for any building shall not run through the building to the room where the isolation valve is located.
5. All outside isolation valves shall be located in a valve box. The box shall be arranged such that dirt does not fill the box over time and water shall not collect in the box.
6. All exposed piping and equipment in harsh environments shall be adequately protected.
7. No plumbing system or piping shall be located below raised floors.
8. Connections to dissimilar metals be avoided if at all possible and if this can't be avoided the connection shall be through the use of a dielectric connection.
9. Line size ball or gate valve shall be used. No butterfly valves shall be used.
10. All ball valves shall be so located for easy access and periodic exercise.
11. All exterior hose bibbs shall be recessed and have lockable doors.
12. All domestic water booster pumps shall be provided with a full line size bypass.
13. All pumping systems shall be provided with a discharge check valve.
14. Mop sinks and Janitor sinks in Hopper Rooms shall be provided with a second faucet for the chemical dispensing system. There shall be backflow preventers on the hot and cold water lines servicing the chemical dispensing system.
15. Locating any piping system under the slab on grade shall be avoided. A suggested separation of building systems to avoid maintenance issues is three feet.
16. Heat exchangers having a heat source from the mechanical boilers shall not be used.
17. The use of hot water storage tanks shall be limited.
18. Whenever possible water heaters shall be located on the first floor of any building. When water heaters are on a floor above the first, a pan shall be provided. The pan shall be drained to a floor sink through an air gap.

19. When a sewage ejector or sump pump are required, they shall be located for easy access and maintenance. Locating these outside the building is strongly suggested. There shall be a remote notification of power failure and for alarms. The location of the remote notification panel shall be specified by the campus.
20. Under counter acid neutralizers shall easily maintainable. Neutralizers with side access for are strongly suggested.
21. Central acid neutralizers shall be located for easy maintenance. Locating those requiring stone replacement outside are strongly suggested.
22. All equipment not easily identifiable such as controls, relays, gauges, etc.; and all equipment in an area remote from its function shall have nameplates or plastic tags listing name, and function. Do not label exposed equipment in public areas.
23. Provide engraved plastic tags at all hydronic or steam system makeup water meters.
24. Do not use one transformer to power multiple fixtures.
25. All equipment shall be located for easy maintenance.
26. Gas earthquake valves shall be provided on the exterior of each building.
27. Locate condensate pumps outside of sensitive areas.
28. The location of any piping or equipment shall not render access to another building system component inaccessible.
29. All penetrations through a roof shall be permanently sealed water tight.
30. Access panels shall be the lockable with a key. All access panels shall be keyed the same.
31. All wall access panels shall be 12" by 12".
32. All ceiling access panels shall be 24" by 24".
33. Wall access panels shall not be more than 4 feet high as measured to the top of the panel.
34. Access panel doors must be closable when the valve is in the closed position.
35. All reasonable efforts shall be to locate the access panels for restrooms in the men's restroom.

B. Storm Drainage Design

1. Storm drainage piping system will be sized in accordance with two (2) inches per hour of rainfall intensity.
2. The overflow drains will also extend from the roof however each of these will terminate at the exterior wall approximately 12 inches above the outside finished surface.
3. Overflow discharges shall not be onto a public walkway but rather through a fitting that takes the line under a walkway and discharges through a curb.
4. Both the piping for the storm drains and the piping for the overflow drains will be sloped at 2%.

5. There shall be a cleanout at the base of each storm drain riser prior to the final horizontal turn to connect to the site piping and cleanouts throughout the piping system as required by the Los Angeles City Plumbing Code.
6. Any groundwater drainage that will be collected below the elevation of city gravity storm drainage lines will be collected by means of a building foundation drain. The foundation drainage system will be provided at footings of the structural foundation in accordance with the Geologist report.
7. The foundation drainage system will discharge into a sump pit from which it will be pumped up such that the discharge can flow by gravity to the city storm drain system. The sump pit will be provided with two 100% redundant automatic sump pumps. System operation will be monitored by alarm panel provided with auxiliary contacts for remote annunciation in a continuously supervised location. Access to pumps and control panel will be maintained at 3'-0" minimum for servicing.
8. All metallic underground piping shall be encased in a Polyethylene tube or wrapped in a Polyethylene sheet. The Polyethylene shall conform to ASTM A674 or AWWA C105, high density, cross laminated, having a thickness of 0.004 inch or LLDPE having a thickness of 0.008 inches.

C. Sanitary Design

1. The vents shall extend 6 inches above any roof not normally used. Vents terminating above roofs which are used for other than weather protection shall extend to a point 7 feet above the roof surface.
2. Building's over 10,000 square feet may have a sub-meter for sewage discharge. The sub-meter shall be configured to interface and exchange data with the District's existing software. Sub-meters shall include an Ethernet communications port or wireless communication capability or other networking capability. Sub-meters shall retain data for a period of no less than 12 months.
3. All the sanitary system including the above and underground horizontal piping will be sloped at 2% for sizes up to 3" and 1% for sizes 4" and larger.
4. There shall be cleanouts throughout the piping system as required by the Los Angeles City Plumbing Code.
5. All metallic underground piping shall be encased in a Polyethylene tube or wrapped in a Polyethylene sheet. The Polyethylene shall conform to ASTM A674 or AWWA C105, high density, cross laminated, having a thickness of 0.004 inch or LLDPE having a thickness of 0.008 inches.
6. Waste generated below the elevation of city sewer mains will be drained by gravity to a sewage ejector pit.
7. The sewage ejector pumps will pump the waste up such that the discharge can flow by gravity to the city sewer main. The sewage ejector pit will be provided with two 100% redundant automatic pumps. The sewage ejector pit will be lined with air tight and will need to be properly vented. System operation will be monitored by alarm panel provided with auxiliary contacts for remote annunciation in a continuously supervised location. Access to pumps and control panel will be maintained at 3'-0" minimum for servicing.
8. Restrooms having two or more water closets or a combination of one water closet and one urinal shall be provided with floor drains.

9. Mechanical Rooms shall be provided with floor sinks and floor drains.
10. All equipment or condensate drains shall be discharged into a floor sink or another approved receptor.
11. There shall be a floor drain below all emergency showers. These floor drains shall have a trap primer.
12. Storage Closets, Hopper Rooms and Main Custodial Supply Areas shall have a floor drain and automatic trap primer.

D. Domestic Cold Water Design

1. A water meter and backflow preventer will typically be provided under Civil Engineer.
2. Every building shall have a water meter and the meter shall be integrated into the Building Management System.. The sub-meter shall be configured to interface and exchange data with the District's existing software. Sub-meters shall include an Ethernet communications port or wireless communication capability or other networking capability. Sub-meters shall retain data for a period of no less than 12 months.
3. If required, the available water pressure in the building will be reduced to the below the maximum code requirement of 80 PSI. The reduction in pressure will be by means of a pressure reducing station consisting of a line size pressure reducing valve and a parallel bypass. Both pressure reducing valves will be provided with strainers. The Pressure reducing station will be located outside the building in an easily accessible location.
4. As a minimum, each building shall be provided with one backflow preventer. The domestic water system shall be provided with reduced pressure backflow preventers. These backflow preventers shall be on a concrete pad with a lockable cage. The cage shall have a rounded top to reduce the likelihood of a student sitting on the top of the cage. The cage shall be of suitable construction to prevent damage due to students sitting on it.
5. The cold water system shall be thoroughly thought out to limit the quantity of backflow preventers feeding the building(s) as well as to limit the backflow preventers used inside the building. The intent is to keep to a minimum the quantity of backflow preventers used.
6. Hydraulic calculations shall be performed for each building. The hydraulic calculations shall include the pressure losses for the change in site elevation changes, site piping, meter losses, backflow pressure losses, building static, mixing valve losses, pressure reducing valve fall offs, and any other losses that may be applicable.
7. The domestic water piping shall be designed to a pressure loss of 3 psi per 100 feet and a maximum velocity of 6 feet per second unless the hydraulic calculation indicated a different pressure loss for the piping.
8. Domestic water piping shall not be oversized.
9. A common cold water line shall supply back-to-back fixtures.
10. The domestic water system shall be designed such that there will be 30 psi at the most remote flush valve fixture and 20 psi at the most remote fixture.

11. Hose bibbs shall be provided in Mechanical Rooms, in all public restrooms, by Mechanical Units on the roof, and as required by the Architect along the exterior of the building.
12. Combination emergency eyewash/shower stations shall be provided in accordance with ANSI Z358.1 in locations where there may be the possibility of having fluids discharged on to the skin or into the eyes.
13. All floor drain and floor sinks shall be provided with a trap primer.
14. Pressure differential trap primers or flush valve primers shall be utilized to maintain p-traps where there is a water header serving a flushvalve. The pressure differential trap primers shall activate at 3 psi differential.
15. Electronic trap primers shall be utilized to maintain p-traps where there are no flushvalve headers to connect.
16. All electronic and pressure differential type trap primers shall be provided with an isolation valve.
17. All trap primers shall be behind a lockable 12" by 12" access panel.
18. All water hammer arrestors shall be behind a lockable 12" by 12" access panel.
19. The only plumbing that shall be in or run over a Telecommunication Room, UPS , Battery Rooms, Electrical Room and Elevator/Escalator Machine Room will those which serve these rooms.
20. There shall be shut-off valves for each restroom, at the bottom of each riser, for each floor, prior to each piece of equipment and strategically placed throughout the domestic water system. All shut-off valve will be line size ball valves.
21. All metallic underground piping shall be encased in a Polyethylene tube or wrapped in a Polyethylene sheet. The Polyethylene shall conform to ASTM A674 or AWWA C105, high density, cross laminated, having a thickness of 0.004 inch or LLDPE having a thickness of 0.008 inches.

E. Domestic Hot Water Design

1. Water temperature to plumbing fixtures will not exceed 120 degrees F. Only heaters with a minimum output of 84% thermal efficiency will be selected. Circulation pumps will be utilized to circulate the hot water throughout the building and back to the heaters if the fixtures are more than 20 feet from the water heater. The hot water equipment will be located in its own room or a Mechanical Room.
2. An aquastat and 7 day time clock located in NEMA rated control panel will be provided for a complete automatic operation of the system.
3. The domestic water piping shall be designed to a pressure loss of 3 psi per 100 feet and a maximum velocity of 4 feet per second unless the hydraulic calculation indicated a different pressure loss for the piping.
4. Master mixing valves shall not be used. Individual mixing valves will be provided at each fixture.
5. Domestic water piping shall not be oversized.
6. A common hot water line shall supply back-to-back fixtures.

7. The domestic water system shall be design such that there will be 20 psi at the most remote fixture.
8. All hot water piping shall be insulated over the entire length.
9. There shall be shut-off valves for each restroom, at the bottom of each riser, prior to each piece of equipment and strategically placed throughout the domestic water system. All shut-off valve will be line size ball valves.
10. There shall be shut-off valves for each restroom, prior to each restroom, at the bottom of each riser, prior to each piece of equipment and strategically placed throughout the domestic water system. All shut-off valve will be line size ball valves.
11. All hot water and return piping will be insulated with pre-formed jacketed fiberglass insulation to maintain set temperature and minimize temperature drop in uncirculated dead-end hot water lines.

F. Piping

1. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
2. Remove scale and dirt, on inside and outside, before assembly.
3. Connect to equipment with flanges or unions.
4. Use only piping materials rated for the maximum temperature of the application, e.g., do not use PVC for dishwasher drainage or piping that receives boiler blowdown.
5. Until system is fully operational, all openings in piping and equipment shall be kept closed except when actual work is being performed on that item or system. Closures shall be plugs, caps, blind flanges or other items specifically designed and intended for this purpose.
6. Run pipes straight and true, parallel to building lines with minimum use of offsets and couplings. Provide only offsets required to provide needed headroom or clearance and to provide needed flexibility in pipe lines.
7. Make changes in direction of pipes only with fittings or pipe bends. Changes in size only with fittings. Do not use miter fittings, face or flush bushings, or street elbows. All fittings shall be of the long radius type, unless otherwise shown on the drawings or specified.
8. Provide flanges or unions at all final connections to equipment and valves.
9. Arrange piping and connections so equipment served may be totally removed without disturbing piping beyond final connections and associated shutoff valves.
10. Unless otherwise indicated, install all piping, including shutoff valves and strainers, pumps and other equipment at line size with reduction in size being made only at control valve or equipment.
11. Unless otherwise indicated, branch take-offs shall be from top of mains or headers at either a 45° or 90° angle from the horizontal plane for air lines, and from top, bottom or side for liquids.
12. Provide dielectric connections between dissimilar metals.
13. Install piping to allow for expansion and contraction without stressing pipe, joints, or equipment.

14. Slope water piping and arrange to drain at low points.
15. Seal pipes passing through exterior walls. Provide Schedule 40 galvanized sleeve at least 2 pipe sizes larger than the pipe.
16. Underground Piping:
 - a. Install buried water piping outside the building with at least 3 feet of cover.
 - b. Underground fire protection service piping shall have at least 3 feet of cover, or as recommended by NFPA 24, whichever is greater.
17. Sanitary and Storm Piping:
 - a. All sanitary and storm piping shall have at least 36" of cover when leaving the building.
18. Unless otherwise indicated on the drawings, all horizontal water and compressed air lines, including branches, shall pitch 1" in 40 feet to low points for complete drainage, removal of condensate and venting.
19. Provide drain valves at all low points of water piping systems for complete or sectionalized draining.
20. Provide drip legs at low points and at the base of all risers in compressed air pipes. Drip legs shall be full line size on pipes through 4" and at least 4", but not less than half line size over 4". Drip legs shall be 12" minimum length, capped with a reducer to a drain valve.
21. Main Custodial Supply Areas shall have 2 compressed air connections from a compressor with a minimum of 25 cfm at 90 psi, 10 Hp, electric driven motor and a 90 gallon receiver.
22. There shall be water faucets on the outside of the Main Custodial Room.
23. The Main Custodial Supply Room shall have a commercial washer and dryer. The washer and dryer shall be front loading with a 60 lbs. capacity.
24. Use eccentric reducing fittings on horizontal runs when changing size of pipes for proper drainage and venting. Install compressed air and gravity drain pipes with bottom of pipe and eccentric reducers in a continuous line; all other liquid lines with top of pipe and eccentric reducers in a continuous line.
25. Provide air vents at high points and wherever else required to eliminate air in all water piping systems.
26. Install air vents in accessible locations. If necessary to trap and vent air in a remote location, install an 1/8" pipe from the tapping location to an accessible location and terminate with a venting device.
27. Flash pipes at roof with premolded EPDM pipe flashing cones adhered to roof membrane by General Contractor. Secure top of cone with stainless steel clamp and seal watertight.
28. Vent pipes through the roof shall be located a minimum of 10 feet from any air intake or exhaust opening on the roof.
29. Do not use double wye or double combination wye and eighth bend DWV fittings in horizontal piping.

30. Provide necessary connections at the start of individual sections of mains for adding chlorine.

G. Valves

1. All valves (except shutoff valves at equipment) shall have numbered tags.
2. Secure tags with heavy duty key chain and brass "S" link or with mechanically fastened plastic straps.
3. Install shutoff valves that permit the isolation of equipment/fixtures in each room without isolating any other room or portion of the building. Individual fixture angle stops do not meet this requirement.
4. Provide clearance for installation of insulation and access to valves and fittings.
5. Provide 12" by 12" access panels for concealed valves.
6. Install valve stems upright or horizontal, not inverted.

H. Deionized (DI) Water

1. The DI system shall consist of three basic components; a Reverse Osmosis Skid, RO/DI Water Post Treatment/Pump Skid and storage tank.
2. The Reverse Osmosis Skid shall consist of 5 micron prefilters, Sodium Bisulfate Chemical Feed System, Antiscalant Feed System, Booster Pump, RO Membrane vessels, adjustable flow controls, FRP Pressure Vessels with TFC membranes, required gauges and controls mounted on a powder coated frame.
3. The low pressure piping on the skid shall be Schedule 80 PVC and ½" poly tubing. The high pressure piping shall be Schedule 80 PVC and ½" poly tubing
4. The pump shall have a stainless steel body with a 200 psig pressure rating.
5. The RO/DI Water Post Treatment/Pump Skid shall consist of UV light(s), DI bottles, Mixed Bed Exchange Tank, Recirculation Loop Resistivity Monitoring, 1 Micron DI Filter(s), 0.2 Micron Sub-Filter(s), backpressure valve, Multistage DI Pump(s), required gauges and controls mounted on a powder coated frame.
6. The suction and discharge piping shall be Schedule 80 Polypropylene.
7. The tank shall be 100 gallons, constructed of Isophthalic Resin, dished bottom and annular head configuration
8. The tank shall be in a containment basin having a capacity equivalent to the tank volume.

I. Air Compressors

1. Install compressor units on concrete foundation with sole plates and vibration isolators as scheduled on the drawings. Level, grout, and bolt in place.
2. Install line size shutoff valve and check valve on compressor discharge.
3. Install replaceable cartridge type filter silencer of adequate capacity for each compressor.
4. Place shutoff valve on water inlet to aftercooler. Pipe drain to floor drain.
5. Connect condensate drains to nearest floor sink.

6. Install valved bypass around air dryers. Factory insulate inlet and outlet connections.
7. Install drain valves at all low points of piping system.
8. Install take-offs from top of mains, with shutoff valves after take-offs. Install line size filter regulators at each take-off.
9. Install compressed air couplings, 3/8" female speed couplers, and pressure gauges where outlets are indicated.

J. Natural Gas Design

1. The system pressure will be selected by the Engineer based on the length of run and the quantity of gas required.
2. Building's over 10,000 square feet shall have a sub-meter for natural gas. The sub-meter shall be configured to interface and exchange data with the District's existing software. Sub-meters shall include an Ethernet communications port or wireless communication capability or other networking capability. Sub-meters shall retain data for a period of no less than 12 months.
3. If at all possible no gas piping shall be run below a building. If it is necessary to run the piping below the slab, a CPC code compliant double containment system shall be installed.
4. The gas line will include a service shut-off valve and seismic type gas valve to interrupt gas flow to equipment during seismic events. A separate manual shut-off valve will be provided upstream of the seismic valve for service when necessary.
5. Install No. 12 Insulated Type UF copper tracer wire, terminate above grade at each end of non-metallic gas pipe.
6. No metallic piping shall be used underground. Only Polyethylene piping shall be used underground.

K. Pipe Markers:

1. All pipe markers shall be compliant with ASME A13.1.
2. Pipes to be marked shall be labeled with the text as shown in the following table regardless of which method or material is used:

Pipe Service	Lettering Color	Background Color
CONDENSATE DRAIN	Black	Yellow
COMPRESSED AIR	Black	Yellow
DOMESTIC COLD WATER	White	Green
DOMESTIC HOT WATER - 115°F	Black	Yellow
DOMESTIC HOT WATER - 140°F	Black	Yellow
DOMESTIC HOT WATER CIRCULATING - 115°F	Black	Yellow
DOMESTIC HOT WATER CIRCULATING - 140°F	Black	Yellow
SANITARY SEWER	Black	Yellow
VENT	Black	Yellow
STORM SEWER (PRIMARY AND SECONDARY)	White	Green
NATURAL GAS	Black	Yellow
TEMPERED WATER	Black	Yellow
TEMPERED WATER RETURN	Black	Yellow
NON-POTABLE WATER	Black	Yellow
DEIONIZED WATER	White	Green
DISTILLED WATER	White	Green
RO WATER	White	Green
FUEL OIL SUPPLY	Black	Yellow
FUEL OIL RETURN	Black	Yellow
Tracer Wire - Water Pipe Lines	---	Blue
Tracer Wire - Natural Gas Pipe Lines	---	Yellow
Tracer Wire - All other buried types	---	Green

3. Secure all adhesive markers at both ends with a wrap of pressure sensitive tape completely around the pipe.
4. Apply markers and arrows in the following locations where clearly visible:
 - a. At each valve.
 - b. On both sides of walls that pipes penetrate.
 - c. At least every 20 feet along all pipes.
 - d. On each riser and each leg of each "T" joint.
 - e. At least once in every room and each story traversed.
5. Underground Pipe Markers: Install 8" to 10" below grade, directly above buried pipes.

L. Tracer Wire

1. Tracer wire shall be installed on top of all non-metallic buried utilities.
2. Tracer wire shall be taped directly to plastic water or drain pipe.
3. Tracer wire shall not be fastened directly or indirectly to gas piping.
4. Tracer wire when attached shall be secured to the pipe a minimum of every 10 feet and at all changes of direction.
5. Tracer wire shall be continuous between boxes and shall be tested for continuity.
6. Splices in tracer wire shall be made with a water proof splice kit to prevent corrosion.
Wire nuts shall not be used.
7. The tracer wire shall daylight to grade through a 2" PVC conduit, at the point of the utility entrance to building. PVC conduit shall be capped and labeled as future contact point to locate the utility.

M. Fixtures

1. All restrooms shall be ADA compliant.
2. All fixtures shall be white.
3. Urinals shall be 17" minimum width with extended side.
4. All fixtures shall be easy to install and replace by using standard/none-proprietary tools.
5. All surfaces and finishes of the fixtures shall withstand commercial usage and harsh chemical treatment during cleaning and maintenance yet vandal resistant.
6. Provide chrome plated rigid or flexible supplies to fixtures with loose key stops, reducers, and escutcheons.
7. Seal fixtures to wall and floor surfaces with sealant.
8. Solidly attach water closets to the wall.
9. No waterless urinals shall be used.
10. For ADA accessible water closets, install flush valve with handle to wide side of stall.
11. Provide gray water to water closets and Urinals where it is available.
12. Fixtures shall not have filters or cartridges which require regular maintenance or replacement.
13. Provide access panels to all plumbing devices in the wall.
14. Hopper rooms shall have a corner floor type mop sink with hot and cold water, mop hanger, 36" hose with wall hanger, vacuum breaker on the faucet.
15. Main Custodial Supply Area shall have a 41-inch high stainless steel utility sink, wall mounted faucet with built in backflow preventer and level handles.

N. Water Hammer Arresters:

1. Water hammer arrestors shall be installed in cold and hot water lines upstream of all plumbing fixtures or equipment, with a quick acting valve or multiple quick acting valves. Quick acting valves shall be defined as solenoid actuated valves, manual flush valves, sensor activated faucets and flush valves, squeeze handle spray faucets, and other similar type valves.
 2. Install multiple water hammer arrestors in toilet group branch piping greater than 20 feet in developed length from the cold and hot water mains.
- O. Cleanouts:
1. Provide cleanouts at bases of all sanitary and storm risers.
 2. Extend cleanouts to the floor above with long sweep elbows.
 3. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with graphite and linseed oil. Ensure clearance at cleanouts for rodding of drainage system.
 4. Wall cleanouts shall be installed above the flow line of the pipe they serve, but no less than 12" above the finished floor.
 5. Cleanouts shall be so located that they are in open spaces or have easy access.
- P. Floor Drains and Sinks:
1. Drains in upper floors shall have a flashing of EPDM or similar membrane sheet. The sheet shall be at least 36" X 36" square with the drain in the center. Clamp membrane in auxiliary clamping ring of floor drain. Membrane is not required if upper floor construction is single pour, cast-in-place concrete.
 2. Top of floor drain and sinks grate/strainer shall not extend above the finished floor elevation.
- Q. Backflow Preventer:
1. Provide an air gap fitting and piping to drain. On 2-1/2" and larger units, install a tail piece from air gap fitting to drain to prevent water from spraying out of drain air gap receptor. Maintain air gap distance required by Code.
 2. Install unit between 12" and 60" above finish floor.
- R. Balancing Valves:
1. Install balancing valves with straight, unobstructed pipe section both upstream and downstream as required, per manufacturer's installation instructions.

PART 2 PRODUCTS

2.01 HANGER RODS

- A. Hanger rods for single rod hangers shall conform to the following:
Hanger Rod Diameter

Pipe Size	Column #1	Column #2
2" and smaller	3/8"	3/8"
2-1/2" through 3-5/8"	1/2"	1/2"
4" and 5"	5/8"	1/2"
6"	3/4"	5/8"
8" through 12"	7/8"	3/4"
14"	1"	7/8"
16" and 18"	1"	N/A
20" and 24"	1-1/4"	N/A

Column #1: Steel, cast iron, and glass pipe.

Column #2: Copper and plastic pipe.

- B. Rods for double rod hangers may be reduced one size. Minimum rod diameter is 3/8 inches.
- C. Hanger rods and accessories used in mechanical spaces or otherwise dry areas shall have ASTM B633 electro-plated zinc finish.
- D. All hanger rods, nuts, washers, clevises, etc., in damp areas shall have ASTM A123 hot-dip galvanized finish applied after fabrication.

2.02 PIPE AND STRUCTURAL SUPPORTS

A. General:

- 1. Pipe hangers, clamps, and supports shall conform to Manufacturers Standardization Society MSS SP-58, 69, 89, and 127 (where applicable).
- 2. On all insulated piping, provide at each support an insert of same thickness and contour as adjoining insulation, between the pipe and insulation jacket, to prevent insulation from sagging and crushing.
 - a. Insulation Couplings:
 - 1) Insulation Coupling: Molded thermoplastic, -65°F to 275°F, sizes up to 4-1/8" OD, and receive insulation thickness up to 1". Suitable for use indoors or outdoors with UV stabilizers. Vertical insulation riser clamps shall have a 1,000lb vertical load rating. On cold pipes operating below 60°F, cover joint and coupling with vapor barrier mastic to ensure continuous vapor barrier.
 - 2) Horizontal Strut Mounted Insulated Pipe:
 - (a) Acceptable Manufacturers: Klo-Shure.
 - 3) Vertical:
 - (a) Acceptable Manufacturers: Klo-Shure Titan.
- 3. Copper piping located in an exposed area, including indirect waste piping in kitchens and janitor's closets, shall use band hangers for copper tubing. Support shall include plastic pipe insert. Use threaded rod. There are to be electro-galvanized or have a more corrosion resistant coating. Wall anchors are to have corrosion resistant threaded rod. Acceptable Manufacturers: Erico/M-Co, B-Line, Anvil or Nibco/Tolco.

B. Vertical Supports:

- 1. Support and laterally brace vertical pipes at every floor level in a multi-story structure, unless otherwise noted by applicable codes, but never at intervals over 15 feet. Support vertical pipes with riser clamps installed below hubs, couplings, or lugs. Provide sufficient flexibility to accommodate expansion and contraction to avoid compromising fire barrier penetrations or stressing piping at fixed takeoff locations. Acceptable Manufacturer: Copper/B-Line, Erico or Nibco/Tolco.
- 2. Place restrained neoprene mounts beneath vertical pipe riser clamps to prevent sweating of cold pipes. Select neoprene mounts based on the weight of the pipe to be supported. Insulate over mounts. Acceptable Manufacturers: Mason.

C. Hangers and Clamps:

- 1. Oversize all hangers, clamps, and supports on insulated piping to allow insulation and jacket to pass through unbroken. This applies to both hot and cold pipes.
- 2. Hangers in direct contact with bare copper pipe shall include plastic pipe insert similar to Unistrut Cush-A-Clamp, Hydra-Zorb, Erico Cushion Clamp or Cooper Vibra-Clamp within their temperature limits of -65°F to +275°F.

3. On all insulated piping, provide a semi-cylindrical metallic shield and vapor barrier jacket.
4. As an alternative to separate pipe insulation insert and saddle, properly sized integral rigid insulation sections may be used. Acceptable Manufacturers: Copper/B-Line, Pipe Shields or Erico.
5. Unless otherwise indicated, hangers shall be as follows:
 - a. Clevis Type:
Service: Bare Metal Pipe
Rigid Plastic Pipe
Insulated Cold Pipe
Insulated Hot Pipe - 3 inches & Smaller

Acceptable Manufacturers: Anvil, Copper/B-Line, Erico or Nibco/Tolco.

- b. Adjustable Swivel Ring Type:
Service: Bare Metal Pipe - 4 inches and Smaller

Acceptable Manufacturers: Anvil, Copper/B-Line, Erico or Nibco/Tolco.

6. Support may be fabricated from U-channel strut or similar shapes. Piping less than 4" in diameter shall be secured to strut with clamps of proper design and capacity as required to maintain spacing and alignment. Strut shall be independently supported from hanger drops or building structure. Size and support shall be per manufacturer's installation requirements for structural support of piping. Clamps shall not interrupt piping insulation.
 - a. Strut used in mechanical spaces or otherwise dry areas shall have ASTM B633 electro-plated zinc finish.
 - b. Strut used in damp areas listed in hanger rods shall have ASTM A123 hot-dip galvanized finish applied after fabrication.
7. Unless otherwise indicated, pipe supports for use with struts shall be as follows:
 - a. Clamp Type:
Service: Bare Metal Pipe
Rigid Plastic Pipe
Insulated Cold Pipe
Insulated Hot Pipe - 3 inches and smaller
 - 1) Clamps in direct contact with copper pipe shall include plastic pipe insert similar to Unistrut Cush-A-Clamp, Hydra-Zorb, Erico Cushion Clamp or Cooper Vibra-Clamp.
 - 2) Pipes subject to expansion and contraction shall have clamps oversized to allow limited pipe movement.
 - 3) Acceptable Manufacturers: Unistrut, Cooper/B-Line or Nibco/Tolco.

D. Upper (Structural) Attachments:

1. Unless otherwise shown, upper attachments for hanger rods or support struts shall be as follows:
 - a. Steel Structure Clamps
 - 1) C-Type Wide Flange Beam Clamps (for use on top and/or bottom of wide flanges. Not permitted for use with bar-joists):

- 2) Acceptable Manufacturers: Anvil, Cooper/B-Line, Erico or Nibco/Tolco.
- 3) Scissor Type Beam Clamps (For use with bar-joists and wide flange):
- 4) Acceptable Manufacturers: Anvil, Cooper/B-Line, Erico or Nibco/Tolco.

b. Concrete

- 1) Concrete Inserts, Single Rod Galvanized:
- 2) Acceptable Manufacturers: Anvil, Cooper/B-Line, Erico or Nibco/Tolco.
- 3) Concrete Inserts, Continuous Strip Galvanized:
- 4) Acceptable Manufacturers: Unistrut, Cooper/B-Line or Erico.
- 5) Concrete Anchors: Fasten to concrete using cast-in or post-installed anchors designed per the requirements of Appendix D of ACI 318-05. Post-installed anchors shall be qualified for use in cracked concrete by ACI-355.2.
- 6) Masonry Anchors: Fasten to concrete masonry units with expansion anchors or self-tapping masonry screws. For expansion anchors into hollow concrete block, use sleeve-type anchors designed for the specific application. Do not fasten in masonry joints. Do not use powder actuated fasteners, wooden plugs, or plastic inserts.

c. Steel Structure Welding:

- 1) Unless otherwise noted, hangers, clips, and auxiliary support steel may be welded in lieu of bolting, clamping, or riveting to the building structural frame. Take adequate precautions during all welding operations for fire prevention and protecting walls and ceilings from smoke damage.

2.03 FOUNDATIONS, BASES, AND SUPPORTS

A. Basic Requirements:

1. Furnish and install foundations, bases, and supports for plumbing equipment.
2. All concrete foundations, bases and supports, shall be reinforced. All steel bases and supports shall receive a prime coat of zinc chromate or red metal primer. After completion of work, give steel supports a final coat of gray enamel.

B. Concrete Bases (Housekeeping Pads):

1. Concrete bases shall be a minimum of 4 inches thick and shall extend a minimum of 3 inches on all sides of the equipment (6 inches larger than factory base).
2. Where a base is less than 12 inches from a wall, extend the base to the wall to prevent a "dirt-trap".
3. Concrete materials and workmanship required for the Contractor's work shall be provided by him. Materials and workmanship shall conform to the applicable standards of the Portland Cement Association. Reinforce with 6"x6", W1.4-W1.4 welded wire fabric. Concrete shall withstand 3,000 pounds compression per square inch at 28 days.

C. Roof Pipe Supports:

1. Provide pre-fabricated roof pipe supports for all piping installed on the roof.
2. Support shall guide and align pipe while permitting longitudinal expansion.
3. The base shall be rounded to prevent damage to the roof, and drainage holes shall prevent ponding of water in the support.

4. Support shall be UV, corrosion and freeze/thaw resistant.
5. Support shall include orange paint, reflective safety orange accents or similar markings for increased visibility.
6. The strut system shall have galvanized aluminum, 302 stainless steel, 316 stainless steel, PVC coated, powder coated or zinc trivalent chromium finish.
7. Acceptable Manufacturers: Anvil , Cooper B-Line, Erico or Miro Industries.

D. Supports:

1. Provide sufficient clips, inserts, hangers, racks, rods, and auxiliary steel to securely support all suspended material, equipment and conduit without sag.
2. Support heavy equipment from concrete floors or hang from ceilings with Architect/Engineer-approved concrete inserts, furnished and installed by the Contractor whose work requires them, except where indicated otherwise.

E. Grout:

1. Grout shall be non-shrinking premixed, unless otherwise indicated on the drawings or approved by the Architect/Engineer.
2. Use Mix No. 1 for clearances of 1" or less, and Mix No. 2 for all larger clearances.
3. Grout under equipment bases, around pipes, at pipe sleeves, etc., and where shown on the drawings.

2.04 MATERIALS FOR SEISMIC BRACING

A. Use the following materials for restraints:

1. Indoor Dry Locations: Steel, zinc plated.
2. Outdoors and Damp Locations: Galvanized steel.
3. Corrosive Locations: Stainless steel.

2.05 ANCHORAGE AND STRUCTURAL ATTACHMENT COMPONENTS FOR SEISMIC BRACING

A. Strength: Defined in reports by ICC Evaluation Service or another agency acceptable to authorities having jurisdiction.

1. Structural Safety Factor: Strength in tension and shear of components used shall be at least two times the maximum seismic forces to which they will be subjected.

B. Concrete and Masonry Anchor Bolts and Studs: Steel-expansion wedge type. Comply with IBC, ACI and ICC ES requirements for cracked concrete anchors.

C. Concrete Inserts: Steel-channel type.

D. Through Bolts: Structural type, hex head, high strength. Comply with ASTM F3125, Grade A 325.

E. Welding Lugs: Comply with MSS SP-69, Type 57.

F. Beam Clamps for Steel Beams and Joists: Double sided. Single-sided type is not acceptable.

G. Bushings for Floor-Mounted Equipment Anchors: Neoprene units designed for seismically rated rigid equipment mountings and matched to the type and size of anchor bolts and studs used.

- H. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for seismically rated rigid equipment mountings and matched to the type and size of attachment devices used.

2.06 SEISMIC BRACING COMPONENTS

- A. Slotted Steel Channel: 1-5/8-by-1-5/8-inch cross section, formed from 0.1046-inch-thick steel, with 9/16-by-7/8-inch slots at a maximum of 2 inches o.c. in webs, and flange edges turned toward web.
 - 1. Materials for Channel: ASTM A 1011, GR 33.
 - 2. Materials for Fittings and Accessories: ASTM A 635, ASTM A 576, or ASTM A 36.
 - 3. Fittings and Accessories: Products of the same manufacturer as channels and designed for use with that product.
 - 4. Finish: Baked, rust-inhibiting, acrylic-enamel paint applied after cleaning and phosphate treatment, unless otherwise indicated.

2.07 ROOF PENETRATIONS

- A. Seal pipes with surface temperature below 150°F penetrating single-ply roofs with conical stepped pipe flashings and stainless-steel clamps equal to Portals Plus Pipe Boots. Material shall match roofing membrane.
- B. Break insulation only at the clamp for pipes between 60°F and 150°F. Seal outdoor insulation edges watertight.

2.08 SLEEVES AND LINTELS

- A. Fabricate all sleeves from standard weight black steel pipe or as indicated on the drawings. Provide continuous sleeve. Cut or split sleeves are not acceptable.
- B. Fabricate all lintels for masonry walls from structural steel shapes or as indicated on the drawings. Have all lintels approved by the Architect or Structural Engineer.
- C. Sleeves through the floors on exposed risers shall be flush with the ceiling, with planed squared ends extending 1" above the floor in unfinished areas, and flush with the floor in finished areas, to accept spring closing floor plates.
- D. Sleeves shall not penetrate structural members or masonry walls without approval from the Structural Engineer. Sleeves shall then comply with the Architect/Engineer's design.
- E. Openings through unexcavated floors and/or foundation walls below the floor shall have a smooth finish with sufficient annular space around material passing through opening so slight settling will not place stress on the material or building structure.
- F. Install all sleeves concentric with pipes. Secure sleeves in concrete to wood forms. This Contractor is responsible for sleeves dislodged or moved when pouring concrete.
- G. Where pipes rise through concrete floors that are on earthen grade, provide 3/4" resilient expansion joint material (asphalt and cork) wrapped around the pipe, the full depth of concrete, at the point of penetration. Secure to prevent shifting during concrete placement and finishing.
- H. Size sleeves large enough to allow expansion and contraction movement. Provide continuous insulation wrapping.

I. Wall Seals ("Link-Seals"):

1. Pipes passing through walls, ceilings, or floors shall have their annular space (sleeve or drilled hole - not tapered hole made with knockout plug) sealed by properly sized sealing elements consisting of a synthetic rubber material compounded to resist aging, ozone, sunlight, water and chemical action.
2. Sleeves, if used, shall be standard weight steel with primed finish and waterstop/anchor continuously welded to sleeve. If piping carries only fluids below 120°F, sleeves may be thermoplastic with integral water seal and textured surface.
3. Sleeves shall be at least 2 pipe sizes larger than the pipes.
4. Pressure shall be maintained by stainless steel bolts and other parts. Pressure plates may be of composite material for Models S and OS.

5. Sealing element shall be as follows:

Service	Element Material	Temperature Range
Standard (Stainless)	EPDM	-40°F to 250°F
High/Low Temperature	Silicone	-67°F to 400°F
Fire Seals (1 hour)	Silicone	-67°F to 400°F
Fire Seals (3 hours)	Silicone	-67°F to 400°F
Oil Resistant/Stainless	Nitrile	-40°F to 210°F

6. Acceptable Manufacturers: Thunderline "Link-Seals", O-Z/Gedney Company, Calpico, Inc., Innerlynx, or Metraflex (cold service only).

2.09 ESCUTCHEON PLATES AND TRIM

- A. Fit escutcheons to all insulated or uninsulated exposed pipes passing through walls, floors, or ceilings of finished rooms.
- B. Escutcheons shall be heavy gauge, cold rolled steel, copper coated under a chromium plated finish, heavy spring clip, rigid hinge and latch.
- C. Install galvanized steel (unless otherwise indicated) trim strip to cover vacant space and raw construction edges of all rectangular openings in finished rooms. This includes pipe openings.

2.10 PIPE PENETRATIONS

- A. Seal all pipe penetrations. Seal non-rated walls and floor penetrations with grout or caulk. Backing material may be used.
- B. Seal fire rated wall and floor penetrations with fire seal system as specified.

2.11 PIPE ANCHORS

- A. Provide all items needed to allow adequate expansion and contraction of all piping. All piping shall be supported, guided, aligned, and anchored as required.

- B. Repair all piping leaks and associated damage. Pipes shall not rub on any part of the building.

2.12 FINISH

- A. Prime coat exposed steel hangers and supports. Hangers and supports in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

END OF SECTION

SECTION 22 05 48

VIBRATION ISOLATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 220500 - Basic Plumbing Materials and Methods, and other Sections in Division 22 specified herein.

1.02 SUMMARY

- A. All plumbing piping and equipment as noted on the equipment schedules or in the specification shall be mounted on vibration isolators to prevent the transmission of vibration and mechanically transmitted sound to the building structure.
- B. Vibration isolators shall be selected in accordance with the weight distribution so as to produce reasonably uniform deflections.
- C. All plumbing piping and equipment as noted on the equipment schedules, in the specification or as required by code shall be designed to resist seismic forces. Refer to Section 220549- Seismic Restraint for Plumbing Piping and Equipment.
- D. This Section includes the following:
 - 1. Vibration Isolation pads.
 - 2. Vibration Isolation mounts.
 - 3. Restrained uni-directional seismic isolation snubber mounts.
 - 4. Spring isolators.
 - 5. Housed seismic spring vibration mounts.
 - 6. Elastomeric hangers.
 - 7. Spring hangers.
 - 8. Spring hangers with vertical-limit stops.
 - 9. Pipe riser resilient supports.
 - 10. Resilient pipe guides.
 - 11. Air-mounting system.
 - 12. Seismic snubbers.
 - 13. Seismic Restraining braces and cable systems for equipment, piping, and ductwork.
 - 14. Vibration isolation equipment bases.
 - 15. Flexible piping connectors
 - 16. Flexible ductwork connectors

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 220500: Basic Plumbing Materials and Methods
- B. Section 220549: Seismic Restraint for Plumbing Piping and Equipment

1.04 DEFINITIONS

- A. AHJ: Authority Having Jurisdiction
- B. IBC: International Building Code with State Amendments.
- C. ICC-ES: ICC-Evaluation Service.

1.05 CODES AND STANDARDS

- A. Provide components conforming to the load requirements of the latest addition of the local building code and the following:
 - 1. International Building Code with AHJ Amendments
 - 2. American Society of Civil Engineers (ASCE):
 - a. ASCE 7 (Latest Edition): Minimum Design Loads for Buildings and Other Structures
 - 3. The Manufacturers Standardization Society (MSS):
 - a. MSS SP-58: Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.
 - b. MSS SP-69: Pipe Hangers and Supports - Selection and Application.
 - c. MSS SP-89: Pipe Hangers and Supports - Fabrication and Installation Practices
 - d. MSS SP-127: Bracing for Piping Systems Seismic-Wind-Dynamic Design, Selection, Application.
 - 4. Mason West Inc. Seismic Restraint Guidelines 2014 Edition
 - a. For all suspended piping.

1.06 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:
 - 1. Refer to Section 220549 Seismic Restraint for Plumbing Piping and Equipment for seismic specific requirements.
 - 2. Vibration isolators must be rated for the seismic loading associated with the system and forces calculated for this building location. Seismic forces for new installations are determined per ASCE 7. Refer to Structural Design for seismic factors and design criteria. Select and submit appropriate values for each piece of equipment and sub-system and material type for the project, and base the seismic calculations on these values.
 - 3. Coordinate all seismic and load requirements with the registered professional Structural Engineer.
- B. Component Importance Factor:

1. Ip=1.0: Standard Occupancies and components associated with Risk Category I, II, and III, including offices and schools.
2. Ip=1.5: Components associated with Risk Category IV Buildings (Essential Services); or for conditions outlined in ASCE 7 Section 13.1.3 regardless of Risk Category; or Hospitals and Correctional Treatment Centers. Components include, but are not limited to the following:
 - a. The component is required to function for life-safety purposes after an earthquake, including fire protection sprinkler systems.
 - b. The component conveys, supports, or otherwise contains toxic, highly toxic, or explosive substances where the quantity of the material exceeds a threshold quantity established by the authority having jurisdiction and is sufficient to pose a threat to the public if released.

1.07 QUALITY ASSURANCE

- A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.
- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Building Structural Limits: The design of supports and restraints shall not exceed the building structure allowable point loads. Coordinate all work with the registered professional Structural Engineer.
- D. Special Inspections: Provide structural design and Special Inspections as required by Chapter 17 of the IBC, the Authority Having Jurisdiction, and as defined in the manufacturer installation instructions for each anchorage system. Per IBC Section 1705 all anchors post-installed in hardened concrete members shall have periodic Special Inspections. Special inspection agencies shall be independent of the design and construction companies and shall act as agents for the AHJ, but contracted directly with the Owner or Owner's Representative.

1.08 SUBMITTALS

- A. Product Data shall include the following:
 1. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with the specification.
 2. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and seismic restraints by referencing numbered descriptive drawings.
 3. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 4. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an evaluation service or agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
 5. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.

- B. Shop Drawings:
1. Submit fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
 2. Provide all details of suspension and support for ceiling hung equipment.
 3. Where walls, floors, slabs or supplementary steel work are used for seismic restraint the locations, details of acceptable attachment methods for ducts, conduit and pipe must be included and approved before the condition is accepted for installation. Restraint manufacturers' submittals must include spacing, static loads and seismic loads at all attachment and support points.
 4. Provide specific details of seismic restraints and anchors; include number, size and locations for each piece of equipment.
- C. Manufacturer Design Submittal: For vibration isolation details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic and where required wind forces required to select vibration isolators, seismic and wind restraints, and for designing vibration isolation bases.
 2. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.
 3. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads. Provide base with level top surfaces with integral sloping on bottom to match support structure.
- D. Coordination Drawings: Show coordination and plan locations of seismic bracing for HVAC piping, ductwork, and equipment with other systems and equipment in the vicinity, including other supports and seismic restraints.
- E. Qualification Data: Devices shall be selected to meet seismic and support requirements by a registered professional Structural Engineer.
- F. Air-Mounting System Performance Certification: Include natural frequency, load, and damping test data performed by an independent test agency.
- G. Operation and Maintenance Data: For air-mounting systems to include in operation and maintenance manuals.

1.09 WARRANTY

- A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.
- B. Refer to Division 01 and Section 220500 for additional warranty and Substantial Completion requirements.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS AND APPLICATION

A. Factory Finishes:

1. Standard paint applied to factory-assembled equipment before shipping.
2. Powder coating on springs and housings.
3. All hardware shall be galvanized or powder coated.
4. Hot-dip galvanized or powder coating of metal components for exterior use.
5. Baked enamel or powder coat for metal components for interior use.

B. Glumac Device Key Schedule: Part 3 of this Section schedules the application of devices described in Part 2 for use with plumbing equipment found on this project. The tag designation of preferred devices is as follows:

Glumac Isolator Tag	Description
P-1	Vibration isolation waffle pad
P-2	Double deflection neoprene mount
P-3	Uni-directional restrained neoprene snubber mount
P-4	Interlocking uni-directional snubber
S-1	Open spring vibration isolator
S-2	Steel housed seismic spring vibration isolator
S-3	Bellows air spring isolator
S-4	Restrained air spring isolator
B-1	Integral equipment and motor base
B-2	Integral equipment and motor base
B-3	Concrete filled steel inertia base
H-1	Spring and rubber in shear vibration isolation hanger
G-1	All-directional pipe anchor
G-2	Vertical pipe guide
G-3	Horizontal thrust restraint
SB-1	Sway bracing
F-1	Kevlar/rubber spherical type flexible piping coupling
F-2	Stainless hose flexible piping coupling
F-3	Flexible expansion joints

2.02 VIBRATION ISOLATORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide a product by one of the following:
1. Mason, basis of selection or equal by
 2. Amber/Booth Company, Inc.
 3. California Dynamics Corporation.
 4. Kinetics Noise Control.
 5. Vibration Eliminator Co., Inc.

6. Vibration Isolation.
 7. Vibration Mountings & Controls, Inc
 8. Vibro-Acoustics, Inc
 9. Vibrex
- B. P-1 Style: Neoprene pads shall consist of a 3/4" (19 mm) thick neoprene pad molded in square waffle modules, a minimum 1/4" (6 mm) thick steel load distribution plate and 3/4" (19 mm) hole with a neoprene anchor bolt bushing with a flat washer face. Pads may be single or multiple layers as required for leveling. Pads shall be Mason #MBSW Series or equal.
- C. P-2 Style: Bridge-bearing neoprene mountings shall have a minimum static deflection of 0.2" (5mm) and all directional seismic capability. The mount shall consist of a ductile iron casting containing two separated and opposing molded neoprene elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock absorbing neoprene materials shall be compounded to bridge-bearing specifications. Mountings shall be Mason #BR Series or equal.
- D. P-3 Style: All-directional seismic snubbers shall consist of interlocking steel members restrained by a one-piece molded neoprene bushing of bridge bearing neoprene. Bushing shall be replaceable and a minimum of 1/4" (6 mm) thick. A minimum air gap of 1/8" (3 mm) shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. No sharp edges such as bolt threads may come in contact with the neoprene bushing. Snubber end caps shall be removable to allow inspection of internal clearances. Snubber shall be Mason #Z-1225 Series.
- E. P-4 Style: All directional seismic snubbers shall consist of interlocking steel members restrained by shock absorbent rubber materials compounded to bridge bearing specifications. Elastomeric materials shall be replaceable and a minimum of 3/4" (19 mm) thick. Rated loadings shall not exceed 1000 psi. Snubbers shall be manufactured with an air gap between hard and resilient material of not less than 1/8" (3 mm) nor more than 1/4" (6 mm). Snubbers shall be installed with factory set clearances. The capacity of the seismic snubber at 3/8" (9 mm) deflection shall be equal or greater than the load assigned to the mounting grouping controlled by the snubber multiplied by the applicable "G" force. Submittals shall include the load deflection curves up to 1/2" (12 mm) deflection in the x, y and z planes. Snubbers shall be Mason #Z-1011 Series.
- F. S-1 Style: Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4" (6 mm) neoprene acoustical friction pad between the base plate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Two base plate holes for attachment to support surface. Isolators shall be Mason #SLFH Series or equal.

- G. S-2 Style: Restrained spring mountings shall include springs that are free standing and laterally stable and complete with a molded neoprene cup or 1/4" (6 mm) neoprene acoustical friction pad between the spring and the mounting base plate. All spring assemblies shall have leveling bolts. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Mount housing shall include vertical limit stops to prevent spring extension when weight is removed. All restraining bolts shall have large rubber grommets to provide cushioning in the vertical and horizontal directions. A minimum clearance of 3/8" (9 mm) shall be maintained around restraining bolts so as not to interfere with the spring action. Mountings shall be Mason #SLR Series or #SLRS Series for steel/wood connections and Mason #SLREBP Series or #SLRSEBP Series or #SSLFH Series for concrete connections.
- H. S-3 Style: Multiple bellow air springs shall be manufactured with powder coated upper and lower steel sections connected by a replaceable, flexible Nylon reinforced Neoprene element to achieve a maximum natural frequency of 3 Hz. Burst pressure must be a minimum of three (3) times the published maximum operating pressure. All air spring systems shall be equipped with three (3) leveling valves connected to the building control air or a supplementary air supply to maintain elevation plus or minus 1/8" (3 mm). An air filter and water separator shall be installed before the air distribution system to the leveling valves. Submittals shall include natural frequency, as well as load and damping tests, all as performed by an independent lab or acoustician. Air springs shall be Mason #MT and leveling valves Mason #LV.
- I. S-4 Style: Restrained mountings shall include multiple bellow air springs manufactured with powder coated upper and lower steel sections connected by a replaceable, flexible Nylon reinforced Neoprene element to achieve a maximum natural frequency of 3 Hz. Burst pressure must be a minimum of three (3) times the published maximum operating pressure. Mount housing shall include vertical limit stops to prevent spring extension when weight is removed. All restraining bolts shall have large rubber grommets to provide cushioning in the vertical and horizontal directions. A minimum clearance of 3/8" (9 mm) shall be maintained around restraining bolts so as not to interfere with the spring action. Mountings shall have test reports or calculations certifying the maximum allowable horizontal and vertical load ratings. All air spring systems shall be equipped with three (3) leveling valves connected to the building control air or a supplementary air supply to maintain elevation plus or minus 1/8" (3 mm). An air filter and water separator shall be installed before the air distribution system to the leveling valves. Submittals shall include natural frequency, as well as load and damping tests, all as performed by an independent lab or acoustician. Mountings shall be Mason #SLR-MT for steel connections and Mason #SLREBP for concrete connections and leveling valves Mason #LV.

2.03 VIBRATION ISOLATION STEEL EQUIPMENT BASES

- A. Basis-of-Design Product: Subject to compliance with requirements provide a comparable product by one of the following:
1. Mason, basis of selection or equal by
 2. Amber/Booth Company, Inc.
 3. California Dynamics Corporation.
 4. Isolation Technology, Inc.
 5. Kinetics Noise Control.
 6. Vibration Eliminator Co., Inc.
 7. Vibration Isolation.
 8. Vibration Mountings & Controls, Inc
 9. Vibro-Acoustics, Inc.

- B. B-1 Style: Vibration isolation manufacturer shall furnish integral structural steel bases designed to prevent excessive base flexure at start up, prevent misalignment of equipment and provide attachment points for seismic restraints. Bases shall be rectangular in shape and constructed of welded structural steel angle or channel members. Base shall be Mason #MSL Series.
- C. B-2 Style: Vibration isolation manufacturer shall furnish integral structural steel bases designed to prevent excessive base flexure at start up, prevent misalignment of equipment and provide attachment points for seismic restraints. Bases shall be rectangular in shape and constructed of welded wide flange structural steel main members with cross bracing located at or near each restraint location. Where height saving brackets are required, they shall be employed in all mounting locations to maintain a 1" (25 mm) clearance below the base. Base shall be Mason #WFSL Series.
- D. B-3 Style: Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating and inertia foundations. Bases for split case pumps shall be large enough to provide for suction and discharge elbows and shall be 6" deep for pumps thru 75 HP and 10" deep for pumps 100 HP thru 250HP. Forms shall include minimum concrete reinforcing consisting of #4 bars welded in place on 6" centers running both ways in a layer 1-1/2" above the bottom. Forms shall be furnished with steel templates to hold the anchor bolts sleeves and anchors while concrete is being poured. Height saving brackets shall be employed in all mounting locations to maintain a 1" clearance below the base. Base shall be Mason #BMK Series or #KSL Series.

2.04 SPRING HANGERS

- A. H-1 Style: Spring hangers shall consist of rigid steel frames containing minimum 1-1/4" (32 mm) thick neoprene elements at the top and steel springs that are free standing and laterally stable seated in a steel washer reinforced neoprene cup at the bottom. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. The neoprene element and the cup shall have a neoprene bushing projecting through the steel box. A seismic rebound washer made of steel and surrounding neoprene shall be provided. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30 arc from side to side before contacting the rod bushing and short circuiting the spring. Hangers shall be Mason #RW30N Series.

2.05 PIPE GUIDES AND SUPPORTS

- A. G-1 Style: All-directional acoustical pipe anchors shall consist of two sizes of steel tubing separated by a minimum 1/2" (12 mm) thick 60 durometer neoprene. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction. Allowable loads on the isolation material should not exceed 500 psi and the design shall be balanced for equal resistance in any direction. All-directional anchors shall be Mason #ADA Series.
- B. G-2 Style: Vertical sliding pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2" (20 mm) thickness of 60 durometer neoprene. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of 1-5/8" (41 mm) upwards or downwards motion, or to meet location requirements. Pipe guides shall be Mason #VSG Series.

- C. G-3 Style: Horizontal thrust restraints shall consist of a spring element seated in a steel washer reinforced neoprene cup at the bottom, in series with a molded neoprene element. Steel springs shall be free standing and laterally stable. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4" (6 mm) movement at start and stop. The assembly shall be furnished with 1 rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit. Horizontal thrust restraints shall be Mason #WBI Series or #WBD Series.

2.06 SWAY BRACING

- A. SB-1 Style: Seismic sway braces shall consist of galvanized steel aircraft cables or steel angles or struts. Cables braces shall be designed to resist seismic tension loads and steel braces shall be designed to resist both tension and compression loads with a minimum safety factor of two (2). Brace end connections shall be steel assemblies that swivel to the final installation angle. Steel angles or struts, when required, shall be clamped to the threaded hanger rods at the seismic sway brace locations utilizing a minimum of two ductile iron clamps. Do not mix cable and steel braces to brace the same system or equipment. Brace assemblies and rod clamps shall have an Anchorage Preapproval "OPM" Number from HCAI in the State of California verifying the maximum certified load ratings. Cable brace assemblies shall be Mason #SCB Series or #SCBH Series, steel brace assemblies shall be Mason #SSB Series, #SSBS Series or #SHB Series, and rod clamps shall be Mason #SRC Series or #UCC Series.

2.07 FLEXIBLE PIPING CONNECTORS

- A. F-1 Style: Flexible spherical expansion joints for pump connections. Shall employ peroxide cured EPDM in the covers, liners and Kevlar tire cord frictioning. Solid steel rings shall be used within the raised face rubber ends to prevent pullout. Flexible cable bead wire is not acceptable. Sizes 2" and larger shall have two spheres reinforced with a ring between spheres to maintain shape and complete with split ductile iron or steel flanges with hooked or similar interlocks. Sizes 16" to 24" may be single sphere. Sizes 3/4" to 1 1/2" may have threaded bolted flange assemblies, one sphere and cable retention. 14" and smaller connectors shall be rated at 250 psi up to 190F with a uniform drop in allowable pressure to 190 psi at 250F. 16" and larger connectors are rated 180 psi at 190F and 135 psi at 250F. Safety factors to burst and flange pullout shall be a minimum of 3/1. All joints must have permanent markings verifying a 5 minute factory test at twice the rated pressure. Concentric reducers to the above specifications may be substituted for equal ended expansion joints. Expansion joints shall be installed in piping gaps equal to the length of the expansion joints under pressure. Manufacturer shall provide pre-stretching charts for expansion joints when used in conjunction with isolated equipment. Control rods need only be used in unanchored piping locations where the manufacturer determines the installation exceeds the pressure requirement without control rods, as control rods are not desirable in seismic work. If control rods are used, they must have 1/2" thick Neoprene washer bushings large enough in area to take the thrust at 1000 psi maximum on the washer area. Expansion joints shall be installed on the equipment side of the shut off valves. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer. All expansion joints shall be installed on the equipment side of the shut off valves. Expansion joints shall be Mason #SAFEFLEX SFDEJ Series, #SAFEFLEX SFEJ Series, #SAFEFLEX SFDCR Series or #SAFEFLEX SFU Series and Control Rods Mason #CR.

- B. F-2 Style: Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings. Sizes 3" (75 mm) and larger shall be flanged. Smaller sizes shall have male threaded nipples or copper sweat ends. Hoses must have sufficient length, minimum 12" (300 mm) long, to accept 1/2" (12 mm) intermittent motion without failure. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible. Hoses shall be Mason #FFL Flanged Series, #CPSB Copper Sweat Series or #CSAMN Threaded Series
- C. F-3 Style: Flexible Vee or U-bend braided hose across building or expansion joints. Piping and equipment connections shall be protected against seismic damage by the insertion of braided flexible hose Vee assemblies rated for $\pm 4"$ (100mm) seismic motion in all planes. Should the application include $\pm 6"$ (150mm) thermal movement or thermal movement alone, install the Vee so the thermal movement is axial. Vees shall have a minimum burst pressure of four times their rated pressure. Vees in steel lines shall have stainless hose and braid. Copper lines, bronze hose and braid. Guiding and anchoring shall be as recommended by the manufacturer. 60° Vees shall be Mason #VFL flanged braided steel Series, #VMN Threaded Braided Stainless Steel Series or #VCPSB Copper Sweat Series.

2.08 BRACING DEVICES FOR EQUIPMENT, PIPING, AND DUCTWORK.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Amber/Booth Company, Inc.
 - 2. California Dynamics Corporation
 - 3. Cooper B-Line, Inc.
 - 4. Hilti, Inc.
 - 5. Kinetics Noise Control
 - 6. Loos & Co.
 - 7. Mason Industries
 - 8. Tolco Incorporated
 - 9. Unistrut
 - 10. ISAT, Inc
 - 11. Vibro-Acoustics, Inc.
- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an agency acceptable to authorities having jurisdiction.
 - 1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least two (2) times the maximum seismic forces to which they will be subjected.
- C. Snubbers: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
 - 1. Anchor bolts for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
 - 2. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
 - 3. Maximum 1/4-inch (6-mm) air gap, and minimum 1/4" (6 mm) thick resilient cushion.

- D. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- E. Hanger Rod Stiffener: Steel tube, steel slotted support system sleeve or reinforcing steel angle clamped to hanger rod are acceptable.
- F. Bushings for Floor-Mounted Equipment Anchorage: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- I. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488. Minimum length of eight times diameter.
- J. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488.

PART 3 EXECUTION

3.01 LOCATION AND APPLICATION OF VIBRATION ISOLATION EQUIPMENT

- A. The following Tables provide schedules for vibration devices required for isolation of plumbing equipment provided on the project. Refer to Part 2 above for device specifications.

B. Pumps – Equipment Isolation

TABLE 1: EQUIPMENT ISOLATION SCHEDULE –										
PUMPS										
		LOCATION								
EQUIPMENT		CRITICAL ROOF OR FLOOR			UPPER STORY			ON GRADE		
		(35' - 50' SPAN)			(20' - 35' SPAN)					
		ISOLATOR	MINIMUM	BASE	ISOLATOR	MINIMUM	BASE	ISOLATOR	MINIMUM	BASE
		TYPE	DEFLECTION	TYPE	TYPE	DEFLECTION	TYPE	TYPE	DEFLECTION	TYPE
			(IN)			(IN)			(IN)	
PUMPS										
Base and Close Coupled Floor Mounted										
Up to 5 HP		S-2/S-1	0.75	B-2	S-2/S-1	0.75	B-1	S-2/S-1	0.4	B-1
7-1/2 HP & Over		S-2/S-1	1.5	B-2	S-2/S-1	1.5	B-2	S-2/S-1	0.75	B-2
Vertical Split Case Floor Mounted										
Up to 5 HP		P-1	0.15	NA	P-1	0.15	NA	P-1	0.15	NA
7-1/2 HP & Over		S-2/S-1	1.5	B-2	S-2/S-1	1.5	B-2	P-1	0.15	NA
Suspended Inline		H-1	1.75	NA	H-1	1.75	NA	H-1	1.0	NA

Notes:

- (1) Alternate: Factory installed by equipment manufacturer.
- (2) Provide full perimeter steel welded frame below equipment
- (3) Provide support per manufacturer's recommendation
- (4) Provide F-1 flexible connector for all high horsepower pumps, F-2 connector for fractional horsepower pumps.

C. Miscellaneous Equipment Isolation

TABLE 2: EQUIPMENT ISOLATION SCHEDULE –										
MISCELLANEOUS EQUIPMENT										
		LOCATION								
EQUIPMENT		CRITICAL			UPPER STORY			ON GRADE		
		(35' - 50' SPAN)			(20' - 35' SPAN)					
		ISOLATOR	MINIMUM	BASE	ISOLATOR	MINIMUM	BASE	ISOLATOR	MINIMUM	BASE
		TYPE	DEFLECTION	TYPE	TYPE	DEFLECTION	TYPE	TYPE	DEFLECTION	TYPE
			(IN)			(IN)			(IN)	
		TYPE	DEFLECTION	TYPE	TYPE	DEFLECTION	TYPE	TYPE	DEFLECTION	TYPE
BOILER (PACKAGE TYPE)										
All Sizes		P-1	0.15	(3)	P-1	0.15	(3)	P-1	0.15	(3)
ENGINE DRIVEN GENERATORS										
Up to 60 HP		S-2	2.5	B-2	S-2	1.5	B-2	S-2	0.75	NA
75 HP & Over		S-2	3.5	B-2	S-2	2.5	B-2	S-2	0.75	NA
AIR COMPRESSORS AND VACUUM PUMPS										
Tank Type (Horizontal Tank)		S-2	2.5	B-2	S-1	1.5	B-2	S-1	0.75	NA
Tank Type (Vertical Tank)		S-1	2.5	B-2	S-2/S-1	1.5	B-2	S-1	0.75	NA

Notes:

- (1) Alternate: Factory installed by equipment manufacturer.
- (2) Provide full perimeter steel welded frame below equipment
- (3) Provide support per manufacturer's recommendation
- (4) For pipe connections to HVAC units provide F-2 pipe and F-3 duct connectors.

3.02 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an evaluation service or agency acceptable to authorities having jurisdiction. Indicate on Drawings, by details, schedules, or a combination of both, the locations where hanger rods for individual pipes and hanger rods for trapeze hangers require hanger rod stiffeners.
- B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.04 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- B. Comply with manufacturer's recommendations for selection and application of vibration isolation materials and units except as otherwise indicated. Comply with minimum static deflections recommended by ASHRAE, of vibration isolation materials and units where not otherwise indicated.
- C. Comply with manufacturer's instructions for installation and load application to vibration control materials and units except as otherwise indicated. Adjust to ensure that units have equal deflection, do not bottom out under loading, and are not short-circuited by other contacts or bearing points. Remove space blocks and similar devices intended for temporary support during installation.
- D. All vibration isolators and seismic restraint systems must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.
- E. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment, piping or ductwork resulting in stresses or misalignment.

- F. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.
- G. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the attention of the Owner's Representative prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.
- H. Install units between substrate and equipment as required for secure operation and to prevent displacement by normal forces, and as indicated.
- I. Adjust leveling devices as required to distribute loading uniformly onto isolators. Shim units as required where substrate is not level.
- J. Flexible Pipe Connectors: Install on equipment side of shutoff valves.
- K. Upon completion of vibration control work, prepare report showing measured equipment deflections for each major item of equipment as indicated. Clean each vibration control unit, and verify that each is working freely, and that there is no dirt or debris in immediate vicinity of unit that could possibly short-circuit unit isolation.
- L. Equipment Restraints:
 - 1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
 - 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
 - 3. Install seismic-restraint devices using methods approved by an evaluation service or agency acceptable to the authorities having jurisdiction. Provide required submittals for components.
- M. Piping Restraints:
 - 1. Comply with requirements in MSS SP-127.
 - 2. Space lateral supports a maximum of 40 feet (12m) and longitudinal supports a maximum of 80 feet (24m).
 - 3. Brace a change of direction longer than 12 feet (3.7m).
- N. Install cables so they do not bend across edges of adjacent equipment or building structure.
- O. Install seismic-restraint devices using methods approved by an evaluation service or agency acceptable to the authorities having jurisdiction, providing required submittals for component.
- P. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolts and mounting hole in concrete base.
- Q. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- R. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- S. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the Structural Engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.05 VIBRATION ISOLATION OF PIPING

- A. Horizontal Piping: The first three pipe supports from vibration isolated equipment must be vibration isolated. The static deflection of the pipe support isolators must be equal to the static deflection for the isolators under the connected equipment. Overhead piping shall suspend from Mason Type 30N spring hangers, or equal. Floor supported piping shall rest on Mason Type SLR isolators, or equal. Refer to contract drawings for additional vibration isolation requirements for piping. Where piping connects to plumbing equipment install Mason Type SFDEJ or SFU expansion joints or Mason Type FFL stainless hoses if Type SFDEJ or SFU is not suitable for the service.
- B. Riser isolation: Risers that experience excessive thermal expansion shall be suspended from Mason Type 30N spring hangers or supported by Mason Type SLF(H) spring mountings, anchored with Mason Type ADA(H) anchors, and guided with Mason Type VSG(H) sliding guides. Horizontal pipe runs and branches shall be supported on Mason Type 30N spring hangers for the first three supports from the risers. Steel springs shall be selected to provide a minimum of 0.75" static deflection except in those expansion locations where additional deflection is required to limit load changes to $\pm 25\%$ of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on the building structure, spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.

3.06 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment.

3.07 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.

- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust air-spring leveling mechanism.
- D. Adjust active height of spring isolators.
- E. Adjust restraints to permit free movement of equipment within normal mode of operation.

SECTION 22 05 53

PLUMBING IDENTIFICATION

PART 1 GENERAL

1.01 REFERENCES

- A. ANSI/ASME A13.1 - Scheme for the Identification of Piping Systems.
- B. UL83 - Thermoplastic-insulated Wires and Cables.
- C. UL 1581 Standard for Electrical Wires, Cables, and Flexible Cords.

PART 2 PRODUCTS

2.01 MATERIALS

- A. All pipe markers (purchased or stenciled) shall conform to ANSI A13.1. Marker lengths and letter sizes shall be at least the following:

<u>OD of Pipe or insulation</u>	<u>Marker Length</u>	<u>Size of Letters</u>
Up to and including 1-1/4"	8"	1/2"
1-1/2" to 2"	8"	3/4"
2-1/2" to 6"	12"	1-1/4"
8" to 10"	24"	2-1/2"
Over 10"	32"	3-1/2"

Plastic tags may be used for outside diameters under 3/4".

- B. Plastic Nameplates: Laminated three-layer phenolic with engraved black, 1/4" minimum letters on light contrasting background.
- C. Aluminum Nameplates: Black enamel background with natural aluminum border and engraved letters furnished with two mounting holes and screws.
- D. Plastic Tags: Minimum 1-1/2" square or round laminated three-layer phenolic with engraved, 1/4" minimum black letters on light contrasting background.
- E. Brass Tags: Brass background with engraved black letters. Tag size minimum 1-1/2" square or 1-1/2" round.
- F. Plastic Pipe Markers: Semi-rigid plastic, preformed to fit around pipe or pipe covering; indicating flow direction and fluid conveyed.
- G. Vinyl Pipe Markers: Colored vinyl with permanent pressure sensitive adhesive backing.

- H. Stencil Painted Pipe Markers: Use industrial enamel spray paint per ANSI Standard A13.1. Indicate fluid conveyed and flow direction.
- I. Underground Pipe Markers: Bright colored continuously printed plastic ribbon tape 6" wide by 3.5 mils thick, manufactured for direct burial, with aluminum foil core for location by non-ferric metal detectors and bold lettering identifying buried item.
- J. Acceptable Manufacturers: 3M, Bunting, Calpico, Craftmark, Emedco, Kolbi Industries, Seton, W.H. Brady, Marking Services.
- K. Tracer Wire:
 - 1. Single copper conductors shall be solid or stranded annealed or hard uncoated copper per UL83 and ASTM requirements. Tracer tape or copper-coated steel wire is not acceptable.
 - 2. Conductor shall be insulated with HMWPE as specified and applied in a concentric manner. The minimum at any point shall not be less than 90% of the specified average thickness in compliance with UL 83.
 - 3. Tracer wire shall be continuously spark tested at 7500 Volts DC. Other electrical and mechanical tests shall be in accordance with UL 1581.
 - 4. Tracer wire shall be installed on top of all non-metallic pipes.

END OF SECTION

SECTION 22 05 76

CLEANOUTS, STORM AND SANITARY

PART 1 GENERAL

PART 2 PRODUCTS

2.01 CLEANOUTS

- A. Cleanouts on exposed pipes shall be cast iron with heavy duty cast brass plug with raised head.
- B. Cleanout shall be same size as the pipe up to 6" and 6" for larger pipes.
- C. Exterior Surfaced Areas: [Round] [Square] cast nickel bronze access frame and non-skid cover.
- D. Exterior Unsurfaced Areas: Line type with lacquered cast iron body and round epoxy coated cover with gasket.
- E. Interior Finished Floor Areas: Lacquered] cast iron body with anchor flange, reversible clamping collar, threaded top assembly, and round scored cover with gasket in service areas and [round] [square] depressed cover with gasket to accept floor finish in finished floor areas.
- F. Interior Finished Wall Areas: Line type with lacquered cast iron body and round epoxy coated cover with gasket, and round stainless steel access cover secured with machine screw.
- G. Interior Unfinished Accessible Areas: Calked or threaded type. Provide bolted stack cleanouts on vertical rainwater leaders.
- H. Acceptable Manufacturers: WATTS, MIFAB, J.R. Smith or Zurn.

PLUMBING PIPING INSULATION

PART 1 GENERAL

1.01 REFERENCES

- A. ANSI/ASTM C533 - Calcium Silicate Block and Pipe Thermal Insulation.
- B. ANSI/ASTM C534 - Elastomeric Foam Insulation.
- C. ASTM C591 - Unfaced Preformed Rigid Cellular Polyisocyanurate Insulation.
- D. ASTM C1729 - Standard Specification for Aluminum Jacketing for Insulation.
- E. ASTM C1767 - Standard Specification for Stainless Steel Jacketing for Insulation.
- F. ASTM E84 - Surface Burning Characteristics of Building Materials.
- G. NFPA 255 - Surface Burning Characteristics of Building Materials.
- H. UL 723 - Surface Burning Characteristics of Building Materials.

PART 2 PRODUCTS

2.01 INSULATION

- A. Type A: Glass fiber; ANSI/ASTM C547; 0.24 maximum 'K' value at 75°F; non-combustible. All purpose, white Kraft jacket bonded to aluminum foil and reinforced with fiberglass yarn, 25/50 flame spread/smoke developed rating when tested in accordance with ASTM E84 (UL 723).
- B. Type B: EPDM (NBR/PVC Blend is not permitted) elastomeric cellular foam; ANSI/ASTM C534; flexible plastic; 0.25 maximum 'K' value at 75°F, 25/50 flame spread/smoke developed rating when tested in accordance with ASTM E84 (UL 723). Maximum 1" thick per layer where multiple layers are specified.
- C. Type C: Molded rigid cellular glass; ANSI/ASTM C-552; 0.35 maximum 'K' value at 75°F; moisture resistant, non-combustible; suitable for -100°F to +900°F. For below grade installations use asphaltic mastic paper vapor barrier jacket. Use self-seal all-purpose white Kraft jacket for above grade installations.
- D. Type D: Hydrous Calcium Silicate; ASTM C533; rigid molded pipe insulation; asbestos free; 0.40 'K' value at 300°F; 1200°F maximum service temperature; 16 gauge stainless steel tie wires on maximum 12" centers.
- E. Type E: Preformed rigid cellular polyisocyanurate insulation; ANSI/ASTM C591; maximum 'K' value of 0.19 at 75°F; moisture resistant; suitable for -297°F to +300°F.

2.02 VAPOR BARRIER JACKETS

- A. Kraft reinforced foil vapor barrier with self-sealing adhesive joints. Beach puncture resistance ratio of at least 50 units. Tensile strength: 35 psi minimum. Single, self-seal acrylic adhesive on longitudinal jacket laps and butt strips.
- B. Polyvinylidene Chloride (PVDC or Saran) film and tape: Durable and highly moisture and moisture vapor resistant. Please refer to manufacturer's recommended installation guidelines.

2.03 JACKET COVERINGS

- A. Aluminum Jackets: ASTM C1729; 0.016" thick (thicker where required by ASTM C1729); stucco embossed finish with Z edge seams and aluminum bands for outdoor use. Where colored jacket covers are called for, provide factory-applied hard film acrylic paint in color selected by Architect.
- B. Stainless Steel Jackets: ASTM C1767. Type [304] [316] stainless steel; 0.010" thick (thicker where required by ASTM C1729); smooth finish with Z edge seams and stainless steel bands for outdoor use.
- C. Plastic Jackets and Fitting Covers: High impact, glossy white, [0.020"] [0.030"] thick, self-extinguishing plastic. Suitable for use indoors or outdoors with ultraviolet inhibitors. Suitable for -40°F to 150°F. 25/50 maximum flame spread/smoke developed.

PART 2 PRODUCTS

2.01 COLD, HOT, AND TEMPERED WATER PIPING - POTABLE AND NON-POTABLE (ABOVE GROUND)

- A. Design Pressure: 175 psi.
Maximum Design Temperature: 200°F.
- B. Piping - All Sizes:
 - 1. Tubing: Type L hard drawn seamless copper tube, ASTM B88.
 - 2. Joints: Solder with 100% lead-free solder and flux, ASTM B32.
 - 3. Fittings: Wrought copper solder joint, ANSI B16.22.
- C. Piping - 4" and Under:
 - 1. Tubing: Type L hard drawn seamless copper tube, ASTM B88.
 - 2. Joints: Mechanical press connection.
 - 3. Fittings: Copper, ANSI B-16.22, with embedded EPDM O-ring, NSF-61.
 - 4. Acceptable Manufacturers: Viega ProPress, Elkhart Xpress, Nibco Press System Fittings and Valves, Mueller Streamline PRS.

2.02 COLD, HOT, AND TEMPERED WATER PIPING - POTABLE AND NON-POTABLE (UNDERGROUND)

- A. Design Pressure: 150 psi.
Maximum Design Temperature: 200°F.
- B. Piping - All Sizes:
 - 1. Tubing: Type K annealed copper tube, ASTM B88.
 - 2. Joints: Brazed Alloy, BCuP-5, AWS A5.8.
 - 3. Fittings: Wrought copper solder joint, ANSI B16.22.
- C. Piping - 4" and Under:
 - 1. Tubing: Type K annealed copper tube, ASTM B88.
 - 2. Joints: Mechanical press connection.
 - 3. Fittings: Copper, ANSI B-16.22, with embedded EPDM O-ring, NSF-61.
 - 4. Acceptable Manufacturers: Viega ProPress, Elkhart Xpress, Nibco Press System Fittings and Valves, Mueller Streamline PRS.

2.03 SERVICE WATER PIPING - POTABLE

- A. Design Pressure: 200 psi.

Maximum Design Temperature: 150°F.

B. Piping:

1. Pipe: Ductile iron pressure water pipe, ANSI/AWWA C151/A21.51, 200 psi pressure class, cement-mortar lined per ANSI/AWWA C104/A21.4.
2. Fittings: Ductile iron, ANSI/AWWA C110/A21.10 or ANSI/AWWA C153/A21.53, 200 psi pressure class, cement-mortar lined per ANSI/AWWA C104/A21.4, push-on joints or mechanical joints.
3. Joint: Push-on joint with rubber gasket, ANSI/AWWA C111/A21.11.
4. Joint: Mechanical joint with glands and gaskets and steel bolts. ANSI/AWWAC111/A21.11.

C. Piping - 2" and Under:

1. Tubing: Type K soft annealed copper tube, ASTM B88.
2. Joints: Solder with 100% lead-free solder and flux, ASTM B32.
3. Fittings: Wrought copper solder joint, ANSI B16.22.

D. Valve Box/Curb Box:

1. 2" and under, extension type curb box with arch pattern base and sufficient length to allow top to terminate flush with finished grade. Cast iron lid with integrally cast brass bushing and marked "water" in integrally cast raised letters. Furnished with valve operating wrench of sufficient length to extend 3' above finished grade when engaged with valve. Construction of curb box shall meet all local codes and requirements. Acceptable Manufacturers: Mueller, A.Y. McDonald, Tyler Pipe.
2. 3" through 12", extension type valve box with flat base, 5-1/4" shaft and sufficient length to allow top to terminate flush with finished grade. Cast iron lid marked "water" in integrally cast letters. Furnished with valve operating wrench of sufficient length to extend 3' above finished grade when engaged with valve. Construction of curb box shall meet all local codes and requirements.
3. Acceptable Manufacturers: Tyler Pipe.

2.04 DEMINERALIZED AND DISTILLED WATER PIPING

A. Design Pressure: 50 psi.

Maximum Design Temperature: 120°F

B. Piping:

1. Pipe: Schedule 40, rigid, unplasticized PVC, normal impact Type I, plain ends.
2. Joints: Solvent-weld socket type with solvent as recommended by manufacturer.
3. Fittings: Unplasticized PVC, normal impact Type I, solvent-weld socket type ends for Schedule 40 pipe. For connections to equipment, outlets and valves requiring screwed connections, use solvent socket to screwed joint PVC adapters or unions.
4. Special Requirements: Schedule 40 PVC pipe.

C. Shutoff/Throttling Valves:

1. 2" and under, 125 psi at 95°F, 35 psi at 140°F, socket weld, PVC, true union ball valve with PTFE ball seats, EPDM O-ring seals. Acceptable Manufacturers: Georg Fischer, Asahi Omni, Nibco.
2. 2-1/2" to 6", 80 psi at 100°F, 25 psi at 140°F, socket weld, PVC, true union ball valve with PTFE ball seats, EPDM O-ring seals. Acceptable Manufacturers: Georg Fischer, Asahi Omni, Nibco.
3. 2" and under, 125# CWP @ 75°F, socket weld, normal impact PVC, Teflon faced diaphragm. Acceptable Manufacturers: Cabot Corp, Nibco/Chemtrol.

D. Check Valves:

1. All sizes, 125# CWP @ 75°F, socket weld, normal impact PVC, ball type. Cabot Corp, Nibco/Chemtrol.

2.05 DEIONIZED (DI) AND REVERSE OSMOSIS (RO) WATER PIPING

A. Design Pressure: 150 psi at 70°F

B. Piping: Ducted Returns

1. Pipe: Schedule 80 polypropylene without plasticizers or pigments, ASTM D-1785.
2. Joints: Fused type.
3. Fittings: Polypropylene socket fused or flanged fittings, ASTM D-4101.
4. Products: All manufacturers must have approval to furnish this system. Purity test data and fitting samples are required for evaluation of equivalency.

C. Acceptable products are as follows: Acceptable Manufacturers: Georg Fischer - PPRO-Seal, Enfield, Nibco/Chemtrol, Orion pure water piping.

D. Piping: Non-Ducted Returns

1. Pipe: Schedule 80 CPVC without plasticizers or pigments, ASTM D-1785.
2. Joints: Solvent type.
3. Fittings: CPVC socket type, ASTM D-4101.
4. Products: All manufacturers must have approval to furnish this system. Purity test data and fitting samples are required for evaluation of equivalency.

E. Acceptable Manufacturers: Corzan.

F. Shutoff and Throttling Valves:

1. Ball Valves:
 - a. 2" and under, 150 psi at 70°F, true union type, polypropylene or PVDF body and ball, PTFE or Viton seats and "O" rings. Acceptable Manufacturers: Sloun, ASAHI, Georg Fischer Plastics, Chemtrol.
 - b. 3" and 4", 150 psi at 73°F, flanged, virgin polypropylene or PVDF body and ball, PTFE seats and "O" rings. Acceptable Manufacturers: ASAHI, Chemtrol.

G. Check Valves:

1. PVDF or natural polypropylene with PTFE or Viton seats, flanged or true union ends, 75 psi at 140°F. Acceptable Manufacturers: ASahi (swing check with PVDF or PTFE coated SS hinge) or Enfield (ball type mounted in vertical pipe with upward flow), Nibco/Chemtrol.

2.06 COLD, HOT, AND TEMPERED WATER VALVES - POTABLE AND NON-POTABLE

A. Shutoff Valves:

1. For pipe systems where, mechanical press connections are allowed, shutoff valves with mechanical press connections are acceptable subject to the requirements in the paragraphs below.
2. Butterfly Valves:
 - a. 2-1/2" thru 6", 175 psi CWP, elastomers rated for 20°F to 250°F at 125 psig, fully lugged end, ductile or cast iron body (not in contact with fluid); bronze, aluminum-bronze or EPDM coated ductile iron disc; EPDM seat, stainless steel stem, extended neck, 175 psi bubble-tight, bi-directional dead-end shutoff without backing flange or nuts and with cap screws extending to centerline of valve body (for pipe extension without draining system), 10 position locking operator up to 6" size. Cv of at least 1580 in 6" size. Center Line, Keystone, Watts, Stockham, Nibco, Milwaukee, Hammond.
 - b. 8" thru 12", 175# CWP, elastomers for 20°F to 225°F at 130 psi, fully lugged end, ductile or cast iron body (not in contact with fluid), bronze, EPDM coated ductile iron or aluminum-bronze disc, EPDM seat, stainless steel stem, extended neck, 175 psi bubble-tight, bi-directional dead-end shutoff without backing flange or nuts and with cap screws extending to the centerline of the valve body (to permit pipe extension without draining system), weatherproof gear operator. Center Line, Keystone, Watts, Stockham, Nibco, Milwaukee, Hammond.
 - c. Mechanically coupled grooved end valves are acceptable if they have the features listed above. Victaulic, Nibco.
3. Ball Valves:
 - a. 3" and under, 150 psi saturated steam, 600 psi CWP, full port, screwed or solder ends (acceptable only if rated for soldering in line with 470°F melting point of lead-free solder), bronze body of a copper alloy containing less than 15% zinc, stainless steel ball and trim, Teflon seats and seals. Apollo, Stockham, Milwaukee, Watts, Nibco, National Utilities Co., RUB.

NOTES:

- 1) Provide extended shaft for all valves in insulated piping.
- 2) Provide lock out trim for all valves opening to atmosphere installed in domestic water piping over 120°F, heating water piping over 120°F, steam, condensate, boiler feed water piping, compressed air piping and gasoline/kerosene piping, and as indicated on the drawings. Solid extended shaft is not required on valves with lock out trim.

B. Throttling/Shutoff Valves:

1. For pipe systems where, mechanical press connections are allowed, throttling valves with mechanical press connections are acceptable subject to the requirements in the paragraphs below.
2. Globe Valves:

- a. 2" and under, 150# saturated steam, 300# CWP, screwed, bronze. Crane, Stockham, Walworth, Milwaukee, Hammond, Watts, Nibco.
- b. 2-1/2" thru 10", 125# steam @ 353°F, 200# CWP @ 150°F, flanged, iron body, bronze mounted. Crane, Hammond, Stockham, Walworth, Milwaukee, Watts, Nibco.

C. Check Valves:

1. For pipe systems where, mechanical press connections are allowed, check valves with mechanical press connections are acceptable subject to the requirements in the paragraphs below.
2. 2" and under, 125# steam @ 406°F, 200# CWP @ 150°F, screwed, bronze, horizontal swing. Crane, Hammond, Stockham, Walworth, Milwaukee, Watts, Nibco.
3. 2-1/2" thru 12", 200# CWP, double disc wafer type, bronze or iron body, bronze trim, metal-to-metal or Viton seat, 316 SS shaft, Inconel 600 spring. Mission Duo Chek (with Inconel springs), Mueller Steam Specialty Co., Stockham, Nibco.

D. Strainers:

1. For pipe systems where, mechanical press connections are allowed, strainers with mechanical press connections are acceptable subject to the requirements in the paragraphs below.
2. Bronze body, screwed ends, screwed cover, 150 psi S @ 350°F, 200 psi CWP @ 150°F. Armstrong, Metraflex, Mueller Steam Specialty Co., Sarco, Watts.
3. 2-1/2" thru 8", bronze body, flanged ends, flanged cover, 150# steam, 225# CWP. Mueller Steam Specialty Co.

2.07 SANITARY, VENT, AND STORM DRAINAGE (ABOVE GROUND)

A. Piping:

1. Pipe and Fittings: Standard weight hub and spigot cast iron soil pipe, corrosion protective coating inside and outside, ASTM A74, NSF Certified, CISPI Trademark.
2. Joints: Compression gasket, ASTM C564.
3. Pipe and Fittings: Standard weight no-hub cast iron soil pipe, corrosion protective coating inside and outside, CISPI 301 or ASTM A888, NSF certified, CISPI trademark.
4. Joints: Heavy duty, neoprene sleeve gasket, ASTM C-564, 300 Series stainless steel shield, clamp, and screws with at least four screw type clamps, FM 1680 or ASTM C1540.
5. Adapters: Transitions from cast iron soil pipe to other pipe materials with manufactured adapters. Heavy duty neoprene sleeve gasket, ASTM C-564, 300 Series stainless steel shield, clamp, and screws with not less than four screw type clamps, FM 1680 or ASTM C1540.

2.08 SANITARY, VENT, AND STORM DRAINAGE (BELOW GROUND - INSIDE BUILDING)

A. Piping - All Sizes:

1. Pipe and Fittings: Standard weight hub and spigot cast iron soil pipe, corrosion protective coating inside and outside, ASTM A74, NSF certified, CISPI trademark.
2. Joints: Compression gasket, ASTM C564.

3. Pipe and Fittings: Standard weight no-hub cast iron soil pipe, corrosion protective coating inside and outside, CISPI 301 or ASTM A888, NSF certified, CISPI trademark.
4. Joints: Heavy duty neoprene sleeve gasket, ASTM C-564, 300 Series stainless steel shield, clamp, and screws with at least four screw type clamps, FM 1680 or ASTM C1540.
5. Adapters: Transitions from cast iron soil pipe to other pipe materials with manufactured adapters. Heavy duty neoprene sleeve gasket, ASTM C-564, 300 Series stainless steel shield, clamp, and screws with not less than four screw type clamps, FM 1680 or ASTM C1540.

2.09 GREASE AND VENT SANITARY DRAINAGE (ABOVE AND BELOW GROUND)

A. Piping – 2” through 8”:

1. Pipe: Stainless Steel Type 316L, ASME A112.3.1
2. Fittings: Stainless Steel Type 316L, ASME A112.3.1, push-on joints.
3. Joints: Push-on joint with integral rubber gaskets suitable for use with greasy waste typical for kitchen grease sanitary applications.
4. Adapters: Transition from stainless steel pipe to other pipe materials with manufactured adapters. Heavy duty neoprene sleeve gasket, ASTM C564, 300 Series stainless steel shield, clamp and screws with not less than four screw type clamps, FM 1680 or ASTM C1540.
5. Acceptable Manufacturers: Blucher, Watts, Josam, or approved equivalent.

B. Piping - 1-1/2" through 15":

1. Pipe and Fittings: Standard weight no-hub cast iron soil pipe, epoxy paint corrosion protective coating inside and outside, CISPI 301 or ASTM A888.
2. Joints: Heavy duty, neoprene sleeve gasket, ASTM C-564, 300 Series stainless steel shield, clamp, and screws with at least four screw type clamps, FM 1680 or ASTM C1540.
3. Adapters: Transitions from cast iron soil pipe to other pipe materials with manufactured adapters. Heavy duty neoprene sleeve gasket, ASTM C-564, 300 Series stainless steel shield, clamp, and screws with not less than four screw type clamps, FM 1680 or ASTM C1540.

2.10 SANITARY AND STORM - PUMPED (BELOW GROUND - OUTSIDE OF BUILDING)

A. Piping - All Sizes:

1. Pipe: Ductile iron pressure water pipe, ANSI/AWWA C151/A21.51, 200 psi pressure class, cement-mortar lined per ANSI/AWWA C104/A21.4.
2. Fittings: Ductile iron, ANSI/AWWA C110/A21.10, or ANSI/AWWA C153/A21.53, 200 psi pressure class, cement-mortar lined per ANSI/AWWA C104/A21.4, long radius, push-on joints.
3. Joint: Push-on joint with rubber gasket, ANSI/AWWA C111/A21.11.

B. Piping - All Sizes:

1. Pipe: Ductile iron pressure water pipe, ANSI/AWWA C151/A21.51, 200 psi pressure class, cement-mortar lined per ANSI/AWWA C104/A21.4.

2. Fittings: Ductile iron, ANSI/AWWA C110/A21.10, or ANSI/AWWA C153/A21.53, 200 psi pressure class, cement-mortar line per ANSI/AWWA C104/A21.4, long radius, mechanical joints.
3. Joint: Mechanical joint with glands and gaskets and steel bolts, ANSI/AWWA C111/A21.11.

2.11 SANITARY AND STORM - PUMPED (BELOW GROUND - INSIDE BUILDING)

A. Piping - All Sizes:

1. Tubing: Type K annealed copper tube, ASTM B88.
2. Joints: Brazed Alloy, BCuP-5, AWS A5.8.
3. Fittings: Long Radius Style, Wrought copper solder joint, ANSI B16.22.

2.12 SANITARY AND STORM – PUMPED (ABOVE GROUND)

A. Piping - All Sizes:

1. Tubing: Type K annealed copper tube, ASTM B88.
2. Joints: Solder with 100% lead-free solder and flux, ASTM B32.
3. Fittings: Long Radius Style, Wrought copper solder joint, ANSI B16.22.

B. Piping - 4" and Under:

1. Pipe: Standard weight galvanized steel, threaded and coupled, ASTM A53.
2. Joints: Screwed.
3. Fittings: Galvanized cast iron screwed drainage type, ANSI B16.12, long radius.

2.13 CONDENSATE DRAINAGE

A. Piping - 1-1/4" through 4":

1. Pipe: Type DWV hard temper seamless copper drainage tube, ASTM B306.
2. Pipe: Type M hard temper seamless copper drainage tube, ASTM B306.
3. Joints: Solder with 100% lead-free solder and flux, ASTM B32.
4. Fittings: Cast brass solder joint drainage type, ANSI B16.23 or wrought copper solder joint drainage type, ANSI B16.29.

2.14 ACID WASTE AND VENT

A. Piping - All Sizes:

1. Pipe: Fire retardant polypropylene Schedule 40 drainage pipe.
2. Joints:
 - a. Join pipe and fittings with electrically fused joints. Make fittings between dissimilar materials with adapters furnished by the polypropylene pipe manufacturer.
 - b. Above Floor Only: Mechanical joint with gasket, stainless steel outer sleeve and corrosion resistant nuts and bolts or threaded fittings with gasket and compression nuts.
3. Fittings: Fire retardant polypropylene DWV pattern with socket ends for electrically fused joints.

4. Limitations: For use in non-return air plenums.
5. Acceptable Manufacturers: Orion, Fuseal, Enfield.

B. Piping – All Sizes:

1. Pipe and Fittings: Polyvinylidene fluoride (PVDF) Schedule 40 drainage pipe, ASTM E-84, UL 723.
2. Joints:
 - a. Join pipe and fittings with electrically fused joints. Make fittings between dissimilar materials with adapters furnished by the polypropylene pipe manufacturer.
 - b. Above Floor Only: Mechanical joint with gasket, stainless steel outer sleeve and corrosion resistant nuts and bolts or threaded fittings with gasket and compression nuts.
3. Fittings: Polyvinylidene fluoride (PVDF) DWV pattern with socket ends for electrically fused joints.
4. Limitations: For use in return air plenums.
5. Acceptable Manufacturers: Orion, Fuseal, Enfield.

2.15 ACID WASTE AND VENT (BELOW GROUND - INSIDE/OUTSIDE BUILDING)

A. Piping - All Sizes

1. Pipe: Non-fire retardant polypropylene Schedule 40 drainage pipe.
2. Joints: Join pipe and fittings with electrically fused joints. Make fittings between dissimilar materials with adapters furnished by the polypropylene pipe manufacturer.
3. Fittings: Non-fire retardant polypropylene DWV pattern with socket ends for electrically fused joints.
4. Acceptable Manufacturers: Orion, Fuseal, Enfield.

2.16 NATURAL GAS PIPING(ABOVEGROUND)

A. Piping – All Sizes

1. Pipe: ASTM A53, Schedule 40 Black Steel
2. Fittings: 150 lb. rating, ASME B16.3, malleable iron threaded, ASMR B16.5, flanged; ASME B16.9, steel.
3. Joints 2" and smaller:
 - a. Threaded in accessible areas. Welded in concealed areas such as shafts and plenums.
 - b. Optional: Steel compression fittings shall conform to the material and sizing requirements of ASME B16.3 or ASTM A420. Fittings shall have an HNBR O-ring seal, 420 stainless steel grip ring, and 304 stainless steel separator ring. Manufacturers: Viega #MegaPress G, NIBCO, or approved equal.
4. Joints 2 1/2" and larger:
 - a. ASME B16.25 bevelweld, ASME B16.5 flanges, or ASME B16.11 socket weld. Welded in concealed areas such as shafts and plenums.
5. Welded Fittings:
 - a. Comply with ASTM A234/A234M, ASME B16.9, ASME B16.25, and ASME B16.11.

- b. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- c. Shop fabricated Bonney Forge "Weldolet" or "Thredolet" type fittings may be used in lieu of tee fittings, but field (site) welding will not be permitted.

2.17 NATURAL GAS PIPING(UNDERGROUND)

A. Polyethylene (IPS):

- 1. Piping & Fittings:
 - a. Polyethylene (IPS), plain ends, heat fused joints. compliant with ASTM D2513, ASME D-3350, PE 2708, NFPA-54 and NFPA-58. Pipe shall be marked "Gas" and "ASTM D2513".
 - b. Manufacturers: Performance Pipe DriscoPlex 6500 Series MDPE Pipe, or Georg Fischer +.
- 2. Tracer Wire:
 - a. Copper clad steel or solid copper core tracer wire of #18 gauge (or larger) with insulation type suitable for direct burial.
- 3. Building gas service riser:
 - a. Annodeless polyethylene to steel riser, epoxy coated steel.
 - b. Manufacturers: Lyall Lyco.

2.18 UNIONS

- A. Copper pipe - wrought copper fitting - ground joint.
- B. Black Steel (Schedule 40) Pipe - malleable iron, ground joint, 150 psi, bronze to bronze seat.
- C. Galvanized Steel Pipe - galvanized malleable iron, ground joint, 150 psi, bronze to bronze seat.

2.19 WATER PRESSURE REDUCING VALVES

- A. PRV-1: Self-contained type up to 2-1/2" size, diaphragm actuated, with cast iron body, stainless steel springs, diaphragm, trim and seats for maximum operating pressure of 150 psig and maximum pressure drop of 100 psi. Acceptable Manufacturers: Fisher Type 95H, Cash Acme, Masoneilan, Terrice, Watts.
- B. PRV-2: 2-1/2" through 6" size, single seated plug valve, with cast iron body, stainless steel seat, maximum 125 psig inlet, 20-100 psi differential. Acceptable Manufacturers: Fisher, Masoneilan, Terrice, Watts.

2.20 BALANCING VALVE

- A. Rated for 125 psi working pressure and 250°F operating temperature, taps for determining flow with a portable meter, positive shutoff valves for each meter connection, memory feature, tight shutoff, and a permanent pressure drop between 1' and 2' water column at full flow with valve 100% open. Furnish with molded, removable insulation covers.
- B. Provide a nomograph to determine flow from meter reading (and valve position on units which sense pressure across a valve). Graph shall extend below the specified minimum flow.
- C. Furnish one meter kit equivalent to Bell & Gossett meeting the following requirements:

1. Carrying case with handle.
 2. Pressure gauge with 0-25 feet of head scale with 3.0% full scale accuracy.
 3. High and low side hoses with 5 feet length and 250 psig pressure rating, equipped with shutoff valves, vent valves, and probes for insertion into pressure and temperature plugs.
 4. Coordinate with the Mechanical Contractor if a meter kit is also required in specification section 23 21 00. It is not our intent to require two identical kits, rather it will be acceptable to provide only one kit to the owner which can be used with both plumbing and hydronic piping systems.
- D. Flow rate of 0.5 GPM or larger: Valves in copper piping shall be brass or bronze. Acceptable Manufacturers: Flow Design, Preso, Armstrong, Bell & Gossett, Griswold, Gerand or Nibco Globe Style balancing valve.
- E. Flow rate less than 0.5 GPM: Valves in copper piping shall be brass or bronze. Cv value shall be less than 1.0 when valve is completely open, and minimum balanceable flow rate shall not exceed 0.1 GPM with a meter reading of at least 2.5 feet. Acceptable manufacturers: Bell & Gossett, Flow Design, Preso, Armstrong, Griswold, Gerand, or Nibco balancing valve.
- F. Manufacturer shall size balancing valves for the scheduled flow rate. Flow rate shall be measurable on manufacturer's standard meters.

2.21 SEISMIC (EARTHQUAKE) GAS SHUTOFF VALVES:

- A. 3/4" thru 4" (low and medium pressure, screwed body): UL Listed valve meeting ASCE 25-97, positive closure, soft seal seating, visual open-close indicator, manual reset, and closure time interval within 5 seconds when subjected to a sinusoidal oscillation with peak acceleration of 0.3G and a period of 0.4 seconds. Pacific Seismic Products #Series 300, sized for 7 psi max operating pressure, respectively.
- B. 3/4" thru 4" (high pressure, screwed body): UL Listed valve meeting ASCE 25-97, manual reset, soft seat construction for positive sealing, visual open-close indicator, tripping mechanism with non-creeping rolling latch, and closure time interval within 5 seconds when subjected to sinusoidal oscillation with peak acceleration of 0.3G and a period of 0.4 seconds. Pacific Seismic Products #Series 300, sized for 60 psi maximum operating pressure.
- C. 2" thru 8" (high pressure, flanged body): UL Listed valve meeting ASCE 25-97, manual reset, soft seat construction for positive sealing, visual open-close indicator, tripping mechanism with non-creeping rolling latch, and closure time interval within 5 seconds when subjected to sinusoidal oscillation with peak acceleration of 0.3G and a period of 0.4 seconds. Pacific Seismic Products #Series 300, sized for 60 psi maximum operating pressure.

2.22 WATER HAMMER ARRESTERS

- A. Provide water hammer arresters as shown and specified on the drawings as well as required by code.
- B. ANSI A112.26.1; sized and located in accordance with PDI WH-201, precharged for operation between -100°F and 300°F and maximum 250 psig working pressure.
- C. Air chambers shall meet the requirements of the applicable plumbing code. Minimum 12" long at fixtures and minimum 24" long on risers. Air chambers shall be the same size or larger than the piping it is connected to.

2.23 DIELECTRIC FITTINGS (CONNECTIONS BETWEEN DISSIMILAR METALS)

- A. Connections between dissimilar metals shall be insulating dielectric types that provide a water gap between the connected metals, and that either allow no metal path for electron transfer or that provide a wide water gap lined with a non-conductive material to impede electron transfer through the water path.
- B. Joints shall be rated for the temperature, pressure, and other characteristics of the service in which they are used, including testing procedure.
- C. Aluminum, iron, steel, brass, copper, bronze, and stainless steel are commonly used and require isolation from each other with the following exceptions:
 - 1. Iron, steel, and stainless steel connected to each other.
 - 2. Brass, copper, and bronze connected to each other.
 - 3. Brass or bronze valves and specialties connected in closed systems with steel, iron, or stainless steel on both sides of the brass or bronze valves and specialties. Where two or more brass or bronze items occur together, they shall be connected with brass nipples. Brass or bronze valves and specialties cannot be used as a dielectric separation between pipe materials.
- D. Dielectric protection is required at connections to equipment of a material different than the piping.
- E. Screwed Joints (acceptable up to 2" size):
 - 1. Dielectric waterway rated for 300 psi CWP and 225°F.
 - 2. Acceptable Manufacturers: Elster Group ClearFlow fittings, Victaulic, Grinnell, Matco-Norca.
- F. Flanged Joints (any size):
 - 1. Use 1/8" minimum thickness, non-conductive, full-face gaskets.
 - 2. Employ one-piece molded sleeve-washer combinations to break the electrical path through the bolts.
 - 3. Sleeve-washers are required on one side only, with sleeves minimum 1/32" thick and washers minimum 1/8" thick.
 - 4. Install steel washers on both sides of flanges to prevent damage to the sleeve-washer.
 - 5. Separate sleeves and washers may be used only if the sleeves are manufactured to exact lengths and installed carefully so the sleeves must extend partially past each steel washer when tightened.
 - 6. Acceptable Manufacturers: EPCO, Central Plastics, Pipeline Seal and Insulator, F. H. Maloney, or Calpico.

2.24 AIR VENTS

- A. Provide means for venting air at all high points in the piping system and at all other points where air may be trapped.
- B. At end of main and other points where large volume of air may be trapped - Use 1/4" globe valve, angle type, 125 psi, Crane #89, attached to coupling in top of main, 1/4" discharge pipe turned down with cap.

2.25 DRAIN VALVES

- A. Drain valves shall be shutoff valves as specified for the intended service with added 3/4" male hose thread outlet and cap.

2.26 RELIEF VALVES

- A. RV-1: (Compressed Air) Spring loaded disc type, cast iron or steel body, stainless steel disc, side outlet and lifting lever, 250# CWP. Acceptable Manufacturers: Consolidated Div. of Dresser Ind., Kunkle, Keckley.
- B. RV-2: (Domestic Hot Water) Pressure and Temperature relief, cast bronze body and internal parts, stainless steel spring, test lever, threaded inlet and outlet. Maximum setting of 150 psi and 210°F temperature. Capacities ASME certified and labeled. Acceptable Manufacturers: Cash, Watts.

2.27 SANITARY AND STORM VALVES – PUMPED (ABOVE GROUND)

- A. Shutoff Valves:
 - 1. Ball Valves:
 - a. 3" and under, 150 psi saturated steam, 600 psi CWP, full port, screwed or solder ends (acceptable only if rated for soldering in line with 470°F melting point of lead-free solder), bronze or brass body, stainless steel ball and trim, Teflon seats and seals. Apollo, Stockham, Milwaukee, Watts, Nibco, National Utilities Co., RUB.
 - 2. Gate Valves:
 - a. 2-1/2" thru 12", 200# CWP @ 150°F, flanged, iron body, bronze trim, OS&Y. Crane, Hammond, Stockham, Walworth, Milwaukee, Nibco.
- B. Check Valves:
 - 1. 2" and under, 125# steam @ 406°F, 200# CWP @ 150°F, screwed, bronze, horizontal swing. Crane, Hammond, Stockham, Walworth, Milwaukee, Watts, Nibco.
 - 2. 2-1/2" thru 12", 200# CWP, double disc wafer type, iron body, bronze or aluminum-bronze discs, 316SS shaft and spring, Viton, EPDM or BUNA-N, Cv of at least 700 in 6" size. Mueller Steam Specialty Co., Stockham, NIBCO, Crane.

2.28 BACKFLOW PREVENTERS

- A. Reduced Pressure Backflow Preventers: 3/4" – 2", comply with ASSE 1013, Lead free, Bronze body, with corrosion resistant internal parts, two independently operating positive seating spring loaded check valves; diaphragm type differential pressure relief valve located between check valves; assembled with two ball valves, and four test cocks. Acceptable Manufacturers: Watts, Zurn, Wilkins.
- B. Reduced Pressure Backflow Preventers: 2 1/2" – 10", comply with ASSE 1013, Lead free, FDA/NSF epoxy coated cast iron body, two independently operating positive seating spring loaded check valves, diaphragm type differential pressure relief valve located between check valves, assembled with two OS&Y gate valves, and four test cocks. Acceptable Manufacturers: Watts, Zurn, Wilkins.
- C. Double Check Valve Assemblies: 3/4" – 2", comply with ASSE 1015 or AWWA C510; Lead free, Bronze body with corrosion resistant internal parts and stainless steel springs; two independently operating check valves, two ball valves, and four test cocks. Acceptable Manufacturers: Watts, Zurn, Wilkins.

- D. Double Check Valve Assemblies: 2 1/2" – 10", comply with ASSE 1015 or AWWA C510; Lead free, Bronze body with corrosion resistant internal parts and stainless steel springs; two independently operating check valves, two OS&Y gate valves, and four test cocks . Acceptable Manufacturers: Watts, Zurn, Wilkins.

2.29 PIPE ESCUTCHEONS:

- A. Provide pipe escutcheons as specified herein with inside diameter closely fitting pipe outside diameter, or outside of pipe insulation where pipe is insulated. Select outside diameter of escutcheon to completely cover pipe penetration hole in floors, walls, or ceilings; and pipe sleeve extension, if any. Furnish pipe escutcheons with nickel or chrome finish for occupied areas. Prime zinc base paint finish is allowed for unoccupied areas.
- B. Pipe Escutcheons for Moist Areas: For waterproof floors, and areas where water and condensation can be expected to accumulate, provide stainless steel, cast brass or sheet brass escutcheons, solid or split hinged.
- C. Pipe Escutcheons for Dry Areas: Provide stainless steel escutcheons, solid or split hinged.

2.30 PIPE SLEEVES:

- A. Provide fire proof sleeve assemblies utilizing UL rated sealant systems at all fire rated penetrations. For non-rated sleeve penetrations pack the annular space between the pipe and sleeve with fiberglass and/or mastic.
- B. Sleeves shall provide a minimum 1/2" annular clearance around pipe. Where pipes cross through/ below footings or footing walls provide a minimum 1" annular clearance between sleeve and pipe.
- C. Sheet metal: Fabricate from 0.025" (0.64 mm) minimum, sheet metal; round tube closed with snap lock joint, welded spiral seams, or welded longitudinal joint.
- D. Steel pipe: Fabricate from Schedule 40 galvanized steel pipe; remove burrs.
- E. Iron pipe: Fabricate from cast iron or ductile-iron pipe; remove burrs.
- F. Plastic and copper pipe: Fabricate from Schedule 80 PVC plastic pipe; remove burrs.
- G. Sleeves through interior concrete walls and floors: Telescopic, submerged, adjustable sleeves to extend a minimum of 1" above finished floor. Manufacturers: Adjust-to-Crete, or Crete-Sleeve, Hilti.
- H. Through exterior walls and floor on grade: 150-pound class cast-iron pipe sleeve. Where waterproof membranes are used, provide membrane clamps. For insulated piping, sleeve diameter shall not be less than diameter of insulated pipe.
- I. Cast-in-place watertight device for protecting penetrating objects from expansion and contraction of concrete. Factory-assembled for use in cast-in-place concrete floors and walls and consisting of two outer sleeves and a one-piece radial extended-flange waterstop gasket, with mid-body seal for embedment and sealing to concrete slab and continuous water seal extending to the penetrating pipe.
 - 1. Outer Sleeves: EPDM attached to the mid-body seal forming an area with which to attach the device to the structural reinforcing rod determining the position of sleeve in the wall.

2. Water Stop Mid-Body Seal: Flexible polymer seal with radial extended flange consisting of one to three concentric raised rings which lock into concrete, maintaining seal over time as concrete contracts from sleeve.
3. Manufacturers: HoldRite #HydroFlame.

2.31 MECHANICAL SLEEVE SEALS FOR UNDERGROUND PENETRATIONS:

- A. General: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve, connected with bolts and pressure plates which cause rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.
- B. All sleeves shall be sealed to prevent intrusion of moisture, dust or insects.
- C. Sleeve: To be furnished by same manufacturer of seals; schedule 40 galvanized steel pipe or Century line sleeves, with integral anchor and waterstop collar.
- D. Manufacturers: Metraflex #Metraseal, Advance Products & Systems #Innerlynx, or GPT #Link-Seal.

2.32 MECHANICAL SLEEVE SEALS-ABOVEGROUND PENETRATIONS:

- A. Aboveground: For sleeves passing through walls or floors provide a non-toxic 3-hour rated fire resistant silicone foam sealant with a Flame Spread Rating of 20. Sealant to be tested and approved under UL 263, ASTM E119, and NFPA 251 Standards. All fire rated penetrations shall be sealed with approved UL System.
- B. Local Approvals: All seals to be provided shall be in accordance with the regulations of all governing agencies of the city, county, and State Fire Marshal's Office.
- C. Wood Decking Description: Cast-in-place, factory-assembled, one-piece watertight firestop device for use in concrete floors formed with wood decking to protect penetrating objects from expansion and contraction of concrete, thermal and seismic movement, and the passage of air, smoke, fire, and hot gasses.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide Hubbard Enterprises/HOLDRITE, Hydroflame Sleeve.
 2. Consists of an outer sleeve lined with an intumescent strip, and a radial extended flange attached to one end of the sleeve for fastening to concrete formwork.
 3. Include a waterstop gasket and mid-body seal consisting of one to three concentric raised rings for embedment and sealing to the concrete slab.
 4. Provide one-hour, two-hour and/or three-hour fire-resistance rated assemblies as required and tested according to ASTM E 814 or ANSI/UL 1479.
- D. Steel Decking Description: Cast-in-place, factory-assembled, one-piece watertight firestop device for use in floors formed with steel decking to protect penetrating objects from expansion and contraction of concrete, thermal and seismic movement, and the passage of air, smoke, hot gasses and fire.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide Hubbard Enterprises/Holdrite; Hydroflame CMD Metal Deck Device.
 2. Consists of an outer sleeve lined with an intumescent strip, and wide outside wings attached to one end of the sleeve for fastening to metal deck concrete formwork and span deck corrugations.

3. Includes a cone attached to the base for extending the device through the metal deck and a water stop gasket and mid-body seal consisting of one to three concentric raised rings for embedment and sealing to the concrete slab.
 4. Provide one-hour, two-hour and/or three-hour fire-resistance rated assemblies as required and tested per ASTM E 814 or ANSI/UL 1479.
- E. Concrete Description: Cast-in-place, watertight tub box drain block out firestop device for use in floors formed with wood decking to protect penetrating objects from expansion and contraction of concrete, thermal and seismic movement, and the passage of air, smoke and fire, and hot gasses.
1. Basis-of-Design Product: Subject to compliance with requirements, provide Hubbard Enterprises/Holdrite, Hydroflame Tub Box.
 2. Consists of a reinforced polymer box containing a 2-1/2-inches (63.5 mm) thick polystyrene foam insert with an upper water seal consisting of absorbent material and a pitched water trough.
 3. Include a sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork.
 4. Include two support legs each with a radial extended flange for balance and for fastening to concrete formwork, and a lower water-seal and radial extended flange attached to the lower end of the sleeve for fastening to concrete formwork and a water stop gasket with three concentric raised rings for embedment and sealing to the concrete slab.
 5. Provide one-hour, two-hour and/or three-hour fire-resistance rated assemblies as required and tested per ASTM E 814 or ANSI/UL 1479.

2.33 THERMOMETERS AND GAUGES

A. General:

1. Certification: Provide meters and gauges whose accuracies, under specified operating conditions, are certified by manufacturer.
2. No mercury shall be used in thermometers due to hazardous material classification.
3. Manufacturers: Weksler, Winters, Trerice, Marshalltown or US Gauge.

B. Thermometers:

1. Bi-Metal Type: Provide bi-metal glass thermometers of materials, capacities, and ranges indicated, designed and constructed in service indicated. Accuracy shall be 1% +/- full scale with adjustable recalibration.
 - a. Case: Type 300 series stainless steel, hermetically sealed, glass window, 3" diameter dial, with adjustable angle.
 - b. Adjustable Joint: Die cast aluminum, finished to match case, 180° adjustment in vertical plane, 360° adjustment in horizontal plane, with locking device.
 - c. Scale: Satin faced, non-reflective aluminum, permanently etched markings.
 - d. Stem: Stainless steel, adjustable angle socket, length to suit installation.
2. Glass Thermometer: Provide adjustable angle 9" thermometer of materials, capacities and ranges as appropriate to medium being measured and designed and constructed for service indicated. Accuracy to be 1% +/- of full scale.
 - a. Case: Aluminum or reinforced plastic.
 - b. Temperature Sensitive Gage Liquid: Organic non-toxic. No mercury permitted.

- c. Scale: Aluminum painted white with black markings.
 - d. Connection: 1/2" NPT with thermowell or 1-1/4" UNF swivel nut without thermowell.
 3. Photovoltaic Cell Powered LCD Thermometer
 - a. Case: ABS Plastic
 - b. Accuracy: 1% of full scale.
 - c. Display: 16 LUX rating LCD display. Switchable Fahrenheit and Celsius.
 - d. Connection: 3/4" NPT with thermowell or 1-1/4" UNF swivel nut without thermowell.
 4. Conform to the following temperature ranges:
 - a. Hot Water: 20°F - 240°F with 2°F scale divisions.
 - b. Cold Water: -40°F - 160°F with 2°F scale divisions.
- C. Thermometer Test Wells:
 1. Provide thermometer test wells as indicated, constructed of brass or stainless steel, pressure rated to match piping system design pressure. Provide 2" extension for insulated piping. Provide cap nut with chain fastened permanently to thermometer well.
- D. Temperature Gauge Connector Plugs:
 1. Provide temperature gauge connector plugs pressure rated for 500 psi and 200°F (93°C). Construct of brass and finish in nickel-plate, equip with 1/2" NPS fitting, with self-sealing valve core type neoprene gasketed orifice suitable for inserting 1/8" OD probe assembly from dial type insertion thermometer. Equip orifice with gasketed screw cap and chain. Provide extension, length equal to insulation thickness, for insulated piping.
- E. Pressure Gauges:
 1. General: Provide pressure gauges of materials, capacities, and ranges indicated, designed and constructed for use in service indicated.
 2. Type: General use, 1% accuracy ANSI B40.1 grade A, phosphor bronze bourbon type, bottom connection.
 3. Case: Drawn steel or brass, glass lens, 4-1/2" diameter.
 4. Connector: Brass with 1/4" male NPT.
 5. Scale: White coated aluminum, with permanently etched markings.
 6. Pressure differential range shall be 100 psig minimum for the appropriate application with maximum 1 psig divisions.
- F. Pressure Gauge Cocks:
 1. General: Provide pressure gauge cocks/valves between pressure gauges and gauge tees on piping systems. Two-piece bronze body ball valve with threaded ends. Manufacturers: Milwaukee #BA-100.
 2. Snubber: 1/4" brass or stainless steel bushing with corrosion resistant porous metal disc, through which pressure fluid is filtered. Select disc material for fluid served and pressure rating. Manufacturers: Wika #910.12, or Ashcroft #1112.
- G. Pressure Gauge Connector Test Plugs:

1. Provide pressure gauge connector plugs pressure rated for 500 psi and 200°F (93°C). Constructed of lead-free brass, with 1/4" or 1/2" NPT fitting, with self-sealing valve core type neoprene or Buna-N gasketed orifice suitable for inserting 1/8" O.D. probe assembly from dial type insertion pressure gauge. Equip orifice with gasketed screw cap and chain. Provide extension, length equal to insulation thickness, for insulated piping.

END OF SECTION

SECTION 22 11 23
PUMPS AND SPECIALTIES

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 220500 - Basic Plumbing Materials and Methods, and other Sections in Division 22 specified herein.

1.02 SCOPE

- A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
 1. Variable flow domestic water booster pump systems
 2. Constant flow domestic water booster pump systems
 3. Sump pumps
 4. Sewage ejectors
 5. In-line circulators
 6. Expansion tanks - diaphragm type pre-pressurized.
 7. Air elimination valve.

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 220500: Basic Plumbing Materials and Methods
- B. Section 224000: Plumbing Fixtures
- C. Division 26.

1.04 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Provide systems that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products.
- B. Codes and Standards: Provide pumps which conform to the requirements of:
 1. Hydraulic Institute (HI): Manufacturer pumps in accordance with "Standards for Centrifugal Rotary and Reciprocating Pumps."
 2. National Electrical Manufacturers Association (NEMA): Provide electrical components which comply with NEMA Standards.
 3. National Fire Protection Association (NFPA) 70: National Electrical Code.
 4. Underwriters Laboratories (UL) UL-778: Motor Operated Water Pumps.

1.05 DEFINITIONS

- A. ECM: Electronically commutated motor.
- B. EPDM: Ethylene propylene diene monomer.
- C. EPR: Ethylene propylene rubber.
- D. FKM: Fluoroelastomer polymer.
- E. HI: Hydraulic Institute.
- F. NBR: Nitrile rubber or Buna-N.

1.06 SUBMITTALS

- A. Product Data: Submit manufacturer's technical product data for units showing dimensions, weights (shipping, installed, and operating), capacities, ratings, performance with operating point clearly indicated, motor electrical characteristics, finishes of materials, and installation instructions.
 - 1. Parallel pump plots: For all parallel and series pump applications submit a combined pump curve showing parallel pump operation and single pump non-overloaded operation verifying that the pump selections operate non-overloading on curve in a single pump operation.
 - 2. Submittal information to verify all scheduled characteristics are met including efficiency.
- B. Shop Drawings: Submit manufacturer's shop drawings indicating dimensions, weight (shipping, operating), required clearances, methods of assembly of components, and location and size of each field connection.
- C. Maintenance Data:
 - 1. Submit maintenance instructions, including instructions for lubrication, tube replacement, motor and drive replacement, and spare parts lists.
 - 2. Include this data, product data, shop drawings, and wiring diagrams in operating and maintenance manuals.
- D. Wiring Diagrams:
 - 1. Submit manufacturer's ladder-type wiring diagrams for power and control wiring required.
 - 2. Differentiate between factory-installed and field-installed wiring.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver units to the site in containers with manufacturer's stamp or label affixed.
- B. Store and protect products and units against dirt, water, chemical, and mechanical damage. Do not install damaged units - remove from project site.
- C. Rigging: Comply with the manufacturer's rigging and installation instructions.

1.08 WARRANTY

- A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.
- B. Refer to Section 220500 for additional warranty and Substantial Completion requirements.

PART 2 PRODUCTS

2.01 DOMESTIC WATER VARIABLE FLOW BOOSTER PUMP SYSTEM

- A. Furnish and install a UL listed prefabricated pump water pressure booster system, simplex, duplex or triplex as schedules on the drawings.
 - 1. Refer to scheduled equipment on Contract Drawings for capacities of pumps and motors.
- B. Pumps
 - 1. Pumps shall be single stage end-suction design of cast iron bronze fitted construction, equipped with mechanical shaft seal. Or, multi-stage, vertical inline design with cast iron stainless steel fitted construction.
- C. Drip-Proof Type Motor
 - 1. Each pump motor shall be premium efficient TEFC (suitable for use with VFD's) and selected to not exceed the service factor of the nameplate horsepower at any point on the pump capacity head curve. ECM are recommended.
 - 2. Each pump shall be fitted with isolation valves and union connections or flanges to facilitate future service requirements.
 - 3. Each pump shall be furnished with a silent check valve with bronze trim.
- D. Power and Control Panel
 - 1. The control panel shall include the following components:
 - a. Main power disconnect, non-fused.
 - b. Control circuit transformer with fused secondary.
 - c. Variable frequency drive for each pump
 - d. Digital programmable logic controller (PLC) with PID control functions.
 - e. Color graphic touch screen display, minimum 6" diagonal, mounted on the panel door with display units in selectable language and engineering units.
 - f. Audible general fault alarm, including a push to silence button and a set of dry contacts wired to a terminal strip for remote monitoring.
 - g. The PLC shall be capable of connection to a Building Automation System (BAS) using BACnet, Modbus or LonWorks protocol as defined in Division 23.
 - h. The control logic shall include a dynamic set point adjustment, which automatically lowers or increases the system discharge operating pressure set point as the system demand changes in accordance with local energy code. Manufacturers without this feature shall provide their discharge pressure transducer loose and installed at the furthest remote location of the system to account for variable friction losses within the piping system.

- i. The control logic shall automatically stage pumps and adjust the pump speed based on discharge pressure control. The lead and lag pumps shall be rotated after each system shutdown. The controls shall start a lag pump on lead pump failure. The controls shall include pump minimum run time and pump maximum run time adjustable set points.
- j. The control logic shall include an energy saving proof of no system demand and automatically shutdown the lead pump if no demand is proven. The lag pump(s) shall shutdown when operated at minimum speed for an adjustable elapsed time.
- k. Compliant with UL 508.

E. Factory Prefabrication

1. The entire booster system shall be factory prefabricated on a common structural steel stand with all interconnecting piping and wiring completed and hydrostatically tested prior to shipment.
2. Purge valve shall be thermally actuated to notify control panel of over-temperature conditions to initiate an alarm and shutdown system.
3. The complete package shall also include isolation valves on the suction and discharge of each pump. Stainless steel suction and discharge pipe manifolds, as well as copper tubing with shutoff cocks for gauges and pressure switches, will be furnished assembled. Provide pressure gauges to read suction and discharge pressures for field verification without accessing control system.
4. Field connections include connection to the system suction and discharge headers, drain tube, piping to the hydropneumatic pressure tank with union ball valve, and the power connection at the control panel.

F. Hydropneumatic Tank:

1. A hydropneumatic tank shall be included by booster skid manufacturer to facilitate low flow conditions.
2. Tank shall be a full acceptance replaceable bladder style, sized at 65% acceptance volume, and include a union isolation valve, tank drain and pressure gauge.
3. Tank may be shipped loose for field installation as indicated on the plans.
4. Tank shall be ASME constructed with ring base and minimum pressure rating of 125 psi.

G. Manufacturer: SyncroFlo, Patterson #Aqua FloPac, Flowtherm #FMV Series, Federal, Grundfos, Xylem Bell & Gossett, QuantumFlo or equal.

2.02 DOMESTIC WATER CONSTANT SPEED BOOSTER PUMP SYSTEM

A. Furnish and install a prefabricated three-pump water pressure booster system.

1. Refer to scheduled equipment on Contract Drawings for capacities of pumps and motors.

B. Pumps:

1. Pumps shall be single stage end-suction design of cast iron bronze fitted construction, equipped with mechanical shaft seal. No lead content.
2. Each pump shall have vibration-isolating mounts and be fitted with a separate prewired temperature probe and approved electrical purge valve installed immediately upstream of each PRV.

C. Drip-proof type motor.

1. Each pump motor shall meet NEMA standards and operate within the nameplate horsepower at any point on the pump capacity head curve. ECM are recommended.
- D. Pressure Regulating Valves:
1. Constant system pressure shall be maintained by a flanged pilot operated diaphragm type combination pressure regulating and non-slam check valve on each pump discharge line.
 2. Valve body shall be cast iron with epoxy coated cover and brass or epoxy coated disc guide, disc retainer, and diaphragm washer.
 - a. The valve body shall be suitable for operation at maximum pump pressure plus maximum suction pressure.
 3. Staging control shall be as noted on the plans and schedule; standard staging control shall be current staging.
 - a. Controls shall include a “no-flow shut down” function that will disable the lead pump during periods of no water demand on the system.
 - b. Control features shall include minimum run timers, automatic lead/lag alternation, low suction pressure cut-out, and lead pump failure protection to automatically start the lag pump when an overload condition occurs on the lead pump.
- E. Power and Control Panel:
1. Furnish a single enclosure power and control panel (NEMA 1).
 2. Enclosure shall be steel and furnished with an industrial grade enamel.
 3. It shall house all control components and include 115-volt control transformer with control power switch, indicating lights, auto alternator, audio-visual alarm system, and other necessary controls.
 4. Include for each pump a fused disconnect switch with external operating handle, a magnetic starter with 3-leg overload protection, a running light, and a multiple position selector switch.
 5. All of the above shall be factory internally prewired and tested in accordance with the provisions of the National Electrical Code.
 6. All control wires shall be individually numbered and each component shall be labeled accordingly.
 7. All internal wiring shall be copper stranded, AWG with a minimum insulation of 90°C.
 8. The complete assembly shall have the UL listing mark for industrial control panels.
- F. Instrumentation and Emergency Controls:
1. Each pump shall anti-vibration pads, a temperature probe, and an electric purge valve.
 - a. Include individual pressure gauges for indicating each pump, system, and suction pressure.
 - b. Include pressure switch for abnormally low suction pressure to activate the automatically reset alarm system.
- G. Factory Prefabrication:
1. The entire booster system shall be factory prefabricated on a common structural steel stand with all interconnecting piping and wiring completed and hydrostatically-tested prior to shipment.

2. The complete package shall also include isolation valves on the suction and discharge of each pump.
3. Stainless steel suction and discharge pipe manifolds, as well as copper tubing with shutoff cocks for gauges and pressure switches, will be furnished assembled.
4. The only field connections required will be system suction and discharge headers, the temp probe drain tube, piping of the hydropneumatic pressure tank with union ball valve, and the power connection at the control panel.

H. Hydropneumatic Tank:

1. A tank shall be included by booster skid manufacturer.
2. Tank shall be a full acceptance replaceable bladder style and include a union isolation valve, tank drain and pressure gauge.
3. Tank shall be skid mounted and piped shipped loose for field installation as indicated on the plans.

I. Manufacturer: SyncroFlo, Patterson #Aqua FloPac, Federal Pumps, Grundfos, Xylem Bell & Gossett, or equal.

2.03 DUPLEX SUMP PUMP SYSTEM

A. Furnish and install duplex submersible sump pump, Weil Pump Series 1600 or equal, as scheduled and shown on drawings.

B. Motors shall be air filled design.

1. Oil filled motor shells shall not be considered equal.
2. Motor end bell shall be designed as a terminal box and separated from the motor shell by a combination bearing support and inspection plate.
3. The inspection plate shall permit viewing and access to the motor from the top side of the motor.
4. Motors shall be housed in a watertight cast iron shell with extended cooling fins and shall have Class "F" insulation and permanently lubricated double seal ball bearings having a rated life of 17,500 hours.
5. Motors using sleeve type bearings will not be considered equal. The mating surfaces between the motor end bell, motor shell and seal housing shall be sealed by means of "X" cross section QUAD RINGS.
6. Motor shaft shall be 300 series stainless steel with keyway for positive positioning of impeller.
7. Carbon steel shafts are not considered equal.

C. The impeller shall be multi-vane and shall be made of close grained bronze and accurately machined to the proper diameter and to be statically and dynamically balanced.

D. A double mechanical seal system shall be furnished.

1. The entire double mechanical seal assembly shall be housed in a seal chamber filled with clean dielectric oil. Seal surfaces shall be of solid silicon carbide variety.
2. Carbon ceramic, tungsten carbide or systems that allow the lower seal mechanism to come in contact with the pumped media, shall not be considered as equal.

- E. Each pump shall be computer tested and a report of the test will be kept.
1. Test data will consist of 6 duty points at various heads and capacities, one of which will be the design point.
 2. Test data will include actual efficiencies; horsepower requirements and amp draw at each point.
 3. This test data will be made available to the engineer and owner upon request.
- F. Furnish remote packaged factory pre-wired duplex pump controller, Weil 8101E with the following:
1. NEMA 4 double door dead front steel lockable enclosure.
 2. Magnetic starter with overload reset through inner door, each pump.
 3. Fused disconnect switch with handle through inner door, each pump.
 4. Automatic alternator separately fused.
 5. Overload reset buttons, each pump.
 6. Running lights, each pump.
 7. H-O-A switches, each pump.
 8. Control circuit transformer for 120V operation for each pump independently.
 9. Output connections for high water annunciation at Simplex system.
 10. Alarm silencing switch.
 11. Alarm light with flasher.
 12. Numbered and wired terminal strip.
 13. Alarm output contact for connection to Building Management System
 14. Single point electrical connection.
 15. All wiring between control panel and pump provided under Division 22.
- G. Furnish and install Weil Series 8230 mercury float switches complete with galvanized rod and wall support bracket.
1. Each pump control switch will consist of 2 normally open mercury switches, encapsulated in epoxy resin.
 2. The float casing will be polypropylene.
 3. The switch cable will be type STO PVC jacket 4 #18 conductor, 41 strand, 600-volt insulation.
 4. The cable will be secured to the support rod with a polypropylene composition clamp with stainless steel bolts.
 5. Switches used for high water alarm service will be of the same construction as the pump switches, except that 2-conductor cable will be furnished.
 6. The switch housing will be color-coded to distinguish between the pump and alarm switches.
 7. All wiring between control panel and float switches provided under Division 22.
- H. Provide reinforced fiberglass basin with steel anti-flotation ring. Provide with matching gasketed steel cover.

1. Install basin and pour concrete all around to secure in place.

I. Warranty:

1. The pump manufacturer shall warrant the pumps being supplied to the owner against defects in workmanship and materials for a period of five (5) years under normal use, operation and service.

2. All repairs or replacement parts that may be needed on the seventeenth month following final acceptance by owner will be made and the cost (F.O.B. factory) pro rated for the period of time the pump has been in operation.

3. The warranty shall be in published form and apply to all similar units.

J. Manufacturer: Weil, Weinmann, Enpo-Cornell, Homa, or equal.

2.04 DUPLEX SUBMERSIBLE SEWAGE EJECTOR

A. Furnish and install a duplex submersible sewage ejector system, Weil Pump Series 2500 or equal, as scheduled and shown on drawings.

B. The pump casing shall be one piece cast iron constructed with tripod support legs that provide an even distribution of weight.

C. The mating surfaces between the motor end bell, the motor shell and the seal chamber shall be sealed by means of "X" section QUAD RINGS. Designs using conventional circulate 'O' rings or rectangular cross sectional gaskets shall not be considered equal.

D. Pump motor shall be vertical, NEMA-6 and of an air filled, hermetically sealed design for premium efficiency. Oil filled shell shall not be considered equal.

E. Motor end bell shall be cast iron, designed as a terminal box and separated from the motor shell by a combination bearing support and inspection plate.

F. The motor shall be housed within a water tight, heavy duty cast iron shell with integral extended cooling fins. Motor shall have Class 'F' insulation and permanently lubricated, double sealed ball bearings having a minimum life of 17,500 hours. Motors using sleeve type bearings shall not be considered equal.

G. Motor shaft shall be 300 series stainless steel with keyway for positive positioning of impeller. Motors using carbon steel shafts or stainless stub shafts shall not be considered equal.

H. Impeller shall be multi-vane design, constructed of bronze, accurately machined and dynamically balanced to the job site conditions. The impeller shall not require the use of wearing rings to insure proper operation and shall be capable of passing 4 inch minimum solids.

I. A double mechanical seal system shall be furnished and housed in a machined cast iron seal chamber filled with clean dielectric oil, providing constant lubrication. Lower seal surfaces shall be of solid silicon carbide to provide longer life. Carbon ceramic, tungsten carbide or systems that allow the lower seal surfaces to come in contact with the pumped media, shall not be considered equal.

- J. Each pump shall be tested and a computer generated report will be kept in file and made available upon request. The reported test data shall consist of six duty points of various heads and capacities, one of which will be the design point and shall include actual efficiencies and horsepower requirements.
- K. Furnish remote packaged factory pre-wired duplex pump controller with the following:
1. NEMA 1 double door dead front steel lockable enclosure.
 2. Magnetic starter with overload reset through cover, each pump.
 3. Fused disconnect switch with handle through cover, each pump.
 4. Automatic alternator, separately fused.
 5. Overload reset buttons, each pump.
 6. Running lights, each pump.
 7. H-O-A switches, each pump.
 8. Control circuit transformer for 120V operation for each pump.
 9. Output connection for hi-water annunciation at Simplex.
 10. Alarm silencing switch.
 11. Alarm light with flasher.
 12. Numbered and wired terminal strip.
 13. Single point electrical connection.
 14. All wiring between control panel and pump provided under Division 22.
- L. Furnish remote packaged factory pre-wired duplex pump controller with the following:
1. NEMA 4X, UL listed label enclosure
 2. PLC with color touch-screen and BMS communication via Modbus
 3. Isolated contacts for high water, pump on, and motor overload
 4. Motor overload protection (one per pump). Instantaneous magnetic trip for short circuit protection. Field adjustable within the full load amp range.
 5. One lockable panel disconnect; through-the-door style with door interlock.
 6. Lockable pump disconnects; one for each motor.
 7. Automatic alternator.
 8. Power supply for control circuit; transient surge voltage protection.
 9. High water alarm, 95 dB horn with silence button on touch screen.
 10. Auto, Off, Hand, and Test modes of operation via touch screen.
 11. Exercise feature - provides a brief run cycle for prolonged idle pumps.
 12. PLC shall display the following:
 - a. Pump run status and amperage draw.
 - b. High water alarm and general alarm indication.
 - c. Pump status icons for On/Off, Run and Disabled.
 - d. Sump tank level bar graph (if using level transmitter).
 - e. Lead pump display; next pump to start on sequence alternation.

- f. Alarm history, date and time stamped.
 - g. Alarms with self-help diagnostics to assist fault troubleshooting.
 - h. Preventive maintenance reminder.
 - i. Hour meter; one per pump and resettable.
13. Control terminal board, numbered and wired.
14. Single point electrical connection. All wiring between control panel and pump provided under Division 22.
- M. Furnish and install diaphragm pressure activated micro switches complete with galvanized mounting rod and wall support bracket. The single-pole switch shall be normally open, closing on liquid rise. Switch shall have a 3 inch OFF activation range and an 8-1/2 inch ON activation range. The 16/3 switch cord shall have a breather tube for equalization to atmospheric pressure, be rated for 10 amps, and have three wires black/white/green. Switches used for high water alarm service will be of the same construction as the pump switches. Manufacturer: Weil #8220 Series or equal.
- 1. All wiring between control panel and float switches provided under Division 22.
- N. Furnish and install four float-type mechanical switches with gold-plated contacts for intrinsically safe circuits. Floats containing mercury will not be permitted. Each tethered switch shall include a cord grip and strap mount for mounting to a 3/4" or 1" diameter pipe.
- 1. All wiring between control panel and float switches provided under Division 22.
- O. Furnish and install a level transmitter and base with 316 stainless steel housing and a sturdy base for wet well floor placement. Transmitter to use a piezo resistive sensing element, have a maximum operating temperature of 176°F, maximum sump depth of 23 feet., and a power requirement of 10-28 Vdc. Transmitter shall be UL approved intrinsically safe.
- 1. All wiring between control panel and transmitter provided under Division 22.
 - 2. Transmitter may be mounted to a pipe, suspended from wet well, or position on basin floor; refer to Drawings for mounting configuration.
- P. Warranty:
- 1. The pump manufacturer shall warrant the pumps being supplied to the owner against defects in workmanship and materials for a period of five (5) years under normal use, operation and service.
 - 2. All repairs or replacement parts that may be needed after the initial sixteen months will be made and the cost (FOB factory) pro-rated for the period of time the pump has been in operation.
 - 3. The warranty shall be in published form and apply to all similar units.
- 2.05 DUPLEX COLUMN SEWAGE EJECTOR
- A. Furnish and install a duplex column sewage ejector system as scheduled and shown on drawings.
- B. The mating surfaces between the motor end bell, the motor shell and the seal chamber shall be sealed by means of "X" section QUAD RINGS. Designs using conventional circulate 'O' rings or rectangular cross sectional gaskets shall not be considered equal.

- C. Motor end bell shall be cast iron, designed as a terminal box and separated from the motor shell by a combination bearing support and inspection plate.
- D. The motor shall be housed within a heavy duty cast iron shell with cooling fins.
 - 1. Motor shall have Class 'F' insulation and permanently lubricated, double sealed ball bearings having a minimum life of 17,500 hours.
 - 2. Motors using sleeve type bearings shall not be considered equal.
- E. Motor shaft shall be 300 series stainless steel with keyway for positive positioning of impeller.
 - 1. Motors using carbon steel shafts or stainless stub shafts shall not be considered equal.
- F. Impeller shall be multi-vane design, constructed of bronze, accurately machined and dynamically balanced to the job site conditions.
 - 1. The impeller shall not require the use of wearing rings to insure proper operation and shall be capable of passing 2-1/4 inch minimum solids.
- G. A double mechanical seal system shall be furnished and housed in a machined cast iron seal chamber filled with clean dielectric oil, providing constant lubrication.
 - 1. Lower seal surfaces shall be of solid silicon carbide to provide longer life.
 - 2. Carbon ceramic, tungsten carbide or systems that allow the lower seal surfaces to come in contact with the pumped media, shall not be considered equal.
- H. Each pump shall be tested and a computer generated report will be kept in file and made available upon request.
 - 1. The reported test data shall consist of six duty points of various heads and capacities, one of which will be the design point and shall include actual efficiencies and horsepower requirements.
- I. Furnish remote packaged factory pre-wired duplex pump controller, Weil 8101E with the following:
 - 1. NEMA 4 double door dead front steel lockable enclosure.
 - 2. Magnetic starter with overload reset through inner door, each pump.
 - 3. Fused disconnect switch with handle through inner door, each pump.
 - 4. Automatic alternator separately fused.
 - 5. Overload reset buttons, each pump.
 - 6. Running lights, each pump.
 - 7. H-O-A switches, each pump.
 - 8. Control circuit transformer for 120V operation for each pump.
 - 9. Output connection for hi-water annunciation at Simplex.
 - 10. Alarm silencing switch.
 - 11. Alarm light with flasher.
 - 12. Numbered and wired terminal strip.
 - 13. Single point electrical connection.
 - 14. All wiring between control panel and pump provided under Division 22.

- J. Furnish and install diaphragm pressure activated micro switches complete with galvanized mounting rod and wall support bracket. The single-pole switch shall be normally open, closing on liquid rise. Switch shall have a 3 inch OFF activation range and an 8-1/2 inch ON activation range. The 16/3 switch cord shall have a breather tube for equalization to atmospheric pressure, be rated for 10 amps, and have three wires black/white/green. Switches used for high water alarm service will be of the same construction as the pump switches. Manufacturer: Weil #8220 Series or equal.
1. All wiring between control panel and float switches provided under Division 22.
- K. Provide reinforced fiberglass basin with steel anti-flotation ring.
1. Provide with matching gasketed steel top by pump manufacturer.
 2. Install basin and pour concrete all around to secure in place.
- L. Warranty:
1. The pump manufacturer shall warrant the pumps being supplied to the owner against defects in workmanship and materials for a period of five (5) years under normal use, operation and service.
 2. All repairs or replacement parts that may be needed after the initial sixteen months will be made and the cost (F.O.B. factory) pro rated for the period of time the pump has been in operation.
 3. The warranty shall be in published form and apply to all similar units.
- M. Removal System (Optional)
1. The pump removal system shall permit removal and re-installation of a pump without disturbing the discharge piping. Personnel shall not be required to enter the wet well. The pump shall be guided by two guide poles (by others). The guide poles shall be mounted on the floor elbow and a 304 stainless steel upper guide bracket. Pump sliding bracket will iron. The floor elbow shall be constructed of ASTM A48-83 class 30 close-grained cast iron. The pump sliding bracket shall act as a wedge type coupling between the pump and floor elbow. This insures a metal-to-metal, watertight fit. Systems that require gaskets, diaphragms, or o-rings to ensure a watertight fit shall not be considered equal.
- N. Manufacturer: Weil #2100/2200 Series, Weinmann, Grundfos, Enpo-Cornell, or equal.

2.06 SIMPLEX SUMP PUMP SYSTEM

- A. Provide where indicated on drawings, a Simplex submersible sump pump. Pump to have a 2" I.P.S. discharge, bronze fitted construction with submersible sealed motor, stainless steel shaft, bronze impeller, mechanical seal, and waterproof power cord. Pump to have 50 GPM flowrate minimum. Motors to be as scheduled. Pump shall have a fully submersible float switch for mounting on pump discharge pipe.
- B. Provide with differential mercury float switches for (1) on-off operation and (2) high water alarm.
- C. Provide check valve and shut-off valve on discharge side of pump.
- D. High water alarm: Local alarm with dry contacts for connection to BAS.
- E. Warranty: One year.

- F. Manufacturer: Meyers S-25, Weil, Federal, Liberty, Zoeller, Homa, or equal.

2.07 IN LINE WATER LUBRICATED CIRCULATING PUMPS (SECONDARY PUMPING AND BOOSTER APPLICATIONS)

- A. Furnish and install pumps with capacities as shown on plans. Pumps shall be in-line type for installation in vertical or horizontal piping. Pump must be capable of being serviced without disturbing piping connections.
- B. Pump body shall be of all bronze construction, rated 175 psi working pressure, with gauge ports at nozzles, and with vent and drain ports.
- C. Impeller shall be non-ferrous material, enclosed type, dynamically balanced, keyed to the shaft and secured by a locking capscrew or nut.
- D. The liquid cavity shall be sealed off at the motor shaft by an internally-flushed mechanical seal with ceramic seal seat, and carbon seal ring, suitable for continuous operation at 225° F. A non-ferrous shaft sleeve shall completely cover the wetted area under the seal.
- E. Motor shall meet NEMA specifications and shall be the size, voltage and enclosure called for on the plans. ECM are recommended.
- F. Each pump shall be factory tested. It shall then be thoroughly cleaned and painted with at least one coat of high-grade machinery enamel prior to shipment.
- G. Provide H-O-A switch with overload protection. Pump shall run continuously. Wiring between switch and pump provided under Division 22, as stated in Section 220500.
- H. Manufacturer: Xylem Bell and Gossett, TACO, Armstrong, Grundfos, or equal.

2.08 VERTICAL TURBINE PUMP

- A. General:
 - 1. This specification covers a lineshaft turbine pump with above ground discharge, the lineshaft bearings lubricated by the water being pumped and furnished with suitable driver and accessories as specified herein. The pumping unit shall be designed and furnished in accordance with the latest Hydraulic Institute and AWWA Standards for lineshaft turbine pump.
 - 2. Refer to drawings for project specific performance requirements.
- B. Pump Construction
 - 1. Bowl assembly: The bowls shall be flanged type constructed of close grained cast iron conform to ASTM A48, class 30. They shall be free from sand holes, blowholes, or other faults and must be accurately machined and fit- ted to close tolerances. They shall be capable of withstanding a hydrostatic pressure equal to twice the pressure at rated flow or 1.5 times shut-off head, whichever is greater. The intermediate bowls shall have enamel or epoxy lined waterways for maximum efficiency and wear protection. All intermediate bowls shall be of identical design for interchangeability. All the bowls shall be fitted with sleeve type bearings of bronze alloy C89835.

2. Impellers: The impellers shall be constructed from ASTM B584 Silicon Bronze. They shall be free from defects and must be accurately cast, machined and filed for optimum performance and minimum vibration. Impellers shall be balanced to grade G6.3 of ISO 1940 as minimum. They shall be securely fastened to the bowl shaft with taper locks of C1018 steel (or key and split thrust ring of SS).
3. Suction: The suction bowl or suction bell shall be provided with a non-soluble grease packed bronze bearing.
4. A bronze or 304 Stainless Steel sand collar shall be provided to protect this bearing from abrasives in the pumping fluids. The bearing housing shall have sufficient opening at the bottom for easy removal of the bearing. A cone or basket type strainer shall be provided. It shall have a net inlet area equal to at least three times the impeller inlet area. The maximum opening shall not be more than 75% of the maximum opening of the water passage through the bowl or impeller.
5. Shaft: The bowl shaft shall be constructed from ASTM 582 type 416 stainless steel. It shall be precision ground and polished with surface finish better than 40 RMS.

C. Column Assembly - Open Line Shaft

1. Column pipe: The column pipe shall be furnished in sections not exceeding a nominal length of 10 ft. and shall be connected by threaded-sleeve couplings (or flanges). Pump speeds between 2200 RPM and 3600 RPM shall have intermediate column length and bearing spacing no greater than 5 feet. The length of the top and bottom sections shall not be more than 5 ft. The pipes shall be of ASTM A53 grade B steel pipe and the weight shall be not less than Schedule 30. The end of the pipe shall be with 8 threads per inch with 3/16" taper per foot thread and faced parallel to butt against the centering spiders of ASTM B584 Silicon Bronze or 304 Stainless Steel to form accurate alignment. All column flange faces shall be parallel and machined for rabbet fit to permit accurate alignment. The inside diameter of the pipe shall be such that the head losses shall not be more than 5 feet per 100 feet of pipe or the flow velocity not to exceed 3 ft./sec based on rated flow of the pump.
2. Line shaft: The line shaft shall be of ASTM A582 type 416 stainless steel ground and polished with surface finish not to exceed 40 RMS. They shall be furnished in interchangeable section not over ten feet in length, and shall be coupled with threaded stainless steel couplings (up to 2-15/16" diameter) machined from solid steel bar. It shall have left-hand thread to tighten during pump operation. The diameter of the shaft and coupling shall be de- signed in according with AWWA E101 Standard.
3. Bearing: Bearing shall be fluted rubber retained in the centering spider by a shoulder on each end of the bearing.

D. Discharge Head Assembly

1. Discharge Head: It shall be of the high profile type to allow shaft coupled above stuffing box and provided for mounting the driver and support the column and bowl assemblies. It shall be of high-grade cast iron, ASTM A48
2. Class 30, or fabricated steel. The above ground outlet shall be flanged, ANSI class 125 (for cast iron) or class 150 (for steel). It shall have a 1/2" NPT connection for a pressure gauge.
3. Stuffing Box: The stuffing box shall be cast iron and shall contain a minimum of five rings of packing (or mechanical seal). It shall have a pressure relief connection. The packing gland shall be a 316 SS split type secured in place with non-corrosive studs and nuts. The bearing shall be C89835 bronze. A rubber slinger shall be secured to the shaft above the packing gland.

E. Electric Motor

1. The motor shall be a heavy duty squirrel cage induction type, NEMA Class B or Class F insulation with vertical hollow or solid shaft motor, with a non-reverse ratchet, or self-release coupling, to prevent reverse rotation of the rotating elements. A thrust bearing of ample capacity to carry the weight of all rotating parts plus the maximum hydraulic thrust load under all conditions of operation calculated L10 life shall be no less than 8800 hours. Provision shall be made for momentary upthrust equal to 30% of the rated down thrust. The motor shall be premium efficiency, 1.15 service factor, and suitable for use on available voltage at three phase, 60 Hz electric service.
2. When vertical hollow shaft motor is used, an adjusting nut shall be provided at the top of the motor for setting the impeller to bowl running clearance. When vertical solid shaft motor is used, an adjustable shaft coupling shall be provided at the discharge head for setting the impeller to bowl running clearance.

F. Manufacturers: Goulds, Taco, or equal.

2.09 WELL JET PUMP

- A. Furnish and install pumps with capacities as shown on plans. Pumps shall be close coupled, single stage, capable of being serviced without disturbing piping connections.
- B. Pump volute shall be cast iron, and impeller shall be Noryl, dynamically balanced.
- C. Pumps shall be rated for maximum of 50 psi working pressure. Casings shall have gauge ports, and vent and drain ports at top and bottom of casing.
- D. Motor shall meet NEMA specifications and shall be of the size, voltage and enclosure called for on the plans. It shall have heavy duty grease lubricated ball bearings, completely adequate for the maximum load for which the motor is designed. Provide premium efficiency motors in accordance with Section 220500.
- E. Each pump shall be factory tested. It shall then be thoroughly cleaned and painted with at least one coat of high grade machinery enamel prior to shipment.
- F. Each pump shall be checked by the contractor and regulated for proper differential pressure, voltage and amperage draw. This data shall be noted on a permanent tag or label and fastened to pump for owner's reference.
- G. Manufacturer: Pentair Berkeley #SN Series or equal.

2.10 EXPANSION TANKS

- A. Diaphragm Type Pre-pressurized:
 1. The pressurization system shall include a diaphragm-type expansion tank which will accommodate the expanded water of the system generated within the normal operating temperature range, limiting this pressure increase at all components in the system to the maximum allowable pressure at those components. It shall maintain minimum operating pressure necessary to eliminate all air. The only air in the system shall be the permanent sealed-in air cushion contained in the diaphragm-type tank. Bladder shall be heavy duty butyl, FDA approved.

2. The expansion tank shall be welded steel, constructed, tested and stamped in accordance with Section VIII of the ASME Code for a working pressure of 125 psi and pre-charged to the minimum operating pressure. Tank shall be epoxy lined.
3. Manufacturer: Wessels #FXA Series, Amtrol, or equal.

2.11 AIR ELIMINATION VALVE (AUTOMATIC)

- A. Air shall be eliminated to the atmosphere as fast as it is separated from system water, through a float activated remote pressure operated, air elimination valve installed at the top of the air separator.
- B. The air elimination valve shall have a high removal rate at low pressure differentials and shall be fully open for the removal of air at all pressures in the operating range from 2 to 150 psig. It shall be tightly sealed against loss of system water and prevent entrance of air in negative pressure situations.
- C. The air elimination valve shall be constructed of metal and all working parts shall be non-corrosive. Working pressure shall be 125 psi.
- D. Provide minimum 3/8" drain line from vent and route to nearest floor drain or floor sink or other approved drainage location.
- E. Manufacturer: Amtrol, Hoffman or equal.

2.12 ELECTRONICALLY COMMUTATED MOTOR (ECM)

- A. Provide pumps so they are specified or scheduled with ECM.
 1. Synchronous, constant torque, ECM with permanent magnet rotor. Rotor magnets to be time-stable, nontoxic ceramic magnets (Sr-Fe).
 2. Driven by a frequency converter with an integrated power factor correction filter. Conventional induction motors will not be acceptable.
 3. Each motor with an integrated variable-frequency drive, tested as one unit by manufacturer.
 4. Motor speed adjustable over full range from 0 rpm to maximum scheduled speed.
 5. Variable motor speed to be controlled by a 0 to 10 Vdc or 4 to 20 mA input.
 6. Integrated motor protection verified by UL to protect the pump against over-/undervoltage, overtemperature of motor and/or electronics, overcurrent, locked rotor, and dry run (no-load condition).

EXECUTION

3.01 INSTALLATION

- A. All equipment, unless otherwise shown or noted on the Drawings, is to be installed in accordance with industry standards and manufacturer's recommended installation instructions.
- B. Grouting Pump Base: For all base mounted flexibly coupled pumps fill the pump base frame with grout after completing pump/motor alignment.
- C. Provide vibration isolation, inertia bases, seismic snubber, flexible pipe connections, etc, as specified in related specification sections.

- D. For variable flow pumping applications, see Section 230902 Variable Frequency Drives for additional requirements.
- E. Contractor to assist testing and balancing contractor in verifying correct pump rotation and system operation.
- F. Flush and clean equipment, in accordance with manufacturer's start-up instructions, and in presence of manufacturer's representative. Test controls and demonstrate compliance with requirements. Replace damaged or malfunctioning controls.
- G. Isolation for Service: Provide pump installations with a discrete isolation valve on both the supply and intake side of the pump to permit service of the pump and any related strainer, check or balancing valves. Triple duty valves are not equivalent for this shut-off service.
- H. Balancing Coordination and Impeller Trimming: Coordinate final pump flow with test and balance contractor. For pumps larger than 5 horsepower, if the system tests and balance indicate that flow exceeds the specified flow by greater than 20%, it is not acceptable to reduce flow merely by adjusting balance valves to create additional head or reducing VFD peak flows. Excess system flow must be reduced by trimming the impeller to match the load.

3.02 MANUFACTURER'S START-UP SERVICES

- A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify pump systems mounting, verify piping installation, verify control wiring, verify power wiring, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four hours of travel from the jobsite.

SECTION 22 13 19

DRAINS

PART 1 GENERAL

1.01 REFERENCES

- A. American Society of Mechanical Engineers:
 - 1. ASME A112.21.1 - Floor Drains.
 - 2. ANSI A112.21.2 - Roof Drains.

PART 2 PRODUCTS

2.01 FLOOR DRAINS AND SINKS

- A. Interior Floor Drain: ASME A112.21.1; lacquered cast iron two-piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze strainer.
- B. Interior Floor Drain: ASME A112.21.1; lacquered cast iron two-piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable [round] [square] nickel-bronze strainer with removable perforated sediment bucket.
- C. Interior Floor Drain: ASME A112.21.1; lacquered cast iron two-piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze extra heavy duty strainer.
- D. Interior Floor Drain: ASME A112.21.1; lacquered cast iron two-piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze extra heavy duty strainer with hinged grate and sediment bucket.
- E. Exterior Surfaced Areas: [Round] [Square] cast nickel bronze access frame and non-skid cover.
- F. Exterior Unsurfaced Areas: Line type with lacquered cast iron body and round epoxy coated cover with gasket.
- G. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

2.02 FLOOR SINKS

- A. Lacquered cast iron body with dome strainer and seepage flange.
- B. [Round] [Square] lacquered cast iron body with integral seepage pan, epoxy coated interior, aluminum dome strainer, clamp collar, sediment bucket, epoxy coated, nickel bronze frame and [full] [half] grate.

Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

2.03 ROOF DRAINS

- A. Roof Drain: Assembly: ASME A112.21.2M, Body: [Lacquered] [Galvanized] cast iron with sump, Strainer: Removable cast iron dome with vandal proof screws, Accessories: Coordinate with roofing type:
1. Membrane flange and membrane clamp with integral gravel stop.
 2. Adjustable under deck clamp.
 3. Roof sump receiver.
 4. Waterproofing flange.
 5. Controlled flow weir.
 6. Leveling frame.
 7. Adjustable extension sleeve for roof insulation.
 8. Perforated or slotted ballast guard extension for inverted roof.
 9. Perforated stainless steel ballast guard extension.
- B. Overflow Drain: Assembly: ASME A112.21.2M, Body: [Lacquered] [Galvanized] cast iron with sump, Strainer: Removable cast iron dome with vandal proof screws, Accessories: Coordinate with roofing type:
1. Membrane flange and membrane clamp with integral gravel stop.
 2. Adjustable under deck clamp.
 3. Roof sump receiver.
 4. Waterproofing flange.
 5. Controlled flow weir.
 6. Leveling frame.
 7. Adjustable extension sleeve for roof insulation.
 8. Perforated or slotted ballast guard extension for inverted roof.
 9. Perforated stainless steel ballast guard extension.
 10. 2" water dam.
- C. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

2.04 CANOPY AND CORNICE DRAINS

- A. [Lacquered] [Galvanized] cast iron body with aluminum flashing clamp collar and [epoxy coated] [nickel bronze] flat strainer.
- B. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

2.05 DOWNSPOUT NOZZLES

- A. Product Description: [Cast] [Nickel] [Polished] bronze body and wall flange round with [straight] [offset] bottom section.
- B. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

3.06 AREA DRAINS

- A. Area Drain: ASME A112.21.1M; lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze strainer.
 - 1. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

- B. Area Drain:

- 1. Assembly: ASME A112.21.1M. Body: Lacquered cast iron with sump. Strainer: [Round] [Square] nickel-bronze.
 - 2. Accessories: Membrane flange and membrane clamp with integral gravel stop, with [adjustable under deck clamp] [roof sump receiver] [waterproofing flange] [leveling frame] [adjustable extension sleeve (for insulation)] [perforated or slotted ballast guard extension for inverted roof] [perforated stainless steel ballast guard extension].
 - 3. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

3.07 EXTERIOR PLANTER DRAINS

- A. ASME A112.21.1M; lacquered cast iron body with sump, Strainer: Removable cast iron dome with [stainless steel] [bronze] screen, Accessories: Membrane flange and membrane clamp with integral gravel stops.
 - 1. Acceptable Manufacturers: MIFAB, J. R. Smith or Zurn.

SECTION 22 15 00
COMPRESSED AIR EQUIPMENT

PART 1 GENERAL

1.01 REFERENCES

- A. ANSI/ASME B16.3 - Malleable Iron Threaded Fittings Class 150 NS 300.
- B. ANSI/ASME B16.5 - Pipe Flanges and Flanged Fittings.
- C. ANSI/ASME B16.9 - Factory-Made Wrought Steel Butt Welding Fittings.
- D. ASTM A53 - Pipe, Steel, Black and Hot-Dipped Zinc Coated, Welded and Seamless.
- E. ASTM A234 - Pipe Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and Elevated Temperatures.

PART 2 PRODUCTS

2.01 TYPE

- A. Provide simplex compressor unit consisting of single-stage, air-cooled motor-compressor, air receiver, filter regulator, rubber isolators, and operating controls.
- B. Acceptable Manufacturers: Ingersoll-Rand, Champion, Quincy, or Curtis.

2.02 COMPRESSOR CONSTRUCTION

- A. Construct compressor with cast iron housing and head, heat treated forged steel or ductile iron shaft, aluminum alloy connecting rods, aluminum pistons with non-lubricated carbon rings, and high-strength alloy suction and discharge valves. Statically and dynamically balance rotating parts.
- B. Provide oil pressure switch to shut down compressor.
- C. Provide automatic capacity reduction equipment consisting of suction valve unloaders, and lifting mechanism operated by oil pressure gas discharge pressure solenoid valve centrifugal force. Provide for unloaded compressor start.
- D. Mount motor and compressor on one-piece ribbed cast iron or welded steel base with provision for V-belt adjustment.
- E. Provide thermostatically controlled water valve on compressor to maintain water temperature through compressor at 98°F to 109°F.

- F. The compressor modules and motors shall be fully isolated from the main compressor base by means of a four-point; heavy-duty seismic-restrained California-approved isolation system for a minimum of 95% isolation efficiency. Engineering data shall be provided supporting isolation efficiency and equal weight distribution between supports. Pumps not having this feature shall have an inertia base sized for that system installed at this contractor's expense.

2.03 AIR RECEIVER

- A. Provide [_____] gallon [vertical] [horizontal] receiver, ASME stamped [125] [175] [250] [_____] psi working pressure. Receivers shall meet requirements of ASME Code for Unfired Pressure Vessels and bear ASME approval stamp. Flanged or screwed inlet and outlet connections.
- B. Fittings: Adjustable pressure regulator, safety valve, pressure gauge, drain cock, and automatic drain trap.
- C. Tank Finish: [Shop primed] [Hot-dipped galvanized] [Shop vinyl].

2.04 FILTER REGULATOR

- A. Push-pull, non-rising knob allows one-hand adjustment.
- B. Balanced valve-type diaphragm regulation ensures positive pressure adjustment.
- C. Regulator offers in-line repairability. Valve and diaphragm can be replaced without removing unit from line.
- D. Automatic drain.
- E. 10 psig minimum operating pressure.

2.05 CONTROLS

- A. Adjustable pressure switch set to cut out at 100 psi with minimum differential of 20 psi.

2.06 PIPING

- A. Design Pressure: 125 psi.
Maximum Design Temperature: 350°F
- B. Piping - 2" and Under:
 - 1. Pipe: Standard weight galvanized steel, threaded and coupled, ASTM A53.
 - 2. Joints: Screwed. (For below ground, all sizes to have welded joints, primed and painted.)
 - 3. Fittings: 150# steam 300# CWP, galvanized malleable iron, banded, ASTM A197, ANSI B16.3.
 - 4. Unions: 250# steam - 500# CWP, galvanized malleable iron, ANSI B16.39, ground joint with brass seat.
- C. Piping - 2-1/2" and Over:
 - 1. Pipe: Standard weight galvanized steel, beveled ends, ASTM A53.
 - 2. Joints: Butt welded and flanged. (All welded joints shall be ground, primed, and painted.)

3. Fittings: Standard weight seamless galvanized steel, butt weld type, ASTM A234, Grade WPB, ANSI B16.9.
4. Flanges: 150# forged steel, weld neck or slip-on, ASTM A181, Grade I, ANSI B16.5.

D. Shutoff Valves:

1. Ball Valves:

- a. 3" and under, 150 psi saturated steam, 600 psi CWP, full port, screwed or solder ends (acceptable only if rated for soldering in line with 470°F melting point of lead-free solder), bronze body of a copper alloy containing less than 15% zinc, stainless steel ball and trim, Teflon seats and seals. Acceptable Manufacturers: Apollo, Stockham, Milwaukee, Watts, Nibco, National Utilities Co., RUB.

NOTES:

- 1) Provide extended shaft for all valves in insulated piping.
- 2) Provide lock out trim for all valves opening to atmosphere installed in domestic water piping over 120°F, heating water piping over 120°F, steam, condensate, boiler feed water piping, compressed air piping and gasoline/kerosene piping, and as indicated on the drawings. Solid extended shaft is not required on valves with lock out trim.

- b. 2-1/2" and 3", 150 psi saturated steam, 275 psi CWP ANSI Class, 150 psi standard port, carbon steel body stainless steel ball and trim, Teflon seats and seals. Acceptable Manufactures: Apollo, Stockham, Nibco, Milwaukee.

NOTES:

- 1) Provide extended shaft for all valves in insulated piping.
- 2) Provide lock out trim for all valves opening to atmosphere installed in domestic water piping over 120°F, heating water piping over 120°F, steam, condensate, boiler feed water piping, compressed air piping and gasoline/kerosene piping, and as indicated on the drawings. Solid extended shaft is not required on valves with lock out trim.

2. Plug Valves:

- a. 2" and under, 125# steam @ 450°F, 175# CWP @ 180°F, cast iron body, screwed, full port. Acceptable Manufactures: Walworth, DeZurik.
- b. 2-1/2" thru 4", 125# steam @ 450°F, 175# CWP @ 180°F, flanged, cast iron body, full port. Acceptable Manufactures: Walworth, DeZurik.
- c. 6" and larger, 125# steam @ 450°F, 175# CWP, cast iron body, flanged, resilient faced plug, gear and handwheel operator, full port. Acceptable Manufactures: Walworth, DeZurik.

E. Throttling Valves:

1. Globe Valves:

- a. 2" and under, 150# saturated steam, 300# CWP, screwed, bronze. Acceptable Manufactures: Crane, Stockham, Walworth, Milwaukee, Hammond, Watts, Nibco.
- b. 2-1/2" thru 10", 125# steam @ 450°F, 200# CWP @ 150°F, flanged, iron body, bronze mounted. Acceptable Manufactures: Crane, Hammond, Stockham, Walworth, Milwaukee, Watts, Nibco.

F. Check Valves:

1. 2" and under, 250# CWP, screwed, all iron, horizontal swing. Crane #346-1/2.
2. 2-1/2" thru 12", 125# steam @ 450°F, 200# CWP @ 150°F, flanged, all iron, horizontal swing. Acceptable Manufactures: Crane, Hammond, Stockham, Walworth, Milwaukee, Watts, Nibco.
3. 2" and larger, 125# CWP, flanged, iron body, cast iron or carbon steel body with stainless steel internals. Acceptable Manufactures: Hoerbiger Design "CT". NOTE: Use only for compressor discharge.

G. Strainers:

1. Cast iron body, 125 lb. flanged ends, bolted cover, 125 psi S @ 350°F, 175 psi CWP @ 150°F. Acceptable Manufactures: Armstrong, Metraflex, Mueller Steam Specialty Co, Sarco, Watts.
2. Cast iron body, screwed ends, screwed cover, 250# steam @ 406°F, 300# CWP @ 150°F. Acceptable Manufactures: Armstrong, Metraflex, Mueller Steam Specialty Co., Sarco.

2.07 COMPRESSED AIR FILTERS

- A. Filters shall have a stainless steel sleeve, micro-glass media with epoxy coating, elastomeric filter to housing seal and sealed end caps.
- B. Filters shall be capable of removing the following:
 1. All solids 3 microns and larger.
 2. Liquids up to 25,000 ppm by weight.
 3. 99% of water droplets.
 4. 40% of oil aerosols.
- C. Provide a differential pressure alarm for each filter. Range shall be adjustable from 10 to 35 psi differential at 100 psig.
- D. Acceptable Manufacturer: Hankison.

2.08 COMPRESSED AIR CONDENSATE TRAPS

- A. Furnish and install traps of the type and capacity shown on the drawings.
- B. Traps shall be mechanically actuated with stainless steel construction, and 10-300 psig working pressure.
- C. Acceptable Manufacturer: Hankison.

END OF SECTION

SECTION 22 30 00
PLUMBING EQUIPMENT

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 220500 - Basic Plumbing Materials and Methods, and other Sections in Division 22 specified herein.

1.02 SCOPE

- A. All work to be furnished and installed under this section shall include but not necessarily be limited to the following:
 - 1. Electronic Water Softener
 - 2. Oil Interceptor
 - 3. Solids Interceptor
 - 4. Dilution Tank
 - 5. Grease Interceptor
 - 6. Lint Trap
 - 7. Drop inlets
 - 8. Curb inlets

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 220500: Basic Plumbing Materials and Methods
- B. Section 221123: Pumps and Specialties
- C. Section 223400: Domestic Hot Water Heating Equipment
- D. Section 224000: Plumbing Fixtures

1.04 SUBMITTALS

- A. Prior to construction submit for approval all materials and equipment in accordance with Division 01. Submit manufacturer's data, colors, installation instructions, and maintenance and operating instructions for all components of this section including, but not limited to, the following:
 - 1. Oil Interceptor
 - 2. Solids Interceptor
 - 3. Dilution Tank
 - 4. Grease Interceptor
 - 5. Lint Trap

6. Water meters
 7. Drop inlets
 8. Curb inlets
- B. Electrical Work: Refer to Division 22, Section 220500 for requirements and coordinate with Division 26.
 - C. Product Data: Include performance data, operating characteristics, furnished specialties and accessories.
 - D. Shop Drawings: Submit rough-in drawings. Detail dimensions, rough-in requirements, required clearances, elevations, sections, and methods of assembly of components and anchorages.
 - E. Wiring Diagrams: Submit manufacturer's electrical requirements for electrical power supply wiring. Submit manufacturer's ladder-type wiring diagrams for interlock and control wiring required for final installation. Differentiate between portions of wiring that are factory installed and portions that are to be field installed.
 - F. Operation and Maintenance Data: Submit maintenance data and parts lists for each type and size of water heater, control, and accessory, including "trouble-shooting" maintenance guide. Include this data, product data, shop drawings, and wiring diagrams in maintenance manual, in accordance with requirements of Division 01. Submit operational manuals.
 - G. Certificates: Submit appropriate Certificates of Shop Inspection and Data Report as required by provisions of ASME Boiler and Pressure Vessel Code.
 - H. Start-up: Provide written report on start-up in accordance with Section 220500.
- 1.05 DELIVERY, STORAGE, AND HANDLING
- A. Deliver units to the site in containers with manufacturer's stamp or label affixed.
 - B. Store and protect products against dirt, water, chemical, and mechanical damage. Do not install damaged products - remove from project site.
- 1.06 COORDINATION
- A. Coordinate size and location of concrete bases and attachments with structural design. Coordinate with Divisions 03 for specification of concrete, reinforcement and formwork requirements.
 - B. Coordinate the elevation and inverts of inlets and outlets of fixtures, elevation of building floor levels and elevation of upstream manhole covers as required by the Plumbing Code. Provide backwater valve in the building drain line or horizontal branch as required to protect fixtures where fixtures are located below the upstream manhole cover.
- 1.07 WARRANTY
- A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.
 - B. Refer to Division 1 for additional warranty and Substantial Completion requirements. Division 1 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

PART 2 PRODUCTS

2.01 ELECTRONIC WATER SOFTENER

- A. Provide electronic water treatment system to the following applications:
1. Incoming cold water line to the building and downstream of pumps.
 2. Incoming cold water line to the water heater system building and downstream of pumps.
 3. Entering water line to storage tanks and downstream of pumps.
 4. Discharge side of heat exchangers and downstream of pumps.
 5. Irrigation supply downstream of pumps.
- B. Provide and install in water distribution system(s) to reduce calcium hardness. System will not require the use of any chemicals or salts. Incoming water must have iron content of 10 ppb or greater to operate correctly to create nucleation seeds. Other means of water softening will be required where iron content is below 10 ppb.
- C. System shall include the following components:
1. Controller sized to treat water line sizes from 1" to 6". Controller shall be capable of interfacing with Building Automation System to provide remote monitoring of system operation and/or alarm. Controller transmits electrical pulses (1 kHz to 10 kHz) into the water in varying frequencies and amplitudes. These radio signals travel in both directions in the water piping and cause some of the minerals in the water to form sub-microscopic clusters which are carried in the water flow and not deposited on the walls in the piping system and equipment.
 2. Antenna propagation wiring shall be wrapped around piping as required by manufacturer. Wiring is wrapped around any pipe material and causes no reduction in water pressure. Pipe insulation can be installed over the wiring with no noticeable thickness or diameter increase in the pipe.
 3. 120 volt transformer with integral wiring to the controller. Maximum load of 0.1 amps. Power consumption to range from one (1) watt on smallest systems to three (3) watts continuous for largest systems. Provide dedicated receptacle and coordinate with electrical design.
 4. Refer to manufacturer for additional requirements and applications.
- D. Manufacturer: Aqua-Rex (www.aqua-rex.com) Series #WK1 through WK5, or approved equal.

2.02 GREASE INTERCEPTOR

- A. Grease traps to be constructed of duco coated steel. Provide with removal baffles and flow control.
- B. Provide with extensions for flush with floor installation and vent.
- C. Manufacturer: JR. Smith 8050, Zurn, or Wade.

2.03 GREASE INTERCEPTOR

- A. Grease interceptor to be constructed of concrete with two or three 24", minimum, clear access manholes with traffic weight frame and covers as required by local jurisdiction.

- B. Interceptor to be IAPMO listed and have a minimum of 2 components. See schedule for capacity.
- C. Features: HS-20 traffic rating, 6000 psi compressive strength, ceramic base coating for protection against low pH and microbial induced corrosion, unrestricted flow path.
- D. Provide sampling vault downstream of interceptor. Manufacturer: Oldcastle Precast #233-BL with cover.
- E. Manufacturer: Oldcastle Precast, or Jensen Precast.

2.04 GREASE INTERCEPTOR

- A. Grease separator shall be constructed of reinforced concrete according to the design, and with pre-fabricated internal parts and covers and as shown on the drawings.
- B. Separator: Furnish, construct, and install, as shown on plans, 1 Rockford Model GSC-20 reinforced concrete separator. Thickness of top and bottom shall be 12", and sides shall be of 8" reinforced concrete, with #4 reinforcing rods, 12" o.c. both ways, 6" hubbed inlet and outlet with outlet vent connection, and internal rear vent connection. Separator screen assembly shall be of 1/4" steel plate construction with removable filter screen and the necessary separator screen support frames. Initial shock plate shall be 1/4" steel plate.
- C. Inside dimensions of separator shall be 18'-0" long, 3'-6" wide, and 8'-0" deep, with 4 covers; 3/8" nonskid, diamond pattern, double section tread plate covers, fastened to cover support frames with recessed stainless steel bolts and suitable for pedestrian or light vehicular traffic.
- D. All supporting frames for separator screen assembly shall be anchored to inside walls of separator by means of 1/2" x 3" concrete anchor bolts. All internal support frames, shock plate, and separator screen assemblies shall be installed before top of separator is poured. All prefabricated assemblies shall have an acid resistant vinyl copolymer coating. An additional supply of protective coating shall be furnished to the contractor to be applied after installation of parts.
- E. Cover support frames shall be placed in proper position, and top of separator shall be poured around them. Inside and outside of concrete separator shall receive suitable waterproofing by contractor, and supplied by this manufacturer.
- F. Manufacturer: Rockford Sanitary Systems, Jensen Precast, or Oldcastle Precast.

2.05 GREASE INTERCEPTOR

- A. Molded high density polyethylene with minimum 3/8" uniform wall thickness. Interceptor shall be furnished for above or below grade installation, with field adjustable riser system, built-in flow control, built in test caps and three outlet directions. Cover shall provide water/gas tight seal with minimum 2,000 lbs. load capacity.
- B. Interceptor shall be built in accordance to ASME A112.14.3 (type C) and CSA B481.1,
- C. Manufacturer: Schier Great Basin Series.

2.06 GREASE INTERCEPTOR

- A. Molded high density polyethylene with minimum 3/4" uniform wall thickness. Interceptor shall be furnished for below grade installation, with field adjustable riser system. Cover shall provide water/gas tight seal and have minimum 16,000 lbs. load capacity.
- B. Sampling Port: Molded high density polyethylene with minimum 3/8" uniform wall thickness. Port shall be built in accordance with the Water Environment Federation's "Standard methods for Examination of Water and Wastewater" with sealed top access port and highway rated composite cover and TeleGlide™ field adjustable riser as required when buried.
- C. Flow Distributor: Flow splitter flow distributor, made of seamless, molded high density polyethylene with minimum 3/8" uniform wall thickness with sealed top access port and highway rated composite cover and field adjustable riser as required when buried.
- D. Manufacturer: Schier Big Foot Series.

2.07 LINT TRAP

- A. Lint separator as shown on drawings. Furnish and install all-welded steel separator with extension up to finished floor, hubbed, inlet and outlet with vent connection, internal vent connection, visible double wall outside trap seal, anchor flange without clamping ring, epoxy coating, anodes, sediment basket, reinforced cover for light traffic, secured with stainless steel bolts, heavy duty leak proof gasket, enamel coating inside, and bituminous coating outside.
- B. Manufacturer: Rockford #RLS Series.

2.08 OIL INTERCEPTOR

- A. Construction: Cast iron interceptor with acid resisting rubber base coating inside and out, double wall trap with cleanout, 2" vent connection, removable baffle, flow control fitting, gasketed cover, 3" inlet and 3" outlet. Provide with extension for flush mounting.
- B. Manufacturer: J.R. Smith 8550, or Zurn.

2.09 SOLIDS INTERCEPTOR

- A. Interceptor: 30 gpm, 3" outlet, 21" x 21" x 27" deep, 10 gauge steel with non-skid bolted top; coat interceptor exterior twice with Bitumastic.
- B. Manufacturer: Rockford #GFE.

2.10 DILUTION TANK

- A. Tank: 17" diameter x 31 1/2" high, high density polyethylene neutralization tank.
- B. Extension: 17" diameter high density polyethylene extension.
- C. Top Door: Circular loose lid bolt on and flange on 1" above finished floor.
- D. Provide 4" concrete pad under dilution tank.

2.11 CURB INLET

- A. Curb inlets shall be of the precast concrete type, as manufactured by Santa Rosa Cast Products or approved equal. The structure shall consist of a precast unit with three exterior walls, monolithically poured with a top slab. An opening shall be provided in the top slab for maintenance access and shall be 24-inch diameter minimum. The inlet side of the unit shall be provided with an integrally cast galvanized structural steel nosing. The access opening shall be trimmed with galvanized steel frame, cast integrally with the structure. A circular cover of reinforced concrete, trimmed with galvanized steel ring cast integrally with the cover, shall be constructed to fit the access opening. All steel nosings and frames shall be hot dipped galvanized after fabrication to requirements of ASTM specifications A123.

2.12 DROP INLET

- A. Drop inlets shall be of the precast concrete type as manufactured by Santa Rosa Cast Products Company, Santa Rosa, California, or approved equal. Concrete shall contain no less than 6 sacks of Type 2 cement per cubic yard and shall have a minimum compressive strength of 3,000 psi at 28 days. Wall thickness and reinforcing mesh shall be in accordance with the manufacturer's recommendations. All structures and grates in traffic areas shall be designed to withstand H-20 loading. Structural design of concrete reinforcement and grates shall be performed and approved by licensed civil engineer and shall take into consideration the intended loading and use. The precast units shall be constructed to conform to the design dimensions for each specific job, and shall be provided with pipe openings as per job requirements. Deflected pipe openings may be chipped by manufacturer in green concrete.
- B. Drop inlets exceeding four feet in depth may be poured in two or more units, and shall be provided with inter-locking keyed joints which shall be grouted with 1:4 mortar during installation. Two-inch diameter lifting holes shall be provided to facilitate job handling. Grates and frames shall be constructed of structural steel. Steel grates and frames shall be hot dipped galvanized after fabrication to requirements of ASTM specifications A123. All frames shall be integrally cast. The top surface of the drop inlet shall be finished smooth, shall be square and clean. Wall surfaces shall be formed, shall be flat and true to dimension.

PART 3 EXECUTION

3.01 GENERAL

- A. Examine areas and conditions under which equipment is to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.
- B. Install equipment in accordance with manufacturer's installation instructions. Install units plumb and level, firmly anchored in locations indicated, and maintain manufacturer's recommended clearances.
- C. Orient so controls and devices needing service and maintenance have adequate access.
- D. Connect water piping to units with shutoff valves and unions as required for maintenance and system isolation.
- E. Start-Up: Start-up, test, and adjust equipment in accordance with manufacturer's start-up instructions. Check and calibrate controls. Start-up to be by authorized manufacturer's representative or agent.

3.02 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections
1. Installation and Startup Test: Perform installation and startup checks according to manufacturer's written instructions.
 2. Leak Test: Repair leaks and retest until no leaks exist.
 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion, if necessary.
 4. Controls and Safeties: Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature.
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Occupancy Adjustments: When requested within 2 months of date of Substantial Completion, provide on-site assistance adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other than normal occupancy hours for this purpose.
- 3.03 OPERATION MANUALS, START-UP SERVICE, WARRANTIES, ACCEPTANCE AND GUARANTEES
- A. General: Refer to Section 220500 for requirements.

1.02 REGULATORY REQUIREMENTS

- A. Water heaters shall conform to AGA, ANSI/NFPA 54, ANSI/NFPA 70, ANSI/UL 1453 as applicable.
- B. Conform to ANSI/ASME Section 8 Division 1 for fabrication of steel pressure vessels.
- C. Conform to ANSI/ASME Section 10 for manufacture of fiber-reinforced plastic pressure vessels.

PART 2 PRODUCTS

2.01 GENERAL

- A. Type: Factory-assembled and wired, electric, vertical storage.
- B. Tank: Glass lined welded steel; 4 inch diameter inspection port, thermally insulated with minimum 2 inches glass fiber encased in corrosion-resistant steel jacket; baked-on enamel finish.
- C. Controls: Automatic immersion water thermostat; externally adjustable temperature range from 60 to 180 degrees F, flanged or screw-in nichrome elements, high temperature limit thermostat.
- D. Accessories: Brass water connections and dip tube, drain valve, magnesium anode, and ASME rated temperature and pressure relief valve.
- E. Heating Elements: Flange-mounted immersion elements; individual elements sheathed with Incoloy corrosion-resistant metal alloy, rated less than 75 Watts per square inch.
 - 1. Acceptable Manufacturers: Lochinvar, A.O. Smith, Bradford White, or Rheem.

2.02 WATER HEATER-ELECTRIC TANK TYPE

- A. Tank type electrical water heater with integral heating elements and insulated tank. Refer to drawings for locations, capacities, flow rates, power requirements and models.
- B. All internal surfaces of the tank shall be glass-lined with an alkaline borosilicate composition that has been fused-to-steel. Tank shall be cathodically protected with adequate extruded magnesium anode. The entire vessel is to be enclosed in a round steel enclosure with baked enamel finish. Tank shall have a 150 psig working pressure. Foam insulated (R-16 minimum) tank to meet or exceed US DOE, ASHRAE/IESNA 90.1 and local energy code requirements.
- C. Electric heating elements shall be medium watt density with zinc plated copper sheath. Each element shall be controlled by an individually mounted thermostat and high temperature cutoff switch. Factory wired for non-simultaneous operation. Set initial water heater temperature to 140°F (minimum).
- D. Heater shall include ASME pressure and temperature relief valve.
- E. Manufacturers: A.O. Smith, Bradford-White, Smith, American, Lochinvar, or Rheem.

2.03 WATER HEATER-ELECTRIC TANKLESS POINT-OF-USE TYPE

- A. Tankless point-of-use electric hot water heater for mounting adjacent to plumbing fixture(s). Flow rate features of water heater shall match the requirements for the connected lavatory faucets to provide a complete and workable system to all connected lavatories. Refer to drawings for locations, capacities, flow rates, power requirements and models.
- B. Features:
1. Enameled steel or aluminum housing.
 2. Copper and nickel chrome coils, insulated.
 3. Replaceable elements.
 4. Inlet water filter, replaceable.
 5. Maximum operating pressure: 150 psig.
 6. Single point power connection.
 7. Thermostatic control with adjustable temperature setpoint. Set initial water heater temperature to 110°F.
 8. High temperature limit switch, no pressure and temperature relief valve needed.
 9. Wall enclosure box for concealed installation in wall below sink(s). Provide all access doors and panels to enclose water heater in finished architectural surfaces. Frame of 16-gauge steel, door of 20-gauge steel, 1" flange width, continuous piano hinge, key or screw drive operated, prime coated. Manufacturer: Elmdoor/Stoneman #VB Series.
- C. For applications serving hot water to public-use lavatories:
1. Provide external or internal temperature mixing valve compliant with ASSE 1070 or CSA B125.3.
- D. Manufacturer: Chronomite #C-Micro Mix, Eemax, Bradford-White, In-Sink-Erator, or Hubbell.
- 2.04 WATER HEATER-ELECTRIC TANKLESS POINT-OF-USE TYPE FOR EMERGENCY SHOWER WITH EYE/FACE WASH
- A. Tankless point-of-use electric hot water heater for mounting adjacent to emergency shower with eye/face wash. Flow rate features of water heater shall match the requirements of the connected shower and/or eye/face wash. Refer to drawings for locations, capacities, flow rates, power requirements and models.
- B. Features:
1. Stainless steel or aluminum housing.
 2. Copper and nickel chrome coils, insulated.
 3. Replaceable elements.
 4. Maximum operating pressure: 150 psig.
 5. Single point power connection.
 6. Voltage/Phase: 480 V/3 ph
 7. Amperage: 139 amps (155 kW) minimum for 39°F rise at 20 gpm. Increase as necessary for entering domestic water temperatures below 50°F.
 8. Thermostatic control with adjustable temperature setpoint. Set initial water heater temperature to 84°F.
 9. High temperature limit switch, no pressure and temperature relief valve needed.

10. Provide temperature mixing valve compliant with ANSI Z358.1.

C. Manufacturer: Chronomite #ERB Series, or Eemax #Safeadvantage Series.

2.05 WATER HEATER-ELECTRIC AIR-TO-WATER HEAT PUMP TYPE

A. Electric air to water heat pump to be connected to external storage tank (specified separately). The heat pump removes heat and humidity from surrounding air and uses this to heat water. The refrigeration system produces cool, dehumidified air for local supplemental spot cooling. Refer to drawings for locations, capacities, flow rates, efficiency, power requirements and models. The heat pump water heater shall be packaged air source equipment, factory assembled, charged, and tested. The heat pump shall be suitable for heating potable water and have the capability of producing no less than 160°F (71°C) water, initially set to 140°F (60°C).

B. Heat Pump unit shall consist of compressor, condenser, evaporator coil, fan, hot water circulating pump, piping, and controls, factory assembled, charged, and tested. The heat pump shall contain the following components, and features:

- a. Cabinet: Shall use formed aluminum, or 304 or 316 Stainless Steel panels. Supports, channels and beams shall also be constructed of like material. Compartments shall have large access doors for servicing. Compressor and condenser shall be located in separate compartment from fan and evaporator for in operation servicing. Base section under evaporator coil shall have stainless steel drip pan for condensate. Cabinet shall be designed for outdoor operation. Cabinet shall be insulated to prevent condensation from forming on exterior surfaces. MERV-8, 2" thick air filters when distributing air to occupied areas. Supply and return air duct connections for using air in alternate locations.
- b. Fan: The fan arrangement shall be draw-through design. Fan shall be centrifugal, direct driven at no more than 1075 RPM. Blower scroll construction shall be 304 stainless steel with stainless steel fasteners. Blower wheel construction shall be galvanized steel or aluminum. Motor shall be foot mounted to blower scroll with stainless steel mount and fasteners, and vibration isolating rubber grommets.
- c. Evaporator Coil: Shall be constructed with aluminum waffle plate fins mechanically bonded to seamless copper tubing. All copper tube joints to be brazed with silver solder. Coils shall have aluminum coil casings and drain pan.
- d. Expansion Valve: Valves shall be specifically designed for heat pump use with field adjustable superheat feature. Expansion valve shall have MOP (Maximum Operating Pressure) type power element to effectively limit saturated suction temperature to 65°F (18°C).
- e. Compressor: Hermetic scroll type suitable for high temperature operation.
 - 1) Compressor controls/accessories must include the following:
 - (a) High and Low Refrigerant Pressure Safety Switches
 - (b) Indicator Lights for:
 - (1) Power On
 - (2) Hot Water Demand
 - (3) High Pressure Fail
 - (4) Low Pressure Fail
- f. Condenser: Stainless steel brazed plate vented double wall type. Single wall condenser construction shall not be allowed. UL Listed and suitable for high temperature operation with potable water.

- g. Refrigerant Accessories:
 - 1) Filter-Driers: Non-Replaceable Core type.
 - 2) Site Glass: Moisture indicating type.
- h. Anti-Short Cycle Control: Units shall be factory wired to allow a maximum of twelve compressor starts per hour to prevent compressor short cycling and allow time for suction and discharge pressures to equalize permitting the compressor to start in an unloaded condition.
- i. Water Circulating Pumps: Shall be in-line all bronze or stainless steel body centrifugal type able to deliver rated flow against the external head shown on the drawings.
- j. Controls: The heat pump unit shall be factory wired for fully automatic operation. Safeties shall include compressor and fan motor thermal overload protection, manual reset pressure stats, anti-cycling compressor relays, plus standard items recommended by the equipment manufacturer. Constant Leaving Water Temperature Control: Heat pump shall be factory equipped with electronic temperature control valve (e-TCV) which automatically maintains constant leaving water temperature (regardless of entering water temperature). Leaving water temperature is set by the heat pump operator/user via a field adjustable electronic temperature controller.

C. Manufacturer: Colmac Industries #HPA Series.

2.06 WATER HEATER-HYBRID ELECTRIC AIR-TO-WATER HEAT PUMP WITH ELECTRIC BACKUP AND INTEGRAL STORAGE

- A. Electric air to water heat pump with integral storage tank. The heat pump removes heat and humidity from surrounding air and uses this to heat water. The refrigeration system produces cool, dehumidified air for local supplemental spot cooling. Refer to drawings for locations, capacities, flow rates, efficiency, power requirements and models. The heat pump water heater shall be packaged air source equipment, factory assembled, charged, and tested. The heat pump shall be suitable for heating potable water and have the capability of producing no less than 140°F (60°C).
 - 1. Backup heat: Electric resistance
 - 2. Controls: Water heater shall be capable of operating in Efficiency, Hybrid or Electric only modes

B. Manufacturers: AO Smith, or Rheem

2.07 WATER HEATER-ELECTRIC WATER-TO-WATER HEAT PUMP TYPE

- A. The heat pump water heater shall be a packaged water source equipment, factory assembled and charged. The heat pump shall be suitable for heating potable water and have the capability of producing no less than 160°F (71°C) water, initially set to 140°F (60°C). Refer to drawings for locations, capacities, flow rates, efficiency, power requirements and models.
- B. Heat Pump unit shall consist of compressor, condenser, evaporator, hot water circulating pump, piping, and controls, factory piped and charged. The heat pump shall contain the following components, and features:
 - 1. Cabinet: Shall use formed aluminum, or 304 or 316 Stainless Steel panels. Supports, channels and beams shall also be constructed of like material. Compartments shall have large access doors for servicing. Cabinet shall be designed for outdoor operation.
 - 2. Evaporator: Shall be single-wall brazed plate type constructed with stainless steel plates.

3. Expansion Valve: Valves shall be specifically designed for heat pump use with field adjustable superheat feature. Expansion valve shall have MOP (Maximum Operating Pressure) type power element to effectively limit saturated suction temperature to 65°F (18°C).
 4. Compressor: Hermetic scroll type suitable for high temperature operation
 5. Compressor Controls: Compressor controls/accessories must include the following:
 - a. High and Low Refrigerant Pressure Safety Switches
 - b. Indicator Lights for:
 - 1) Power On
 - 2) Hot Water Demand
 - 3) High Pressure Fail
 - 4) Low Pressure Fail
 6. Condenser: Stainless steel brazed plate vented double wall type. Single wall condenser construction shall not be allowed. UL Listed and suitable for high temperature operation with potable water.
 7. Refrigerant Accessories:
 - a. Filter-driers: Non-Replaceable Core Type
 - b. Sight Glass: Moisture Indicating Type
 8. Anti-Short Cycle Control: Units shall be factory wired to allow a maximum of twelve compressor starts per hour to prevent compressor short cycling and allow time for suction and discharge pressures to equalize permitting the compressor to start in an unloaded condition.
 9. Hot Water Circulating Pumps: Shall be factory installed in-line all bronze or stainless steel body centrifugal type able to deliver rated flow against the external head shown on the drawings.
 10. Source Water Circulating Pumps: Provided by others. Refer to drawings pump(s) and flow capacity. Coordinate with heat pump manufacturer for pressure and flow requirements.
 11. Controls: The heat pump unit shall be factory wired for fully automatic operation. Safeties shall include compressor motor thermal overload protection, manual reset pressure stats, anti-cycling compressor relays, plus standard items recommended by the equipment manufacturer.
 12. Constant Leaving Water Temperature Control. Heat pump shall be factory equipped with electronic temperature control valve (e-TCV) which automatically maintains constant leaving water temperature regardless of entering water temperature. Leaving water temperature is set by the heat pump operator/user via a field adjustable electronic temperature controller.
- C. Manufacturer: A.O.Smith E-Tech #WW Series, or Colmac Industries #HPW Series.

2.08 DOMESTIC WATER EXPANSION TANK

- A. Precharged welded steel tank with air charging valve and removable heavy duty butyl/ EPDM diaphragm or bladder separating water and air with a working pressure of 150 psig. All internal parts shall comply with FDA regulations and approvals. The tank shall have NPT stainless steel connection, gauge glass openings and drain and be constructed in accordance with Section VIII of the ASME Boiler and Pressure Vessel Code. For model number see schedule on the drawings. Acceptable Manufacturers: Amtrol.

3.04 AQUASTATS

- A. Provide immersed type adjustable volatile liquid mercury tube switch similar to Mercoide Type DA-37-2 Range 5 (1 pole single), similar to Mercoide Type DA-37-127 Range 5 (2 pole duplex). Set in oversized tee and nipple in hot water return line for automatically controlling hot water circulators and hot water circulating pumps. Acceptable Manufacturers: Honeywell.

3.05 TIME SWITCH

- A. Provide an adjustable heavy duty self-starting synchronous motor clock (120 volt) in NEMA-1 enclosure for automatically controlling hot water circulators.
- B. Clock shall have seven-day calendar dial. Acceptable Manufacturers: Tork.

3.06 IN-LINE CIRCULATION PUMPS

- A. All bronze construction body, stainless steel face plate, 30% glass filled Noryl impeller, carbon steel shaft, stainless steel shaft sleeve, mechanical, carbon on silicon carbide seal, sealed precision steel ball bearing permanently lubricated motor bearings, maximum operating pressure of 150 psi; 1/12 HP, 115 volts, 2650 rpm, non-overloading type motor, drip-proof. Acceptable Manufacturers: Bell and Gossett, Grundfos, Taco.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Wall Hung Fixture Carriers:
 - 1. Material: All Metal, ASME/ANSI A112.6.1M.
 - 2. Acceptable Manufacturers: Zurn, Smith, Wade, Josam, Watts, Mifab.
 - 3. Water closet carrier shall be rated to support 500 lbs. unless noted otherwise on the drawings.
- B. All china shall be from the same manufacturer where possible.
- C. All lavatory and sink trim shall be from the same manufacturer where possible.
- D. All fixtures shall be lead free. Faucets, traps, stops, and other fixture accessories shall not contain more lead than allowed per the latest State or Federal Act.

2.02 WATER CLOSET, FLOOR MOUNTED

- A. Bowl: ANSI A112.19.2M; 1.28 gallons per flush, commercial type, siphon jet, white vitreous china closet bowl with elongated rim, 1-1/2" spud and china bolt caps. Acceptable Manufacturers: American Standard, Kohler, Eljer.

- B. Flush Valve: ANSI A112.18.1; 1.28 gallons per flush, exposed chrome plated, diaphragm type with oscillating handle or hard wired infra-red sensor operated at the discretion of the campus, escutcheon, vacuum breaker, integral screwdriver stops. Acceptable Manufacturers: Sloan Model No. 110.
- C. Seat: Solid elongated white plastic, open front, stainless steel posts, and self-sustaining hinge. Acceptable Manufacturers: Church, Olsonite, Bemis.

2.03 WATER CLOSET, FLOOR MOUNTED, ACCESSIBLE

- A. Bowl: ANSI A112.19.2M; 1.28 gallon per flush, commercial type, siphon jet, white vitreous china closet bowl with elongated rim, 17" to 19" to top of seat, 1-1/2" top spud and china bolt caps. Acceptable Manufacturers: American Standard, Kohler, Eljer.
- B. Flush Valve: ANSI A112.18.1; 1.28 gallons per flush, exposed chrome plated, diaphragm with oscillating handle or hard wired infra-red sensor operated at the discretion of the campus, escutcheon, vacuum breaker, integral screwdriver stops. Acceptable Manufacturers: Sloan Model No. 110.
- C. Seat: Solid elongated white plastic, open front, stainless steel posts, and self-sustaining hinge. Acceptable Manufacturers: Church, Olsonite, Bemis.

2.04 WATER CLOSET, WALL HUNG

- A. Bowl: ANSI A112.19.2M; 1.28 gallons per flush, commercial type, siphon jet, white vitreous china closet bowl with elongated rim, 1-1/2" spud and china bolt caps. Acceptable Manufacturers: American Standard, Kohler, Eljer.
- B. Flush Valve: ANSI A112.19.2; 1.28 gallons per flush, exposed chrome plated, diaphragm type with oscillating handle or hard wired infra-red sensor operated at the discretion of the campus, escutcheon, vacuum breaker, integral screwdriver stops. Acceptable Manufacturers: Sloan Model No. 110.
- C. Seat: Solid elongated white plastic, open front, stainless steel posts, and self-sustaining hinge. Acceptable Manufacturers: Church, Olsonite, Bemis.

2.05 WATER CLOSET, WALL HUNG, ACCESSIBLE

- A. Bowl: ANSI A112.19.2M; 1.28 gallons per flush, commercial type, siphon jet, white vitreous china closet bowl with elongated rim, 17" to 19" to top of seat, 1-1/2" spud and china bolt caps. Acceptable Manufacturers: American Standard, Kohler, Eljer.
- B. Flush Valve: ANSI A112.19.2; 1.28 gallons per flush, exposed chrome plated, diaphragm with oscillating handle or hard wired infra-red sensor operated at the discretion of the campus, vacuum breaker, integral screwdriver stops. Acceptable Manufacturers: Sloan Model No. 110.
- C. Seat: Solid elongated white plastic, open front, stainless steel posts, and self-sustaining hinge. Acceptable Manufacturers: Church, Olsonite, Bemis.

2.06 WATER CLOSET, FLOOR MOUNTED, FLUSH TANK

- A. Bowl: ANSI A112.19.2M; 1.28 gallons per flush, pressure assisted, commercial type, siphon jet, white vitreous china closet with round front bowl, close-coupled tank and china bolt caps. Acceptable Manufacturers: American Standard, Kohler, Eljer.

- B. Seat: Solid white plastic, open front with stainless steel hinge posts. Acceptable Manufacturers: Church, Olsonite, Bemis.

2.07 URINAL, WALL HUNG

- A. Urinal: ANSI A112.19.2M; white vitreous china, 1/8 gallon per flush, commercial type, siphon jet with flushing rim, integral trap, and 3/4 inch top spud. Acceptable Manufacturers: American Standard, Kohler, Eljer.
- B. Flush Valve: ANSI A112.18.1; exposed chrome plated, diaphragm type with oscillating handle or hard wired infra-red sensor operated at the discretion of the campus, escutcheon, vacuum breaker. Acceptable Manufacturer: Sloan.
- C. Wall Mounted Carrier: ANSI A112.6.1; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, threaded fixture studs for fixture hanger, bearing studs.

2.08 URINAL, WALL HUNG, ACCESSIBLE

- A. Urinal: ANSI A112.19.2M; white vitreous china, 1/8 gallon per flush, commercial type, siphon jet with flushing rim, integral trap, 17" to top of rim, 14" to 17" from wall to front of rim edge, and 3/4 inch top spud. Acceptable Manufacturers: American Standard, Kohler, Eljer.
- B. Flush Valve: ANSI A112.18.1; exposed chrome plated, diaphragm type with oscillating handle or hard wired infra-red sensor operated at the discretion of the campus, escutcheon, vacuum breaker. Acceptable Manufacturer: Sloan.
- C. Wall Mounted Carrier: ANSI A112.6.1; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, threaded fixture studs for fixture hanger, bearing studs.

2.09 DRINKING FOUNTAIN

- A. Fountain: ASME A112.19.3; Wall mounted, 2 station, stainless steel, stain finish, push-button operation, laminar flow, lead free, polished chrome plated brass bubbler head, vandal-resistant bottom plate, integral 1 1/2" trap, less filter.
- B. Bottle Filling Station: A minimum of one (1) bottle filling/hydration station shall be provided within the project limits. , The bottle filler station may be supplied with the drinking fountain [with filter] or [without filter]. Acceptable Manufacturers: Elkay Model No. LVRCTLDDWSK
- C. Trim:
 - 1. Stops and Supplies: angle stops, lock shield type, 1/2", loose key, and flexible supplies. Acceptable Manufacturers for Stops: Chicago Faucet or Sloan. Acceptable Manufacturers for Supplies: Chicago Faucet, Brasscraft.

2.10 ELECTRIC WATER COOLER, ACCESSIBLE

- A. ASME A112.19.3; Wall mounted, dual "Hi-Lo" station, electric water cooler, 18 gauge, Type 304 stainless steel, , satin finish, push-button operated, polished chrome plated bubbler with stream guard, vandal resistant bubblers, vandal resistant strainers, vandal resistant bottom plates, louver intrusion resistant grill, mounting bracket, R-134 refrigerated with integral air cooled condenser; capacity of 8 gal/hr of 50 degree F water with inlet at 80 degree F, and room temperature of 90 degree F. Acceptable Manufacturers: Halsey Taylor, Haws, Elkay.
- B. Trim:

1. P-trap: 1 ¼" by 1 ½" chrome plated 17 gage cast brass, L.A. pattern, with secured escutcheon. Acceptable Manufacturers: McGuire.
2. Stops and Supplies: angle stops, lock shield type, 1/2", loose key, and flexible supplies. Acceptable Manufacturers for Stops: Chicago Faucet or Sloan. Acceptable Manufacturers for Supplies: Chicago Faucet, Brasscraft.

2.11 LAVATORY, ACCESSIBLE WALL HUNG

- A. Basin: ANSI A112.19.2M; vitreous china lavatory, approximately 20" x 18" rectangular basin, self-draining deck area, contoured splash shields, 4-inch high back, faucet ledge, 4-inch center drilling, front overflow, and concealed arm supports. Acceptable Manufacturers: American Standard and Kohler.
- B. Trim:
 1. Faucet: ANSI A112.18.1; chrome plated combination supply fitting with a cast brass body, adjustable time cycle, vandal resistant, with 0.35 gpm or 0.5 gpm aerator, manual metered faucet. Adjust between 10 and 15 seconds. Acceptable Manufacturers: Chicago Model No. 333-665E39PSHABCP or Chicago Model No. 3400-ABCP.
 2. P-trap: 1 ¼" by 1 ½" chrome plated 17 gage cast brass, L.A. pattern, with secured escutcheon. Acceptable Manufacturers: McGuire.
 3. Drain: ANSI/ASME A112.18.2, chrome plated, brass construction, open grid strainer, 1 ¼" tailpiece. Acceptable Manufacturers: Chicago Faucet, Elkay.
 4. Stops and Supplies: angle stops, lock shield type, 3/8", loose key, and flexible supplies. Acceptable Manufacturers: Chicago Faucet, Brasscraft.

2.12 LAVATORY, ACCESSIBLE COUNTER TOP

- A. Basin: ANSI A112.19.2M; vitreous china, approximately 20" x 17" oval basin, self-rimming, faucet ledge, 4-inch center drilling with front overflow. Acceptable Manufacturers: American Standard, Kohler.
- B. Trim:
 1. Faucet: ANSI A112.18.1; chrome plated combination supply fitting with a cast brass body, adjustable time cycle, vandal resistant, with 0.35 gpm or 0.5 gpm aerator, manual metered faucet. Adjust between 10 and 15 seconds. Acceptable Manufacturers: Chicago Model No. 333-665E39PSHABCP or Chicago Model No. 3400-ABCP.
 2. P-trap: 1 ¼" by 1 ½" chrome plated 17 gage cast brass, L.A. pattern with secured escutcheon. Acceptable Manufacturers: McGuire.
 3. Drain: chrome plated, brass construction, open grid strainer, 1 ¼" tailpiece. Acceptable Manufacturers: Chicago Faucet, Elkay.
 4. Stops and Supplies: angle stops, lock shield type, 3/8", loose key, and flexible supplies. Acceptable Manufacturers: Chicago Faucet, Brasscraft.

2.13 SINK, ACCESSIBLE SINGLE COMPARTMENT

- A. Bowl: ANSI A112.19.3; outside dimension approximately 20" x 19", 5-inch deep outside dimensions, 18 gage thick, Type 304 stainless steel, self-rimming with undercoating, single hole punching, 3-1/2 inch strainer, ledge back drilled for trim. Acceptable Manufacturers: Elkay, Just.
- B. Trim:

1. Faucet: ANSI A112.18.1; deck mounted, gooseneck spout, chrome plated with a cast brass body, vandal resistant, with 1.5 gpm aerator, manually operated sensor. Acceptable Manufacturers: Chicago Faucet.
2. P-trap: 1 ½" chrome plated 17 gage cast brass, L.A. pattern with secured escutcheon. Acceptable Manufacturers: McGuire.
3. Drain: 3-1/2", Type 304 stainless steel, basket strainer, 1 1/2" tailpiece. Acceptable Manufacturers: Chicago Faucet, Just, Elkay.
4. Stops and Supplies: angle stops, lock shield type, 3/8", loose key, and flexible supplies. Acceptable Manufacturers: Chicago Faucet, Brasscraft.

2.14 SINK, ACCESSIBLE DOUBLE COMPARTMENT

- A. Bowl: ANSI A112.19.3; 19" x 33" x 5-inch deep, 18 gage thick, Type 304 stainless steel, self-rimming with undercoating, three hole punching, 3-1/2 inch strainer on left bowl, ledgeback drilled for trim, disposer under right bowl. Acceptable Manufacturers: Elkay, Just.
- B. Trim:
 1. Faucet: ANSI A112.18.1; deck mounted, gooseneck spout, chrome plated with a cast brass body, vandal resistant, with 1.5 gpm aerator, manually operated sensor. Acceptable Manufacturers; Chicago Faucet.
 2. P-trap: 1 ½" chrome plated 17 gage cast brass, L.A. pattern with secured escutcheon. Acceptable Manufacturers: McGuire.
 3. Drain: 3-1/2", Type 304 stainless steel, basket strainer, 1 1/2" tailpiece. Acceptable Manufacturers: Chicago Faucet, Just, Elkay.
 4. Stops and Supplies: angle stops, lock shield type, 3/8", loose key, and flexible supplies. Acceptable Manufacturers: Chicago Faucet, Brasscraft.

2.15 INSULATION KIT

- A. Where lavatories or sinks are noted to be insulated for ADA compliance, furnish the following: Safety covers conforming to ANSI A177.1, ASTM E84-07 and consisting of insulation kit of molded closet cell vinyl construction, 3/16 inch thick, white color, for insulating tailpiece, P-trap, valves and supply piping. Acceptable Manufacturers: Truebro.

2.16 MOP SINK, FLOOR MOUNTED

- A. Bowl: Enameled cast iron, corner type, with 3" IPS drain and flat chrome grid strainer and vinyl rim guard. Acceptable Manufacturers; American Standard, Kohler, CECO
- B. Trim: ANSI A112.18.1; wall mounted, lever handles, chrome plated, integral check valves, integral stop valves with vacuum breaker, pail hook and 3/4"-inch hose thread outlet. Acceptable Manufacturers; Chicago Faucet.

2.17 COMBINATION EMERGENCY SHOWER AND EYE/FACE WASH

- A. Barrier-free design with coated galvanized steel piping; ANSI Z358.1 compliant, impact-resistant plastic shower head, Chrome-plated brass 1 1/4 inch IPS stay-open ball-type shower valve operated by a 304 stainless steel pull rod having triangular handle, 304 stainless steel eye wash bowl, [chrome-plated brass] [ABS plastic] spray head assembly eye wash heads and protective spray head covers; integral flow control capable of maintaining uniform flow under varying water supply conditions from 30-90 psig; Chrome-plated 1/2 inch IPS stay-open ball-type eye wash valve hand operated by a large, [PVC] [304 stainless steel] [push handle] [foot pedal], and 1-1/4 inch water supply connection.
- B. Acceptable Manufacturers: Haws, Bradley, Guardian.

2.18 EYE/FACE WASH - WALL MOUNTED:

- A. Barrier-free design ANSI Z358.1 compliant, with stainless steel bowl; stainless steel wrap-around skirt; chrome-plated brass spray head assembly with twin, soft flow, eye wash heads and protective spray head covers; integral flow control capable of maintaining uniform flow under varying water supply conditions from 30-90 psig; Chrome-plated 1/2 inch IPS stay-open ball-type eye wash valve hand operated by a large, stainless steel push handle; chrome-plated circular face spray ring; chrome plated brass pipe and fittings; dome type strainer; 1-1/4 inch drain fitting, wall tube and trap; universal identification sign; inspection tag, and 1/2 inch water supply connection.
- B. Acceptable Manufacturers: Haws, Bradley, Guardian.

2.19 EMERGENCY THERMOSTATIC MIXING VALVE:

- A. ANSI Z358.1 compliant, ASSE 1071 Certified, Lead Free, Liquid-filled thermostat or bimetallic thermostat, Strainer checkstops on inlets, adjustable temperature set point, built-in cold water bypass, positive shutoff of hot supply when cold supply is lost, dial thermometer, brass construction.
- B. Acceptable Manufacturers: Bradley, Leonard.

2.20 TRAPS

- A. Provide all individual connections to the sanitary system with P-traps, except where such drains discharge directly into a properly trapped collection basin or sump. Unless otherwise specified or shown, traps shall be:
 1. Chromium plated cast brass when used with plumbing fixtures or when installed exposed in finished spaces.
 2. Insulated at accessible lavatories and sinks.
 3. Cast iron, deep-seal pattern where concealed above ceiling, below grade or in unfinished areas.
 4. Deep-seal pattern of the same material and/or coating where drainage lines are of special materials or coatings such as polypropylene, PVDF, CPVC, etc.

2.21 TRAP SEALS AND PRIMERS

- A. Trap primers shall be pressure drop activated and be of all brass construction including a brass body with ½-inch male NPT inlet and ½-inch female NPT discharge. Internal components shall consist of a stainless steel debris screen, brass piston and brass discharge jet. Lubricated O-rings shall be EPDM and seal O-rings shall be nitrile. The trap primer shall be designed to operate upon a drop in line pressure of 10 psi. Working pressure shall be 35psi to 75 psi and a working temperature range of range of -40° to 450°F. Valves shall be listed with ASSE 1018. Acceptable Manufacturers: Precision Plumbing Products, Watts, Sioux Chief.
- B. Trap primer enclosed in a NEMA-1 enclosure, flush mounted box, with a ½-inch NPT female inlet complying with ANSI/ASME B1.20.1, outlet shall be ½-inch compression fitting, with a 5/8-inch Type "L" copper tubing manifold complying with ASTM B88, provide with circuit breaker, switch, timer, manual override, solenoid valve marked as UL Listed, electronic assembly tested and certified per UL #73, and backflow device anti-siphon atmospheric vacuum breaker meets IAPMO, ASSE 1001 and CSA. Unit shall comply with ASSE Standard No. 1018. Working pressure shall be 35psi to 75 psi and a working temperature range of range of -40°F to 450°F. Acceptable Manufacturers: Precision Plumbing Products, Sioux Chief, Zurn.

2.22 WATER HAMMER ARRESTORS:

- A. Water hammer constructed of type K hard drawn copper, cap attached by 95-5 solder joint, piston and threaded adapter of machined brass, "O"-ring constructed in compliance with EP-5778-80, silicon seal lubricant, operating pressures of 35 to 250 psi, spike pressures of 1,500 psi, temperature range -40°F to 212°F. Acceptable Manufacturers: Precision Plumbing Products, Watts, Sioux Chief.

DIVISION 23
HEATING, VENTILATING, AND AIR-CONDITIONING
(HVAC)

This page intentionally left blank

SECTION 23 05 00

BASIC HVAC MATERIALS AND METHODS

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work under this Section shall comply with the requirements of General Conditions, Supplemental Conditions, Special Conditions and Division 01 - General Requirements, and shall include all Mechanical Sections specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 SCOPE OF THIS SECTION

- A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
 - 1. Compliance with all codes and standards applicable to this jurisdiction
 - 2. Shop Drawings for Equipment
 - 3. Coordination Documents
 - 4. Record Drawings
 - 5. Start-up Service and Building Commissioning
 - 6. Instruction, Maintenance, and O & M Manuals
 - 7. Work associated with Delivery, Storage, and Handling of products
 - 8. Work associated with provision of Temporary Facilities
 - 9. Preparation of Posted Operating Instructions
 - 10. Meeting Project Safety and Indemnity requirements
 - 11. Proper Cleaning and Closing
 - 12. Supplying proper Warranty information
 - 13. Supply specified Guarantee documentation
 - 14. Design and provision of Supports and Anchors
 - 15. Pipe Portals
 - 16. Pipe Supports
 - 17. Equipment Rails
 - 18. Access Doors
 - 19. Identification Markers
 - 20. Coordination of Electrical requirements for equipment provided

1.03 DESCRIPTION OF WORK

- A. The Contract Documents, including Specifications and Construction Drawings, are intended to provide all material and labor to install complete heating, ventilating, air conditioning systems for the building and shall interface with all existing building systems affected by new construction.

- B. The Contractor shall refer to the architectural interior details, floor plans, elevations, and the structural and other Contract Drawings and shall coordinate this work with that of the other trades to avoid interference. The plans are diagrammatic and show generally the locations of the fixtures, equipment, and pipe lines and are not to be scaled; all dimensions and existing conditions shall be checked at the building.
- C. The Contractor shall comply with the project closeout requirements as detailed in General Requirements of Division 01.
- D. Where project involves interface with existing building and site systems, every effort has been made to note existing utilities and services. However, the Contractor should thoroughly familiarize themselves with existing conditions and be aware that in some cases information is not available as to concealed conditions, which exist in portions of the existing building affected by this work.
- E. The contractor shall design and supply all miscellaneous metals and system support components that are necessary to support all mechanical system, whether indicated or not on the drawings. Such metals and support components and related connections shall be provided as necessary to directly and concentrically impose loads on the primary structure. Refer to structural design requirements for specific attachment requirements. The mechanical system supports shall accommodate lateral movements between floors as defined in the story drift requirements.
- F. The contractor shall design and supply mechanical devices and system components that are necessary to accommodate structural movement as defined by structural design criteria associated with ductwork and piping transitions through building expansion joints. Design of expansion joints to allow for dimensional changes in portions of a structure separated by such joints should take both reversible and irreversible movements into account.

1.04 DESCRIPTION OF BID DOCUMENTS

- A. Specifications:
 - 1. Specifications, in general, describe quality and character of materials and equipment.
 - 2. Specifications are of simplified form and include incomplete sentences.
- B. Drawings:
 - 1. Drawings in general are diagrammatic and indicate sizes, locations, connections to equipment and methods of installation.
 - 2. Before proceeding with work check and verify all dimensions.
 - 3. Assume all responsibility for fitting of materials and equipment to other parts of equipment and structure.
 - 4. Make adjustments that may be necessary or requested, in order to resolve space problems, preserve headroom, and avoid architectural openings, structural members and work of other trades.
 - 5. Where existing pipes, conduits and/or ducts prevent installation of new work as indicated, relocate, or arrange for relocation, of existing pipes, conduits and/or ducts. Verify exact location and elevation of existing piping prior to any construction.
 - 6. If any part of Specifications or Drawings appears unclear or contradictory, apply to Owner's Representative interpretation and decision as early as possible, including during bidding period.

1.05 DEFINITIONS

- A. Above Grade: Not buried in the ground and not embedded in concrete slab on ground.
- B. Accessible: Ability to perform recommended maintenance without removal of services or equipment and requiring no special platforms.
- C. Actuating or Control Devices: Automatic sensing and switching devices such as thermostats, pressure, float, electro-pneumatic switches and electrodes controlling operation of equipment.
- D. Below Grade: Buried in the ground or embedded in concrete slab on ground.
- E. Concealed: Embedded in masonry or other construction, installed in furred spaces, within double partitions or hung ceilings, in trenches, in crawl spaces, or in enclosures. In general, any item not visible or directly accessible.
- F. Connect: Complete hook-up of item with required service.
- G. Drift: The horizontal deflection at the top of the story relative to the bottom of the story. Refer to structural design for drift dimensional movements.
- H. Expansion Joint: A mid-structure separation designed to relieve stress on building materials caused by building movement induced by any of the following: thermal expansion and contraction; wind sway; seismic events; static load deflection; or live load deflection. Expansion joint systems are used to bridge the gap and maintain building assembly functions while accommodating expected movements. Expansion joints also include transitions from an existing building to a new building addition. Refer to structural design for expansion joint dimensional movements.
- I. Explosion Proof Equipment (per National Electrical Code-Article 501): Equipment enclosed in a case that is capable of withstanding an explosion of a specified gas or vapor that may occur within it and of preventing the ignition of a specified gas or vapor surrounding the enclosure by sparks, flashes, or explosion of the gas or vapor within, and that operates at such an external temperature that a surrounding flammable atmosphere will not be ignited thereby. Explosion proof motors are required for Class I, II or III applications regardless of Division or Group as defined in National Electrical Code – Article 501 and ANSI/ISA-12.20.01.
 - 1. Class I: Hazardous due to flammable gases or vapors are present or may be present in quantities sufficient to produce explosive or ignitable mixtures.
 - 2. Class II: Hazardous due to combustible or conductive dusts are present or may be present in quantities sufficient to produce explosive or ignitable mixture.
 - 3. Class III: Hazardous due to ignitable fibers are present or may be present in quantities sufficient to produce explosive or ignitable mixtures.
 - 4. Division: The substance referred to by Class has a high probability (Division 1) or low probability (Division 2) of producing an explosive or ignitable mixture due to it being present continuously, intermittently, or periodically or from the equipment itself under normal operating conditions.
 - 5. Group: Type of hazardous material in surrounding environment ranging from Group A flammable liquids to Group G combustible dusts.
- J. Exposed: Not installed underground or concealed.
- K. FRT: Fire retardant treated wood is any wood product that, when impregnated with chemicals by a pressure process or other means during manufacture, shall have, when tested in accordance with ASTM E84 or UL 723, a listed flame spread index of 25 or less.

- L. Furnish: To supply equipment and products as specified.
- M. Indicated, Shown or Noted: As indicated, shown or noted on Drawings or Specifications.
- N. Install: To erect, mount and connect complete with related accessories.
- O. Motor Controllers: Manual or magnetic starters (with or without switches), individual push buttons or hand-off-automatic (HOA) switches controlling the operation of motors.
- P. Must: A desire to complete the specified task. Allows some flexibility in application as opposed to Shall.
- Q. Noncombustible Material: A noncombustible material is a substance that will not ignite, burn, support combustion, or release flammable vapors when subject to fire or heat in compliance with ASTM E136 Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750°C. Examples of noncombustible materials include the following, but confirm compliance in manufacturer literature:
 - 1. Portland cement concrete, concrete, gypsum concrete (normally used in drywall or poured gypsum floor toppings), Portland cement stucco, Portland cement plaster, and gypsum plaster, gypsum wall board (sheetrock), and Type X gypsum wall board.
 - 2. Brick masonry, concrete block masonry, and ceramic tiles.
 - 3. Steel, stainless steel, galvanized steel, and other metals, except aluminum (aluminum is classified as limited-combustible), magnesium and magnesium alloys.
 - 4. Sheet glass, block glass, and uncoated glass fibers.
 - 5. Mineral wool and rock wool.
- R. NRTL: Nationally Recognized Testing Laboratory, including UL and/or ETL.
- S. Piping: Pipe, tube, fittings, flanges, valves, controls, strainers, hangers, supports, unions, traps, drains, insulation, and related items.
- T. Provide: To supply, install and connect as specified for a complete, safe and operationally ready system.
- U. Reviewed, Satisfactory or Directed: As reviewed, satisfactory, or directed by or to Architect/Engineer/Owner's Representative.
- V. Rough-In: Provide all indicated services in the necessary arrangement suitable for making final connections to fixture or equipment.
- W. Shall: An exhortation or command to complete the specified task including providing and installing work associated with task.
- X. Similar or Equal: Of base bid manufacture, equal in materials, weight, size, design, and efficiency of specified products.
- Y. Supply: To purchase, procure, acquire and deliver complete with related accessories.
- Z. Typical or Type: Exhibiting the qualities, traits, or characteristics that identify a kind, class, number, group or category. Of or relating to a representative specimen. Application shall apply to all other similarly identified on plan or detail.

- AA. Will: A desire to complete the specified task. Allows some flexibility in application as opposed to "Shall".
- BB. Wiring: Raceway, fittings, wire, boxes and related items.
- CC. Work: Labor, materials, equipment, apparatus, controls, accessories, and other items required for proper and complete installation.

1.06 RELATED WORK SPECIFIED ELSEWHERE

- A. All Division 23 Mechanical sections included herein.
- B. Division 33: Utility Site Work.
 - 1. Coordination of excavation of trenches and the installation of mechanical systems and piping on site.
- C. Division 03: Concrete.
 - 1. All concrete work required for mechanical work shall be coordinated by Division 23 with Division 03 including:
 - a. Concrete curbs and housekeeping pads for the mechanical equipment.
 - b. Thrust blocks, pads, and boxes for mechanical equipment.
- D. Division 07: Thermal and Moisture Protection.
 - 1. Flashing and sheet metal.
 - 2. Sealants and caulking.
 - 3. Firestopping.
- E. Division 09: Painting.
 - 1. Division 23 shall coordinate with Division 09 to perform all painting, except where specifically stated otherwise in Division 09.
 - 2. Painting of all exposed steel, piping, ductwork, insulation, equipment and materials
- F. Division 10: Miscellaneous Metals.
 - 1. Exterior louvers and grilles shall be included in this Section.
- G. Division 26: Electrical.
 - 1. Power connections to all mechanical equipment
- H. Division 28: Electronic Safety and Security.
 - 1. Fire protection alarms and relays.
 - 2. Smoke detector and monitoring.
 - 3. Life safety systems.

1.07 CODES AND STANDARDS

- A. The Contractor is cautioned that code requirements not explicitly detailed in these specifications or drawings, but which may be reasonably inferred or implied from the nature of the project, must be provided as part of the contract.

- B. Perform all tests required by governing authorities and required under all Division 23 Sections. Provide written reports on all tests.
- C. Electrical devices and wiring shall conform to the latest standards of NEC; all devices shall be UL listed and labeled.
- D. All accessible mechanical work shall comply with the minimum requirements of the Americans with Disabilities Act (ADA) and local amendments. Also, refer to ICC/ANSI A117.1 Accessible and Usable Buildings and Facilities. Refer to Architectural drawings and specifications for additional ADA requirements. The following requirements are provided as consolidated list of minimum ADA requirements. Compliance requirements applicable to HVAC work includes, but is not limited to, the following:
 - 1. Section 309: Operable parts shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. The force required to activate operable parts shall be 5 pounds maximum.
 - 2. Section 308.3: Temperature control devices mounted on walls with operable buttons or switches shall be placed where clear floor or ground space allows a parallel approach and the side reach is unobstructed. Operable parts shall be located 48" maximum above finished floor, and no lower than 42" above finished floor. Do not mount above light switches to avoid inaccurate temperature readings due to light switch heat output.
 - 3. Section 308.3.2: Where a clear floor or ground space allows a parallel approach to an element and high reach is over an obstruction, the height of the obstruction shall be 34" maximum and depth of obstruction shall be 24" maximum.
 - 4. Section 404.2.9: Fire doors shall have a minimum opening force allowable by the applicable Building Code. The force for pushing or pulling open a door other than fire doors shall be 5 pounds maximum.
- E. All excavation work must comply with all provisions of state laws including notification to all owners of underground utilities at least 48 business day hours, but not more than 10 business days, before commencing an excavation.
- F. Provide in accordance with rules and regulations of the following:
 - 1. California Building Codes enforced by the Authority Having Jurisdiction (AHJ):
 - a. 2022 Building Standards Administrative Code, Part 1, Title 24 California Code of Regulations (CCR).
 - b. 2022 California Building Code (CBC), Part 2, Title 24 CCR (2021 International Building Code with California Amendments).
 - c. 2022 California Electrical Code (CEC), Part 3, Title 24 CCR (2020 National Electrical Code with California Amendments).
 - d. 2022 California Mechanical Code (CMC) Part 4, Title 24 CCR (2021 Uniform Mechanical Code with California Amendments).
 - e. 2022 California Plumbing Code (CPC), Part 5, Title 24 CCR (2021 Uniform Plumbing Code with California Amendments).
 - f. 2022 California Energy Code (CEC), Part 6, Title 24 CCR.
 - g. 2022 California Fire Code, Part 9, Title 24 CCR (2021 International Fire Code with California Amendments).
 - h. 2022 California Green Building Standards Code (CALGreen), Part 11, Title 24 CCR.

- i. 2022 California Referenced Standards, Part 12, Title 24 CCR.
 - j. Title 19 CCR Public Safety, State Fire Marshal Regulations.
 2. Local, city, county and state codes and ordinances.
 3. Local Bureau of Buildings.
 4. Local Health Department.
 5. Local and State Fire Prevention Districts.
 6. State Administrative Codes.
- G. Provide in accordance with appropriate referenced standards of the following and as referenced in other specification sections:
 1. AABC - Associated Air Balance Council
 2. ADA - Americans with Disabilities Act
 3. ADC - Air Diffuser Council
 4. AHRI - Air Conditioning, Heating and Refrigeration Institute
 5. AMCA - Air Moving and Conditioning Association
 6. ANSI - American National Standards Institute
 7. ASCE 7-10 – American Society of Civil Engineers – Minimum Design Loads for Buildings and Other Structures
 8. ASHRAE - American Society of Heating, Refrigerating & Air Conditioning Engineers
 9. ASME - American Society of Mechanical Engineers
 10. ASTM - American Society for Testing Materials
 11. AWS - American Welding Society
 12. CSA - Canadian Standards Association
 13. ETL - Electrical Testing Laboratories
 14. FM - Factory Mutual
 15. IBC - International Building Code
 16. ICC AC156 Seismic Certification by Shake-Table Testing of Nonstructural Components.
 17. MSS - Manufacturer's Standardization Society
 18. NEMA - National Electrical Manufacturer's Association
 19. NFPA - National Fire Protection Association
 20. SMACNA - Sheet Metal and Air Conditioning Contractors National Association
 21. UL - Underwriter's Laboratories
- H. Provide compliance in accordance with the following referenced standard which applies to general system compliance in contrast to specific equipment standards referenced elsewhere:
 1. UL-2043: Standard for Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces. This is applicable to spaces above suspended ceilings and below raised floors.

1.08 CONFLICTING REQUIREMENTS

- A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to the Owner's Representative for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to the Owner's Representative for a decision before proceeding.

1.09 QUALITY ASSURANCE

- A. Manufacturer's Nameplates: Nameplates on manufactured items shall be metallic riveted or bolted to the manufactured item, with nameplate data engraved or punched to form a non-erasable record of equipment data suitable for the ambient exposure.
- B. All work shall include the following:
 - 1. Manufactured items and equipment shall be a current, cataloged product of the manufacturer.
 - 2. Replacement parts shall be readily available and stocked in the USA.
- C. Experience: Unless more stringent requirements are specified in other sections of Division 23, manufactured items shall have been installed and used, without modification, renovation or repair, on other projects for not less than one year prior to the date of bidding for this project.
- D. Each product and/or equipment type shall be provided by one manufacturer. Mixtures of manufacturers for each product and/or equipment type are not acceptable. Example – all fire dampers shall be supplied by one manufacturer.
- E. Special Inspections: Provide structural design and Special Inspections as required in Chapter 17 of the local building code and the Authority Having Jurisdiction, and as defined in the manufacturer installation instructions for each anchorage system. All anchors post-installed in hardened concrete members shall have periodic Special Inspections. Special inspection agencies shall be independent of the design and construction companies and shall act as agents for the AHJ, but contracted directly with the Owner or Owner's Representative.
- F. Welding Standards:
 - 1. Welding Qualifications:
 - a. Certification: Each welder shall have a current AWS QC7 welding certification with successful completion of written test and welding samples in compliance with AWS D1.1. The welder must maintain their certification to show qualified welding experience every six months. The Owner's Representative reserves the right to request sample coupon test welds of each welder to validate quality of welding work.
 - 2. Welding Procedures:
 - a. Steel Support Welding: All work shall be performed in compliance with American Welding Society AWS D1.1/D1.1M-Structural Welding Code-Steel.

- b. Pipe Welding: All work shall be performed to meet or exceed the requirements of the American Welding Society AWS B2.1 Specification for Welding Procedure and Performance Qualification and ASME Boiler & Pressure Vessel Code: Section IX "Qualification Standard for Welding and Brazing Procedures, Welders, Brazers, and Welding and Brazing Operators."

G. Pressure Piping Standards

- a. Comply with ASME B31.1 Power Piping, ASME B31.3-Process Piping and ASME B31.9-Building Services Piping standards for materials, products, and installation per pressure and temperature operating class.
- b. Comply with ASME B31.9 Building Services Piping standard for the following services:
 - 1) Conveying fluid between 0°F (-18°C) to 250°F (121°C).
 - 2) Fluid pressure less than 350 psig.
- c. Comply with ASME B31.1 Power Piping standard for the following services:
 - 1) Steam.
- d. Comply with ASME B31.3 Process Piping standard for the following services:
 - 1) Conveying fluid above 250°F (121°C).
 - 2) Toxic or flammable fluids.

1.10 GENERAL REQUIREMENTS

- A. Examine all existing conditions at building site.
- B. Review contract documents and technical specifications for extent of new work to be provided.
- C. Provide and pay for all permit, licenses, fees and inspections, including, but not limited to, building permits, planning permits, air quality management district permits, operating licenses, utility district fees, special district fees, environmental impact reports, and additional local permits and fees.
- D. Prepare a Construction IAQ Management Plan meeting the SMACNA IAQ guidelines. See Section 23 31 13 - Air Distribution for a summary of requirements.
- E. Install equipment and materials to provide required access for servicing and maintenance. Coordinate the final location of concealed equipment and devices requiring access with final location of required access panels and doors. Allow ample space for removal of all parts that require replacement or servicing. This work shall include furnishing and installing all access doors required for mechanical access. Joints and fittings shall not be located in inaccessible locations such wall, floor and roof penetrations.
- F. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected. Refer to Equipment Specifications for rough-in requirements.
- G. Coordinate mechanical equipment and materials installation with other building components.
- H. Ductwork and piping dimensions, as identified on drawings and in specifications, refer to the interior free dimensions. Adjust work as necessary to account for larger outside dimensions to account for material wall thickness. Upsize plastic pipe diameters as necessary to maintain minimum interior dimensions.

- I. Verify all dimensions by field measurements.
- J. Arrange for chases, slots, and openings in other building components to allow for mechanical installations.
- K. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.
- L. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the work. Give particular attention to large equipment requiring positioning prior to closing-in the building.
- M. Coordinate the cutting and patching of building components to accommodate the installation of mechanical equipment and materials. Contractor shall provide for all cutting and patching required for installation of this work unless otherwise noted.
- N. Where mounting heights are not detailed or dimensioned, install mechanical services and overhead equipment to provide the maximum headroom possible.
- O. Install mechanical equipment to facilitate maintenance and repair or replacement of equipment components. Connect equipment for ease of disconnecting, without interference with other installations.
- P. Coordinate the installation of mechanical materials and equipment above ceilings with ductwork, piping, conduits, suspension system, light fixtures, cable trays, sprinkler piping and heads, and other installations.
- Q. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.
- R. Coordinate with Owner's Representative in advance to schedule shutdown of existing systems to make new connections. Provide valves in new piping to allow existing system to be put back in service with minimum down time.
- S. All materials (such as supports, gaskets, sealants, insulation, ductwork, piping, wiring, controls, etc.) located within air plenum spaces, air shafts, and occupied spaces shall be noncombustible or have a flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing, or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified. Coordinate with all disciplines to assure that all discrete electrical, plumbing and mechanical products located in plenums are non-combustible and compliant with UL 2043.
- T. Coordinate installation of floor drains and floor sinks with work of other trades, such that finished floor slopes to drains and floor sinks are flush with surrounding floor.
- U. Products made of or containing lead, asbestos, mercury or other known toxic or hazardous materials are not acceptable for installation under this Division. Any such products installed as part of the work of the Division shall be removed and replaced and all costs for removal and replacement shall be borne solely by the installing Contractor.

1.11 MINOR DEVIATIONS

- A. The Drawings are diagrammatic and show the general arrangements of all mechanical work and requirements to be performed. It is not intended to show or indicate all offsets, fittings, and accessories which will be required as a part of the work of this Section.
- B. The Contractor shall review the structural and architectural conditions affecting their work. It is the specific intention of this section that the contractor's scope of work shall include:
- C. Proper code complying support systems for all equipment whether or not scheduled or detailed on drawings or in these specifications
- D. Minor deviations from the mechanical plans required by architectural and structural coordination.
- E. The Contractor shall study the operational requirements of each system, and shall arrange work accordingly, and shall furnish such fittings, offsets, supports, accessories, as are required for the proper and efficient installation of all systems from the physical space available for use by this section. This requirement extends to the Contractor's coordination of this section's work with the "Electrical Work". Should conflicts occur due to lack of coordination, the time delay, cost of rectification, demolition, labor and materials, shall be borne by the Contractor and shall not be at a cost to the Owner.
- F. Minor deviations to avoid conflict shall be permitted where the design intent is not altered.
- G. Advise the Owner's Representative, in writing, in the event a conflict occurs in the location or connection of equipment. Bear all costs for relocation of equipment, resulting from failure to properly coordinate the installation or failure to advise the Owner's Representative of conflict.

1.12 SPECIFIED EQUIPMENT

- A. Where specific manufacturers and/or model numbers are provided in the contract documents, it shall be understood that they constitute the design basis for the project. Where approved optional manufacturers are identified, the Contractor may submit based on these manufacturers, however, the submittals must be inclusive of all additional costs (or credits) and coordination requirements necessary to successfully and fully implement said manufacturer's product. See section on Substitutions below for procedures to use non-specified equipment.
- B. **Where required by law**, specified equipment listed on the contract documents shall be interpreted to include the phrase "or equal" to allow products that are equal to those specified. The Engineer of Record has the sole authority to accept a product as equal to the specified product. For an "or equal" product to be accepted for use on the project, the following conditions must be met:
 - 1. The proposed "or equal" substitution shall be submitted within seven days (7) of contract award.
 - 2. Contractor shall notify the Engineer as to how the substituted product will impact the project completion.
 - 3. Contractor shall notify Engineer as to the costs of both the substituted product and the listed product.
 - 4. Contractor shall provide a detailed analysis of the difference between the listed product and proposed product.
 - 5. Contractor shall provide:
 - a. Product identification, manufacturer literature, samples, names and addresses of similar projects where the substituted product has been used along with facility contact information, and

- b. The name and address of the manufacturer's representative
- 6. Contractor shall pay the cost of the design team to review the proposed substitution and any redesign fees.
- C. Engineer's approval of an "or equal" product does not relieve Contractor of the responsibility to submit required shop drawings and to comply with all other requirements of the Contract Documents.

1.13 SHOP DRAWINGS AND EQUIPMENT SUBMITTALS

- A. Prior to construction submit for review all materials and equipment in accordance with Division 01 requirements.
- B. After approval of preliminary list of materials, the Contractor shall submit Shop Drawings and manufacturer's Certified Drawings to the Owner's Representative for approval.
- C. The Contractor shall submit approved Shop Drawings and manufacturer's equipment cuts, of all equipment requiring connection by Division 26, to the Electrical Contractor for final coordination of electrical requirements. Contractor shall bear all additional costs for failure to coordinate with Division 26.
- D. Delegated-Design Submittal: For structural pipe and equipment supports, vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for preparation.
 - 1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic, and where required wind forces required to select vibration isolators, seismic and wind restrains, support framing members, and for designing vibration isolation bases.
 - 2. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment and cantilever loads. Provide base with level top surfaces with integral sloping on bottom to match support structure.
- E. Submittals and Shop Drawings:
 - 1. Submit electronic copies of manufacturer's submittal sheets in one (1) coordinated package per Division. Multiple submissions will not be accepted without prior approval of the Owner's Representative. Organize submittal sheets in sequential order aligned with matching specification section numbers.
 - 2. Provide electronic copies of shop drawings prepared to show details of the proposed installation. Copies of contract design drawings submitted to demonstrate shop drawing compliance will not be accepted.
 - 3. Paper submittals will only be acceptable if specifically required by Division 01.
 - 4. The approved submittals shall be converted into Operations & Maintenance Manuals at the completion of the project. Refer to Division 01 for additional requirements.

1.14 COORDINATION DOCUMENTS/SHOP DRAWINGS

- A. The Contractor shall prepare coordinated Shop Drawings using the same electronic format as the contract documents.

1. The shop drawings shall serve to record the coordination of the installation and location of all HVAC equipment, ductwork, grilles, diffusers, piping, fire sprinklers, lights, audio/video systems, electrical services and all system appurtenances.
 2. The Drawings shall include all mechanical rooms and floor plans.
 3. The Drawings shall be keyed to the structural column identification system, and shall be progressively numbered. Prior to completion of the Drawings, the Contractor shall coordinate the proposed installation with the Owner's Representative and the structural requirements, and all other trades (including HVAC, Plumbing, Fire Protection, Electrical, Ceiling Suspension, and Tile Systems), and provide maintenance access clearance as required by manufacturer installation instructions and as required to meet minimum code clearances. When conflicts are identified, modify system layout as necessary to resolve. Do not fabricate, order or install any equipment or materials until coordination documents are approved by the General Contractor and Owner's Representative.
 4. Within thirty (30) days after award of Contract, submit proposed coordination document Shop Drawing schedule, allowing adequate time for review and approval by parties mentioned above. Drawings or electronic coordination should be prepared and submitted for approval on a floor-by-floor basis to phase with building construction.
- B. The coordination work shall be prepared as follows:
1. Two dimensional AutoCAD / Revit based documents:
 - a. Contractor shall prepare AutoCAD/Revit coordination drawings to an accurate scale of 1/4" = 1'-0" or larger. Drawings are to be same size as Contract Drawings and shall indicate locations, sizes and elevations above finished floor, of all systems. Lettering shall be minimum 1/8" high.
 - b. Contractor shall obtain AutoCAD/Revit drawings from all other trades as required to fully coordinate the installation with architectural, structural, HVAC, plumbing, electrical, fire alarm devices, low voltage devices, and other systems that interface with and/or impact the HVAC work.
 - c. Provide maintenance access clearance as required by manufacturer installation instructions and as required to meet minimum code clearances.
 - d. Drawings shall incorporate all addenda items and change orders.
 - e. Distribute drawings to all other trades and provide additional coordination as needed to assure adequate space for piping, equipment and routing to avoid conflicts. When conflicts are identified, modify system layout as necessary to resolve.
 2. Three dimensional Revit / BIM based documents (if required for project):
 - a. Provide three dimensional Revit model and BIM input information locating all equipment and piping, including valves and fittings, dimensions from column lines, and bottom of pipe elevations above finished floor.
 - b. Contractor shall obtain Revit model and BIM input from all other trades as required to fully coordinate the installation with architectural, structural, HVAC, plumbing, electrical, fire alarm devices, low voltage devices, and other systems that interface with and/or impact the fire protection work.
 - c. Model shall indicate locations of all equipment and piping, including valves and fittings, dimensions from column lines, and bottom of pipe elevations above finished floor.
 - d. Provide maintenance access clearance as required by manufacturer installation instructions and as required to meet minimum code clearances.

- e. Model shall incorporate all addenda items and change orders.
 - f. Distribute Revit model and BIM input information to all other trades and provide additional coordination as needed to assure adequate space for equipment and piping and routing to avoid conflicts. When conflicts are identified, modify system layout as necessary to resolve.
- C. Advise the Owner's Representative in the event a conflict occurs in the location or connection of equipment. Bear all costs for relocation of equipment, resulting from failure to properly coordinate the installation or failure to advise the Owner's Representative of conflict.
- D. Verify in field exact size, location, invert, and clearances regarding all existing material, equipment and apparatus, and advise the Owner's Representative of any discrepancies between those indicated on the Drawings and those existing in the field prior to any installation related thereto.
- E. Final Coordination Drawings with all appropriate information added are to be submitted as Record Drawings at completion of project.
- F. Provide copy of Record Drawings to Testing and Balancing Contractor for their use when doing their work.

1.15 REQUESTS FOR INFORMATION (RFIS)

- A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified (refer to Division 01).
- 1. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.
 - 2. RFIs shall address single questions and related issues only.
 - 3. All RFIs shall be thoroughly reviewed and approved by the General Contractor and/or Construction Manager for accuracy and need for information required before submittal to the Owner's Design Representative.
- B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
- 1. Project name.
 - 2. Project number.
 - 3. Date.
 - 4. Name of Contractor.
 - 5. Name of Architect and/or Construction Manager.
 - 6. RFI number, numbered sequentially and unique.
 - 7. RFI subject.
 - 8. Specification Section number and title and related paragraphs, as appropriate.
 - 9. Drawing number and detail references, as appropriate.
 - 10. Field dimensions and conditions, as appropriate.
 - 11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.

12. Contractor's signature.
 13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
 - a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.
- C. Engineer's Action: Engineer will review each RFI, determine action required, and respond. Allow a minimum three business days for Engineer's response to each RFI, plus additional time for Architect and General Contractor to review and forward. RFIs received by Engineer after 1:00 p.m. will be considered as received the following business day.
1. The following Contractor-generated RFIs will be returned without action:
 - a. Incomplete RFIs or inaccurately prepared RFIs.
 - b. RFIs submitted without indication of review and approval for submission by General Contractor or Construction Manager.
 - c. RFIs addressing multiple unrelated issues.
 - d. Requests for approval of submittals.
 - e. Requests for approval of substitutions.
 - f. Requests for approval of Contractor's means and methods.
 - g. Requests for information already indicated in the Contract Documents.
 - h. Requests for adjustments in the Contract Time or the Contract Sum.
 - i. Requests for interpretation of Engineer's actions on submittals.
 2. Engineer's action may include a request for additional information, in which case Engineer's time for response will date from time of receipt of additional information.

1.16 RECORD DOCUMENTS

- A. Maintain set of Coordination Documents (drawings and specifications) marked "Record Set" at the job site at all times and use it for no other purpose but to record on it all the changes and revisions during construction.
- B. Record Drawings shall indicate revisions to piping and ductwork, size and location both exterior and interior; including locations of coils, dampers and other control devices, filters, boxes and similar units requiring periodic maintenance or repair; actual equipment locations, dimensioned from column lines; actual inverts and locations of underground piping; concealed equipment, dimensioned to column lines; mains and branches of piping systems, with valves and control devices located and numbered, concealed unions located, and with items requiring maintenance located (i.e. – valves, traps, strainers, expansion compensators, tanks, etc.).
- C. Record Specifications shall indicate approved substitutions; Change Orders; and actual equipment and materials provided.
- D. Provide copy of Record Documents to Testing and Balancing Contractor and Commissioning Agent for use when performing their work.
- E. At the completion of the construction transfer all "Record Set" notations to a clean set of drawings and specifications in a neat and orderly fashion that incorporates all site markups to clearly show all changes and revisions to the Contract Documents. Submit copies of Record Documents and CD/DVD disks labeled with all drawings and specifications and other supporting documentation.

- F. Refer also to Division 01 for full scope of requirements.

1.17 START-UP SERVICE AND BUILDING COMMISSIONING

- A. Prior to start-up, be assured that systems are ready, including checking the following: Proper equipment rotation, proper wiring, auxiliary connections, lubrication, venting, controls, and installed and properly set relief and safety valves.
- B. Provide services of factory-trained technicians for start-up of air conditioning units, temperature controls, chillers, boilers, pumps, and other major pieces of equipment. Certify in writing compliance with this Paragraph, stating names of personnel involved and the date work was performed.
- C. Provide certificates of calibration for all sensors required for control and monitoring including temperature and pressure.
- D. Refer to other Division 23 Sections for additional requirements.

1.18 INSTRUCTION, MAINTENANCE, AND O&M MANUALS

- A. O&M Manuals: Upon completion of the work, and prior to training of Owner's personnel, the Contractor shall submit to the Owner's Representative complete set of operating instructions, maintenance instructions, part lists, and all other bulletins and brochures pertinent to the operation and maintenance for equipment furnished and installed as specified in this section, bound in a durable binder. Refer to Division 01.
- B. Contractor shall be responsible for providing proper instruction of the of Owner's personnel for operation and maintenance of equipment, and apparatus installed as specified in Division 23. Training is to be appropriate to the complexity of the equipment. The Contractor shall develop and submit training materials prior to this training. These materials shall include qualifications of the trainer, training agenda, learning objectives, and a written test to be administered at the end of the training session. Operation and Maintenance manuals must present, incorporated and referenced in the training sessions.

1.19 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to project properly identified with names, model numbers, types, grades, compliance labels, and similar information needed for distinct identifications; adequately packaged and protected to prevent damage during shipment, storage, and handling.
- B. Store equipment and materials in an environmentally controlled area at the site, unless off-site storage is authorized in writing. Protect stored equipment and materials from damage. Piping and equipment showing signs of rust shall be removed from site and replaced with new.

1.20 UNIT PRICING SUBMITTALS

- A. Prior to construction submit for review all materials and equipment in accordance with Division 01 requirements.
- B. Preliminary List of Materials and Unit Price Items: Within thirty (30) days after awarding of the Contract, submit to Owner's Representative for preliminary approval a complete list of manufacturer's names and model numbers of proposed materials and equipment. Also include proposed list of unit price items for review.
 - 1. Indicate substituted items.

2. Identify test and balancing agency.
 3. Identify independent testing laboratory for water analysis.
- C. The Contractor shall submit with preliminary list of materials a unit price list for each item furnished on this project. Included with price shall be labor cost index.
- D. Submittals and Shop Drawings shall be submitted as a complete package bound in a 3-ring binder with tabs for each specification section. Submit six (6) typed copies of submittals. Refer to Division 01 for additional requirements.

1.21 TEMPORARY FACILITIES

- A. Refer to Division 01 for the requirements of temporary water and sewer for construction and safety. Provide temporary heating, air conditioning, ventilation, water, and sewer, etc. services as necessary during the construction period and as required to maintain operation of existing systems.
- B. Temporary Heating for Commissioning Tests:
1. Provide temporary heating where needed to provide false load for commissioning tests.
 2. Temporary heating may be from the permanent heating system of the project or from a dedicated temporary heating system. If temporary system is necessary, select facilities known to be safe and without deleterious effect upon what work in place or being installed.
- C. Temporary Cooling for Commissioning Tests:
1. Provide temporary cooling where needed to provide false load for commissioning tests.
 2. Temporary cooling may be from the permanent cooling system of the project or from a dedicated temporary cooling system. If temporary system is necessary, select facilities known to be safe and without deleterious effect upon the work in place or being installed.

1.22 POSTED OPERATING INSTRUCTIONS

- A. Furnish approved operating instructions for systems and equipment indicated in the technical sections for use by operation personnel. The operating instructions shall include wiring diagrams, control diagrams, and control sequence for each principal system and equipment. Print or engrave operating instructions and frame under glass or in approved laminated plastic. Post instructions where directed. Attach or post operating instructions adjacent to each principal system and equipment including start-up, operating, shutdown, safety precautions and procedure in the event of equipment failure. Provide weather-resistant materials or weatherproof enclosures for operating instructions exposed to the weather. Operating instructions shall not fade when exposed to sunlight and shall be secured to prevent easy removal.

1.23 SAFETY AND INDEMNITY

- A. The Contractor shall be solely and completely responsible for conditions of the job site including safety of all persons and property during performance of the work. This requirement will apply continuously and not be limited to normal hours of work.
- B. No act, service, Drawing, review, or Construction Review by the Owner's Representative, Architect, the Engineers or their consultants, is intended to include the review of the adequacy of the Contractor's safety measures, in, on, or near the construction site.

- C. The Contractor performing work under this Division of the Specifications shall hold harmless, indemnify and defend the Owner, the Architect, the Engineers and their consultants, and each of their officers, employees and agents from any and all liability claim, losses or damage arising, or alleged to arise from bodily injury, sickness, or death of a person or persons, and for all damages arising out of injury to or destruction of property arising directly or indirectly out of, or in connection with, the performance of the work under the Division of the Specifications, and from the Contractor's negligence in the performance of the work described in the Construction Contract Documents; but not including the sole negligence of the Owner's Representative, the Architect, the Engineers, and their consultants or their officers, employees and agents.

1.24 CLEANING AND CLOSING

- A. All work shall be inspected, tested, and approved before being concealed or placed in operation.
- B. Upon completion of the work, all equipment installed as specified in this section, and all areas where work was performed, shall be cleaned to provide operating conditions satisfactory to the Owner's Representative.

1.25 WARRANTIES

- A. Refer to general terms and conditions, as well as warranties and obligations defined in Division 1 of the specifications that provide basic warranty requirements for the entire project.
- B. The warranties and corrective obligations provided under this section (i) are in addition to, and not in lieu of, any other warranty, representation, covenant, duty or other obligation (including any corrective obligation) of the Contractor or Manufacturer, (ii) have no relationship to the time when any warranty, representation, duty, covenant or other obligation of Contractor or Manufacturer may be enforced or any dispute resolution proceeding commenced and (iii) are made by the Manufacturer to both the Contractor and the Owner and by the Contractor to Owner.
- C. All equipment and systems shall be provided with a minimum one-year warranty, or longer, as defined in each subsequent specification section. Warranty shall include all parts, material, labor and travel.
- D. Warranty Start Date: The start date for all warranty periods shall be defined as starting from the date of Substantial Completion which shall include the Certificate of Occupancy from the Authority Having Jurisdiction.
- E. Refer to individual Specification sections for additional extended warranty requirements.
- F. Provide complete warranty information for each item, to include product or equipment, date of beginning of warranty or bond; duration of warranty or bond; and names, addresses, telephone numbers and procedures for filing a claim and obtaining warranty services.
- G. Nothing in any separate warranty or other document provided by Contractor or Manufacturer, or both, will apply to limit their liability or responsibility for damages arising out of or related to a breach of any warranty or corrective obligation.
- H. Service during warranty period: Contractor shall provide maintenance as specified elsewhere during the 12-month warranty period.

1.26 GUARANTEE

- A. The Contractor shall guarantee and service all workmanship and materials to be as represented by him and shall repair or replace, at no additional cost to the Owner, any part thereof which may become defective within the period of one (1) year, minimum, after Substantial Completion, ordinary wear and tear excepted.
- B. Contractor shall be responsible for and pay for any damages caused by or resulting from defects in this work.

PART 2 PRODUCTS

2.01 GENERAL

- A. Furnish and install all new material, equipment, and apparatus hereinafter specified unless specifically noted otherwise. All material, equipment, and apparatus shall be identified by the manufacturer's name, nameplate, and pertinent data.
- B. All materials, equipment, and apparatus are mentioned as standards unless noted otherwise. The words "or approved equal" shall be considered to be subsequent to all manufacturers' names used herein, unless specifically noted that substitutes are not allowed.

2.02 SUPPORTS AND ANCHORS

- A. General: Comply with applicable codes pertaining to product materials and installation of supports and anchors, including, but not limited to, the following:
 - 1. UL and FM Compliance: Provide products, which are UL listed and FM approved.
 - 2. ASCE 7 (Latest Edition): American Society of Civil Engineers-Minimum Design Loads for Buildings and Other Structures.
 - 3. MSS Standard Compliance: Manufacturer's Standardization Society (MSS).
 - 4. NFPA: Pamphlet number 13 and 14 for fire protection systems.
 - 5. Provide copper plated or plastic coated supports and attachment for copper piping systems. Field applied coatings or tape is unacceptable.
 - 6. Manufacturer: Mason Industries, Hilti Inc., B-Line/Tolco (Eaton), Anvil, Erico, Kin-Line, Simpson Strong-Tie Co. Inc., Superstrut, Empire, PHD Manufacturing, Carpenter & Paterson, Powers Fasteners or equal.
- B. Horizontal Piping Hangers and Supports: Except as otherwise indicated, provide factory-fabricated hangers and supports of one of the following MSS SP-58 types listed.
 - 1. Adjustable Steel Clevis Hangers: MSS Type 1.
 - 2. Adjustable Steel Swivel Band Hangers: MSS Type 10.
 - 3. U-Bolts: MSS Type 24.
 - 4. Pipe Slides and Slide Plates: MSS Type 35, including one of the following plate types:
 - a. Plate: Unguided type.
 - b. Plate: Guided type.
 - c. Plate: Hold-down clamp type.
 - 5. Pipe Saddle Supports: MSS Type 36, including steel pipe base support and cast iron floor flange.

6. Pipe Saddle Supports with U-Bolt: MSS Type 37, including steel pipe base support and cast iron floor flange.
 7. Adjustable Pipe Saddle Supports: MSS Type 38, including steel pipe base support and cast iron floor flange.
 8. Upper Attachment Side Beam Bracket: MSS Type 34
 9. Upper Attachment Side Beam Angle Bracket: MSS Type 34, UL listed and FM Approved.
 10. Single Pipe Roller with Malleable Sockets: MSS Type 41. Rollers are not required for hydronic piping where spring hangers are utilized.
 11. Adjustable Roller Hangers: MSS Type 43. Rollers are not required for hydronic piping where spring hangers are utilized.
 12. Pipe Roll Stands: MSS Type 44.
 13. Pipe Guides: Provide factory-fabricated guides of cast semi-steel or heavy fabricated steel, consisting of a bolted two-section outer cylinder and base with a two-section guiding spider bolted tight to pipe. Size guide and spiders to clear pipe and insulation (if any), and cylinder. Provide guides of length recommended by manufacturer to allow indicated travel.
- C. Horizontal Cushioned Pipe Clamp: Where pipe hangers are called out to absorb vibration or shock install a piping clamp with thermoplastic elastomer insert. Cush-A-Clamp type by many manufacturers.
- D. Vertical Piping Clamps: Provide factory-fabricated two-bolt vertical piping riser clamps, MSS Type 8 and or four-bolt riser clamps for heavy loads, MSS Type 42. Provide with 1" thick (minimum) neoprene pad on floor with 1/4" thick steel plate to distribute riser clamp weight to pad.
- E. Hanger-Rod Attachments: Except as otherwise indicated, provide factory-fabricated hanger-rod attachments of one of the following MSS types listed.
1. Steel Turnbuckles: MSS Type 13.
 2. Steel Clevises: MSS Type 14.
 3. Swivel Turnbuckles: MSS Type 15.
 4. Malleable Iron Eye Sockets: MSS Type 16.
 5. Steel Weldless Eye Nuts: MSS Type 17.
- F. Building Attachments: Except as otherwise indicated by the Structural Engineering design, provide factory-fabricated building attachments of one of the following types listed.
1. Concrete Inserts:
 - a. MSS Type 18.
 - b. Manufacturers: Hilti #KCS-MD (for metal deck) or HCI-WF (for wood forms), Simpson Strong Tie #Blue Banger Hanger, Powers Fasteners #Bang-It (for metal deck) or #Wood-Knocker (for wood forms), or equal.
 2. Steel Brackets: One of the following for indicated loading:
 - a. Light Duty: MSS Type 31.
 - b. Medium Duty: MSS Type 32.
 - c. Heavy Duty: MSS Type 33.
 3. Horizontal Travelers: MSS Type 58.

4. Concrete Screw Anchors: For floor mounted attachments with maximum allowable pullout and shear force of 250 lbs. (1.1 kN) per anchor regardless of size.
 - a. Manufacturers: Hilti #Kwik Hus EZ-I, Simpson Strong-Tie #Titen HD (or Rod Hanger version), Powers Fasteners #Wedge-Bolt+ (Screw Anchor), Powers Fasteners #Vertigo+ (Rod Hanger), Powers Fasteners #Snake+ (Internally Threaded Screw Anchor), or equal.
 5. Torque-Controlled Expansion Anchor:
 - a. Manufacturers: Hilti #Kwik Bolt TZ, Simpson Strong Tie #Strong-Bolt 2, Powers Fasteners #Power-Stud+ SD1 or Power-Stud+ SD2, or equal.
 6. Screws and Bolts:
 - a. Manufacturers: Bolt Depot, Fastenal, National Bolt & Nut, or equal.
 7. Eye Bolts:
 - a. Manufacturers: Lawson Products, Sierra Pacific, US Cargo Control, or equal.
 8. Powder-Driven Concrete Anchors:
 - a. Only for existing concrete structures with minimum 4000 psi concrete compressive strength.
 - b. Minimum embedment of 1" (25 mm).
 - c. Maximum allowable load of 50 lbs (0.2 kN) per anchor.
 - d. Manufacturer: Hilti #X or D Series, Powers Fasteners #CSI Series, or equal.
- G. Saddles and Shields: Except as otherwise indicated, provide saddles or shields under piping at hangers and supports, factory-fabricated, for all insulated piping. Size saddles and shields for exact fit to mate with adjacent pipe insulation.
1. Pipe Covering Protection Saddles: MSS Type 39; fill interior voids with segments of insulation matching adjoining insulation.
 2. Insulation Protection Shields: MSS Type 40, 18" minimum, or of the length recommended by manufacturer to prevent crushing of insulation. High-density insulation insert lengths shall match or exceed shield length.
 3. Thermal Hanger Shields: Constructed of 360° insert of waterproofed calcium silicate (60 psi flexural strength minimum) encased in 360° sheet metal shield. Provide assembly of same thickness as adjoining insulation. Shield length shall match or exceed length of calcium silicate insert. Shield and insulation length shall be 4" for pipe diameters up to 2", length shall be 6" for pipe sizes 2-1/2" to 6", and 12" length (minimum) for sizes greater than 12" diameter. Alternate Shield: Polyisocyanurate Urethane with a minimum flexural strength of 60 psi, fully encased in Snappltz #360 PVC for pipe sizes to 6" diameter.
 4. Thermal Hanger Couplings: Constructed of high strength plastic coupling to retain tubing and joint insulation at clevis hangers and strut-mounted clamps.
 - a. Manufacturers: Hydra-Zorb #Klo-Shure Insulation Couplings or equal.
- H. Miscellaneous Materials:
1. Metal Framing: Provide products complying with NEMA STD ML1.
 2. Steel Plates, Shapes, and Bars: Provide products complying with ASTM A36.

3. Cement Grout: Portland Cement (ASTM C150, Type I or Type III) and clean uniformly graded, natural sand (ASTM C404, Size No. 2). Mix at a ratio of one-part cement to three-parts sand by volume, with minimum amount of water required for placement and hydration.
4. Heavy-Duty Steel Trapezes: Fabricate from steel shapes selected for loads required. Weld steel in accordance with AWS standards.
5. Pipe Brackets: Copper plated brackets and supports for various mounting options. Insulate brackets attached to metal studs with felt.
 - a. Manufacturers: Holdrite or equal.

2.03 PIPE PORTALS

- A. Where pipe portals are not provided by other sections of Specification, provide prefabricated insulated pipe portals as required for piping penetrating through the roof where shown on plans. Field built pipe portals are acceptable alternatives - provide detail of construction for review.
- B. Standard pipe portals, unless otherwise noted, shall be constructed as follows:
 1. Curb shall be constructed of heavy gauge galvanized steel with continuous welds on shell seams.
 2. Insulation to be 1-1/2" thick, 3 lb. density rigid fiberglass.
 3. Curb to have a raised 3" (minimum), 45° cant.
 4. Curb to have 1-1/2" x 1-1/2" wood nailer (minimum).
 5. Curb height to be 8" (minimum) above roof deck.
 6. Cant strips shall be raised to match roof insulation thickness.
 7. Cover or flashing to be constructed of galvanized steel or other suitable material to provide sturdy weather tight closure. Provide collars and rubber nipples with draw bands of sizes required by piping. Size curb, cover and nipples per manufacturer's recommendations.
- C. Manufacturer: Roof Products Systems, Pate, or equal.

2.04 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping. Coordinate all pipe stands with structural design. Select stands for rated support weight and spacing. Refer to details on drawings for permanent fixed roof support and curbs.
- B. Compact Pipe Stand:
 1. Adjustable strut-based support stands shall only be used as intermediate support points between permanent fixed stands/supports as required to prevent pipe from sagging.
 2. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
 3. Base: Single piece, vulcanized rubber, molded polypropylene or polycarbonate.
 4. Hardware: Galvanized or stainless steel.
 5. Manufacturers: Dura-Blok, Roof Top Blox, Roof Products Systems, nVent CADDY Pyramid, Portable Pipe Hangers, or equal.

6. Accessories: Mount on protective roof pad with a minimum of 6" material extending beyond all edges to allow for future pipe movement. Nonwoven pad shall be constructed spaghetti-like strands of flexible plastic with UV inhibitor and rated for -40°F to 180°F (-40°C to +82°C). Manufacturer: Yellow Spaghetti or equal.

C. Single-Pipe Stand:

1. Adjustable strut-based support stands shall only be used as intermediate support points between permanent fixed stands/supports as required to prevent pipe from sagging.
2. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
3. Base: Single piece, vulcanized rubber, molded polypropylene, or polycarbonate.
4. Vertical Members: Two, galvanized or stainless steel, continuous-thread 1/2-inch (12-mm) rods.
5. Horizontal Member: Adjustable horizontal, galvanized or stainless-steel pipe support channels.
6. Pipe Supports: Roller, strut clamps, clevis hanger or swivel hanger.
7. Hardware: Galvanized or stainless steel.
8. Manufacturers: Dura-Blok, Roof Products Systems, nVent CADDY Pyramid, Portable Pipe Hangers, or equal.
9. Accessories: Mount on protective roof pad with a minimum of 6" material extending beyond all edges to allow for future pipe movement. Nonwoven pad shall be constructed of spaghetti-like strands of flexible plastic with UV inhibitor and rated for -40°F to 180°F (-40°C to +82°C). Manufacturer: Yellow Spaghetti or equal.

D. Multiple-Pipe Stand:

1. Adjustable strut-based support stands shall only be used as intermediate support points between permanent fixed stands/supports as required to prevent pipe from sagging.
2. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
3. Base: Two or more, vulcanized rubber, molded polypropylene, or polycarbonate.
4. Vertical Members: Two or more, galvanized or stainless steel, channels.
5. Horizontal Member: Two or more, adjustable height, galvanized or stainless-steel pipe support slotted channels or plates.
6. Pipe Supports: Roller, strut clamps, clevis hanger or swivel hanger.
7. Hardware: Galvanized or stainless steel.
8. Manufacturers: Dura-Blok, Roof Products Systems, nVent CADDY Pyramid, Portable Pipe Hangers, or equal.
9. Accessories: Mount on protective roof pad with a minimum of 6" material extending beyond all edges to allow for future pipe movement. Nonwoven pad shall be constructed of spaghetti-like strands of flexible plastic with UV inhibitor and rated for -40°F to 180°F (-40°C to +82°C). Manufacturer: Yellow Spaghetti or equal.

E. Curb and Rail-Mounted Type Pipe Stands:

1. Shop- or field-fabricated pipe supports made from structural-steel shapes, channels, continuous-thread rods, with rollers, strut clamps, clevis hangers or swivel hangers for mounting on permanent stationary roof curbs.

2. Coordinate with structural design and mechanical details for attachment through membrane.
3. Manufacturer: Pate, Thybar, ThyCurb, Roof Products Systems, Protech, FastCurbs, or equal.

2.05 EQUIPMENT/PIPING RAILS

- A. Where equipment/pipe rails are not provided by other sections of Specification, provide prefabricated reinforced equipment rails as required for support of equipment and piping. Field built curbs are acceptable alternatives - provide detail of construction for review.
- B. Standard equipment rail, unless otherwise noted, shall be constructed as follows:
 1. Construct of heavy gauge galvanized steel with continuous welds on shell seams.
 2. Provide internal reinforcing supports welded as required to meet application requirements.
 3. Equipment rails to have raised 3" (minimum), 45° cant.
 4. Equipment rails to have 1-1/2" x 1-1/2" wood nailer (minimum) and counterflashing.
 5. Equipment rail height to be 6" (minimum) above roof deck.
 6. Cant shall be raised to match roof insulation thickness.
- C. Equipment rails to be constructed to meet equipment size and weight requirements. Provide tapered rails to match roof pitch where required. Coordinate with structural design and mechanical details for attachment through membrane.
- D. Manufacturer: Pate, Thybar, ThyCurb, Roof Products Systems, or equal.

2.06 ACCESS DOORS FOR WALL AND CEILING APPLICATIONS

- A. Provide all access doors and panels to service equipment under this work, including those which must be installed, in finished architectural surfaces. Refer to other specification sections for specific access doors associated with ductwork and equipment.
- B. Construction:
 1. Frame: 16-gauge steel (minimum).
 2. Door: 16-gauge steel (minimum) or two layers of 20-gauge steel (minimum) for double wall door construction.
 3. Hinge: 1" flange width, continuous piano hinge.
 4. Latching System: screwdriver latch, allen key latch or T-handle latch for non-public access areas. Cylinder key lock for public access areas. Cam latch for access to fire/life safety systems.
 5. Paint: white prime coated.
- C. Size:
 1. Access doors shall be of a size to permit access and removal of equipment for servicing. Access door shall have same rating as the wall or ceiling in which it is mounted. Provide access panel for each trap primer, concealed valve, fire and combination fire/smoke dampers, volume dampers, and other equipment requiring access. Use no panel smaller than 12" x 12" for simple manual access, or smaller than 24" x 24" where personnel must pass through.

D. Architectural Coordination:

1. Refer to Division 01 Architectural specifications and drawings for additional requirements for each surface. Contractor is to submit schedule of access panels for approval. Exact size, number and location of access panels are not shown on Plans.
2. Included under this work is the responsibility for verifying the exact location and type of each access panel or door required to service equipment under this work and in the proper sequence to coordinate with construction schedule and with prior approval of the Owner's Representative.
3. Access doors in fire rated partitions and ceilings shall carry all label ratings as required to maintain the rating of the rated assembly.
4. Submit markup of architectural plans showing size and location of access panels required for equipment access for approval by Owner's Representative.

E. Manufacturers: Milcor, Karp, Nystrom, Elmdor/Stoneman, Durodyne, Austin Hardware, or equal.

2.07 IDENTIFICATION MARKERS

A. Mechanical Identification Materials: Provide products of categories and types required for each application as referenced in other Division 23 Sections. Where more than single type is specified for application, selection is installer's option, but provide single selection for each product category. Stencils, hand printed, painted, and felt pen markers are not acceptable.

B. Plastic Pipe Markers:

1. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially or fully cover the circumference of pipe, or insulated pipe, and to attach to pipe without fasteners or adhesive complying with ANSI A13.1. Minimum letter size shall be 1/2" high.
2. Pressure Sensitive Type: Provide pre-printed, permanent adhesive, color coded, pressure sensitive vinyl pipe markers, complying with ANSI A13.1. Secure both ends of markers with color coded adhesive vinyl tape.
3. Insulation: Furnish 1" thick molded fiberglass insulation with jacket for each plastic pipe marker to be installed on uninsulated pipes subjected to fluid temperatures of 125°F (52°C) or greater. Cut length to extend 2" beyond each end of plastic pipe marker.
4. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as separate unit of plastic.
5. Nomenclature shall include service type and directional arrow as follows:
 - a. Chilled Water Supply and Return: green background with white lettering.
 - b. Heating Water Supply and Return: yellow background with black lettering.
 - c. Condenser Water Supply and Return: green background with white lettering.
 - d. Heat Pump Loop Supply and Return: green background with white lettering.
 - e. Refrigerant: yellow background with black lettering.
 - f. Exhaust air: blue background with white lettering.
 - g. Other piping services: Comply with ANSI and ASME A13.1 standards.
 - h. Direction of water flow.

C. Plastic Duct Markers:

1. Provide duct labels to indicate the system and direction of flow. Submit a labeling product that is suitable for the surface to be labeled.
 - a. Pressure sensitive, 16" long by 2-1/4" high (minimum), 3 mil thick high gloss adhesive backed vinyl, 1-1/2" high letters, and color coded per ducted service.
 2. Nomenclature shall include service type and directional arrow as follows:
 - a. Supply air (cold service): green background with white lettering.
 - b. Supply air (hot service): yellow background with black lettering.
 - c. Return air: blue background with white lettering.
 - d. Relief air: blue background with white lettering.
 - e. Outside air: blue background with white lettering.
 - f. Exhaust air: blue background with white lettering.
 - g. Other air services: Comply with ANSI and ASME A13.1 standards.
 - h. Direction of air flow.
- D. Valve Tags:
1. Brass Valve Tags: Provide 1-1/2" diameter 19-gauge polished brass valve tags with stamp-engraved piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener. Fill tag engraving with black enamel.
 2. Plastic Laminate Valve Tags (indoors only): Provide 3/32" thick engraved plastic laminate valve tags, with piping system abbreviations in 1/4" high letters and sequenced valve number 1/2" high, and with 5/32" hole for fasteners.
 3. Valve Tag Fasteners: Provide solid brass chain (wire link or beaded type), or solid brass S-hooks of the sizes required for proper attachment of tags to valves and manufactured specifically for that purpose.
- E. Access Panel Markers: Provide 1/16" thick (minimum) engraved plastic laminate access panel markers, with abbreviations and numbers corresponding to concealed valve or device.
- F. Plastic Equipment Signs:
1. Provide 4-1/2" x 6" (minimum) plastic laminate sign, ANSI A.13 color coded with engraved white core lettering. Minimum letter size shall be 1/2" high.
 2. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substrate.
 3. Nomenclature: Include the following, matching terminology on schedules as closely as possible:
 - a. Tag number
 - b. Equipment service.
 - c. Design capacity.
 - d. Other design parameters, such as pressure drop, entering and leaving conditions, rpm, etc.
 4. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2"x11" bond paper, tabulate each equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

- G. Underground-Type Plastic Line Markers: Provide 6" wide x 4 mils thick multi-ply tape, consisting of solid metallic foil core between 2 layers of plastic tape. Markers to be permanent, bright colored, continuous printed, intended for direct burial service.
- H. Acceptable Manufacturers: Craftmark, Seton, Brady, Marking Services, Kolbi, or Brimar.

2.08 ACOUSTICAL BLANKET INSULATION

- A. Application:
 - 1. Wrap high noise producing equipment and ductwork where occupied room noise levels cannot be obtained by architectural room barrier construction alone.
 - a. Wrap variable air volume terminal where located above noise sensitive rooms such as conference rooms, lobbies and offices.
 - b. Wrap ductwork where located above noise sensitive rooms such as conference rooms, lobbies and offices.
 - c. Wrap fans where located above noise sensitive rooms such as conference rooms, lobbies and offices.
 - d. Wrap chillers and pumps where located adjacent to noise sensitive rooms.
- B. Manufacturers: Kinetics Noise Control #KNM-100ALQ, or equal by BRD Noise and Vibration Control, GLT Products #Vinaflex with Absorber/Decoupler, or Singer Safety Company, Quilted Fiberglass Panels.
- C. Composite material, quilted, with reinforced aluminized-face, mass loaded limp vinyl bonded to scrim-face, quilted fiberglass absorber/decoupler.
- D. The barrier shall be constructed of a 0.12" (3 mm), minimum, thick mass loaded, limp vinyl sheet bonded to a thin layer of reinforced aluminum foil on one side. The barrier shall have a nominal density of 1.0 lbs./ft² (4.9-kg/m²) and shall have a minimum STC rating of 28 as measured in an independent accredited acoustical laboratory in accordance with ASTM E90 and/or E413.
- E. The decoupling layer shall be a combination of 1.0" (25 mm), minimum, fiberglass batting, non-woven porous scrim-coated glass cloth, quilted together in a matrix of 4" (100 mm) diamond stitch pattern which encapsulates the glass fibers.
- F. The composite material shall be fabricated to include a minimum 2" (50 mm) wide barrier overlap tab extending beyond the quilted fiberglass to facilitate a leak-tight seal around field joints.
- G. The barrier shall have a Flame Spread Index of no more than 10 and a Smoke Development Index of no more than 40 when tested for Surface Burning Characteristic per ASTM E84.

2.09 ELECTRICAL

- A. General:
 - 1. All electrical material, equipment, and apparatus specified herein shall conform to the requirements of Division 26.
 - 2. Provide all motors for equipment specified herein. Provide motor starters, controllers, and other electrical apparatus and wiring which are required for the operation of the equipment specified herein.
 - 3. Set and align all motors and drives in equipment specified herein.

4. Provide expanded metal or solid sheet metal guards on all V-belt drives to totally enclose the drive on all sides. Provide holes for tachometer readings. Support guards separately from rotating equipment.
 5. Provide for all rotating shafts, couplings, etc., a solid sheet metal, inverted "U" cover over the entire length of the exposed shaft and support separately from rotating equipment. Cover shall extend to below the bottom of the shaft and coupling, and shall meet the requirements of the State Industrial Safety Regulations.
 6. Specific electrical requirements (i.e., horsepower and electrical characteristics) for mechanical equipment are scheduled on the Drawings.
- B. Quality Assurance:
1. Electrical components and materials shall be UL or ETL listed/labeled as suitable for location and use - no exceptions.
- C. Motors:
1. The following are basic requirements for simple or common motors. For special motors, more detailed and specific requirements are specified in the individual equipment Specifications.
 2. Torque characteristics shall be sufficient to satisfactorily accelerate the driven loads.
 3. Motor sizes shall be large enough so that the driven load will not require the motor to operate in the service factor range. Unless otherwise noted on plans, all motors 3/4 HP and larger shall be rated for 3-phase operation above 200 volts. Unless otherwise noted on plans, all motors up to 1/2 HP shall be rated for 120-volt, single phase operation.
 4. Temperature Rating: Motor meets class B rise with class F insulation.
 5. Service Factor: 1.15 for poly-phase motors and 1.35 for single phase motors.
 6. Motor Construction: NEMA Standard MG 1, general purpose, continuous duty, Design "B", except "C" where required for high starting torque.
 - a. Frames: NEMA Standard No. 48 or 56; use driven equipment manufacturer's standards to suit specific application.
 - b. VFD driven motors to be provided as inverter ready and equipped with a shaft grounding device.
 - c. Bearings:
 - 1) Ball or roller bearings with inner and outer shaft seals.
 - 2) Re-greasable, except permanently sealed where motor is normally inaccessible for regular maintenance.
 - 3) Designed to resist thrust loading where belt drives or other drives product lateral or axial thrust in motor.
 - 4) For fractional horsepower, light duty motors, sleeve type bearings are permitted.
 - 5) Enclosure Type:
 - a) Open drip-proof (ODP) motors for indoor use in clean air environments.
 - b) Totally enclosed fan cooled (TEFC) motors for outdoor use and indoor application in dirty environments.

- c) Totally enclosed air over (TEAO) motors for motors in the airstream of cooling towers and fluid coolers.
- d) Explosion proof motors where motor is located in environments with hazardous or flammable quantities of vapors, gases, mists or dusts or where motor is located inside ductwork or cabinets with hazardous vapors, gases, mists or dusts that exceed 25 percent of the lower flammability limit.
- e) Guarded drip-proof motors where exposed to contact by employees or building occupants.
- f) Weather protected Type I for outdoor use, Type II where not housed.
- d. Overload Protection: Built-in thermal overload protection where external overload protection is not provided and, where indicated, internal sensing device suitable for signaling and stopping motor at starter.
- e. Noise Rating: "Quiet."
- f. Efficiency:
 - 1) Motors shall have a minimum efficiency per governing State or Federal codes, whichever is higher.
 - 2) And, motors shall meet the NEMA premium efficiency standard.
- g. Nameplate: Indicate the full identification of manufacturer, ratings, characteristics, construction, special features and similar information.

D. Starters and Electrical Devices:

- 1. Motor Starter Characteristics:
 - a. Enclosures: NEMA 1, general purpose enclosures with padlock ears, except in wet locations shall be NEMA 3R with conduit hubs.
 - b. Type and size of starter shall be as recommended by motor manufacturer and the driven equipment manufacturer for applicable protection and start-up condition.
- 2. Manual switches shall have pilot lights and all required switch positions for multi-speed motors. Overload Protection: Melting alloy or bi-metallic type thermal overload relays, sized according to actual operating current (field measured).
- 3. Magnetic Starters:
 - a. Heavy duty, oil resistant, hand-off-auto (HOA), or as indicated, and pilot lights, properly arranged for single speed or multi-speed operation as indicated.
 - b. Trip-free thermal overload relays, each phase, sized according to actual operating current (field measured).
 - c. Interlocks, pneumatic switches and similar devices as required for coordination with control requirements of Division 23 Controls sections.
 - d. Built-in primary and secondary fused control circuit transformer, supplied from load side of equipment disconnect.
 - e. Externally operated manual reset.
 - f. Under-voltage release or protection for all motors over 20 hp.
- 4. Motor Connections: Liquid tight, flexible conduit, except where plug-in electrical cords are specifically indicated.

- E. Low Voltage Control Wiring:
 - 1. General: 14-gauge, Type THHN, color coded, installed in conduit.
 - 2. Manufacturer: General Cable Corp., Alcan Cable, American Insulated Wire Corp., Senator Wire and Cable Co., or Southwire Co.

- F. Disconnect Switches:
 - 1. Fusible Switches: For equipment 1/2 HP or larger, provide fused, each phase; heavy duty; horsepower rated; spring loaded quick-make, quick-break mechanism; dead front line side shield; solderless lugs suitable for copper or aluminum conductors; spring reinforced fuse clips; electro silver plated current carrying parts; hinged doors; operating lever arranged for locking in the "OPEN" position; arc quenchers; capacity and characteristics as indicated.
 - 2. Non-Fusible Switches: For equipment less than 1/2 horsepower, switch shall be horsepower rated; toggle switch type with thermal overload quantity of poles and voltage rating as required.

PART 3 EXECUTION

3.01 GENERAL

- A. Workmanship shall be performed by licensed journeymen or master mechanics and shall result in an installation consistent with the best practices of trades.
- B. Install work uniform, level and plumb, in relationship to lines of building. Do not install any diagonal, or otherwise irregular work unless so indicated on Drawings or approved by Owner's Representative.

3.02 MANUFACTURER'S DIRECTIONS

- A. Follow manufacturers' directions and recommendations in all cases where the manufacturers of articles used on this Contract furnish directions covering points not shown on the Drawings or covered in these Specifications.
 - 1. If the contractor must deviate from the manufacturer's recommendations provide a letter from the manufacturer indicating the clearance to be provided is acceptable for scheduled performance and maintenance.

3.03 INSTALLATION

- A. Coordinate the work between the various Mechanical Sections and with the work specified under other Divisions. If any cooperative work must be altered due to lack of proper supervision or failure to make proper and timely provisions, the alternations shall be made to the satisfaction of the Engineer and at the Contractor's cost. Coordinate wall and ceiling work with the General Contractor, and other trades in locating ceiling air outlets, wall registers, etc.
- B. Inspect all material, equipment, and apparatus upon delivery and do not install any damaged or defected materials.

3.04 SUPPORTS AND HANGERS

- A. Prior to installation of hangers, supports, anchors, and associated work, installer shall meet at project site with the General Contractor, installer of each component of associated work, inspection and testing agency representatives, (if any), installers of other work with requirements specified.
- B. Installation of Building Attachments: Install building attachments at required locations within concrete or on structural steel for proper piping support. Install additional building attachments where support is required for additional concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Install concrete inserts before concrete is placed. Fasten insert securely to forms. Where Gypcrete is indicated, install reinforcing bars through opening at top of inserts. Inserts and anchors shall be located no closer than 6" to any edge and no closer than 1" from any pre-tension cables or embedded steel and as required per manufacturer's instructions and Structural Engineer.
- C. Proceed with installation of hangers, supports, and anchors only after required building structural work has been completed in areas where the work is to be installed. Correct inadequacies including, but not limited to, proper placement of inserts, anchors, and other building structural attachments.
- D. Install hangers, supports, rails, clamps, and attachments to support piping properly from building structure. Arrange for grouping of parallel runs of horizontal piping to be supported together on trapeze type hangers and rails where possible. Where piping of various sizes is to be supported together by trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipe. Do not use wire or perforated metal to support piping, and do not support piping from other piping.
- E. Install pipe supports (hangers, rails, etc.) within 12 inches of every change in piping direction (only one support required at each change in direction), end of pipe run or concentrated load, and within 36 inches of every major piece of equipment. Supports (hangers, rails, etc.) shall be installed on both sides of flexible connections. Where flexible connection connects directly to a piece of equipment only one support is required.
- F. Install hangers, rails, and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories. Except as otherwise indicated for exposed continuous pipe runs, install hangers and supports of same type and style as installed for adjacent similar piping.
- G. Support sprinkler piping and gas independently of other piping.
- H. Prevent electrolysis in support of copper tubing by use of hangers and supports which are copper plated, or by other recognized industry methods.
- I. Hanger Spacing in accordance with following minimum spans for support of individual pipes and a minimum of one hanger per elbow at each change of direction. For straight runs of horizontal piping with no concentrated loads such as valves, flanges, expansion joints, or other components. Sections of piping with concentrated loads will have to be considered carefully and a determination made as to appropriate spacing and rod size for the given situation. Other spacing and rod sizes may be considered in compliance with Table 121.5 of ASME B31.1, ANSI/MSS SP-58 Table 4, and local mechanical code, but shall not exceed 12 feet for any pipe size. Comply with more restrictive requirements of local codes where those exceed the following minimum criteria.
 - 1. Steel Pipe:

Steel Pipe Size	Hanger/Support Spacing (Maximum)	Rod Size (Minimum)
1/2" to 1"	7 feet	3/8"
1-1/4" to 2-1/2"	10 feet	3/8"
3" to 4"	12 feet	3/8"
5" to 8"	12 feet	1/2"
10" to 12"	12 feet	5/8"
14" to 16"	12 feet	3/4"

2. Copper Pipe:

Copper Pipe Size	Hanger/Support Spacing (Maximum)	Rod Size (Minimum)
1/2"	4 feet	3/8"
3/4" to 2"	6 feet	3/8"
2-1/2" to 4"	8 feet	3/8"
5" to 8"	8 feet	1/2"

3. Plastic/Fiberglass Pipe:

Plastic/Fiberglass Pipe Size	Hanger/Support Spacing (Maximum)	Rod Size (Minimum)
Up to 1"	3 feet	3/8"
1-1/4" to 2-1/2"	4 feet	3/8"
3" to 8"	5 feet	1/2"

4. Trapeze support: Provide details stamped by a Registered Structural Engineer for the project state indicating trapeze channels, support rod sizes, and spacing.
5. Maximum threaded rod loading: Below are maximum loads for hanger rods based on ASHRAE Fundamentals Handbook (Pipe Design Chapter) and ASTM A36, with a safety factor.

Maximum Allowable Loading Capacity for Hanger Rod in Tension	
Nominal Rod Diameter	Load (Maximum Weight)
3/8"	610 pounds
1/2"	1,130 pounds
5/8"	1,810 pounds
3/4"	2,710 pounds
7/8"	3,770 pounds
1"	4,960 pounds

J. Provisions for Movement:

1. Install hangers and supports to allow controlled movement of piping systems and to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
2. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connecting equipment.
3. Insulated Piping: Comply with the following installation requirements:
 - a. Clamps: Attach clamps, including spacers, (if any), to piping with clamps projecting through insulation.
 - b. Shields: Where low compressive strength insulation or vapor barriers are indicated on cold or chilled water piping, install shields or inserts.
 - c. Saddles: Where insulation without vapor barrier is indicated install protection saddles.

K. Installation of Anchors:

1. Install anchors at proper locations to prevent excessive stresses and to prevent transfer of loading and stresses to connected equipment.
2. Fabricate and install anchor by welding steel shapes, plates and bars to piping and to structure.
3. Where expansion compensators are indicated, install anchors in accordance with expansion unit manufacturer's written instructions, to limit movement of piping and forces to maximums recommended by manufacturer for each unit.
4. Anchor Spacing: Where not otherwise indicated, install anchors at ends of principal pipe runs and at intermediate points in pipe runs between expansion loops and bends.

L. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

M. Equipment Supports:

1. Provide all concrete bases, unless otherwise furnished as work of Division 03. Furnish to Division 03 Contractor scaled layouts of all required bases, with dimensions of bases, and location to column centerlines. Furnish templates, anchor bolts, and accessories necessary for base construction. Coordinate size of concrete pads and placement of anchors bolts with structural design. Anchor bolts shall be placed to maintain 6", minimum, or greater distance from concrete pad edges.
2. Provide structural steel stands to support equipment not floor mounted or hung from structure. Construct of structural steel members or steel pipe and fittings. Provide factory-fabricated tank saddles for tanks.

N. Adjusting:

1. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments.
2. Support Adjustment: Provide grout under supports to align piping and equipment to proper level and elevations.
3. Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch-up paint.

O. Upper Building Attachments: Powder-actuated fasteners may be used where appropriate for construction materials to which hangers are being attached per the following:

1. Maximum allowable tension load shall not exceed 50 lbs. (0.2 kN) per attachment.
2. May only be used to supporting for ductwork up to two (2) square feet (0.2 m²) in cross sectional area and for control conduit clips.
3. May not be used for support of any piping, equipment, or ductwork greater than two (2) square feet (0.2 m²) in cross sectional area.
4. Use concrete inserts before placing concrete in new construction.
5. Install powder-actuated concrete fasteners after concrete is placed and completely cured to concrete compressive strength of 4000 psi or greater.

6. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches (100 mm) thick.
7. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches (100 mm) thick.
8. Do not use powder-actuated concrete fasteners for seismic restraints.

3.05 WALL, FLOOR, AND ROOF PENETRATIONS

- A. All pipe and duct penetrations through rated and non-rated assemblies shall be sized to allow for compliance with structural integrity and fire ratings, as applicable. Penetrations of fire-resistance-rated assemblies shall be protected by an approved firestop system installed and tested in accordance with ASTM E814 or UL 1479. The system shall have an F rating/T rating of not less than the required rating of the floor or wall penetrated. Where sleeves are required, the sleeve size shall be installed with the inside clear diameter providing clearances as required below. Coordinate the required opening sizes with the manufacturer of the fire protection products.
 1. Uninsulated pipe penetrations through non-rated walls and floors: pipe penetration sizes shall be a 1" (minimum) to 2" (maximum) larger than the outside diameter of each uninsulated pipe.
 2. Insulated pipes penetrations through non-rated walls and floors: pipe penetration sizes shall be a 1" (minimum) to 2" (maximum) larger than the outside diameter of each pipe, including insulation.
 3. Uninsulated pipe penetrations through fire rated walls and floors, and through roof: penetration sizes shall be a 1/2" (minimum) to 1-1/2" (maximum) larger than the outside diameter of each uninsulated pipe to provide minimum 1/4" annular space between the outside of the pipe surface and assembly. Coordinate with specific manufacturer requirements and UL listing.
 4. Insulated pipe penetrations through fire rated walls and floors, and through roof: pipe penetration sizes shall be a 1/2" (minimum) to 1-1/2" (maximum) larger than the outside diameter of each insulated pipe to provide minimum 1/4" annular space between the outside of the insulation surface and assembly. Coordinate with specific manufacturer requirements and UL listing.
 5. Uninsulated pipe penetrations through foundation and basement walls: penetration sizes shall be larger than the outside diameter of each uninsulated pipe to allow adequate space for installation of mechanical link seals. Coordinate with specific manufacturer requirements.

3.06 ROOF CURBS

- A. Install per manufacturer's instructions.
- B. Coordinate with other trades so units are installed when roofing is being installed, as applicable.
- C. Verify roof insulation thickness and adjust height of perimeter cant strips to accommodate insulation and roofing material installation.
- D. Provide rigid insulation, minimum 1" thick, on exposed elements of roof curb.
- E. Provide additional rigid insulation inside the roof curb perimeter secured to roof surface, around ductwork penetrations, to match the adjacent roof insulation levels (same R-value or greater).

3.07 EQUIPMENT RAILS AND PIPE PORTALS

- A. Install per manufacturer's instructions.
- B. Coordinate with other trades so units are installed when roofing is being installed, as applicable.
- C. Verify roof insulation thickness and adjust height of perimeter cant strips to accommodate insulation and roofing material installation.

3.08 ELECTRICAL COORDINATION

- A. Division 23 installers shall coordinate with Division 26 work to provide complete systems as required to operate all mechanical devices installed under this Division of work.
- B. Installation of Electrical Connections: Furnish, install, and wire (except as may be otherwise indicated) all heating, ventilating, air conditioning, etc., motors and controls in accordance with the drawings and in accordance with equipment manufacturer's written instructions and with recognized industry practices, and complying with applicable requirements of UL, NEC, and NECA's "Standard of Installation" to ensure that products fulfill requirements.
- C. Division 23 has responsibilities for electrically powered mechanical equipment which is specified in Division 23 Specifications or scheduled on Division 23 Drawings as follows:
 - 1. Motors: Furnish and install all motors necessary for mechanical equipment.
 - 2. Magnetic Starters: Furnish all magnetic starters whether manually or automatically controlled which are necessary for mechanical equipment. Furnish these starters with all control relays or transformers necessary to interface with mechanical controls. If the starter is factory installed on a piece of Division 23 equipment, also furnish and install the power wiring between starter and motor.
 - 3. Variable Frequency Drives: Provide all VFD's associated with mechanical equipment. If the drive is installed on a piece of factory assembled equipment the wiring between motor and drive is to be provided as part of the factory equipment.
 - 4. Disconnects: Provide the disconnects which are part of factory wired Division 23 equipment. Factory wiring to include wiring between motor and disconnect or combination starter/disconnect.
 - 5. Controls: Division 23 Contractor (including the Building Automation System (BAS) Controls subcontractor) is responsible for furnishing the following equipment in its entirety. This equipment includes but is not limited to the following:
 - a. Additional control panels beyond what is identified on drawings shall be provided by BAS contractor in order to provide a complete control system at no additional cost to Owner.
 - b. Control relays necessary for controlling Division 23 equipment.
 - c. Control transformers necessary for providing power to controls for Division 23 equipment.
 - d. Line voltage thermostats.
 - e. Low or non-load voltage control components.
 - f. Remote bulb thermostats.
 - g. Non-life safety related valve or damper actuators.
 - h. Float switches.
 - i. Solenoid valves.
 - j. Switches.

- k. Refrigeration controls.
 - l. Communications wiring and conduit between control devices and mechanical equipment. Control wiring gauge in stranded or solid wire configuration shall be the responsibility of the contractor to coordinate with manufacturers for allowable lengths and load requirements to assure complete and operational systems.
 - m. Raceway to support control cabling.
6. Fire/Smoke Dampers: Division 23 is responsible for providing and physically installing the damper and for installing any required control interface wiring to Division 23 controls.
- a. Where fire/smoke dampers are part of an integrated smoke control system, Division 23 is responsible for providing dampers with necessary end switches for use by Division 28 in providing proof of closure.
 - b. Where these dampers are not part of an integrated area wide smoke detection system, Division 23 is responsible for providing each fire/smoke damper with a dedicated duct detector installed per the requirements of the building code. If not integral with the damper assembly, the detector is to be installed in ductwork by Division 23 but wired to the damper controller by Division 26.
- D. Division 26 Electrical Responsibilities:
- 1. BAS Controls Contractor shall initiate and coordinate a meeting with the Electrical Contractor and General Contractor to coordinate all BAS component locations and wiring requirements prior to start of construction. All additional costs associated with lack a coordinated shall be the responsibility of the BAS Contractor at no additional cost to the Owner.
 - 2. Additional power requirements, including conduit and wiring, for additional or relocated control panels and devices shall be coordinated and the responsibility of the BAS Controls Contractor at no additional cost to Owner.
 - 3. Motors: Provide the power wiring for the motors from servicing panel to motor controller.
 - 4. Magnetic Starters: Except where magnetic starters are factory installed on Division 23 factory assembled equipment, Division 26 is to install magnetic starters furnished by Division 23 and install the necessary power wiring to the starter and from the starter to the motor. In the case of factory installed starters, Division 26 is to install the necessary power wiring from source panel/disconnect to the starter.
 - 5. Variable Frequency Drives: Provide the necessary power wiring to the VFD and from the VFD to the motor except in the case of factory installed VFD's where wiring between the motor and VFD is to be by Division 23.
 - 6. Disconnects: Provide all disconnects necessary for Division 23 mechanical equipment which are not provided as part of factory wired Division 23 equipment. Provide power wiring to all disconnects. In addition, provide power wiring between motor and disconnect when the disconnect is not factory installed.
 - 7. Controls: Division 26 is responsible for providing power to mechanical control panels and provide final power connection to Division 23 provided control transformers.
 - 8. Fire/Smoke Dampers: Division 26 is responsible for power wiring to each damper and as follows:
 - a. Where these dampers are part of an integrated smoke control system Division 28 is responsible for providing the detectors and for all fire/smoke detection system wiring necessary to integrate dampers and related end switches into the system.

- b. Where these dampers are not part of an integrated area wide smoke detection system, Division 23 is responsible for providing each fire/smoke damper with a dedicated duct smoke detector installed per the requirements of the building code. If not integral with the damper assembly, the detector is to be installed by Division 23, but wired for damper control by Division 26.
- E. Motors and Motor Control Equipment: Conform to the standards of the NEMA. Equip motors with magnetic or manual line starters with overload protection. Motor starters and line voltage controls shall be installed under Electrical Section but located and coordinated as required under this Section of the work. Starters shall be combination type with non-fusible disconnect switches. All single phase fractional horsepower motors shall have built-in overload protection.

3.09 FIELD PAINTING

- A. All painting shall be provided under this Division work, unless otherwise specified under Section 09 91 00: Painting. Painting schemes shall comply with ANSI A13.1. Paint all exposed materials such as piping, ductwork, equipment, insulation, steel, etc. The inside surface of visible ductwork above diffusers/grilles shall be painted flat black.
- B. All exposed work under Division 23 shall receive either a factory finish or a field prime coat finish, except:
 - 1. Exposed copper piping.
 - 2. Aluminum jacketed outdoor insulated piping.

3.10 FACTORY PAINTING

- A. Manufacturer's standard factory painting systems may be provided subject to certification that the factory painting system applied will withstand 125 hours in a salt-spray fog test, except that equipment located outdoors must withstand 500 hours in a salt-spray fog test. Salt-spray fog test must be in accordance with ASTM B117, and for that test the acceptance criteria must be as follows: immediately after completion of the test, the paint must show no signs of blistering, wrinkling, or cracking, and no loss of adhesion; and the specimen must show no signs of rust creepage beyond 3 mm 0.125 inch on either side of the scratch mark. The film thickness of the factory painting system applied on the equipment must not be less than the film thickness used on the test specimen. If manufacturer's standard factory painting system is being proposed for use on surfaces subject to temperatures above 120°F (50°C), the factory painting system must be designed for the temperature service.

3.11 COASTAL OR MARINE ENVIRONMENTS

- A. Coastal and marine environments are characterized by the abundance of sodium chloride (salt) which is carried by sea spray, mist or fog. Salt spray can be carried several miles by ocean breezes and tidal currents, often up to five (5) miles from the coast. As a result, protection of HVAC equipment from ocean-borne electrolytes is necessary to assure long equipment life. Line-of-sight distance from the ocean, prevailing wind direction, relative humidity, wet/dry time, and coil temperature will determine the severity of corrosion potential in the coastal environment. If the condenser coils or evaporator coils face the ocean or faces into the prevailing winds from the coast, there is a higher probability of seawater contamination.

- B. Coils shall have a flexible epoxy polymer electrostatic coating uniformly applied to coil and fin surface areas with no material bridging between fins. Coating shall be applied in factory, not field applied. The coating process will ensure complete coil encapsulation and a uniform dry film thickness from 0.6 to 1.2 mils on all surface areas including fin edges and meet 4B to 5B rating cross-hatch adhesion per ASTM B3359. Corrosion durability will be confirmed through testing to no less than 5,000 hours salt spray resistance per ASTM B117 using scribed aluminum test coupons. Coating shall be applied to all coils rated for air flows greater than 3,000 cfm.
- C. Equipment cabinets shall be coated with painted on all sides of metal skin and framing elements. No exposed metal is allowed. Coating shall be applied in factory, not field applied. The paint shall be applied using powder coating or spray epoxy as required to meet a 5,000 hour salt spray resistance per ASTM B117.

3.12 IDENTIFICATION MARKERS

- A. General: Where identification is to be applied to surfaces which require insulation, painting, or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.
- B. Piping System Identification:
 - 1. Install pipe markers on each system indicated to receive identification, and include arrows to show normal direction of flow.
 - 2. Locate pipe markers as follows:
 - a. Near each valve and control device.
 - b. Near each branch, excluding short take-offs for fixtures and terminal units; mark each pipe at branch, where there could be question of flow pattern.
 - c. Near locations where pipes pass through walls or floors/ceilings, or enter non-accessible enclosures.
 - d. At access doors, manholes, and similar access points which permit view of concealed piping.
 - e. Near major equipment items and other points of origination and termination.
 - f. Spaced horizontally at maximum spacing of 20' along each piping run, with minimum of one in each room.
 - g. Vertically spaced at each story transversed.
- C. Ductwork Identification: A minimum of every 50' for all ductwork, 12" or more in diameter or width, where ducts are concealed above accessible ceilings.
- D. Mechanical Equipment Identification: Locate engraved plastic laminate signs on or near each major item of mechanical equipment and each operational device. Provide signs for the following:
 - 1. Main control and operating valves, including safety devices.
 - 2. Meters, gauges, thermometers, and similar units.
 - 3. Pumps.
 - 4. Chillers.
 - 5. Boilers.
 - 6. Fans.

7. Compressors and similar motor-driven units.
 8. Hot water system mixing valves and similar equipment.
 9. Heat exchangers and similar equipment.
 10. Balancing dampers and mixing boxes.
 11. Packaged HVAC central-station and zone-type units.
 12. Tanks and pressure vessels.
 13. Strainers, filters, treatment systems and similar equipment.
- E. Text of Signs: In addition to name of identified unit, provide lettering to distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations. Equipment signs shall include an identification of the area or other equipment served by the equipment being labeled.
- F. Underground Piping Identification: During backfilling/topsoiling of each exterior underground piping system, install continuous underground-type plastic line marker, located directly over buried line at 6" to 8" below finished grade. Where multiple small lines are buried in common trench and do not exceed overall width of 16", install single line marker.

3.13 VIBRATION AND DYNAMIC BALANCING

- A. All equipment submitted and installed by Division 23 shall not exceed maximum tolerances as specified by the "International Research and Development Corporation", Worthington, Ohio, measured by the displacement, peak to peak, as follows:
1. All Fans: Below severity chart labeled "FAIR", maximum velocity of 0.0786 in/sec, peak.
 2. Pump and Electric Motors: Below severity chart labeled "SLIGHTLY ROUGH", maximum vibration velocity of 0.157 in/sec, peak.
 3. Compressors: Same as pumps.
- B. Where installed equipment noise or vibration is objectionable to the Owner's Representative, it shall be responsibility of the contractor to conduct testing to confirm that the equipment does not exceed the standard.
- C. Correction shall be made to all equipment, which exceeds vibration tolerances specified above. Final vibration levels shall be reported as described above.

3.14 TESTING

- A. Provide all tests specified hereinafter and as otherwise required. Provide all test equipment, including test pumps, gauges, instruments, and other equipment required. Test all rotational equipment for proper direction of rotation. Upon completion of testing, certify to the Owner's Representative, in writing, that the specified tests have been performed and that the installation complies with the specified requirements and provide a report of the test observations signed by qualified inspector.
- B. Ductwork: Test all air quantities as specified in Section 23 05 93 - Testing, Adjusting and Balancing. Pressure tests per SMACNA.
- C. Registers and Diffusers: Test for proper operation of manually operated control feature. Test all air quantities as specified in Section 23 05 93 – Testing, Adjusting and Balancing.

- D. Ductwork Specialties: Test all operable ductwork specialties for proper operation. Check all fire, smoke and fire/smoke dampers to ensure that they are 100% open.
- E. Temperature Control: Test all control functions to assure that all systems are controlling as specified or as otherwise necessary and that all controls are adjusted to maintain proper room temperatures. The manufacturer's representative shall perform all tests.

SECTION 23 05 48

VIBRATION ISOLATION FOR PIPING, DUCTWORK AND EQUIPMENT

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 05 00 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 SUMMARY

- A. All mechanical equipment, piping and ductwork as noted on the equipment schedule or in the specification shall be mounted on vibration isolators to prevent the transmission of vibration and mechanically transmitted sound to the building structure.
- B. Vibration isolators shall be selected in accordance with the weight distribution so as to produce reasonably uniform deflections.
- C. All mechanical equipment, piping and ductwork as noted on the equipment schedule, in the specification or as required by code shall be designed to resist seismic forces. Refer to Section 23 05 49 - Seismic Restraint for Piping, Ductwork and Equipment
- D. This Section includes the following:
 - 1. Vibration isolation curbs, pads and mounts.
 - 2. Flexible ductwork connectors
 - 3. Spring hangers with and without vertical-limit stops.
 - 4. Spring isolators.
 - 5. Restrained uni-directional seismic isolation snubber mounts.
 - 6. Housed seismic spring vibration mounts.
 - 7. Elastomeric hangers.
 - 8. Pipe riser resilient supports.
 - 9. Resilient pipe guides.
 - 10. Air-mounting system.
 - 11. Restrained vibration isolation roof-curb rails.
 - 12. Seismic snubbers.
 - 13. Vibration isolation equipment bases.
 - 14. Flexible piping connectors

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 23 05 00 - Basic HVAC Materials and Methods.
- B. Section 23 05 49 - Seismic Restraint for Piping, Ductwork and Equipment.

1.04 DEFINITIONS

- A. AHJ: Authority Having Jurisdiction.
- B. FRT: Fire retardant treated wood is any wood product that, when impregnated with chemicals by a pressure process or other means during manufacture, shall have, when tested in accordance with ASTM E84 or UL 723, a listed flame spread index of 25 or less.
- C. IBC: International Building Code with State Amendments.
- D. ICC-ES: ICC-Evaluation Service.

1.05 CODES AND STANDARDS

- A. Provide components conforming to the load requirements of the latest addition of the local building code and the following:
 - 1. International Building Code with AHJ Amendments
 - 2. American Society of Civil Engineers (ASCE):
 - a. ASCE 7 (Latest Edition): Minimum Design Loads for Buildings and Other Structures.
 - 3. The Manufacturers Standardization Society (MSS):
 - a. MSS SP-58: Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.
 - b. MSS SP-69: Pipe Hangers and Supports - Selection and Application.
 - c. MSS SP-89: Pipe Hangers and Supports - Fabrication and Installation Practices
 - d. MSS SP-127: Bracing for Piping Systems Seismic-Wind-Dynamic Design, Selection, Application.
 - 4. Mason West Inc. Seismic Restraint Guidelines 2014 Edition
 - a. For all suspended piping, suspended ductwork and suspended electrical raceways.

1.06 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:
 - 1. Refer to Section 23 05 49 - Seismic Restraint for Piping, Ductwork and Equipment for seismic specific requirements.
 - 2. Vibration isolators must be rated for the seismic loading associated with the system and forces calculated for this building location. Seismic forces for new installations are determined per ASCE 7. Refer to Structural Design for seismic factors and design criteria. Select and submit appropriate values for each piece of equipment and sub-system and material type for the project, and base the seismic calculations on these values.

3. Coordinate all seismic and load requirements with the registered professional Structural Engineer.

B. Component Importance Factor:

1. $I_p=1.0$: Standard Occupancies and components associated with Risk Category I, II, and III, including offices and schools.
2. $I_p=1.5$: Components associated with Risk Category IV Buildings (Essential Services); or for conditions outlined in ASCE 7 Section 13.1.3 regardless of Risk Category; or Hospitals and Correctional Treatment Centers. Components include, but are not limited to the following:
 - a. The component is required to function for life-safety purposes after an earthquake, including fire protection sprinkler systems.
 - b. The component conveys, supports, or otherwise contains toxic, highly toxic, or explosive substances where the quantity of the material exceeds a threshold quantity established by the authority having jurisdiction and is sufficient to pose a threat to the public if released.

1.07 QUALITY ASSURANCE

- A. Comply with seismic-restraint requirements in the CBC unless requirements in this Section are more stringent.
- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Building Structural Limits: The design of supports and restraints shall not exceed the building structure allowable point loads. Coordinate all work with the registered professional Structural Engineer.
- D. Special Inspections: Provide structural design and Special Inspections as required by Chapter 17A of the CBC, the Authority Having Jurisdiction, and as defined in the manufacturer installation instructions for each anchorage system. Per IBC Section 1705A all anchors post-installed in hardened concrete members shall have periodic Special Inspections. Special inspection agencies shall be independent of the design and construction companies and shall act as agents for the AHJ, but contracted directly with the Owner or Owner's Representative.

1.08 WARRANTY

- A. Provide minimum one-year warranty requirements, including all parts, material, labor and travel.
- B. Refer to Section 23 05 00 for additional warranty and Substantial Completion requirements.

1.09 SUBMITTALS

- A. Product Data shall include the following:
 1. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with the specification.
 2. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and seismic restraints by referencing numbered descriptive drawings.
 3. Include rated load, rated deflection, and overload capacity for each vibration isolation device.

4. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an evaluation service or agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
 5. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
- B. Shop Drawings:
1. Submit fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
 2. Provide all details of suspension and support for ceiling hung equipment.
 3. Where walls, floors, slabs or supplementary steel work are used for seismic restraint the locations, details of acceptable attachment methods for ducts, conduit and pipe must be included and approved before the condition is accepted for installation. Restraint manufacturers' submittals must include spacing, static loads and seismic loads at all attachment and support points.
 4. Provide specific details of seismic restraints and anchors; include number, size and locations for each piece of equipment.
- C. Manufacturer Design Submittal: For vibration isolation details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic and where required wind forces required to select vibration isolators, seismic and wind restraints, and for designing vibration isolation bases.
 2. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.
 3. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads. Provide base with level top surfaces with integral sloping on bottom to match support structure.

- D. Coordination Drawings: Show coordination and plan locations of vibration isolation for HVAC ductwork, piping, and equipment with other systems and equipment in the vicinity, including other supports and seismic restraints.
- E. Qualification Data: Devices shall be selected to meet seismic and support requirements by a registered professional Structural Engineer.
- F. Air-Mounting System Performance Certification: Include natural frequency, load, and damping test data performed by an independent test agency.
- G. Operation and Maintenance Data: For air-mounting systems to include in operation and maintenance manuals.

1.10 WARRANTY

- A. Refer to section 23 05 00 for basic warranty requirements.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS AND APPLICATION

- A. Factory Finishes:
 1. Standard paint applied to factory-assembled equipment before shipping.
 2. Powder coating on springs and housings.
 3. All hardware shall be galvanized or powder coated.
 4. Hot-dip galvanized or powder coating of metal components for exterior use.
 5. Baked enamel or powder coat for metal components for interior use.
- B. Glumac Device Key Schedule: Part 3 of this Section schedules the application of devices described in Part 2 for use with mechanical equipment found on this project. The tag designation of preferred devices is as follows:

Glumac Isolator Tag	Description
P-1	Vibration isolation waffle pad
P-2	Double deflection neoprene mount
P-3	Uni-directional restrained neoprene snubber mount
P-4	Interlocking uni-directional snubber
S-1	Open spring vibration isolator
S-2	Steel housed seismic spring vibration isolator
S-3	Bellows air spring isolator

S-4	Restrained air spring isolator
C-1	Seismic spring isolation roof curb (20 ton HVAC and below)
C-2	Seismic spring isolation roof curb (Greater than 20 ton HVAC)
C-3	Curb mounted spring isolation roof base
B-1	Integral equipment and motor base
B-2	Integral equipment and motor base
B-3	Concrete filled steel inertia base
H-1	Spring and rubber in shear vibration isolation hanger
G-1	All-directional pipe anchor
G-2	Vertical pipe guide
G-3	Horizontal thrust restraint
SB-1	Sway bracing
F-1	Kevlar/rubber spherical type flexible piping coupling
F-2	Stainless hose flexible piping coupling
F-3	Flexible expansion joints
F-4	Flexible ductwork connector

2.02 VIBRATION ISOLATORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide a product by one of the following:
1. Mason, basis of selection or equal by
 2. Amber/Booth Company (VMC Group)
 3. California Dynamics Corporation.
 4. Kinetics Noise Control.
 5. Vibration Eliminator Co., Inc.
 6. Vibration Isolation.
 7. Vibration Mountings & Controls (VMC Group)
 8. Vibro-Acoustics, Inc
 9. Vibrex (M.W. Saussé & Company, Inc.)
 10. VMC Group

- B. P-1 Style: Neoprene pads shall consist of a 3/4" (19 mm) thick neoprene pad molded in square waffle modules, a minimum 1/4" (6 mm) thick steel load distribution plate and 3/4" (19 mm) hole with a neoprene anchor bolt bushing with a flat washer face. Pads may be single or multiple layers as required for leveling. Manufacturers: Mason #MBSW Series or equal.
- C. P-2 Style: Restrained bridge bearing neoprene mountings shall have a minimum static deflection of 0.2" (5mm) and all directional seismic capability. The mount shall consist of a ductile iron casting containing two separated and opposing molded neoprene elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock absorbing neoprene materials shall be compounded to bridge-bearing specifications. Manufacturers: Mason #BR Series, VMC Group #YRSM3 Series, or equal.
- D. P-3 Style: All-directional seismic snubbers shall consist of interlocking steel members restrained by a one-piece molded neoprene bushing of bridge bearing neoprene. Bushing shall be replaceable and a minimum of 1/4" (6 mm) thick. A minimum air gap of 1/8" (3 mm) shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. No sharp edges such as bolt threads may come in contact with the neoprene bushing. Snubber end caps shall be removable to allow inspection of internal clearances. Manufacturers: Mason #Z-1225 Series or equal.
- E. P-4 Style: All directional seismic snubbers shall consist of interlocking steel members restrained by shock absorbent rubber materials compounded to bridge bearing specifications. Elastomeric materials shall be replaceable and a minimum of 3/4" (19 mm) thick. Rated loadings shall not exceed 1000 psi. Snubbers shall be manufactured with an air gap between hard and resilient material of not less than 1/8" (3 mm) and not more than 1/4" (6 mm). Snubbers shall be installed with factory set clearances. The capacity of the seismic snubber at 3/8" (9 mm) deflection shall be equal or greater than the load assigned to the mounting grouping controlled by the snubber multiplied by the applicable "G" force. Submittals shall include the load deflection curves up to 1/2" (12 mm) deflection in the x, y and z planes. Manufacturers: Mason #Z-1011 Series or equal.
- F. S-1 Style: Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4" (6 mm) neoprene acoustical friction pad between the base plate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Two base plate holes for attachment to support surface. Manufacturers: Mason #SLFH Series or equal.
- G. S-2 Style: Restrained spring mountings shall include springs that are free standing and laterally stable and complete with a molded neoprene cup or 1/4" (6 mm) neoprene acoustical friction pad between the spring and the mounting base plate. All spring assemblies shall have leveling bolts. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Mount housing shall include vertical limit stops to prevent spring extension when weight is removed. All restraining bolts shall have large rubber grommets to provide cushioning in the vertical and horizontal directions. A minimum clearance of 3/8" (9 mm) shall be maintained around restraining bolts so as not to interfere with the spring action. Manufacturers: #SLR Series or #SLRS Series for steel/wood connections and Mason #SLREBP Series or #SLRSEBP Series or #SSLFH Series for concrete connections, or equal.

- H. S-3 Style: Multiple bellow air springs shall be manufactured with powder coated upper and lower steel sections connected by a replaceable, flexible Nylon reinforced Neoprene element to achieve a maximum natural frequency of 3 Hz. Burst pressure must be a minimum of three (3) times the published maximum operating pressure. All air spring systems shall be equipped with three (3) leveling valves connected to the building control air or a supplementary air supply to maintain elevation plus or minus 1/8" (3 mm). An air filter and water separator shall be installed before the air distribution system to the leveling valves. Submittals shall include natural frequency, as well as load and damping tests, all as performed by an independent lab or acoustician. Manufacturers: Mason #MT and leveling valves Mason #LV, or equal.
- I. S-4 Style: Restrained mountings shall include multiple bellow air springs manufactured with powder coated upper and lower steel sections connected by a replaceable, flexible Nylon reinforced Neoprene element to achieve a maximum natural frequency of 3 Hz. Burst pressure must be a minimum of three (3) times the published maximum operating pressure. Mount housing shall include vertical limit stops to prevent spring extension when weight is removed. All restraining bolts shall have large rubber grommets to provide cushioning in the vertical and horizontal directions. A minimum clearance of 3/8" (9 mm) shall be maintained around restraining bolts so as not to interfere with the spring action. Mountings shall have test reports or calculations certifying the maximum allowable horizontal and vertical load ratings. All air spring systems shall be equipped with three (3) leveling valves connected to the building control air or a supplementary air supply to maintain elevation plus or minus 1/8" (3 mm). An air filter and water separator shall be installed before the air distribution system to the leveling valves. Submittals shall include natural frequency, as well as load and damping tests, all as performed by an independent lab or acoustician. Manufacturers: Mason #SLR-MT for steel connections and Mason #SLREBP for concrete connections and leveling valves Mason #LV, or equal.
- 2.03 SEISMIC RESTRAINED SPRING VIBRATION ISOLATION ROOF-CURB (C-1) (HVAC UNITS 20 TON AND UNDER CAPACITY)
- A. Basis-of-Design Product: Subject to compliance with requirements, provide a product by one of the following:
1. Mason, basis of selection or equal by M.W. Saussé & Company, Inc.
 2. Amber/Booth Company (VMC Group)
 3. California Dynamics Corporation.
 4. Isolation Technology, Inc.
 5. Kinetics Noise Control.
 6. Thybar Corporation.
 7. Vibration Eliminator Co., Inc.
 8. Vibration Isolation.
 9. Vibration Mountings & Controls (VMC Group)
 10. Vibro-Acoustics, Inc.
 11. VMC Group

- B. C-1 Style: Curb mounted rooftop equipment shall be mounted on spring isolation curbs. Curbs shall consist of continuous sheet metal frames above and below isolators. Isolators shall be adjustable, free-standing and laterally stable and include a 1/4" (6 mm) acoustical neoprene cup and leveling bolt. Spring diameters shall be no less than 0.8 of the compressed height of the spring at the rated load with 50% additional travel to solid. Seismic snubbers with an all directional neoprene bushing and 1/4" (6 mm) air gap shall be incorporated into each corner. A continuous sheet metal flashing shall be attached to the upper frame and be separated from the lower frame by a neoprene weatherseal. The sheet metal flashing shall incorporate removable cover plates for adjustment and inspection of isolators after the unit is set. The unit must be solidly fastened to the top steel frame and the lower sheet metal curb must be attached to the roof structure. Manufacturers: Mason #ISC Series or equal.
- C. C-3 Style: Curb mounted rooftop equipment shall be mounted on vibration isolation bases that fit over the rigid roof curb and under the isolated equipment. The extruded aluminum top member shall overlap the bottom to provide water runoff independent of the seal. Aluminum members shall house electro-galvanized or powder coated springs selected for 0.75" (20 mm) minimum deflection. Travel to solid shall be 1.5" (40 mm) minimum. Spring diameters shall be no less than 0.8 of the spring height at rated load. Wind resistance shall be provided by means of resilient snubbers in the corners with a minimum clearance of 1/4" (6 mm) so as not to interfere with the spring action except in high winds. Manufacturer's self adhering closed cell sponge gasketing must be used both above and below the base and a flexible EPDM duct like connection shall seal the outside perimeter. Foam or other sliding or shear seals are unacceptable in lieu of the EPDM ductlike closure. Submittals shall include spring deflections, spring diameters, compressed spring height and solid spring height as well as seal and wind resistance details. Manufacturers: Mason #CMAB Series or equal.
- 2.04 SEISMIC RESTRAINED SPRING VIBRATION ISOLATION ROOF-CURB (C-2) (HVAC UNITS OVER 20 TON CAPACITY)
- A. Basis-of-Design Product: Subject to compliance with requirements, provide a product by one of the following:
1. Mason, basis of selection or equal by M.W. Saussé & Company, Inc.
 2. Amber/Booth Company (VMC Group)
 3. California Dynamics Corporation.
 4. Isolation Technology, Inc.
 5. Kinetics Noise Control.
 6. Thybar Corporation.
 7. Vibration Eliminator Co., Inc.
 8. Vibration Isolation.
 9. Vibration Mountings & Controls (VMC Group)
 10. Vibro-Acoustics, Inc.
 11. VMC Group

- B. C-2 Style: Curb mounted rooftop equipment shall be mounted on spring isolation curbs. The lower member shall consist of a sheet metal Z section containing adjustable and removable steel springs that support the upper floating section. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind and seismic forces. All directional neoprene snubber bushings shall be a minimum of 1/4" (6 mm) thick. Steel springs shall be laterally stable and rest on 1/4" (6 mm) thick neoprene acoustical pads. Hardware must be plated and the springs provided with a rust resistant finish. The curbs waterproofing shall consist of a continuous galvanized flexible counter flashing nailed over the lower curbs waterproofing and joined at the corners by EPDM bellows. All spring locations shall have access ports with removable waterproof covers. Lower curbs shall have provision for 2" (50 mm) of insulation. The roof curbs shall be built to seismically contain the rooftop unit. The unit must be solidly fastened to the top floating rail, and the lower Z section anchored to the roof structure. Manufacturers: Mason #RSC Series or equal.

2.05 VIBRATION ISOLATION STEEL EQUIPMENT BASES

- A. Basis-of-Design Product: Subject to compliance with requirements provide a comparable product by one of the following:
1. Mason, basis of selection or equal by
 2. Amber/Booth Company (VMC Group)
 3. California Dynamics Corporation.
 4. Isolation Technology, Inc.
 5. Kinetics Noise Control.
 6. Vibration Eliminator Co., Inc.
 7. Vibration Isolation.
 8. Vibration Mountings & Controls (VMC Group)
 9. Vibro-Acoustics, Inc.
 10. VMC Group

- B. B-1 Style: Vibration isolation manufacturer shall furnish integral structural steel bases designed to prevent excessive base flexure at start up, prevent misalignment of equipment and provide attachment points for seismic restraints. Bases shall be rectangular in shape and constructed of welded structural steel angle or channel members. Manufacturers: Mason #MSL Series or equal.
- C. B-2 Style: Vibration isolation manufacturer shall furnish integral structural steel bases designed to prevent excessive base flexure at start up, prevent misalignment of equipment and provide attachment points for seismic restraints. Bases shall be rectangular in shape and constructed of welded wide flange structural steel main members with cross bracing located at or near each restraint location. Where height saving brackets are required, they shall be employed in all mounting locations to maintain a 1" (25 mm) clearance below the base. Manufacturers: Mason #WFSL Series or #TSLR Series, or equal.
- D. B-3 Style: Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating and inertia foundations. Bases for split case pumps shall be large enough to provide for suction and discharge elbows and shall be 6" deep for pumps through 75 hp and 10" deep for pumps 100 hp through 250 hp. Forms shall include minimum concrete reinforcing consisting of #4 bars welded in place on 6" centers running both ways in a layer 1-1/2" above the bottom. Forms shall be furnished with steel templates to hold the anchor bolts sleeves and anchors while concrete is being poured. Height saving brackets shall be employed in all mounting locations to maintain a 1" clearance below the base. Manufacturers: Mason #BMK Series or #KSL Series or equal.

2.06 SPRING HANGERS

- A. H-1 Style: Spring hangers shall consist of rigid steel frames containing minimum 1-1/4" (32 mm) thick neoprene elements at the top and steel springs that are free standing and laterally stable seated in a steel washer reinforced neoprene cup at the bottom. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. The neoprene element and the cup shall have a neoprene bushing projecting through the steel box. A seismic rebound washer made of steel and surrounding neoprene shall be provided. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30 arc from side to side before contacting the rod bushing and short circuiting the spring. Manufacturers: Mason #RW30N Series or equal.

2.07 PIPE GUIDES AND SUPPORTS

- A. G-1 Style: All-directional acoustical pipe anchors shall consist of two sizes of steel tubing separated by a minimum 1/2" (12 mm) thick 60 durometer neoprene. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction. Allowable loads on the isolation material should not exceed 500 psi and the design shall be balanced for equal resistance in any direction. Manufacturers: Mason #ADA Series or equal.
- B. G-2 Style: Vertical sliding pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2" (20 mm) thickness of 60 durometer neoprene. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of 1-5/8" (41 mm) upwards or downwards motion, or to meet location requirements. Manufacturers: Mason #VSG Series or equal.

- C. G-3 Style: Horizontal thrust restraints shall consist of a spring element seated in a steel washer reinforced neoprene cup at the bottom, in series with a molded neoprene element. Steel springs shall be free standing and laterally stable. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4" (6 mm) movement at start and stop. The assembly shall be furnished with 1 rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit. Manufacturers: Mason #WBI Series or #WBD Series or equal.

2.08 SWAY BRACING

- A. SB-1 Style: Seismic sway braces shall consist of galvanized steel aircraft cables or steel angles or struts. Cables braces shall be designed to resist seismic tension loads and steel braces shall be designed to resist both tension and compression loads with a minimum safety factor of two (2). Brace end connections shall be steel assemblies that swivel to the final installation angle. Steel angles or struts, when required, shall be clamped to the threaded hanger rods at the seismic sway brace locations utilizing a minimum of two ductile iron clamps. Do not mix cable and steel braces to brace the same system or equipment. Manufacturers: Mason #SCB Series or #SCBH Series, steel brace assemblies shall be Mason #SSB Series, #SSBS Series or #SHB Series, and rod clamps shall be Mason #SRC Series or #UCC Series or equal.

2.09 FLEXIBLE PIPING CONNECTORS

- A. F-1 Style: Flexible spherical expansion joints for pump connections. Shall employ peroxide cured EPDM in the covers, liners and Kevlar tire cord frictioning. Solid steel rings shall be used within the raised face rubber ends to prevent pullout. Flexible cable bead wire is not acceptable. Sizes 2" and larger shall have two spheres reinforced with a ring between spheres to maintain shape and complete with split ductile iron or steel flanges with hooked or similar interlocks. Sizes 16" to 24" may be single sphere. Sizes 3/4" to 1 1/2" may have threaded bolted flange assemblies, one sphere and cable retention. 14" and smaller connectors shall be rated at 250 psi up to 190F with a uniform drop in allowable pressure to 190 psi at 250F. 16" and larger connectors are rated 180 psi at 190F and 135 psi at 250F. Safety factors to burst and flange pullout shall be a minimum of 3/1. All joints must have permanent markings verifying a 5-minute factory test at twice the rated pressure. Concentric reducers to the above specifications may be substituted for equal ended expansion joints. Expansion joints shall be installed in piping gaps equal to the length of the expansion joints under pressure. Manufacturer shall provide pre-stretching charts for expansion joints when used in conjunction with isolated equipment. Control rods need only be used in unanchored piping locations where the manufacturer determines the installation exceeds the pressure requirement without control rods, as control rods are not desirable in seismic work. If control rods are used, they must have 1/2" thick Neoprene washer bushings large enough in area to take the thrust at 1000 psi maximum on the washer area. Expansion joints shall be installed on the equipment side of the shut off valves. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer. All expansion joints shall be installed on the equipment side of the shut off valves. Manufacturers: Mason #SAFEFLEX SFDEJ Series, #SAFEFLEX SFEJ Series, #SAFEFLEX SFDCR Series or #SAFEFLEX SFU Series and Control Rods Mason #CR, or equal.
- B. F-2 Style: Flexible stainless-steel hose shall have stainless steel braid and carbon steel fittings.
1. Sizes 1/2" (15 mm) to 2" (50 mm):

- a. EPDM or Kevlar core hose with stainless steel braid and brass end fittings. Swivel union ends for threaded nipples or copper sweat ends. Minimum 175 psig working pressure rating. Operating temperature range from 32°F to 225°F (0°C to 107°C). Hoses must have sufficient length, minimum 12" (300 mm) long, to accept 1/2" (12 mm) intermittent motion without failure. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible. Manufacturers: IMI #Versaflo, Nexus #UF Series, Pro Hydronic Specialties, Titus, Victaulic, Hays Fluid Control, or equal.
- 2. Sizes 2-1/2" (65 mm) and larger:
 - a. EPDM, Kevlar or corrugated stainless-steel core hose with stainless-steel braid. Threaded, flanged or brazed weld ends. Minimum 200 psig working pressure rating. Operating temperature range from 32°F to 225°F (0°C to 107°C). Manufacturers: Mason #FFL Flanged, #CPSB Copper, #CSAMN Threaded, or equal.
- C. F-3 Style: Flexible 60° Vee or U-bend braided hose across building or expansion joints. Piping and equipment connections shall be protected against seismic damage by the insertion of braided flexible hose Vee assemblies rated for ±4" (100mm) seismic motion in all planes. Should the application include ±6" (150mm) thermal movement or thermal movement alone, install the Vee so the thermal movement is axial. Veeps shall have a minimum burst pressure of four times their rated pressure. Veeps in steel lines shall have stainless hose and braid. Copper lines, bronze hose and braid. Guiding and anchoring shall be as recommended by the manufacturer. Manufacturers: Mason #VFL flanged braided steel Series, #VMN Threaded Braided Stainless Steel Series or #VCPSB Copper Sweat Series, or equal.

2.10 FLEXIBLE DUCTWORK CONNECTORS

- A. F-4 Style: Flexible ductwork connection fabricated of fiberglass canvas with fire resistant rated neoprene and UV resistant coating. Stainless steel metal edge banding.
- B. Flexible Connections (Indoor Applications):
 - 1. Provide flexible connectors at the discharge and inlet of fans, air handlers, rotating mechanical equipment, and where shown on the Drawings for proper vibration isolation.
 - 2. Neoprene (polychloroprene) impregnated glass cloth with 24-gauge (minimum) galvanized metal frame.
 - 3. Shall be airtight, watertight and fire retardant.
 - 4. Minimum density of 30 oz. per sq. yard.
 - 5. Temperature range: -40°F to 200°F
 - 6.
 - 7. Neoprene-only connectors are not allowed.
 - 8. Minimum dimensions shall be 3" metal, 3" fabric, 3" metal.
 - 9. Manufacturers: Ventfabrics #Ventglas or approved equal by Duro Dyne, Q Industries, consolidated Kinetics, Ductmate Proflex or Elgen.
- C. Flexible Connections (Outdoor Applications):
 - 1. Provide flexible connectors at the discharge and inlet of fans, air handlers, rotating mechanical equipment, and where shown on the Drawings for proper vibration isolation.
 - 2. Hypalon (chlorosulfurated polyethylene) impregnated glass cloth with 24-gauge (minimum) galvanized metal frame.

3. Shall be airtight, watertight and fire retardant. Resistant to sunlight, ozone and weather.
4. Minimum density of 26 oz. per sq. yard.
5. Temperature range: -50°F to 275°F
- 6.
7. Minimum dimensions shall be 3" metal, 3" fabric, 3" metal.
8. Provide flexible cloth insulating blanket to encase flexible connections to maintain ductwork insulation integrity as follows:
 - a. Jacket shall be UV and ozone resistant with Velcro attachment.
 - b. Service Operating Temperature: 0-350°F.
 - c. Jacket and Liner: silicon or teflon impregnated fiberglass or mineral wool cloth.
 - d. Insulation: Aerogel, 2" thick (minimum) or R-8 equivalent (minimum), and thicker as required by local energy code.
 - e. Fastening: 2" Nomex Velcro or 1" straps and stainless steel D-rings.
 - f. Thread: Kevlar/stainless steel thread.
 - g. Manufacturers: Thermal Energy Products, Coverflex, Thermaxx, Pacor, Unitherm, Advance Thermal, Fit Tight Covers, or equal.
9. Manufacturers: Ventfabrics #Ventlon or approved equal by Duro Dyne, Q Industries, consolidated Kinetics, Ductmate Proflex or Elgen.

2.11 BRACING DEVICES FOR EQUIPMENT, PIPING, AND DUCTWORK

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Amber/Booth Company (VMC Group)
 2. California Dynamics Corporation
 3. Cooper B-Line, Inc.
 4. Hilti, Inc.
 5. Kinetics Noise Control
 6. Loos & Co.
 7. Mason Industries
 8. Tolco Incorporated
 9. Unistrut
 10. ISAT, Inc
 11. Vibro-Acoustics, Inc.
 12. VMC Group
- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an agency acceptable to authorities having jurisdiction.
 1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least two (2) times the maximum seismic forces to which they will be subjected.

- C. Snubbers: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
 - 1. Anchor bolts for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
 - 2. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
 - 3. Maximum 1/4-inch (6-mm) air gap, and minimum 1/4" (6 mm) thick resilient cushion.
- D. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- E. Hanger Rod Stiffener: Steel tube, steel slotted support system sleeve or reinforcing steel angle clamped to hanger rod are acceptable.
- F. Bushings for Floor-Mounted Equipment Anchorage: Neoprene bushings designed for rigid equipment mountings and matched to type and size of anchor bolts and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- I. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488. Minimum length of eight times diameter.
- J. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an evaluation service or agency acceptable to authorities having jurisdiction. Indicate on Drawings, by details, schedules, or a combination of both, the locations where hanger rods for individual pipes and hanger rods for trapeze hangers require hanger rod stiffeners.
- B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.03 VIBRATION-CONTROL DEVICE INSTALLATION

- A. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- B. Comply with manufacturer's recommendations for selection and application of vibration isolation materials and units except as otherwise indicated. Comply with minimum static deflections recommended by ASHRAE, of vibration isolation materials and units where not otherwise indicated.
- C. Comply with manufacturer's instructions for installation and load application to vibration control materials and units except as otherwise indicated. Adjust to ensure that units have equal deflection, do not bottom out under loading, and are not short-circuited by other contacts or bearing points. Remove space blocks and similar devices intended for temporary support during installation.
- D. All vibration isolator systems must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.
- E. Installation of vibration isolators must not cause any change of position of equipment, piping or ductwork resulting in stresses or misalignment.
- F. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.
- G. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the attention of the Owner's Representative prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.
- H. Install units between substrate and equipment as required for secure operation and to prevent displacement by normal forces, and as indicated.
- I. Adjust leveling devices as required to distribute loading uniformly onto isolators. Shim units as required where substrate is not level.
- J. Flexible Pipe Connectors: Install on equipment side of shutoff valves.
- K. Upon completion of vibration control work, prepare report showing measured equipment deflections for each major item of equipment as indicated. Clean each vibration control unit, and verify that each is working freely, and that there is no dirt or debris in immediate vicinity of unit that could possibly short-circuit unit isolation.

- L. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolts and mounting hole in concrete base.
- M. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- N. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- O. Drilled-in Anchors:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the Structural Engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 - 4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
 - 5. Set anchors to manufacturer's recommended torque, using a torque wrench.
 - 6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.04 VIBRATION ISOLATION OF PIPING

- A. Horizontal Piping: The first three pipe supports from vibration isolated equipment must be vibration isolated to minimize fluid transmitted vibration. The static deflection of the pipe support isolators must be equal to the static deflection for the isolators supporting the connected equipment. Overhead piping shall suspend from Mason Type 30N spring hangers or equal. Floor supported piping shall rest on Mason Type SLR isolators or equal. Refer to contract drawings for additional vibration isolation requirements for piping. Where piping connects to mechanical equipment install Mason Type SFDEJ or SFU expansion joints or Mason Type FFL stainless hoses if Type SFDEJ or SFU is not suitable for the service.
- B. Riser isolation: Risers that experience excessive thermal expansion shall be suspended from Mason Type 30N spring hangers or supported by Mason Type SLF(H) spring mountings, anchored with Mason Type ADA(H) anchors, and guided with Mason Type VSG(H) sliding guides. Horizontal pipe runs and branches shall be supported on Mason Type 30N spring hangers for the first three supports from the risers. Steel springs shall be selected to provide a minimum of 0.75" static deflection except in those expansion locations where additional deflection is required to limit load changes to + 25% of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on the building structure, spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.

3.05 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment.

3.06 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust air-spring leveling mechanism.
- D. Adjust active height of spring isolators.
- E. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.07 AIR MOUNTING SYSTEM DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air-mounting systems. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 23 05 49

SEISMIC RESTRAINT FOR PIPING, DUCTWORK AND EQUIPMENT

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 05 00 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 SUMMARY

- A. This Section includes the following:
 - 1. Seismic restraint and support of piping, ductwork and mechanical equipment as required by code and as designed by a registered Professional Structural Engineer for each related nonstructural equipment restraint.
 - 2. Mechanical component supports and the means how they are attached to the mechanical component shall be designed for the forces and displacements determined in ASCE 7 Chapter 13. Such supports include structural members, braces, frames, skirts, legs, saddles, pedestals, cables, guys, stays, snubbers, and tethers, as well as elements forged or cast as a part of the mechanical component.
 - 3. All ductwork designed to carry toxic, highly toxic, flammable gases or used for smoke control shall be seismically braced regardless of size or location.

1.03 DEFINITIONS

- A. AHJ: Authority Having Jurisdiction.
- B. ASCE: American Society of Civil Engineers.
- C. ASHRAE: American Society of Heating, Refrigerating and Air-Conditioning Engineers.
- D. IBC: International Building Code with Amendments.
- E. ICC-ES: ICC-Evaluation Service.
- F. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.
- G. Mechanical Attachments: Means by which components or supports of nonstructural components are secured or connected to the seismic force-resisting system of the structure. Such attachments include anchor bolts, welded connections, and mechanical fasteners.
- H. Mechanical Supports: Those members, assemblies of members, or manufactured elements, including braces, frames, legs, lugs, snubbers, hangers, saddles, or struts, and associated fasteners that transmit loads between nonstructural components and their attachments to the structure.

- I. Mechanical Components: Elements, including, but not limited to, pumps, air handling units, boilers, chillers, pipes, ductwork, and exhaust fans.

1.04 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 23 05 00 - Basic HVAC Materials and Methods.
- B. Section 23 05 48 - Vibration Isolation for Piping, Ductwork and Equipment.
- C. Section 23 21 13 - Hydronic Piping, Valves and Specialties.
- D. Section 23 31 13 - Air Distribution.
- E. Other Division 23 Sections.

1.05 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Provide systems that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products. Units shall not be fabricated by the Contractor.
- B. Structural Performance: Restraint devices and systems shall withstand the effects of locally defined gravity loads, seismic loads, dead loads, live loads, winds loads and stresses within limits and under conditions indicated per the local building code and ASCE 7. Coordinate all support structures and restraint systems with project registered professional Structural Engineer.
- C. Special Inspections: Provide structural design and Special Inspections as required in Chapter 17A of the local building code and the Authority Having Jurisdiction, and as defined in the manufacturer installation instructions for each anchorage system. All anchors post-installed in hardened concrete members shall have periodic Special Inspections. Special inspection agencies shall be independent of the design and construction companies and shall act as agents for the AHJ, but contracted directly with the Owner or Owner's Representative.
- D. Codes and Standards: Provide components conforming to the seismic load requirements of the latest addition of the local building code and the following:
 - 1. International Building Code with State Amendments
 - 2. ASCE 7 (Latest Edition) - Minimum Design Loads for Buildings and Other Structures
 - a. Ductwork and piping requirements defined in Chapter 13 Seismic Design Requirements for nonstructural Components.
 - b. Seismic Design Categories, B through F, are defined in Chapter 12, Table 12.6-1. Seismic Design Category B and C apply to all structures. While Seismic Design Categories D, E and F may apply to Category I and II buildings not exceeding two stories, light frame construction and/or structures not exceeding 160 in height.
 - c. Nonstructural components in Seismic Design Category A are exempt from seismic design requirements.
 - 3. ASHRAE – Practical Guide to Seismic Restraint (Latest Edition).
 - 4. Mason West Inc. - Seismic Restraint Guidelines (Latest Edition).
 - a. For all suspended piping, suspended ductwork and suspended electrical raceways.

1.06 APPLICABILITY

- A. Seismic restraints are required for nonstructural mechanical systems, but may not be required for the following conditions related to nonstructural components per ASCE 7 Section 13.1.4:
1. Mechanical components in Seismic Design Category B facilities.
 2. Mechanical components in Seismic Design Category C facility if the component Importance Factor, I_p , is equal to 1.0.
 3. Mechanical components in Seismic Design Categories D, E, or F facilities where all of the following apply:
 - a. The component Importance Factor, I_p , is equal to 1.0;
 - b. The component is positively attached to the structure;
 - c. Flexible connections are provided between the component and associated ductwork, piping, and conduit; and any of the following applies:
 - 1) The component weighs 400 lbs. (1,780 N) or less and has a center of mass located four feet (1.22 m) or less above the adjacent floor level; or
 - 2) The component weighs 20 lbs. (89 N) or less; or
 - 3) The distributed ductwork or piping system weighs 5 lbs./ft. (73 N/m) or less.
- B. Seismically restrained systems shall not move more than 2" when pushed and shall not impact the building structure or other nonstructural components. The design force of restraint elements shall be doubled ($2 \times F_p$) to allow for movement up to 2" per ASCE 7.

1.07 PERFORMANCE REQUIREMENTS

- A. Component Importance Factor and Risk Category:
1. $I_p=1.0$: Standard Occupancies and components associated with Risk Category I, II, and III, including offices and schools.
 2. Additions, alterations, and repairs involving nonstructural mechanical components in structures designed in accordance with pre-1973 building codes may have a Component Importance Factor of $I_p=1.0$. However, components required to operate for life-safety purposes after an earthquake, including emergency and standby power systems, mechanical smoke removal system, fire alarm panels and egress stairways shall have an $I_p=1.5$.
- B. Building Seismic Design Category:
1. The directions of application of seismic forces used in the design shall be those which will produce the most critical load effects. Seismic Design Categories are classified as B, C, D, E or F. Refer to Architectural and Structural Designs for project specific classification.
- C. Mechanical Seismic Coefficients for Mechanical Components:
1. Refer to ASCE 7 Table 13.6-1 for a_p factor (component amplification factor) and R_p factor (component response modification factor) as required for each unique mechanical component.

1.08 SUBMITTALS

- A. Product Data:
1. Include rated load, rated deflection, and overload capacity for each device or system.

2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an evaluation service or agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
 3. Submit seismic brace product details from the Mason West Seismic Restraint Guidelines detailing compliance with the specifications.
 4. Where products from the Mason West Seismic Restraint Guidelines cannot be used, special details must be submitted for approval.
- B. For each vibration isolation and seismic-restraint device.
1. Seismic restraint calculations must be provided for all connections to the structure.
 2. Calculations must be stamped by a registered professional Structural or Civil Engineer.
 3. Include design calculations and details for selecting vibration isolators, seismic restraints, and vibration isolation bases complying with performance requirements, design criteria, and analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 4. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system was examined for excessive stress and that none exists.
 5. Provide flexible joints, supports and piping joints as required to accommodate movement across seismic expansion joints and vertical building drift between floors.
- 1.09 ENGINEERED PIPING SYSTEMS
- A. Where the piping system design indicated on the plans utilizes Mason Industries, Inc. - Mason West, Inc. seismic restraint components, vibration isolators, guides, anchors, expansion compensators and flexible connectors the following requirements apply:
1. Mason Industries, Inc. - Mason West, Inc. products must be installed as shown.
 2. If product substitutions or design changes are made the contractor must provide certified design of the piping system and meet the following conditions:
 - a. Certification must be provided by a registered professional Structural Engineer.
 - b. Certification shall include a statement that all systems have been checked for loads and stresses and that no excessive loads or stresses exist.
 - c. Forces on all anchors, guides, supports, and restraints must not exceed those shown in the original design unless the structure is checked for the larger loads at no cost to the owner.
- B. Where the piping system design is not indicated on the drawings the design is delegated to the contractor with the following requirements for piping certification and analysis:
1. The supports, anchors, guides and seismic braces for systems with significant thermal motion including steam, condensate, high temperature hot water and heating hot water systems must be designed for combined gravity, seismic, pressure and thermal loads.

2. Small diameter pipes (2" diameter and smaller) may not require analysis as determined by the project registered professional Structural Engineer.
3. The results of the analysis shall include reactions at restraints and anchors, maximum pipe displacements and a code compliant report indicating maximum pipe stresses.
4. Where required, seismic restraint components, vibration isolators, guides, anchors, expansion compensators and flexible connectors manufactured by Mason Industries, Inc. and Mason West, Inc. shall be incorporated into the design of the systems.
5. The analysis and design must be performed by a Structural Engineer with 5 years of experience in this field.

1.10 MANUFACTURER AND CONTRACTOR RESPONSIBILITIES

- A. All seismic restraints shall be designed by a registered professional Structural Engineer.
- B. Seismic restraint layouts for piping and ductwork shall be added to the contractor's shop drawings and shall include:
 1. The number, size and location of seismic braces.
 2. Maximum support loads and seismic loads at the seismic brace locations.
 3. Reference to specific details or pages from the Mason West Seismic Restraint Guidelines.
- C. Submit seismic restraint layout drawings and special details for approval of the project registered professional Structural Engineer per the requirements listed in the Mason West Seismic Restraint Guidelines.
- D. Seismic restraint layout drawings shall bear the stamp and signature of the registered professional Structural Engineer who designed the layout of the braces.

1.11 LOADS ON STRUCTURE

- A. The responsibility of determining allowable loads on the structure is the sole responsibility of the project registered professional Structural Engineer.
- B. Maximum support loads and seismic brace loads on the structure must be less than the maximum allowable loads defined by the project registered professional Structural Engineer, as shown on the plans.
- C. Where maximum loads are not listed on the plans or the maximum allowable loads cannot be met, any additional support steel required to reduce support and seismic bracing loads on the structure shall be designed by the project registered professional Structural Engineer.
- D. Mechanical component supports and the means how they are attached to the component shall be designed for the forces and displacements determined in ASCE 7 Section 13.3.1 and 13.3.2. Such supports include structural members, braces, frames, skirts, legs, saddles, pedestals, cables, guys, stays, snubbers, and tethers, as well as elements forged or cast as a part of the mechanical component.
- E. Mechanical supports are those members, assemblies of members, or manufactured elements, including braces, frames, legs, lugs, snubbers, hangers, saddles, or struts, and associated fasteners that transmit loads between nonstructural components and their attachments to the structure.

- F. Mechanical attachments are the means how components or supports of nonstructural components are secured or connected to the seismic force-resisting system of the structure. Such attachments include anchor bolts, welded connections, and mechanical fasteners.

1.12 WARRANTY

- A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.
- B. Refer to Section 23 05 00 for additional warranty and Substantial Completion requirements.

PART 2 PRODUCTS

2.01 INTENT

- A. All seismic restraints described in this section shall be the product of a single manufacturer.
- B. Refer to Section 23 05 00 for additional guidelines for applicable supports and anchors.
- C. Mason Industries products are the basis of these specifications; products of other manufacturers may be submitted for review provided their systems strictly comply with the specifications. Manufacturers: Mason Industries, Hilti Inc., B-Line/Tolco (Eaton), Anvil, Superstrut, or equal.

2.02 SEISMIC SWAY BRACING

- A. Seismic sway braces shall consist of galvanized steel aircraft cables, steel angles or steel struts.
- B. Cable braces shall be designed to resist seismic tension loads and steel braces shall be designed to resist both tension and compression loads. Brace end connections shall be steel assemblies that swivel to the final installation angle.
- C. Cable brace assemblies shall have published strength and stiffness ratings based on testing per FM-1950 standards.
- D. Angle or strut bracket assemblies shall be FM Approved except as noted below.
- E. Steel angles or struts, when required, shall be clamped to the threaded hanger rods at the seismic sway brace locations utilizing a minimum of two ductile iron clamps.
- F. Cable and universal swivel sway brace bracket attachment assemblies shall be Mason Industries #SCB or #SCBH, or equal.
- G. Solid and swivel brace bracket assemblies shall be Mason Industries #Type SSB or #SSBS, or equal.
- H. Rod clamps shall be Mason Industries #SRC or #UCC, or equal.
- I. Hanging Cables with Adjustable Fastener: Wire rope hangers for maximum point loads not exceeding 100 lbs. (45 Kg) for supporting rigid galvanized ductwork and suspended diffusers/grilles/terminal units.

1. Wire Rope: High tensile steel wire rope, to ASTM 1023/1023M, class A zinc coating; 7 by 7 or 7 by 19 cross-sectional construction; having a tensile strength of 256,000 psi (1,770 N per sq. mm); lengths, diameters, and wire construction to accommodate design loads and as indicated on Construction Shop Drawings.
2. Adjustable Fastener: Mild steel (type EN1A), bright zinc plated, one-channel body; encasing a series of Type 302 stainless-steel springs with serrated self-locking grade 40 chrome steel balls, adjustable by means of an integrated mechanism, capable of accommodating load of 100 lbs. (45 kg) (maximum per hanger).
3. Manufacturers: Gripple #Standard No. 2/3/4/5, Ductmate #Clutcher, or equal.

PART 3 EXECUTION

- 3.01 CONTRACTOR'S STATEMENT OF RESPONSIBILITY: EACH CONTRACTOR RESPONSIBLE FOR INSTALLING A DESIGNATED SEISMIC SYSTEM OR ANY SEISMIC RESISTING COMPONENT MUST SUBMIT A STATEMENT OF RESPONSIBILITY PRIOR TO THE COMMENCEMENT OF WORK TO INCLUDE ACKNOWLEDGMENT OF AWARENESS OF THE NEED FOR SPECIAL INSPECTIONS.
- 3.02 ALL SEISMIC RESTRAINT SYSTEMS MUST BE INSTALLED IN STRICT ACCORDANCE WITH THE MANUFACTURERS WRITTEN INSTRUCTIONS AND ALL CERTIFIED SUBMITTAL DATA.
- 3.03 INSTALLATION OF SEISMIC RESTRAINTS MUST NOT CAUSE ANY CHANGE OF POSITION OF EQUIPMENT, PIPING OR DUCTWORK RESULTING IN STRESSES OR MISALIGNMENT.
- 3.04 NO CONNECTIONS BETWEEN THE PIPING OR DUCTWORK AND THE BUILDING STRUCTURE SHALL BE MADE THAT DEGRADES THE SEISMIC RESTRAINT SYSTEM HEREIN SPECIFIED.
- 3.05 ANY CONFLICTS WITH OTHER TRADES DUE TO INADEQUATE SPACE OR OTHER UNFORESEEN CONDITIONS SHOULD BE BROUGHT TO THE ATTENTION OF THE OWNER'S REPRESENTATIVE PRIOR TO INSTALLATION. CORRECTIVE WORK NECESSITATED BY CONFLICTS AFTER INSTALLATION SHALL BE AT THE RESPONSIBLE CONTRACTOR'S EXPENSE.

SECTION 23 05 93

TESTING, ADJUSTING AND BALANCING

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 05 00 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 WORK RELATED IN OTHER SECTIONS

- A. Section 23 05 00 - Basic HVAC Materials and Methods.
- B. Section 23 09 00 - Building Automation System (BAS) Controls.
- C. Section 23 21 13 - Hydronic Piping, Valves and Specialties.
- D. Section 23 31 13 - Air Distribution.
- E. Division 26 - Electrical.

1.03 SUMMARY

- A. Scope: Extent of testing, adjusting and balancing work required by this Section is indicated on the drawings, in schedules, and by the requirements of this Section, and Section 23 05 00 - Basic Mechanical Requirements.
- B. Systems: Testing, adjusting and balancing specified in this Section shall include, but not be limited to, the following systems:
 - 1. Air handling systems including supply, return and exhaust.
 - 2. Air distribution ductwork including supply, return and exhaust.
 - 3. Dedicated exhaust systems.
 - 4. Building automation system controls.
 - 5. Hydronic system including heating, chilled water and condenser water.
 - 6. Steam distribution.
 - 7. Smoke control system.
 - 8. Underfloor air distribution system air leakage.
 - 9. Instruction of Owner's personnel for future balancing of systems.

1.04 CODES AND STANDARDS

- A. The Contractor is cautioned that code requirements not explicitly detailed in these specifications or drawings, but which may be reasonably inferred or implied from the nature of the project, must be provided as part of the contract.

B. Reference Standards

1. ANSI/ASHRAE Standard 111 - Measurement, Testing, Adjusting and Balancing of Building HVAC Systems (current edition).
2. ASHRAE - HVAC Applications Handbook: Chapter 38 - Testing, Adjusting and Balancing (current edition).
3. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings, Chapter 6 (current edition).
4. AABC - National Standards for Total System Balance.
5. NEBB - Procedural Standards for Testing, Balancing and Adjusting of Environmental Systems.
6. SMACNA - HVAC Systems-Testing, Adjusting and Balancing.
7. SMACNA - HVAC Air Duct Leakage Test Manual.
8. ANSI - American National Standards Institute. Comply with the following:
 - a. S1.4: Specifications for Sound Level Meters.
 - b. S1.11: Specifications for Electroacoustics - Octave-Band and Fractional-Octave-Band Filters
9. Building Code, with State Amendments, Chapter 9 Fire Protection Systems.
10. Mechanical Code, with State Amendments, Chapter 4 Ventilation Air Supply.
11. Local Nonresidential Energy Code.

1.05 QUALITY ASSURANCE

- A. Contractor's Qualifications: A specialist certified by the National Environmental Balancing Bureau (NEBB) or Associated Air Balance Council (AABC) with at least 5 years of experience in those testing, adjusting and balancing requirements similar to those required for this project, is not the installer of the system to be tested and is otherwise independent of the project. Testing, adjusting, and balancing shall be performed by a certified NEBB technician or a certified AABC technician under direct field supervision of a Certified NEBB Supervisor or a Certified AABC Supervisor. Testing and balancing agency must submit qualifications for review and approval prior to acceptance for work.
- B. Penalty: The Contractor shall submit the name of the organization he proposes to employ for approval within 30 days after contract award. If the Contractor fails to submit the name of an acceptable agency within the specified time, a firm may be selected to accomplish the work, and this selection shall be binding upon the Contractor at no additional cost.
- C. Retainages: In addition to any other sums retained or withheld pursuant to the provisions of this Contract, the amount of dollars will be withheld from payments to the contractor until such time as the work has been completed and accepted. In no event will this amount be paid to the Contractor prior to 60 days following acceptance of the project; during such time, the Contractor shall investigate and correct any reported deficiencies unless such deficiencies are a result of unauthorized tampering by building occupants.
- D. Calibration of Testing Instruments: All measurement instruments used for testing, adjusting, balancing, and commissioning shall be calibrated. The time between the most recent calibration data and the final test report date shall not be over 6 months.

- E. Testing and balancing agency, as part of its contract, shall act as authorized inspection agency responsible to Consulting Engineer and Owner, and shall list all items that are installed incorrectly, require correction, or have not been installed in accordance with contract Drawings and Specifications, pertaining to air distribution, cooling and heating systems. The testing and balancing agency is required to provide written reports of all deficiencies and proposed recommendations to the Owner' Representative, Contractor, Architect and Engineer.
- F. The testing and balancing agency shall provide with their bid a performance guarantee covering all phases of the work as herein specified.
- G. The General and Mechanical Contractors shall cooperate with the selected testing and balancing agency in the following manner:
 - 1. Provide sufficient time before final completion dates so that tests and balancing can be accomplished.
 - 2. The various system installers, suppliers and contractors shall provide all required materials, labor and tools to make corrections when required without undue delay. Install balancing dampers and valves as required by testing and balancing agency.
 - 3. The contractor shall put all heating, ventilating and air conditioning systems and equipment into full operation and shall continue the operation of the same during each working day of testing and balancing.
 - 4. Testing and balancing agency shall be kept informed of any major changes made to the system during construction, and shall be provided with a complete set of Record Drawings.
 - 5. The General Contractor shall make space and other facilities available to the testing and balancing agency to enable their work to progress. The General Contractor shall schedule the work of other trades to avoid conflicts with this work.
- H. All air balancing work shall be coordinated with other disciplines to comply with the meet or exceed the minimum requirements of the Americans with Disabilities Act (ADA), Building Code, local amendments and State Energy Code.

1.06 SUBMITTALS

- A. Conform to the Submittals requirements of Division 01.
- B. Forms: The Contractor shall deliver a complete copy of either NEBB or AABC standard forms for testing and balancing work associated with the project. These forms shall serve as specific guidelines for producing final test report. Hybrid or non-standards forms are not acceptable.
- C. Test Reports: Provide six (6) certified test reports, signed by the test and balance supervisor who performed the work. The final reports shall include key plans identifying all inlets and outlets. Final test reports shall be typed. Handwritten reports are not acceptable.
- D. Maintenance Data: Include, in maintenance manuals, copies of certified and approved test and balance reports and identification of instruments.
- E. Qualifications: The Test and Balance Agency shall submit qualifications of all persons responsible for supervising and performing the on-site testing and balancing work and the name of the certifying agency, NEBB or AABC. Provide a reference list of five (5) similar size projects with contact person and telephone number.
- F. LEED:

1. Air-Balance Report for Prerequisite EQp1: Documentation of work performed per ASHRAE 2.1, Section 7.2.2 - "Air Balancing".
2. TAB Report for Prerequisite EAc2: Documentation of work performed per ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing".

1.07 AGENDA

- A. Agenda: A preliminary report and agenda shall be submitted and approved prior to the start of testing and balancing work.
1. Review plans and specifications prior to installation of any of the affected systems, and submit a report indicating any deficiencies in the systems that would preclude the proper adjusting, balancing, and testing of the systems.
 2. The agenda shall include a general description of each air and water system with its associated equipment and operation cycles for heating and cooling.
 3. The agenda shall include a list of all air and water flows to be performed at all mechanical equipment.
 4. The agenda shall incorporate the proposed selection points for sound measurements, including typical spaces as well as sound sensitive areas such as conference rooms.
 5. The agenda shall also include specific test procedures and parameters for determining specified quantities (e.g. flow, drafts, sound levels) from the actual field measurements to establish compliance with contract requirements. Samples of forms showing application of procedures and calculations to typical systems shall be submitted.
 6. Specific test procedures for measuring air quantities at terminals shall specify type of instrument to be used, method of instrument application (by sketch) and factors for:
 - a. Air terminal configuration.
 - b. Flow direction (supply or exhaust).
 - c. Velocity corrections.
 - d. Effective area applicable to each size and type of air terminal.
 - e. Density corrections.
 7. The agenda shall include identification and types of measurement instruments to be used, and their most recent calibration date.

1.08 JOB CONDITIONS

- A. General: Do not proceed with testing, adjusting and balancing work until the following conditions have been met.
1. Installation and start-up work on equipment or systems to be tested has been completed and documented.
 2. Work area scheduled for testing, adjusting and balancing is clean and free from debris, dirt and discarded building materials.
 3. All architectural openings (doors, windows, and other openings) which may affect the operation of the system to be tested shall be in their completed normal positions and operation.
 4. All related mechanical systems which may affect the operation of the system to be tested shall be at their normal operating conditions.

PART 2 PRODUCTS

2.01 TEST HOLES

- A. Test holes and ports shall be provided in ducts, housings and pipes as directed by the Balancing Agency. At each location where ducts or plenums are insulated, test holes shall be provided with an approved extension with plug fitting.

2.02 PATCHING MATERIALS

- A. Material: Seal, patch and repair ductwork, piping and equipment drilled or cut for testing purposes.
 - 1. Plastic plugs with retainers may be used to patch drilled holes in ductwork and housings.
 - 2. Insulation shall be neatly hemmed with metal or plastic edging, leaving test points visible for future testing.

2.03 TEST INSTRUMENTS

- A. Test Instruments: All instruments used for measurements shall be accurate and calibration histories for each instrument shall be available for examination. Each test instrument shall be calibrated by an approved laboratory or by the manufacturer. The Owner's Representative has the right to request instrument recalibration, or the use of other instruments and test methodology, where accuracy of readings is questionable.
- B. Additional Instruments: Permanently installed measuring instruments, such as temperature and pressure gauges, shall be checked against Certified Calibrated instruments. Any instrument which does not meet specification requirement shall be replaced or recalibrated.
- C. Cone Instruments: The Contractor shall employ manufactured enclosure type cones, capable of air volume direct readings, for all diffuser/grille/register air flow measurements. The readout meters shall meet calibration requirements.

PART 3 EXECUTION

3.01 PROCEDURES AND INSTRUMENTS, GENERAL

- A. Requirements: All systems and components thereof shall be adjusted to perform as required by approved project drawings and specifications.
- B. Test Duration: Operating tests of heating and cooling coils, fans, and other equipment shall be of not less than four-hours duration after stabilized operating conditions have been established. Capacities shall be based on temperatures and air and water quantities measured during such tests.
- C. Instrumentation: Method of application of instrumentation shall be in accordance with the approved agenda.
 - 1. All instruments shall be applied in accordance with the manufacturer's certified instructions.
 - 2. All labor, instruments, and appliances required shall be furnished by the Contractor. Permanently installed instruments used for the tests (e.g., flow meters and Btu meters) shall not be installed until the entire system has been cleaned and ready for operation.

3.02 DUCT SMOKE DETECTORS

- A. Duct smoke detectors shall be provided and located as required by these specifications and drawings and as required by the building codes and the following:
1. Obtain information from the Contractor who is to furnish the smoke detectors on the proper device placement and installation limitations and on the proper differential pressure across the sampling tubes of the duct detectors and for required air velocity range requirements.
 2. Installing Contractor shall review the manufacturer's installation guidelines for proper mounting locations.
 3. The testing and balancing agency shall be engaged to confirm that proposed mounting locations will not be adversely impacted by airflows.
- B. Duct smoke detectors shall be tested in collaboration with the installing Contractor and project Fire Alarm Contractor to ensure proper air flow sampling and differential pressure.

3.03 DUCTWORK AIR LEAKAGE TESTING

- A. Test and balance agency shall perform active air flow testing of ductwork systems or sections of ductworks. Agency shall inspect and confirm that all ductwork is sealed per the specification requirements prior to performing any testing. Calculate maximum allowable air leakage by system based on total design air flow rate and/or square footage of ductwork. Maximum allowable system air flow leakage shall not exceed 5% of total air volume, or the maximum allowable per local energy or mechanical codes where the allowable limit is less than 5%.
- B. Representative sections totaling 10 percent, or greater, of the total installed duct area shall be tested. Where the tested 10 percent fails to comply with the requirements, then 40 percent of the total installed duct area shall be tested. Where the tested 40 percent fails to comply then 100 percent of the total installed duct area shall be tested and verified to have a leakage rate that does not exceed the maximum allowable limit. Duct sections shall be selected by the Owner's Representative. Obtain total duct surface area and air flow volumes for each duct section from the installing contractor. Positive pressure leakage testing shall be permitted for negative pressure ductwork.
- C. Additional ductwork leakage testing may be required to meet local energy and mechanical code requirements. Refer to local codes for applicability and requirements.
- D. Ductwork systems to be leakage tested and procedures shall include:
1. Testing shall be performed at 1.5 times the peak design outlet static pressure (external static pressure) from the air handling unit/fan, but not greater than the maximum SMACNA pressure rating of the ductwork construction classification.
 2. Testing is not required of flexible ductwork or ductwork downstream of VAV terminal units.
 3. Leakage through manufactured products, such as air handling units, dampers, fire/smoke dampers and terminal units may be excluded from the leakage calculations based on manufacturer stated values, at pressure, or these units may be temporarily sealed with painter's tape or plastic sheeting during testing to seal any openings and must be removed after testing.
 4. Supply air ductwork from the outlet of the air handling unit/fan to inlet side of terminal units or connection to flexible ductwork. Duct leakage testing is not required downstream of terminal units.

5. All supply, return and exhaust air ductwork located outside the building envelope.
 6. Return and exhaust air ductwork located in unconditioned spaces from inlet of the air handling unit/fan to the ductwork terminations upstream of each return air grille.
- E. For buildings under the jurisdiction of the UMC or CMC provide duct leakage testing in compliance with maximum allowable leakage quantities per code Section 603.10.1, but in no case greater than 5% of the total system air flow volume. Ductwork shall be leak-tested in accordance with the procedures described in SMACNA HVAC Air Duct Leakage Test Manual. The permitted duct leakage shall be not more than the following:
1. $L_{MAX} = C_L P^{0.65}$ where:
 - a. L_{MAX} =maximum permitted leakage (ft³/min/100 sf [0.0001 (m³/s)/m²] duct surface area.
 - b. C_L = Six (6), SMACNA duct leakage class (ft³/min/100 sf [0.0001 (m³/s)/m²] duct surface area at 1 inch water column (0.2 kPa).
 - c. P =test pressure, which shall be equal to the design duct pressure class rating in inches of water column (kPa).
- F. Additional leakage testing in California, per the energy code, requires that duct systems shall be sealed to a leakage rate not to exceed 6% of the fan flow if the duct systems are:
1. Connect to a constant volume, single zone system, air conditioners, heat pumps or furnaces, and,
 2. Serve less than 5,000 square feet of floor area, and
 3. Have more than 25% duct surface area located in one or more of the following places:
 - a. Outdoors, or,
 - b. In a space directly under a floor where the U-factor of the roof is greater than the U-factor of the ceiling, or,
 - c. In a space directly under a roof with fixed vents or openings to the outside or unconditioned spaces, or,
 - d. In an unconditioned crawlspace, or,
 - e. In other unconditioned spaces.
- G. Ductwork installer shall prepare ductwork for pressure testing as deemed appropriate to maintain construction schedule. Ductwork may be tested as total systems or in sections. Sectional testing will require documentation to prove the totalized system leakage is within allowable range of entire system. Ductwork inlets and outlets may be temporarily sealed airtight with plastic, or other means, to facilitate testing pressures.
- H. Testing may occur through ductwork devices such as balancing dampers, smoke fire dampers and coils. Manufacturer provided air leakage allowances for such devices may be excluded from duct leakage measurement but must be documented in final report.
- I. The leakage rate shall be confirmed through field verification and diagnostic testing in accordance with procedures defined by Oriflow Air Leakage Test, or equivalent procedure. Perform all testing utilizing a duct leakage testing system, Oriflow Duct Leakage Tester or equal, with calibrated fan, orifice, gauges, ductwork, pressure tips and tubing.

3.04 UNDERFLOOR PLENUM AIR LEAKAGE TESTING

- A. Test and balance agency shall perform active air leakage testing of raised floor plenums. Agency shall inspect and confirm that all plenums are sealed per the specification requirements prior to testing. Agency shall coordinate with commissioning agent and all installing contractors and identify areas where floor plenum integrity has been compromised. Reports of inspections will be submitted to the general contractor.
- B. Plenum Mock-Up & Testing: All subcontractors responsible for constructing or penetrating the underfloor plenum must participate in the construction of an on-site plenum mockup consisting of all planned plenum components, penetrations, seams and openings. The mock-up plenum is to be inspected and tested by the test and balance agency and an independent commissioning agent for air leakage to verify that it was constructed and sealed in accordance with specifications and drawings including meeting the air leakage requirements.
- C. Air leakage requirement for mock-up and final plenums: total air leakage from each plenum should be no more than 5% of the design airflow when tested at a static pressure of 0.10" w.g. (25 Pascals). Areas with leakage exceeding 5% shall be inspected, repaired and retested until such time that plenum leakage is less than 5% of the design air flow for each floor area.
- D. Perform all pressure testing using a calibrated blower door apparatus, such as a Minneapolis Blower Door model 3 as manufactured by the Energy Conservatory. The fan discharge plenum shall be sized to match a typical floor tile, such as 24" x 24". A minimum of three measurements shall be obtained to assure the average pressure does not exceed the allowable leakage rate. Document results in TAB report.

3.05 AIR SYSTEM PROCEDURES

- A. Adjustments: Adjust all air handling systems to provide design air quantity to or through, each component, and to maintain stable and comfortable interior temperatures, free of drafts or stagnant air conditions.
- B. Equalizers: Equalizing devices shall be adjusted to provide uniform velocity across the inlets (duct side for supply) of terminals prior to measuring flow rates.
- C. Balance: Flow adjusting (volume control) devices shall be used to balance air quantities (i.e., proportion flow between various terminals comprising system) to the extent that their adjustments do not create objectionable air motion or sound (i.e., in excess of specified limits).
 - 1. Balancing between runs (submains, branch mains, and branches) generally shall be accomplished by flow regulating devices at, or in, the divided-flow fitting.
 - 2. Restriction imposed by flow regulating devices in or at terminals shall be minimal.
 - 3. Final measurements of air quality shall be made after the air terminal has been adjusted to provide the optimum air pattern of diffusion and as indicated on the air distribution drawings.
- D. Fan Adjustment: Total air system quantities, generally, shall be varied by adjustment of fan speeds or axial-flow fan wheel blade pitch. Damper restriction of a system's total flow may be used only for systems with direct-connected fans (without adjustable pitch blades), provided system pressure is less than 0.5" w.g. and sound level criteria are met.
- E. Air Measurement: Where air quantity measuring devices are specified in other sections such systems shall be used as a cross-check of portable measuring equipment.
 - 1. Except as specifically indicated herein, pitot tube traverses shall be made of each duct to measure air flow therein. Pitot tubes, associated instruments, traverses, and techniques shall conform to the ASHRAE "Handbook Fundamentals Inch Pound Edition."

2. For ducts serving modular office areas with movable partitions, which are subject to change, pitot tube traverses may be omitted provided the duct serves only a single room or space and its design volume is less than 2000 cfm. In lieu of pitot tube traverses, airflow in the duct shall be determined by totaling volume of individual terminals served, measured as described herein.
 3. Where duct's design velocity and air quantity are both less than 1000 (fpm/cfm), air quantity may be determined by measurements at terminals served.
- F. Test Holes: Test holes shall be in a straight duct, as far as possible downstream from elbows, bends, take-offs, and other turbulence generating devices, to optimize reliability of flow measurements.
- G. Air Terminal Balancing: Generally, measurement of flow rates by means of velocity meters applied to individual terminals, with or without cones or other adapters, shall be used only for balancing. Measurement of air quantities at each type of air terminal (inlet and outlet) shall be determined by the method approved for the balancing agenda. Laboratory tests shall be conducted to prove accuracy of testing methodology and test data when so directed. Such tests shall be conducted in conformance with applicable ASHRAE or American Society of Mechanical Engineers (ASME) codes and shall be performed at no additional cost to Owner.
- H. Air Motion: Air motion and distribution shall be as specified and indicated on drawings. The Contractor, at no additional cost to the Owner shall, in addition to air motion and direct measurements, perform smoke tests as requested to demonstrate the air distribution and pattern from air terminals and outlets.
- I. Air system test and balance procedures shall include, but not be limited to the following requirements:
1. Test and adjust blower RPM to design requirements.
 2. Test and record motor full load amperes.
 3. Make pitot tube traverse of main supply ducts and obtain design CFM at fans.
 4. Test and record system static pressures, suction pressure directly at system fan inlet, and outlet pressure directly at system fan outlet or discharge. Test and record static pressure across each component of air handling system (coils, filters, etc.).
 5. Test and adjust system for design CFM recirculated air.
 6. Test and adjust system for design CFM outside air.
 7. Test and record entering air temperatures.
 8. Test and record leaving air temperatures.
 9. Adjust all supply, return and exhaust air ducts to proper design CFM.
 10. Adjust all zones to proper design CFM, supply and return.
 11. Test and adjust duct systems and each diffuser, grille, and/or register to within 10% of design requirements.
 12. Each grille, diffuser and register shall be identified as to location and area.
 13. Operate each variable frequency drive (VFD) and verify controls installation is complete.
 14. Size, type and manufacturer of VAV boxes, diffusers, grilles, registers and all tested equipment shall be identified and listed. Manufacturer's ratings on all equipment shall be used to make required calculations.

15. Readings and tests of diffusers, grilles and registers shall include required FPM velocity and test resultant velocity, required CFM and test resultant CFM after adjustment.
16. In cooperation with the control manufacturer's representative, setting adjustments of automatically operated dampers to operate as specified, indicated, and/or noted. Testing agency shall check all controls requiring adjustment by control installers. Room thermostats shall be checked for cooling and heating response.
17. All diffusers, grilles and registers shall be adjusted to minimize drafts in all areas.
18. Adjust overall system balances to allow all self-closing exterior doors to close from any open position. Maximum interior air pressure in all operational modes shall not exceed 0.05" static pressure relative to the outside air pressure. Comply with chapter 10 of the Building Code to assure that self-closing doors will release with a maximum force of 15 pounds.
19. As part of the work of this contract, the HVAC contractor shall make any changes in the pulleys, belts and dampers or the addition of dampers required for correct balance as recommended by air balance agency, at no additional cost to Owner.
20. After air balancing is completed and RPM determined, HVAC Contractor shall provide fixed pitch pulleys.
21. All mixing boxes, VAV air valves, control dampers, smoke dampers and similar devices which operate at 100% shut off shall be tested for leakage.
22. Variable Air Volume Fan Systems: The primary balancing mode is 100% outside air with all terminal boxes on a full call for cooling. Also check and record performance at minimum outside air with all terminal boxes on call for full cooling and at minimum outside air with all terminal boxes on call for full heating and at minimum outside air in the deadband range with no call for heating or cooling. Verify that the systems are operating on a stable part of the fan curves in each mode. Record final duct static controller settings.
23. Provide testing of underfloor air distribution plenum floor mock-ups and final floor installation to document that plenum does not exceed 5% air leakage rate at maximum 0.10" w.g. positive differential pressure.
24. Space Pressurization Procedure:
 - a. Before testing for space pressurization, observe the space to verify the integrity of the space boundaries. Verify that windows and doors are closed and applicable gaskets, and sealants are installed. Report deficiencies and postpone testing until after the reported deficiencies are corrected.
 - b. Measure, adjust, and record the pressurization of each room, each zone, and each building by adjusting the supply, return, and exhaust airflows to achieve the indicated conditions.
 - c. Measure space pressure differential where pressure is used as the design criteria and measure airflow differential where differential airflow is used as the design criteria for space pressurization.
 - 1) For pressure measurements, measure and record the pressure difference between the intended spaces at the door with all doors in the space closed. Record the high-pressure side, low-pressure side, and pressure difference between each adjacent space.
 - 2) For applications with cascading levels of space pressurization, begin in the most critical space and work to the least critical space.
 - 3) Test room pressurization first, then zones, and finish with building pressurization.

- d. To achieve indicated pressurization, set the supply airflow to the indicated conditions and adjust the exhaust and return airflow to achieve the indicated pressure or airflow difference.
- e. For spaces with pressurization being monitored and controlled automatically, observe and adjust the controls to achieve the desired set point.
 - 1) Compare the values of the measurements taken to the measured values of the control system instruments and report findings.
 - 2) Check the repeatability of the controls by successive tests designed to temporarily alter the ability to achieve space pressurization. Test over pressurization and under pressurization, and observe and report on the system's ability to revert to the set point.
 - 3) For spaces served by variable-air-volume supply and exhaust systems, measure space pressurization at indicated airflow and minimum airflow conditions.
- f. In spaces that employ multiple modes of operation, such as normal mode and emergency mode or occupied mode and unoccupied mode, measure, adjust, and record data for each operating mode.
- g. Record indicated conditions and corresponding initial and final measurements. Report deficiencies.

3.06 ADA COMPLIANCE

- A. All air balancing work shall be coordinated with other disciplines to comply with meeting or exceeding the minimum requirements of the Americans with Disabilities Act (ADA), Chapters 9 and 10 of the Building Code, local amendments and State Energy Code. Final air balancing for all systems in each space shall be verified and adjusted as necessary to meet the following requirements during peak ventilation, smoke control mode, partial ventilation and minimum ventilation modes during occupied and non-occupied hours. The following requirements are provided as consolidated list of minimum ADA requirements:
 - 1. The required force for pushing or pulling open a door other than fire doors shall not exceed 5 pounds.
 - 2. At fire doors the required opening force shall not exceed 15 pounds.
 - 3. At fire doors the doors shall be set in motion when subjected to a force not exceeding 30 pounds.
 - 4. At fire doors the doors shall swing to a full open position when subjected to a force not exceeding 15 pounds.
 - 5. The force to operate door latch releases shall not exceed 5 pounds.
 - 6. The differential pressure between the building lobby and outside shall remain positive between 0.01" w.g., minimum, and 0.05" w.g., maximum, during operational hours.

3.07 AIR SYSTEM DATA

- A. Report: The certified report shall include for each air handling system the data listed below.
 - 1. Equipment (Fan or Factory Fabricated Station Unit):
 - a. Installation data

- 1) Manufacturer and model
 - 2) Size
 - 3) Arrangement, discharge and class
 - 4) Motor hp, voltage, phase, cycles, and full load amps
 - 5) Location and local identification data
- b. Design data
- 1) Data listed in schedules on drawings and specifications.
- c. Fan recorded (test) data
- 1) CFM
 - 2) Static pressure (suction and discharge, across each coil and filter set)
 - 3) RPM
 - 4) Motor operating amps
 - 5) Motor operating bhp
2. Duct Systems:
- a. Duct air quantities (maximum and minimum) - main, submains, branches, outdoor (outside) air, total air, and exhaust:
- 1) Duct size(s)
 - 2) Number of pitot tube (pressure measurements)
 - 3) Sum of velocity measurements (Note: Do not add pressure measurements)
 - 4) Average velocity
 - 5) Recorded (test) cfm
 - 6) Design cfm
- b. Individual air terminals
- 1) Terminal identification supply or exhaust, location and number designation
 - 2) Type size, manufacturer and catalog identification applicable factor for application, velocity, area, etc., and designated area
 - 3) Design and recorded velocities - fpm (state "core," "inlet," etc., as applicable)
 - 4) Design and recorded quantities - cfm (deflector vane or diffusion cone settings)

3.08 WATER SYSTEM PROCEDURES

A. Preparation:

1. Open all valves to fully open position. Close coil bypass stop valves. Set mixing valve to full coil flow.
2. Remove all strainers and clean same. Reinstall.

3. Examine water system and determine if water has been treated and cleaned.
 4. Check pump rotation.
 5. Check expansion tank to determine they are not air bound and the system is completely full of water.
 6. Check all air vents at high points of water systems and determine that all are installed and operating freely.
 7. Check operation of automatic bypass valve.
 8. Operate each variable frequency drive (VFD) and verify controls installation is complete.
 9. Check and set operating temperatures of all equipment at design requirements.
 10. Complete air balance must have been accomplished before actual water balance begins.
- B. Adjustment: All heating, cooling and condensing water systems shall be adjusted to provide required quantity to or through each component.
- C. Metering: Water quantities and pressures shall be measured with calibrated meters.
1. Venturi tubes, orifices, or other metering fittings and pressure gauges shall be used to measure water flow rates and balance systems. Systems shall be adjusted to provide the approved pressure drops through the heat transfer equipment (coils except room units, converters, etc.) prior to the capacity testing.
 2. Where flow metering fittings are not installed, in air/water type heat transfer equipment, flow balance shall be determined by measuring the air side energy differential across the heat transfer equipment. Measurement of water temperature differential shall be performed with the air system, adjusted as described herein, in operation.
- D. Automatic Controls: Automatic control valves shall be positioned for full flow through the heat transfer equipment of the system during tests.
- E. Flow: Flow through bypass circuits at three-way valves shall be adjusted to equal that through the supply circuit, when the valve is in the bypass position.
- F. Distribution: Adjustment of distribution shall be affected by means of balancing devices (cocks, valves, and fittings) and automatic flow control valves as provided. Manual service valves shall not be used for balancing.
1. Where automatic flow control valves are utilized in lieu of Venturi tubes, only pressure differential need be recorded, provided that the pressure is at least the minimum applicable to the tag rating.
- G. Special Procedures: Where available pump capacity (as designed) is less than total flow requirements of individual heat transfer units of system served, full flow may be simulated by the temporary restriction of flow to portions of the system; specific procedures shall be delineated in the agenda.
- H. Water System Test and Balance Procedure: Perform the following tests, and balance each system in accordance with the following requirements:
1. Set chilled, heating and condenser water pumps to proper gallons per minute delivery.
 2. Adjust chilled water flow through chiller(s).
 3. Adjust heating water flow through boiler(s).
 4. Adjust condenser water flow through cooling tower(s).

5. Test and record entering and leaving water temperatures through chillers, boilers, heat exchangers and cooling towers/fluid coolers.
6. Test and record water temperatures at inlet and outlet side of each terminal unit. Note rise or drop of temperatures from source.
7. Proceed to balance each terminal unit.
8. Upon completion of flow readings and adjustments at coils, mark all settings and record data.
9. After adjustments to coils are made, recheck settings at the pumps, chiller, boilers, and cooling towers and readjust if required.
10. Record and check the following items at each coil.
 - a. Inlet water temperatures.
 - b. Leaving water temperatures.
 - c. Water pressure drop of each coil.
11. Pump operating suction and discharge pressures and final total dynamic head.
12. List all mechanical specifications of pumps.
13. Rated and actual running amperage of pump motor.
14. Water metering device readings.

3.09 WATER SYSTEM DATA

A. Report: The certified report for each water system shall include the data listed below.

1. Pumps:
 - a. Installation data
 - 1) Manufacturer and model
 - 2) Size
 - 3) Type drive
 - 4) Motor hp, voltage, phase, and full load amps
 - b. Design data
 - 1) GPM
 - 2) Head
 - 3) RPM and amps
 - c. Recorded data
 - 1) Discharge pressures (full-flow and no-flow)
 - 2) Suction pressures (full-flow and no-flow) operating head
 - 3) Operating gpm (from pump curves if metering is not provided) no-load
 - 4) Amps
 - 5) Full-flow amps
 - 6) No-flow amps

2. Air Heating and Cooling Equipment:
 - a. Design data
 - 1) Load in Btuh or MBh
 - 2) GPM
 - 3) Entering and leaving water temperature
 - 4) Entering and leaving air conditions (DB and WB)
 - 5) CFM
 - 6) Water pressure drop
 - 7) Entering steam pressure
 - b. Recorded data
 - 1) Type of equipment and identification (location or number designation)
 - 2) Entering and leaving air conditions (DB and WB)
 - 3) Entering and leaving water temperatures
 - 4) GPM
 - 5) Temperature rise or drop
 - 6) Entering steam pressure
3. Water Chilling Units:
 - a. Installation data
 - 1) Manufacturer and model
 - 2) Motor hp, voltage, cycles, phase, and full load amps
 - 3) Part load amperes
 - 4) GPM - chiller and condenser
 - 5) Water pressure drop - chiller and condenser
 - 6) Entering and leaving water temperature - chiller and condenser
 - b. Recorded data (chiller and condenser)
 - 1) GPM
 - 2) Water pressure drop
 - 3) Entering and leaving water temperature
 - 4) Amperes
4. Cooling Towers and Fluid Coolers:
 - a. Installation data
 - 1) Manufacturer and model
 - 2) Motor hp, voltage, cycles, phase, and full load amps
 - 3) Part load amperes
 - 4) GPM
 - 5) Water pressure drop

- 6) Entering and leaving water temperature
- b. Recorded data
 - 1) GPM
 - 2) Water pressure drop
 - 3) Entering and leaving water temperature
 - 4) Amperes
5. Boilers:
 - a. Installation data
 - 1) Manufacturer and model
 - 2) Motor hp, voltage, cycles, phase, and full load amps
 - 3) Part load amperes
 - 4) GPM
 - 5) Water pressure drop
 - 6) Entering and leaving water temperature
 - b. Recorded data
 - 1) GPM
 - 2) Water pressure drop
 - 3) Entering and leaving water temperature
 - 4) Amperes
6. Heat Exchangers:
 - a. Installation Data
 - 1) Manufacturer, model, and type
 - 2) Flow rate
 - 3) Inlet (entering) and outlet (leaving) temperatures
 - 4) Inlet (entering) and outlet (leaving) pressures
 - b. Recorded Data
 - 1) Flow rate
 - 2) Entering and leaving water temperatures
 - 3) Entering and leaving pressures

3.10 HEAT EXCHANGER CAPACITY VERIFICATION

- A. Air coil capacities shall be verified from air side measurement data. Capacities of coils shall be the difference of the energy carried by the air between the upstream and downstream of the coils.

- B. The measured air flow rate for the fan may be used for air coil capacity calculations providing no ducted bypassing of coil is occurring.
- C. Water/water heat exchanger equipment capacity shall be verified by measuring the flow rate and temperature differential of the water.
- D. Capacity verification shall be performed after air and water systems have been balanced.
- E. False load shall be applied if the upstream air or water does not meet the specified conditions at the time of test.

3.11 SOUND TEST PROCEDURES

- A. Scope: Tests of sound levels shall be made at each selection point as described in the following:
 - 1. Each normally occupied room or space, including, but not limited to, the following:
 - a. Offices, open and enclosed.
 - b. Conference rooms and breakout rooms.
 - c. Lobbies and waiting rooms.
 - d. Break rooms.
 - e. Retail spaces.
 - f. Dining area.
 - g. Hospitality spaces, guest rooms and patient rooms.
 - h. IT and data equipment rooms.
 - 2. Within five feet of each piece of noise generating equipment, such as chillers, cooling towers/fluid coolers, fans, compressors, pumps, and condensers. Or, within the documented sound measurement distance as listed in the equipment manufacturer literature.
 - 3. Within five feet of property lines where mechanical equipment is located outside the building.
- B. Timing: Sound level measurements shall be taken at times when the building is unoccupied, or when activity in surrounding areas and background noise level in areas tested are at a minimum and relatively free from sudden changes in noise levels.
 - 1. Measurements shall be taken with all equipment turned off, except that being tested.
 - 2. The required sound levels shall be measured at any point within a room not less than 6 feet from any equipment or air terminal and not closer than 3 feet from any floor, wall, or ceiling surface.
- C. Meters: Sound levels shall be measured with a sound meter complying with ANSI S1.4. The "A" scale shall be used to measure over all sound levels. To determine the specified octave band levels, the above sound level meter, set on "C" scale, shall be supplemented by an octave band analyzer complying with ANSI S1.11.
- D. Equipment Components: The "Equipment Component" of room sound equals LPt-C. The "Equipment Component" of room sound (noise) levels shall be determined for each of eight octave bands as follows:

1. Measure room sound pressure level "LPb" with equipment to be tested shut off.
2. Measure room sound pressure level "LPt" with equipment to be tested turned on.
3. Calculate LPt-LPb; if this value is less than 1, applicable test must be rerun with lower background level (LPb) unless LPt is within sound pressure level specified for equipment.
4. Determine "c" from the table below.

LPt-LPb (db)	c (db)
1	7
2	4
3	3
4 to 4- ½	2
5 to 5- ½	1 – ½
6 to 7- ½	1
8 to 12	½
over 12	0

3.12 SOUND LEVEL DATA

- A. Report: Certified report shall record data on sound levels, taken at each selected location, as follows:
 1. Source of sound and location.
 2. Diagram or description of relationship of sound source to measuring instrument.
 3. "A" scale readings equipment being tested turned off (ambient) equipment being tested turned on (operating conditions).
 4. Readings at each specified octave band frequency for equipment being tested turned off (ambient level) and equipment being tested turned on (operating conditions).
 5. "Equipment Components" of sound (noise) levels with applicable calculations per "Sound Test Procedures".
 6. Graph showing relationship between pressure levels specified and recorded readings
- B. Retest: Subsequent to any correctional construction work, such as acoustic corrections, measurement shall be made to verify that associated air and water quantities, as previously measured, have not been disrupted.
 1. Certified report shall record all sound data, and their locations, after final adjustments of air and water systems involves

3.13 MEASUREMENT TOLERANCES

- A. Set system air flow rates and water flow rates within the following tolerances:
 1. Supply, return, and exhaust fans and equipment with fans: +/- 10%.
 2. Air outlets and inlets: +/- 10%.

3. Heating water flow rate: +/- 10%.
4. Chilled water flow rate: +/- 10%.
5. Condenser water flow rate: +/- 10%.

3.14 CERTIFIED REPORTS

- A. Submittals: Six (6) copies of the reports described herein, covering air and water system performance, air motion (fpm), and sound pressure levels, shall be submitted prior to final tests and inspection.
- B. Instrument Records: Types, serial numbers, and dates of calibration of all instruments shall be included.
- C. Reports: Reports shall conspicuously identify items not conforming to contract requirements, or obvious malfunction and design deficiencies.
- D. Certification: Certification shall include checking of adherence to agenda, of calculations, of procedures, and evaluation of final summaries.

3.15 FINAL COMMISSIONING TESTS, INSPECTIONS AND ACCEPTANCE

- A. Scope: Test shall be made to demonstrate that capacities and performance of air and water systems comply with contract requirements.
 1. At the time of final inspection, the Contractor shall recheck, random selection of data (water and air quantities, air motion, and sound levels) recorded in the certified report. In addition, all courtrooms, auditoriums, and conference rooms shall be rechecked.
 2. Points and areas for recheck shall be selected by the commissioning team.
 3. Measurement and test procedures shall be the same as approved for work forming basis of certified report.
 4. Selections for recheck (specific plus random), in general, will not exceed 25 percent of the total number tabulated in the report, except that special air systems may require a complete recheck for safety reasons.
- B. Retests: If random tests elicit a measured flow deviation of 10 percent or more from design, or a sound level greater than 2 db or more than recorded in the certified report listings, as 10 percent or more of the rechecked selections, the report shall be automatically rejected. In the event the report is rejected, all systems shall be readjusted and tested, new data recorded, new certified reports submitted, and new inspection tests made, all at no additional cost. Retainage time shall be based on the date of the final acceptance of the certified report.
- C. Marking of Settings: Following final acceptance of certified reports, the settings of all valves, splitters, dampers, and other adjustment devices shall be permanently marked by the Contractor so that adjustment can be restored if disturbed at any time. Devices shall not be marked until after final acceptance.

SECTION 23 07 13

DUCT INSULATION

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 05 00 - Basic Materials and Methods, and other Sections in Division 23 specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 SCOPE

- A. All work to be furnished and installed under this Section shall include, but not necessarily be limited to, providing insulation for the following:
1. Ductwork Insulation:
 - a. Duct wrap insulation.
 - b. Acoustic duct lining.
 - c. Rigid board ductwork and plenum insulation.
 - d. Fire Rated duct insulation systems.
 - e. Field applied jackets, indoor and outdoor.
 2. Section Includes insulating the following duct services:
 - a. All supply air ductwork, unless otherwise shown on drawings.
 - b. Return air ductwork in unconditioned spaces and as shown on drawings.
 - c. Acoustical duct lining, in vertical/horizontal supply and return ducts within twenty feet (20') of air handling equipment and where otherwise shown on drawings.
 - d. Outside air ductwork in return plenums, mechanical rooms and in freezing climates.
 - e. Exhaust air ductwork in cold air plenums.
 - f. Vapor/moisture ductwork.
 - g. Insulation to protect fire rated exhaust systems.
 3. Plenums and equipment rooms, as noted.
- B. Types of mechanical insulation specified in this Section include the following:
1. Duct wrap insulation: Glass mineral wool also known as fiberglass.
 2. Duct wrap insulation: Flexible elastomeric foam.
 3. Acoustic duct liner: Glass mineral wool also known as fiberglass.
 4. Acoustic duct liner: Flexible elastomeric foam.
 5. Acoustic duct liner: Polyimide foam.
 6. Rigid board duct and plenum insulation: Calcium silicate.

7. Rigid board duct and plenum insulation: Glass mineral wool.
8. Fire-rated duct insulation: Calcium silicate.
9. Fire-rated duct insulation: Fire-rated board.
10. Fire-rated duct insulation: Fire rated blanket.
11. Insulation jackets.
12. Removable covers
13. Insulation accessories.

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 23 05 00 - Basic HVAC Materials and Methods.
- B. Section 23 31 13 - Air Distribution.

1.04 DEFINITIONS

- A. Ambient: The air temperature to be maintained in a conditioned room. Typically, between 70°F and 78°F.
- B. Insulation Group (IG): Definition of Insulation Materials and Operating Temperatures.
- C. Vapor Barrier Jacket: Insulation jacket material that impedes the transmission of water vapor.
- D. Freezing Climate: Where outdoor design temperature is less than 33° F, as stated in ASHRAE fundamentals under 99% column for winter design conditions.
- E. Unconditioned Space: any space not directly conditioned by mechanical equipment or maintained to temperature by mechanical equipment.

1.05 INSULATION INDUSTRY DEFINITIONS

- A. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a Kraft paper interleaving with an outer film layer leaving no paper exposed.
- B. ASJ: All Service Jacket (no outer film).
- C. EPA: Environmental Protection Agency.
- D. FHC: Fire Hazard Classification
- E. FSK: Foil-Scrim-Kraft facing or vapor barrier.
- F. FSP: Foil-Scrim-Polyethylene facing or vapor barrier.
- G. ECOSE Technology: a proprietary binder system based on rapidly renewable bio-based materials; rather than petroleum-based chemicals commonly used in other glass mineral wool insulation materials. ECOSE Technology reduces the binder embodied energy by up to 70 percent and does not contain phenol, formaldehyde, acrylics or artificial colors.

- H. Imperative 11, Red List – requires that manufacturers disclose the ingredients in their products to document they are free of Red List chemicals and materials. The Red List represents the “worst in class” materials, chemicals and elements known to pose serious risks to human health and the greater ecosystem.
 - I. PSK: Polypropylene-Scrim-Kraft facing or vapor barrier.
 - J. PVC: Polyvinyl Chloride.
 - K. Polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE and Deca-BDE fire retardants: have been linked to adverse health effects after exposure in low concentrations.
 - L. Recycled Content – Post-Consumer: materials such as bottled glass collected at curbside or other collection sites after consumer use and used in the manufacturing process to create a new product rather than being placed in a landfill or incinerated.
 - M. Recycled Content – Pre-Consumer (aka Post-Industrial): materials used or created from one manufacturing process which are collected as scrap and placed back into another manufacturing process rather than being placed in a landfill or incinerated.
 - N. SVF: Synthetic Vitreous Fiber including all forms of manufactured inorganic fibrous insulations such as glass wool (fiberglass) and mineral wool (rock wool and slag wool).
 - O. SSL+: Self-Sealing Lap with Advanced Closure System.
 - P. SSL: Self-Sealing Lap.
 - Q. Underwriter’s Laboratories Environment (UL Environment): offers independent green claims validation, product assessment and certification.
 - R. UL Classified: UL has tested and evaluated samples of the product with respect to certain properties of the product. UL classifies products to applicable UL requirements standards for safety and standards of other National and International organizations
 - S. UL Environment Claims Validation (ECV): service and label tests a manufacturer’s product and validates that the environmental claims they make in their marketing and packaging materials are factual. This ECV service enables products to qualify for LEED® MR Credit 4 Recycled Content LEED-NC 2009 or New LEED V-4 Building product disclosure and optimization – sourcing of raw materials.
 - T. UL GREENGUARD: Provides independent third-party, Indoor Air Quality (IAQ) certification of products for emissions of respirable particles and Volatile Organic Compounds (VOC’s), including formaldehyde and other specific product-related pollutants. Certification is based upon criteria used by EPA, OSHA, and WHO.
 - U. UL GREENGUARD Gold Certification: (formerly known as GREENGUARD Children & Schools Certification) offers stricter certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced by both The Collaborative for High Performance Schools (CHPS) and the Leadership in Energy Environmental Design (LEED) Building Rating Systems.
 - V. WHO: World Health Organization.
- 1.06 QUALITY ASSURANCE

- A. Codes and Standards: Provide products conforming to the requirements of the following:
1. American Society for Testing and Materials (ASTM): Manufacture and test insulation in accordance with the ASTM Standards, including:
 - a. B209: Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - b. C165: Recommended Practice for Measuring Compressive Properties of Thermal Insulation.
 - c. C167: Test Methods for Thickness and Density of Blanket or Batt Thermal Insulations.
 - d. C168: Terminology for Thermal Insulation.
 - e. C177: Test Method for Steady-State Heat Flux Measurements and Thermal Transmission by Properties by Means of the Guarded Hot Plate Apparatus.
 - f. C195: Specification for Mineral Fiber Thermal Insulating Cement.
 - g. C196: Specification for Expanded or Exfoliated Vermiculite Thermal Insulating Cement.
 - h. C302: Test Method for Density of Preformed Pipe-Covering-Type Thermal Insulation.
 - i. C303: Test Method for Density of Preformed Block-Type Thermal Insulation.
 - j. C305: Test for Thermal Conductivity of Pipe Insulation.
 - k. C356: Test for Linear Shrinkage of Preformed High-Temperature Thermal Insulation.
 - l. C411: Test for Hot-Surface Performance of High Temperature Thermal Insulation.
 - m. C423: Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
 - n. C449: Specification of Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
 - o. C518: Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
 - p. C533: Specification for Calcium Silicate Block and Pipe Thermal Insulation.
 - q. C534: Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
 - r. C547: Specification for Mineral Fiber Preformed Pipe Insulation.
 - s. C552: Specification for Cellular Glass Block and Pipe Thermal Insulation.
 - t. C612: Specification for Mineral Fiber Block and Board Thermal Insulation.
 - u. C755: Standard Practice for Selection of Water Vapor Retarders for Thermal Insulation.
 - v. C795: Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
 - w. C916: Standard Specification for Adhesives for Duct Thermal Insulation.
 - x. C921: Practice for Determining Properties of Jacketing Materials for Thermal Insulation.
 - y. C1104: Standard Test Method for Determining the Water Vapor Sorption of Unfaced Mineral Fiber Insulation.

- z. C1071: Standard Specification for Thermal and Acoustical Insulation.
 - aa. C1136: Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation
 - bb. C1290: Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
 - cc. C1338: Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings.
 - dd. D1667: Standard Specification for Flexible Cellular Material-Vinyl Chloride Polymers and Copolymers (Closed-Cell Foam).
 - ee. E84: Test Method for Surface Burning Characteristics of Building Materials.
 - ff. E119: Test for Fire Resistance.
 - gg. G21: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.
 - hh. G22: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Bacteria.
2. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE): Provide and install pipe and duct insulation in accordance with the following ASHRAE Standard:
- a. 90: Energy Conservation in New Building Design.
3. National Fire Protection Association (NFPA): Manufacture insulation in accordance with the following NFPA standards:
- a. 255: Test Methods, Surface Burning Characteristics of Building Materials.
4. Underwriters Laboratory (UL): Manufacture and test insulation in accordance with the UL Standards, including:
- a. 181: Standard for Factory-Made Air Ducts and Air Connectors.
 - b. 723: Standard for Test for Surface Burning Characteristics of Building Materials.
 - c. 2043: Standard for Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.
- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- C. Do not provide materials with flame proofing treatments subject to deterioration due to the effects of moisture or high humidity.
- D. Flame/Smoke Rating: Materials exposed within ducts or plenums shall be noncombustible. Provide composite mechanical insulation (insulation, jackets, coverings, sealers, mastics and adhesives) with flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method or UL 723. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing; or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified. Discrete plumbing, mechanical, and electrical products that are located in a plenum and have exposed combustible material shall be in accordance with UL 2043.

- E. Corrosiveness: Passes ASTM C1617-05, Standard Practice for Quantitative Accelerated Laboratory Evaluation of Extraction Solutions Containing Ions Leached from Thermal Insulation on Aqueous Corrosion of Metals.
- F. Insulation thickness shall be the greater standard of that specified here or the State energy conservation requirements.
- G. Sustainable Project Requirements: Formaldehyde Free: Third party certified with UL Environment Validation or Scientific Certification Systems (SCS).
 - 2. Biosoluble: As determined by research conducted by the International Agency for Research on Cancer (IARC) and supported by revised reports from the National Toxicology Program (NTP) and the California Office of Environmental Health Hazard Assessment. Certified by European Certification Board for Mineral Wool Products
- A. Product Data: Submit manufacturer's technical product data and installation instructions for each type of mechanical insulation. Submit schedule showing manufacturer's product number, K-value, thickness, and furnished accessories for each mechanical system requiring insulation. Also, furnish necessary test data certified by an independent testing laboratory. Submit samples.
 - 1. Products containing the following prohibited chemicals for use as flame retardants or for other purposes will not be acceptable when present in quantities greater than 0.1% by mass. Provide a statement with the submittal indicating that no product submitted contains an amount equal to or greater than 0.10% by mass of the following chemicals:
 - a. Pentabrominated diphenyl ether (CAS#32534-81-9).
 - b. Octabrominated diphenyl ether (CAS#32536-52-0).
 - c. Decabrominated diphenyl ether (CAS#1163-19-5).
 - 2. All materials, adhesives, mastics and sealants installed in California shall meet or exceed the minimum testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing and Evaluation of Volatile Organic Emissions from Indoor Sources using Environmental Chambers."
- B. Maintenance Data: Submit maintenance data and replacement material lists for each type of mechanical insulation. Include this data and product in maintenance manual.

1.08 LEED ACTION SUBMITTALS:

- A. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
- B. Product Data for Credit MR 5 Regional Materials: For products and materials to comply with requirements for regional materials, provide documentation indicating location of product or material, manufacturing location and the point of extraction, harvest or recovery for each raw material. Include distance to Project, contractor cost for each regional material, and percent by weight that is considered regional.
- C. LEED v 4, Product Data for Credit EA 2: For products and materials significant to the energy performance of a structure, provide documentation that indicates that insulation levels are significant to increasing the level of energy performance beyond the prerequisite standard.

- D. LEED v 4, Product Data for Credit MR 2: For products and materials to comply with Building Product Disclosure & Optimization, provide data/evidence that substantiates Environmental Product Declaration and Multi Attribute Optimization requirements.
- E. LEED v 4, Product Data for Credit MR 3: For products and materials to comply with requirements for regional materials, provide documentation indicating location of product or material, manufacturing location and the point of extraction, harvest or recovery for each raw material. Include distance to Project, contractor cost for each regional material, and percent by weight that is considered regional.
- F. LEED v 4, Product Data for Credit MR 4: For products having recycled content documentation; indicating percentages by weight of post-consumer and pre-consumer recycled content. Include statement indicating cost for each product having recycled content.
- G. LEED v 4, Product Data for Credit EQ 2: For products and materials to comply with low emittance standards, provide documentation substantiating that insulation products comply with requisite low emittance standards.
- H. LEED v 4, Product Data for Credit EQ 5: For products and materials to meet the standard for both thermal comfort design and thermal comfort control, provide data to support that insulation products are significant to thermal comfort design and thermal comfort control.
- I. LEED v 4, Product Data for Credit EQ 9: For products and materials that contribute to the design and performance of workspaces that promote occupants well-being, productivity, and communication, provide data/documentation supporting acoustical benefits of Glass Mineral Wool insulation products.
- J. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver insulation, coverings, cements, adhesives, and coating to the site in containers with manufacturer's stamp or label affixed showing fire hazard indexes of products.
- B. Store and protect insulation against dirt, water, chemical, and mechanical damage. Do not install damaged or wet insulation; remove from project site.

1.10 WARRANTY

- A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.
- B. Refer to Section 23 05 00 for additional warranty and Substantial Completion requirements.

PART 2 PRODUCTS

2.01 GENERAL REQUIRMENTS

- A. Comply with requirements in "PART 3 – EXECUTION" for Table 1, Table 2 and Table 3 for application of insulation materials.

- B. Products shall not contain asbestos, lead, mercury or mercury compounds if possible. Products shall be certified UL GREENGUARD Gold or Indoor Advantage Gold if possible.
- C. Insulation materials for use on austenitic stainless steel shall be qualified per ASTM C795.
- D. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- E. Each insulation material has been provided a descriptive key code, such as **DW-A**, to simplify the organization and application of materials in following sub-sections.
- F. Acceptable manufacturers include Knauf, Johns Manville, Owens-Corning, Armstrong, Pittsburgh-Corning, Trymer, IIG, Certainteed, Halstead, Rubatex, 3M FireMaster, Pabco, Reflectix or equal. Manufacturer and insulation types listed below indicate a minimum acceptable level of quality required for each classification.

2.02 DUCT WRAP INSULATION (IDENTIFIED BY KEY CODE **DW** AND IN TABLE 1)

- A. **DW-A**, Flexible Glass Mineral Wool Blanket:
 1. Application: Exterior insulation wrap for ductwork or other HVAC systems.
 2. Flexible Glass Mineral Wool Blanket bonded with a bio-based thermosetting resin:
 3. Comply with ASTM C553, ASTM C1290, UL 723, and UL Greenguard certified.
 4. K-value: 0.29 Btu·in./(hr.·ft²·°F) at 75°F installed full thickness (maximum). Equivalent to "R-Value" per inch of 3.4 (hr.·ft²·°F)/Btu·in. (minimum).
 5. Density: 0.75 lb./cu.ft. (minimum).
 6. Vapor Barrier Jacket: FSK (Foil-Scrim-Kraft) aluminum foil faced reinforced with glass mineral wool yarn and laminated to fire-resistant Kraft. Or, PSK (Polypropylene-Scrim-Kraft) plastic vapor barrier.
 7. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" section.
 8. Maximum operating temperature: 250°F.
 9. Flame spread index: ASTM E84, less than 25.
 10. Smoke developed index: ASTM E84, less than 50.
 11. Manufacturers: Knauf Insulation #Atmosphere Duct Wrap, Owens Corning #SOFTR Duct Wrap, John Manville #Microlite FSK or PSK or equal.
- B. **DW-B**, Elastomeric Foam Flexible Insulation:
 1. Application: Exterior insulation wrap for ductwork or other HVAC systems.
 2. Elastomeric foam insulation with acrylic polymer airstream coating.
 3. Comply with ASTM D1622, ASTM C1104, ASTM C518, and UL Greenguard Low VOC certified.
 4. K-value: 0.25 Btu·in./(hr.·ft²·°F) at 75°F per ASTM C518. Equivalent to "R-Value" per inch of 4.0 (hr.·ft²·°F)/Btu·in. (minimum).
 5. Density: ASTM D 1622, 3.0-6.0 lb./ft³.
 6. Water vapor sorbtion: ASTM C 1104, less than 2% by weight.
 7. Fungal and bacteria resistance: ASTM G 21/22, no growth.
 8. Maximum operating temperature: 250°F.

9. Flame spread index: ASTM E84, less than 25.
10. Smoke developed index: ASTM E84, less than 50.
11. Adhesive: UL listed waterproof type compliant with ASTM C916.
12. Manufacturers: Armacell #AP Armaflex and #AP Coilflex or equal.

C. **DW-C**, Black PSK-Faced Flexible Glass Mineral Wool Blanket for Visible Exposed Ducts:

1. Application: Exterior insulation wrap for exposed ductwork or other HVAC systems.
2. Flexible Glass Mineral Wool Blanket bonded with a bio-based thermosetting resin:
3. Comply with ASTM C553, ASTM C1290, UL 723, and UL Greenguard certified.
4. K-value: 0.29 Btu·in./(hr.·ft²·°F) at 75°F installed full thickness (maximum). Equivalent to "R-Value" per inch of 3.4 (hr.·ft²·°F)/Btu·in. (minimum).
5. Density: 0.75 lb./cu.ft. (minimum).
6. Vapor Barrier Jacket: Black PSK (Polypropylene-Scrim-Kraft) faced reinforced with glass mineral wool yarn and laminated to fire-resistant Kraft.
7. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" section.
8. Maximum operating temperature: 250°F.
9. Flame spread index: ASTM E84, less than 25.
10. Smoke developed index: ASTM E84, less than 50.
11. Manufacturers: John Manville #Microlite Black PSK or equal.

2.03 ACOUSTIC DUCT LINER (IDENTIFIED BY KEY CODE **ADL** AND IN TABLE 3).

A. **ADL-A**, Glass Mineral Wool Acoustic Duct Liner:

1. Application: Internal insulated duct lining for acoustic or thermal purposes.
2. Fiberglass acoustical duct liner bonded with a bio based thermosetting resin mat fiber-free facing.
3. Comply with ASTM C411, ASTM C1071, ASTM E84, UL723, and UL Greenguard Low VOC certified.
4. Comply with ASTM G21 and ASTM G22 and ASTM C1338 for microbial resistance.
5. K-value: 0.24 Btu·in./(hr.·ft²·°F) at 75°F (maximum). Equivalent to "R-Value" per inch of 4.2 (hr.·ft²·°F)/Btu·in. (minimum).
6. Water vapor absorption: ASTM C1104, less than 3% by weight.
7. Noise Reduction Coefficient (NRC) equal to, or greater than, 0.70 based on ASTM C423 Type "A" mounting. Minimum 1" thickness.
8. Maximum velocity on mat or coated air side: 6,000 ft./min.
9. Surface burning: NFPA 90 A and 90B.
10. Maximum operating temperature: 250°F.
11. Flame spread index: ASTM E84, less than 25.
12. Smoke developed index: ASTM E84, less than 50.
13. Fasteners: Duct liner galvanized steel pins, welded or mechanically fastened.

14. Manufacturers: Johns Manville #Linacoustic RC, Knauf Insulation #Atmosphere with ECOSE, Owens Corning #QuietR Duct Liner HD or Duct Liner Board or equal.

B. **ADL-B**, Flexible Elastomeric Foam Duct Liner:

1. Application: Internal insulated duct lining for thermal purposes. Not ideal for acoustics as the performance is not equivalent to that of fiberglass liner.
2. Elastomeric foam insulation with acrylic polymer airstream coating.
3. K-value: ASTM C518, 0.25 Btu·in./(hr·ft²·°F) at 75°F per ASTM C518. Equivalent to "R-Value" per inch of 4.0 (hr·ft²·°F)/Btu·in. (minimum).
4. Density: ASTM D 1622, 3.0-6.0 lbs./ft³.
5. Water vapor absorption: ASTM C209, less than 2% by weight.
6. Fungal and bacteria resistance: ASTM G21/22, no growth.
7. Noise Reduction Coefficient: ASTM C 423, 0.49 or higher based on "Type A mounting".
8. Maximum Velocity on Mat or Coated Air Side: 5,000 ft/min.
9. Maximum operating temperature: 250°F.
10. Flame spread index: ASTM E84, less than 25.
11. Smoke developed index: ASTM E84, less than 50.
12. Adhesive: UL listed waterproof type compliant with ASTM C916.
13. Greenguard certified, low VOC.
14. Fasteners: Duct liner galvanized steel pins, welded or mechanically fastened.
15. Manufacturers: Armacell #AP Armaflex, Armacell #AP Coilflex, Armacell #AP Spiralflex or equal.

C. **ADL-C**, Polyimide Foam Acoustic Duct Liner:

1. Application: Internal insulated duct lining for thermal purposes. Not ideal for acoustics as the performance is not equivalent to that of fiberglass liner.
2. Greenguard certified, low VOC.
3. Polyimide foam insulation with acrylic polymer airstream coating.
4. K-value: ASTM C518, 0.30 Btu·in./(hr·ft²·°F) at 75°F per ASTM C518. Equivalent to "R-Value" per inch of 3.3 (hr·ft²·°F)/Btu·in. (minimum).
5. Density: ASTM D 3574, 0.80 lbs./ft³.
6. Water vapor absorption: ASTM C1104, less than 2% by weight.
7. Fungal and bacteria resistance: ASTM G21/22, no growth.
8. Noise Reduction Coefficient: ASTM C423, 0.70 or higher based on "Type A mounting".
9. Maximum Velocity on Mat or Coated Air Side: 5,000 ft/min.
10. Maximum operating temperature: 250°F.
11. Flame spread index: ASTM E84, less than 25.
12. Smoke developed index: ASTM E84, less than 50.
13. Adhesive: UL listed waterproof type compliant with ASTM C916.
14. Fasteners: Duct liner galvanized steel pins, welded or mechanically fastened.

15. Manufacturers: Boyd Corporation #SOLCOUSTIC or equal.

D. **ADL-D**, Round Duct Liner:

1. Application: Internal insulated round duct lining for acoustic or thermal purposes.
2. Fiberglass acoustical duct liner bonded with a bio based thermosetting resin.
3. Comply with ASTM C411, ASTM C1071, ASTM E84, UL723, and UL Greenguard Low VOC certified.
4. Comply with ASTM G21 and ASTM G22 and ASTM C1338 for microbial resistance.
5. K-value: 0.23 Btu·in./(hr·ft²·°F) at 75°F (maximum). Equivalent to "R-Value" per inch of 4.3 (hr·ft²·°F)/Btu·in. (minimum).
6. Water vapor absorption: ASTM C1104, less than 3% by weight.
7. Noise Reduction Coefficient (NRC) equal to, or greater than, 0.75 based on ASTM C423 Type "A" mounting. Minimum 1" thickness.
8. Maximum velocity on mat or coated air side: 6,000 ft./min.
9. Surface burning: NFPA 90 A and 90B.
10. Maximum operating temperature: 250°F.
11. Flame spread index: ASTM E84, less than 25.
12. Smoke developed index: ASTM E84, less than 50.
13. Factory-formed grooves at sufficient intervals to prevent air gaps between back of insulation and spiral duct surface.
14. Manufacturers: Owens Corning #QuietZone Spiral Duct Liner, Johns Manville #Spiracoustic Plus or equal.

2.04 RIGID FIBERGLASS BOARD DUCTWORK AND PLENUM INSULATION (IDENTIFIED BY KEY CODE **RB** BELOW AND IN TABLE 2)

A. **RB-A**, Rigid fiberglass duct board:

1. Application: Rigid duct boards for insulating metal plenums and metal ductwork where rigidity is required.
2. Fiberglass duct board with a bio based thermosetting resin.
3. Comply with ASTM C411, ASTM C1071, ASTM E84, UL723, and UL Greenguard Low VOC certified.
4. Comply with ASTM G21 and ASTM G22 and ASTM C1338 for microbial resistance.
5. K-value: 0.23 Btu·in./(hr·ft²·°F) at 75°F (maximum). Equivalent to "R-Value" per inch of 4.3 (hr·ft²·°F)/Btu·in. (minimum).
6. Water vapor absorption: ASTM C1104, less than 3% by weight.
7. Noise Reduction Coefficient (NRC) equal to, or greater than, 0.75 based on ASTM C423 Type "A" mounting. Minimum 1" thickness.
8. Maximum velocity on mat or coated air side: 6,000 ft./min.
9. Surface burning: NFPA 90 A and 90B.
10. Maximum operating temperature: 250°F.
11. Flame spread index: ASTM E84, less than 25.

12. Smoke developed index: ASTM E84, less than 50.
13. Density: 3.0 lbs./cu ft. (minimum).
14. Vapor Barrier Jacket: ASJ+ (All Service Jacket) or FSK (Foil-Scrim-Kraft) aluminum foil faced reinforced with glass mineral wool yarn and laminated to fire-resistant Kraft paper.
15. Manufacturers: Knauf #Atmosphere Air Duct Board, Johns Manville #SuperDuct RC, Owens Corning #QuietR Duct Board, Certainteed #Ultra*Duct or equal.

2.05 FIRE-RATED INSULATION SYSTEMS

- A. **FRI-A**, Hydrous Calcium Silicate for wrapping exhaust pipes and mufflers from generators and engines:
1. Rigid Molded Block Insulation; Asbestos-Free Coded Throughout Material Thickness and Maintained Throughout Temperature Range. ASTM C5333 compliant.
 2. "K" Value: $0.397 \text{ Btu} \cdot \text{in.} / (\text{hr.} \cdot \text{ft}^2 \cdot ^\circ\text{F})$ at 300°F. Equivalent to "R-Value" per inch of $2.5 \text{ (hr.} \cdot \text{ft}^2 \cdot ^\circ\text{F}) / \text{Btu} \cdot \text{in.}$ (minimum).
 3. Maximum Service Temperature: 1,200°F.
 4. Compressive Strength (block): Minimum of 100 psi to produce 5% compression.
 5. Tie Bands: Secure blocks in places with staggered joints using 3/8" or 1/2" stainless steel bands on 12" centers.
 6. Manufacturers: Johns Manville #Thermo-12 Gold or equal.
- B. **FRI-C**, Fire-Rated Board:
1. Structural-grade, press-molded, xonolite calcium silicate, fireproofing board suitable for operating temperatures up to 1700°F (927°C).
 2. Comply with ASTM C656, Type II, Grade 6.
 3. Compliant with ASTM E119, ASTM E814, UL 263, UL 1479, UL 1709 and NFPA 251 for one and two hour fire protection.
 4. Flame spread index: ASTM E84, equal to 0.
 5. Smoke developed index: ASTM E84, equal to 0.
 6. Density (minimum): 28 lb./cu.ft.
 7. "R-Value" per inch thickness (minimum): $1.7 \text{ (hr} \cdot \text{ft}^2 \cdot ^\circ\text{F}) / \text{Btu}$ at 75°F.
 8. Manufacturers: Johns Manville #Super Firetemp M or equal.
- C. **FRI-D**, Fire Barrier Duct Wrap for ventilation ducts:
1. High-temperature, flexible, blanket insulation with FSK jacket that is NRTL (Nationally Recognized Test Lab) tested and certified to provide a 1-hour or 2-hour fire rating. Apply one layer for ventilation (supply, return, environmental exhaust) ducts and life safety ducts.
 2. Compliant with ISO 6944.
 3. Density (minimum): 6 lb./cu.ft.
 4. Thickness (minimum): 1.5" thick (38 mm).
 5. "R-Value" per inch thickness (minimum): $4.0 \text{ (hr} \cdot \text{ft}^2 \cdot ^\circ\text{F}) / \text{Btu}$ at 75°F.
 6. Maximum operating temperature: 2192°F (1200°C).

7. Flame spread index: ASTM E84, less than 25.
8. Smoke developed index: ASTM E84, less than 50.
9. Manufacturers: 3M #Fire Barrier Duct Wrap 615+, Morgan #FireMaster FastWrap XL, Morgan #Pyroscat DuctWrap XL, Unifrax #FyreWrap Elite 1.5 or equal.

D. **FRI-E**, Fire Barrier Plenum Wrap for encapsulating non-rated (plastic) pipes and cables:

1. High-temperature, flexible, blanket insulation with FSK jacket that is NRTL (Nationally Recognized Test Lab) tested and certified. Apply one layer blanket to wrap combustible items in an air plenum area.
2. Density (minimum): 8 lb./cu.ft.
3. Thickness (minimum): 0.5" thick (13 mm).
4. Maximum operating temperature: 2300°F (1260°C).
5. Flame spread index: ASTM E84, less than 25.
6. Smoke developed index: ASTM E84, less than 50.
7. Manufacturers: 3M #Fire Barrier Duct Wrap 5A+, Unifrax #FyreWrap 0.5 Plenum Insulation, Morgan #FireMaster PlenumWrap or equal.

2.06 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Flexible Elastomeric and Polyolefin Adhesive:

1. Comply with MIL-A-24179A, Type II, Class I.
2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated per 40 CFR 59, Subpart D (EPA Method 24).
3. Manufacturer: Aeroflex #Aeroseal, Armacell #Armaflex 520, H.B.Fuller #Foster 85-75, K-Flex #720-LVOC or equal.

C. Mineral-Fiber Adhesive:

1. Comply with MIL-A-3316C, Class 2, Grade A.
2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated per 40 CFR 59, Subpart D (EPA Method 24).
3. Manufacturer: H.B.Fuller #Childers Chil-Quik CP-127, H.B.Fuller #Foster 85-60 or 85-75, Mon-Eco Industries # 22 Series or equal.

D. ASJ+ Adhesive, and FSK Jacket Adhesive:

1. Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Manufacturer: H.B.Fuller #Childers Chil-Quik CP-127, H.B.Fuller #Foster 85-60 or 85-75, Mon-Eco Industries #22 Series or equal.

E. PVC Jacket Adhesive:

1. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Manufacturer: Dow Corning #739 Plastic Adhesive, Johns Manville #Zeston Perma-Weld, Speedline #Polyco Adhesive Low VOC or equal.

2.07 MASTICS

- A. Materials shall be compatible with ductwork material, insulation materials, jackets, and substrates and for sealing joints and seams.
- B. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
 1. Water-Vapor Permeance: ASTM E96/E96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 2. Service Temperature Range: -20°F to +180°F (-29°C to +82°C).
 3. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 4. Color: White.
 5. Manufacturer: H.B.Fuller #Foster 30-90, Vimasco #749 Vapor-Blok or equal.
- D. Vapor-Barrier Mastic: Solvent based; suitable for indoor use.
 1. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.03 metric perm) at 35-mil (0.9-mm) dry film thickness.
 2. Service Temperature Range: 0 to 180°F (Minus 18 to plus 82°C).
 3. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
 4. Color: White.
 5. Manufacturer: H.B.Fuller #Childers CP-30, H.B.Fuller #Foster 30-35, Mon-Eco Industries #55-10 or equal.
- E. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use for below ambient services.
 1. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
 2. Service Temperature Range: Minus 50 to plus 220°F (Minus 46 to plus 104°C).
 3. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 4. Color: White.
 5. Manufacturer: H.B.Fuller #Foster 60-95/60-96 or equal.
- F. Breather Mastic: Water based; suitable for indoor and outdoor use for above ambient services.
 1. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
 2. Service Temperature Range: Minus 20 to plus 180°F (Minus 29 to plus 82°C).
 3. Solids Content: 60 percent by volume and 66 percent by weight.

4. Color: White.
5. Manufacturer: H.B.Fuller #Childers CP-10, H.B.Fuller #Foster 46-50, Mon-Eco Industries #55-50, Vimasco #WC-1 or WC-5 or equal.

2.08 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250°F (Minus 40 to plus 1241°C).
4. Color: Aluminum.
5. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Manufacturer: H. B. Fuller Company #Childers CP-76, Eagle Bridges - Marathon Industries #405, H. B. Fuller Company #Foster 95-44, Mon-Eco Industries, Inc.#44-05 or equal.

B. ASJ+ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250°F (Minus 40 to plus 121°C).
4. Color: White.
5. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Manufacturer: H. B. Fuller Company #Childers CP-76 or equal.

2.09 SECUREMENTS

A. Bands:

1. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304, 0.020 inch (0.50 mm) thick, 1/2 inch (13 mm) or 3/4 inch (19 mm) wide with wing seal.
2. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) or 3/4 inch (19 mm) wide with wing seal.
3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
4. Manufacturer: ITW Insulation Systems, Gerrard Strapping and Seals, RPR Products #Insul-Mate Strapping or equal.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated. Manufacturer: AGM Industries, Inc. #CWP-1, GEMCO #CD, Midwest Fasteners #CD, Nelson Stud Welding #TPA/TPC/TPS or equal.

2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer. Manufacturer: AGM Industries #CHP-1, GEMCO #Cupped Head Weld Pin, Midwest Fasteners #Cupped Head, Nelson Stud Welding #CHP or equal.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - b. Spindle: Copper- or zinc-coated, low-carbon steel, Aluminum or Stainless steel coordinated with application, fully annealed, 12 gauge, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - c. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 - d. Manufacturer: AGM Industries #Tactoo Perforated Base Insul-Hangers, GEMCO #Perforated Base, Midwest Fasteners #Spindle or equal.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.
 - b. Spindle: Nylon, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).
 - c. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 - d. Manufacturer: GEMCO #Nylon Hangers, Midwest Fasteners #Nylon Insulation Hangers or equal.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Baseplate: Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - b. Spindle: Copper- or zinc-coated, low-carbon steel, Aluminum, Stainless steel, fully annealed, as coordinated with application. 12-gauge, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - c. Adhesive-backed base with a peel-off protective cover.
 - d. Manufacturer: AGM Industries #Tactoo Self-Adhering Insul-Hangers, GEMCO; #Peel & Press, Midwest Fasteners #Self Stick or equal.
6. Insulation-Retaining Washers: Self-locking washers formed from 0.015-inch- (0.41-mm-) thick, galvanized-steel, aluminum or stainless steel sheet, as coordinated with application with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.

- a. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 - b. Manufacturer: AGM Industries #RC-150, GEMCO #R-150, Midwest Fasteners #WA-150, Nelson Stud Welding #Speed Clips or equal.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
- a. Manufacturer: GEMCO, Midwest Fasteners or equal.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.
- D. Wire: 0.062-inch (1.6-mm) soft-annealed, stainless steel
- 2.10 LAGGING ADHESIVES
- A. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
- B. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated per 40 CFR 59, Subpart D (EPA Method 24).
 2. Service Temperature Range: 0 to +180°F (-18°C to +82°C).
 3. Color: White.
 4. Manufacturer: H.B.Fuller #Childers CP-50, H.B.Fuller #Foster 30-36, Vimasco #713 or 714 or equal.
- 2.11 TAPES
- A. ASJ+ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
1. Width: 3 inches (75 mm).
 2. Thickness: 11.5 mils (0.29 mm).
 3. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf./inch (7.2 N/mm) in width.
 6. ASJ+ Tape Disks and Squares: Precut disks or squares of ASJ+ tape.
 7. Manufacturer: ABI Ideal Tape #428 AWF ASJ+, Avery Dennison Corporation Specialty Tapes Division #Fasson 0836, Compac Corporation #104 and 105, Venture Tape #1540 CW Plus, #1542 CW Plus, and #1542 CW Plus/SQ or equal.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Width: 3 inches (75 mm).
 2. Thickness: 6.5 mils (0.16 mm).
 3. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.

4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
 7. Manufacturer: ABI Ideal Tape #491 AWF FSK, Avery Dennison Corporation Specialty Tapes Division #Fasson 0827, Compac Corporation #110 and 111, Venture Tape #1525 CW NT, #1528 CW, and #1528 CW/SQ or equal.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications and UL 723 compliant.
1. Width: 2 inches (50 mm).
 2. Thickness: 6 mils (0.15 mm).
 3. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
 4. Elongation: 500 percent.
 5. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
 6. Manufacturer: ABI Ideal Tape #370 White PVC tape, Compac Corporation #130, Venture Tape #1506 CW NS or equal.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive and UL181 compliant.
1. Width: 2 inches (50 mm).
 2. Thickness: 3.7 mils (0.093 mm).
 3. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
 4. Elongation: 5 percent.
 5. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.
 6. Manufacturer: ABI Ideal Tape Division #488 AWF, Avery Dennison Corporation #Specialty Tapes Division Fasson 0800, Compac Corporation #120, Venture Tape #3520 CW or equal.
- 2.12 FIELD APPLIED DUCTWORK INSULATION JACKETS
- A. Field Applied Jackets (For Exterior Applications):
1. Longitudinal seams shall not be located on top of ducts when exposed to outdoor environment. All longitudinal seams shall be located on bottom of ductwork.
 2. Stainless Steel Jacket: Type 304 stainless steel, 0.010" minimum (smooth/corrugated) finish.
 3. Aluminum Jacket: 0.016" aluminum with factory applied moisture barrier positioned such that the longitudinal overlap provides a watershed.
 4. PVC Jacket: Johns Manville #Zeston 300, 30 mil thick, white.
 5. Circumferential joints shall be wide enough to provide weather-proofing jacket.
 6. Secure jacket with 3/8" or 1/2" stainless steel bands on 12" centers for round ductwork and objects.
 7. Secure to rectangular sheet metal with sheet metal screws. Seal screw penetrations with silicone caulk.
- B. Field Applied Jackets (For Interior Applications):

1. All longitudinal seams shall be located on bottom of ductwork.
2. PVC Plastic: One-piece molded type fitting covers and jacketing material, gloss white. Connect with tacks and pressure sensitive color matching vinyl tape.
3. Manufacturer: Johns Manville #Zeston 2000 or equal.

2.13 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ+: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ+-SSL: ASJ+ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
 5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms (0.86 metric perm) when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.14 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Adhesive: As recommended by jacket material manufacturer.
 2. Color: White.
 3. Manufacturer: Johns Manville #Zeston, P.I.C. Plastics #FG Series, Proto Corporation #LoSmoke, Speedline Corporation #SmokeSafe or equal.
- D. Metal Jacket:
1. Aluminum Jacket: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005, Temper H-14.
 - a. Sheet and roll stock ready for shop or field sizing or factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier: 3-mil (0.076 mm) thick polysurlyn.
 2. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
 - a. Sheet and roll stock ready for shop or field sizing or factory cut and rolled to size.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier: 3-mil (0.076 mm) thick polysurlyn.

3. Manufacturer: H. B. Fuller Company #Childers Metal Jacketing Systems, ITW Insulation Systems #Aluminum and Stainless Steel Jacketing, RPR Products #Insul-Mate or equal.

E. Self-Adhesive Outdoor Jacket:

1. 60-mil (1.5 mm) thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with stucco-embossed aluminum-foil facing.
2. Manufacturer: Polyguard Products, Inc. #Alumaguard 60 or equal.

2.15 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately 4 oz./sq. yd. (203 g/sq. m) with a thread count of 5 strands by 5 strands/sq. in. (2 strands by 2 strands/sq. mm) for covering ducts. Manufacturer: H. B. Fuller Company #Childers Chil-Glas No. 5 or equal.
- B. Woven Polyester Fabric: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for ducts. Manufacturer: H. B. Fuller Company #Foster 42-24 Mast-A-Fab, Vimasco Corporation #Elastafab 894 or equal.

2.16 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and pre-sized a minimum of 8 oz./sq. yd. (271 g/sq. m). Manufacturer: Alpha Associates, Inc. #84215/9383 or equal.

PART 3 EXECUTION

3.01 EXAMINATION AND PREPARATION

- A. Verify that ductwork has been tested for leakage in accordance with specifications before applying insulation materials. All ductwork shall be inspected by Owner's Representative prior to installation of insulation. Any insulation applied prior to inspection shall be removed and new insulation applied at no additional cost to Owner. Notify Owner's Representative five (5) working days prior to insulation installation.
- B. Verify that all surfaces are clean, dry and free of foreign material.

3.02 INSTALLATION

- A. General:
 1. Install materials in accordance with manufacturer's recommendations, building codes and industry standards.
 2. Remove and replace any insulation that has become wet or damaged during the construction process.
 3. Continue insulation and vapor barrier at penetrations and duct supports, except where prohibited by code. Instances where this is required include:
 - a. Ductwork support angle or struts.

- 1) To prevent crushing of low density insulation, provide separator or high density insulation at point of support. A 12 inch wide strip of 6 pcf density, glass mineral wool board or similar manufactured product, across the bottom side of the duct. Vapor barrier to continue unbroken at point of support.
- 2) As an alternative method, where the duct sits directly on the Unistrut or similar support, install board material on either side of the support to allow duct wrap to be tented over the support, providing a smooth transition over the support and maintaining thickness. Rigid 3 pcf board may be used in this method.

B. Insulation Applied on the Outside/Exterior of the Duct:

1. Provide insulated ductwork conveying air below ambient temperature (below room temperature) with vapor retardant jacket.
2. Seal all vapor retardant jacket seams and penetrations with 3" wide pressure-sensitive vapor barrier tape matching the insulation facing.
3. Provide insulated ductwork conveying air above ambient temperature (above room temperature) with or without vapor retardant jacket. Where service access is required, bevel and seal ends of insulation.
4. Continue insulation through walls, sleeves, hangers, and other duct penetrations except where prohibited by code.
5. For ductwork exposed in mechanical equipment rooms below 7' or in finished spaces, finish with jacket material.
6. For interior vapor/moisture conveying duct applications, install glass mineral wool insulation unless specifically indicated otherwise on drawings. Install to meet manufacturer's requirements and as required by local code authorities.
7. Ducts installed exposed outside the building:
 - a. For exterior applications where insulation is on the outside of the duct, provide insulation with a weather protection metal jacket or double wall construction.
 - b. All exposed to weather exterior metallic ductwork exposed or covered with cladding is to be built with a crown or reverse cross break to shed moisture.

C. Installation of Mineral-Fiber Insulation (Blanket or Rigid Type):

1. Secure weld pins to duct using adhesive recommended for ductwork material. Pins shall be installed on a minimum of three sides of each duct to assure proper support. For overhead ductwork - pins are not required on the top of the ducts. For underfloor ducts - pins are not required on bottom side of ducts. For vertical ducts - pins are not required on surface facing wall. Install pins as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller: Place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) on center.
 - b. On duct sides with dimensions larger than 18 inches (450 mm): Place pins 16 inches (400 mm) on center each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing and reinforcement points.
 - c. Pins may be omitted from top surface of plenums.
 - d. Do not over compress insulation during installation.

- e. Impale insulation over pins and attach speed washers.
 - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
2. Install insulation with a continuous unbroken vapor barrier and insulation butted tight at each joint. Create a facing lap for longitudinal seams and end joints with insulation by removing up to 2 inches (50 mm) from one edge as required to allow stapling. Secure laps to adjacent insulation section with 1/2-inch (13 mm) outward-clinching staples, 6 inch (150 mm) (maximum) on center. Staples may be omitted when closures are made by machine using heat-sensitive tape. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 3. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 4. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6 inch (150 mm) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) (maximum) on center.
- D. Duct Liner-Insulation Applied on the Interior of the Duct:
1. Adhere insulation to sheet metal with a UL listed adhesive. Adhesive shall be applied to the sheet metal with a minimum coverage of 90%.
 2. Secure insulation with mechanical liner fasteners as indicated by SMACNA or manufacturer. Pin length should be as recommended by the liner manufacturer.
 3. All exposed edges of the liner must be factory or field coated. Unless factory coated, all transverse edges and longitudinal joints of the duct liner shall be coated. For systems operating at 2,000 fpm or higher, a metal nosing must be installed in all liner facing fan discharge or upstream of the airflow.
 4. Repair liner surface penetrations with UL listed adhesive.
 5. Duct dimensions indicated on plans are net inside dimensions required for airflow. Increase duct size to allow for insulation thickness.
 6. Liner shall be folded and compressed into corners of rectangular duct or cut and fitted to assure a lapped compressed joint. Longitudinal joints should not occur in rectangular duct except at corners.
 7. Longitudinal joints shall be coated with adhesive.
- 3.03 ENCAPSULATING NON-RATED PIPES AND CABLES
- A. Where combustible non-fire rated pipes (plastic) and cables are installed in an air plenum space provide one layer of **FRI-E** fire barrier plenum wrap to fully encapsulate the item to comply with ASTM E84 or UL-723.
- 3.04 DUCTWORK INSULATION SCHEDULES

- A. All insulation thicknesses shall meet or exceed latest edition of applicable ASHRAE 90.1, IECC, State Energy Code, Local Energy Code, and State Mechanical Code requirements as noted below. Minimum thermal resistance in range of 4.0 to 4.2 per inch of thickness. Insulation thicknesses are based on glass mineral wool insulation and may be adjusted for equivalent insulation values for materials with superior “K” factors.
- B. The installed thickness of duct insulation used to determine its R-value shall be determined as follows:
1. For duct board, duct liner, and factory-made rigid ducts not normally subjected to compression, the nominal insulation thickness shall be used.
 2. For duct wrap, installed thickness shall be assumed to be 75 percent (25 percent compression) of nominal thickness.
 3. For factory-made flexible air ducts, the installed thickness shall be determined by dividing the difference between the actual outside diameter and nominal inside diameter by two.
- C. All air distribution system ducts and plenums, but not limited to, building cavities, mechanical closets, air handler boxes, and support platforms used as ducts or plenums, shall be installed, sealed, and insulated to meet the requirements of the code. Portions of supply-air and return-air ducts conveying heated or cooled air located in one or more of the following spaces shall be insulated to a minimum level of R-8.
1. Outdoors; or,
 2. In a space between the roof and an insulated ceiling; or,
 3. In a space directly under a roof with fixed vents or openings to the outside or unconditioned spaces; or,
 4. In an unconditioned crawlspace; or,
 5. In other unconditioned spaces; or,
 6. For buildings subject to compliance with the IECC in any location in Climate Zones 5 through 8 the insulation shall be 3” (R-12) minimum thickness for ductwork exterior to the building envelope.
- D. TABLE 1: DUCT WRAP INSULATION SERVICE, THICKNESS, AND MATERIAL TYPE REQUIRED.

TABLE 1: EXTERNAL DUCT WRAP INSULATION			
SYSTEM	R-Value (Minimum)	FINISH/JACKET	INSULATION KEY CODE AND REMARKS
Supply and/or return ductwork located outside to the building envelope.	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	Metal jacket or galvanized sheet metal sandwich (double wall). Refer to drawings. Alternate option: pre-insulated duct system, refer to Section 233113 Air Distribution.	DW-B, RB-A. Duct wrap or blanket with fabric jacket is not allowed.
Supply and/or return ducts within building envelope in unconditioned areas, inside shafts and above ceilings.	R-8	FSK or PSK	DW-A, B, C
Supply and/or return duct exposed in the atmosphere controlled occupied space.	R-4.2	Black PSK	DW-C
Supply or return duct serving the remote 50 ft. (15 m) of exposed ductwork in the atmosphere controlled occupied space.	NA	NA	Except where noted on drawings for acoustical reasons.
Outside air intake ducts within the building envelope.	R-4.2	FSK or PSK	DW-A, B
Exhaust ducts within 10 ft. (3 m) of exterior openings.	R-3	FSK or PSK	DW-A, B
Adjust insulation thicknesses as required to meet minimum R-Values.			

- E. TABLE 2: DUCTWORK RIGID INSULATION AND PLENUM INSULATION SERVICE, THICKNESS, AND INSULATION TYPE REQUIRED.

TABLE 2: RIGID INSULATION AND PLENUM INSULATION			
SYSTEM	THICKNESS (Minimum)	FINISH/JACKET	INSULATION KEY CODE AND REMARKS
Supply and/or return ducts located outside of the building envelope. Use rigid duct board sandwiched between sheet metal layers.	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	Metal jacket or galvanized sheet metal sandwich (double wall). Refer to drawings. Alternate option: pre-insulated duct system, refer to Section 233113 Air Distribution.	DW-B or RB-A. Duct wrap or blanket with fabric jacket are not allowed in this application.
Outside air intake ducts	R-4.2	FSK	RB-A. Provide aluminum jacket over exterior installations.
Interior Plenums	R-8	FSK	RB-A
Exterior Plenums	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	FSK	RB-A
Supply, return and relief ducts in mechanical rooms.	R-8	FSK	RB-A
Supply and return ducts routed through parking garages.	R-8	FSK	RB-A
Roof curb walls used for supply or return air that aren't pre-insulated by manufacturer.	R-8	FSK	RB-A
Roof surface inside roof curb perimeter and around duct penetrations.	R-8 or greater to match roof insulation value	FSK	RB-A

TABLE 2: RIGID INSULATION AND PLENUM INSULATION			
SYSTEM	THICKNESS (Minimum)	FINISH/JACKET	INSULATION KEY CODE AND REMARKS
Vapor/moisture ducts installed exterior to the building envelope.	R-4.2	FSK	RB-A. Provide jacketing on exterior ducts.
Adjust insulation thicknesses as required to meet minimum R-Values.			

F. TABLE 3: ACOUSTIC DUCT LINER SERVICE, THICKNESS, AND INSULATION TYPE
REQUIRED

TABLE 3: ACOUSTICAL DUCT LINER			
SYSTEM	THICKNESS (Minimum)	FINISH	INSULATION KEY CODE
Where indicated for rectangular supply or return ductwork installed in conditioned areas.	R-4.2 unless otherwise noted on drawings	Air stream side mat or other fiber-free facing	ADL-A, B, C
Where indicated for rectangular supply or return ductwork installed in unconditioned areas without exterior duct insulation.	R-8 unless otherwise noted on drawings	Air stream side mat or other fiber-free facing	ADL-A, B, C
Supply and/or return ducts located exterior to the building envelope, where indicated on drawing.	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	Air stream side mat or other fiber-free facing	ADL-A, B, C
Inside supply and return ducts within 20' of Air Handling Unit connections.	R-8	Air stream side mat or other fiber-free facing	ADL-A, B, C
VAV terminal unit outlet plenum	R-4.2 unless otherwise noted on drawings	Air stream side shall be fiber-free with resin mat facing, aluminum or mylar liner, or acrylic polymer facing	ADL-A, B, C
Where indicated for round ductwork installed in conditioned areas.	R-4.2	Air stream side mat or other fiber-free facing	ADL-D
Where indicated for round ductwork installed in unconditioned areas without exterior insulation.	R-8	Air stream side mat or other fiber-free facing	ADL-D
Adjust insulation thicknesses as required to meet minimum R-Values.			

END OF SECTION

SECTION 23 07 16

HVAC EQUIPMENT INSULATION

PART 1 GENERAL

1.01 APPLICABLE REQUIREMENTS

- A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 05 00 - Basic Materials and Methods, and other Sections in Division 23 specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 SCOPE

- A. All work to be furnished and installed under this Section shall include, but not necessarily be limited to, providing insulation for the following:
1. HVAC Equipment Insulation section includes the following equipment that is not factory insulated
 - a. Heat exchangers.
 - b. Converters.
 - c. Chilled-water pumps.
 - d. Condenser-water pumps.
 - e. Heating hot-water pumps.
 - f. Heat-recovery pumps.
 - g. Steam condensate pumps.
 - h. Expansion/compression tanks.
 - i. Air separators.
 - j. Thermal storage tanks.
 - k. Deaerators.
 - l. Steam condensate tanks.
 - m. Steam flash tanks, flash separators, moisture separators, and blow-off tanks.
 - n. Piping system filtration unit housings.
 - o. Outdoor, aboveground, heated, fuel-oil storage tanks.
 - p. Generator exhaust systems.
- B. Types of mechanical insulation specified in this Section include the following:
1. Glass fiber and mineral wool.
 2. Closed cell phenolic.
 3. Polyisocyanurate.
 4. Calcium silicate.

5. Cellular glass.
6. Flexible elastomeric closed-cell foam.
7. Aerocel.

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Division 22: Plumbing.
- B. Section 23 05 00 - Basic HVAC Materials and Methods.
- C. Section 23 21 13 - Hydronic Piping, Valves and Specialties.

1.04 DEFINITIONS

- A. Ambient: The air temperature to be maintained in a conditioned room. Typically, between 70°F and 78°F.
- B. Insert: Spacer placed between the pipe support system and the piping to allow for the space required for insulation.
- C. Insulation Group (IG): Definition of Insulation Materials and Operating Temperatures.
- D. Insulation Shield: Buffer material placed between the pipe support system and the insulation to prevent the insulation material from crushing.
- E. Jacket: Protective covering over the pipe insulation; may be factory applied such as "all service jacket" or field applied to provide additional protection; of such materials as canvas, PVC, aluminum or stainless steel.
- F. Piping Insulation: Thermal insulation applied to prevent heat transmission to or from a piping system.
- G. Vapor Barrier Jacket: Insulation jacket material that impedes the transmission of water vapor.
- H. Freezing Climate: Where outdoor design temperature is less than 33° F, as stated in ASHRAE fundamentals under 99% column for winter design conditions.
- I. Unconditioned Space: any space not directly conditioned by mechanical equipment or maintained to temperature by mechanical equipment.

1.05 INSULATION INDUSTRY DEFINITIONS

- A. UL GREENGUARD: Provides independent third-party, Indoor Air Quality (IAQ) certification of products for emissions of respirable particles and Volatile Organic Compounds (VOC's), including formaldehyde and other specific product-related pollutants. Certification is based upon criteria used by EPA, OSHA, and WHO.
- B. EPA: Environmental Protection Agency.
- C. WHO: World Health Organization.
- D. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film layer leaving no paper exposed.

- E. ASJ: All Service Jacket (no outer film).
- F. SSL+: Self-Sealing Lap with Advanced Closure System.
- G. SSL: Self-Sealing Lap.
- H. FSK: Foil Scrim Kraft; jacketing.
- I. FSP: Foil Scrim Polyethylene jacketing
- J. PSK: Poly Scrim Kraft; jacketing.
- K. PVC: Polyvinyl Chloride.
- L. FHC: Fire Hazard Classification
- M. Glass Mineral Wool: Interchangeable with fiber glass, but replacing the term in the attempt to disassociate and differentiate Glass Mineral Wool from the potential health and safety risk of special purpose or reinforcement products that do not meet the bio solubility criteria of insulation made from glass. Rock Mineral Wool will replace the traditional Mineral Wool label. Both are used in lieu of the Mineral Fiber label.
- N. ECOSE Technology: a proprietary binder system based on rapidly renewable bio-based materials; rather than petroleum-based chemicals commonly used in other glass mineral wool insulation materials. ECOSE Technology reduces the binder embodied energy by up to 70 percent and does not contain phenol, formaldehyde, acrylics or artificial colors.
- O. UL GREENGUARD Gold Certification: (formerly known as GREENGUARD Children & Schools Certification) offers stricter certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced by both The Collaborative for High Performance Schools (CHPS) and the Leadership in Energy Environmental Design (LEED) Building Rating Systems.
- P. Recycled Content – Post-Consumer: materials such as bottled glass collected at curbside or other collection sites after consumer use and used in the manufacturing process to create a new product rather than being placed in a landfill or incinerated.
- Q. Recycled Content – Pre-Consumer (aka Post-Industrial): materials used or created from one manufacturing process which are collected as scrap and placed back into another manufacturing process rather than being placed in a landfill or incinerated.
- R. Polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE and Deca-BDE fire retardants: have been linked to adverse health effects after exposure in low concentrations.
- S. UL Classified: UL has tested and evaluated samples of the product with respect to certain properties of the product. UL classifies products to applicable UL requirements standards for safety and standards of other National and International organizations
- T. Imperative 11, Red List – requires that manufacturers disclose the ingredients in their products to confirm they are free of Red List chemicals and materials. The Red List represents the “worst in class” materials, chemicals and elements known to pose serious risks to human health and the greater ecosystem.

- U. Underwriter's Laboratories Environment (UL Environment): offers independent green claims validation, product assessment and certification.
- V. UL Environment Claims Validation (ECV): service and label tests a manufacturer's product and validates that the environmental claims they make in their marketing and packaging materials are factual. This ECV service enables products to qualify for LEED® MR Credit 4 Recycled Content LEED-NC 2009 or New LEED V-4 Building product disclosure and optimization – sourcing of raw materials.

1.06 QUALITY ASSURANCE

- A. Codes and Standards: Provide products conforming to the requirements of the following:
 - 1. American Society for Testing and Materials (ASTM): Manufacture and test insulation in accordance with the ASTM Standards, including:
 - a. B209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plat.
 - b. C165 - Recommended Practice for Measuring Compressive Properties of Thermal Insulation.
 - c. C168 – Terminology for Thermal Insulation
 - d. C177 - Test Method for Steady-State Heat Flux Measurements and Thermal Transmission.
 - e. Properties by Means of the Guarded-Hot-Plate Apparatus.
 - f. C195 - Specification for Mineral Fiber Thermal Insulating Cement.
 - g. C196 - Specification for Expanded or Exfoliated Vermiculite Thermal Insulating Cement.
 - h. C302 - Test Method for Density of Preformed Pipe-Covering-Type Thermal Insulation.
 - i. C303 - Test Method for Density of Preformed Block-Type Thermal Insulation.
 - j. C305 - Test for Thermal Conductivity of Pipe Insulation.
 - k. C356 - Test for Linear Shrinkage of Preformed High-Temperature Thermal Insulation.
 - l. C411 - Test for Hot-Surface Performance of High Temperature Thermal Insulation.
 - m. C423 – Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
 - n. C449 - Specification of Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
 - o. C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
 - p. C533 - Specification for Calcium Silicate Block and Pipe Thermal Insulation.
 - q. C534 - Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
 - r. C547 - Specification for Mineral Fiber Preformed Pipe Insulation.
 - s. C552 - Specification for Cellular Glass Block and Pipe Thermal Insulation.
 - t. C553 - Specification for Mineral Fiber Blanket-Type Pipe Insulation (Industrial Type).

- u. C592 - Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered).
 - v. C612 - Specification for Mineral Fiber Block and Board Thermal Insulation.
 - w. C795 – Standard Practice for Quantitative Accelerated Laboratory Evaluation of Extraction Solutions Containing Ions Leached from Thermal Insulation on Aqueous Corrosion of Metals.
 - x. C921 - Practice for Determining Properties of Jacketing Materials for Thermal Insulation.
 - y. C1104 - Standard Test Method for Determining the Water Vapor Sorption of Unfaced Mineral Fiber Insulation.
 - z. C1071 - Standard Specification for Thermal and Acoustical Insulation.
 - aa. C1338 - Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings.
 - bb. C1617 Standard Specification for Thermal Insulation for use in Contact with Austenitic Stainless Steel.
 - cc. D1667 – Standard Specification for Flexible Cellular Material-Vinyl Chloride Polymers and Copolymers (Closed-Cell Foam).
 - dd. E84 - Test Method for Surface Burning Characteristics of Building Materials.
 - ee. E119 - Test for Fire Resistance.
 - ff. G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.
 - gg. G22 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Bacteria.
2. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE): Provide and install pipe and duct insulation in accordance with the following ASHRAE Standard:
- a. 90 - Energy Conservation in New Building Design.
3. National Fire Protection Association (NFPA): Manufacture insulation in accordance with the following NFPA standards:
- a. 255 - Test Methods, Surface Burning Characteristics of Building Materials.
- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- C. Do not provide materials with flame proofing treatments subject to deterioration due to the effects of moisture or high humidity.
- D. Flame/Smoke Rating: Provide composite mechanical insulation (insulation, jackets, coverings, sealers, mastics and adhesives) with flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing; or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified.

- E. Corrosiveness: Provide insulation such that when tested in accordance with the following test, the steel plate in contact with the insulation shows no greater corrosion than sterile cotton in contact with a steel plate for comparison.
1. Test Specimen: Two specimens shall be used, each measuring 1" by 4" by approximately 1/2" thick.
 2. Apparatus: Provide a humidity test chamber in which two polished-steel test plates, 1" wide, 4" long and 0.020" thick, shall be placed. Plates shall be clear finish, cold-rolled strip steel, American quality, quarter hard, temper No. 3, weighing 0.85 lbs./sq. ft.
 3. Procedure: The steel test plates shall be rinsed with cp benzol until their surfaces are free from oil and grease and allowed to dry. One piece of cold-rolled steel shall be placed between the two insulation specimens and secured with tape or twine. The test specimen and uncovered plate shall be suspended vertically in an atmosphere having a relative humidity of 95% (plus or minus 3%), and a temperature of 120°F (plus or minus 3°F), for 96 hours, and then be examined for corrosion.
- F. Insulation thickness shall be the greater standard of that specified here or the State energy conservation requirements.
- G. Sustainable Project Requirements:
1. Formaldehyde Free: Third party certified with UL Environment Validation or Scientific Certification Systems (SCS).
 2. Biosoluble: As determined by research conducted by the International Agency for Research on Cancer (IARC) and supported by revised reports from the National Toxicology Program (NTP) and the California Office of Environmental Health Hazard Assessment. Certified by European Certification Board for Mineral Wool Products (EUCEB).
 3. Low Emitting Materials: For all thermal and acoustical applications of Glass Mineral Wool Insulation Products, provide materials complying with the testing and products requirements of UL GREENGUARD standards for Low-Emitting Products.
 4. Living Building Challenge-Declare Red List Free.

1.07 SUBMITTALS

- A. Product Data: Submit manufacturer's technical product data and installation instructions for each type of mechanical insulation. Submit schedule showing manufacturer's product number, K-value, thickness, and furnished accessories for each mechanical system requiring insulation.
- B. Products containing the following prohibited chemicals for use as flame retardants or for other purposes will not be acceptable when present in quantities greater than 0.1% by mass. Provide a statement with the submittal indicating that no product submitted contains an amount equal to or greater than 0.10% by mass of the following chemicals:
1. Pentabrominated diphenyl ether (CAS#32534-81-9)
 2. Octabrominated diphenyl ether (CAS#32536-52-0)
 3. Decabrominated diphenyl ether (CAS#1163-19-50)
- C. Maintenance Data: Submit maintenance data and replacement material lists for each type of mechanical insulation. Include this data and product in maintenance manual.

1.08 LEED ACTION SUBMITTALS:

- A. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
 - B. Product Data for Credit MR 5 Regional Materials: For products and materials to comply with requirements for regional materials, provide documentation indicating location of product or material, manufacturing location and the point of extraction, harvest or recovery for each raw material. Include distance to Project, contractor cost for each regional material, and percent by weight that is considered regional.
 - C. LEED v 4, Product Data for Credit EA 2: For products and materials significant to the energy performance of a structure, provide documentation that indicates that insulation levels are significant to increasing the level of energy performance beyond the prerequisite standard.
 - D. LEED v 4, Product Data for Credit MR 2: For products and materials to comply with Building Product Disclosure & Optimization, provide data/evidence that substantiates Environmental Product Declaration and Multi Attribute Optimization requirements.
 - E. LEED v 4: Product Data for Credit MR 3: For products and materials to comply with requirements for regional materials, provide documentation indicating location of product or material, manufacturing location and the point of extraction, harvest or recovery for each raw material. Include distance to Project, contractor cost for each regional material, and percent by weight that is considered regional.
 - F. LEED v 4, Product Data for Credit MR 4: For products having recycled content documentation; indicating percentages by weight of post-consumer and pre-consumer recycled content. Include statement indicating cost for each product having recycled content.
 - G. LEED v 4, Product Data for Credit EQ 2: For products and materials to comply with low emittance standards, provide documentation substantiating that insulation products comply with requisite low emittance standards.
 - H. LEED v 4, Product Data for Credit EQ 5: For products and materials to meet the standard for both thermal comfort design and thermal comfort control, provide data to support that insulation products are significant to thermal comfort design and thermal comfort control.
 - I. LEED v 4, Product Data for Credit EQ 9: For products and materials that contribute to the design and performance of workspaces that promote occupants well-being, productivity, and communication, provide data/documentation supporting acoustical benefits of Glass Mineral Wool insulation products.
 - J. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- 1.09 DELIVERY, STORAGE, AND HANDLING
- A. Deliver insulation, coverings, cements, adhesives, and coating to the site in containers with manufacturer's stamp or label affixed showing fire hazard indexes of products.
 - B. Store and protect insulation against dirt, water, chemical, and mechanical damage. Do not install damaged or wet insulation; remove from project site.
- 1.10 WARRANTY

- A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.
- B. Refer to Section 23 05 00 for additional warranty and Substantial Completion requirements.

PRODUCTS

2.01 GENERAL REQUIREMENTS

- A. Comply with requirements in "PART 3-EXECUTION, Table 1: Equipment Insulation Type Required" for application of insulating materials. Products shall not contain asbestos, lead, mercury or mercury compounds if possible. Products shall be certified UL GREENGUARD Gold or Indoor Advantage Gold if possible.
- B. Products that contact stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM 871.
- C. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C795.
- D. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- E. Each insulation material has been provided a descriptive key code, such as EI-A, to simplify the organization and application of materials in following sub-sections.
- F. Acceptable manufacturers include Knauf, Johns Manville, Owens-Corning, Armstrong, Pittsburgh-Corning, Trymer, IIG, Certainteed, Halstead, Rubatex, 3M FireMaster, Pabco, Reflectix, Aeroflex, Armacell, Pacor or equal. Manufacturer and insulation types listed below indicate a minimum acceptable level of quality required for each classification.

2.02 EQUIPMENT INSULATION (IDENTIFIED BY KEY CODE EI AND IN TABLE 1)

- A. **EI-A, Rigid Hydrous Calcium Silicate:**
 - 1. Applications: High temperature insulation for piping and equipment and for placement at piping hangers and supports.
 - 2. Compliant with ASTM C165, C302, C356, C447, C533, C665, C1338 and E84.
 - 3. Maximum Service Temperature: 1200°F (650°C).
 - 4. Thermal conductivity (K-value): 0.389 Btu□in./(hr□ft²□°F), or less, at 200°F (93°C). Thickness as required to meet energy code requirements.
 - 5. Nominal density is 14 lbs./cu. ft. or greater.
 - 6. Compressive Strength (block): Minimum of 100 psi to produce 5% compression as tested per ASTM C165.
 - 7. Surface Burning Characteristics: Flame Spread Index =0 and Smoke Developed Index =0 ratings as tested per ASTM E84.
 - 8. Tie Wire: 16-gauge stainless steel with twisted ends on maximum 12" centers.
 - 9. Product must contain corrosion inhibiting chemistry.
 - 10. Manufacturers: Johns Manville Industrial Insulation Group #Thermo-12 Gold or equal.

B. EI-B, Rigid Closed-Cell Cellular Glass:

1. Applications: Rigid closed cell glass impermeable to water and water vapor for insulating buried piping and equipment, as well as traditional application on other piping and equipment.
2. Compliant with ASTM C165, C240, C303, C450, C552, C585, E136, E1461, and E84.
3. Service Temperature Range: -450°F to 900°F (-268°C to 482°C).
4. Thermal conductivity (K-value): 0.29 Btu·in./(hr·ft²·°F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
5. Water Vapor Absorption, % of volume: <0.2% (maximum) compliant with ASTM C240.
6. Nominal density is 8 lbs./cu. ft. or greater.
7. Compressive Strength (block): Minimum of 90 psi to produce 5% compression as tested per ASTM C165.
8. Surface Burning Characteristics: Flame Spread Index =0 and Smoke Developed Index =0 ratings as tested per ASTM E84.
9. Manufacturers: Pittsburgh-Corning #Foamglas One or equal

C. EI-C, Flexible Closed-Cell Elastomeric, Neoprene or Polyethylene:

1. Applications: Insulation of piping, fittings and equipment with thickness as required by local energy code.
2. Compliant with UL 181, ASTM C411, C518, C534, G21/C1338, G22, D1056 and E84. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
3. Service Temperature Range: -297°F to 220°F (-183°C to 105°C).
4. Thermal conductivity (K-value): 0.28 Btu·in./(hr·ft²·°F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
5. Water Vapor Absorption, % of volume: <0.2% (maximum) compliant with ASTM C209.
6. Nominal density is 2.5 lbs./cu. ft. or greater.
7. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
8. Seal all seams and joints with contact adhesive or factory self-seal system with lap seal tape.
9. Manufacturers: Armacel #AP Armaflex, Rubatex #K-Flex ECO, Aeroflex #Aerocel or equal.

D. EI-D, Rigid Fiberglass Board:

1. Applications: Rigid fiberglass insulation board for insulation of ducts and plenums, tanks, and walls with integral vapor barrier. Thickness as required by local energy code. Insulation shall be provided with a jacket coordinated with the temperature service of the insulation. Glass fibers bonded with a thermosetting resin.
2. Compliant with ASTM C423, C553, C612, C665, C1101, C1136, C1338, E795 and E84.
3. Thermal conductivity (K-value): 0.25 Btu·in./(hr·ft²·°F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
4. Service Temperature Range: 0°F to 250°F (-18°C to 121°C) for faced board.
5. Water Vapor Absorption, % of volume: <5% (maximum) as tested per ASTM C1104.

6. Vapor Retarder Jacket: Factory applied ASJ or FSK interleaving reinforced with glass fiber scrim yarn and bonded to aluminum foil.
 7. Nominal density is 2.0 lbs./cu. ft. or greater.
 8. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 50 ratings as tested per ASTM E84.
 9. Manufacturers: CertainTeed #CertaPro Commercial Board, Johns Manville #800 Series Spin-Glas, Knauf, Manson, Owens Corning or equal.
- E. **EI-E**, Flexible Fiberglass Blanket:
1. Applications: Flexible insulation blanket for wrapping large pipes, tanks and equipment. Thickness as required by local energy code. Insulation shall be provided with a jacket coordinated with the temperature service of the insulation. Glass or mineral fibers bonded with a thermosetting resin.
 2. Compliant with ASTM C167, C177, C411, C518, C612, C665, C1136, C1338, C1393, E96 and E84.
 3. Thermal conductivity (K-value): 0.24 Btu \cdot in./(hr \cdot ft 2 \cdot °F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 4. Service Temperature Range: 35°F to 850°F (2°C to 454°C).
 5. Water Vapor Absorption, % of volume: <5% (maximum) as tested per ASTM C1104.
 6. Vapor Retarder Jacket: Factory applied ASJ or FSK interleaving reinforced with glass fiber scrim yarn and bonded to aluminum foil.
 7. Nominal density is 2.5 lbs./cu. ft. or greater.
 8. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 50 ratings as tested per ASTM E84.
 9. Manufacturers: CertainTeed #CrimpWrap, Johns Manville #Micro-Flex, Knauf, Manson, Owens Corning or equal.
- F. **EI-F**, Rigid High Temperature Mineral Fiber Board:
1. Applications: Rigid high temperature insulation board for insulation of equipment and tanks with thickness as required by local energy code. Insulation shall be provided with a jacket coordinated with the temperature service of the insulation. Inorganic mineral fibers bonded with a thermosetting resin.
 2. Compliant with ASTM C356, C447, C612, C665, C692, C795, C871, C1104 and E84.
 3. Thermal conductivity (K-value): 0.25 Btu \cdot in./(hr \cdot ft 2 \cdot °F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 4. Service Temperature Range: 0°F to 1200°F (-18°C to 650°C).
 5. Water Vapor Absorption, % of volume: <1% (maximum) as tested per ASTM C1104.
 6. Nominal density is 6 lbs./cu. ft. or greater.
 7. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 50 ratings as tested per ASTM E84.
 8. Manufacturers: Johns Manville #MinWool-1260, Owens Corning Thermafiber #Industrial Board, Johns Manville, Knauf, Manson, Rockwool, CertainTeed or equal.
- G. **EI-G**, Flexible High Temperature Mineral Fiber Blanket:

1. Applications: Flexible high temperature insulation blanket for tanks and equipment with thickness as required by local energy code. Insulation shall be provided with a jacket coordinated with the temperature service of the insulation. Inorganic mineral fibers bonded with a thermosetting resin.
 2. Compliant with ASTM C356, C447, C612, C665, C692, C795, C871, C1104 and E84.
 3. Thermal conductivity (K-value): 0.25 Btu□in./(hr□ft²□°F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 4. Service Temperature Range: 0°F to 1200°F (-18°C to 650°C).
 5. Water Vapor Absorption, % of volume: <1% (maximum) as tested per ASTM C1104.
 6. Nominal density is 6 lbs./cu. ft. or greater.
 7. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
 8. Manufacturers: Owens Corning Thermafiber #Industrial Blanket, Johns Manville, Knauf, Manson, Rockwool, CertainTeed or equal.
- H. **EI-H**, Rigid Closed-Cell Phenolic Foam:
1. Applications: Insulation of piping, tanks, and equipment with thickness as required by local energy code.
 2. Compliant with ASTM C209, C518, C795, C1126, D1621, D1622, D2856, D6226 and E84.
 3. Service Temperature Range: -290°F to 250°F (-178°C to 121°C).
 4. Thermal conductivity (K-value): 0.18 Btu□in./(hr□ft²□°F) or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 5. Vapor Retarder Jacket – straight sections: Factory applied ASJ with SSL.
 6. Water Vapor Absorption, % of volume: <0.87% (maximum) as tested per ASTM C209.
 7. Nominal density is 2.5 lbs./cu. ft. or greater.
 8. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
 9. Manufacturers: ITW Trymer #Supercel, Kingspan #Koolphen K, Resolco #Insul-phen or equal.
- I. **EI-I**, Rigid Closed-Cell Polyisocyanurate Foam:
1. Applications: Rigid preformed insulation of piping, fittings, vessels, and equipment with thickness as required by local energy code. Not for use in return air plenums or ventilation ductworks.
 2. Compliant with ASTM C272, C591, C755, C1136, C920, D6226, E96, and E84.
 3. Service Temperature Range: -297°F to 300°F (-183°C to 149°C).
 4. Thermal conductivity (K-value): 0.19 Btu□in./(hr□ft²□°F) or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 5. Water Absorption, % of volume: 0.7 (maximum) as tested per ASTM C272.
 6. Vapor Retarder Jacket: Saran 540/SSL or Mylar laminate.
 7. Nominal density is 2 lbs./cu. ft. or greater.

8. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 450 ratings as tested per ASTM E84. Not compliant for use in return air plenums.
 9. Manufacturers: Trymer #2000 XP, Dyplast #ISO, HiTherm or equal.
- J. **EI-J**, Rigid Extruded Polystyrene Foam Board:
1. Applications: Rigid board insulation for large outdoor tanks and vessels with thickness as required by local energy code. Not for use indoors.
 2. Compliant with ASTM C203, C272, C518, C578, D121, D696, D1621, D2126, D2842 and E96.
 3. Maximum Service Temperature: 165°F (75°C).
 4. Thermal conductivity (K-value): 0.18 Btu \cdot in./(hr \cdot ft 2 \cdot °F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 5. Water Vapor Absorption, % of volume: $< 0.2\%$ (maximum) compliant with ASTM C209.
 6. Nominal density is 2.5 lbs./cu. ft. or greater.
 7. Surface Burning Characteristics: Flame Spread Index =0 and Smoke Developed Index =155 ratings as tested per ASTM E84.
 8. Seal all seams and joints with contact adhesive and provide field applied jacket system.
 9. Manufacturers: Dow #Styrofoam or equal.
- K. **EI-K**, Flexible Low Temperature Aerogel (Cold Fluid Piping and Equipment):
1. Applications: High performance flexible insulation for specialty insulation of low temperature piping and equipment with reduced available space or where higher thermal performance is required.
 2. Compliant with ASTM C1728, C165, C1101/1101M, C1104/1104M, C1336, C1617, C1763 and E84.
 3. Service Temperature Range: -200°F to 200°F (-129°C to 93°C).
 4. Thermal conductivity (K-value): 0.12 Btu \cdot in./(hr \cdot ft 2 \cdot °F), or less, at 75°F (24°C). Thickness as required to meet energy code requirements.
 5. Water Vapor Absorption, % of volume: $\leq 5\%$ (maximum) as tested per ASTM C1104 compliant with ASTM C240.
 6. Nominal density is 10 lbs./cu. ft. or greater.
 7. Compressive Strength: ≥ 5 psi to produce 10% compression as tested per ASTM C165.
 8. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 50 ratings as tested per ASTM E84.
 9. Manufacturers: Pacor #Cryogel X201 or equal.
- L. **EI-L**, Flexible High Temperature Aerogel (Hot Fluid Piping and Equipment):
1. Applications: High performance flexible insulation for specialty insulation of high temperature piping and equipment with reduced available space or where higher thermal performance is required.
 2. Compliant with ASTM C177, C1728, C165, C1101/1101M, C1104/1104M, C1336, C1617, C1763, and E84.
 3. Service Temperature Range: 32°F to 482°F (0°C to 250°C).

4. Thermal conductivity (K-value): 0.12 Btu·in./(hr·ft²·°F), or less, at 212°F (100°C). Thickness as required to meet energy code requirements.
5. Water Vapor Absorption, % of volume: ≤5% (maximum) as tested per ASTM C1104 compliant with ASTM C240.
6. Nominal density is 10 lbs./cu. ft. or greater.
7. Compressive Strength: ≥ 5 psi to produce 10% compression as tested per ASTM C165.
8. Surface Burning Characteristics: Flame Spread Index ≤5 and Smoke Developed Index ≤10 ratings as tested per ASTM E84.
9. Manufacturers: Pacor #Pryogel 2250.

M. **EI-M**, Flexible Extreme High Temperature Aerogel (High Temperature Exhaust Piping and Equipment):

1. Applications: High performance flexible insulation for specialty insulation of extreme high temperature piping and equipment with reduced available space or where higher thermal performance is required.
2. Compliant with ASTM C177, C1728, C165, C1101/1101M, C1104/1104M, C1336, C1617, C1763, and E84.
3. Service Temperature Range: 32°F to 1200°F (0°C to 650°C).
4. Thermal conductivity (K-value): 0.16 Btu·in./(hr·ft²·°F), or less, at 212°F (100°C). Thickness as required to meet energy code requirements.
5. Water Vapor Absorption, % of volume: ≤5% (maximum) as tested per ASTM C1104 compliant with ASTM C240.
6. Nominal density is 12.5 lbs./cu. ft. or greater.
7. Compressive Strength: ≥ 5 psi to produce 10% compression as tested per ASTM C165.
8. Surface Burning Characteristics: Flame Spread Index ≤5 and Smoke Developed Index ≤10 ratings as tested per ASTM E84.
9. Manufacturers: Pacor #Pryogel XTE.

2.03 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ+: White, polypropylene-coated, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
3. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
4. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
5. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
6. Vinyl Jacket: White vinyl with a permeance of 1.3 perms (0.86 metric perm) when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.04 JACKETING MATERIALS

A. Field Applied Jackets (For Indoor Applications):

1. All longitudinal seams shall be located on bottom of pipes.
2. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
3. PVC Plastic:
 - a. High-impact-resistant, UV-resistant PVC as tested per ASTM C553, C547, C665, C795, C1338, D1784, E96, C1136 and D3679.
 - b. One piece molded type fitting covers and jacketing material.
 - c. Adhesive: As recommended by jacket material manufacturer.
 - d. Color: White.
 - e. Thickness: 20 mil (0.5 mm), minimum.
 - f. Service Temperature Range: 0°F to 150°F (-18°C to 66°C).
 - g. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 50 ratings as tested per ASTM E84.
 - h. Manufacturers: Johns Manville #Zeston 2000, Proto #LoSmoke, PIC Plastics, Proto Corporation, Speedline Corporation or equal.
4. Aluminum Jacket:
 - a. Comply with ASTM B209/B209M.
 - b. Aluminum alloy 3003, 3005, 3105 or 5005 with an H-14 temper.
 - c. Thickness: 0.016" thick sheet (minimum).
 - d. Finish: Smooth or stucco embossed
 - e. Moisture Barrier: 3 mil thick polysurlyn or 3 mil thick polyethylene.
 - f. Longitudinal slip joints and 2" laps, die shaped fitting covers with factory attached protective liner. Secure with 3/8" or 1/2" stainless steel bands on 12" centers.
 - g. Surface Burning Characteristics: Flame Spread Index ≤ 25 and Smoke Developed Index ≤ 50 ratings as tested per ASTM E84.
 - h. Manufacturers: Pabco, Childers, RPR, ITW or equal.
5. Canvas Jacket:
 - a. Cotton or fiberglass cloth.
 - b. UL listed fabric treated with dilute fire retardant.
 - c. Lagging adhesive per manufacturer.
 - d. Manufacturers: GJC General, GLT Products, Foster #Mast-A-Fab, Childers #Chil-Glas No. 5 or equal.

B. Field Applied Jackets (For Outdoor Applications): All longitudinal seams, on horizontal pipe runs, shall be installed on the bottom of pipes.

1. Secure stainless steel or aluminum jackets with 3/8" or 1/2" stainless steel bands on 12" centers and at each joint.
2. PVC Jacket: Not allowed for outdoor applications.
3. Canvas Jacket: Not allowed for outdoor applications.

4. Aluminum Jacket:
 - a. Comply with ASTM B209/B209M.
 - b. Aluminum alloy 3003, 3005, 3105 or 5005 with an H-14 temper.
 - c. Thickness: 0.016" thick sheet (minimum).
 - d. Finish: Smooth, stucco embossed or corrugated surface.
 - e. Moisture Barrier: 3 mil thick polysurlyn or 3 mil thick polyethylene.
 - f. Longitudinal slip joints and 2" laps, die shaped fitting covers with factory attached protective liner. Secure with 3/8" or 1/2" stainless steel bands on 12" centers.
 - g. Manufacturers: Pabco, Childers, RPR, ITW or equal.
 5. Self-Adhesive Aluminum Jacket:
 - a. Comply with ASTM D774, C1338, C1371, E96, and D882.
 - b. Thickness: 56 mils (minimum).
 - c. Multi-ply UV-resistant aluminum foil/polymer laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with stucco-embossed aluminum-foil facing.
 - d. Weight: 0.3 lbs./sf, minimum.
 - e. Service Temperature Range: -15°F to 160°F (-26°C to 71°C).
 - f. Manufacturers: Polyguard Products #Alumaguard or equal.
 6. Stainless Steel Jacket:
 - a. Comply with ASTM A240 and A666.
 - b. Stainless steel alloy T-304 or T-316. T-316 shall be used in corrosive environments including close proximity to coast.
 - c. Thickness: 0.016" thick sheet (minimum).
 - d. Dull Finish: Smooth, stucco embossed or corrugated surface.
 - e. Moisture Barrier: 3 mil thick polysurlyn or 3 mil thick polyethylene.
 - f. Longitudinal slip joints and 2" laps, die shaped fitting covers with factory attached protective liner. Secure with 3/8" or 1/2" stainless steel bands on 12" centers.
 - g. Manufacturers: Pabco, Childers, RPR, ITW or equal.
- C. Removable Covers:
1. Provide removable covers on indoor pumps, valves, air separators, air vent fittings, flanges, strainers, traps, etc., where periodic maintenance or removal of insulation is required.
 - a. Pre-molded insulation covers:
 - 1) Cold Systems: Provide PVC covers over insulated elbows, fittings and flanges.
 - 2) Cold Systems: Provide flexible closed cell foam or removable cloth insulating blankets for valves, pumps and strainers.
 - 3) Hot Systems: Provide PVC covers over insulated elbows, fittings and flanges.

- 4) Hot Systems: Provide removable cloth insulating blankets on valves, pumps, and strainers.
- b. Removable cloth insulating blankets:
- 1) Service Operating Temperature: 0-350°F.
 - 2) Jacket and Liner: silicon or teflon impregnated mineral wool cloth.
 - 3) Liner Reinforcement: stainless steel mesh cloth.
 - 4) Insulation: Fiberglass matt or Pacor #Aerogel, 2" thick (minimum) or R-8 equivalent (minimum), and thicker as required by local energy code.
 - 5) Fastening: 2" Nomex Velcro or 1" straps and stainless steel D-rings or 12-gage stainless steel hooks and stainless steel wire.
 - 6) Thread: Kevlar/stainless steel thread.
 - 7) Outdoor Applications: Jacket shall be UV and ozone resistant with Velcro attachment.
 - 8) Manufacturers: Thermal Energy Products, Coverflex, Thermaxx, Pacor, Unitherm, Advance Thermal, Fit Tight Covers, Alpha or equal.

2.05 CORNER ANGLES

- A. PVC Corner Angles: 30 mils (0.8 mm) thick, minimum 1 by 1 inch (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch (1.0 mm thick, minimum 1 by 1 inch (25 by 25 mm), aluminum according to ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14.
- C. Stainless-Steel Corner Angles: 0.024 inch (0.61 mm thick, minimum 1 by 1 inch (25 by 25 mm), stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304

2.06 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive:
 1. Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 1200°F (10 to 649°C).
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Manufacturers: Childers Brand #CP-97, Johns Manville #CalBond Gold, Marathon Industries #290, Foster Brand #81-27, Mon-Eco Industries #22-30, Vimasco Corporation #760 or equal.
- C. Cellular-Glass Adhesive:
 1. Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200°F (minus 73 to plus 93°C).
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Manufacturers: Foster Brand #81-84 or equal.

- D. Phenolic and Polyisocyanurate Adhesive:
1. Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300°F (minus 59 to plus 149°C).
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Manufacturers: Childers Brand #CP-96, Foster Brand #81-33 or equal.
- E. Flexible Elastomeric and Polyolefin Adhesive:
1. Comply with MIL-A-24179A, Type II, Class I.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Manufacturers: Aeroflex USA, Inc.; Aeroseal, Armacell LLC; Armaflex #520 Adhesive, Foster Brand #85-75, K-Flex USA #R-373 Contact Adhesive or equal.
- F. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Manufacturers: Childers Brand #CP-127, Eagle Bridges - Marathon Industries #225, Foster Brand #85-60/85-70, Mon-Eco Industries, Inc.#22-25 or equal.
- G. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Manufacturers: Childers Brand #CP-82, Eagle Bridges - Marathon Industries #225, Foster Brand #85-50, Mon-Eco Industries, Inc.#22-25 or equal.
- H. PVC Jacket Adhesive: Compatible with PVC jacket.
1. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Manufacturers: Dow Corning Corporation #739, Dow Silicone, Johns Manville #Zeston Perma-Weld, CEEL-TITE #Solvent Welding Adhesive, P.I.C. Plastics, Inc. #Welding Adhesive, Speedline Corporation #Polyco VP Adhesive or equal.

2.07 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based for indoor use.
1. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43 mil (1.09 mm) dry film thickness.
 2. Service Temperature Range: -20°F to 180°F (-29 to 82°C).
 3. Vapor Safe Coating: Shall meet requirements of LEED IEQ Low-Emitting Materials. VOC 33 g/l, less water and exempt solvents.

4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
5. Color: White.
6. Manufacturers: Foster Brand #30-80/30-90, Vimasco Corporation #749 or equal.

C. Vapor-Barrier Mastic: Solvent based for outdoor use.

1. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30 mil (0.8 mm) dry film thickness.
2. Service Temperature Range: -50°F to 220°F (-46 to 104°C).
3. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
4. Color: White.
5. Manufacturers: Childers Brand #Encacel X CP-40, Eagle Bridges - Marathon Industries #570, Foster Brand #60-95/60-96 or equal.

D. Breather Mastic: Water based for indoor and outdoor use.

1. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625 inch (1.6 mm) dry film thickness.
2. Service Temperature Range: -20°F to 180°F (-29 to 82°C).
3. Solids Content: 60 percent by volume and 66 percent by weight.
4. Color: White.
5. Manufacturers: Childers Brand #CP-10/CP-11, Eagle Bridges - Marathon Industries #550, Foster Brand #46-50, Mon-Eco Industries, Inc. #55-50, Vimasco Corporation #WC-1/WC-5 or equal.

2.08 LAGGING ADHESIVES

A. Adhesives shall be compatible with insulation materials, jackets, and substrates.

1. Comply with MIL-A-3316C, Class I, Grade.
2. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
4. Service Temperature Range: 0 to 180°F (-18 to 82°C).
5. Color: White.
6. Manufacturers: Childers Brand #CP-50 AHV2, Foster Brand #30-36, Vimasco Corporation #713/714 or equal.

2.09 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate.
 - a. Manufacturers: Childers Brand #CP-76, Marathon Industries#405, Foster Brand #30-45, Mon-Eco Industries, Inc.#44-05, Pittsburgh Corning Corporation #Pittseal 444 or equal.
2. Joint Sealants for Polystyrene.

- a. Manufacturers: Childers Brand #CP-70, Marathon Industries #405, Foster Brand #30-45, Mon-Eco Industries, Inc.#44-05 or equal.
 3. Materials shall be compatible with insulation materials, jackets, and substrates.
 4. Permanently flexible, elastomeric sealant.
 5. Service Temperature Range: -100 to 300°F (-73 to 149°C).
 6. Color: White or gray.
 7. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24). Shall be compliant with requirements of LEED IEQ Low-Emitting Materials.
- B. FSK and Metal Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250°F (Minus 40 to plus 121°C).
 4. Color: Aluminum.
 5. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 6. Manufacturers: Childers Brand #CP-76, Eagle Bridges - Marathon Industries #405, Foster Brand #95-44, Mon-Eco Industries, Inc. #44-05 or equal.
- C. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250°F (Minus 40 to plus 121°C).
 4. Color: White.
 5. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 6. Manufacturers: Childers Brand #CP-76 or equal.

2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Width: 3 inches (75 mm).
 2. Thickness: 11.5 mils (0.29 mm).
 3. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
 7. Manufacturers: ABI, Ideal Tape Division #428 AWF ASJ, Avery Dennison Corporation #Fasson 0836, Compac Corporation #105, 3M Venture Tape #1540 CW Plus/1542 CW Plus/1542 CW Plus/SQ or equal.

- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Width: 3 inches (75 mm).
 2. Thickness: 6.5 mils (0.16 mm).
 3. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
 7. Manufacturers: ABI Tape #491 AWF FSK, Avery Dennison Corporation #Fasson 0827, Compac Corporation #110 and 111, 3M Venture Tape #1525 CW NT/1528 CW/1528 CW/SQ or equal.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Width: 2 inches (50 mm).
 2. Thickness: 6 mils (0.15 mm).
 3. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
 4. Elongation: 500 percent.
 5. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
 6. Manufacturers: ABI Tape #370 White PVC tape, Compac Corporation #130, Venture Tape #1506 CW NS or equal.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Width: 2 inches (50 mm).
 2. Thickness: 3.7 mils (0.093 mm).
 3. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
 4. Elongation: 5 percent.
 5. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.
 6. Manufacturers: ABI Tape #488 AWF, Avery Dennison Corporation #Fasson 0800, Compac Corporation #120, 3M Venture Tape #3520 CW or equal.

2.11 SECUREMENTS

- A. Bands:
1. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304, 0.020 inch (0.50 mm) thick, 1/2 inch (13 mm) or 3/4 inch (19 mm) wide with wing seal.
 2. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) or 3/4 inch (19 mm) wide with wing seal
springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application. Manufacturers: ITW Insulation Systems, Gerrard, RPR or equal.
- B. Insulation Pins and Hangers:
1. Capacitor-Discharge-Weld Pins:

- a. Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106 inch (2.6 mm) diameter shank, length to suit depth of insulation indicated.
 - b. Manufacturers: AGM Industries #CWP-1, GEMCO #CD, Midwest Fasteners #CD, Nelson Stud Welding #TPA/TPC/TPS or equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins:
- a. Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106 inch (2.6 mm) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38 mm) galvanized carbon-steel washer.
 - b. Manufacturers: AGM Industries #CHP-1, GEMCO #Cupped Head Weld Pin, Midwest Fasteners #Cupped Head, Nelson Stud Welding #CHP or equal.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers:
- a. Baseplate welded to projecting spindle capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Copper- or zinc-coated, low-carbon steel, Aluminum or Stainless steel coordinated with application, fully annealed, 12 gauge, 0.106 inch (2.6 mm) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 - e. Manufacturers: AGM Industries, Inc. #Tactoo Perforated Base Insul-Hangers, GEMCO #Perforated Base, Midwest Fasteners #Spindle or equal.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers:
- a. Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.
 - c. Spindle: Nylon, 0.106 inch (2.6 mm) diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).
 - d. Adhesive as recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 - e. Manufacturers: GEMCO #Nylon Hangers, Midwest Fasteners #Nylon Insulation Hangers or equal.
5. Self-Sticking-Base Insulation Hangers:
- a. Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Copper- or zinc-coated, low-carbon steel, Aluminum, Stainless steel, fully annealed, as coordinated with application. 12 gauge, 0.106 inch (2.6 mm) diameter shank, length to suit depth of insulation indicated.

- d. Adhesive-backed base with a peel-off protective cover.
 - e. Manufacturers: AGM Industries, Inc. #Tactoo Self-Adhering Insul-Hangers, GEMCO #Peel & Press, Midwest Fasteners #Self Stick equal.
6. Insulation-Retaining Washers:
- a. Self-locking washers formed from 0.015 inch (0.41 mm) thick, galvanized-steel, aluminum or stainless steel sheet, as coordinated with application with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 - c. Manufacturers: AGM Industries #RC-150, GEMCO #R-150, Midwest Fasteners #WA-150, Nelson Stud Welding #Speed Clips or equal.
7. Nonmetal Insulation-Retaining Washers:
- a. Self-locking washers formed from 0.016 inch (0.41 mm) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - b. Manufacturers: GEMCO, Midwest Fasteners or equal.
- C. Staples: Outward-clinching insulation staples, nominal 0.75 inch (19 mm) wide, stainless steel or Monel.
- D. Wire: 0.062 inch (1.6 mm) soft-annealed, stainless steel.
- 1. Manufacturers: C&F Wire Products or equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature ranging from 140°F to 300°F (60°C to 149°C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

2. Carbon Steel: Coat carbon steel operating at a service temperature ranging from 32°F to 300°F (0°C to 149°C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.03 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
 1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3" (75 mm) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) on center.
 3. Overlap jacket longitudinal seams at least 1-1/2" (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2" (50 mm) on center. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4" (100 mm) beyond damaged areas. Adhere, staple, and seal patches like butt joints.
- O. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.04 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral-Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 50 percent coverage of tank and vessel surfaces.
 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 3. Protect exposed corners with secured corner angles.
 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches (75 mm) from insulation end joints, and 16" (400 mm) on center in both directions.
 - d. Do not over compress insulation during installation.

- e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles or breather springs. Place one circumferential girdle around equipment approximately 6" (150 mm) from each end. Install wire or cable between two circumferential girdles 12" (300 mm) on center. Install a wire ring around each end and around outer periphery of center openings and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48" (1200 mm) on center. Use this network for securing insulation with tie wire or bands.
 7. Stagger joints between insulation layers at least 3" (75 mm).
 8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
 9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
 10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6" (150 mm) centers, starting at corners. Install 3/8" (10 mm) diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
 2. Fabricate boxes from galvanized steel, aluminum or stainless steel, at least 0.040 inch (1.0 mm) thick.
 3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.
- 3.05 INSTALLATION OF CALCIUM SILICATE INSULATION
- A. Insulation Installation on Boiler Breechings:
1. Secure single-layer insulation with stainless-steel bands at 12" (300 mm) intervals and tighten bands without deforming insulation material.

2. Install two-layer insulation with joints tightly butted and staggered at least 3" (75 mm). Secure inner layer with wire spaced at 12" (300 mm) intervals. Secure outer layer with stainless-steel bands at 12" (300 mm) intervals.
3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1" (25 mm). Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

3.06 INSTALLATION OF PHENOLIC INSULATION

- A. Secure single-layer insulation with stainless-steel bands at 12" (300 mm) intervals and tighten bands without deforming insulation materials.
- B. Install two-layer insulation with joints tightly butted and staggered at least 3" (75 mm). Secure inner layer with 0.062" (1.6 mm) wire spaced at 12" (300 mm) intervals. Secure outer layer with stainless-steel bands at 12" (300 mm) intervals.

3.07 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 1. Draw jacket smooth and tight to surface with 2" (50 mm) overlap at seams and joints.
 2. Embed glass cloth between two 0.062" (1.6 mm) thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2" (38 mm) laps at longitudinal seams and 3" (75 mm) wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1" (25 mm) overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2" (50 mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12" (300 mm) on center and at end joints.
- E. Where PVDC jackets are indicated, install as follows:

1. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference less than 34" (860 mm). A 34" (860 mm) circumference limit allows for 2" (50 mm) overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fish mouthing," and use PVDC tape along lap seal to secure joint.
2. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 125% circumferences to avoid damage to tape edges.

3.08 FINISHES

- A. Equipment Insulation with ASJ+, Glass-Cloth or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 for Sections "Exterior Painting" and "Interior Painting".
 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

3.09 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
- B. Insulate indoor and outdoor equipment that is not factory insulated.
- C. TABLE 1: EQUIPMENT INSULATION TYPE REQUIRED.
 1. All insulation thicknesses shall meet or exceed state energy code requirements as noted below. Increase thickness by 1/2" (minimum) where insulated pipe is exposed to exterior ambient air. Minimum thermal resistance shall comply with building code minimum ranges and may exceed those minimum levels. Insulation thicknesses may be adjusted for equivalent insulation values for materials with superior "K" factors. Refer to "PART 2- PRODUCTS" for characteristics of each insulation material listed below.

EQUIPMENT INSULATION INDEX	
INSULATION KEY CODE	INSULATION TYPE
EI-A	Rigid Hydrous Calcium Silicate
EI-B	Rigid Closed-Cell Cellular Glass
EI-C	Flexible Closed-Cell Elastomeric, Neoprene or Polyethylene
EI-D	Rigid Fiberglass Board
EI-E	Flexible Fiberglass Blanket
EI-F	Rigid High Temperature Mineral Fiber Board
EI-G	Rigid High Temperature Mineral Fiber Blanket
EI-H	Rigid Closed-Cell Phenolic Foam
EI-I	Rigid Closed-Cell Polyisocyanurate Foam
EI-J	Rigid Extruded Polystyrene Foam Board
EI-K	Flexible Low Temperature Aerogel
EI-L	Flexible High Temperature Aerogel
EI-M	Flexible Extreme High Temperature Aerogel

TABLE 1: EQUIPMENT INSULATION TYPE REQUIRED		
SERVICE	INSULATION KEY CODE	THICKNESS/REMARKS (Minimum)
Insulated pipes, equipment, fittings, valves, etc. at pipe hangers and supports with saddles or 360° shields.	EI-A	Same thickness as adjoining pipe insulation
Chiller cold surfaces: condenser, evaporator, heat recovery bundles, suction piping, compressor inlets, water boxes, and nozzles.	EI-C,D,F,H,I	1" (25 mm)
	EI-C,D,F,H,I	1" (25 mm)

TABLE 1: EQUIPMENT INSULATION TYPE REQUIRED		
SERVICE	INSULATION KEY CODE	THICKNESS/REMARKS (Minimum)
Insulated pipes, equipment, fittings, valves, etc. at pipe hangers and supports with saddles or 360° shields.	EI-A	Same thickness as adjoining pipe insulation
Heat exchanger for cooling service.	EI-K	0.6" (15 mm)
Heat exchanger for heating service.	EI-D,F,H,I	3" (75 mm)
	EI-L	1.5" (38 mm)
Steam to hot water converter.	EI-D,F	4" (100 mm)
	EI-L	2" (50 mm)
Chilled water pump.	EI-C,D,F,H,I	1" (25 mm)
	EI-K	0.6" (15 mm)
Condenser water pump (outdoors).	EI-C,D,F,H,I	1" (25 mm)
	EI-K	0.6" (15 mm)
Heating hot water pump.	EI-D,F,H,I	3" (75 mm)
	EI-L	1.5" (38 mm)
Heat recovery pump.	EI-D,F,H,I	2" (50 mm)
	EI-L	1" (25 mm)
Chilled water expansion/compression tank.	EI-C,D,E,F,G,H,I	1" (25 mm)
	EI-K	1/2" (12 mm)
Condenser water expansion/compression tank.	EI-C,D,E,F,G,H,I	1" (25 mm)
	EI-K	1/2" (12 mm)
Hot water expansion/compression tank.	EI-C,D,E,F,G,H,I	1" (25 mm)
	EI-K	1/2" (12 mm)

TABLE 1: EQUIPMENT INSULATION TYPE REQUIRED		
SERVICE	INSULATION KEY CODE	THICKNESS/REMARKS (Minimum)
Insulated pipes, equipment, fittings, valves, etc. at pipe hangers and supports with saddles or 360° shields.	EI-A	Same thickness as adjoining pipe insulation
Heat recovery system expansion/compression tank.	EI-C,D,E,F,G,H,I	1" (25 mm)
	EI-K	1/2" (12 mm)
Chilled and condenser water air separator	EI-C,D,E,F,G,H,I	1" (25 mm)
	EI-K	0.6" (15 mm)
Heating water air separator.	EI-C,D,E,F,G,H,I	3" (75 mm)
	EI-L	1.5" (38 mm)
Cold thermal storage tank (indoors).	EI-C,D,E,F,G,H,I	3" (75 mm)
	EI-K	1.5" (38 mm)
Cold thermal storage tank (outdoors).	EI-H,I,J	3" (75 mm)
	EI-K	1.5" (75 mm)
Deaerator.	EI-D,E,F,G,H,I	3" (75 mm)
	EI-L	1.5" (38 mm)
Steam condensate pump and boiler feedwater pump.	EI-D,E,F,G,H,I	3" (75 mm)
	EI-L,M	1.5" (38 mm)
Steam condensate tank and receiver.	EI-D,E,F,G,H,I	3" (75 mm)
	EI-L,M	1.5" (38 mm)
Steam flash tank, flash separator, moisture separator, blow off tank.	EI-D,E,F,G,H,I	3" (75 mm)
	EI-L,M	1.5" (38 mm)
Outdoor, aboveground, heated, fuel-oil storage tank.	EI-B	3" (75 mm)
	EI-D,E,F,G,H,I	2" (50 mm)

TABLE 1: EQUIPMENT INSULATION TYPE REQUIRED		
SERVICE	INSULATION KEY CODE	THICKNESS/REMARKS (Minimum)
Insulated pipes, equipment, fittings, valves, etc. at pipe hangers and supports with saddles or 360° shields.	EI-A	Same thickness as adjoining pipe insulation
	EI-J	1.5" (38 mm)
Buried cold water piping and tanks.	EI-B	2" (50 mm)
Breeching, flues and connectors.	EI-A	4" (100 mm). Thickness is based on desired exterior temperature defined by code.
	EI-F,G	3" (75 mm)
	EI-L,M	2" (50 mm)
Generator engine exhaust piping, including flanges, fittings, mufflers, filters, etc.	EI-A	4" (100 mm). Thickness is based on desired exterior temperature defined by code.
	EI-O	2" (50 mm)
Generator engine exhaust flexible piping fittings	EI-G	3" (75 mm)
	EI-M	2" (50 mm)

3.10 EQUIPMENT INSULATION JACKET SCHEDULE

A. All insulation jackets shall be applied to protect the underlying insulation as scheduled above, providing protection both from environmental and physical conditions.

B. TABLE 2: INDOOR FIELD APPLIED EQUIPMENT INSULATION JACKETS

TABLE 2: INDOOR EQUIPMENT FIELD APPLIED INSULATION JACKET				
SERVICE	JACKET TYPE	THICKNESS OPTIONS	FINISH OPTIONS	CORRUGATION OPTIONS
Concealed equipment.	PVC	20 or 30 mils		
	Aluminum	0.016, 0.020, 0.024 or 0.032 inch	Smooth, corrugated, embossed	
	Stainless Steel	0.010, 0.016, 0.020, 0.024 inch	Smooth, corrugated, embossed	
Exposed equipment up to 48 inches in diameter or with flat surfaces to 72 inches.	PVC	20 or 30 mils		
	Aluminum	0.016, 0.020, 0.024 or 0.032 inch	Smooth, corrugated, embossed	
	Stainless Steel (304 or 316 type)	0.010, 0.016, 0.020, 0.024 inch	Smooth, corrugated, embossed	
Exposed equipment larger than 48 inches in diameter or with flat surfaces greater than 72 inches.	Aluminum	0.032 inch	Smooth	1-1/4 inch deep to
		0.040 inch	Embossed	2-1/2 inch deep 4 x 1 inch
	Stainless Steel (304 or 316 type)	0.020 inch	Smooth	1-1/4 inch deep to
		0.024 inch	Embossed	2-1/2 inch deep 4 x 1 inch
Notes:				
Install jacket over insulation material. For insulation with factory applied jacket, install the field applied jacket over the factory applied jacket.				
If more than one material is listed, selection from materials listed is Contractor's option.				

C. TABLE 3: OUTDOOR FIELD APPLIED EQUIPMENT INSULATION JACKETS

TABLE 3: OUTDOOR EQUIPMENT FIELD APPLIED INSULATION JACKET				
SERVICE	JACKET TYPE	THICKNESS OPTIONS	FINISH OPTIONS	CORRUGATION OPTIONS
Concealed equipment	PVC	20 or 30 mils		
	Aluminum	0.016 inch, 0.020inch, 0.024inch, 0.032 inch 0.040 inch	Smooth, Corrugated, Embossed	
	Stainless Steel	0.010 inch 0.016 inch 0.020 inch 0.024 inch	Smooth, Corrugated, Embossed	
Exposed equipment up to 48 inches in diameter or with flat surfaces to 72 inches.	Aluminum	0.016, 0.020, 0.024 or 0.032 inch	Smooth, Corrugated, Embossed	
	Stainless Steel (304 or 316 type)	0.010 inch 0.016 inch 0.020 inch 0.024 inch	Smooth, Corrugated, Embossed	
Exposed equipment larger than 48 inches in diameter or with flat surfaces greater than 72 inches.	Aluminum	0.032 inch 0.040 inch	Smooth Embossed	1-1/4 inch deep to 2-1/2 inch deep x 4 x 1 inch
	Stainless Steel (304 or 316 type)	0.020 inch 0.024 inch	Smooth Embossed	1-1/4 inch deep to 2-1/2 inch deep x 4 x 1 inch

TABLE 3: OUTDOOR EQUIPMENT FIELD APPLIED INSULATION JACKET				
SERVICE	JACKET TYPE	THICKNESS OPTIONS	FINISH OPTIONS	CORRUGATION OPTIONS
Notes: Install jacket over insulation material. For insulation with insulation with factory applied jacket, install the field applied jacket over the factory applied jacket. If more than one material is listed, selection from materials listed is Contractor's option.

SECTION 23 07 19

HVAC PIPING INSULATION

PART 1 GENERAL (LEVEL 1)

1.01 APPLICABLE REQUIREMENTS

- A. A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 05 00 - Basic Materials and Methods, and other Sections in Division 23 specified herein. Division 01 shall not be included in these standards and shall be included as part of each projects contractual documentation as required.

1.02 SCOPE

- A. All work to be furnished and installed under this Section shall include, but not necessarily be limited to, providing insulation for the following:
1. Piping Insulation:
 - a. Piping Insulation.
 - b. Insulation Jackets.
 - c. Removable Covers.
 2. Acoustic piping wrap
 3. Section includes the following HVAC piping systems:
 - a. Heating hot water supply and return piping.
 - b. Chilled water supply and return piping.
 - c. Condenser water supply and return piping.
 - d. Steam and condensate return piping.
 - e. Heat recovery piping.
 - f. Process piping.
 - g. Valves, pumps, air separators, strainers and fittings in insulated piping systems.
 - h. Refrigerant hot gas and suction piping.
- B. Types of mechanical insulation specified in this Section include the following:
1. Glass fiber.
 2. Mineral wool.
 3. Closed cell phenolic.
 4. Polyisocyanurate.
 5. Calcium silicate.
 6. Cellular glass.
 7. Flexible elastomeric closed cell foam.

8. Aerocel.
9. Insulation jackets.
10. Removable covers.
11. Insulation accessories.

1.03 RELATED WORK SPECIFIED ELSEWHERE

- A. Division 22: Plumbing.
- B. Section 23 05 00: Basic HVAC Materials and Methods.
- C. Section 23 21 13: Hydronic Piping, Valves and Specialties.

1.04 DEFINITIONS

- A. Ambient: The air temperature to be maintained in a conditioned room. Typically, between 70°F and 78°F.
- B. Insert: Spacer placed between the pipe support system and the piping to allow for the space required for insulation.
- C. Insulation Group (IG): Definition of Insulation Materials and Operating Temperatures.
- D. Insulation Shield: Buffer material placed between the pipe support system and the insulation to prevent the insulation material from crushing.
- E. Jacket: Protective covering over the pipe insulation; may be factory applied such as “all service jacket” or field applied to provide additional protection; of such materials as canvas, PVC, aluminum or stainless steel.
- F. Piping Insulation: Thermal insulation applied to prevent heat transmission to or from a piping system.
- G. Vapor Barrier Jacket: Insulation jacket material that impedes the transmission of water vapor.
- H. Freezing Climate: Where outdoor design temperature is less than 34°F (1°C), as stated in ASHRAE Fundamentals under 99% column for winter design conditions.
- I. Unconditioned Space: any space not directly conditioned by mechanical equipment or maintained to temperature by mechanical equipment.

1.05 INSULATION INDUSTRY DEFINITIONS

- A. Third Party Independent Product sustainable certification: Provides independent third-party, Indoor Air Quality (IAQ) certification of products for emissions of respirable particles and Volatile Organic Compounds (VOC's), including formaldehyde and other specific product-related pollutants. Certification is based upon criteria used by EPA, OSHA, and WHO.
 1. UL GREENGUARD
 2. Scientific Certification Systems (SCS)
- B. EPA: Environmental Protection Agency.

- C. WHO: World Health Organization.
- D. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film layer leaving no paper exposed.
- E. ASJ: All Service Jacket (no outer film).
- F. SSL+: Self-Sealing Lap with Advanced Closure System.
- G. SSL: Self-Sealing Lap.
- H. FSK: Foil Scrim Kraft; jacketing.
- I. FSP: Foil Scrim Polyethylene jacketing
- J. PSK: Poly Scrim Kraft; jacketing.
- K. FHC: Fire Hazard Classification
- L. PVC: Polyvinyl Chloride.
- M. Bio based Binder Technology: binder systems based on rapidly renewable bio-based materials; rather than petroleum-based chemicals commonly used in other glass mineral wool insulation materials. Biobased Technology reduces the binder embodied energy by up to 70 percent and does not contain phenol, formaldehyde, acrylics or artificial colors.
- N. UL GREENGUARD Gold Certification: Certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced by the Leadership in Energy Environmental Design (LEED) Building Rating Systems.
- O. Recycled Content – Post-Consumer: materials such as bottled glass collected at curbside or other collection sites after consumer use and used in the manufacturing process to create a new product rather than being placed in a landfill or incinerated.
- P. Recycled Content – Pre-Consumer (aka Post-Industrial): materials used or created from one manufacturing process which are collected as scrap and placed back into another manufacturing process rather than being placed in a landfill or incinerated.
- Q. Polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE and Deca-BDE fire retardants: have been linked to adverse health effects after exposure in low concentrations.
- R. UL Classified: UL has tested and evaluated samples of the product with respect to certain properties of the product. UL classifies products to applicable UL requirements standards for safety and standards of other National and International organizations
- S. Imperative 11, Red List – requires that manufacturers disclose the ingredients in their products to document they are free of Red List chemicals and materials. The Red List represents the “worst in class” materials, chemicals and elements known to pose serious risks to human health and the greater ecosystem.
- T. Underwriter’s Laboratories Environment (UL Environment): offers independent green claims validation, product assessment and certification.

- U. UL Environment Claims Validation (ECV): service and label tests a manufacturer's product and validates that the environmental claims they make in their marketing and packaging materials are factual. This ECV service enables products to qualify for LEED® MR Credit 4 Recycled Content LEED V-4 Building product disclosure and optimization – sourcing of raw materials.

1.06 QUALITY ASSURANCE

- A. Codes and Standards: Provide products conforming to the requirements of the following:
 - 1. American Society for Testing and Materials (ASTM): Manufacture and test insulation in accordance with the ASTM Standards, including:
 - a. B209: Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - b. C165: Recommended Practice for Measuring Compressive Properties of Thermal Insulation.
 - c. C168: Provides standard terminology for thermal insulation.
 - d. C177: Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
 - e. C195: Specification for Mineral Fiber Thermal Insulating Cement.
 - f. C196: Specification for Expanded or Exfoliated Vermiculite Thermal Insulating Cement.
 - g. C302: Test Method for Density of Preformed Pipe-Covering-Type Thermal Insulation.
 - h. C303: Test Method for Density of Preformed Block-Type Thermal Insulation.
 - i. C305: Test for Thermal Conductivity of Pipe Insulation.
 - j. C335: Standard Test Method for Steady-State Heat Transfer Properties of Pipe Insulation.
 - k. C356: Test for Linear Shrinkage of Preformed High-Temperature Thermal Insulation.
 - l. C411: Test for Hot-Surface Performance of High Temperature Thermal Insulation.
 - m. C423: Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
 - n. C449: Specification of Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
 - o. C518: Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
 - p. C533: Specification for Calcium Silicate Block and Pipe Thermal Insulation.
 - q. C534: Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
 - r. C547: Specification for Mineral Fiber Pipe Insulation.
 - s. C552: Specification for Cellular Glass Block and Pipe Thermal Insulation.
 - t. C553: Specification for Mineral Fiber Blanket-Type Pipe Insulation (Industrial Type).
 - u. C592: Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered).
